APO 403

CIRCULAR)
NUMBER 70)

19 October 1944.

MAP SUPPLY POLICY

1. GENERAL. Letter, this Headquarters, dated 19 May 1944, file AG 061-CHMCR, subject, "Map Supply Policy", and Operations Memorandum Number 11, this Headquarters, dated 5 June 1944, are rescinded.

2. RESPONSIBILITY. The unit engineer of Army, Corps, and Division is charged with the distribution of military maps under the policy of the unit commander and the supervision of the unit G-2 except such confidential or secret maps that may require special distribution. He will obtain maps not reproduced by himself from the engineer of the next higher unit.

3. DISTRIBUTION.

a. Agencies of Distribution. A map depot for Army, one for each Corps, and one for each Division will accomplish distribution.

(1) Army Map Depot. Personnel of the map storage and distribution platoon of the Army Topographic Battalion, under the supervision of the Army Engineer, will operate the Army map depot. The duties of personnel of the Army map depot are as follows:

(a) Draw bulk stocks of maps from the Communications Zone advance map depot.

(b) Break down bulk stocks to Corps loads and deliver to Corps map depots.

(c) Operate map depot for "over the counter" delivery of maps to Army separate units.

(2) Corps Map Depot. Personnel of the Corps map storage and distribution detachment, attached to the Corps Topographic Company and supervised by the Corps Engineer, will operate the Corps map depot. The duties of personnel of the Corps map depot are as follows:

(a) Break down bulk stocks received from the Army map depot to Division loads and deliver to Division map depot.

(b) Operate map depot for "over the counter" delivery of maps to Corps separate units.

(3) Division Map Depot. The Division Engineer is responsible for operation of a Division map depot to provide for "over the counter" delivery of maps to divisional and attached units.

b. Basis of Distribution. "Initial Issue Tables for Operational Maps" inclosed herewith are based on tables in FM 30-20 and give the quantities of maps and auxiliary material considered adequate for initial issue.

(1) No issue in excess of these allowances is authorized without the approval of the Army Engineer.

(2) Actual maps issued will depend on their availability.

c. Mechanics of Distribution.

(1) Army separate units will requisition direct to the Army map depot for "over the counter" delivery.

(2) Corps separate units will requisition direct to the Corps map depot for "over the counter" delivery.

(3) The Division Engineer will submit consolidated requisition to the Corps Engineer for divisional and attached units. The attached units included will be listed on the requisition for editing purposes. The maps will be delivered in bulk by the Corps map depot to the Division map depot.

(4) The Corps Engineer will submit, in triplicate, consolidated requisition to the Army Engineer for replenishing Corps map depot stock. These maps will be delivered in bulk by the Army map depot to the Corps map depot. Consolidated divisional requisitions, as approved by the Corps Engineer, may be forwarded to the Army Engineer for processing. Maps will be stocked in Corps map depot primarily for "over the counter" issue to Corps separate units.

(5) Requisitions for "over the counter" delivery by Corps and Army map depots will be signed by an officer and submitted in duplicate direct to the issuing depot.

d. Automatic Issue. Maps will normally be issued automatically, without requisition, to the Corps map depot in staff planning or operational quantities, whichever may be applicable, for: -

(1) Distribution of new maps initially received by Army map depot.

(2) Initial issue covering new operational areas.

(3) Mapping a newly assigned Division which is not relieving another Division. (See paragraph 4c below).

4. USE AND DISPOSITION OF MAPS. The supply of materials required for map reproduction is critical and the reproduction facilities are at present overtaxed in the preparation of operational maps. Therefore, unit commanders are enjoined against viewing the problem of map supply complacently. It is their responsibility that maps issued to their units are used efficiently and that maps not immediately required are safely stored.

a. Maps issued to units in operational quantities will be limited to their immediate operational area.

b. When a unit has no further need for a certain series of maps, these maps will be sorted, packed, and returned with an itemized transmittal direct to the source of supply for that unit.

c. Any Division being replaced by another Division will transfer maps, no longer required, to the replacing unit, pursuant to instructions issued by the Corps Commander.

d. Maps worn beyond serviceability will be burned and the resulting ashes thoroughly pulverized.

5. CAPTURED AND LOCAL MAPS. Captured or local maps or reproduced copies of captured or local maps will not be issued to troops for operational use except in an emergency and then only with the approval of the Army Commander.

6. NEW MAPS AND MAP INFORMATION.

a. Whenever new maps or map substitutes are prepared by subordinate units, particularly a Corps or Army topographic unit, record copies will be required. These will include copies of all publications (including overprints) which can legitimately be classified as maps. Odd diagrams, tabulations, cards, etc. which may be reproduced lithographically, but which have no map significance, are not required. Distribution will be made as follows:

(1) Two (2) copies through engineer channels to Engineer, Third US Army, APO 403, US Army.

(2) Five (5) copies direct to Engineer, Twelfth Army Group, APO 655, US Army, copy of letter of transmittal to be forwarded to Engineer, Third US Army.

(3) Two (2) copies of each complete printing plus two (2) sets of color pulls direct to Chief, Map Reproduction and Distribution Section, Intelligence Division, OCE, Headquarters, European Theater of Operations United States Army, APO 887, US Army (Bigot material will be addressed directly to Colonel A. Hilwit, same address); copy of letter of transmittal to be forwarded to the Engineer, Third US Army.

(4) Two (2) copies of each complete printing plus two (2) sets of color pulls direct to Directorate of Military Survey, Survey 2(b), The War Office, Whitehall, SW1 (Bigot material will be addressed directly to Lieutenant Colonel WDC Wiggins, same address); copy of letter of transmittal to be forwarded to the Engineer, Third U S Army.

b. All corrective or supplementary map information will be forwarded through engineer channels to the Engineer, Third US Army.

c. Except for local sketches all map reproduction will be coordinated with the Engineer, Third US Army.

d. Communications involving change of map policy, procurement of aerial photography, or issue of non-standard map material for staff intelligence studies will be sent through G-2 channels to AC of S, G-2, Third US Army.

By command of Lieutenant General PATTON:

HUGH J. GAFFEY,
Major General, U. S. Army,
Chief of Staff.

OFFICIAL

R. E. CUMMINGS,
Colonel, Adjutant General's Department,
Adjutant General.

1 Incl:
Incl 1 - "Initial Issue Tables for Operational Maps".

* Notes: 1 When either one of the two maps is not available, the other will be issued on basis of the combined allowance of the two.

2 These maps are primarily for special use by the Artillery, Infantry and Engineer units and will be issued on request from a unit when a positive need for them exists.

3 Will be issued on above basis upon request from a unit when a positive need for this map exists.

4 Issued in these quantities only when a unit is operating on a special airborne mission. When operating on the ground, distribution for these maps will be the same as for the Infantry Division.

5 Hydrographic charts and defense overprints will be issued on request as made available for special missions.

Engineer Operational Instruction No. 33, shown on the preceding page, is an exact reproduction of the order as published with the exception of the overlay which has been superimposed on a 1:500,000 map. In order to provide coherence and present the complete instruction, the paragraphs headed "no change" are extracted from previous instructions and quoted below:

Paragraph 2. - The engineer mission is to support the operations through normal engineer functions.

Paragraph 3. a.- Perform all engineer work in zone (overlay) and support VIII Corps.

Paragraph 3. b.- Coordination of engineer depot haulage activities.

Paragraph 3. c.- Perform all engineer work in zone (overlay) and support XX Corps.

Paragraph 3. d.- Perform all engineer work in zone (overlay) and support XII Corps. Establish and report forward boundary.

Paragraph 3. e.- Perform all engineer work in zone (overlay) and support 1303d Engr GS Regt.

Paragraph 3. f.- Support operations through normal functions.

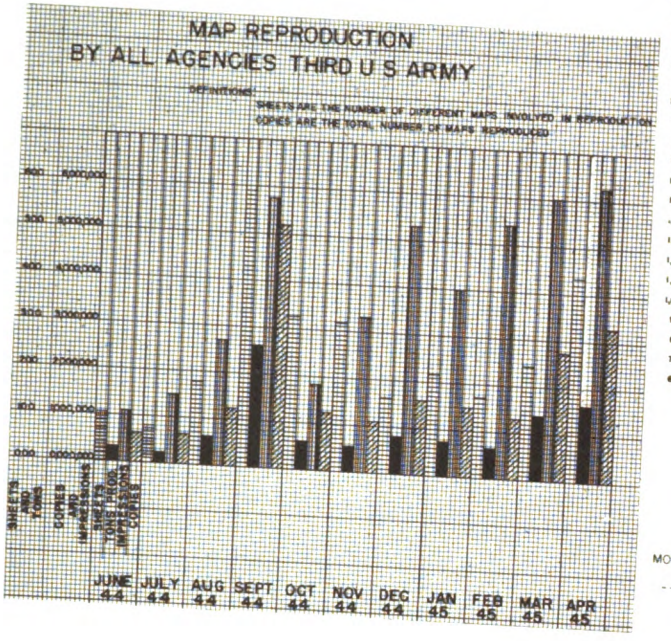
Paragraph 3. x. (2) (a) - Engineer boundaries between Corps and supporting Army units will be as mutually agreed upon by Corps Engineers and supportin; Army units. Such boundaries will be definitely delineated and will be reported promptly to the Army Engineer.

(b) - Engineer boundaries between mutually supporting Army units will be changed only upon approval of the Army Engineer.

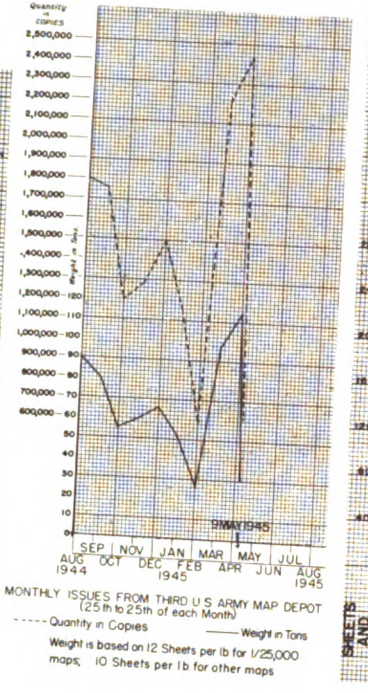
Paragraph 3. x. (3) - Priority of routes for maintenance - see TRAFFIC Section of current Administrative Order and accompanying Traffic Circulation Diagram. Two way Class 70 routes parallel to the axis of movement will be of first priority. All other routes will be of second priority.

Paragraph 3. x. (4) (a) - Reference is made to letter, this headquarters, dated 7 November 1944, subject: "Protection of the Line of Communications." The following delineation of responsibility between Army Engineer and Corps troops will be followed:

DECLASSIFIED

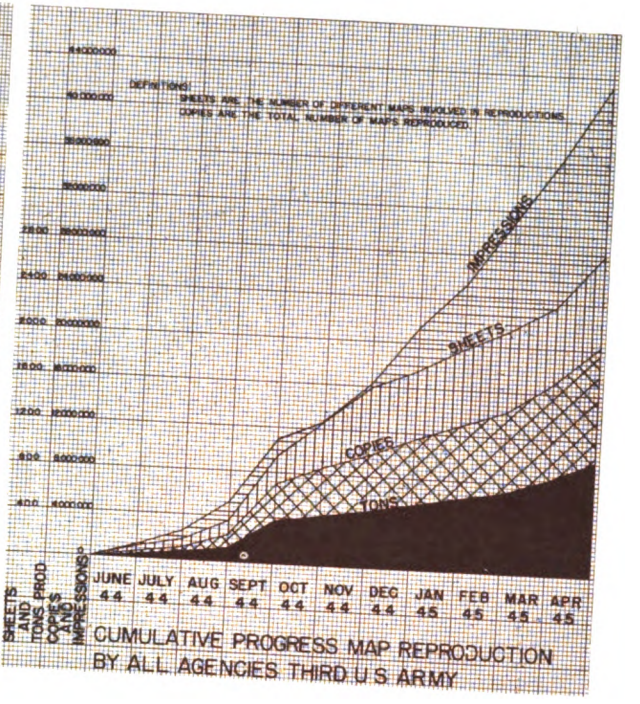


1. Army Engineer troops will be responsible, within their areas of responsibility, for the tactical guarding of such bridges in the Army area as may be designated by the Army Engineer.



2. Corps will be responsible for the tactical guarding of bridges forward of the Corps rear tactical boundary. Exceptions involving the use of Army Engineer troops will be made only on specific instruction of the Army Engineer.

Paragraph 4. b.- 976th Engr Maint Co (P-6023) 1 mi W of ARLON - Maintenance of engineer equipment.



Paragraph 5. - Changes in locations of headquarters charged with submission of Engineer Situation Reports (See Operations Memo No. 25, 27 June 1944, Hq Third U.S. Army) will be reported to the Army Engineer by the most expeditious means available.

HEADQUARTERS
THIRD UNITED STATES ARMY
Office of the Finance Officer
APO 403

SUBJECT: Letter of Transmittal.

TO : Commanding General,
Third United States Army.
APO 403, U. S. Army.

1. Submitted herewith is the After Action Report of the Finance Section, Third U. S. Army, beginning with March, 1944, and continuing at the properly designated intervals by chapter.

2. This report presents a review of the operations of the Finance Section since its arrival in the European Theater of Operations, and includes the planning period in the United Kingdom, the pre-operational period on the Continent, and the operational period of Third U. S. Army.

3. The Finance story is told without attempt to detail the various technical procedures which are more or less standardized by regulations of the War Department, the Treasury Department, and the Comptroller General. It is believed that this concise narrative of operations and problems in the field will serve to present a better general picture of events than a mass of technical data which tends to cloud significant issues.

FINANCE SECTION

FINANCE SECTION

Organizational and Functional Chart

DECLASSIFIED

DUTIES OF ADMINISTRATIVE - FISCAL SUBSECTION

Administrative and Fiscal Officer:
1. Supervises operation of Administrative and Fiscal Section.
2. Verifies Fiscal Reports.
3. Supervises suballotment of funds.
4. Supervises distribution of Finance information.
5. Supervises preparation and flow of correspondence.
6. Supervises consolidation of disbursing and personnel data.

Chief Clerk:
1. Effects flow of correspondence.
2. Supervises filing and reference system.
3. Checks all outgoing and incoming correspondence.

Principal Clerk:
1. Supervises sub-branches.
2. Audits Fiscal Reports.

Stenographic Branch:
1. Performs stenographic functions.
2. Handles all classified documents.
3. Maintains classified files.

Distribution Branch:
1. Maintains current rosters of Finance Officers.
2. Makes distribution of finance information.

Filing Branch:
1. Maintains unclassified files.
2. Posts all circulars and regulations.
3. Maintains office personnel records and rosters.

Fiscal and Report Branch:
1. Consolidates and forwards all administrative reports.
2. Maintains fiscal records.
3. Prepares necessary fiscal reports.
4. Effects proper suballotment of available funds.

MISSION

1. Advise Commanding General on fiscal and finance matters.
2. Supervise fiscal and finance activities within the Army.
3. Supervise payment of Army troops and commercial accounts.
4. Suballot funds to lower units.

DUTIES OF DISBURSING SUBSECTION

Disbursing Officer:
1. Supervises operation of Disbursing Subsection.
2. Verifies cashier and depository transactions.
3. Verifies accounting reports and records.
4. Inspects all vouchers paid.
5. Signs checks.

Deputy Disbursing Officer:
1. Acts as Deputy to Disbursing Officer.
2. Audits cashier's accounts daily.
3. Post-audits all vouchers.
4. Audits all accounting reports and records.

Principal Clerk:
1. Supervises branches.
2. Audits all vouchers before payments.
3. Informs personnel as to changes in regulations.

Cashier:
1. Assists in making cash collections.
2. Makes cash disbursements.
3. Exchanges funds.
4. Prepares daily Cashier's Report.

Accounting Branch:
1. Maintains accounting records.
2. Prepares accounting reports.
3. Prepares checks.

Pay and Allowances Branch:
1. Computes enlisted men's pay and allowances vouchers.
2. Computes officers' pay and allowances vouchers.
3. Prepares pay vouchers of headquarters officers.

Commercial Accounts Branch:
1. Computes commercial accounts vouchers.
2. Maintains Purchasing and Contracting Officers' ledger.

CHAPTER I
PLANNING IN UNITED KINGDOM

Organization.-- The Finance Section of Headquarters Third U. S. Army was organized under the direction of Col. James E. Daly, FD, as an integral part of the staff and primarily as the head of the General Staff Section. The general duties of this section were the administrative and supervision of finance activities and services within the Army and the payment of troops and civilians employed by Army headquarters and assigned troops. To effectively perform this mission, the Finance Section was organized into an Administrative-Fiscal subsection and a Disbursing subsection.

Administration.-- Administrative activities entailed the following duties:

1. Distribution of technical finance information to finance officers, staff sections, divisions and corps finance offices.

2. Centralization of monthly reports of disbursements, personnel, etc., and monthly analyses of disbursements and collections for submission to higher headquarters.

3. Handling of technical questions.

4. Preparation of the finance plan for combat operations.

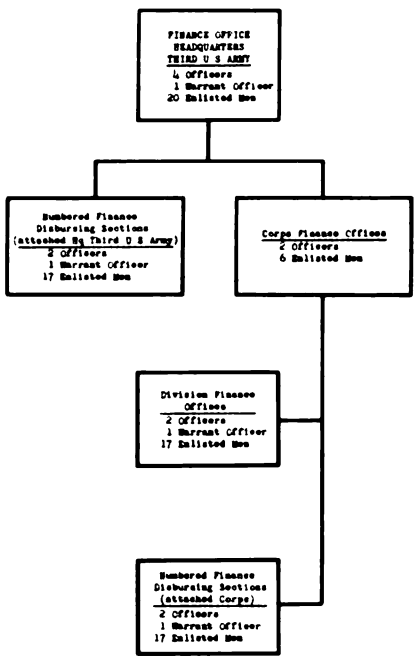
5. Inspection of finance offices under Army jurisdiction.

6. Preparations to effect purchasing and contracting in the event it proved necessary. Grant Officer Orders, instructing finance officers to purchase and contract with Contracting Officers, and issuing necessary DA forms.

Corps and divisions were provided with organic finance sections. Service units, however, had no organic finance units; consequently, the effective payment of Army and Corps troops in the Zone of the Interior was made the responsibility of Continental Communications Zone Finance Disbursing Sections, on a basis of one section per 15,000 troops. Sections were attached as follows:

7 Sections	to Army
1 Section	to VIII Corps
2 Sections	to III Corps
2 Sections	to XV Corps
2 Sections	to XX Corps

The finance plan for accounting and for continental operations was prepared and published in Third U. S. Army Administrative Orders. The complete plan is included as Annex No. 1.



In order to determine the operational efficiency and the adequacy of personnel and equipment, inspections were made of Corps, Division, and Finance Disbursing Sections prior to movement to the Continent. A certain amount of francs currency was distributed to each Disbursing Officer prior to his departure from the United Kingdom, and authority was granted him to keep $400,000.00 cash on hand.

For the cross-channel operation Finance Disbursing Sections were phased so that service could be maintained on the Continent according to troop strength. Since Finance Disbursing Sections had no organic transportation or messing facilities, it was necessary to phase the sections with other units to assure the availability of such facilities. Section equipment was shipped from home stations to the Continent by Communications Zone.

During their stay in the United Kingdom, Corps, Divisions and Finance Disbursing Sections performed regular finance functions. A summary report of operations for all Finance Offices of Third U. S. Army is presented as Annex No. 2.

Fiscal.-- Upon arrival in the United Kingdom, an unlimited allotment of Finance Department General Allotment Funds was issued to the Army Commander. Specific allotments of Contingencies of the Army Funds in amount of $1,540 for entertainment and $1,000 for military intelligence were received. The Army was designated a procurement agency with

ARMY FISCAL ORGANIZATION CHART

authority to suballot funds to Corps and Divisions. Corps and Divisions were appointed procurement agencies and suballotments were made on the following approximate basis:

	Contingencies of Army Funds Military Intelligence	Contingencies of Army Funds Entertainment	All other Funds FDGA 60-136
Each Corps	$750.00	$100.00	Unlimited
Each Division	$500.00	$ 50.00	Unlimited

Fiscal records were set up to record obligations of Army units and to consolidate the obligation reports submitted by Corps and Divisions. The monthly consolidated obligation reports were submitted to the Fiscal Director, Communications Zone, European Theater of Operations, U. S. Army. Funds obligated by Third U. S. Army Units are shown in Annex Number 3.

In view of continental operations an increase of $160,000 in Contingency of the Army funds for Military Intelligence purposes was requested and received. Corps Military Intelligence funds were increased to $10,000 and Divisions to $4,000.

Disbursing.-- The Disbursing subsection consisted of fourteen men. It was organized into Accounting, Pay and Allowances, and Commercial Accounts Branches.

Inasmuch as the section equipment was not available until several weeks after the arrival of the personnel in the United Kingdom, the Fiscal Officer, Western Base Section provided finance service for Headquarters, Third U. S. Army through a Class "B" Agent Office consisting of one warrant officer and two enlisted men from the 71st Finance Disbursing Section.

In order to obtain actual experience in problems and policies of European Theater of Operations, two officers and thirteen enlisted men were placed on temporary duty with Base Section Finance Disbursing Sections. In addition three enlisted men were sent for a short period to the Accounts Branch, Office of the Fiscal Director to learn its requirements regarding the preparation of vouchers, daily reports and capital papers.

Prior to the opening of the Army Disbursing Account, it was necessary to take care of certain technical matters pertaining to the account. These were as follows:

1. Obtained all necessary finance instructions pertaining to disbursing in the European Theater of Operations; these instructions were contained primarily in Finance Circular Letters issued by the Fiscal Director, European Theater of Operations, U. S. Army.

2. Reported total accountability to the Accounts Branch, Office of the Fiscal Director, European Theater of Operations, U. S. Army.

3. Forwarded signature cards of Disbursing Officer and Deputy Disbursing Officer to Fiscal Director, European Theater of Operations, U. S. Army, for transmittal to the Guaranty Trust Company, of New York, London Branch, a general depository of the Treasurer of the United States, and to Barclays Bank, Ltd., local depository, to be used in verifying indorsements on deposits.

4. Reduced balance with the Treasurer of the United States to $1,000.

5. Forwarded surplus Treasury Checks to Accounts Branch, Office of the Fiscal Director, European Theater of Operations, U. S. Army, for storage.

6. Secured the Appointment of Deputy Disbursing Officer as Sterling Deputy.

7. Obtained sufficient sterling funds for one month's disbursements from Fiscal Director, European Theater of Operations, U. S. Army.

8. Opened checking account with Barclays Bank, Ltd., and obtained supply of checks.

The Disbursing Account was opened in the European Theater of Oper-

ations on 6 April. The usual functions of disbursing were performed thereafter.

Prior to the departure of Headquarters for the Continent, one set of francs invasion currency was distributed to Disbursing Officers of Corps, Divisions and attached Finance sections as follows:

Boxes	Denomination	No. of Notes Per Set	Francs Set Value
2	2 francs	128,000	256,000
1	5	64,000	320,000
1	10	64,000	640,000
1	50	32,000	1,600,000
1	100	32,000	3,200,000
1	500	32,000	16,000,000
Total 7			22,016,000

Francs were distributed also to Purchasing and Contracting Officers appointed by Headquarters Third U. S. Army to be used for purchases on the Continent. These funds were distributed in sealed boxes, each box containing a total of 40,000 francs as follows:

Denomination	No. of Notes	Francs Value
5 francs	1,000	5,000
100 francs	350	35,000
	Total	40,000

To facilitate the computation of exchange on the Continent, conversion tables were compiled based on the rate of exchange set by Supreme Headquarters, Allied Expeditionary Force. These tables showed the conversion of Dollars and Sterling to Francs.

Inasmuch as Forward Echelon of Headquarters was scheduled to precede the Rear Echelon by two weeks, an Agent Finance Officer and three enlisted men from the Finance Section were designated to accompany the Forward Echelon. The mission of this group was to pay Headquarters personnel and convert personal funds to francs.

Before actual departure for the Continent American and British funds on hand were deposited, and the treasury balance and Barclay's balance were transferred to the Central Disbursing Officer in London. Surplus Treasury checks were forwarded to the Accounts Branch, Office of the Fiscal Director for safekeeping, and Barclay's checks were returned to the local depository.

Military personnel retained only a small portion of the pay and allowances they received while in the United Kingdom, most of it being returned to the United States in the form of allotments, personal transfer accounts or war bond purchases. The disposition of pay and allowances received by military personnel is shown in Annex No. 4.

CHAPTER 2
PRE-OPERATIONAL ON CONTINENT

As Finance Disbursing Sections arrived on the Continent, they were bivouaced according to troop density. A study was made of the tactical plan of operations in order that sections could follow up the main attack.

Upon receipt of final obligation reports for the fiscal year 1943-1944, 1944-45 funds were suballotted in amounts equal to the unobligated balances reported for 1943-44. Instructions were issued to Corps and Divisions to include obligations of Purchasing and Contracting Officers in future monthly obligation reports. Funds obligated during July, 1944 by units of Third U. S. Army are shown in Annex No. 5.

For the month of July approximately 1200 officers and 22,000 enlisted men were paid by the disbursing subsection assisted by the 11th Finance Disbursing Section. Of over $700,000 cash disbursements, more than $500,000 was returned in cash collections. A summary report of operations for July, 1944 of all Finance Offices of Third U. S. Army is presented in Annex No. 6; and the Disposition of Pay and Allowances of Third U. S. Army Military Personnel is shown in Annex No. 7.

CHAPTER 3
AUGUST OPERATIONS

After the Third U. S. Army became operational administrative duties became too voluminous to permit the Headquarters Finance Section to continue disbursing. Disbursing functions, consequently, were turned over to the 11th Finance Disbursing Section which was attached to Headquarters Special Troops; and later the 78th Finance Disbursing Section also was attached to assist in providing finance service to Army troops.

The Headquarters Finance Section was divided into two subsections, Administrative and Personnel. The personnel subsection prepared officers vouchers for the Headquarters and assigned troops and submitted them to the 11th Finance Disbursing Section for payment.

With the breakthrough of Third U. S. Army below Avranches, no trucks were available to move finance sections. In an effort to solve the transportation problem, Army Disbursing Sections were attached to other units with organic transportation as shown below:

Disbursing Section	Unit To Which Attached
11th Finance Disbursing Section -	Headquarters Third U S Army
56th Finance Disbursing Section -	121st Evacuation Hospital
71st Finance Disbursing Section -	48th Replacement Battalion
75th Finance Disbursing Section -	13th Evacuation Hospital
78th Finance Disbursing Section -	Headquarters Third U S Army
81st Finance Disbursing Section -	105rd Evacuation Hospital
98th Finance Disbursing Section -	136th Evacuation Hospital
94th Finance Disbursing Section -	55rd Replacement Battalion

Rapid movement over a large area made communications between this office and Finance sections, and between Finance sections and the units they were serving, extremely difficult. Keeping the units advised of the movement of Finance Disbursing Sections was solved by publishing locations in Administrative Orders. Maintaining service for corps troops was relatively simpler because Finance Disbursing Sections attached to Corps remained with, or near, the Corps Rear Echelons. Authority was obtained to issue one captured vehicle to each section in order to alleviate the transportation problem.

The amount of funds obligated by units of Third U. S. Army during August 1944 is shown in Annex No. 8; and a summary report of operations for the month for all Finance Offices of Third U. S. Army is given in Annex No. 9.

Third U. S. Army personnel retained only 11 per cent of their pay during the month of August, the balance being returned to the United States. Annex No. 10 shows the disposition of pay and allowances of military personnel.

CHAPTER 4
SEPTEMBER OPERATIONS

The number of Finance Disbursing Sections servicing Army and Corps troops was reduced to two sections for Army troops and two sections for each Corps. All other Disbursing Sections originally attached to Third U. S. Army reverted to the control of Advance Section, Communications Zone, but continued to assist in servicing Army and Corps troops. The locations of Finance Disbursing Sections were published periodically in Administrative Orders.

As a means of increasing mobility, each Corps Finance Disbursing Section was allocated one weapons carrier. Advance Section, Communications Zone Disbursing Sections operating in Army area were furnished two personnel carriers with trailers.

Allied Military Marks totalling 165,296,000 were distributed among Disbursing Officers. Each Disbursing Officer received one set of the following composition:

Boxes	Denomination	Number of Notes Per Set	Mark Value
1	100 marks	32,000	3,200,000
1	50 marks	32,000	1,600,000
1	20 marks	32,000	640,000
1	10 marks	32,000	320,000
1	5 marks	64,000	320,000
1	1 mark	64,000	64,000
1	½ mark	64,000	32,000
TOTAL 7			6,256,000

In addition, Belgium francs totalling 61,032,000 were distributed to those Disbursing Officers attached to Third U. S. Army and paying troops in Luxembourg. Rates of exchange between the Dollar, the German Mark and the Belgian Franc were set by Supreme Headquarters Allied Expeditionary Forces as follows:

One Dollar equals 10 German Marks
One Dollar equals 43.7732 Belgium Francs

The finance plan for continental operations was revised and published in Third U. S. Army Administrative Orders. The revised plan is shown in Annex No. 11.

Original specific suballotments of Military Intelligence and Entertainment funds were issued to each new division and corps; they were designated also as a procurement agency to use all other overseas appropriations, Monthly Obligation Reports were received, consolidated, and forwarded to the Fiscal Director, European Theater of Operations. Funds obligated by units of Third U. S. Army are shown in Annex No. 12.

The per cent of pay retained by Third U. S. Army personnel during the month of September was only 6.3 per cent, which partially accounts for the fact that the aggregate cash collections of all Finance Officers of Third U. S. Army exceeded the total amount disbursed. A summary report of operations of all Finance Officers of Third U. S. Army is included as Appendix No. 13; and the disposition of pay and allowances of military personnel is shown in Annex No. 14.

CHAPTER 5
OCTOBER OPERATIONS

A supply point was established in Third U. S. Army area for supplying currency and finance forms and for accepting sterling, dollars, negotiable instruments and surplus marks and francs. This supply point was located at [illegible] (NVL 1954.3) - Northwest Europe 1:250,000) and was operated by the 88th Finance Disbursing Section.

The 98nd Finance Disbursing Section was attached to Army and further attached to III Corps Headquarters. The Finance Officers of both units conferred with the Army Finance Officer regarding technical procedures and administration. Two weapons carriers were secured and issued to the 98rd Finance Disbursing Section for transportation unprovided in the Table of Organization for such a unit.

Instructions were issued to Finance Officers that until such time as German-issued "Reichsmarks" and "Rentenmarks" were placed in general circulation by Disbursing Officers, German-issued marks would not be accepted in denominations of 100 marks or greater; and German-issued marks that gave a date of issue prior to 1 September 1944 were not acceptable currency. No restrictions were placed on the use of Allied Military Authority Mark Notes.

Finance Officers serving Third U. S. Army troops in Luxembourg were advised of the program announced by Luxembourg authorities to withdraw German marks as legal tender and substitute therefor new Belgium francs and Luxembourg francs at the rate of one mark for 12.5 Belgium or Luxembourg francs. A special rate of exchange was provided for those military personnel who had received German marks as change in commercial transactions when the mark was legal tender and enjoyed a high rate of exchange. This special rate was one mark for 12.5 Belgian francs or Luxembourg francs; however, only a maximum of 50 marks per person could be exchanged at this rate.

In order to afford military personnel a means of safeguarding their funds during periods of duty in combat zone "Dreerhead Deposits" were made available. "Dreerhead Deposits" were temporary deposits made by military personnel with Finance Officers and repayable by any Finance Officer upon presentation of a proper voucher. These deposits were non-interest bearing.

During the month several reassigned corps and divisions reported Military Intelligence and entertainment funds for withdrawal and the balances were withdrawn and reissued to new units as necessary. Instructions were issued stating that upon reassignment of a corps or division cumulative totals of obligations and expenditures under general suballotments Finance Department General Allotment 60 funds would be reported to the new suballotting agency and a final report to this office was unnecessary.

CHAPTER 9
FEBRUARY OPERATIONS

The 153rd Finance Disbursing Section opened at the 6th Convalescent Hospital at METZ (M9629) for the purpose of servicing Army troops in that area. As the 153rd Finance Disbursing Section had arrived recently on the Continent and was unfamiliar with Continental Disbursing, an officer and an enlisted man from the Headquarters Finance Section were attached for temporary duty with the section in order to assist it in the activation of its account.

The limitation against exchanging Continental currencies used by the Third U. S. Army for sterling and dollar currency by personnel leaving the Continent was removed. A revised directive on German money and exchange procedure was issued. The information contained in this directive is shown in Annex No. 27.

Old issue Belgium notes in denomination of 100 francs and above were found to be in the possession of some Finance Officers. These notes were no longer negotiable, as they had been withdrawn from circulation by the Belgium authorities in October, 1944; consequently, it was necessary to arrange a redemption procedure for these notes with the National Bank of Belgium.

Finance Officers were ordered to accept old issue Belgian notes in denomination of 100 francs and above only upon presentation of a certificate from the individual stating that the notes were acquired through the source of pay and allowances received on or before 30 September 1944. This precaution was necessary, because reports had been received that large quantities of old issue Belgian notes were in the possession of Germans captured during the recent German Offensive in Belgium and Luxembourg.

All Finance Officers were informed that counterfeit Belgian Five Franc coins were in circulation. Instructions as to the means of differentiating between the counterfeit and the real coins were issued.

The distribution of procurement directives and forms for requisition and purchase through civilian channels were turned over to the Third U. S. Army Adjutant General. Only the procurement forms involving cash payments were retained by the Third U. S. Army Finance Office for distribution to Purchasing and Contracting Officers requiring them.

Military Intelligence funds and ETO open allotment funds were suballotted to new divisions assigned to Third U. S. Army. Funds were withdrawn from divisions and corps relieved from assignment to Third U. S. Army.

Monthly Reports and Analysis of Disbursements and Collections were consolidated and forwarded to the Fiscal Director, European Theater of Operations, U. S. Army. Technical Finance information was distributed to all Finance Officers. Reports of Survey were processed, reviewed, or approved and proper disposition made in accordance with new Theater directives.

Annex No. 28 shows the amount of funds obligated by units of Third U. S. Army. A report of the operations of all Finance Officers is summarized in Annex No. 29. The disposition of pay and allowances of Third U. S. Army Military Personnel is given in Annex No. 30.

CHAPTER 10
MARCH OPERATIONS

Finance Officers of Third U. S. Army were informed of the program of the French Ministry of Finance to exchange all holdings of Reichsmarks in the Departments of Haut Rhin and Bas Rhin in eastern France at the rate of 15 French Francs for 1 Reichsmark. Finance Officers were authorized to exchange at this favorable rate Reichsmarks acquired by military personnel as change in these Departments; however, the amount that could be exchanged by military personnel was limited to 50 Reichsmarks per individual.

An estimate of the quantity and kind of Finance forms required by Third U. S. Army units was submitted to the Fiscal Director, Advance Section, Communications Zone, in order that an adequate supply of forms would be available at all times. The 46th Finance Disbursing Section located at LUXEMBOURG, Luxembourg (P8315) continued to be the supply point for Finance forms, as well as the funding office, for the Third U. S. Army Zone.

Third U. S. Army Finance Officers were ordered to pay troops serving in Germany in Allied Military Marks only and to exchange all currencies, other than marks, in the possession of troops in Germany for Allied Military Marks. This was done in order to prevent the illegal requisition and return through military and civilian channels of currencies illegally obtained and to prevent black market activities in currencies.

Descriptions of additional valid Netherlands Banknotes were issued. The exchange rate for the Swedish Krona was set at 4.1957; Swedish Kronors equal $1.00.

Change List Guides for pay rolls computed in German marks were prepared and issued to all Finance Officers for optional use. Technical finance information was distributed to all finance units.

Reports of funds obligated by units of Third U. S. Army were prepared and forwarded to the Fiscal Director. A summary report of funds obligated is given in Appendix No. 31.

Operations of all Finance Offices of Third U. S. Army for the month are summarized in Appendix No. 32. The disposition of pay and allowances of Third U. S. Army military personnel is presented in Annex No. 33.

CHAPTER 11
APRIL OPERATIONS

The advance of the Third U. S. Army through Germany was so rapid and so extensive that contact with the Funding Office of Advance Section, Communications Zone was impracticable. It became necessary, consequently, for the Headquarters Finance Section to take over the funding of all Finance Officers assigned to Third U. S. Army. It also was necessary to maintain an emergency supply of blank finance forms on hand for Finance Officers inasmuch as the usual Advance Section, Communications Zone supply point was inaccessible.

Conversion into Allied Military Marks of all approved currencies other than marks was made for military personnel in Germany. All accumulated surplus currencies of allied countries were returned to the Funding Officer for return to the various governments of liberated countries.

In order to provide Belgian civilians employed in Germany by the United States forces an opportunity to transmit to their families funds received as wages, an agreement was reached with the Belgian Government whereby the wages of the Belgian nationals could be credited to a personal account or remitted to their families by the Belgian Government. The part of their pay that was to be retained by the civilian employees was to be paid by the using service. Similar agreements were being negotiated with the French, Luxembourg, and Netherland Governments.

Five tons of Allied Military Austrian Shillings were requisitioned for the payment of the Third U. S. Army troops who had fought their way into Austria. The rate of exchange was set at ten Austrian Shillings for one U. S. Dollar.

A conference of Corps Finance Officers was held for the purpose of discussing the finance plan to be inaugurated in the Third U. S. Army Zone of Occupation in Germany.

Plans for the payment of repatriated United States and British Prisoners of War were formulated. Several tons of currency, personal effects, and records belonging to United States and Allied Prisoners of War were captured in overrun Prisoner of War Camps. The currency, records and personal effects were forwarded to Supreme Headquarters, Allied Expeditionary Force for processing and return to their rightful owner.

An investigation was made of the pay status of enlisted personnel of the Third U. S. Army. This survey covered the extent of pay delinquency, the reasons therefor, and the possibilities of eliminating pay delinquency. The report is presented in Annex No. 34.

The 114th, 153rd, and 154th Finance Disbursing Sections were reorganized under Table of Organization and Equipment No. 14-500, dated 2 April 1944. The new Table of Organization provided for 2 officers, 1 warrant officer, and 17 enlisted men and resulted in a net loss of 2 enlisted men from each section. The surplus enlisted men were assigned to other Finance Disbursing Sections.

Finance instructions for Third U. S. Army troops were revised and published. These instructions are shown in Annex No. 35.

Action reports submitted by Purchasing and Contracting Officers revealed that procurement by each was practically non-existent since operations were almost entirely in Germany where all necessary unlicensed items were procured through requisition or seizure. Cash payments, however, were made to civilian employees for labor performed. Proper Finance procurement forms were distributed to Purchasing and Contracting Officers as needed. The list of Army Purchasing and Contracting Officers was brought up to date and the General Purchasing Agent, European Theater of Operations, U. S. Army, notified.

The shift of corps and divisions to and from Third Army command increased considerably the withdrawals and suballotments of funds during the month. In some cases divisions were reassigned before the funds could be used. This fluidity of units made the procedure requiring final obligation reports upon reassignment on open allotments of Finance Department General Allotment Funds impracticable in many instances. For maximum utilization of funds withdrawals were executed before final reports were received and proper adjustment made later upon receipt of the obligations incurred. A summary of the consolidated obligation report of April for the entire Army is shown as Annex No. 36.

Monthly Reports and Analysis of Disbursements and Collections for April were rendered to the Fiscal Director, European Theater of Operations. A summary report of operations for all Finance Officers of Third U. S. Army is presented in Annex No. 37. The disposition of pay and allowances of Third U. S. Army military personnel is given in Annex No. 38.

CHAPTER 12
MAY OPERATIONS

A revised currency policy for Germany was formulated. This policy provided that troops in Germany would be paid in Allied Military Authority Marks only. All currencies other than Allied Military Marks held by troops stationed in Germany were to be exchanged for Allied Military Authority Marks not later than 25 May 1945. After the deadline date, Finance Officers were to exchange other currencies only upon presentation of official orders which legitimized possession of such currencies, or by a full explanation by a unit commander of field grade of the special circumstances which made the exchange necessary and proper.

A shipment of 16,320,000 Schillings of Allied Military Austrian Currency was received for funding the Finance Officer paying Third U. S. Army troops stationed in Austria. The Austrian Currency was distributed to Finance Officers in sets of eight boxes of the following composition:

Boxes	Denomination	No. of Notes Per Box	Schillings Value
1	100 Schillings	30,000	3,000,000
1	50 Schillings	40,000	2,000,000
1	20 Schillings	40,000	800,000
1	10 Schillings	90,000	900,000
1	5 Schillings	90,000	450,000
1	2 Schillings	60,000	120,000
1	1 Schilling	60,000	60,000
1	50 Groschen	60,000	30,000
Total 8			6,760,000

Fiscal procedures for Redeployment and Readjustment after the cessation of hostilities in the European Theater of Operations were formulated. A copy of the basic plan is included as Annex No. 40.

The stabilization of the Third U. S. Army Area made it necessary to reassign the Finance disbursing sections for better geographical troop coverage. The three sections situated at Third U. S. Army Rear Echelon and working as one unit opened their respective disbursing accounts and were attached to III Corps. They were located as follows:

78th Finance Disbursing Section at ERFURT (O-3627), Germany
114th Finance Disbursing Section at BAMBERG (O-2719), Germany
154th Finance Disbursing Section at WEISSENBURG (T-3653), Germany

In addition, the 153rd Finance Disbursing Section was relieved from attachment to the 6th Convalescent Hospital, attached to XII Corps, and located at AMBERG (O-9901), Germany. It was found advisable for security reasons to place these installations in bank buildings near other troops. The 78th Finance Disbursing Section dispensed with disbursing duties and acted solely as a funding agent for Finance Officers in the Third U. S. Army Zone. The Army Headquarters Finance Section ceased funding and resumed disbursing duties, paying headquarters personnel and units attached as special troops.

In order to facilitate Finance service, 1 truck, 3/4-ton (Weapons Carrier) was authorized the 114th, 153rd, and 154th Finance Disbursing Sections. The 78th Finance Disbursing Section because of its specialized funding activity was authorized two trucks, 3/4-ton (Weapons Carrier).

Due to the rapid reassignment of divisions a considerable number of suballotments and withdrawals of funds were effected.

An additional report of [illegible] Finance Department was submitted in compliance [illegible] survey of all outstanding [illegible] sealed no outstanding

DECLASSIFIED

CHAPTER 13
LESSONS LEARNED & CONCLUSIONS

1. The Finance Disbursing Sections assigned to the Third U. S. Army were organized under Table of Organization and Equipment No. 14-500. During field operations these organizations were found to have certain limitations which are listed below.

a. No cashiers are provided in the Table of Organization, although in combat all business is in cash and three or four cashiers are required at all times.

b. Finance Disbursing Sections are not self sufficient for mess and transportation; consequently it was necessary to attach the sections to other units with organic mess and transportation.

c. Table of Equipment provides only one ¼-ton truck. This was found insufficient to transport large volumes of cash to and from the Funding Office.

2. One Finance Disbursing Section is required in close support of each Army to act as a Funding Office (clearing house) for the Army, Corps and Division disbursing offices. Although this service was provided by Advance Section, Communications Zone, often times the Funding Office was so far to the rear that there was an unnecessary waste of time, transportation and gasoline. It would be more efficient to have a Funding Office assigned to each Army.

3. One Finance Disbursing Section should be attached to each Corps Headquarters for the purpose of rendering disbursing service to all Corps troops. The size of the section should be determined by the number of Corps troops to be served.

4. In order that Finance Disbursing Sections may be located easily by the units being served, they should be in the vicinity of rear echelons of Army and Corps Headquarters when the Army is operational. In a static situation, they should be located according to troop density.

5. In the invasion of Europe four different types of invasion currencies were used; namely, French, German, Austrian, and Italian Allied Military Notes. This required the conversion and reconversion of funds in the hands of troops each time that they entered or left an European country. Most of this exchange could have been eliminated if one type of invasion currency had been issued for use in all of the countries. The equivalent of the currency of the invaded countries would have to be stated on each invasion note; for example, there would be stated on a One Dollar ($1.00) Invasion Note that it was worth 50 French Francs, 10 German Marks, 10 Austrian Schillings or 100 Italian Lire. The Invasion Note would circulate at par with the currency of the country in which the troops were stationed.

6. The suballotment of funds to Corps and Divisions was a function of the Finance Section of Army Headquarters. As long as Corps and Divisions were static the system worked well, but the numerous interchanges of Corps and Divisions during combat made contact with suballottees and control of funds from Army level impracticable. There was a continual process of suballotting, withdrawing, and resuballotting to the same Corps and divisions as they were shifted back and forth between Armies. Considerable paper work and confusion would be eliminated if all funds were suballotted by one central office in the Theater of Operations.

ANNEXES

DECLASSIFIED

ANNEX NO. 1

FINANCE PLAN FOR MOUNTING AND CONTINENTAL OPERATIONS

1. General. French currency only will be used on the Continent. The rate of exchange is 49.5663 francs equals $1.00 or 200 francs equals one pound. Neither dollar nor sterling will be legal tender. All personnel are prohibited from accepting British or American currency. Personnel violating this order will be subject to courtsmartial. All foreign financial and foreign trade transactions, and all exports and imports of currency by any member of the armed forces, is prohibited except as permitted under regulations issued by authority of the Commanding General, European Theater of Operations, U. S. Army. Initially all payments by Disbursing Officers will be in cash.

2. Mounting Operations.

a. Disposition of Surplus Funds.

(1) Unit commanders will be responsible that all sterling and dollar currency, except a sum not exceeding 10 shillings to cover purchases in the concentration and marshalling areas, is disposed of or exchanged by all members of their command. Facilities of static SOS Finance Units will be utilized insofar as possible.

(2) Military personnel may dispose of their excess funds by one of the following methods:

(a) Soldiers' Deposits (Enlisted personnel only)
(b) Purchase of War Bonds.
(c) Transmission of funds to the United States by FTA.

b. Partial Pay and Currency Exchange.

(1) Personnel officers will prepare partial payment payrolls (WD Form 366a) by organizations in sufficient copies to provide an original and two copies for each part of his organization called forward from the concentration area or home station. Such payrolls will include the names of all officers and enlisted men, attached and assigned, and one copy for each part of the organization will be properly signed before leaving the concentration area. The amount to be paid each man will be $1.05.

(2) One signed and two copies of payroll will be furnished the officer or non-commissioned officer in charge of each part of the organization which departs from the concentration area or home station or which will be detached from the organization prior to briefing. The names of all personnel not included in that part will be red-lined.

(3) On the triplicate, or retained copy, of the payroll, the amounts turned in for conversion will be entered opposite each name under the column general heading "Collections" or "Analysis of Collections" changed to read "Personal Funds". Separate columns will be used for pounds and shillings, and dollars (if any) and the last collection column will be left blank for use by the Finance Officer in entering therein the converted amounts.

(4) All 3 copies of the payroll, together with the personal funds collected for exchange will be entrusted to the officer or non-commissioned officer in charge of each detached party who will deliver payrolls and total cash to be exchanged to the Finance Officer assigned to his camp in the marshalling area, as soon as the camps are sealed. The Finance Officer will turn over to the unit or detachment commander, currency in proper denominations to cover the partial payments and a separate amount to cover the exchange of personal funds. The unit or detachment commander will complete the certificates as to payments on the original and duplicate copies of Form 366 at the time he obtains the funds. Triplicate copy, on which are shown the amounts to be exchanged for each man, will be retained by his and used for the purpose of paying the men the amounts due. The triplicate copy of the payroll will be turned over by the unit or detachment commander to his personnel officer at the earliest opportunity. Partial payments and exchange of currency will be made to troops immediately after briefing and prior to the further breakdown of units or detachments into unit parties (components of craft loads).

c. Unit and Hospital Funds.

(1) Custodians of Unit or Hospital Funds will turn over funds held in cash to their organizational or other Disbursing Officer who will issue a receipt (WD FD Form 38), or issue a Sterling Check for the amount of the funds.

(2) Repayment will be made by any Disbursing Officer upon surrendering the receipt (WD FD Form 38) or check.

(3) Funds deposited in registered bank accounts in the United Kingdom will not be withdrawn prior to embarkation. After the completion of the movement, the custodian of the funds will present a Sterling Check covering the balance of the registered bank account to his organizational or other Disbursing Officer who will effect payment in the appropriate currency.

3. Continental Operations.

a. Technical Finance Operating Procedure. Technical Finance Operating Procedure will be in accordance with "ETO-SOP No. 11 - Finance", Hq ETOUSA, dated 20 April 1944, as amended. Disbursing Officers should consult the SOP concerning their duties in regard to the following subparagraphs. Disbursing Officers should carry sufficient supplies to operate for sixty (60) days.

b. Currency Supply. Initial re-supply of currency for all troops on the Continent will be through the Fiscal Officer, Advance Section, Communications Zone. When Forward Echelon, Communications Zone becomes operational, supply of currency for all troops on the Continent will be through the Fiscal Director, Communications Zone.

c. Army Exchange Funds. Army Exchange Officers will deposit receipts from sales at Army Exchanges with Disbursing Officers.

d. Postal Funds. Postal Officers will turn in funds derived from sale of postal money orders and stamps to Disbursing Officers.

e. Special Service Funds. Stars and Stripes Routemen (enlisted men who are authorized to sell Stars and Stripes) and officers will turn in funds received from sale of Stars and Stripes and Yank, to Disbursing Officers.

f. Fiscal Procedure. See Annex No. 5 (Procurement Directive No. 1).

g. Procurement Procedure. See Annex No. 5 (Procurement Directive No. 1).

h. Enemy Funds. Any funds captured or received belonging to the enemy government or any of its departments or agencies which comes into the possession of military personnel will be promptly remitted without deduction to the nearest Disbursing Officer with full information as to the source from which the funds were received.

i. Funds of U S military personnel officially reported dead, killed in action, missing in action, missing, interned or captured by the enemy, and funds of deceased allied personnel will be turned in to the nearest Disbursing Officer with full information as to name, rank, serial number, status (KIA, MIA, etc.), organization and amount pertaining to each individual.

j. Repatriated Prisoners of War. Payment of repatriated Prisoners of War will be in conformity with directive to be issued by SHAEF.

k. Advances of Funds to Civil Affairs Officers. Civil Affairs Officers in need of funds during the early states of the operation and later in emergency situations, may secure such funds from Disbursing Officers.

l. Finance Service for duly accredited US War Correspondents and British War Correspondents attached to American units.

(1) Disbursing Officers are authorized to cash US Post Office Money Orders or Travelers' Checks for all duly accredited US War Correspondents.

(2) The privilege of Personal Transmission Accounts now afforded military personnel will be extended to duly accredited US War Correspondents.

(3) Accredited US Correspondents may have additional funds transmitted to them from the US by making arrangements with their home office in the US, who will be required to deposit in advance, such sums as they desire with the Central Disbursing Officer, APO 887.

(4) Disbursing Officers will make advances of pay to British War Correspondents on British advance of pay forms W-3241.

m. Vouchers covering travel and allowances to Allied personnel. Disbursing Officers will not make payment of vouchers covering allowances for travel, subsistence or quarters, presented by personnel of the Allied Forces. Such vouchers should be submitted through proper channels of the force concerned.

n. Troops departing from the Continent. No exchange of currency will be made for troops or civilian personnel when leaving the Continent. The exchange of currency for the appropriate currency of the country which troops or civilian personnel are to enter will be made on arrival at the port of debarkation.

ANNEX NO. 2

SUMMARY REPORT OF OPERATIONS
OF ALL FINANCE OFFICES OF THIRD U. S. ARMY
MARCH, 1944 TO JUNE, 1944

	March	April	May	June
Collections	$ 891,169	$ 925,982	$ 3,913,169	$5,599,371
Disbursements	$5,830,373	$4,455,352	$10,536,451	$7,080,899
Vouchers Processed	6,641	7,926	21,193	20,308
Personnel Paid	*	*	215,591	216,900
Finance Personnel on Duty	191	234	504	439

ANNEX NO. 11

THIRD U. S. ARMY
FINANCE PLAN FOR CONTINENTAL OPERATIONS

1. Rates of Exchange.

[illegible]0.5663 French francs equals	$1.00
[illegible]3.7732 Belgian francs equals	$1.00
1 pound Sterling equals	$[illegible].035
10 German marks equals	$1.00

2. Legal Tender.

a. Personnel are prohibited from having British or American currency in their possession on the Continent. All such currency will be exchanged for legal tender of the country in which serving.

b. Legal tender for continental countries is as follows:

France (including Alsace, Lorraine and Moselle)	French francs
Belgium	Belgian francs
Luxembourg	*Belgian francs
Germany	German marks

*Luxembourg may issue its own currency at a later date.

3. Financial Transactions. Except as permitted under regulations issued by authority of the Commanding General, European Theater of Operations, foreign financial and foreign trade transactions, and exports and imports of currency by any member of the Armed Forces is prohibited.

4. Technical Finance Operating Procedure. Technical Finance Operating Procedure will be in accordance with "ETO-SOP No. 11 - Fiscal Procedures", Volume I, Headquarters ETO, dated 31 August 194[illegible].

5. Funding Service. The Disbursing Officer, Headquarters Third U. S. Army will act as funding officer for Corps, Divisions and separate Disbursing Officers. This service will include (1) supply of currency, (2) acceptance of sterling and dollar currency, (3) supply of blank forms, etc. Checks and postal money orders will be accepted for transmission to the Central Disbursing Officer, provided "Invoice of Funds Transferred" WD Form 326, is made out to Lt. Colonel C. C. Beely, FD, symbol number 210-930. Similar funding service is also maintained by the Fiscal Officer, Advance Section, Communications Zone, for those Disbursing Officers located closer to Advance Section, Communications Zone.

6. Army Exchange Funds. Army Exchange Officers will deposit receipts from sales at Army Exchanges with Disbursing Officers.

7. Postal Funds. Postal Officers will turn in funds derived from sale of postal money orders and stamps to Disbursing Officers.

8. Funds Captured or Seized from the Enemy. Funds captured or seized from the enemy (declared as State Funds by G-2) which come into the possession of United States or attached allied forces will be remitted promptly, without deduction, to the nearest finance officer with full information as to the source from which funds were received.

9. Personal Funds of Casualties. Funds of United States military personnel officially reported dead, killed in action, missing, interned or captured by the enemy, and funds of deceased allied personnel will be turned in to the nearest finance officer with full information as to name, rank, serial number, status (KIA, MIA, etc.), organization and amount pertaining to each individual.

10. Repatriated Prisoners of War. Payment of repatriated prisoners of war will be in conformity with a directive to be issued by Supreme Headquarters Allied Expeditionary Force.

11. Troops Departing from Continent. No exchange of currency will be made for troops or civilian personnel leaving the continent. Exchange will be made upon arrival at port of debarkation.

ANNEX NO. 27

GERMAN MONEY AND EXCHANGE PROCEDURE
FEBRUARY, 1945

1. Upon entry into Germany, or as soon thereafter as local commanders consider it advisable, dollar, franc and sterling (English) currency in the hands of troops will be exchanged for Allied Military Authority Marks at the following rates:

1 mark equals 4.95665 francs
1 mark equals 10 cents (US)
1 mark equals 8 pence (English)

2. Corps and division commanders will prescribe the exchange procedure for units under their command.

3. The exchange procedure for Third United States Army troops is as follows:

a. Each company and detachment will prepare a duplicate list of the names of each member of the organization. The amount collected from each individual will be shown opposite his name, leaving sufficient space for entry of the mark value of the money turned in. The funds collected and one copy of the list will be turned in to the Finance Officer normally paying the unit. The Finance Officer will furnish marks to the organization representative in the correct amount to pay each individual.

4. Allied Military Authority marks, in all respects equivalent to valid German-issue marks, are paper money printed in the following denominations:

½ mark (50 pfennig)
1 mark
5 marks
10 marks
20 marks
50 marks
100 marks
1000 marks

Allied Military Authority marks bear the words "Alliierte Militarbehorde" and "In Umlauf Gesetzt in Deutschland". The value is expressed in German words and figures.

5. Valid Reichsmarks are issued by the Reichsbank in denominations of 5, 10, 20, 50, 100 and 1000. They bear the word "Reichsbanknote" and the value in German words and figures.

6. Valid Rentenmarks are issued by the Rentenbank in denominations of 1, 2, and 5. They bear the word "Rentenbankschein" and the value in German words and figures.

7. The following bank notes are known to be invalid, and will not be accepted by finance and postal installations:

a. Mark notes bearing decree date prior to 30 August 1924, issued by either the Reichsbank or the private banks.

b. Reichsmark notes issued by the private banks.

c. Rentenbank notes of Rentenmark 10 and upwards.

d. Reichskreditkassenscheine and Verrechnungsscheine notes of all denominations.

e. German paper currency in denominations larger than 1000 marks.

f. Army auxiliary currency (Behrmachtbehelfsgeld).

8. The smallest denomination coins are the Reichspfennig and Rentenpfennig. One hundred pfennigs equal one mark. There are no coins of greater value than five marks.

9. Until further order, military personnel in Germany are not authorized to have in their possession German-issue notes in denominations of 100 marks or larger.

ANNEX NO. 34

PAY STATUS OF ENLISTED PERSONNEL
OF THE THIRD U. S. ARMY AS OF
28 FEBRUARY 1945

1. This report presents an analysis of the pay status of enlisted personnel in combat and service units of divisions, corps troops and Army troops assigned to the Third U. S. Army. It analyses the pay status as of 28 February 1945 of 269,470 enlisted men, approximately 95% of the total assigned enlisted strength of the Third U. S. Army. It discusses the reasons for delinquency in pay and submits suggestions for the elimination of pay delinquency. The information upon which this report is based was obtained from 413 organizations assigned to the Third U. S. Army.

2. Approximately 87 percent of all Third U. S. Army enlisted personnel were paid in full on the 28 February 1945. The enlisted men not paid at the end of February were practically all combat troops who could not be paid on the last day of the month because of the tactical situation; however, they did receive pay as soon as the tactical situation permitted. Among units who did not undergo front line conditions the percentage of troops not paid was less than 1 percent.

3. Of the personnel unpaid at the end of February, many were paid on supplementary pay rolls or received partial payments during the first half of March. In most cases of non-payment a complete settlement of the enlisted man's account was not feasible, because excessive indebtedness and courts-martial fines made settlement impossible; consequently, only a partial payment could be given. Many enlisted men in this category, however, refused ever partial payments because they preferred to settle their accounts completely as early as possible. The following are the reasons advanced by the various units included in this survey for nonpayment of enlisted men on the last day of the month:

Tactical situation
Insufficient funds to cover indebtedness
Hospitalization of enlisted man
Enlisted man transferred into unit after pay roll prepared
Enlisted man not present on pay day
Personnel records not received
Enlisted man in confinement or awaiting trial
Enlisted man reduced in grade after pay roll prepared
Enlisted man did not desire to sign pay roll
Service Record incomplete
Enlisted man's allotment in process of adjustment
Enlisted man AWOL
Clerical errors
Pay roll erroneously signed

4. The Finance Department was not held at fault for the non-payment of troops. In only two instances was the failure to pay enlisted men attributed to errors on the part of the Finance Department.

5. The personnel system was considered as one of the principal causes of non-payment of enlisted men. The haphazard way records of enlisted men were kept was severely condemned. There were many cases of poorly kept service records with incomplete and questionable entries which made the enlisted man's pay status questionable and which necessitated time and correspondence in clearing such accounts.

6. The personnel policy in effect at Reinforcement and Hospital Units was criticized, because these organizations were paying enlisted men partial payments in amounts larger than the enlisted men were entitled. The result was that when these men were given an assignment or were returned to duty, their organization found them overpaid; and their insolvency often lasted through two pay periods.

7. Various proposals were offered for the elimination of pay delinquency. The suggestions listed below are quoted remarks from Corps and Division reports and represent an adequate cross section of the proposals offered by all units.

a. "More cooperation from Reinforcement Depots in promptly furnishing Service Records of men transferred promptly.

"More complete financial data on Service Records or temporary service records of men transferred from Reinforcement Depots.

"Consideration should be given to having Service Records or temporary Service Records accompany men upon transfer or return from hospitalization."--XII Corps.

b. "A better system of obtaining records of Reinforcements who are assigned to organizations with only affidavits for service records. It often requires two or three months before said records are located.

"Partial payments should be kept to a minimum and should not be made without some information regarding pay status of individual."--90th Infantry Division.

c. "More emphasis on proper entries in Service Records of enlisted men at staging areas in the United States, and while in the replacement system would aid materially in effecting prompt payment of enlisted men after they arrive at new organizations.

"Personnel officers and disbursing officers of mobile units are overburdened at critical times because the equipment issued to such sections is not designed for mobile operation, with the result that such sections become inoperative for a considerable number of hours before each move, during each move, and after each move. These inoperative periods are usually the very periods during which their services are needed most because the administrative processes that must be accomplished in connection with movements and payments, or concurrently with movements, keep increasing. Frequently this results in accomplishment of only the most urgent processes, and payment of troops is generally not as urgent as some other matters. Delay in payment could be minimized by any of the following:

(1) "Creating a trend toward reducing administrative processes instead of increasing them.

(2) "Specifically designed and built boxes which house office records and equipment without wasting space, and which fit compactly in standard type vehicles.

(3) "Provision for 'rolling' offices in specially designed truck bodies or trailers, or both, for personnel sections and other offices.

(4) "Not recommended at this time, but recommended for consideration after termination of the present wars is a system providing for partial payments only to be made outside the United States upon signature of a cash receipt in the amount the individual desires to draw, with all other payments, including settlements of pay accounts in full when desired, to be made by a central pay office in the United States at which a pay card on each individual in the Army would be maintained."--6th Armored Division.

d. "A more efficient system of paying men while absent from their units and a more thorough check made on all records passing through each Port of Embarkation and Replacement Depot, as otherwise the Personnel Officer has to write for pertinent information required after the man has been assigned, causing delay in making prompt payment."--5th Infantry Division.

e. "Discontinuance by the Reinforcement Command of their compulsory partial payment policy. Most casuals have temporary records when returning to their parent unit and a true picture cannot be ascertained of their financial status. Cases have been reported of Enlisted Men being made to take partial payments at 3 or 4 Depots or Battalions as part of their processing before being allowed to continue further on their way back to the division."--4th Armored Division.

f. "Adequate supply and distribution of pay roll forms at all times to facilitate preparation of rolls and thus take advantage of short breaks in tactical operations.

"Prompt transmittal of permanent Service Records by hospitals and reinforcement Depots."--4th Infantry Division.

g. "To refrain from paying enlisted men at reinforcement depots unless soldiers original service record is available. If service record is not available, make a partial payment to the soldier.

"To require hospitals and reinforcement depots to adhere to TM 12-230 as pertains to financial status and entries in service record. (A common practice is to omit transferring to financial page record of courts-martial fines collected). Forwarding indorsements made too frequent reference to "see previous indorsements" which inveriably give little or no information. It is not uncommon to receive notice from two disbursing officers that an enlisted man has been paid by both officers for the same period or portion thereof. This necessitates inquiry as to exact periods covered and deductions made in each case. In these cases considerable difficulty is encountered when making inquiry in that APO number of disbursing officer is not indicated.

"Closer supervision of enlisted men when they make affidavits in lieu of service record. Date of last payment and amount of allotments carried are often incorrect.

"Closer supervision by reinforcement depots and hospitals as to total partial payments made in a given period. Many enlisted men receive so many partial payments that they are overpaid and not due for payment until this indebtedness is settled.

"Stress the importance of all allotment applications accompanying service record at all times so that financial status can be determined.

"Stress the importance of the original Service Record accompanying the enlisted man upon transfer, especially when through reinforcement channels."--80th Infantry Division.

h. "Reinforcement depots should secure permanent records from unit to which the enlisted man was last assigned or attached and forward them promptly.

"Reinforcement depots and hospitals should not give partial payments in excess of accrued pay. WD AGO Form innn should be checked for allotments before partial payment is made.

"Reinforcement depots should record accurate information as to pay status on the Service Record indorsement as required by paragraph 68h, TM 12-230, instead of using stock entry, "See Remarks Financial""--26th Infantry Division.

Digitized by Google

1. "It is apparent that Personnel Officers are not making full use of temporary service records, as covered by paragraph 12 and 13, AR 345-155; also many Personnel Officers are not stating a man's account on the pay roll if his debits exceed his credits. This prevents the payment of a statutory partial payment. Also full use is not being made of supplemental pay rolls."--VIII Corps.

ANNEX NO. 35

THIRD U. S. ARMY FINANCE INSTRUCTIONS

1. Finance.

a. Rates of Exchange.

10 German marks equals	$1.00
49.6663 French francs equals	$1.00
43.7732 Belgian francs equals	$1.00
1 pound Sterling equals	$4.035

b. Legal Tender.

(1) Personnel are prohibited from having British or American currency in their possession on the continent. All such currency will be exchanged for legal tender of the country in which serving.

(2) Legal tender for military personnel in Continental Countries are as follows;

Germany - Allied Military Marks
France (including Alsace, Lorraine and Moselle) - French francs
Belgium - Belgian francs
Luxembourg - Luxembourg or Belgian francs

(3) As soon as practicable after entry into Germany, approved currencies, other than marks, possessed by personnel will be exchanged for Allied Military Marks.

c. Financial Transactions;

(1) Except as permitted under regulations issued by authority of the Commanding General, European Theater of Operations, (in Germany by specific instructions from Supreme Headquarters) foreign financial and foreign trade transactions, and exports and imports of currency by any member of the Armed Forces is prohibited.

(2) Commanders of all echelons will take continuing and vigorous steps to prevent the securing of funds by military personnel from unlawful sources, including captured enemy currency, barter with prisoners of war, black market operations and similar methods.

d. Technical Finance Operating Procedure; Technical Finance Operating Procedure will be in accordance with "ETO-SOP No. 11 - Fiscal Procedures", Headquarters European Theater of Operations, dated 23 March 1945.

e. Army Exchange Funds; Army Exchange Officers will deposit receipts from sales at Army Exchanges with disbursing officers.

f. Postal Funds; Postal Officers will turn in funds derived from sale of postal money orders and stamps to disbursing officers.

g. Funds Captured or Seized from the Enemy;

(1) Currency captured or seized from the enemy which comes into the possession of United States or attached allied forces will be promptly remitted, without deduction, to the nearest Finance Officer, with full information as to the source from which such currency was received.

(2) The procedure for the handling of funds that are the personal property of prisoners of war is set forth in Par 3c (4) (d), ETO-SOP No. 16, "Evacuation, Processing and Handling of Prisoners of War", 3 December 1944.

h. Personal Funds of Casualties; Funds of United States military personnel officially reported dead, killed in action, missing in action, missing, interned or captured by the enemy, or evacuated to the hospital, and funds of deceased allied and enemy personnel will be turned into the nearest finance officer with full information as to name, rank, serial number, status (KIA, MIA, etc.), organization and amount pertaining to each individual.

i. Transmission of Funds;

(1) The transmission by military personnel of funds, other than amounts less than One Dollar ($1.00) for souvenir purposes, to any point outside the theater utilizing means other than those afforded by U. S. Army Finance Officers, Army War Bond Officers, or through the Army Postal Service, is prohibited.

(2) Any person (excluding officers of field grade and above) desiring to transmit funds by Personal Transfer account, postal money order, or by purchase of war bonds, will first submit application in appropriate form to the unit personnel (or comparable administrative) officer, for countersigning.

(3) The unit personnel officer is charged with maintaining a record in respect to each such individual in the unit, indicating the date, amount, and method of every transmittal of funds by such person.

(4) Unit commanders will examine the unit record of fund transmittals in conjunction with individual deposits entered on WD, FD Form No. 33 (Soldiers' Deposit Book) and individual records of currency exchanges at frequent intervals to detect disproportionately large sums of money in the possession of individuals. All such instances will be investigated, and if unlawful possession is indicated, appropriate action will be taken.

j. Upon presentation of proper travel orders, Finance Officers are authorized to convert currencies for military personnel upon change of station or leave to another country.

ANNEX NO. 36

FUNDS OBLIGATED
BY UNITS OF THIRD U. S. ARMY
APRIL, 1945

Fund	Symbol	Amount
Contingencies of the Army	212/50102	$ 878.00
Finance Service Army, Pay Civilian Employees	212/50425	3,712.00

Personal Transfers	22.3
Other Collections	4.1
Retained	13.0
Total	100.0%

ANNEX NO. 39

THIRD U. S. ARMY
FISCAL PROCEDURE FOR REDEPLOYMENT AND READJUSTMENT

1. GENERAL.

a. Personnel. Finance administrative personnel, Finance disbursing sections and/or Finance teams will be located at assembly and staging areas to make payments, assist in reduction of funds in possession of troops, exchange currency, and otherwise provide finance service for troops embarking for the United States or for other theaters.

b. Application. All procedures required to be accomplished in the assembly area by the following paragraphs will be accomplished at the unit station if the organization proceeds directly to a staging area or port from the unit station.

2. PROCEDURES IN ASSEMBLY AREA.

a. Payment of Troops.

(1) The Soldier's Individual Pay Record, WD AGO Form 20, will be completed and in the hands of each enlisted individual prior to his departure from this theater. Enlisted personnel travelling separately from their units will be advised that they may draw partial payments through any personnel officer from any finance officer upon presentation of their individual pay record and upon proper identification.

(2) Officer's Pay Data Card (WD AGO Form 77) will likewise show complete and current information.

(3) All military personnel will be paid in full through the last day of the month preceding their departure from the assembly area. In the absence of the service or pay records, personnel officers will not omit enlisted personnel from payrolls, but will accept their affidavit for payment as prescribed in AR 345-155, 24 January 1945.

(4) All necessary partial payments will be made in the assembly area as no such payments will be made in the staging areas.

b. Reduction of Funds. All military personnel in the assembly area will be encouraged to dispose of all excess funds by the purchase of or investment in war bonds, soldiers' deposits, spear-head deposits, allotments, National Service Life Insurance, or personal transmission accounts. No such service will be available in staging areas, except for the purchase of war bonds through the static finance office.

c. Unit Funds (Non-appropriated funds). Unit funds will be disposed of in the assembly area in accordance with AR 210-50, 20 January 1945, and current theater directives. Units departing this theater may deposit their funds as spearhead deposits or exchange them for postal money orders for safekeeping during the movement. Money order fees may be deducted from unit funds as an authorized expenditure. Government bonds owned by and in the possession of departing units should be forwarded by registered mail and deposited with the U. S. Treasury Department for safekeeping. Where a unit is demobilized within the theater, a postal money order will be secured for the transmission of the unit funds to the ETOUSA Central Welfare Fund.

3. PROCEDURES IN STAGING AREAS.

a. Currency conversions. Currency conversions for troops will be accomplished in the staging areas from rosters prepared by unit and group commanders prior to departure from the assembly area. Each unit and reception station group commander will prepare a list in duplicate of the individuals under his control and will include the names of officers and enlisted men. Spaces should be allowed opposite each name for two columns headed respectively, "local currency collected" and "dollar equivalent". Such lists will be turned in with the local currency collected from individuals to the Finance officers at the staging areas for conversion, and the (blue or) yellow seal currency will be delivered to such commanding officers for payment to the persons concerned together with a copy of the roster on which the conversions are shown.

(1) Military personnel departing direct to another theater will be required to exchange all local currency in their possession for United States yellow seal currency. This will be accomplished in staging areas. Upon arrival at destination, yellow seal currency will be exchanged through disbursing officers for local currency of the country concerned.

(2) Military personnel departing to the United States will be required to exchange all local currency in their possession with disbursing officers for regular blue seal U. S. Currency. This will be accomplished in staging areas.

Digitized by Google

(3) No limit will be placed on sums of money that individuals may carry so long as the amount requested for conversion does not exceed the amount that the individual could have received through normal pay and allowances. Where excessive amounts are presented for conversion, disbursing officers will require the execution of certificates establishing the source as pay and allowances and in the event that the certificate is not satisfactory, a request for an investigation should be made to the individual's commanding officer.

b. Bank accounts. Prior to departure all personnel are advised to close their bank accounts in the United Kingdom or on the Continent. This may be accomplished by:

(1) Cashing a personal check at the bank or requesting the bank to transfer the balance by cable or mail to a given address.

(2) Obtaining a cashier's check which should be cashed prior to departure from this theater and converted into blue or yellow seal U. S. Currency.

4. PROCEDURES EN ROUTE.

a. Partial payment. Partial payments necessary for military personnel due to lack of funds at time of departure for other theaters or the United States will be accomplished on board ship. Administrative instructions will direct each unit and reception station group commander to prepare and have signed, a partial payment payroll for his organization or group prior to its departure from the assembly area.

(1) The partial payment payroll will be prepared for every member of the organization in the amount of $10.00 for each individual.

(2) Where the journey exceeds 30 days, additional partial payments of $10.00 for individuals may be made.

(3) Such payrolls, properly completed and signed, will be turned in immediately after sailing to the Class "B" Agent Finance Officer on board who was previously appointed by order of the commanding officer at the staging area, as Agent to a Finance Disbursing Officer at the same location.

(4) Funds necessary for such payments will be secured by the officer appointed to act as Class "B" Agent on shipboard from his parent disbursing officer.

(5) The payrolls will be paid in yellow or blue seal United States currency, dependent upon the destination, by the Class "B" Agent. If the number of payrolls is large, unit or group commanders may be appointed Class "A" Agents to the Class "B" Agent Finance Officer by the senior US Army officer commanding the troops on board ship, for the purpose of paying their organizations or groups.

(6) The Class "B" Agent Officer will make his returns to the first available Finance Disbursing Officer after arrival at destination or, if an opportunity arises, to any Finance Disbursing Officer enroute.

b. Currency conversion. All necessary conversions of currency for local currency at stop-over ports of call enroute will be accomplished by a procedure corresponding to that outlined in paragraph 3a above.

5. FULL SETTLEMENT OF PAY AT DESTINATION.

a. Administrative instructions will direct each unit and reception station group commander to prepare and have signed, prior to arrival at final port of debarkation, payrolls for full settlement of pay to be submitted to Finance Officer at destination.

DECLASSIFIED

ANNEX NO. 40

PICTORIAL ANALYSIS OF FINANCE FUNCTIONS

ADMINISTRATIVE-FISCAL: Preparation of Correspondence and Reports; Maintenance of Files and Fiscal Records; Suballotment of Funds.

ACCOUNTING: Processing of Paid Vouchers; Maintenance of Accounting Records.

PAY AND ALLOWANCES: Computation of Pay Vouchers and Commercial Accounts.

FUNDING: Shipment of Funds to Finance Officers.

CASHIER: Conversion, Collection, and Payment of Funds.

Preparation of Funds for Payment of Troops.

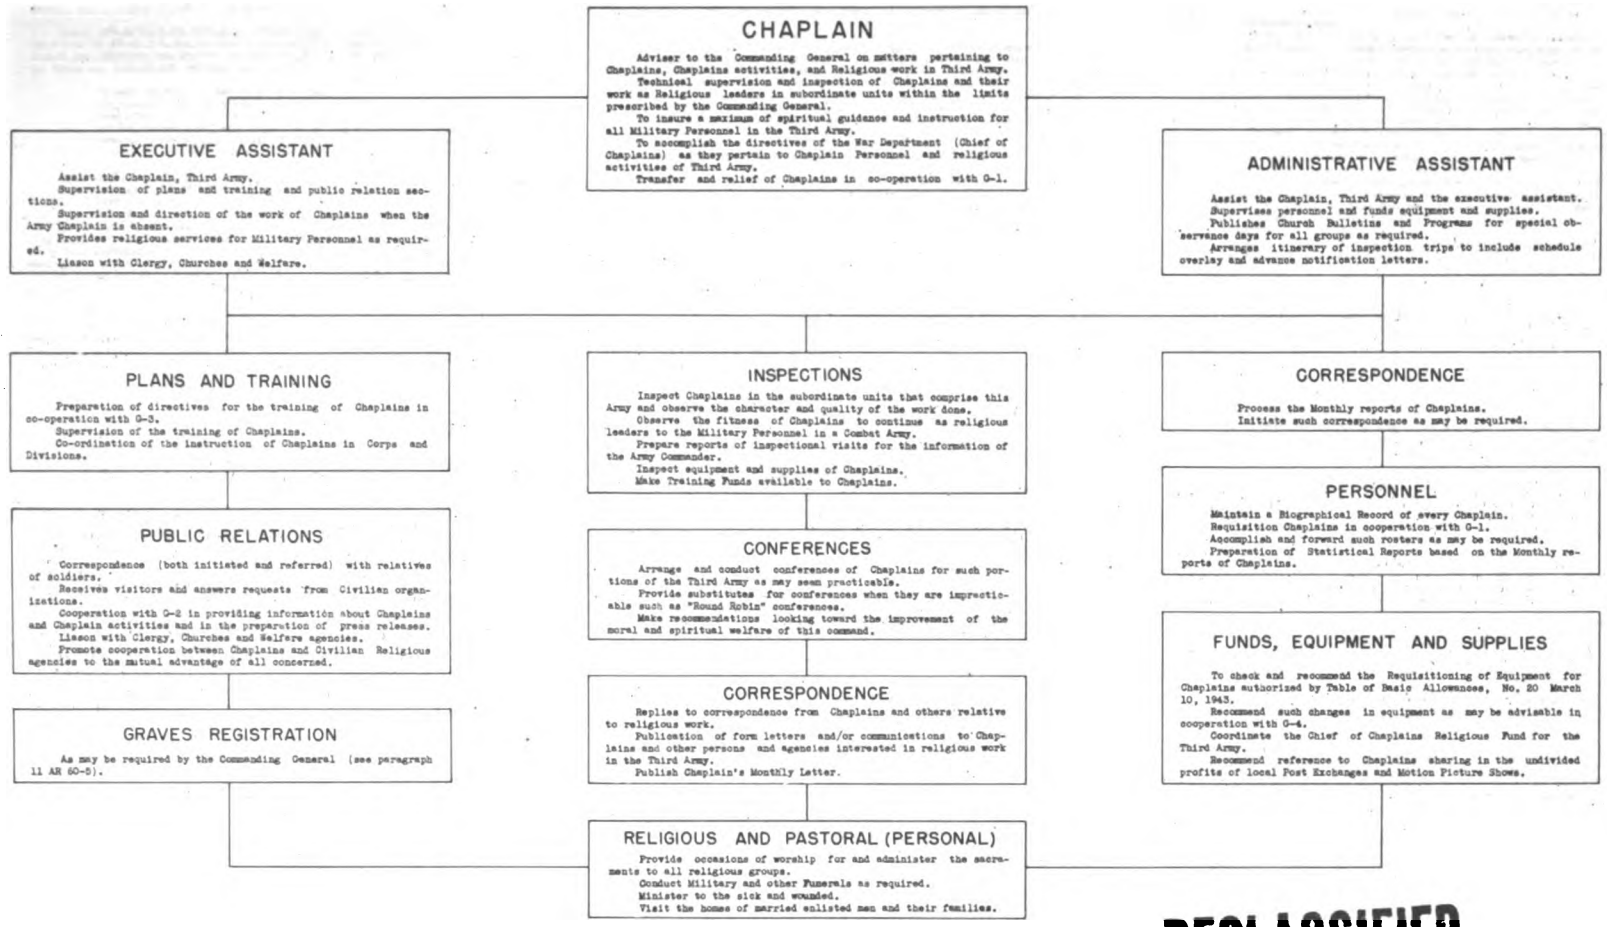
HEADQUARTERS THIRD U. S. [illegible]
Office of the Chaplain
APO 403

SUBJECT: After-Action Report.

TO : Commanding General, Third United States Army, APO 403, U. S. Army.

1. Submitted herewith is the After-Action Report of the Chaplain Section, Third United States Army Headquarters, beginning with 31 March 1944, and continuing at the properly designated intervals by chapters.

2. Taken quickly from civil life and plunged deep into the [illegible] strom of battle chaplains of the Third United States Army have [illegible] demonstrated unflagging devotion both to God and to country. Death, wounds, and decorations for some testify to the self-sacrifice of all. It has been well worth the cost. For in the person of each soldier the chaplain has met something of his Lord; and in trying to give he has received far more than he had to offer. Therefore our chaplains complete this portion of their task as soldiers of God strengthened by the knowledge not only that men of faith make the best fighting men, but also that fighting men can be mighty warriors in the faith.



JAMES H. O'NEILL,
Chaplain (Colonel), U. S. Army,
Third U. S. Army Chaplain.

CHAPTER 1
PLANNING IN UNITED KINGDOM

The Chaplain Section was organized under Tables of Organization 200-1, War Department, 1 July 1942, and with its normal complement of officers and enlisted men arrived at the first overseas headquarters site, TAFT and FLAKER CAMPS, CHELTENHAM, England, 23 March 1942. Office space previously arranged by the advanced party was occupied and found to be adequate for the proper functioning of the Section.

Space limitations within the initial camp site did not allow the reservation of a specific building as a chapel for religious services. In preparation for the first Sunday schedule of religious services in the new location, announcements were prepared and circulated to every section and attached unit or team, announcing Catholic and Protestant Services in the enlisted men's mess halls, Forward and Rear Echelons, for 26 March. This schedule of services marked the beginning of the ministry of the Chaplain Section to the personnel of the Army Headquarters and attached units. Heretofore, the Headquarters had been so located in the United States that separate services specifically designed for the Headquarters personnel were not necessary nor desirable. The response to this initial service was satisfactory and promising.

On 27 March, the Chief of Section, with the Executive, made official calls to the residences of all clergymen whose parishes were adjacent to TAFT and FLAKER CAMPS. Clergymen of the Church of England, the Roman Catholic Church, and the various Protestant (Non-conformist) Groups were contacted, and the reception accorded American Chaplains had from the beginning and continued to be very warm and enthusiastic. These early contacts resulted in the offer, on the part of the Church of England, of two beautiful church buildings, complete with all equipment, for use by Protestant Chaplains in conducting a full religious program for the American troops. This offer was accepted, and these two churches, one in close proximity of each echelon of the Headquarters, were used with great effectiveness throughout the stay in the initial location. The schedule of services for American military personnel was arranged so as not to interfer with the normal parish schedule then in effect for the Churches. As the American religious program developed and as the attendance at all religious services increased, both the local clergy and the members of the parish Church were deeply impressed. They frequently commented enthusiastically upon the loyalty of the American soldier to his religious obligations.

In the assumption of the supervisory responsibilities belonging to this Section, it was necessary in this preliminary period to maintain a close liaison with the Troop Movement Sub-section of the G-3 Section to obtain as accurate and current list of units being assigned to this command whose tables of organization authorized an assigned or attached chaplain or chaplains. Immediately upon the assignment of such units, the necessary correspondence was prepared and forwarded to secure the name of and certain other desired information concerning the chaplain or chaplains assigned and present for duty. When replies to this initial correspondence indicated the absence of a chaplain in a T/O vacancy, necessary action was initiated to requisition the desired chaplain or chaplains.

Early in April, an official visit was made to the Base Chaplain, Western Base Section, Services of Supply, European Theater of Operations, United States Army, with reference to T/E and non-T/E equipment for chaplains. The visit afforded the opportunity of obtaining certain information necessary for proper orientation with reference to appropriate channels of supply in this Theater.

Upon the request of the Theater Chaplain, the Army Chaplain visited Headquarters European Theater of Operations, United States Army, 4 and 5 April for the purpose of attending a conference on the policies of the Theater as they affected the work of chaplains.

During the period 25 March to 10 April, 149 chaplains came under the administrative supervision of this Section, and were, in general, assigned or attached as follows: forty-eight with five divisions, eighty-three with eleven non-divisional units, and eight assigned to corps headquarters. In a conference with the corps chaplains instructions were issued by the Army Chaplain to each corps chaplain to furnish this Section, monthly, a complete and accurate roster of all chaplains attached or assigned under corps jurisdiction. Individual Information Sheets were mailed to all Army units to obtain pertinent information on all chaplains on duty with Army troops. Appropriate instructions were given to units for whom chaplains were authorized and to which chaplains had not been assigned. Close liaison was maintained with the Personnel Sub-section, Adjutant General Section in the processing of all requisitions for chaplains. Initial rosters submitted by corps chaplains and individual Information Sheets prepared by Army Troop chaplains provided the necessary information for the beginning of a master card file. This card file was kept current at all times, and important changes occurring in the assignment of chaplains in the interim between the monthly roster were reported by corps chaplains as soon as they occurred. Monthly Rosters were prepared and submitted to the Theater Chaplain, who was kept informed on all changes occurring within the Third United States Army by means of an appropriate change in assignment form which was prepared and sent forward as soon as the change occurred.

A constant effort was made by this Section to insure full religious coverage for all religious groups within the Command. Detailed plans were made locally as well as throughout the entire Army for the appropriate observance by Jewish personnel of the Passover Holidays. Arrangements were made with local English synagogues and Jewish Communities to furnish appropriate religious ministrations to the Jewish personnel of this Headquarters. Transportation was provided and the attendance recorded represented a very high percentage of the total Jewish personnel present. Wide publicity was given to all Easter Services and the Religious Services throughout the entire Army were well attended on Easter Sunday. Many occasions arose for assistance and counsel by the Army Chaplain with unit chaplains who planned and conducted joint civilian and military services during the Easter Season. Holy Week Services were encouraged and many were conducted on a daily schedule with good results. The Pre-Easter Services within the Headquarters area were well attended.

In general the period 9-30 April is marked by three major emphases, namely, (1) the allocation of duties and responsibilities to each chaplain and enlisted man within the Chaplain Section; (2) the issuance of new instructions for accomplishing the Monthly Report of Chaplains, W.D., A.G.O., Form Number 5; (3) the systematic visitation of corps chaplains and chaplains assigned to Army troops. A detailed report of each visitation, enumerating observations made and corrections necessary, was submitted to the Chief of Staff.

Within the European Theater of Operations, an orientation school for chaplains was organized and conducted under the supervision of Headquarters Services of Supply, European Theater of Operations, United States Army. Third United States Army chaplains were detailed on a quota basis to attend this school. The duration of each class was two days, and classes were scheduled every two weeks. Quotas were received by the Army Chaplain and allocated to separate corps and Army troops. New chaplains arriving in the Theater were sent to this school as rapidly as the quota would allow.

All chaplains coming under the jurisdiction of this Army were instructed to requisition all chaplain's equipment authorized under the provisions of War Department Circular Number 81, dated 25 February 1942. A constant check of paragraph 6b of the Monthly Report of each chaplain was made to insure that all necessary equipment had been received and was being effectively and appropriately used. Deficiencies were noted and remedial measures taken immediately. All authorized equipment for this Section was requisitioned and received.

Attention is invited to the fact that the Chaplains of this Section, in addition to their other duties, performed the normal religious functions of unit chaplains for the personnel of this Headquarters. To the end that these functions might be effectively performed a small chapel and conference room was constructed adjacent to the office where daily services were conducted and religious instruction given as needed and desired.

At this stage in the training of unit chaplains, the need became apparent for some easily distinguishable feature of the chaplains uniform to provide for immediate recognition in the hour of combat when some outer garment such as a raincoat or trench coat might conceal the chaplain's insignia on the shirt collar. A recommendation was prepared by this Section, submitted to the Chief of Staff, was approved, and published in Section IV, Circular Number 4, this Headquarters, dated 17 April 1942.

Early in May the large number of units arriving in the United Kingdom made necessary an additional service on the part of the Chaplain Section, namely, a more careful supervision of the complete religious coverage for all units, especially separate battalions and companies not authorized tables of organization chaplains. To accomplish this task a new set of unit cards were prepared according to geographical location. The nearest chaplain was then notified to assume responsibility for all small units in his vicinity. The corps chaplains were instructed to set up the same plan for small units within corps troops. A map showing the location of chaplains assigned to army troops was set up in the Section and proved to be very valuable for unit commanders and chaplains. Visitation of chaplains and constant check on the status of equipment continued throughout this period.

In the period beginning 1 June, the number of Third United States Army chaplains had increased to 216, all of these chaplains had either received all authorized equipment or had requisitioned this equipment and were functioning effectively in the performance of their assigned duties with their respective units. With the increasing number of chaplains, a need was felt for some convenient instrument which might be effectively employed to disseminate information rapidly and concisely to each chaplain. It was not considered favorable under the restrictions governing travel to schedule a chaplain's conference of any kind. To meet this growing need for general instruction, the plan for the preparation of a Training Letter was originated and approved. This Letter was designed to be helpful to each individual chaplain and was to be prepared and issued by the Chaplain Section, not according to a fixed schedule but as the need seemed to warrant it. Training Letter Number 1 was prepared and forwarded to all chaplains of this Command, 1 June.

With the issuance of authorized transportation to chaplains, scattered reports began to reach this Section concerning certain misunderstandings that had developed between chaplains and unit commanders concerning the use of this transportation. In order to clarify the situation and to avert future difficulties of this kind, Section II, Circular Number 22, was prepared and issued by this Headquarters, 7 June 1942. This circular was the solution to what might have been a serious problem. After its issue, the number of complaints received were negligible and easily disposed of without excessive correspondence and command action.

As the organization of the Chaplain Section became complete, one chaplain from the Section was transferred to a combat unit to assist in meeting a great need for chaplains in the field. It was not necessary to secure a replacement.

In the period 15 to 25 June, units of this command were attached to First United States Army in numbers sufficient to reduce the chaplain strength of the Third United States Army to approximately 125. It was in this period that preparations were begun for the later movement with the Headquarters to the Marshalling Area and subsequently to the Continent.

A careful appraisal of this period revealed that satisfactory progress had been made in this preparatory period in equipping chaplains physically, mentally, and spiritually for the eventual hour of combat.

CHAPTER 2
PRE-OPERATIONAL ON CONTINENT

During the initial period there was a continuation of the procedures and policies formulated and practiced in the initial overseas period in the United Kingdom. The working out of the tactical planning of the invasion provided for the release of all divisional and many non-divisional units to the First United States Army. Those non-divisional units remaining with the Third United States Army upon arrival on the Continent were grouped in specific areas. The close proximity of units in these designated areas materially assisted the chaplain in providing complete religious coverage.

Through constant liaison with the Troop Movement Sub-section, G-3 Section, and the operations sub-sections of other sections of this Headquarters, current information was maintained in the Chaplain Section on the location of troop areas and of individual units within these areas. During this period of uniting, emphasis was placed on a complete and thorough religious program for all Third United States Army troops. Due to the small number of Catholic chaplains in certain areas, contacts were made with and the use of buildings secured from local ecclesiastical authorities for use in central Catholic Services for all adjacent military personnel. This procedure oftentimes proved to be very effective in enlarging the services of a limited number of Catholic Chaplains in a specific area.

The initial continental location increased the local religious ministry of the Chaplain Section. The Headquarters Commandant provided a large squad tent for religious services, and every phase of the religious program met with an enthusiastic response.

The location of this Headquarters in the pre-operational period was such that the Chaplain Section was easily accessible to all chaplains on duty with units assigned to the Third United States Army. The contacts of all unit chaplains with this section were frequent, thereby reducing the amount of visitation required of supervisory chaplains. Final sheets were made concerning equipment on hand and in use by unit chaplains.

Digitized by Google

The first large continental problem confronting this Section was the needed authorization for a minimum amount of tonnage for each unit chaplain to provide protection for his expensive religious equipment as well as a place for counseling and the giving of religious instruction. A request for such authorization was forwarded to European Theater of Operations, United States Army, 5th July.

During this period it was determined that the entire Chaplain Section would become a part of the Forward Echelon of this Headquarters.

Every effort was made during this period of waiting to prepare all chaplains by personal contact, correspondence, and otherwise for actual combat experience in the field. The morale of the chaplains was high, and there was the general feeling, "We are ready".

CHAPTER 3
AUGUST OPERATIONS

On becoming operational 1 August, Headquarters Third United States Army began to receive Third United States Army units which had previously been attached to First United States Army. The rapid return of units made it difficult for the Chaplain Section to compile readily a new and accurate roster of Third United States Army chaplains. During the time which had elapsed between the arrival on the continent and the operational period many of the Third United States Army chaplains had come combat with the First United States Army. Casualties had resulted, and many physicians returned to Third United States Army with many changes in chaplain personnel; however, within a short time new rosters were received utilizing every means available to get them, and the master card file was brought up-to-date.

Several conferences were held with the Army Graves Registration Officer and under his direction all United States Military Cemeteries on the Continent were visited and studied with a view of arranging for the participation of Third United States Army chaplains in the regular interment services. Information regarding the location of cemeteries was made available to all chaplains and certain supervisory chaplains were designated to assume responsibility and provide appropriate interment services for the cemeteries. Frequently checks were made with corps chaplains responsible for cemeteries in the corps zone to insure that each soldier buried received the appropriate religious rites of his particular faith.

At the request of this Section, a visit was made to this Headquarters by the Senior Chaplain, Advance Section, Communications Zone, for a series of conferences with reference to non-T/E religious items essential for the work of chaplains in the field. From these conferences definite plans were formulated for the procurement and distribution to all chaplains of religious supplies to include, communion wine, altar candles, Catholic and Protestant Testaments, Jewish Scriptures, pamphlets, prayer books, missals, medals, rosaries, benediction sets, tracts, communion paper cups, and other miscellaneous supplies as needed. This plan was outlined in Training Letter Number 2 mailed to all Third United States Army chaplains, 19 August.

The Theater Chaplain and members of his staff visited this Headquarters for conferences on chaplain replacements and chaplain supplies, 18-19 August. This visit effected a closer liaison with the Theater Chaplain, the Communication Zone Chaplain, and the Army Chaplain, this Headquarters.

During the month of August, the master card file indicated that 289 chaplains were serving in the Third United States Army, of whom 199 were Protestant, eighty-six Catholic and four Jewish. Among the Protestant Chaplains seventeen denominations were represented. 143 chaplains were on duty with eleven divisions; 137 chaplains were assigned or attached to non-divisional miscellaneous units; and nine chaplains were on duty with four corps headquarters.

Many divisions returned from combat with the First United States Army with vacancies in their normal complement of chaplains. Replacements were expedited for these deficiencies by close liaison with the G-1 Section.

In combat, chaplains performed their duties in an excellent manner. For many chaplains of this command this first month of operations provided their first combat experience. The rapid movement of Third United States Army columns in the initial phases of the campaign of France presented problems which unit and supervisory chaplains had never confronted before. Scarcely was there a time throughout August when unit chaplains of forward units could gather together any appreciable part of their unit personnel for a formal religious service; however, the conclusion should not be drawn that this was a period of inactivity for chaplains with combat units. On the contrary, the chaplain with his motherized transportation was equal to the situation and was challenged by the difficulties under which he had to work. Following the instructions of the Commanding General and the Army Chaplain, the unit chaplain was always "forward" with his men. His presence was a source of inspiration to officers and men alike, and his indomitable spirit and the ability to endure proved him to be a good soldier. He was available to his men at every pause for a prayer, a period of Confession, and time permitting, a religious service. Men went into the fight with his blessings and carried with them his words of encouragement. At the battalion aid stations and the division clearing companies the chaplain met those who had been injured at the front. He administered the Sacraments of his Church and the appropriate ceremonies of his Faith to the wounded and the dying who needed and sought the eternal comforts of religion. But the saddest of his tasks was the responsibility of writing a letter of comfort and consolation to a mother or wife or sweetheart whose greatest hero had fallen on the battlefield.

At the front at least one of our chaplains was killed by rifle fire in an effort to reach one of his wounded men. On several occasions chaplains within front-line divisions crossed over to the enemy and arranged truces for the evacuation of the wounded and the dead. For such gallantry in action our chaplains have received many decorations but whether decorated or undecorated the same general spirit prevailed among the chaplains of the command.

Total decorations awarded to chaplains of this command from D-Day to and including 31 August were as follows: Purple Heart, five; Bronze Star, four; Silver Star, six.

The continuing emphasis of the Army Chaplain was complete coverage for all personnel. To this end, chaplains were placed on a detached service basis to insure complete coverage for all hospitals receiving combat patients. The problem of sufficient chaplains in all hospitals became acute at this period.

Transfers during this period were few, but necessary transfers were made speedily wherever and whenever necessary with the cooperative approval of G-1.

Chaplain casualties within Third United States Army units for total period since D-Day to 31 August were reported as follows: Killed in Action, three; Wounded in Action, seven; Missing in Action, one; evacuated for other causes, one.

Religious harmony, cooperation, and unity of purpose prevailed continuously, and Monthly Reports indicated that the Third United States Army chaplains gave outstanding service during this period.

CHAPTER 4
SEPTEMBER OPERATIONS

The first part of the second operational month for the Chaplain Section was given over to the initiation of a new plan of acquiring and delivering non-T/E religious items to unit chaplains of all echelons. Each individual chaplain within the Third United States Army was asked to indicate his need for such items as communion wine, communion wafers and hosts, new testaments, Catholic and Protestant, missals, medals, tracts, etc. These estimates were consolidated by each supervisory chaplain through which they passed. Corps chaplains under the supervision of the Army Chaplain procured all supplies for individual chaplains within the corps directly from the Senior Chaplain, Advance Section, Communication Zone. This Section prepared a consolidated requisition for all supplies needed for unit chaplains on duty with Third United States Army troops.

The distance between the echelons of Headquarters became so great at this period that it was necessary to assign two chaplains on a temporary duty status to the Rear Echelon for an adequate religious coverage of the military personnel of Headquarters. These chaplains were returned to their respective organizations as soon as conditions permitted.

On 5 September, the first shipment of religious supplies were received under the new plan from Advance Section, Communications Zone, and were delivered the same day to the Corps Chaplain, XX Corps, for further distribution to units within the corps.

Training Letter Number 3 was prepared, approved by Chief of Staff, and mailed 6 September, to all Third United States Army chaplains.

VIII Corps with ninety-nine chaplains attached or assigned passed from the control of the Third United States Army to the Ninth United States Army, 7 September.

The Religious Services during this period were well attended, due in some measure to the fact that both echelons were together for the first time since this Headquarters became operational.

Conferences with corps chaplains and assistants were held frequently to insure full and complete Catholic, Protestant and Jewish coverage for all personnel in the corps zone.

Archbishop Francis J. Spellman, Military Vicar of New York, arrived 13 September at the Third United States Army area, and offered Mass at 1700 hours for the military personnel of this Headquarters and adjoining units. During this period of his stay at the Army Command Post, he was escorted by the Army Chaplain on a tour of corps headquarters and front line combat units. Catholic chaplains were contacted and Masses offered by the Archbishop wherever the tactical situation would permit. At the conclusion of his visit in this zone the Army Chaplain accompanied the Archbishop on his visit to First United States Army and his return to the Twelfth United States Army Group.

As the period of the Jewish Holidays approached, this Section completed arrangements for Jewish Holiday Services in VERDUN (U 2865) and throughout the Third United States Army area. The Jewish personnel of this Headquarters were dispatched by motor convoy to VERDUN (U2865) for the New Year Religious Services. All Jewish Yom Kippur Services scheduled within the Third United States Army area were coordinated and announced. This Section arranged for three Jewish Services to be conducted at the theater of METZ (U 4770). Each of these services registered a very large attendance drawn from all Third United States Army units in that vicinity.

The events of this month necessitated a new study and a new appraisal was made concerning the religious coverage in evacuation and convalescent hospitals. The result of this study revealed an insufficient number of Catholic chaplains in or near hospital installations, to provide adequate Catholic chaplains in or near hospital installations to provide adequate Catholic coverage for the wounded and the dying. Recommendation was prepared and submitted to Headquarters European Theater of Operations, United States Army, recommending that existing tables of organizations be changed to allow reassignment of one Catholic Chaplain and one Protestant Chaplain to each evacuation and convalescent hospital.

CHAPTER 5
OCTOBER OPERATIONS

Movement of the Headquarters into permanent buildings proved to be a definite asset to the religious program of this Headquarters and attached units. Heretofore, all religious services had been conducted in the field with a tent, small wall as protective covering for the altar only. Upon the movement of the Headquarters into the city of METZ (U 4770), an increasing attendance was noted from the personnel of neighboring small units not authorized an assigned or an attached chaplain. These circumstances called forth a special effort to make the religious program of this Headquarters serve as large an area as possible. To achieve a satisfactory measure of success in this "area plan" of services, it was necessary to give wide publicity to the schedule of religious services. The resulting success of this plan was even greater than was anticipated. One of the significant features contributing to the success of this "planned coverage" of many small units in one central program was the splendid interest and cooperation on the part of individual unit commanders. Unusually large attendances were recorded throughout this period at Catholic, Protestant and Jewish religious services. The responsibility for the Jewish religious program for this Headquarters and surrounding units was assumed by the Jewish Chaplain assigned to Headquarters XIX Tactical Air Command. The attendance figures increased, as they had always done through the campaign, on each Sunday that the Headquarters remained in the same loca-

Digitized by Google

tion. The large number of men receiving the Sacraments, requesting New Testaments, Scriptures, Prayer Books, etc., and otherwise indicating a forward practice of their faith is indicative of the strength of religion among the men of the Third United States Army.

On 12 October, this Section moved with the Forward Echelon of this Headquarters from HOLTZ (U 4770) to METZ (U 8512). Upon arrival in the city of METZ (U 8512) a reconnaissance was made of all Churches, Protestant and Catholic, and Jewish Synagogues located within the city and its environs. The schedule of services in these Houses of Worship was made available to all personnel billeted within the city.

A careful study of the garrison area assigned for the billeting of this Headquarters, revealed a combination theater-chapel which was available for religious services as needed. It proved to be highly desirable to conduct a full religious program within the garrison area for Catholic and Protestant personnel.

A large synagogue was located in the city of METZ (U 8512) and steps were immediately taken through the Local Civil Affairs Detachment to clear the building of enemy medical supplies and to make it ready for "area" Jewish Religious Services. This Section cooperated with a French military officer, who was an acting chaplain in this area, in opening a French-American Service Center.

Arrangements were made with the Army Graves Registration Officer to furnish this Section with copies of burial forms for all personnel interred in Army Military Cemeteries. These reports were made available to chaplains conducting burial services in the cemeteries in an effort to help them accomplish correctly the Monthly Report of Chaplains.

The most significant accomplishment of the entire month of October was the agreement worked out by this Section and the Quartermaster Section of this Headquarters whereby one tent, small well complete with fly was made available to every chaplain the desired it within this command. But since the authorization for transportation of chaplains was there any item of equipment issued, which was issued for the chaplains work, which was more important than the tent, small wall. This barrage provided not only office space, privacy for counsel, study and religious instructions, but it also gave protective covering for altar, organ, and other expensive and essential equipment.

CHAPTER 6
NOVEMBER OPERATIONS

On 1 November 1944 the Army Chaplain and the Assistant Army Chaplain attended services at the Cemetery Du End and the Cathedral in METZ (U 8512) commemorating the death of civilians during the German occupation.

The Right Reverend Henry W. Hobson, Bishop of Southern Ohio Episcopal Church, representing both the General Commission on Army and Navy Chaplains and the Chief of Chaplains, arrived at this Headquarters from the United States. He conferred with the Army Chaplain on matters relating to Episcopalian and Protestant Chaplains. On 4 November, twenty-six of the chaplains of the Third United States Army participated in a conference with Bishop Henry W. Hobson at the Thiers Hotel, METZ. (U 8512).

During the month, routine items of administration touched upon tentage for chaplains, procurement of religious supplies, military cemeteries, funerals, Christmas plans, photo coverage of chaplain activities, distribution of Jewish Chaplains, technical questions on letters of condolence, a foreign language survey concerning chaplains, illegitimate pregnancy and marriages, casualty problems and a general survey to Leaders Commanding Officers who are requisitioning chaplain transportation without filling a requisition for a chaplain.

Armistice Day celebrations were held at the Cemetery Du End, the Cathedral in METZ (U 8512) in other Churches and cemeteries in the Third United States Army Area, and likewise in all Army cemeteries of World War I within the zone of the Third United States Army.

On 12 November 1944, the Assistant Third United States Army Chaplain, having served thirty months with this organization, was relieved. His successor reported for duty on 22 November 1944.

Action was taken for the restoration of sixty children and eleven governesses to their homes in METZ (U 8512). The group had been refugees in BOAS L'ETAPE (Q 4443) and word from Reverend Durand, the Pastor of the Temple Protestant, METZ (U 8512) informed the Army that they had been returned safely to METZ (U 8512). Arrangements were made to hold Jewish Services in a synagogue in METZ (U 8557) for men of the Jewish Faith stationed in the XX Corps Area.

The execution of two German Spies at the Prisoner of War Enclosure at TOUL (U 4410) brought commendation to the Chaplain of the 28th Field Hospital, for the moral and spiritual effort of his services. Religious Supplies were received from Advance Section, Communication Zone, as a result of pooled requisitions received from Army Chaplains during October and sent in together on 1 November. This procedure has resulted in a steady flow of religious supplies to chaplains in the field.

Through the cooperation of the chaplains in the combat area, a considerable quantity of ecclesiastical property including: Monstrances, Ciboria, Chalices, Missals, and Testaments, was returned to the Bishop of METZ (U 8512). Burial services were provided for 3,672 military personnel by the Chaplains of the Third United States Army.

Since the Third United States Army became operational, the following casualties had been suffered through November by its chaplains; Three Killed in Action; one Missing in Action; three Captured (two released); three Seriously Wounded in Action; ten Wounded in Action; eleven Slightly Wounded in Action; one Slightly Injured in Action; Total Casualties, thirty-two.

From 1 June 1944 to 1 December 1944, the number of chaplains under the administrative control of the Third United States Army varied from month to month. These totals read commencing 1 June, 216, 99, 289, 317, 308, 211, and 251 as of 1 December 1944.

On 1 December the 251 chaplains in the Third United States Army were serving as follows; Army Headquarters, two; on duty with three Corps Headquarters, six; on duty with nine divisions, 118, with twenty-six Antiaircraft Artillery Groups and Battalions, twenty-six; with three Armored Groups, four; with three Cavalry Groups, five; with nine Engineer Groups and Service Battalions, twelve; with eleven Field Artillery Groups, twenty-one; with three Medical Groups, three; with eight Evacuation Hospitals, fourteen; with one Convalescent Hospital, two; with four Field Hospitals, four; with seven Medical Clearing Companies, seven; with two Medical Gas Treatment Battalions, two; with sixteen Ordnance Groups and Battalions, seventeen; with two Quartermaster Groups, two; and with three Tank Destroyer Groups, six.

CHAPTER 7
DECEMBER OPERATIONS

Early in December the Twelfth U. S. Army Group Chaplain visited the Third United States Army Chaplain for a general discussion of pending problems.

Bad weather for operations in the field were characteristic of this period. The rains were continuous and immoderate. The Army Commander suggested to the Army Chaplain that a special prayer be prepared and circulated to every soldier in the Third United States Army, with an appeal to Almighty God for fair weather for battle. 250,000 copies of the following prayer were circulated in the Third United States Army; "Almighty and most merciful Father, we humbly beseech Thee of Thy great goodness, to restrain these immoderate rains with which we have had to contend. Grant us fair weather for battle. Graciously hearken to us as soldiers who call upon Thee that armed with Thy power, we may advance from victory to victory, and crush the oppression and wickedness of our enemies, and establish Thy justice among men and nations. Amen." The reverse side of the card contained the following Christmas Message from the Third United States Army Commander; "To each officer and soldier in the Third United States Army, I wish a Merry Christmas. I have full confidence in your courage, devotion to duty, and skill in battle. We march in our might to complete victory. May God's blessing rest upon each of you on this Christmas Day. /s/ G. S. Patton, jr., Lieutenant General, Commanding, Third United States Army. This office had general supervision of this Prayer Card distribution.

Following the same thought, Prayer was made the subject of Training Letter Number 5, which was circulated to Third United States Army Chaplains and unit commanders at this time. The letter is as follows; "Chaplains of the Third Army: At this stage of the operations I would call upon the chaplains and the men of the Third United States Army to focus their attention on the importance of prayer.

"Our victorious march from the Normandy Beach across France to where we stand, before and beyond the Siegfried Line, with the wreckage of the German Army behind us, should convince the most skeptical soldier that God has ridden with our banner. Pestilence and Famine have not touched us. We have continued in unity of purpose. We have had no quitters, and our leadership has been masterful. The Third Army has no roster of Retreats. None of Defeats. We have no memory of a lost battle to hand on to our children from this great campaign.

"But we are not stopping at the Siegfried Line. Tough days may be ahead of us before we eat our rations in the Chancellery of the Deutsches Reich.

"As chaplains it is our business to pray. To preach its importance. To urge its practice. But the time is now to intensify our faith in prayer, set alone with ourselves but with every believing man, Protestant, Catholic, Jew or Christian, in the ranks of the Third United States Army.

"Those who pray do more for the world than those who fight; and if the world goes from bad to worse, it is because there are more battles than prayers.' 'Blest is lifted up' said Emerson, 'much more battalions than hands that strike'. Gideon of Bible Fame was least in his father's house. He came from Israel's smallest tribe. But he was a mighty man of valor. His strength lay not in his military might, but in his recognition of God's proper claims upon his life. He reduced his army from thirty-two thousand to three hundred men lest the people of Israel would think that their valor had saved them. We have no intention to reduce our vast attacking force. But we must urge, instruct, and indoctrinate every fighting man to pray as well as fight. In Gideon's day, and in our own, spiritually alert minorities carry the burdens and bring the victories.

"Urge all of your men to pray, not alone in church, but everywhere. Pray when driving. Pray when fighting. Pray alone. Pray with others. Pray by night and pray by day. Pray for the cessation of immoderate rains, for good weather for battle. Pray for the defeat of our wicked enemy whose banner is injustice and whose god is oppression. Pray for Victory. Pray for our Army, and pray for peace.

"We must march together, all out for God. The soldier who 'crucks up' does not need sympathy or comfort so much as he needs strength. We are not trying to make the best of these days. It is our job to make the most of them.

"Now is not the time to follow God from 'afar off'. This Army needs the assurance and the faith that God is with us. With prayer we cannot fail.

"Be assured that this message on prayer has the approval, the encouragement, and the enthusiastic support of the Third United States Army Commander.

"With every good wish to each of you for a very Happy Christmas and my personal congratulations for your splendid and courageous work since landing on the beach, I am, etc."

Two chaplains assisted at the execution of German spies at the Prisoner of War Enclosure at TOUL (U 4410), one Catholic and one Protestant.

The 87th Infantry Division Chaplain visited this Headquarters on the occasion of the 87th Infantry Division coming under the control of the Third United States Army.

The following directive was issued by the Army Commander in regard to Church Property in the Army Area; "In situations where the local clergy abandon churches, soldiers are not forbidden to enter such churches, but extreme care should be exercised not to force entrance into locked rooms or compartments; to touch sacred vessels, vestments, or in any way to violate American church manners. Any act which reflects discredit on the United States Army or violates the American attitude of reverence and respect for a place of worship in France or Germany will be reported by unit commanders or chaplains to the nearest Military Police Headquarters. Commander of offenders will take necessary action under Articles of War 79-80, and Section I, Circular 41, this Headquarters, dated 4 August 1944. This directive will be brought to the attention of all personnel."

Digitized by Google

The G-4 Section cooperated in forwarding a shipment of supplies very expeditiously from LONDON at this time.

Following the German break-through attempt, the VIII Corps Chaplains and chaplains serving other installations came under Third United States Army control.

The new procedure for the writing of Condolence Letters prepared by hospital personnel in the name of the Commanding Officer of the hospital for the signature of the appropriate chaplain, and addressed to the person whose name, relationship, and address supplied by the patient was inaugurated in the Third United States Army. This was a definite improvement in handling cases where wounded died in hospitals.

The military cemeteries at LIMEY (U 6429) and AMDILLY (U 6519) were closed toward the end of the month, and new cemeteries were opened at HAHN (P 8715) and GRAND FAILLY (U 9994). The total number of interment services conducted by chaplains under Third United States Army supervision were approximately 4,982, Allied and enemy dead.

With the assistance of documents issued by the Civil Affairs, general survey of religious affairs in Germany was made, it was discovered that in 1933, 32.5 per cent of the population of Germany were Catholic (Mostly concentrated in Bavaria and the Rhineland), 62.7 per cent Protestant, 0.8 per cent Jewish, and 4 per cent without religious preference. Austria, the Sudentenland, Alsace-Lorraine and the portions of Poland annexed in 1939 are all predominately Catholic. Consequently in the so-called "Greater Germany" the number of Protestants and Catholics are almost equal.

In addition to the Evangelical Church there were reported to be a number of small Protestant bodies which are called Free Churches. These include: certain Lutheran and Reformed sects, Methodists, Baptists, the Salvation Army, Mormons (Latter Day Saints), etc. The Christian Science Church and the group known as Jehovah's Witnesses existed in Germany before Hitler's rise to power but have since been banned. Before 1933 German Jews, like those of other countries, maintained Orthodox, Conservative and Reformed Synagogues.

It is the policy of the Supreme Commander to eliminate Nazi influence in official religious circles, to provide protection and fair treatment for all religious elements, and to permit freedom of religious worship for everyone in Germany.

Appropriate Religious Services for Christmas Day were conducted at midnight and in the morning for Headquarters troops. The War Department Theater which was used as a chapel, was appropriately decorated with Christmas trees, holly, and greens. The 61st Army Ground Forces Band supplied the music for the Protestant Service and the 28th Field Hospital choir participated in the Catholic Service.

On 26 December, the Forward Echelon moved to LUXEMBOURG (P 8422). The Rear Echelon remained at NANCY (U 8512). At this period, the Chaplain Section was a part of the Rear Echelon.

On the close of the month, the Third United States Army included the III, VIII, XII and XX Corps. The chaplains under the supervision of the Third United States Army totaled 262, and were serving as follows: Army Headquarters, two; on duty with four Corps Headquarters, eight; on duty with ten divisions, 138; with twenty-six Antiaircraft Artillery Groups and Battalions, twenty-six; with three Armored Groups, six; with three Cavalry Groups, four; with eight Engineer Groups and Service Battalions, thirteen; with eleven Field Artillery Groups, twenty-one; with three Medical Groups, three; with ten Evacuation Hospitals, eleven; with one Convalescent Hospital, one; with five Field Hospitals, five; with eight Medical Clearing Companies, eight; with two Medical Gas Treatment Battalions, two; with sixteen Ordnance Groups and Battalions, seventeen; with two Quartermaster Groups, two; and with three Tank Destroyer Groups, six.

CHAPTER 8
JANUARY OPERATIONS

The opening of 1945 found the Chaplain Section of the Third United States Army located in NANCY (U 8512). Religious Services were conducted for Third United States Army personnel on New Year's Day in the local churches. The Ardennes Salient situation was in its closing phase, during which the Third United States Army had lost three Protestant and two Catholic Chaplains, missing in action.

A survey of the list of Military Dead revealed that there were many with religious preference classified as "unknown". The Third United States Army Chaplain secured lists of such unknown religious classifications and with the aid of the Corps, Division, and unit chaplains, determined the religious preference of a large percentage. This enabled the Graves Registration Service to erect proper grave markings; a Cross or a Star of David. An average of twenty such inquiries were received daily in the Third United States Army Chaplain Office. When the information was received, it was forwarded on to the Graves Registration Officer.

On 8 January, the Chaplain Section moved with the Rear Echelon, instead of the Forward, as formerly, from NANCY (U 8512) to the city of ESCH (P 7200). Four rooms were occupied on the second floor of a modern office building. The Section was ready for operations on the morning of 9 January.

The Third United States Army Chaplain and Assistant visited the city of LUXEMBOURG (P 8412) and made contacts and arrangements for complete religious coverage for the Forward Echelon's religious services.

At this period, difficulties arose concerning the flow of non-T/E religious supplies. For several months many units received only a small portion of needed rosaries, prayer books, missals, medals, and New Testaments for Catholic men. Protestant supplies also were very meager. Divisions that transferred from the administrative supervision of one corps to another were frequently without supplies on account of the failure of the previous corps to notify and make delivery to the new corps. Some units reported making trips to the nearest Communications Zone, Base Section, only to return without supplies requested. The Communications Zone Supply Officer stated that while some supplies were indeed insufficient, reservation had been made for shipping space at the New York Port of Embarkation, and it was expected that within two months the situation would improve. The Chief Quartermaster, European Theater of Operations, issued Circular #7, 15 January 1945, indicating improved organization of Chaplain Supply matters.

A satisfactory conference was held with the Oise Base Section, Communications Zone Chaplain and a standard procedure for non-T/E supplies was adopted. Chaplains of the Third United States Army were advised in Training Letter Number 6, under date of 22 January 1945, that original requests for non-T/E supplies would be filed in triplicate by individual chaplains on the twenty-fifth of each month. The European Theater of Operations Chaplain kept a card showing supplies furnished each chaplain; hence the importance of individual applications. Chaplains of Special Troops Third United States Army would file requests with the Third United States Army Chaplain before the twenty-fifth of each month. Chaplains whose units were attached to Corps would submit individual requests to the Corps Chaplain before the twenty-fifth of each month. Chaplains within Divisions would submit individual requests through the Division Chaplain to the Corps Chaplain. The Army and Corps Chaplains would forward two copies of the individual request to the Senior Chaplain, Headquarters Communications Zone, European Theater of Operations, APO 887, and one copy to the Oise Base Section, Communications Zone Chaplain, APO 513, on the first of each month. The Oise Base Section, Communications Zone Chaplain, would deliver the supplies to the Army Chaplain and to the respective Corps Chaplains. Receipts accompanying supplies released to the Army Chaplain and to the Corps Chaplain were promised upon delivery. Distribution would then be made through the Army Chaplain for Army Troops, and through Corps Chaplains for Corps Troops and Divisions.

Chaplains were further advised in Training Letter Number 6 that the success or failure of the supply system depended on supplies reaching front-line chaplains and the men whom they served. Chaplains were advised not to omit until supplies were exhausted before filing a request. Negative requisitions, with explanation, were to be submitted by Division Chaplains to their respective Corps Chaplains when no supplies are desired for the following month. Supplies would be provided only on requisition, except in emergency. Standing order requisitions would not be honored. Desired supplies previously requisitioned but not received would be included in a requisition submitted the following month. Chaplains were advised that if they could not reach the proper Army or Corps distribution point to pick up supplies in person, they should contact any agency in their unit that may have transportation going to the assigned distribution point and arrange for collection of the supplies. Chaplains were admonished not to complain that they had failed to receive supplies unless they could prove that they had filed a request and were prepared to exhibit a copy thereof. When Corps Chaplains received supplies for Division Chaplains who had passed from their administrative control, these supplies would not be kept or returned. A notification that such supplies were waiting would be sent to the new Corps Chaplain, who would see that the undelivered supplies would reach the unit designated. While the Army Chaplain's Office was not a supply section, it was concerned that the flow of supplies for Chaplains of the Third United States Army be maintained at an efficient level.

DECLASSIFIED

[illegible] effort [illegible] secure more accurate interment records made [illegible] Monthly Report of Chaplains. Directions were given in Training [illegible] 22 January 1945, to all Chaplains of the Third United [illegible] Forces this purpose. Despite the fact that the number of American, Allied and enemy interments for the month of December numbered some thousands, December Chaplain Reports list under paragraph 7c (W.D. Ch. Form No. 3) less than thirty-five. The question was raised as to whether this was in violation of the instruction for paragraph 7 in the Monthly Report, and of the letter from the Chief of Chaplains (File EPCHS 319.1 CMR, Subject: "Reports of Burials and Funerals") dated 29 August 1944, directing that chaplains conducting interment services report for each burial name, grade, organization, serial number, and the name of the cemetery. In Training Letter Number 4, dated 10 October 1944, from the Third United States Army Chaplain, chaplains were advised to conform to the directive of the Chief of Chaplains, especially since channels of official correspondence were becoming burdened by communications from the Office of the Chief of Chaplains directing that chaplains supply missing or incomplete records of interments.

Decision was made that administrative supervision of chaplains working in cemeteries rests with the Corps Chaplains. United States Military Cemetery No. 1 at HAHN (P 8715) was under the supervision of the XII Corps Chaplain. The United States Military Cemetery No. 1 at GRAND FAILLY (U 9994) was under the supervision of the III Corps Chaplain. Future installations would be announced by the Third United States Army Chaplain, and the appropriate Corps Chaplain advised to assume administrative responsibility. From time to time, each Corps Chaplain was to issue a duty roster covering a two week period to include names of Protestant, Catholic, and Jewish Chaplains assigned to cemetery duty. Services would be held by a chaplain representative of each religious group at least three time a week. For example, the Protestant Chaplain who conducted services on the 7th of the month would be presumed to be conducting Protestant burial services for all Protestant interments since the visit of the last Protestant Chaplain to the cemetery. His Monthly Report should list interments for which services were conducted under the date that he was actually present. The same procedure was to be followed by Catholic and Jewish Chaplains. The name, grade, serial number, organization, and place of each interment would be reported in paragraph 7c, of each officiating Chaplain's monthly report.

The Army Chaplain received from the Army Graves Registration Officer consecutive lists of interments made in each cemetery. These lists were immediately dispatched to the responsible Corps Chaplains. For example, a Catholic Chaplain who conducted services on the 14th of the month might desire to know the names of the Catholic dead for whom he conducted services. If he could not secure the data before leaving the cemetery from the Graves Registration Officer, he could secure the information from the Corps Chaplain from the date that the last Catholic Chaplain officiated.

For purposes of future check it was regarded as advisable for the Corps Chaplain to submit to the Army Chaplain copies of the Duty Rosters as they were issued. If past Duty Rosters covering the period from the beginning of operations had not been forwarded, they too would be desired.

To prevent a volume of future official correspondence, chaplains were advised to be extremely conscientious in the fulfilment of the duty of recording interment services. The Army Chaplain explained to correspondents "the answer 'I don't know' will not be satisfactory when placed on an official communication as the '7th Indorsement' from a higher echelon of command. It will be the chaplain's responsibility to secure as accurate a record as possible of each interment to include name, grade, serial number, organization, and cemetery designation. The Chief of Chaplains has been advised as to the difficulty of obtaining this record, but in his letter dated 29 August 1944, indication was given as to the procedure to be followed. A blank entry under paragraph 7c does not constitute obedience to the directive of the Chief of Chaplains on 'Reports of Burials and Funerals'".

Toward the end of January a conference was held with Jewish Chaplains on the Jewish Passover Holidays. An announcement of the results of the conference appeared in Training Letter Number 6 reading as follows: "The annual Jewish Observance of the Feast of the Passover extends, this year, from 29 March through 5 April. The first two days (29-30 March) and the last two days (4-5 April) are of particular obligation. While tactical and geographical necessity may prevent many Jewish men from keeping the Passover as they desire, nevertheless, chaplains will take care to cooperate with Commanding Officers in providing such means of religious observance as may be available. During this period it is customary for Jews to abstain from ordinary bread and instead eat MATZOTH. During the Passover Holy Days approximately one pound per mattoth per Jewish observant is needed. Passover wine is also a desirable requisite. These supplies should be included in non-T/E requisitions submitted before 25 February 1945. They will be

[redacted]

The total number of chaplains under the supervision of the Third United States Army Chaplain on 31 January 1945, was 354. These were distributed as follows: Army Headquarters, ten; on duty with four Corps Headquarters, nine; on duty with fifteen divisions, 197; with thirty-three Antiaircraft Artillery Groups and Battalions, thirty-three; with four Armored Groups, six; with three Cavalry Groups, four; with thirteen Engineer Groups and Service Battalions, twenty-two; with fourteen Field Artillery Groups, twenty-eight; with three Medical Groups, three; with twelve Evacuation Hospitals, thirteen; with one Convalescent Hospital, one; with six Field Hospitals, six; with ten Medical Clearing Companies, ten; with two Medical Gas Treatment Battalions, two; with seventeen Ordnance Groups and Battalions, eighteen; with two Quartermaster Groups, two; and with four Tank Destroyer Groups, eight.

CHAPTER 9
FEBRUARY OPERATIONS

The Adjutant Section, Third United States Army, changed location on 1 February from [redacted], to the [redacted] on the [redacted].

On the 5th and 6th of February, the Army Chaplain was present at a [redacted] at the [redacted] of the Rhine-Main Center of Gravity as [redacted] Army, which was attended by the First, Third, Seventh, Ninth, Fifteenth Armies, and Sixth United States Air Force Chaplains. Discussion centered on questions of supplies, reinforcements, administration, exchange of personnel, and other profitable subjects.

[redacted] and in February, the Assistant Executive, [redacted] of the Army Air Force, spent ten days at the headquarters covering work of [redacted] and Special Service Sections. The Remagen Battle Field was visited.

[redacted] cases of trench sickness were reported during the month. [redacted] was held on the 28th for Antitoxin Administration.

The number of interments during the month was 4,260.

The roster of Third United States Army Chaplains during February numbered [redacted].

CHAPTER 10
MARCH OPERATIONS

A [redacted] Jewish Chaplain was held at the Third Army Headquarters [redacted] on March 8 [redacted] Army Chaplains.

CHAPTER 12
MAY OPERATIONS

On the first day of May, Chaplains reported the over-running of German Prison Camp, at REGENSBURG (V 7878), MAUTHAUSEN (M 0284), and CHAM (D 9980). With these reports came stories of the finding of human bodies stacked in the past week, crematoria, of kennels where huge dogs were kept to torment prisoners, and of other German atrocities. This period found Chaplains advancing into Austria and Czechoslovakia, and services were held in SALZBURG (Q 4500) and other places famous in the Nazi regime.

At this time the wounded were carried to the rear areas almost entirely by air.

The Chief of Chaplains of the Wehrmacht, Major General Dormann, a Protestant Bishop, and with him, his staff, Colonel Wirmann, Catholic, and Colonel Muenchmeyer, Evangelical, retreating from BERLIN (Z 7) with the Commandant of the Wehrmacht headquarters, surrendered to the 20th Infantry Division. While under arrest at a Benedictine Monastery, they were interviewed by the 20th Division Chaplain and the 4th Armored Division Chaplain. It was reported that they were in great admiration of our Chaplains Corps. Commenting on our fifteen Chaplains in the Division, they asserted that they had great difficulty with the basis to have one Catholic and one Protestant assigned to each Division. Their senior rank was admitted to be a military Front and a sop to the religious-minded people of Germany. They admitted that the Nazi Party - with which they disclaimed membership - had to move cautiously toward the extermination of religion. The seeds were to die, for drastic action, but the slow death was in process. They appeared very familiar with the objectives and personnel of the United States Army Corps of Chaplains and could not praise it too highly.

Victory was celebrated in all units on 9 May, with services dedicated to the troops who destroyed the German Army, to the dead who lie near the roads from the Channel to the Elbe, and from the desert to the Alps. Victory meant the triumph of truth, the freedom and the dignity of the common man. The war ended with a common sentiment on the part of the chaplains that their belief in the rights of the common man was strengthened, and with the world's tragic losses before them, a better way would be found to settle human differences, and live their lives in peace, with reason, and with enduring good-will.

General Eisenhower issued an order of the day declaring that "full victory in Europe had been attained" and commending each member of the Allied Expeditionary Forces "for valiant performance of duty." Asserting that the "crusade in which we all embarked in the early summer of 1944, has reached a glorious conclusion," and the Supreme Commander asserted that "our accomplishments at sea, in the air, on the ground, and in the field of supply have astonished the world."

"Even before the final week of the conflict, you had put five million of the enemy out of the war. You have taken in stride military tasks so difficult as to be classed by many observers as impossible. You have confused the enemy on the road to victory, you have endured every discomfort and privation, and surmounted every obstacle ingenuity and desperation could throw in your path. Allied fighting men, General Eisenhower said, did not pause until "our front was firmly joined up with the great Red Army coming from the east and other allied forces coming from the south."

"But Allied troops, in achieving victory, have travelled through hundred of miles, marked by the graves of former comrades, for whose sacrifices, the Supreme Commander added, "the blood of many nations has been shed to gain the victory of the fallen."

The Chaplains of the Third United States Army participated in three campaigns on the continent; Normandy Campaign, 6 June 1944 to 24 July 1944; Northern France, 25 July 1944 to 14 September 1944, and the Germany Campaign, 15 September 1944 to an unannounced date.

In the line on 9 May were 17 Divisions with 225 Chaplains assigned. 120 Chaplains were attached to other supporting units. Third Army headquarters (Rear) was located at ERLANGEN (S 8417), III Corps at DEGGENDORF (Z 2773); V Corps at OBERNBURG (P 0131); XII Corps at GRAFENRAU (Q 1144) and XX Corps at ST. MARTIN (V 2242).

CHAPTER 13
LESSONS LEARNED & CONCLUSIONS

ADMINISTRATION: Administrative representation in Army Groups and Supreme Headquarters Allied Expeditionary Forces would have been extremely advantageous. It is recommended that a chaplain of senior rank have a place on each of these staffs.

EQUIPMENT:

a. Tents, Wall, Small, Complete with Pins and Poles: In a large percentage of days in combat, tentage is a definite advantage to the chaplain for cover to protect vestments and alter equipment as provided in Section II (2) W.D. Circular 377 dated 18 September 1944.

b. Organ, Field Folding: Changing weather conditions effect the use of the Organ, Field, Folding. Metal should be substituted for the wooden pegs for organ stops. The use of plastic instead of fabric-covered wood would be an advantage to prevent warping.

INTERMENTS: During operations a Protestant and Catholic Chaplain should be assigned to Graves Registration Units. These chaplains would also have the responsibility of reporting burials to the Chief of Chaplains.

NON-T/E SUPPLIES: Throughout the campaign, supply installations were consistently too far behind the Army line for satisfactory supply service. Delivery of supplies to combat chaplains was not marked by a high standard of service. Supplies, in some items, were always inadequate. Chaplain Supply Agencies should have sufficient truckage on call to ease monthly deliveries of Non-T/E Supplies to Army and to Corps. Locked boxes, returnable at point of delivery, should be provided as basic equipment for the supply services, to eliminate possibility of theft.

PROMOTIONS: The chaplains promotion program was unsatisfactory. A critical bottleneck existed with reference to the promotion of chaplains from the rank of Captain to Major. Captains with three years in grade had little or no future opportunity for promotion. To overcome this situation the following suggestions are offered:

a. That Regimental, Group, and Senior Division Artillery chaplains be authorized in grade of Major.

b. That Infantry Divisions, comprising at present 15 chaplains, be allotted the following grades: One (1) Lieutenant Colonel, five (5) Majors, nine (9) Captains or First Lieutenants.

c. That Armored Divisions be allotted one (1) Lieutenant Colonel, four (4) Majors, (one (1) Assistant Division Chaplain, one (1) each Combat Command, one (1) Division Trains) and five (5) Captains.

TRANSFERS: More elasticity recommended for transfer of chaplains from combat to Communications Zone and vice versa. With this provision, problems of fatigue, age, denominational distribution, promotion and rank could be more efficiently handled.

HEADQUARTERS
THIRD UNITED STATES ARMY
Office of the Chemical Officer
APO 403

SUBJECT: Transmittal of Chemical Section's Historical Report.

TO : Commanding General, Third U. S. Army, APO 403, U. S. Army.

1. Submitted herewith is the After-Action Report of the Chemical Warfare Section, Third U. S. Army Headquarters, beginning with 23 March 1944, and continuing at the properly designated intervals by chapters.

2. The Chemical Section had primary duties pertaining both to operation of troops and to supply, and accordingly was represented in both Echelons of Headquarters. Chemical Mortar Battalions participated in all major operations, employing both high explosive and smoke in the support of forward elements. The employment of smoke in river crossings, utilizing Chemical smoke generator companies, reached a new high in this campaign. Storage and issue of Chemical supplies, and maintenance and repair of Chemical equipment, often complicated by rapid movement and extent of front lines, were adequately handled by available Chemical Service units.

CHAPTER 1
PLANNING IN UNITED KINGDOM

Section I. General. The Chemical Section, Third U. S. Army, arrived in the United Kingdom organized under its full authorized personnel. This consisted of six officers, one warrant officer, and nineteen enlisted men. Besides the Chemical Officer and the executive, the section was composed of operations, supply, intelligence, and administrative sub-sections. While in the United Kingdom, the Forward and Rear Echelons of the Chemical Section were located together. Prior to embarking for the Continent it was necessary, due to a reduction in personnel, to combine the operations and intelligence sub-sections.

Section II Operations. It was apparent upon arrival that the operations section was responsible for accomplishing the following:

1. Determining the number of Chemical service and combat troops required for the operations given Third U. S. Army, and recommending additional attachments if necessary.

2. Taking active steps to raise the standards of defense against chemical attack to the level of proficiency demanded in the event the enemy used gas

3. Establishing an operational policy for the Third U. S. Army for use prior to and during the initial phase of gas warfare.

4. Preparing Chemical service and combat troops for performance of their primary missions

5. Preparing Chemical annex to Operation OVERLORD plan.

Chemical Battalions

For operations given Third U. S. Army the Army was assigned four corps, with an initial allotment of one Chemical battalion, motorized, to support the operations. Because of the demand for Chemical battalions and in order to attach one Chemical battalion to each corps, an allotment of three additional battalions was requested. Although approved, the request could not be fulfilled because of the shortage of battalions in the theater

The one Chemical battalion assigned to Third U. S. Army, the 86th Chemical Battalion, Motorized, arrived in the United Kingdom 24 April 1944 and was billeted seven miles south of LIVERPOOL, at PORT SUNLIGHT. Upon arrival the unit was attached to VIII Corps as this was to be the initial corps of Third U. S Army to move to the Continent, and it was desired to give the corps the maximum fire power possible. The period from 26 April, when the battalion arrived, until 28 June, when it departed for the concentration area, was used by the battalion for securing its 75% equipment and giving all mortar squads additional firing practice. A total of 2296 rounds of 4" and 2016 rounds of 4" were expended during this firing. While it was desired to attach the battalion to a division for experience in rendering close support of infantry, this was impractical in England.

The battalion arrived at the staging area 28 June and left for the Continent as follows:

Battalion Headquarters	29 June
Headquarters Detachment	29 June
Medical Detachment	29 June
"A" Company	30 June
"B" Company	29 June
"C" Company	28 June
"D" Company	28 June

"B" Company, which embarked for the Continent 29 June, was forced to return to the United Kingdom on the same date when the original ship on which it boarded was damaged by enemy action. As a result of this accident the company had some casualties and lost all organic equipment, basic loads, and individual equipment except what the men had on their persons. It was therefore necessary to secure replacements and completely re-equip this company. Arrangements were made through the G-1 Section, Third U. S. Army, for replacements, and through the G-4 Section, Third U. S. Army for complete re-equipment of the company. By 16 July the company was again ready for embarkation and departed for the Continent where it was placed in section 19 July, the day following its debarkation. In the meantime the remainder of the battalion had arrived safely on the Continent and been committed by VIII Corps on 3 July.

Chemical Warfare Service Units

With the expectation of receiving three additional Chemical battalions later in the campaign, for a total of four, it was decided the Army would need a minimum of two Chemical depot companies and two Chemical maintenance companies. As the Army was assigned only one depot company and one maintenance company, the assignment of an additional company of each type was requested. With the assignment of these units it was planned that each maintenance-depot team would support two corps and two Chemical battalions. Chemical ammunition was to be supplied from Chemical ammunition supply points operated by detachments from the depot companies, and E/S items were to be drawn as needed on a replacement basis from the Chemical depot companies. All Chemical Warfare Service items requiring maintenance were to be evacuated from the depot company to the maintenance company for repair or reissue, salvage, or evacuation to the rear for disposition. Flame throwers were to be filled by the depot companies and drawn fully charged by units as needed. Empty flame throwers were to be returned immediately for refilling.

The first Chemical maintenance company assigned to Third U. S. Army was the 57th Chemical Maintenance Company which arrived in the United Kingdom 17 April and was billeted at CHURSTLETON miles north of WREXHAM. While in the United Kingdom the unit was equipped for operations on the Continent and performed third and fourth echelon maintenance of Chemical Warfare equipment brought to it by Third U. S. Army units. Arrangements were also made for the unit to continue its basic training and re-fire individual and organic weapons. The company was alerted for overseas shipment 5 July, departed for the concentration area 13 July, and left for the Continent 18 July.

On 1 June the 61st Chemical Depot Company was relieved of assignment to Western Base Section, Services of Supply, European Theater of Operations, United States Army, and assigned to the Third U. S. Army. At this time the unit was divided into three sections which were operating separate Chemical Warfare Service depots in Great Britain. The same day the unit was assigned to Third U. S. Army it was alerted for overseas movement and detachments were relieved from attachments to depots. By 8 June all detachments had rejoined company headquarters operating the Chemical section of General Depot Number 40 seven miles southwest of CARDIFF, at BARRY, WALES, and action was begun to prepare the unit for movement to the Continent. Preparations were completed 5 July, and the company moved to the concentration area at STROUD twelve miles southeast of GLOUCESTER. On 11 and 12 July the company moved to the marshalling area at PLYMOUTH, and departed for the Continent on 14 and 15 July.

As a result of the request for the assignment of an additional Chemical depot and maintenance company the 182d Chemical Depot Company was relieved from assignment to Southern Base Section, Communications Zone, European Theater of Operations, 15 July and assigned to Third U.S. Army. The unit was alerted for a short sea voyage 18 July, and as Army Headquarters was by this time on the Continent, the unit was attached to XX Corps 19 July, for administration and supply. By 1 August the unit was ready for overseas operations and departed from SHEPTON MALLET, five miles east of WELLS for the marshalling area. On 5 August the company left the marshalling area and proceeded by motor convoy to SOUTHAMPTON where it embarked for FRANCE on the same day.

On 9 June the 16th Chemical Maintenance Company, in NORTH IRELAND, was attached to Third U. S. Army in response to the Army's request for an additional maintenance company. The unit was further attached 14 July to XX Corps. Following this attachment, the 16th Chemical Maintenance Company continued operating the maintenance section of a Chemical depot at COLLYTOWN thirty-five miles south of LONDONDERRY, including the repair of Chemical Warfare equipment. During the month of June a total of 300 1½-quart decontaminating apparatuses and 32,891 gas masks, in addition to other items, were repaired. As the company was at that time located in North Ireland Base Section, Services of Supply, European Theater of Operations, it was alerted for short sea voyage 17 July, and was moved one month later, in order to facilitate preparations for Continental operations, to ARMATHOM, ENGLAND, fourteen miles north of CHELTENHAM. Upon arrival in ENGLAND, the company was attached to General Depot Number 26 at TEWKESBURY just north of CHELTENHAM, where it operated the Chemical Warfare section of the depot. The company left for the marshalling area 26 August and arrived at UTAH BEACH 29 August.

The 46th Chemical Laboratory Company, attached to VIII Corps, was assigned to Third U. S. Army upon the Army's arrival in ENGLAND. A Laboratory company on the Continent was not required by this Army prior to the initiation of gas warfare as it was planned to forward by air all samples of gas and gas equipment from the Continent to laboratories in the United Kingdom for analysis. For this reason action was begun at once to have the 46th Chemical Laboratory Company relieved from the Third U.S. Army and assigned to Headquarters, European Theater of Operations, U. S. Army. This action resulted in the company's being assigned to Western Base Section, Services of Supply, European Theater of Operations, on 26 May.

Training

Various Army units were visited and their proficiency in defense against chemical attack tested. Based upon this inspection, Training Memorandum No. 14, Subject: Training in Chemical Warfare, (Annex a (Part Eleven, Chapter One)), was published 20 April to outline the standards of proficiency required by Third U. S. Army. Other actions taken were as follows:

1. Training films were made available through Western Base Section.

2. Ammunition and protective covers were made available for training.

3. Arrangements were made with Western Base Section for Third U.S. Army troops to send personnel to a Unit One Officer's and One NCO's course being conducted each week by Western Base Section.

4. All units were authorized to request assistance in their training program from division, corps, and Army Chemical sections.

The Chemical Warfare policy of this Army was established by Operations Memorandum Number 13, Subject: Chemical Warfare, which was published 8 June 1944 (Annex b (Part Eleven, Chapter One)).

Section III. Supply. The first week in the United Kingdom the supply section spent in devising a satisfactory supply system. It was necessary to contact Services of Supply, European Theater of Operations, to arrive at final decisions. A credit system was established for Third U. S. Army, and from stocks at various depots the supply officer issued Chemical Warfare equipment to the units. The usual procedure was for units to submit requisitions to Third U.S. Army for approval, after which the unit could either pick up the supplies, or request shipment. Of sections in this Headquarters having supply functions, the Chemical Section was the only one to make initial issue of supplies direct to units instead of having the initial issue made by the appropriate base section. This was done in order to conform with the supply policy previously established by the Chemical section of Services of Supply, European Theater of Operations, and in order that the Third U. S. Army Chemical Section would have accessible at all times information as to the amount of Chemical equipment each unit had on hand.

VIII Corps, which had arrived in the United Kingdom prior to Third U. S. Army, had been the supply agency for all units to be assigned to this Headquarters upon its arrival. The supply system VIII Corps employed was essentially the same as that followed by Third U.S. Army. This corps terminated its duties of supplying army units with submission of the Material Status Report for the month of March 1944. The Chemical Officer, Third U. S. Army, submitted on 20 April the first Chemical Warfare Material Status Report for the Army after arrival of this Headquarters in the United Kingdom. The purpose of this report was to provide a record that would indicate the extent of shortages of Chemical items by organizations. These figures were consolidated and submitted to Headquarters Services of Supply, European Theater of Operations.

Initially, some difficulties were experienced in providing authorized amounts of Chemical Warfare items for troops. Among these were flame thrower fuel, 4.2-inch Chemical mortar ammunition, and colored smoke grenades. However, as D-Day approached these items were provided in quantity set forth in the basic load requirements. The basic load established for the portable flame thrower was two fillings. This permitted transporting the apparatus filled with one loading, ready for use, with another filling in reserve. Basic load of 4.2-inch Chemical mortar ammunition was 2880 rounds for a battalion, in the ratio of 60% HE to 40% WP shells. It was necessary for this section to prepare its own basic load chart for Chemical Warfare ammunition.

Some items of British make were included in the Chemical equipment issued to U. S. Army units. These included the British gas alarm, British Anti-Lewisite (BAL) eye ointment, sleeve gas detector, eyeshields, a paint detector, and a substitute filling for the portable flame thrower.

Digitized by Google

On 14 April, Administrative Order Number One was published setting forth the Chemical Warfare supply procedure, including initial allowances and basis of issue of Chemical Warfare items. These figures were based principally on logistic tables furnished by Services of Supply, European Theater of Operations. It became necessary to modify these figures slightly, due to changes in priority status of units, and in some part to availability of supplies. Units that were scheduled for early departure for the continent were relieved of their organizational protective equipment but retained individual protective equipment.

The Rear Echelon of Third U. S. Army moved to the staging area at NINE TREES, fifteen miles southwest of SALISBURY, 6 July. From here, on 11 July, the Chemical supply officer, in "S" Echelon--a group consisting chiefly of the supply sub-sections of the Headquarters--moved to CHELTENHAM to continue the job of providing all units under this Headquarters with initial and replacement equipment and supplies preparatory to their moving to the continent.

CHAPTER 2
PRE-OPERATIONAL ON CONTINENT

Section I. General. The Forward Echelon of the Chemical Section, Third U. S. Army, arrived on the Continent 7 July. This echelon was composed of the Chemical Officer, operations officer, warrant officer, and five enlisted men. The Rear Echelon, less the supply officer and one enlisted man, who had remained in "S" Echelon, arrived 19 July.

The Chemical Section, together with other supply services in this Headquarters, furnished a small cadre, known as the "S" Echelon, to remain in the United Kingdom. This echelon was attached to XII Corps. The purpose of the "S" Echelon was to complete the equipping of all Third U. S. Army units remaining in the United Kingdom subsequent to the Army's departure for the Continent.

Section II. Operations. The operations officer of the Chemical section made reconnaissances for bivouac areas for Chemical units scheduled to arrive on the Continent. The usual procedure was to meet the unit at the beach, and conduct it to the area selected.

Chemical Battalions

Prior to Third U.S. Army's arrival on the Continent, the 86th Chemical Battalion, Motorized, arrived 26 and 29 June in France. During the month of July, while assigned to VIII Corps, the battalion was in combat, when Third U. S. Army became operational 1 August, the 86th Chemical Battalion was the only combat Chemical unit under this command.

Chemical Warfare Service Units

Assigned to Third U. S. Army since 28 May, the 61st Chemical Depot Company arrived at UTAH BEACH 16 July, and proceeded to an area near STE. MERE-GLISE (T09), where it bivouaced over night. The next day the company moved to and occupied an area one mile east of ST. GERMAIN LE GAILLARD (000). The 87th Chemical Maintenance Company, arriving on the Continent 12 July, was met and conducted to a bivouac area in the vicinity of the 61st Chemical Depot Company. During the next week, all T/E shortages of both companies were filled, and the companies further prepared for performance of their primary missions. In order to be ready to serve Third U. S. Army troops when the Army became operational, both companies were attached to First U. S. Army. The 61st Chemical Depot Company was stocked with Class II, IV, and V supplies, and the 87th Chemical Maintenance Company was prepared to handle Chemical Warfare maintenance. This was accomplished by moving the two companies on 20 July to a point one mile south of PONT L' ABBE (T29) where a First U. S. Army Chemical depot was taken over. Their mission at this time was to furnish Chemical ammunition, operate supply dumps, and perform maintenance for VIII Corps.

When Third U. S. Army became operational, at 011500 August 1944, both the 87th Chemical Maintenance and the 61st Chemical Depot Companies reverted from attachment to First U. S. Army.

Section III. Supply. The principal type units remaining in the United Kingdom until the latter part of August, with which the Chemical Section in the "S" Echelon was concerned with supplying, were Field Artillery and Engineer Combat Battalions. In addition, there were two Chemical units which were subsequently to be assigned to Third U.S. Army --the 16th Chemical Maintenance Company and the 192d Chemical Depot Company.

During the five months the Chemical supply sub-section of Third U. S. Army was in the United Kingdom, 1853.8 tons of Chemical supplies, including all items, were issued to troops.

On 15 July, the 192d Chemical Depot Company, while still in England was assigned to Third U. S. Army. The 16th Chemical Maintenance Company, assigned to Services of Supply, European Theater of Operations, United States Army, but attached to Third U. S. Army, arrived at ASHCHURCH, England, near CHELTENHAM, from North Ireland on 17 August. It was necessary to complete the supply of these two units both with equipment and personnel before their departure for the Continent. This responsibility was primarily that of the "S" Echelon.

On the Continent, during the three weeks prior to becoming operational, the Rear Echelon of the Chemical Section was confronted mainly with devising a supply system that would be suitable for the Army upon becoming operational. Conferences were held with Chemical officers of Advance Section, Communications Zone, in order to gain any benefits that would simplify the system and improve its efficiency. Arrangements were made for Third U.S. Army units to draw Class II and IV Chemical supplies from First U. S. Army Chemical Warfare Service supply points. One of these supply points was operated by the 61st Chemical Depot Company, a unit temporarily attached to First U. S. Army, but designed to revert to Third U. S. Army upon the latter's becoming operational.

CHAPTER 3
AUGUST OPERATIONS

Section I. General. On 1 August, to reduce the size of the Forward Echelon of the Chemical Section, the warrant officer and one enlisted man were transferred from the Forward to the Rear Echelon. This left the Forward Echelon of the section with two officers--the Chemical Officer, and the operations officer--and four enlisted men.

Section II. Operations. Though requests had been made for additional Chemical battalions, maintenance and depot companies, there was only one each of these units under Third U.S. Army on 1 August--the 86th Chemical Battalion, attached to VIII Corps, and the 87th Chemical Maintenance and the 61st Chemical Depot Companies.

Chemical Battalion

The 86th Chemical Battalion remained attached to VIII Corps assigned to Third U. S. Army. Originally, this unit was organized so that each of its forty-eight 4.2-inch Chemical mortars, twelve of which were in each of the four combat companies, was operated by a six man squad. There were four squads to a platoon, three platoons to a company. During July while under VIII Corps, the battalion reorganized the four weapons companies into two platoons per company. Each platoon operated four mortars. The resulting excess personnel was rotated to the battalion headquarters detachment in the rear areas for rest whenever possible. The four extra mortars in each company were placed in the rear echelon of the units as reserve.

The first of August found the battalion headquarters, "A", and "B" Companies bivouaced in vicinity of MONTVILLE (T26), with "C" Company at ST. JEAN DE LA HAIZE (T01) supporting the 314th Infantry of the 79th Division, and "D" Company at PLOMB (T32). The following day the battalion headquarters moved to CHAMPSEY (T22). "B" Company was attached to the 8th Infantry Division. On 3 August, "A" Company was attached to the 83d Infantry Division.

On 5 August the battalion fired its first missions following its assignment to Third U.S. Army. "A" Company, in the ST. MALO Peninsula, fired two missions, one with 200 rounds of HE, the other with sixty-four rounds of WP. "C" Company expended ninety-one rounds of HE on an area target, and 100 rounds of WP, setting up a smoke screen. From 12 to 15 August, "B" Company was attached to 83d Infantry Division and fired several missions during the attack on ST. MALO (871).

DECLASSIFIED

Members of the 86th Chemical Battalion firing the 4.2-inch mortar in operations near ST. MALO

After the fall of the Citadel at ST. MALO (871) on 17 August, "A", "B", and "C" Companies were released from their respective attachments, and reverted to battalion control. These companies moved to the battalion headquarters' area near TREMEDAN (A86), and were attached to the 8th Infantry Division. By 19 August the battalion was enroute to BREST (F99) where, for the next six weeks it participated in the attack on, and aided in reducing enemy resistance in the BREST Peninsula. During the month of August, the battalion fired 136 missions, expending 9156 rounds HE and 7702 rounds WP 4.2-inch Chemical mortar ammunition.

Chemical Warfare Service Units

It was planned to use one depot and one maintenance company as a team to operate in support of two corps. Chemical ammunition would be available at the ammunition supply points operated by the depot company, with T/E items drawn from the depot company on a replacement basis. The Chemical Warfare Service items requiring maintenance were to be evacuated from the depot company to the maintenance company for repair and reissue, salvage, or evacuation to the rear for disposition.

Upon reverting to Third U. S. Army on 1 August, the 61st Chemical Depot Company and the 87th Chemical Maintenance Company were bivouaced together near PONT L'ABBE (T29). The 61st Chemical Depot Company obtained a stock of Class II, IV, and V supplies at this location and both companies on the following day moved to a location four miles southeast of COUTANCES (T83). On 5 August the 61st Chemical Depot Company established Ammunition Supply Point No. 1 two miles east of PONTAUBAULT (T81). Three days later the remainder of the 61st Chemical Depot Company moved to a new location five miles northwest of FOUGERES (T36) to set up Ammunition Supply Point No. 2.

A second Chemical Depot company, the 192d, assigned to this command, arrived in France on 8 August. It moved the following day to an area near ST. GERMAIN LE GAILLARD (000). Since the Army's front had expanded over such a large area, it was decided to leave the 87th Chemical Maintenance and the 61st Chemical Depot Companies to operate in general support of VIII Corps to which the 86th Chemical Battalion remained attached. As their action centered westward, toward the BREST Peninsula, it [illegible] depot company was needed on the eastern end of [illegible] U.S. Army units exclusive [illegible] Company was moved from [illegible]ERS (T85) where on 12 [illegible] ished.

At the beginning of September, the 1st Chemical Depot Company was operating three supply points: one at MONTSAUGE (T55), one at CLAYE (W11), and another at LAS GRANDS (Z69). All efforts were made to close out the supply point at MONTSAUGE (T55), which was too far to the rear, and transfer its stock to the most forward supply point at LAS GRANDS (Z69). However, before this could be done and in order to keep up with the rapidly advancing Third U. S. Army troops the 1st Chemical Depot Company had to establish still another supply point on 6 September at PIERREFITTE SUR AIRE (U25). On the same date the supply point at MONTSAUGE (T55) was closed, and operations were transferred to the newly established supply point at PIERREFITTE. Five days later the supply point at CLAYE (W11) was also closed, and operations were transferred to PIERREFITTE for the first time since leaving [illegible]. On 17 September a detachment was sent to Etival [illegible] later the entire depot from PIERREFITTE was moved to [illegible] remainder of the depot was sent to refurbish [illegible] the rear and receive, assemble and [illegible]

[illegible]

[illegible]

During the 5th Infantry Division's advance eastward [illegible] the Moselle River in the vicinity of Arnaville [illegible] protect the bridging operation from observed artillery fire by use of smoke. The request to Twelfth U. S. Army Group for [illegible] generator company was approved with the result that [illegible] smoke generator company was assigned to [illegible] The [illegible] left its bivouac area at 0200, the same day, and arrived in the 5th Infantry Division area at 0815 [illegible] of the area to be screened was completed after arrival, and [illegible] tions were started at 0930. [illegible] every artillery fire [illegible] from the west bank of the Moselle River on 15 September, and by [illegible] tended it was possible to ferry four generators to the east bank. The river was [illegible] by smoke from both sides from 0930 to 2000 each day until the company was relieved by the 181st Chemical Smoke Generator Company, 29 September. CHAPTER 5
OCTOBER OPERATIONS

Section I. General. Located northeast of Metz (T47), the Chemical Section, together with the entire Rear Echelon of Third U. S. Army, departed 5 October for HARET (Z61) where the Headquarters was located for the remainder of October.

On 6 October, the Chemical Officer and the Operations Officer of this section witnessed a demonstration of a British Chemical mortar. This weapon was constructed similarly to the U S Army 4.2-inch Chemical mortar but on a much larger scale. The British weapon was a 9.75-inch mortar that fired a one hundred pound shell as far as 3700 yards. The projectile could be loaded with either fifty-six pounds of CK or sixty pounds of WP.

Again, on 26 October, a British flame thrower demonstration was witnessed by personnel of Third U. S. Army Headquarters. This flame thrower, mounted on a half track, carried 125 gallons of fuel, and fired up to a distance of 150 yards.

Section II. Operations.

Unit Activities

Remaining attached to XII Corps, the 86th Chemical Battalion went into action 1 October, two days after its arrival in the XII Corps area. The battalion headquarters detachment and "A" Company, the latter in corps reserve, remained at DOMMARIE (T90), ten miles east of NANCY. "B" Company took up a new position near GERBECOURT (Q04), while "C" Company operated near MORET (U03), and "D" Company remained in position near JUVRECOURT (Q11). By 8 October "A" Company was attached to the 6th Armored Division and moved out two days later to vicinity of ARNACOURT (T93). The other three companies continued firing small missions during the first week of October.

[illegible] Company of the 86th Chemical Battalion equipped [illegible] with an 81 mm mortar

[illegible]

Digitized by Google

Personnel of the 81st Chemical Battalion in action in France

With the 81st Chemical Battalion still attached to XX Corps, "A" and "B" Companies were operating in support of the 83rd Infantry Division, and "C" and "D" Companies were further attached to the 5th Infantry Division to the 11th and 19th Field Artillery Battalions, respectively. The headquarters of the Chemical Battalion was billeted at MAINVILLE (7066). The first week of October "A" Company supported the 329th Infantry in its attack on MALZIEVILLE (7366). "B" Company operated with the 330th Infantry in the reduction of MARIMONTE (7975) and VEHEMIELLE (7975). and "C" Company was employed in the conquest of CHEMINOT (7163). Company "D" was used in support of infantry troops in their attack on FORT DRIANT (7979).

With the 5th Infantry Division the day before the scheduled attack on FORT DRIANT (7979), the enemy resistance was very stubborn and our forces were meeting with difficulties. Their artillery battalion was directed to the attack area for the purpose of destroying three railroad bridges which crossed the CHIERS River at [illegible]. Two of the bridges were destroyed, but the third bridge was not destroyed. It was necessary to create a diversion in order to get the infantry across the river. It was necessary to create a smoke screen on the south bank of the river. It was necessary to create a smoke screen on the north bank of

CHAPTER 6
NOVEMBER OPERATIONS

Section I. General. While Third U. S. Army Headquarters remained at NANCY (U81), the Chemical Section had attached to it a detachment of M2 smoke generator specialists. One of the individuals was the designer of the apparatus. During their approximately two weeks stay with the Headquarters, special schools in operation of the generator were conducted for the smoke generator companies. And instruction was given to the maintenance company in its repair and maintenance. As most of these generators were received without manuals of instructions, the specialists prepared directives on the proper operation and maintenance of this piece of equipment. This directive was distributed to all Chemical smoke generator and maintenance companies.

Some relief on the supply situation was obtained when the tonnage allocation of Chemical Warfare items brought forward daily for Third U. S. Army was increased from fifty tons to one hundred fifty tons per day.

Section II. Operations.

Chemical Battalions

Remaining attached to XX Corps, assigned to Third U. S. Army, the companies of the 81st Chemical Battalion at the beginning of November were attached two to the 90th Infantry Division, and two to the 95th Infantry Division. The battalion headquarters continued in its location near ST BENOIT (U84).

On the second day of November, Company "A", at HAGONDANGE (U87), and Company "B" at VERNEVILLE (U76), were relieved of front line combat when the 90th Infantry Division to which they were attached was sent to the rear for a rest period. Heretofore, when an organization which was supported by 4.2-inch Chemical mortar troops was relieved from combat for rest, the Chemical unit remained in operation and was attached to the organization which relieved the front line unit. This was the first time such relief had included the Chemical mortar companies. Companies "A" and "B", travelling approximately thirty miles to the rear of their old front line positions were set up in billets at JEUMAIN-LA-VILLE (U89) for rest, rehabilitation and training.

Company "C", in position near SILLEGNY (U84), was relieved on the first of November from attachment to the 95th Infantry Division and attached to the 46th Field Artillery Battalion of the 5th Infantry Division. The company continued its harassing fire on enemy troops in and around the villages of LA HAUTEMENIL (U84) and SILLEGNY (U84). Company "D" also was relieved from attachment to the 95th Infantry Division, and was attached to the 19th Field Artillery Battalion of the 5th Infantry Division. The company remained in its position near ANY (U74). The towns of VRIZE (U74), FEY (U84), and CORNY (U74) were still targets for the company, being subjected to harassing HE and WP fire.

A view of the smoke screen used to conceal bridging operations over the MOSELLE River, just south of METZ

After six days' rest and rehabilitation, "A" and "B" Companies on 8 November moved back into combat positions. These companies were brought back into action with the 90th Infantry Division in preparation for Third U. S. Army's offensive in the vicinity of METZ (U85). Companies "A" and "B" were located north of METZ (U85), while Companies "C" and "D" were south of the city. By 9 November, Company "A" in the vicinity of CAPENDEN (U99), was dropping HC and WP shells in the vicinity of HAUTE-RAN (U98), and BASSE-RAN (U98). In support of the 359th Infantry Regiment of the 90th Division, Company "B" by 9 November was located at GAVISSE (U99), where it remained two days awaiting completion of the bridge over the MOSELLE River.

Companies "C" and "D", located to the south of METZ (U85), continued in support of 5th Infantry Division field artillery battalions. However, on 8 November, "C" Company was relieved of its attachment and attached to the 10th Infantry Regiment, remaining near SILLEGNY (U84). Missions included harassing fire and smoke screens until 10 November, when the company was attached to the 83d Infantry Division. The following day, this attachment was terminated and the company attached to the 10th Armored Division. Company "D", meanwhile, on 8 November was relieved from its attachment to the 19th Field Artillery Battalion, and attached to the 2d Infantry Regiment of the 5th Division. Firing on the towns of FEY (U84) and CHEMINOT (U83) was continued.

On 15 November, battalion headquarters was moved from ST BENOIT (U84) to FONTOY (U79). Companies "A" and "B", remaining attached to the 90th Infantry Division continued in support of the drive north of METZ (U85). Company "A" moved up on 16 November to DISTROFF (U98), where firing was continued in the vicinity of KLINE (U98) and METTERVISEN (U98). "B" Company had moved by 14 November to HUNTING (U99), and two days later to NUTLING (U98), firing interdictory and harassing missions. On 18 November the company moved into FISLANGE (Q07).

"C" Company, by 16 November was located at KERSCHHAUSEN (Q06), supporting the 3d Tank Battalion of the 10th Armored Division. Moving at a rapid rate, reaching towns that the infantry had entered only one hour previously, personnel of the company were taking prisoners and evacuating them to the rear in return runs of the ammunition trucks. Two days later the company had reached RITZING (Q06). Company "D", continued to support the 5th Infantry Division in the drive against the METZ Fortress. Firing into the city of METZ (U85) on 18 November, this company hit an enemy ammunition dump which in turn completely knocked out enemy 150mm and 75mm guns.

For week of 19-25 November all companies of the battalion fired relatively small missions. Nevertheless, mortar part breakage continued at a high level, due, it was believed, to the muddy ground in which the mortars had to be emplaced. During the earlier part of the month a reclamation in the requests for mortar fire reduced the rate of mortar destruction as compared to that of the previous month. With only the one maintenance company to service the battalion's mortars, men from the battalion were put on detached service with the company to further expedite the replacement and repair of mortar parts. To lessen damage to baseplates and to help in maintaining fireable mortar positions, personnel of the battalion, working with the maintenance company, devised a square ring of metal to fit around the perimeter of the baseplate. The purpose of increasing the surface area was to reduce the rapid sinking of the mortar into soft earth by distributing the force of the recoil over a greater (by 70%) area, and to keep the front of the mortar from declining too rapidly, thereby eliminating frequent resetting of the weapon. Though somewhat successful, the experimental modification did not provide the desired improvements and only a few mortars were equipped with the attachment.

By 25 November, "A" Company which three days previously had been relieved of attachment to the 90th Infantry Division and had been attached to the 95th Infantry Division, was located in GOMELANGE (Q07), placing fire on the MAGINOT Line at (Q17). Four days later "A" Company crossed the German border to establish itself at ITTERSDORF (Q07). Moving from FISLANGE (Q07) on 19 November to KERANGE (Q06), and departing there three days later for ANTELING (Q07), "B" Company on 24 November was relieved from attachment to the 90th Infantry Division and attached to the 95th Infantry Division. On 28 November this company crossed into German territory, and by month's end was in position at DISINGEN (Q28).

Company "C", with the 10th Armored Division, entered Germany 19 November at LAUENTROFF (Q18). One week later the company was relieved from attachment to the 10th Armored Division and attached to the 90th Infantry Division while located near KERALING (Q09). The following day, the unit moved to ONNERSCH (Q18), and by end of the month was set up at GRELFANGE (Q13).

Company "D", at NAGNY (U98), on 19 November fired a smoke mission to deny observation to the enemy at FORT DE QUELEU (U85) while our troops advanced. The smoke mission was continued while part of an infantry battalion that had advanced in this zone the previous night could regroup. Relieved from its attachment to the 5th Infantry Division, the company on 20 November was attached to the 95th Infantry Division. On the same day the company entered the city of METZ (U85). Leaving METZ two days later, the command post of the company was set up at SERVIGNY-LES-HAVILLE (Q05), and by 30 November was at DALEM (Q17).

Chemical Warfare Service Units

Chemical Depot Companies

The 61st and 192d Chemical Depot Companies continued to operate Chemical depots for all Third U. S. Army troops. At the beginning of November, the 61st maintained Depot No. 9 at FLAVIGNY (U89) in support of XII Corps. This supply point handled Class II, IV, and V supplies. On 19 November the company opened Depot No. 11, stocking all classes of Chemical Warfare supplies, at FRESNES (Q02). Depot No. 11 was operated in support of XII and III Corps. The 192d Chemical Depot Company operated Depot No. 7 at FLIREY (U63) until 5 November when Depot No.10, handling Class V supplies was opened at AUDUN (U68) in support of XX Corps. Later, on 25 November, Depot No. 12 was set up at HOMBOURG (U97) stocking Class II, IV, and V supplies. This depot served XII and XX Corps.

Stacks of 4.2-inch Chemical shells handled by the depot companies.

Chemical Maintenance Company

The 16th Chemical Maintenance Company was, during November, the only unit of this type under Third U. S. Army. Located at PONT-A-MOUSSON (U79), the company was responsible for maintaining repair and serviceability of all Chemical Warfare equipment of Third U. S. Army troops. In addition to the 4.2-inch Chemical mortar maintenance for the 81st Chemical Battalion, the unit repaired 10,270 gas masks, 64 smoke generators, and 46 portable flame throwers. As the M2 portable smoke generator was being substituted for the M1 generator, there was need for a method of transporting this two hundred pound apparatus for short distances. The 16th Chemical Maintenance Company altered the two wheeled mortar cart to satisfactorily serve this purpose. In addition to transporting the M2 smoke generator, the cart can be used for transporting the fifty-five gallon, 450 pound, drums of fog oil.

CHAPTER I
OPERATIONS

Section I: General.

Section II: Operations

Preliminary Planning

The first [illegible] of the Headquarters Detachment of the 91st Chemical Battalion to [illegible] [illegible] [illegible]

The amount of damage to mortar parts continued to decrease during the month as improving weather conditions permitted the selection of better mortar emplacements, shorter ranges were requested on most missions, and the reinforced baseplates displayed some advantages. A rest camp was established at FONTOY (U78), to which personnel of the companies were rotated for three day periods. The companies, remaining in the above-mentioned positions, fired principally harassing missions until the end of December.

The 91st Chemical Battalion, arriving on the Continent 22 October, was assigned two days later to Third U. S. Army. Difficulties involved in completely outfitting the organization with its authorized equipment resulted in the battalion remaining bivouaced near VALOGNES (O30) until 3 December. On this date the 91st Chemical Battalion assumed the responsibility of security of the petroleum pipe-line system from CHERBOURG (O12) to COUTRAIN (N29), a distance of approximately 128 miles. One week later, having received all its equipment, the battalion was relieved of this duty and was alerted for movement to Third U. S. Army's area. The battalion arrived in the vicinity of NANCY (U81) 18 December and continued on to PONTPIERRE (Q24) where billets were secured. The same day this unit was attached to XII Corps.

The first round fired in combat by the 91st was on 19 December when "D" Company, attached to the 35th Infantry Division, had as its target BLEINGRUNDEN (Q26). "C" Company was attached to the 87th Infantry Division while the remainder of the battalion was attached to the 80th Infantry Division. On 21 December "C" Company reverted to battalion control. The next day the battalion, less "D" Company, departed its location at PONTPIERRE (Q24) and moved to GONDRANGE (P92) where orders were received relieving the companies of their previous attachments and attaching them as follows: "A" and "B" Companies to the 4th Infantry Division, "C" and "D" Companies to the 5th Infantry Division. These attachments were made necessary when the XII Corps was given the mission of securing the south and west bank of the SAUER River which had been seized by the enemy in their new offensive in BELGIUM and LUXEMBOURG. Battalion headquarters attached to the 4th Infantry Division, remained in position at GONDRANGE (P92).

A mortar squad of the 91st Chemical Battalion fires a round of HE from their position in Belgium.

All companies except "A" were committed on 23 December. Company "B", in support of the 22d Infantry Regiment was employed in clearing the enemy from the vicinity of the west bank of the SAUER River, and seizing the bank of the river. In its advance, the company was requested to fire on a small town located in a valley and provided with good defilade. Artillery could not reach RODENBOURG (P92) but the mortar could. The command "Fire for Effect" resulted in the leveling of the town. "C" and "D" Companies supported the attack of the 5th Infantry Division, the former reducing the village of WALDHILLIG (P93) in its advance from HAFFINGEN (P93) to the north of BEAUFORT (P90). By the end of the month the company was firing on the German village of WALLENDORF (P94). "D" Company, on the left flank of the division it was supporting was employed in the attack on ERPELDORF (P93). firing harassing and interdictory missions. Company "A", committed on 27 December, operated in support of the 8th Regiment of the 4th Infantry Division. By month's end the barrages this company had put down on the high ground overlooking the SAUER River from WASSERBILLIG (L12) to MORSDORF (L12) resulted in our infantry taking and holding the ridge with relative ease.

On 24 December a third Chemical battalion was attached to Third U.S. Army. Assigned to Sixth U. S. Army Group, the 2d Chemical Battalion was further attached by this Headquarters to III Corps. On 1830 on Christmas Day the battalion had reached its assembly area at AUTELHAUT, BELGIUM (P61), and the companies were attached as follows: "A" Company to the 26th Infantry Division; "B" Company to the 6th Cavalry Group; "C" Company to the 4th Infantry Division; "D" Company to the 6th Cavalry Squadron. Battalion headquarters was established at AUTELHAUT (P61) where it was located for the remainder of the month. The following day the companies, taking up positions across III Corps' front, gave support to the drive on the south flank of the German ARDENNES Salient between BASTOGNE (P55) and STEINBRUCK (P63). The 3d Chemical Battalion had as its mission, in addition to stemming the enemy's salient, the close support of two infantry divisions, an Armored division, and a cavalry group in liberating the 101st Airborne Division along with elements of the 9th and 10th Armored Divisions which were encircled at BASTOGNE (P56).

In the course of the attack against the enemy's salient, "D" Company on 27 December was relieved from attachment to the 6th Cavalry Squadron, and was placed in support of the 35th Infantry Division. By 30 December, "C" Company was relieved of its attachment and was also attached to the 35th Infantry Division, while "B" Company, relieved from the 6th Cavalry Group, was placed in support of the 26th Infantry Division.

Chemical Warfare Service Units

Chemical Depot Companies

The 61st Chemical Depot Company at the beginning of December was operating Depot No. 11 at FUSSEN (Q08). This depot stocked Class II, IV and V supplies, and operated in support of III and XII Corps. On 11 December Depot No. 13 was opened at SANKTALNE (Q44) in order to service XII Corps units more efficiently. Only Class V Chemical Warfare supplies were stocked. This depot was closed when the ammunition was moved to REUTELLE (U09), where Depot No. 14, handling Class II, IV, and V items was opened 24 December. Troops of three corps were serviced by this installation—III, VIII, and XII. Five days after this depot was opened, Depot No. 11 was closed. The 192d Chemical Depot Company on 2 December closed Depot No. 10, and continued during December to operate Depot No. 12 at HOMBOURG (U97). This latter depot, servicing III and XX Corps, stocked Class II, IV, and V Chemical Warfare items.

When a railhead was established at PIENNEPONT (U89) there was a substantial increase in the amount of supplies received by rail. Both depot companies unloaded cars and shuttled supplies by truck from the railheads to the various depot installations.

Chemical Maintenance Company

The 16th Chemical Maintenance Company continued to perform maintenance work on Chemical Warfare items for Third U. S. Army troops. Improving weather conditions indirectly resulted in less destruction of mortar parts, with baseplates still the most frequently damaged item. The company remained in operation at PONT-A-MOUSSON (T72) until 24 December. It moved at this time to NILVANGE (U78), where repair and servicing of Chemical Warfare equipment of Third U. S. Army troops was continued.

With the acquisition of two additional Chemical battalions, it was necessary that at least one additional Chemical maintenance company be obtained. Thus, on 23 December the 13th Chemical Maintenance Company, assigned to Advance Section, Communications Zone, was attached through Twelfth U. S. Army Group to Third U. S. Army. At this time the company was located in BONNY (U98) where, in addition to repairing 4.2-inch Chemical mortars, the company was experimenting with methods designed to lengthen the lifetime of mortar parts. A device which increased the area of the mortar baseplate by seventy percent was being improved by personnel of the company in cooperation with members of the 91st Chemical Battalion. On 29 December a detachment from the unit was sent to KLEINBETTINGEN (P61) to set up a mortar repair shop nearer the newly acquired 3d and 91st Chemical Battalions of Third U. S. Army.

Chemical Decontamination Company

For the first time since becoming operational, Third U. S. Army received a Chemical decontamination company. On 23 December the 33d Chemical Decontamination Company, assigned to Sixth U. S. Army Group, was attached to Third U. S. Army. The unit moved to and joined the 192d Chemical Depot Company at HOMBOURG (U97) on 26 December. As the absence of gas warfare exempted this unit from functioning in its primary role, its personnel and transportation facilities were equally divided to assist the two depot companies. The problem of unloading supplies at the railhead and transporting them to the various Chemical Warfare depots was being further solved.

Chemical Smoke Generator Companies

Located at HAGONDT (Q12) personnel of the 81st Chemical Smoke Generator Company continued to receive instructions in the operation and servicing of the M2 mechanical smoke generator. On 7 December the unit moved to FUTCLAEUE (Q45). Two days later its first mission with the M2 generator was performed. Under heavy mortar, artillery, and small arms fire a four hour screen was maintained in order to conceal construction by engineers of a bridge over the SAAR River in the vicinity of ZEMMELFING (Q26). Remaining in position until 11 December, the company moved that date to BILCHINGEN (Q45), and again, on 23 December to ELLANGE (P90). The 1634 Chemical Smoke Generator Company remained attached to Third U. S. Army.

On 2 December, the 84th Chemical Smoke Generator Company, after accomplishing its mission of providing a smoke screen over the MOSELLE River bridge at METZ (U80), moved to BERTLINGEN (Q18). A three day mission was begun on 4 December when the company furnished three sections to provide concealing smoke screens for the assault crossing of the SAAR River by troops of the 90th Infantry Division. The three sections were all established in the vicinity of SAARLAUTERN (Q27), one at WALLERFANGEN (Q26), another at WADGASSEN (Q37), and a third between these two sites. As operations progressed, changes in the plans of adjacent units necessitated the removal of the section from WADGASSEN (Q37), and its subsequent emplacement at LISDORF (Q27). The smoke drew heavy enemy artillery fire, with the sections of the company suffering casualties, and damage to vehicles and smoke generators. The operations at WALLERFANGEN (Q26) were suspended 5 December and the remainder of the sections were concentrated at LISDORF (Q27). Smoke operations were continued at this location until 17 December. Meanwhile, the company moved on 7 December from GERSTLINGEN (Q18) to BEHRENDORF (Q27). From here, on 19 December, a section was sent to assist the 161st Chemical Smoke Generator Company in its operations. This detachment returned two days later. By 23 December the company had moved to METTERNICH (U98) where it was located at month's end.

Three soldiers of the 161st Chemical Smoke Generator Company switch fuel line of an M2 smoke generator to a full drum of fog oil. This screen covered the SAAR River near WALLERFANGEN.

Two of the four sections of the 161st Chemical Smoke Generator Company, located at METTERNICH (U98), were attached on 3 December to the 10th Armored Division. The sections moved into position at HILBRINGEN (P19) on the SAAR River where a diversion screen was established to draw enemy fire. An active screen was maintained for two days, when operations were suspended. On 5 December the entire company was attached to the 90th Infantry Division and the following day moved to WALLERFANGEN (Q26) to screen operations over the SAAR River. Heavy enemy artillery and machine gun fire caused casualties and damages to be sustained by the company.

Smoke operations were continued daily from 0700 until 1700 hours, with from fifteen to twenty M2 smoke generators in operation at all times. This mission was completed 21 December, and the company returned the following day to METTERNICH (U98).

Many [illegible] were issued to troops as a [illegible] Army Service Forces. Additional [illegible] were not available. The Headquarters was able to secure fifty percent of the materials used in [illegible] positions. Chemical [illegible] Line

Section II [illegible]

[illegible] Defensive

The 91st Chemical Battalion [illegible] Headquarters [illegible] Company [illegible] Company [illegible] Infantry Division, [illegible] Company [illegible] Platoon [illegible] Company [illegible] Platoon [illegible] Company [illegible] Platoon

Company "A", in position near MECHER-DUNKROUT (P64) fired on communication centers and enemy personnel in preparation for an attack by the 101st Infantry. On 4 January this company was employed in repelling a local German counterattack. Company "B" was in position at ST PIERRE (P64) while Company "C" was at SALVACOURT (P66). Located near LIVARCHAMPS (P64) "D" Company fired missions similar to those of "A" Company. Both HE and WP missions were carried out, although the battalion on the whole fired fewer missions than did similar units. Targets consisted of enemy assembly areas, routes of communication, personnel, roads, and towns.

On 6 January "B" Company, after attachment to the 6th Armored Division, moved to PERLE (P65). The following day the unit proceeded to a location near BASTOGNE (P65) where several enemy counterattacks near BASTOGNE (P65) and MAGERET (P65) were broken up. This company fired a smoke mission on 11 January to screen our troops in their advance on WARDIN (P65). On 8 January, "C" Company was relieved of attachment to the 35th Infantry Division, and was placed in support of the 90th Infantry Division. Five days later "B" Company was similarly attached. By middle of the month, the latter company was firing on enemy personnel in LONGVILLY (P66). Meanwhile, "C" Company on 17 January was relieved of attachment to the 90th Infantry Division, and reverted to battalion control. The company then moved to LONGWY (P50) for rest and rehabilitation. Company "A" likewise reverted to battalion control on 27 January, and moved to LIVARCHAMPS (P64), where the unit was afforded rest, and an opportunity to recondition equipment. On the same day the battalion headquarters moved from AUTELHAUT (P61) to HONVILLE (P54).

Replacing Company "C" in its rest camp at LONGWY (P50), Company "B" on 25 January was relieved from attachment to the 6th Armored Division, with Company "C" in turn attached to that organization. The latter company then moved up to BINSFELD (P77). The only other change in attachments during the month was that of "D" Company. On 27 January that unit was relieved from the 26th Infantry Division and was attached to the 17th Airborne Division. The company took up positions at HONVANGE (P76) where smoke missions were fired in the vicinity of HOSINGEN (P85).

Chemical Warfare Service Units

Chemical Depot Companies

The 192d Chemical Depot Company continued during January to operate Depot No. 12. Located at HOMECOURT (U97) until 14 January, when it moved to FERANGE (Q07), this depot provided Chemical supplies for XII and XX Corps troops. The only change in Chemical depot installations of Third U. S. Army in January was the establishing of Depot No. 15 on 3 January at BONNERT (P62). This depot was opened by the 61st Chemical Depot Company in addition to Depot No. 14 which the company was operating at PIERREPONT (U89). Both depots functioned in support of III and VIII Corps.

Chemical Maintenance Companies

The repair of mortar parts and the maintenance of all Chemical Warfare items of Third U. S. Army troops was carried out by the 13th and 16th Chemical Maintenance Companies. No move was made by the 16th Chemical Maintenance Company, the unit remaining at HILVARDE (U78). Approximately 8,000 gas masks were repaired during January. Baseplates continued to be the part of the 4.2-inch Chemical mortar requiring the most maintenance, with this item slackening off during the latter half of the month. A total of 70 M-2 smoke generators were overhauled during the period.

The 13th Chemical Maintenance Company moved from its location at HONNY (U85) on 4 January, to KOERICH (P72). The same day the unit's mortar repair detachment which had been operating at KLEINBETTINGEN (P61) in support of the 3d and 91st Chemical Battalions, moved to and joined the company at KOERICH (P72). On 16 January this company modified the WP hand grenade for use as a rifle grenade. This was done by swedging an adapter on the bottom of the grenade body. In addition, the unit by month's end produced 520 white camouflage snow suits for Third U.S. Army Engineer camouflage battalions. After setting up an assembly line, thirty of these suits were turned out each day.

Chemical Decontamination Company

The four platoons of the 33d Chemical Decontamination Company remained in operation with the two depot companies. Two of these platoons assisted the 192d Chemical Depot Company in bringing supplies forward from the railhead at FERANGE (Q07). The other two platoons operated with the 61st Chemical Depot Company in transferring supplies from the railhead at PIERREPONT (U89) to the Chemical supply depots. On 27 January, the 33d Chemical Decontamination Company, with headquarters at PIERREPONT (U89), was relieved from assignment to Seventh U.S. Army and was assigned to Third U. S. Army.

Chemical Smoke Generator Companies

Four Chemical smoke generator companies were part of Third U. S. Army's troops. These were the 162d, assigned to this Headquarters 15 November, and the 81st, 84th, and 161st Chemical Smoke Generator Companies. The latter three were relieved from assignment to Advance Section, Communications Zone and attachment to Third U. S. Army, and were assigned on 22 January to this Command. The 81st Company, at HOMECOURT (P63), was attached 18 January to the 91st Chemical Battalion to coordinate smoke operations that the battalion might be called upon to perform. This was in connection with the attack launched by XII Corps' 4th and 80th Infantry Divisions. Smoke was to be provided for screening construction of bridges by the Engineers. One mission was carried out at INGELDORF (P64), over the SAUER River, another at SCHIEREN (P83) over the ALZETTE River, and a third at HURDEN (P84).

The 84th Smoke Generator Company, located at METZERVISSE (U98), carried out no smoke missions during the month of January, but was engaged in trucking Chemical supplies between the railheads and Chemical supply points. On 11 January the unit moved to VALMESTROFF (Q08), where it remained until the end of the month. The 161st Chemical Smoke Generator Company, also located at METZERVISSE (U98) aided Third U. S. Army Chemical depot companies in transporting Chemical supplies. This company moved 11 January to BASSE HAM (Q08) where it was located for the remainder of the month.

CHAPTER 9
FEBRUARY OPERATIONS

Section I. General. The Rear Echelon of Third U. S. Army, operating in ESCH/ALZETTE (P70) at the beginning of February, moved after the first week of the month to join the Forward Echelon at LUXEMBOURG City (P81). Sections of the echelons of the Headquarters, while in the same immediate vicinity, continued to operate in separate installations.

A mortar squad of the 3d Chemical Mortar Battalion fires a 4.2-inch mortar emplaced near BASTOGNE

Shortages of ammunition for the 4.2-inch Chemical mortar became more acute during February than at any time since Third U. S. Army became operational. Mortar accidents attributable to faulty rounds of ammunition had resulted in the impounding of large quantities of the shell. To relieve this shortage, the Chemical Officer obtained permission to authorize firing of the impounded rounds with the use of the lanyard. The shortage of ammunition, which had necessitated rationing of shells and resulted in a reduction of the fire power of the battalions during the first two weeks of February, was thus somewhat relieved and the units resumed their regular pace.

Both the 81st and 91st Chemical Battalions, Motorized, were reorganized and redesignated the 81st and 91st Chemical Mortar Battalions by 20 February. Both battalions reorganized with a minimum of confusion and difficulty while engaged in front line activities. The new Table of Organization and Equipment, 3-26, dated 29 September 1944, provided three weapons companies and a headquarters company in each battalion, while under the old organization the battalion consisted of four weapons companies and a headquarters detachment. Another major difference in the two setups was the increase under the new organization of the overall strength of the battalion by fifty enlisted men.

The two Chemical maintenance companies were reorganized during the month to conform to Table of Organization and Equipment 3-47, dated 22 November 1944. Total personnel of the company was three officers and ninety enlisted men; one officer and twenty-five enlisted men less than formerly comprised the company.

On 22 February a Chemical Officer from Edgewood Arsenal, Maryland, a specialist in the installation of the mechanized flame thrower, was attached to the Chemical Section of Third U. S. Army. Approximately twenty-two such flame throwers were issued and installed in armored units under this Headquarters.

The Supply Officer and the supply sergeant of the Chemical Section, Rear Echelon, were awarded the Bronze Star Medal by the Commanding General for meritorious service rendered from August 1944 to February 1945.

Section II. Operations.

Chemical Battalions

Three Chemical battalions were operating under Third U. S. Army at the beginning of February--the 81st, 91st, and 3d Battalions. Assigned to Sixth U. S. Army Group, attached to Third U. S. Army, and further attached to III Corps, the 3d Chemical Battalion, in position at HONVILLE (P54), was relieved on 3 February from attachment to this Headquarters and was attached to Ninth U. S. Army. The battalion departed for its new station on 6 February.

The headquarters of the 81st Chemical Battalion remained during the month of February at ERKELVILLEN (Q07). Company "A", on 1 February continued operations from SCHOENBUCK (Q28) while attached to the 182d Field Artillery Battalion of the 26th Infantry Division. Its targets were the towns of SAARLAUTERN ROHEN (Q28) and KNEIDORF (Q37), and pillboxes in the surrounding area. "B" Company, located at KERICH (L06), and attached to the 301st Regiment of the 94th Infantry Division, provided smoke screens for the attack of our infantry on pillboxes in the Siegfried Line. Also attached to the 94th Division, "C" Company, supporting the 302d Infantry, was located at ETT (Q09). This company placed fire on OBER-LEUKEN (L00), and enemy mortar positions and roads in the surrounding area. "D" Company, in position near ITTRACH (Q28) remained attached to the 101st Field Artillery Battalion of the 26th Infantry Division. From this location the mortars of the company placed fire on HECKINGEN (Q26), DILLINGEN (Q28), and PACHTEN (Q26).

For the first week of the month all companies of the battalion fired routine and relatively minor missions. Ammunition expenditures were smaller than for any like period of time in over two months. The light firing resulted in an almost negligible amount of equipment failure. The above conditions were the results no doubt of the critical ammunition supply situation. The outcome of several accidents caused by faulty ammunition was that almost all of the stock of HE 4.2-inch Chemical mortar shells were impounded. Functioning on a reduced basis the battalions consumed their maximum allotments of shells, and would have undoubtedly expended more had they been available. However, the situation was somewhat relieved as soon as permission was received authorizing the firing of impounded HE shells by use of the lanyard.

As the increased mortar ammunition supply permitted the battalion to resume its normal pace, breakage of mortar parts began to increase. The warming weather and melting snow left the ground muddier, softer, and less supporting to the mortar baseplates than previously. Damaged parts of the mortar were principally the baseplates and standards, with relatively few barrels requiring repair or maintenance.

Digitized by Google

...equarters of the battalion in the [illegible] were involved missions during the month. [illegible] was requested on [illegible] of the night [illegible] there was unusual activity [illegible] of the town of [illegible] and engineers from enemy observation as they [illegible] bridge across the Siegfried Line. [illegible] On 7 February the enemy was pushing an [illegible] on 128 [illegible] antitank ditch [illegible] just east of the town. This permitted our tanks [illegible] of the town and [illegible] to continue enemy [illegible] fleeing in the vicinity. [illegible] On [illegible] February [illegible] one day before from [illegible] to [illegible]. During this mission the artillery fired [illegible] ammunition [illegible] use of [illegible] shells, which for the same purpose of screening [illegible] very satisfactorily. This was the first time WP was used in the Continent by any Third U. S. Army Chemical battalion and reports were that this agent compared favorably with WP in its screening power. It did not, however, possess the smoke reducing and [illegible] properties of WP, for which [illegible] was more and more to be used in the Siegfried. Another [illegible] mission was at 2345 hours on 8 February when "C" Company, supporting Task Force "A" of the 26th Infantry Division, expended 18 rounds of WP ammunition in an area across the SAAR River near PACHTEN (4928). This fire was requested by the division in order that an area where enemy activity was suspected might be illuminated and our infantry be permitted to act accordingly. The operation was successful.

On 13 February, Company "A" moved from its position at SCHERVOCK (4928) to SAARLAUTERN (4927) where its fire power was still [illegible] on the [illegible] and SAARLAUTERN (4927) areas. "F" Company on 15 February [illegible] into diversionary fire to cover an attack by the Infantry of the 26th Division on a position [illegible] east of [illegible] (4926). Meanwhile, the WP smoke screens surrounded combat patrols and two tank platoons that were advancing toward the [illegible] and SAARLAUTERN (4926). Mortars of the company expended 2400 rounds of WP and 252 rounds of HE in their support of this mission. A small counterattack initiated by the enemy at this time was [illegible], and "F" Company moved up three days later to [illegible] (4927).

Company "C" departing from [illegible] (4926) on 11 February took up a position at [illegible] (4926). Two days later the company moved to [illegible] (4926). On 15 February a smoke screen near [illegible] northwest of [illegible] was provided to enable troops of the 26th Infantry Division to capture [illegible] in the immediate vicinity. FP was used in this mission which was purely for [illegible] operations and harassing. Approximately [illegible] rounds of smoke screen were maintained for thirty minutes with 248 rounds of WP and FP. Two enemy pillboxes were reduced and thirty-two prisoners were taken.

Moving from [illegible] on 19 February, "F" Company arrived at [illegible]. A two [illegible] smoke screen was maintained [illegible] on the west side of the SAAR River at [illegible]. The purpose of the screen was to conceal [illegible] crossing while the infantry [illegible] to get [illegible] across. Part of the infantry [illegible] river. [illegible] of thirty men [illegible] this mission [illegible] artillery fire, and the smoke screens [illegible] by "F" Company. However, by 16 February all members of the patrol had been located in [illegible] the river and returning to our area.

To help regulate an enemy counterattack in the vicinity of the railroads [illegible] SAARLAUTERN [illegible] artillery of "A" company on 21 February placed in over [illegible] rounds of WP. The counterattack was successfully regulated. By 24 February the company [illegible] as its targets WALLERN [illegible], HELLENDORF [illegible] and FRAUENKIRCH [illegible]. Company "A" on 16 February moved from SAARLAUTERN [illegible], to [illegible]. This company participated in the first phase of the attack launched by the 26th Division the following day to clear the enemy from the SAAR-MOSELLE triangle. The principal part played by "A" Company was providing smoke screens. The company moved to FELS [illegible] 20 February from which place the second phase of the attack was begun. By evening FELSENBERG (4910) had fallen to our troops and the company headquarters was established at that place the following day. Steadily moving forward, two companies of the supported unit had, by 22 February, crossed the SAAR River and successfully established a bridgehead. "F" Company moved to the west bank of the river at FELSENBERG (4910), provided a six-hour [illegible] screen that entirely enveloped the bridgehead. By 24 February the company had moved to ZAPPEN (4911) from which location several screens were maintained while the bridgehead was developed.

On 18 February "C" Company moved to KERPEN (4910) while still operating in support of the 26th Infantry Division. On 21 February, the company was relieved from attachment to this organization and was further attached to the 10th Armored Division. The company moved 22 February to KERPEN (4911) and two days later to ATL (4911) where it gave support to units employed in the SAAR River bridgehead operations. "F" Company, on 18 February, was relieved of its attachment to the 101st Field Artillery Battalion of the 26th Infantry Division, and reverted to Battalion control. The company remained in place at ITZBACH (4908) and prepared for the discontinuance of the company relative to the reorganizing of the battalion under a new Table of Organization and Equipment

Members of the 13th Chemical Maintenance Company repair gas masks.

...onvert WP hand grenades to rifle grenades. ...

...ware white camouflage snow suits.

At the beginning of February the 91st Chemical Battalion still operated in support of XII Corps units. Company "A", at KRAUTHEIM (P93) operated in support of the 90th Infantry Division, while "F" Company concluded its four day rest period at MERSCH (P82). "C" Company, with the 5th Infantry Division, was in place at WEILER (L06) preparing to go to the rest area upon being relieved by "B" Company. This change was made the following day. In position near VIANDEN (P94) "D" Company supported troops of the 5th Infantry Division.

After assuming its position at WEILER (L06) "B" Company immediately went into action on 2 February, giving direct support at the main line of resistance. The same day "D" Company, relieved from attachment to the 5th Infantry Division, was attached to the 76th Infantry Division, moving to HERSCHDORF (L03) the following day. All companies fired interdictory and harassing missions though hindered somewhat by the scarcity of mortar ammunition. In preparation for XII Corps' offensive to be launched 7 February to breach the Siegfried Line, all the companies of the battalion were dispersed and in support of attacking organizations. Company "A", attached to the 90th Infantry Division was on the north end of the line; Companies "B" and "C", with the 5th Infantry Division, were located in the center; "D" Company was in support of the 76th Infantry Division on the south.

That the resistance of the enemy was strong was evidenced by the fact that all companies were still giving supporting fire from their original positions four days after the attack was begun. "A" Company was in position at HOSDORF (P94), and "B" Company was just north of HERSCHDORF (L03). The latter company was employed principally in maintaining smoke screens while the infantry was engaged in operations over the SAUER River in the 5th Division's zone. On 9 February over 2800 rounds of WP mortar ammunition were expended in maintaining a nine-hour screen. In three days time the company expended in excess of 6000 rounds. Company "C" remained in position south of HERSCHDORF (L03) supporting the crossing with WP and HE shells. "D" Company operated from a position near ROSPORDEN (L03).

The attack on the Siegfried Line continued with improving success. By 13 February Company "B" moved entirely into German territory, and was established near HOLLENDORF (L04). Company "C" was edging its way into the enemy's country, while Company "D" gave support by establishing smoke screens. Those permitted personnel to deepen the bridgeheads across the SAUER River while at the same time rendering as much protection as possible. Company "A" by 14 February was on German soil and went into position east of WOLLENDORF (P94). As the attack progressed, the bridgehead became more firmly established, and, except for one, all platoons of the 91st Chemical Battalion's companies were inside Germany by 15 February.

A forceful enemy counterattack on the following day was repulsed by troops of the 5th Infantry Division, while the mortars of "D" Company gave heavy support. Fire from the artillery and the mortar company repulsed the counterattack. When the position of the units across the SAUER and OUR Rivers was considered sufficiently secure, XII Corps regrouped its forces to continue the attack to the northeast. In this shuffle, Company "C" was relieved from attachment to the 5th Infantry Division and was attached to the 76th Infantry Division. Company "A", with the 314th Field Artillery Battalion moved into position just west of BETTENDORF (P94), while "B" Company maintained its position at SCHANKWEILER (L04), supporting troops of the 5th Infantry Division. Company "D", on 22 February, was redesignated as Company "A". Under the reorganizing of the battalion, while Company "A" was broken up, forming mainly the Headquarters Company. Some personnel of the former Company "A" were assigned to the three weapons companies.

The troops were engaged actively again them. on 24 February XII Corps renewed its eastward attack to clear the enemy from the area bounded by the SAUER - MOSELLE - SYLL Rivers. Lighter enemy resistance than had heretofore been encountered permitted the troops to make favorable advances with a minimum of casualties.

Chemical Warfare Service Units

Chemical Depot Companies

The Chemical Warfare depots were operated during the month by the 192d and 61st Chemical Depot Companies. The 192d Chemical Depot Company continued operating Depot No. 12 at FERANGE (Q07), handling all classes of Chemical Warfare supplies. At the beginning of the month this company sent out a detachment to establish Depot No. 14 at PILTZERDORF (P89) and Depot No. 15, at BONNERT (P82). As increasing amounts of supplies were moved forward to Depot No. 15, a detachment of officers and enlisted men from the 61st Chemical Depot Company were attached to the LORENTZWEILER (P82) installation. When the 61st Closed out Depot No. 15 on 10 February, and Depot No. 14 on 20 February, the entire company took over Depot No. 15. Personnel of the 192d Chemical Depot Company at the end of February were operating Depot No. 12, at FERANGE (Q07).

Digitized by Google

Chemical Decontamination Companies

The 334 Chemical Decontamination Company remained attached to the two depot companies. The company's headquarters and two platoons were attached to the 51st Chemical Depot Company at PIRMASENS (U89). The other two platoons of the company were attached to the 1924 Chemical Depot Company, alternately operating at [illegible]-WEILER (F52) and PERL[illegible] (Q87). Employment of the decontamination company continued principally to assisting the depot companies in moving incoming chemical supplies from railheads to the depot installations.

Chemical Maintenance Companies

Located at HILTZHAUS (C78) during February the 11th Chemical Maintenance Company continued its repair of gas masks and the main source of the 4.5-inch Chemical mortars, M2 smoke generators and flame throwers, A, proximately 800 ammunition units were turned in by the company during the month. The 12th Chemical Maintenance Company, assigned to the division at [illegible] (K3[illegible]), in addition to the repair and maintenance of Chemical Warfare items, this company was responsible for the [illegible] of the [illegible] Platoon personnel of this company were also [illegible] Chemical Warfare [illegible] Platoon personnel [illegible] Chemical Warfare [illegible] Platoon personnel [illegible] Chemical Warfare [illegible] Platoon personnel

Tactical attachments of the companies changed frequently during the month. "A" Company on 7 March was attached to the 668th Field Artillery Battalion of the 65th Division. Company "B", after a forty-eight hour attachment to the 26th Infantry Division, was attached on 9 March to the 301st Infantry of the 94th Division. On this change of attachment the company moved to a new position at PFALZGRAFENROTH (LL0). The same day "C" Company was attached to the 328th Infantry of the 26th Division. On 10 March the unit moved up to [illegible] (LL7). Continuing in support of artillery units, Company "A" on [illegible] March was attached to the 313th Field Artillery Battalion of the [illegible] Division. The company moved 16 March to a new position near [illegible] (LL3) firing harassing and interdictory fire in support of the artillery. Company "B" on 13 March established a thirteen hour smoke screen for the infantry of the 94th Division. The screen denied observation to the enemy located on high ground east of the RHINE River (LM81A), while the 376th Infantry attacked. Moving up the next day to LORSCHWEIG (LM2) the company established a 3600 yard long smoke screen to conceal a bridge over the ROER River and to aid in the advance of the 301st Infantry. An effective screen was maintained for over nine hours with 1888 rounds of WP. Supporting the 26th Division, Company "C" moved up to a position at [illegible] (LL7) followed the same day by a move to HEPPLAER (LL9) and then to [illegible] (LM9).

As the front began to move more and more rapidly the companies were on the road at times twenty-four hours a day. Very little firing was done during the week 18-24 March, only "B" Company expending 612 rounds of ammunition. On 20 March, "A" Company sustained a serious loss when its position at HERRESHEIM (LM9) was attacked by enemy aircraft. Anti-personnel bombs were dropped on the area by evidently experienced pilots just after daylight. The company suffered thirty-seven battle casualties in the raid. A relief from the strain of battle was given the companies when on 24 March [illegible] companies were relieved of their attachment and proceeded to [illegible] (LM9), to revert to battalion control. This was the first time the companies had been in their battalion assembly area since the arrival of the 81st in Third U. S. Army's area in September 1944.

From its assembly area at [illegible] (LM9) the battalion on 29 March began its move east. Although an advance of 185 miles was made by the organization during the last week of the month not one round of 4.2-inch mortar ammunition was fired - the first time this had occurred since 6 June 1944. By month's end the 81st was located at [illegible] (MC6), with its companies attached as follows: "A" and "B" Companies to Field Artillery battalions of the 65th Infantry Division, and "C" Company to the 26th Infantry which at the time was operating with the 6th Armored Division.

Firing done by the 81st Chemical Mortar Battalion was light early in March. Engaged in moving a great deal of the time, there were few opportunities or necessities for going into action. Company "A" in position at HERRESHEIM (LL9), was attached to Field Artillery units of the 65th Infantry Division. Company "B" at [illegible] (LL8) gave support to the 11th Infantry of the 5th Division. Clearing the enemy from the division's zone, and firing on [illegible] (LL8), and BACHEM (LL8), the company gave strong support in the advance to and the establishing of a bridgehead over the ERFT River on 3 March. "C" Company, attached to the 76th Division also gave support in the crossing of the ERFT River by the 304th Infantry. That the companies were moving frequently is attested to by the fact that until 10 March no rounds were fired by Company "A", and relatively few by the other companies. "C" Company in ten days occupied eighteen new mortar positions.

In XII Corps' breakthrough to the RHINE River in the zone between ANDERNACH (FF0) and KOBLENZ (LM9), the 81st Battalion's companies were employed by the attacking divisions. "C" Company remained attached to the 76th Infantry Division which was on the Corps' south flank. On the north, the 4th Armored Division led, followed by the 5th and 90th Infantry Divisions to which "B" and "A" Companies, respectively, were attached. The bridgehead established over the ERFT River by the 5th Division on 3 March was passed through by the 4th Armored Division leaving the 5th and 90th Divisions to mop up enemy resistance and clear the enemy in the zone to the RHINE River. In the 76th Division's zone, "C" Company did extensive firing as heavier resistance was met in this area. On 6 March, just as the first platoon was engaged in "march order", the enemy launched a counterattack, and the second platoon was immediately called on for harassing and interdictory fire. In the hasty set up, it was necessary for a short while to transmit fire data from the fire direction center to the gun position by a line of men who relayed the information by voice. Results of the mission were destruction of one enemy vehicle, silencing of four enemy mortars, and blasting of the town of SCHLEIDWEILER (LL6).

Unloading Class V Chemical supplies at a railhead, personnel of the depot companies haul drums of fog oil to Chemical depots, where they are handled by the company's swinging boom.

On 10 March "A" Company passed to control of the 89th Infantry Division and began preparations for moving forward to the front line. "B" Company moved up with the 5th Division toward the RHINE River and occupied a position at KOLLIG (L68). Moving into NIEDERLITTDORF (L36) on the same date, "C" Company with the 76th Infantry Division took up positions farther eastward in the vicinity of WITTLICH (L56). On 11 March the battalion headquarters moved from METTERICH (L15) to DAUN (L37). By middle of the month Company "A" had moved to BRUNEN (L77) and Company "B" was at RAIRUEN (L67). "C" Company on 14 March was attached to the 90th Infantry Division and moved up seventy-five miles to occupy positions near MOSELKRUMPH (L78). At this location a smoke screen was provided on 15 March while the 357th and 359th Infantries crossed the MOSELLE River. The same day "B" Company fired 350 rounds of HE into the town of LUKE (L76) and on road junctions south of the town. By 16 March, "C" Company had reached the RHINE River where it was attached by the 90th Division to the 3d Cavalry Group. The company went into action the same day, dropping mortar fire on ZILLEN (L88), across the RHINE River.

The attack across the RHINE River by XII Corps on 22 March met with light and disorganized resistance, evidently completely surprising the enemy. By noon of the same day "B" Company, with the 5th Infantry Division was across the river, and "C" Company with the 90th Infantry Division crossed on the night after the attack was begun. By the 25th, "A" Company was across the RHINE River, attached to the 358th Infantry. The following day the company fired its first important mission in over twenty-five days. From its position at KRIV ACHEIM (M86) rounds of WP and HE were fired on a rail yard and an oil warehouse located about 3000 yards from the mortar positions. A total of fifty prisoners were flushed from this target.

Almost continually on the go, by months end "C" Company with the 90th Infantry Division had taken up positions at HINRAGH (M84), while "A" Company, with the 26th Infantry Division, was located at WITTGENBORN (M98). Company "B" after supporting the 5th Infantry Division's attack on FRANKFURT (M56), reverted to battalion control, and on 31 March was set up with the headquarters at OFFENBACH (M76), on the MAIN River.

Chemical Warfare Service Units

Chemical Depot Companies

At the beginning of the month only two depots were in operation by Chemical units. Depot No. 12, at HOMBURG (U97), remained opened the entire month. This depot, handling Class II, IV, and V Chemical Warfare supplies, was operated by the 193d Chemical Depot Company. The other supply point in operation was Depot No. 18 located at LORENTZWEILER (P43). Operated by the 61st Chemical Depot Company, the depot furnished Class II, IV, and V Chemical Warfare items to units of VIII and XII Corps. In an effort to keep supplies available as near the front as practicable, the depot companies sent out detachments to establish forward supply points. On 6 March the 61st Chemical Depot Company opened Depot No. 17 at KRUCHTEN (P98), and the following day the 193d Chemical Depot Company opened Depot No. 18 at OBERDORF (L01). The company operating Depot No. 17 closed the installation after one week, and opened Depot No. 19 on 14 March at DAUN (L37). This depot operated approximately one week, and was closed 23 March, one day after the 61st Chemical Depot Company opened Depot No. 20, on 22 March, at ARGENSCHWANG (L04). As the 193d had closed out Depot No. 18 on 26 March, the only depots in operation at the end of the month was No. 20.

Chemical Decontamination Company

The 93d Chemical Decontamination Company remained attached to the two depot companies. The company headquarters, second and third platoons were attached to the 61st Chemical Depot Company, while the first and fourth platoons operated with the 193d Chemical Depot Company. Moving farther into Germany had necessitated additional security precautions around the depot installations. To this end personnel of the decontamination company were employed as guards in addition to their duties of helping the depot companies unload supplies at railheads and truck stocks to the supply installations.

Chemical Maintenance Companies

The 16th Chemical Maintenance Company moved from HILVARDE (U78) on 9 March to ZAMBEN (L12) Germany. Repairs of Chemical Warfare items were made for Third U. S. Army units. In addition to the maintenance of 4.2-inch Chemical mortars and M2 smoke generators. Large quantities of gas masks and duet respirators were repaired and salvaged by the company. The unit departed ZAMBEN (L12) and arrived at MEISENHEIM (L83) on 23 March, moving the following day to BOCKENAU (L83). During the month, twenty-four smoke generator mounts were made by each maintenance company for installation in assault boats. This order was requested by engineers who planned to use the M2 portable smoke generator in assault boats for making initial river crossings.

From KERSCH, Luxemburg (P72) the 13th Chemical Maintenance Company moved on 8 March to ALSDORF, Germany (L04). In addition to performing its primary mission, the company sent out a detachment of men to VIII Corps units to install mechanical flame throwers. Another detachment was put on temporary duty with the 81st Chemical Mortar Battalion to help relieve urgent maintenance needs of the battalion. A third detachment of maintenance men was sent to the 103d Chemical Smoke Generator Company. On 16 March the company moved from ALSDORF (L04) to NIEDERSTAUFFELD (L97) where the job of making twenty-four smoke generator mounts was completed. The company moved again on 22 March, and established itself at KRAUSCHEILER (M04). The 13th Chemical Maintenance Company was given the mission of supporting the 93d Chemical Mortar Battalion when that organization became operational under Third U. S. Army on 29 March.

Digitized by Google

On 27 March the company was attached to the 90th Infantry Division to carry out smoking operations on the RHINE River at MAINZ (M36). Two sections of the company were set up in MAINZ (M35), while the other two sections operated from KASTEL (M35) on the opposite bank of the river. Smoke screens were provided from MAINZ (M35) 29 March while engineers were engaged in bridging the river. Since it was unnecessary to use the KASTEL (M35) installations, the two sections on the west bank of the river returned to MAINZ (M35) and on 30 March were operating with the two sections previously installed on the west bank. Smoke missions by all four sections were continued from MAINZ (M35) for the remainder of the month.

Two smoke operations were performed by the 84th Chemical Smoke Generator Company in Germany. Attached for one operation to the 5th Infantry Division, two sections of the company were employed 2 March to provide smoke screens at METTERICH, Germany (L26) while troops of the division attached across the KYLL River. The second operation of the company was also on 2 March when the other two sections of the company, attached to the 5th Infantry Division, were set up at HUTTINGEN, Germany (L25). For two days intermittent screens were maintained at this position to deny observation to the enemy of the exposed supply route of the supported unit. Only light artillery and mortar fire were experienced, and it is believed the anti-observation screens helped prevent destruction of material and personnel in an otherwise vulnerable spot.

On 3 March one section of the 161st Chemical Smoke Generator Company was attached to the 6th Armored Division. Moving up to LUXEMBACH (L07), the section's generators were emplaced but no screening was required. The following day the company moved to PRONSFELD, Germany (L09) where it was attached on 5 March to the 90th Infantry Division. For the ensuing week, men and trucks were employed by the division to haul troops. The company moved 16 March to PLAID (L79) where it resumed its primary mission. Attached to the 87th Infantry Division, one section provided a smoke screen over the MOSELLE River at KAIMIS (L69), while infantry men crossed the river. Relieved of this attachment, the company moved up 20 March to WALDRACHS (L88), and two days later to FILSEN (L88). At this latter location the unit was again attached to the 90th Infantry Division and small smoke screens were provided 23 March at HUSSENICH (M30), HAIDENPANZT (M29), and FRIL-WINDRIN (M29). Other missions were carried out by the company at NIERSTEIN (M44) on the RHINE River on 28 March, at GROSSANKEIM (M46) and MULHEIM (M46) on 27 and 28 March, and at MULHEIM (M46) and HUPPENHEIM (M45) from 28-31 March.

The 162d Chemical Smoke Generator Company, operating in the VIII Corps sector in direct support of the 358d and 345th Infantry Regiments, expended 9900 gallons of fog oil from 24 to 28 March. For the operations the company was divided into five sections, employed as follows: section one at DREHKOSEL (L96); section two At ST. GOAR (L97); section three at WELLMICH (L97), section four at BOPPARD (L86); and section five at BOPPARD (L86). Encountering enemy small arms and artillery fire, the sections provided smoke screens that denied direct observation to the enemy while our infantry troops crossed the RHINE River with a minimum of casualties. The BOPPARD (L86) mission in addition to the screening protection for the infantry crossing, also screened construction of a RHINE River bridge by the 1105d Engineer Group. Operations by the 162d Chemical Smoke Generator Company at all five sites were suspended 28 March.

Chemical Smoke Generator Companies

Continuing in operation under Third U.S. Army, the 81st, 84th, 161st and 162d Chemical Smoke Generator Companies carried out smoking missions for various organizations during March. The 81st Company, with headquarters at REMICH, Luxemburg (P90) had sections one and two in position at CASTEL, Germany (L10), and sections three and four at TRIER (L23) until 9 March. No missions were required and the company moved to a rest and rehabilitation center at METZ, France (U98). At times during the two weeks rest period part of the personnel and trucks were employed by XX Corps for trucking operations.

[illegible]

[illegible] Section I General [illegible] Chemical [illegible] FRANKFURT [illegible] on 6 April, [illegible] FRANKFURT (M46), to [illegible] on 26 April were made by the [illegible] division.

Several sample gas shells from a German toxic gas dump, captured near HUNSTADT (M89) the latter part of March, were forwarded to Twelfth U. S. Army Group for analysis. The single-blue-ring marked shells were examined by the 40th Chemical Laboratory Company and were reported to contain the harassing and irritant agent DM (Adamsite). According to the report the net weight of the shell was 46.5 kilograms, the body weighing 27.7 kilograms. Encased were 2.5 kilograms of HE and 1.4 kilograms of DM (Adamsite). From the heavy steel casing, and the comparatively large charge of HE, it was believed the shell would be valuable tactically for causing casualties by fragmentation. As a chemical harassing agent the missile would cause sneezing, vomiting and some systemic effects, but presence of the agent would be concealed initially by the HE blasting effect.

Two additional German poison gas dumps were uncovered during April in Third U. S. Army's eastward advance, in addition to several bridges laden with toxic filled bombs discovered on the DANUBE River. On 23 April one of the enemy's large ammunition dumps was uncovered in the vicinity of GRAFENWOHR (P0038). This dump contained at first estimate between two and four million rounds of German chemical ammunition. In addition to Nebelwerfer (rocket smoke projector) shells, and land mines an undetermined amount of French and possibly Hungarian filled gas shells were found. Most of the German filled shells were marked either with white (for lacrimatory and irritant), green (for non-persistent choking irritant), blue (for lung irritant, sternutator), or yellow (for persistent vesicant, blister) bands. The second dump was captured on 29 April at WINDEA LEITERSDORF (U8033). The stock of this enemy dump consisted almost entirely of approximately 80,000 aerial bombs, marked either with one yellow band, two yellow bands, two blue bands, two white bands, two green bands, or three green bands. The area was placed under guard of personnel from the 33d Chemical Decontamination Company, and the capture of the dump was reported to higher headquarters for disposition.

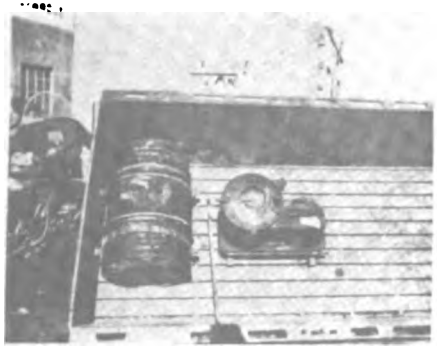
The contents of these two dumps, however, did not produce the tactical interest equal to that which arose from the report of gas laden barges on the DANUBE River near KOWNRACH (U8347) and REINERSTOFF (U8746). With fuses marked "1945", and having been filled as recently as March of the same year, the 500 pound bombs had been brought by rail from NURNBERG (040) and put on the river barges, evidently in an effort to build up a poison gas reserve in the Redoubt area. The three green painted bands indicated the bombs were filled with a mixture of AC (Hydrocyanic Acid) and HN (Nitrogen Mustard) gas. The five barges captured 28 April held a total of approximately 2800 bombs.

Further investigation of the barges revealed that when capture of the barges became imminent, the enemy left a German officer (Captain) in the area to ensure that the bombs were not detonated by either side, thereby creating an unintentional gas attack. On 28 April a conference was held by officers of Third U. S. Army with two Colonels from the German Army, together with an SS Lieutenant. The purpose of the meeting was to establish a neutral zone around the area of the DANUBE River where the barges were located. This was done so that both enemy and friendly forces could be warned not to bomb, strafe, or fire artillery into the area.

A shell is dropped down the barrel of a 4.2-inch mortar in Germany

The end of April found more Chemical mortar battalions assigned to Third U. S. Army than had been assigned at any other one time. The 93d Chemical Mortar Battalion, acquired during the latter part of March, was relieved from assignment to Third U. S. Army on 22 April when VIII Corps, with its attached units, passed from control of this Headquarters. However, four battalions were acquired during the month--the 90th, 94th, 98th, and 97th Chemical Mortar Battalions. With the assignment of III Corps to this Command on 18 April, the 90th Chemical Mortar Battalion was assigned to Headquarters, Third U. S. Army. On 8 April, the 97th Chemical Mortar Battalion was assigned to Third U. S. Army, and later in the month, 21 April, the 94th and 98th were acquired from Ninth U. S. Army. Thus, a total of six Chemical mortar battalions operated under this Headquarters at the end of April.

Section II. Operations.



Chemical Battalions

At the beginning of the month the 81st, 91st and 93d Chemical Mortar Battalions continued operating assigned to Third U.S. Army. The 81st was attached to the XX Corps throughout the month, the 91st to XII Corps, and the 93d to VIII Corps. When this latter Corps, with attached units, was transferred on 22 April, the 93d Chemical Mortar Battalion was lost from control of this Headquarters. However, with the assignment of III Corps to Third U. S. Army on 18 April, the 90th Chemical Mortar Battalion was acquired. Three other battalions received during the month were the 97th, assigned to this Command 8 April, and the 94th and 98th battalions, assigned 21 April to Third U. S. Army from Ninth U. S. Army. For operations the six Chemical mortar battalions were attached as follows: 90th and 98th to III Corps; 91st and 97th to XII Corps; and the 81st and 94th to XX Corps.

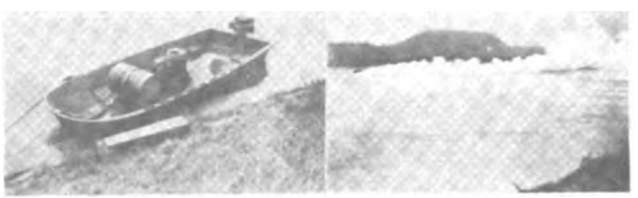
Headquarters of the 81st Chemical Mortar Battalion was located early in the month at RIPA (R14), with "A" Company in position at BRUTH (R18), attached to Artillery of the 90th Infantry Division. Company "B" was also in support of the 90th Infantry Division, and was located at SCHLAGEN (M29). "C" Company, attached to the 65th Division operated from a position near HAMSFELD (M26). On 4 April this company was relieved from the attachment and was attached to the 76th Infantry Division. The first week of April all elements of the battalion were continually on the move, doing little firing in their support of Third U. S. Army units in the advance toward SOTHA (J06) and ERFURT (J36). The front lines were advancing so rapidly, that at times the battalion was over one hundred miles in front of the corps headquarters.

Company "B" did the majority of firing for the battalion the first week of April. A total of 662 rounds were fired by the company to support the advance of the 319th Infantry towards EHRENSTEIN (W66), on 5 April. While firing W76 to provide a screen, the company fired HE to assist in keeping down enemy fire as our infantry advanced. By 10 April the mortars of the company were firing on targets of opportunity in the vicinity of EHOTA (J36). A group of the enemy walking along a ridge northeast of SCHMIRA (J36) was sighted and fired upon. The same day the company was employed in repulsing an enemy counterattack comprised of a force of three tanks and sixty infantry. Credit for checking the counterattack was given by the supported 318th Infantry to the mortars of Company "B". The towns of ARNSTEDEN (J26) and WITTERDA (J27) were fired on by "C" Company on 10 April in an effort to soften the targets for troops of the 328th Infantry. Company "A" supported the 317th Infantry 10 April by firing on road junctions, buildings and other targets in the vicinity of KINDERSLEBEN (J36). Even with the increased number of missions, mortar breakage continued at a minimum.

[illegible] On 24 April "B" Company was [illegible] mortars. Friendly [illegible] Army [illegible] the same [illegible] Artillery Battalion [illegible] attached to the [illegible] Division. [illegible] Artillery Battalion [illegible] Infantry [illegible] Army was attached to the [illegible] Infantry [illegible] was relieved from attachment [illegible] Company "B" [illegible] Division. Two [illegible] Division [illegible] Division [illegible] Division

Attached to III Corps, the companies of the 91st Chemical Mortar Battalion were operating in support of the 26th, 71st and 97th Infantry Divisions. Company "A", attached to the 104th Infantry of the 26th Division, occupied positions near DIEUZE (F92). The mission of the regiment was to protect the right flank of the Corps. Company "B" in position at FOLKLING (K3), was in reserve of the 71st Division. Company "C", at DRAKE HM (F74), operated in the vicinity of the SIERCK River. Headquarters Company at FENETRANGE (F76) made preparations on 1 April to move to MERLEN (F84). But unexpected events began to take place. The advance party of the company reached its new location without difficulty, but the main body of the company proceeded to serve up several pockets of enemy troops caught along the Corps' main supply route. As the company encountered road blocks created by enemy action, guns and small arms, orders were given to built up later elements of the company that had not imported the III Chemical Post. The following day enemy resistance had been overcome and the battalion headquarters proceeded on its move. Two personnel of two vehicles was captured but was recovered unharmed on 8 April.

Company "A" fired missions 4 April on the towns of OPPERTZ (H30) and and BRINCK (H30). Enemy in the woods north of these two towns were routed out with a few rounds of VT harassing fire. The same day "C" Company fired one mission in the attack on RAHLINGEN (H84) and by 7 April had moved to ETTENDORF (H68).



In preparation for an attack by III Corps on 10 April, "A" Company was attached to the entire 26th Division for general support. The company moved up to DIEDENHOFEN (J22), and two days later to KUPPELSTOCK (J4), firing only a few small harassing missions. By 13 April the company was relieved from the 26th Division, and was attached along with "B" Company to the 71st Infantry Division. With companies were placed in division reserve. On 10 April "B" Company moved from MARIENTHAL (H42) to TUNTAN (J01), and the following day to SCHLOSS (K20). No missions were fired. "C" Company from positions at STUTZANGEN (J23), gave on call registers of the 90th Infantry Division. Beginning 10 April, the platoons of the company leap-frogged throughout the next three days in order to keep within effective range of the infantry. Some harassing and interdictory missions were fired in support of the troops. By 13 April the company was situated in LEMBERG (J61).

On 14 April the 91st Chemical Mortar Battalion was relieved from its attachment to the 71st and 90th Infantry Divisions and moved to an assembly area at BACHEMDORF (J30). The entire battalion was attached to the 9th Tank Destroyer Group with the mission of furnishing Military Government Guard for the III Corps area. "A" Company on 16 April moved to BINSFELD (J20) and began patrolling the assigned area. The next day, "B" Company moved to the vicinity of ARZFELDEN (J40) and "C" Company, with "A" Battery of the 275th Field Artillery Battalion, began patrolling the area surrounding LORENTZEN (J71) and HEMMERICH (J67). By 19 April, changes in division boundaries had displaced headquarters Company, companies "A" and "B" to new areas in the vicinity of PRUM (J56) and BONNERSDORF (J19), while "C" Company patrolled in the vicinity of WILSECKERANGE (J07).

The 91st Chemical Mortar Battalion, after mobilization, went to Third U. S. Army, arriving 11 April in an assembly area at TAILLY (H8). Four days later the battalion was attached to the 12th Armored Group, Corps Area in case of need. The following day operations of the battalion moved to front line combat areas and established security guards on supplies, communication zones, factories and bridges. On 21 April, fired 48 rounds of HE into the woods in the vicinity of DIEULOUARD to clear enemy from the area. No other rounds were fired by the battalion and the Head, Artillery was located by 22 April at LAENGENICH (J54).

Attached to III Corps upon its arrival in Third U. S. Army's area 24 April, the 90th Chemical Mortar Battalion assembled in the area of LEDEBURG (J61). Two companies were attached to the 80th Infantry Division for overall support. The battalion headquarters moved from MARIENTHAL (J42) on 25 April to ALTRANSTEDT (J44) and three days later to LANGENSTEIN (J72).

These pictures illustrate the use of the M2 smoke generator in river crossings. Mounts made by the 13th and 16th Chemical Maintenance companies permit installation of the generator in an assault boat (upper left) and in a ferry boat (center left). Large (55 gal) drum containing fog oil. Generator in action and boat in use to distribute smoke across river (center right and lower right).

One platoon of "A" Company of the 90th Battalion fired a smoke mission 28 April near FRANKENAU (C64). The rest of the month the troops encountered such light resistance that no additional missions were requested. By 30 April the unit was located at LAUTERBACH (C58). The latter three days of the month "B" Company fired on railroad junctions, buildings and other enemy built installations in the vicinity of ALSFELD (C42). The following day the company gave support at WINDECKEN (C72) to cover infantry crossing the LAHN RIver. Two days later the company received positions at FAULBACH (C41). "C" Company fired two missions 27 April from its position near HESS (F2). Four missions were fired on RAUSCHENBACH (C60), the following day. By month's end the company had reached AMPERTSHAUSEN (C89).

Chemical Warfare Service Units

Chemical Depot Companies

Depot No. 20, stocking Class II, IV and V Chemical supplies remained in operation during the month by the 61st Chemical Depot Company. This supply point served III Corps units and was located at ABLEICHSWANN (C44). Depot No. 21 was opened at BATTALSTADT (C84) by the 1926 Chemical Depot Company on 12 April. Class IV and V items were handled at this location until 21 April when the depot was closed. The following day the company opened Depot No. 23, at ALTENFETN (C7) stocking the Class IV and V supplies. Meanwhile, the 61st Chemical Depot Company on 20 April had established Depot No. 22 at OBERSS-LAUDENBACH (B43) servicing III, XII, and XX Corps units.

The biggest problem for the depot companies during April was transportation. To keep Chemical supplies available for Third U.S. Army's fast moving tempo it was necessary for the depot companies to keep stocks of all classes of supplies constantly moving up. At times the Chemical depot companies were borrowed in addition to the 331 Chemical Decontamination Company to assist in transporting supplies to the more forward depot points. Fortunately, the amount of supplies consumed was not great and no serious shortages were experienced, even though at times there were six battalions operating under Third U. S. Army.

On 1 April, both the 61st and 1926d Chemical Depot Companies, complying with orders issued by Third U. S. Army 31 March, were reorganized and equipped under Table of Organization and Equipment 8-67, dated 6 January 1945. The new reorganization reduced the number of enlisted personnel by 27 men, leaving each company with five officers and one hundred fifty enlisted men.

Chemical Decontamination Company

Continuing to operate with the Chemical depot companies, the headquarters section and third platoon of the 331st Chemical Decontamination Company were attached to the 61st Chemical Depot Company. The first and fourth platoons assisted the 1926 in carrying out depot functions. Personnel of the decontamination company were also employed in guarding captured enemy chemical dumps. The third platoon was stationed at the captured toxic gas dump at HEMMERICH (M56) from 8 to 16 April. At this time the platoon moved to OSNABRUCK (L70). The second platoon on 22 April established a guard at the captured dump at BAUMHOLZ (G84) while the third platoon moved the same day to WILDFLECKEN (H6w).

Chemical Maintenance Company

Located at NEU ISENBURG (M6w), the 16th Chemical Maintenance Company continued to perform its primary service for Third U. S. Army troops. Maintenance was performed on 1F2 Chemical smoke generators (M2) and repairs made to sixteen 4.2-inch Chemical mortars, including barrels, baseplates and standards. On 11 April the unit departed NEU ISENBURG (M6w), and set up at VAINA (M45). From this location the company moved to KITZINGEN (M72) on 17 April, followed by still another move one week later to EICHSTADT (P7w).

The 13th Chemical Maintenance Company, at MARKTBREITEN (M04), moved 1 April to ALSFELD (M38) and six days later to HERSFELD (M38). Work was performed on twenty-five smoke generators and the company furnished a detail of men to the depot companies for reworking defective fuses of 4.2 inch Chemical ammunition. The company moved again on 9 April to WASTENSAND JD (M16) where it continued routine operations. A school was held at VAINA (M45) for personnel of both maintenance companies from 12 to 16 April. Instructions were given in the installation, operation and maintenance of flame throwers mounted in tanks. On 22 April the company moved to KITZINGEN AIR JD (J01). The relatively few missions performed in April by the smoke generator companies and Chemical Battalions resulted in a minimum of work being received by the two Chemical maintenance companies.

CHAPTER 13
LESSONS LEARNED & CONCLUSIONS

1. During operations of Third U. S. Army, the greatest handicap to adequate supply of Chemical items was the lack of organic transportation. At times depot companies were unable to move stocks of the supply points from one location to another, and it was necessary to obtain additional transportation from Army sources. In many instances, because other agencies had higher priority, transportation was not available promptly, and during the advance across France and again across Germany, portions of one depot company were as far as two hundred miles behind the troops supported. Until the middle of March, the Chemical smoke generator companies, with their twenty-nine (29) two and one-half ton trucks were utilized, in addition to performing their primary duties, in transferring the Chemical depot stocks nearer the front. The reorganization and equipping of the companies in March 1945 under T/O and E 3-267, dated 4 May 1944, reduced the number of two and one-half ton trucks in each company to five (5). This imposed further hardships in the transportation situation.

2. Consideration should be given to the formation of a service unit similar to a Quartermaster truck company for addition to each Chemical depot company, or provisions made thereby it would be standard procedure to attach a Quartermaster truck company to each Chemical depot company in operation. In this connection, it will be noted that the Ordnance Department, the Quartermaster Corps, the Corps of Engineers, and other services, all have service units with surplus organic transportation in their organizations or are able to use such units for the transportation of depot supplies in emergencies. This action was possible in the Chemical Warfare Service in those instances where smoke generator companies (prior to reorganization in March 1945) could be used to provide transportation when not performing their primary mission.

3. From the experience Third U. S. Army gained in its nine-month operational period, the following information relative to the function and employment of Chemical Warfare units in combat is submitted:

a. Chemical Mortar Battalions

(1) In the phase of planning for operations, prior to 9 May, it was recommended that one Chemical mortar battalion be attached to each infantry division. However, the number of battalions available was limited. Upon becoming operational 1 August 1944, only one Chemical mortar battalion was assigned to Third U. S. Army.

(2) During the operational period Third U. S. Army constituted of from two to four corps, with as many as eighteen divisions under Army control at a single time. The maximum number of Chemical mortar battalions assigned to Third U. S. Army at one time was seven. Other times the Army operated with only one, but generally with three such units, one attached to each corps. In this capacity the three companies of the battalion supported at times three different divisions. Employed over such large areas, the control, administration, and supply by the battalion headquarters was very difficult.

(3) Chemical mortar battalions were frequently attached during combat to Field Artillery units. Such attachments were not favored, principally because of the tendency of the artillery to request firing on targets outside the authorized range of the 4.2-inch Chemical mortar. This weapon should not be expected to fire over 4400 yards, especially at any sustained rate of fire. Artillery liaison officers and liaison planes were used at times to direct the fire of the 4.2-inch mortars.

(4) Chemical mortar troops should not be attached to armored units. Designed to be employed directly in front line operations, Armored divisions are equipped accordingly, with maximum protection afforded the individual. Chemical mortar battalions do not possess the mechanized mobility or protection commensurate with operating in areas in which armored troops are employed.

(5) During certain periods the breakage of mortars and accessory equipment was extremely high. Because of the dispersion of the battalions over a large area, and the rapidly moving front, the Chemical maintenance companies supporting the battalions were often a great distance from the companies of the battalions. Under these conditions, and considering the time consumed in returning the equipment to the maintenance companies for repair, an excessive number of mortars and accessories were necessary to maintain the mortar-position-to-maintenance-company cycle.

(6) In view of the demands combat by larger organizations for 4.2-inch Chemical mortar support, the basis of troop unit requirements should be one Chemical mortar battalion per infantry division.

(7) Consideration should be given to providing a mortar repair detachment as an organic part of Headquarters and Headquarters Company, Chemical mortar battalion. This type detachment could perform such non-specialized maintenance as welding, base-plate straightening, and other repairs which are normally but not necessarily performed by the maintenance company.

b. Chemical Depot Companies

(1) The number of Chemical depot companies needed by an Army in operation depends on the method employed by Army in issuing Class V Chemical supplies, the extent of use of Chemical Warfare material, and the speed with which the Army moves. The latter two conditions are too unstable to justify using them as a basis for making definite calculations.

(2) It was the policy within the area of Third U. S. Army to handle all Class V Chemical supplies, in addition to Classes II and IV Chemical items, at the Chemical depot points. This was done in preference to sending out small detachments from the Chemical depot companies to Ordnance ammunition supply points to handle Chemical ammunition at Ordnance installations.

(3) According to plan, all portable flame throwers were filled, stocked, and issued ready for operation, to using units. This proved to be an advantage since the limited availability of flame thrower filling kits would not permit the issue of the kits to the using troops in the amount authorized. Flame throwers were returned empty to the depot companies.

(4) If it is the intention of the Chemical Warfare Service within an Army to maintain Chemical depots through which Class V Chemical items are issued, two Chemical depot companies should be assigned to each Army.

c. Chemical Decontamination Company

(1) The Chemical decontamination company assigned to Third U. S. Army was not called on for performance of its primary mission. However, it was employed to a great extent in other operations. Useful in such jobs as fire-fighting, hauling water, washing vehicles, providing bathing facilities, the equipment and personnel of the company more than justified their attachment to Third U. S. Army, despite the fact they were not engaged in their primary mission.

(2) Although gas warfare was not initiated, the safety factor of having a Chemical decontamination company, in addition to the capabilities noted above, warrants recommending assignment of such a company to an Army. Additional companies should be retained in rear echelons, available for use in emergencies.

d. Chemical Maintenance Companies

(1) The maintenance of mortars comprised the majority of work, and received priority over other items to be repaired in the company. In this Army it was found that one maintenance company could support two Chemical mortar battalions. At the same time, maintenance facilities for all other Chemical Warfare Service equipment were ample. However, the assignment of additional battalions severely taxed the capacity of the maintenance companies.

(2) Generally, two maintenance companies proved to be sufficient in performing the maintenance of all Chemical equipment within Third U. S. Army. The employment by one Army of more than four battalions in sustained combat would require the services of more than two maintenance companies.

(3) It is estimated also that when mechanized flame throwers (M4-6) are supplied in considerable quantity, and these maintenance companies are responsible for maintenance of these weapons, additional maintenance facilities would be required.

(4) Except for the conditions indicated above, one maintenance company should be assigned to each field Army, with additional companies assigned in the ratio of one (1) maintenance company per two (2) Chemical mortar battalions.

(5) Because the majority of the work of the maintenance companies was concentrated in the mortar repair section, such a section or detachment should be included in Headquarters and Headquarters Company, Chemical mortar battalion.

e. Chemical Smoke Generator Company

(1) For the majority of the time, four Chemical smoke generator companies were assigned to Third U. S. Army. It was the practice in this Army to attach single companies to corps for any particular operation. In some cases corps have attached these companies to divisions or to particular engineer or antiaircraft artillery units. In fact, some engineer units requested that smoke generator companies be in action prior to their initiating bridging operations. In the majority of cases smoke generator companies were employed primarily to cover bridges and bridge sites.

(2) Upon reorganizing under Table of Organization and Equipment 3-267 (dated 4 May 1944) the Chemical smoke generator companies lost twenty-four (24) two and one-half ton trucks. Having previously been employed intermittently in transporting stocks of Chemical depots from rear areas to forward installations, the smoke generator companies after reorganizing had insufficient organic transportation within the unit. The supplying of heavy items such as drums of fog oil, smoke pots, and other materials required by these companies in action was seriously hampered. To assist in overcoming this difficulty, permission was obtained to permit each company to retain ten (10) two and one-half ton trucks in addition to the authorized five (5).

(3) Only in a very few instances were smoke generator companies requested to maintain a screen at a site unfavorable to operations because of terrain. Even though the M2 is a portable smoke generator as compared to the M1, when a site is selected and a position secured, the smoke generator cannot be moved by personnel. Therefore, some defilade or other protective cover is necessary. In situations lacking such protection the 4.2-inch Chemical mortar is more practicable for maintaining a smoke screen.

(4) One serious disadvantage of the M2 Chemical smoke generator is the noise made by the generator in operation. In assault type operations it was difficult to maintain the element of surprise. Operating personnel experienced difficulty in hearing incoming enemy artillery and mortar shells, which frequently were placed on the smoke generator positions.

(5) With reference to a Headquarters, and Headquarters Detachment, Chemical smoke generator battalion, as far as operating under Army control is concerned, there is no need for such a detachment. Since the smoke generator companies were attached by Army to corps for any particular operation, the Chemical smoke generator battalion could not be efficiently utilized. When the smoke generator companies were attached as indicated, the corps assumed responsibility for administration and control. The supervising of a smoke generator battalion headquarters over companies widely separated (no more than two companies were ever attached to or ever used by more than one corps) was not practicable and served no useful purpose.

(6) Sufficient Chemical smoke generator companies should be assigned to an Army to be available for attachment on the basis of one company per corps.

f. Chemical General Service Company

At no time during operations was any Chemical general service company attached or assigned to Third U. S. Army. It is not believed that this type of unit is economical for operation with field Armies or corps under normal situations. Certain sections of this company would only be employed under special situations, and the units discussed above will normally be sufficient.

ANNEXES

ANNEX NO. 1

HEADQUARTERS
THIRD UNITED STATES ARMY
APO 403

30 April 1944

TRAINING MEMORANDUM:

NUMBER 14 :

TRAINING IN CHEMICAL WARFARE

1. Attention is invited to Training Memorandum Number 48, Headquarters ETOUSA, 23 December 1943, and Training Memorandum Number 4, Headquarters ETOUSA, 27 January 1944.

2. All commanders will immediately make a survey of the training of their troops to see that they meet the "Standard of Proficiency" in defense against chemical attack as outlined in paragraph 4, Section I, Chapter I, FM 21-40.

3. The purpose of all training in defense against chemical attack will be to assure the unit's being able to complete its mission with a minimum of casualties, even though gas or smoke is used against them. With this in mind the limitations as well as capabilities of chemical warfare will be taught so that an individual will have an unwarranted fear of gas. All instructions on the effects of gases will emphasize the available protection the individual has against this type of attack, and that the degree of protection depends on the individual's knowledge and ability to use his protective equipment.

4. The following additional provisions will be complied with:

a. Unit commanders will ascertain that all members of their command have the complete authorized protective uniform in serviceable condition, and by observation of the men in the uniform will assure themselves that each man knows how to wear the uniform and that it fits him correctly. Upon completion of the visual inspection the protective uniform will be held in unit storage.

b. The protective cover, carried in the gas mask carrier, will not be removed from the container unless gas attack is obviously imminent or unless directed by higher headquarters.

c. The ½-quart decontaminating apparatus will be mounted on vehicles as directed by Section XI, Maintenance and Operation of Motor Vehicles, Headquarters ETOUSA, 24 January 1944. The apparatus will be kept filled with decontaminating agent non-corrosive (DANC) in accordance with Section II, Training Memorandum Number 23, Headquarters ETOUSA, 31 July 1943.

d. The following items will be issued to individuals and carried in the gas masks as directed in Training Memorandum Number 4, Headquarters ETOUSA, 27 January 1944, Section I, subject: "Method of Carrying Individual Gas Protection Equipment."

(1) Two (2) eyeshields
(2) One (1) tube protective ointment
(3) One (1) pocket reference card
(4) One (1) protective cover (QM issue)
(5) Two (2) sleeve gas detectors
(6) One (1) tube BAL eye ointment (Medical issue)

e. The following items will be drawn and placed in unit storage until directed otherwise:

(1) One (1) protective cover (QM issue)
(2) Two (2) eyeshields
(3) Protective clothing (QM issue)
(4) One (1) can shoe impregnite

5. Unit gas personnel will be trained and appointed as indicated below, and all units will maintain an up-to-date list of personnel so appointed.

a. A minimum of one unit gas officer and one gas noncommissioned officer of each brigade, regiment, and battalion, and a minimum of two gas noncommissioned officers for each company.

b. Decontamination squads on the basis of one man for each twenty (20) men or fraction thereof. As each unit will be required to perform its own decontamination, members of the squad will be trained to decontaminate clothing, shoes, web equipment, gas masks, weapons, vehicles, areas, food, and any special equipment which the unit is authorized. Each individual in the unit will be able to perform personal decontamination, decontamination of weapon with which armed, and, if a member of a crew-served weapon, decontamination required to keep that weapon in operation. Drivers will be able to perform first echelon decontamination of vehicles with the ½-quart apparatus.

6. A gas defense plan will be prepared by each unit, based upon what the unit should do if subjected to a gas attack while in its present location. The plan should be simple and explained to all personnel of the unit, after which it will be tested by trial alarms. The alert plans will contain the following minimum:

a. Plan for movement of unit to alternate position in the event of vesicant gas attack.

b. Use of decontamination squads for decontamination of vital areas, buildings, and equipment.

c. Procedure for reporting the use of gas by the enemy.

d. Location of gas alarms and responsibility for sounding the alarm.

e. Use of protective equipment in the gas mask carrier.

f. Drawing gas protective equipment and clothing from unit storage.

g. Protection of vehicles and supplies.

7. a. Gas masks will be carried under the following conditions:

(1) When participating in actual or simulated field operations except when specifically directed otherwise by the commander of troops. Unit commanders will use their own judgment as to when it is obviously inappropriate for masks to be worn and will then direct that gas masks not be carried.

(2) By both interior and local security detachments while on duty. The mask may be kept at posts of duty, instead of being worn, except that during air raids or gas alerts the mask will be carried on the person.

(3) While on leave, furlough, or traveling on official business, if separation from the post is to exceed 24 hours. The mask need not be carried on the person but must be available for use.

b. Gas masks will be worn for a minimum of one-half hour per week, except that in higher headquarters (divisions and above) this requirement may be reduced to 15 minutes per day, twice each month.

c. Individuals who have not tested their gas masks in the presence of tear gas or who have had repairs made to their masks since the last test, will be taken through the gas chamber at present station. This will be done at the earliest practicable date.

By command of Lieutenant General PATTON:

/s/ R. W. HARTMAN
/s/ R. W. HARTMAN,
Lt. Col., A.G.D.,
Asst. Adj. Gen.

"A" & "C"

ANNEX NO. 2

HEADQUARTERS
THIRD UNITED STATES ARMY
APO 403

8 June 1944

OPERATIONS MEMORANDUM:

NUMBER 13:

CHEMICAL WARFARE

1. REFERENCE.

a. Operation Memorandum Number 15, SHAEF, dated 26 March 1944, (Secret) subject: "Chemical Warfare."

b. Operations Memorandum, Headquarters ETOUSA, dated 2 May 1944, (Secret) subject: "Chemical Warfare."

c. Operations Memorandum Number 14, Headquarters ETOUSA, dated 28 December 1943, subject: "Reciprocs." (Section I); "Reporting Enemy Gas Attacks in the United Kingdom." (Section II); and "Reporting Enemy Gas Attacks Other Than in the United Kingdom" (Section III).

d. Operations Memorandum No. 1, Headquarters ETOUSA, dated 16 May 1943, subject: "Reporting Enemy Gas Attacks in the United Kingdom."

2. PURPOSE.

The purpose of this memorandum is to establish the Chemical Warfare policy within Third United States Army.

3. GENERAL.

The enemy is capable of employing gas on a large scale at any time. He is fully trained in defensive measures and has an adequate supply of suitable equipment and material for extensive defensive use of gas. Other than his capabilities, however, there is no positive intelligence that the enemy plans to use gas against troops invading the continent.

4. OFFENSIVE POLICY.

a. Full scale of gas offensive equipment will be provided and held in the United Kingdom until gas warfare begins.

b. Toxic gas will not be employed until so directed, and offensive gas ammunition will not be moved overseas, into or through ports or port areas until so directed by the Supreme Commander.

c. If and when chemical warfare is resorted to, commanders responsible for ordering the employment of toxic agents will be responsible for warning all Allied units operating in the vicinity.

5. DEFENSIVE POLICY.

a. Provisions are being made in the United Kingdom for full-scale anti-gas equipment for all troops to be engaged in operations. Location, method of carrying, and use of protective supplies, equipment, and reserves will be in conformity with instructions from this headquarters. The guiding principle is:

(1) One layer of protective clothing (outer) to be worn by all troops entering the Continent during the assault phase. Troops under this category will be so notified in sufficient time to don the protective uniform in the Marshalling Area.

(2) The user will not be separated from his personal anti-gas protective equipment except for a definite period of operation for which the risk can be accepted.

(3) Reserves of anti-gas protective clothing and equipment will be carried in forward areas only as considered necessary by gas intelligence. Main reserves will be located in such a way that they are readily available when required.

b. Inspections of anti-gas protective clothing, equipment, and supplies will be made with sufficient frequency to insure that these items are always serviceable. Current directives for inspection of protective ointment and clothing will be complied with.

6. USE OF SMOKE.

a. During land operations authority is delegated to corps and divisions to make full large scale use of smoke and smoke-making materials within their sectors. This authority may be redelegated to subordinate units provided proper coordination is maintained between adjacent units. Wherever smoke from one sector may drift into or interfere in the defense of another sector, the use of smoke will be coordinated between commanders of the respective sectors.

b. All units are authorized to use colored smoke grenades in accordance with appropriate SOI's, and individual HC, WP, or Frangible Grenades for purposes of escape, blinding pill boxes, etc.

DECLASSIFIED

Digitized by Google

c. During amphibious operations the use of gas will be coordinated with the necessary Naval commanders after establishment of a beach head and until troops are far enough inland to be under the protection of land artillery fire. Units will be ready while afloat for combat use in Naval amphibious operations.

7. SAFETY PRECAUTIONS.

The storage and shipment of lethal and toxic gas and chemical ammunition and gas will be closely controlled under the supervision of the Chemical Warfare Service Troops. These services will be supplied with information and instructions regarding safety precautions for storage and shipment. Individuals will be adequately trained in the safety precautions and hazards pertaining to handling and employment and that all personnel will be familiar with these hazards and will observe them as nearly as possible. Gas masks will be carried by all troops when it is necessary to initiate the use of gas. Carriers will be notified in advance and will be instructed to provide safety precautions. Manifests will describe the shipment in detail and will specify the necessary counteracting chemical of decontaminating agent. Shipments will be routed through sparsely populated areas wherever possible.

8. GAS ATTACKS.

a. Enemy use of gas not particularly initial employment, must be reported to Army Headquarters and to adjacent units by the most expeditious means available. All messages concerning the first use of or subsequent use of gas by the enemy will be secret and will be given PRIORITY priority.

b. Any information in the army's interiors in connection with gas warfare must reach Army Headquarters in the shortest possible time. Negative, as well as positive information of the enemy's intentions is required.

c. When the fact that the enemy is using gas is substantiated, the type of attack report to be made will be specified.

9. WARNINGS.

a. Units of this command will give local warnings to civilians in the United Kingdom only if ordered to save civilian lives. A general warning will be given only by British authorities while in the United Kingdom. Units are responsible for their own local warning system, using the British type gas rattle.

b. During overseas operations a general warning of the presence of gas will be issued whenever warranted. A general warning will be issued in the United Kingdom after the issue of the general warning by His Majesty's Government.

10. DECONTAMINATION.

a. All units are responsible for performing their own decontamination. Where the need for decontamination of areas or equipment exceeds the capacity of the unit, Chemical Warfare Service Troops may be requested from Army Headquarters through command channels.

b. Unit commanders will insure that adequate preparations are made for decontamination of vital communication centers, headquarters, static camps and supply and maintenance installations. Authorized amounts of decontaminating materials and equipment will be maintained.

c. Within the United Kingdom and prior to the use of gas the provision of gas-sealing shelters for personnel and the gas-proofing of rooms and vehicles is not considered necessary. Vital installations, such as operation rooms and telephone exchanges can be gas-proofed when necessary.

d. Unit commanders will render such assistance to the civilian population of re-occupied territories in clearing, etc., as is compatible with the attainment of their major object which is the furtherance of the military effort. Local resources, personnel, and raw materials will be exploited to the fullest extent possible before imported military resources are diverted from their primary functions.

By command of Lieutenant General PATTON

HUGH J. DAFFEY
Major General, U. S. Army,
Chief of Staff.

ANNEX NO 3

HEADQUARTERS
THIRD UNITED STATES ARMY
APO 403

10 May 1945

Change No. 1 to Administrative Instructions Number 3

* * * * *

III. Chemical Warfare Service Instructions

1. Class II & IV

a. Method of issue: Requisitions in duplicate to the nearest CWS depot

b. Maintenance:

(1) First and second echelon: By unit concerned.

(2) Beyond second echelon: By Chemical maintenance companies. Direct exchange of serviceable for unserviceable items will be made at CWS depot and/or maintenance companies

c. Special Class IV Instructions:

(1) Portable flame throwers and accessories - Issued fully charged and serviced for use from CWS ASPs. Empty flame throwers must be returned to nearest CWS installation. Division Engineer combat battalions only are authorized to retain flame throwers, kits, and filling equipment.

(2) Containers - Cylinders for storage and shipment of hydrogen and nitrogen and containers (jerricans, drums, etc.) used for CWS POL products will be returned to nearest CWS ASP or depot without delay.

4. Individual and Organizational CWS Equipment, Clothing, and Supplies:

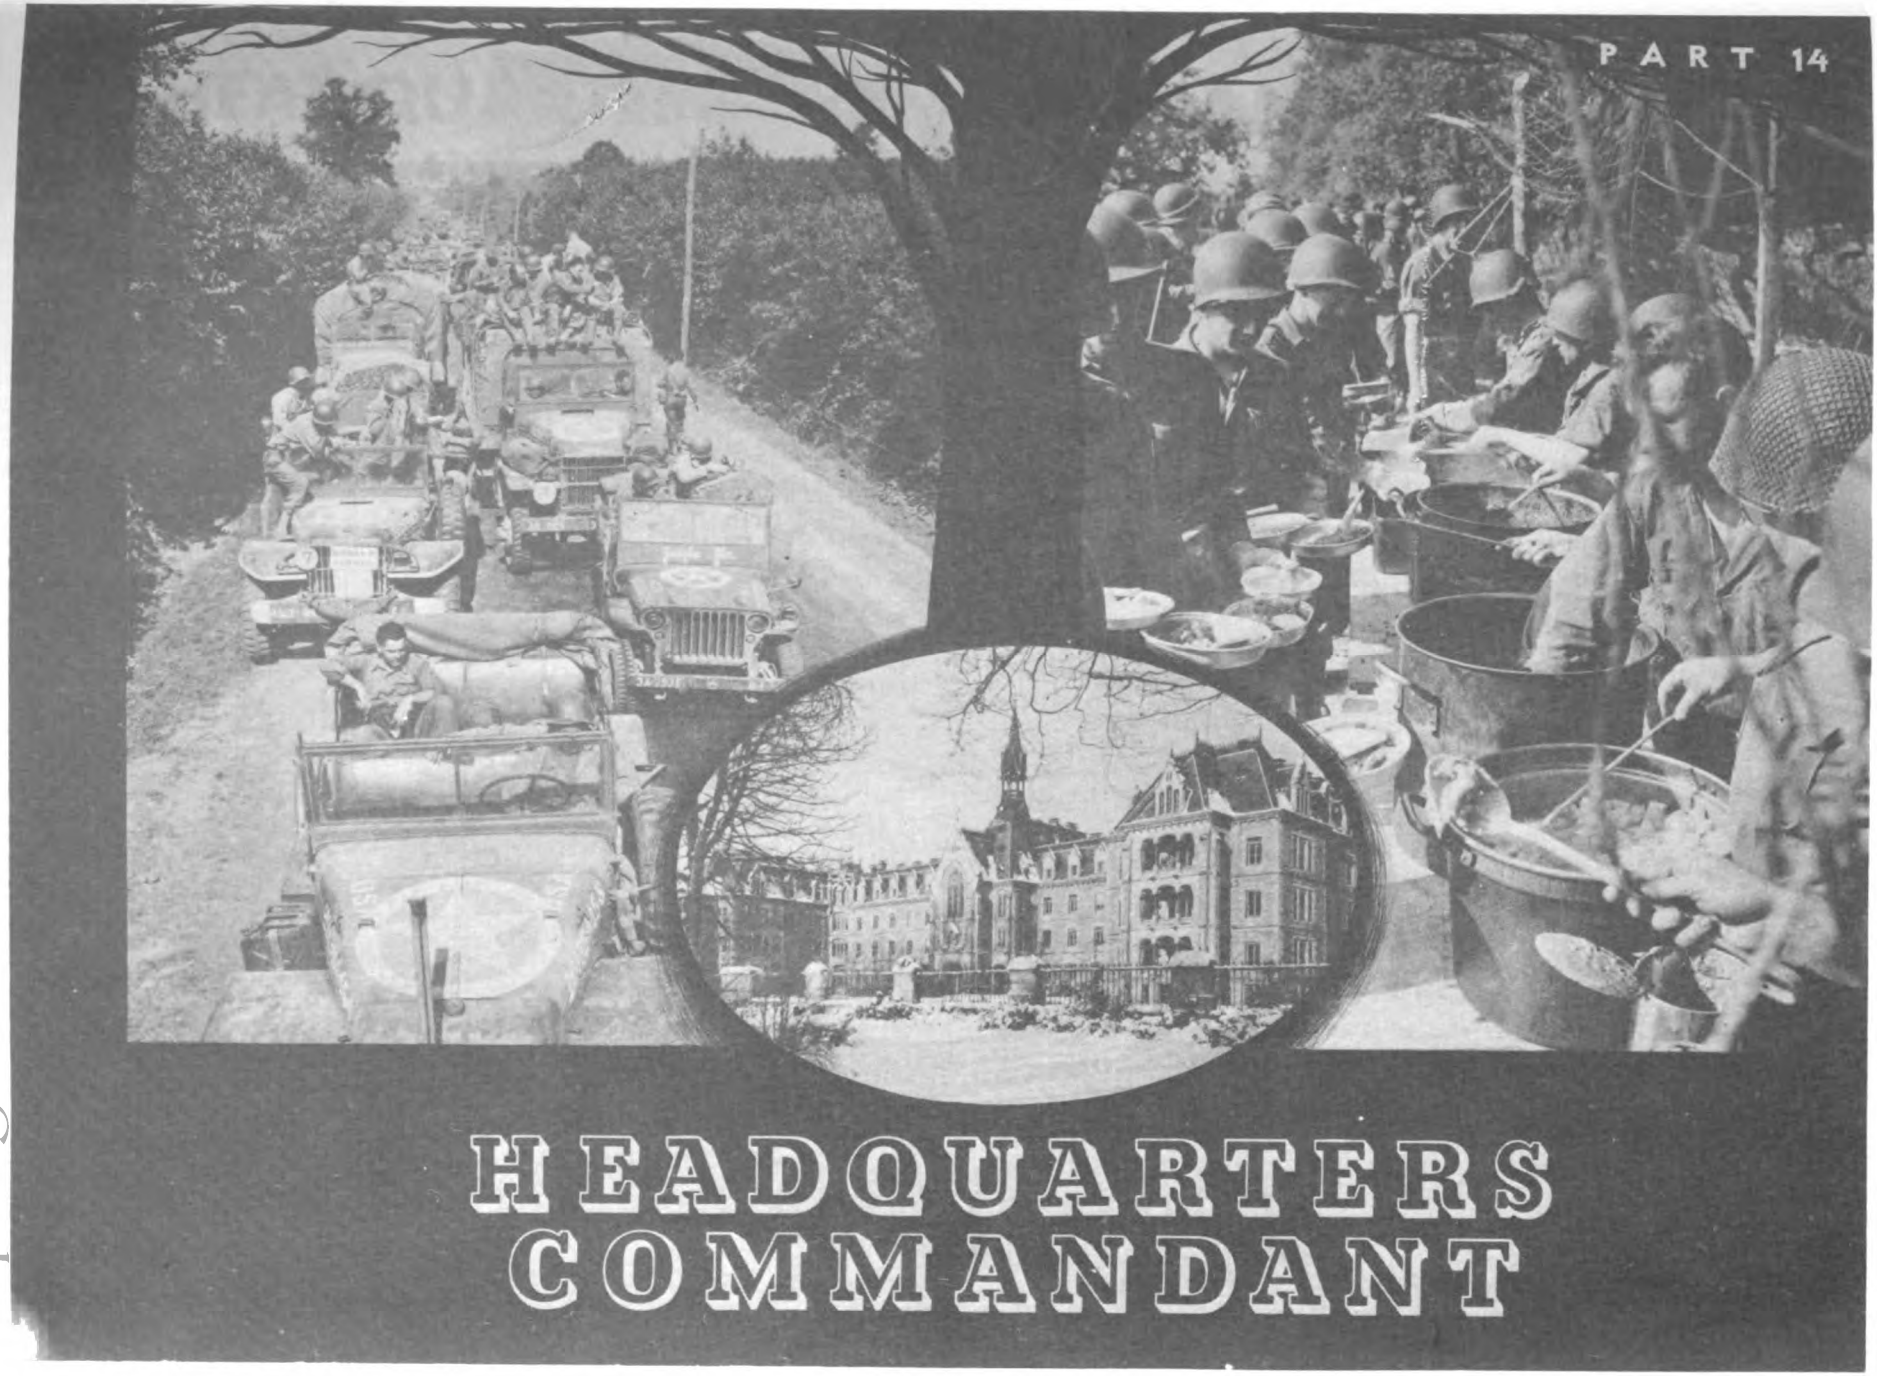
(1) The following items of individual protective equipment will be retained by the individual or held in regimental or smaller unit storage at the discretion of the unit commander concerned:

1 ea Mask, Gas (service or diaphragm as authorized)
1 ea Tube, Ointment, Protective) Kit, Ointment,
1 ea Tube, Bal Eye Ointment) Protective, M5, contains these items in single package.
4 ea Eyeshields
2 ea Detector, Sleeve

(2) The following items of collective protective equipment will be held in regimental or smaller unit storage:

Alarm, gas
Disinfectant, gas mask
Kit, repair, gas mask, M1 (Company)
Kit, repair, gas mask, Universal, M8
Kit, Chemical agent detector, M9 or substitute
Apparatus, decon 1½ qt. (retain mounted, but empty on vehicles)
Apparatus, decon., power driven

(3) All other CWS equipment except respirator, dust, will be turned in to nearest CWS supply point. Dust respirators may be retained at the option of unit commander concerned.



These instructions do not apply to Chemical depot, maintenance, and decontamination companies.

(4) Cover, protective (M item) - disposition as directed in letter, this Headquarters, subject: "Covers, Protective, Individual", file AG 420 3SMCG-4.

[redacted]
Third [redacted] Army
Office of the Headquarters Commandant
APO [redacted]

Subject: After Action Report, Headquarters Commandant's Section.

To : Commanding General, Third U. S. Army, APO 403, U. S. Army.

1. Submitted herewith is the After Action Report of the Headquarters Commandant's Section, Third U. S. Army, beginning with the date of alert for overseas service on 1 January, 1944 and continuing at the properly designated intervals by chapters.

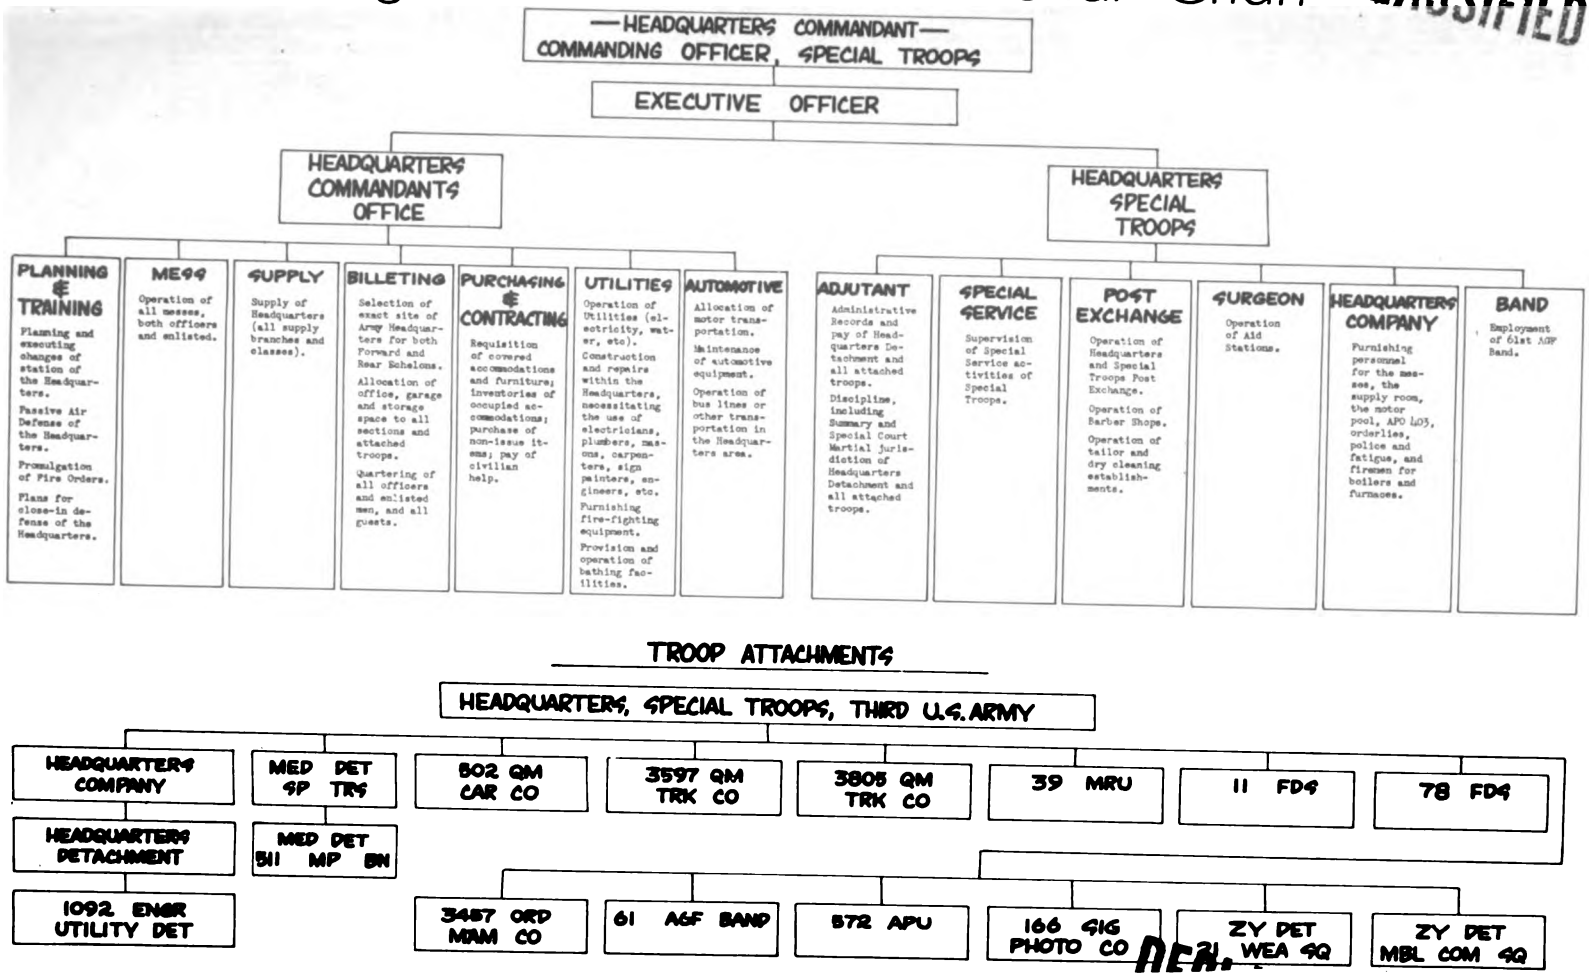
2. It has been written with two objectives:

a. To report the operations of the section.

b. To be as helpful as possible to future commandants of a large headquarters in campaign: during summer, autumn, winter and spring; in fast moving tactical situations over great distances, and during periods of relative stability of the front; under canvas in the field, or utilizing covered accomodations in communities both large and small; in combat, and perhaps (the future will tell) during the occupation of enemy territory after hostilities have ceased.

3. The Commandant's task is not easy, and little source material is available to assist him to visualize his work and to prepare to get it done. It is hoped that this report may fill a portion of this void.

Fred H. Kelley



FRED H. KELLEY,
Colonel, Infantry,
Headquarters Commandant.

FOREWORD

FROM THE UNITED STATES TO THE UNITED KINGDOM

On 1 January, 1944, Headquarters Third U. S. Army, stationed at FORT SAM HOUSTON, Texas under the command of Lieutenant General [illegible] was alerted for movement through the NEW YORK Port of Embarkation to the European Theater of Operations.

An advance party consisting of thirteen officers and twenty-six enlisted men left FORT SAM HOUSTON on 10 January. Upon arriving near STAMFORD, CONNECTICUT, it was met aboard ship by the newly designated Army Commander, Lieutenant General [illegible] and entrained immediately for FROGHALL AREA, about three miles from [illegible], Cheshire, England, fifteen miles south of WIGAN and eight miles distant, for the reception of the main body. During the next few weeks a number of staff officers, most of whom had served with the Seventh U. S. Army, joined the Headquarters.

Headquarters and Headquarters Detachment, Headquarters Special Troops, Headquarters Company, and Medical Detachment, Special Troops, Third U. S. Army (less the advance party), after having relieved of command responsibilities by Headquarters Fourth U. S. Army, entrained at FORT SAM HOUSTON, Texas on 17 February and arrived at CAMP KILMER, New York, 19 February. On 10 March the Headquarters boarded the [illegible] at a Manhattan pier and sailed without escort the following day. The vessel anchored in the FIRTH OF CLYDE opposite the port of GREENOCK, Scotland on 1 March. The [illegible] debarked 20 March, entrained immediately, and reached the FROGHALL area on 20 and 21 March.

ORGANIZATION OF THE HEADQUARTERS FOR COMBAT

When the Headquarters arrived in the United Kingdom, it was at the exact strength prescribed in Tables of Organization [illegible], and 20-1. Additional attachments were made by higher Headquarters commencing the early part of April and continuing for many weeks. This, and the nature of the forthcoming operations, necessitated the enlargement of Headquarters Special Troops, Headquarters Company and many of the General and Special Staff Sections.

The dual function of the Headquarters Commandant and Provost Marshal set forth in T/O 200-1 was eliminated by appointing an Army Provost Marshal in the grade of colonel and creating for him a special staff section.

- The G-5 Section was constituted (Civil Affairs).
- The G-6 Section was constituted (Publicity and Psychological Warfare).

An Army Exchange Officer was appointed to operate under the Special Service Section.

An American Red Cross Field Director joined the Headquarters to operate in conjunction with the Special Service Section.

Within the G-3 Section, the Accomodations Sub-section was constituted. Its mission was to receive and billet in Army Army troops, working in conjunction with the British authorities and with the Western Base Section, United States Army. It became the G-3 Liaison Sub-section when its former mission ceased upon arrival on the Continent.

Within the G-4 Section, the Transportation Sub-section was constituted. Its mission was to coordinate and control transportation and motor routings within the Army area.

By 1 July the following teams and units, by attachment, had become an integral part of the Headquarters:

G-2 Attachments:

G-2 Air Sub-section
Special Liaison Unit
Counter Intelligence Detachments
Military Intelligence Interrogation Teams
Photo Interpreter Detachments
Order of Battle Unit
Interrogators of Prisoners of War Teams
Escape and Evasion Unit
SIS (Secret Intelligence) Team
SCI (Secret Counter Intelligence) Team
Field Interrogation Detachment
Enemy Documents Section
Advance Documents Section

G-3 Attachments:

G-3 Air Sub-section
G-3 Air Liaison Sub-section
Third Army Historical Team
Special Operations Detachment and Signal Section (redesignated HQ, U. S. Strategic Air Force, Signal Section)
- 11th Liaison Squadron (Army Air Forces)

G-6 Attachments:

- 3rd Mobile Radio Broadcasting Company (Note: Transferred to Headquarters 12th Army Group 6 August 1944)
- Detachment, 82nd Publicity Service Battalion (This unit established with the Press Camp and provided complete housing, messing and transportation facilities for a group of approximately fifty war correspondents)

Adjutant General Attachments:

- 44th Machine Records Unit
  572nd Army Postal Unit

Engineer Attachments:

  106lst Engineer Liaison Detachment
  Detachment, 496th Engineer Topographical Battalion
  496th Engineer Technical Intelligence Team

Finance Attachments:

  71st Finance Disbursing Section (Note: Relieved by 11th Finance Disbursing Section 7 August 1944)

Provost Marshal Attachments:

  Headquarters and Headquarters Detachment, 511th Military Police Battalion (Note: 14th Military Police Criminal Investigating Section attached 17 August 1944)

Signal Attachments:

- IX Detachment, 21st Weather Squadron, and IX Detachment, 1295th Mobile Communications Squadron
- 166th Signal Photo Company
  (Note: Enemy Equipment Identification Service Team No. 8 attached during late July)

Medical Detachment, Special Troops Attachments:

  Medical Detachment, 511th Military Police Battalion

ORGANIZATION OF SPECIAL TROOPS FOR COMBAT UNDER THE COMMAND OF THE HEADQUARTERS COMMANDANT

Table of Organization 100-2 (Headquarters Company, Army) proved to be inadequate for service in the field. The need for utility engineers, carpenters, masons, plumbers, sign painters and electricians was met by attaching to Headquarters Company, Third U. S. Army, the 1294th Engineer Utility Detachment. The number of generators assigned was insufficient for CP-tour operations in the field, and a considerable number of additional generators was obtained.

To insure mobility to the Headquarters, two Quartermaster Truck Companies (175th and 176th) were attached to Headquarters Special Troops, as was the 526th Quartermaster Car Company. In addition, Headquarters Company was provided with three additional 3/4-ton CARGO and Reconnaissance Trucks and fifty additional 1/4-ton 4 x 4 Trucks. Fifteen of the latter were needed for the G-3 Air Liaison Sub-section alone. Three 1/4-ton 6 x 6 Cargo Type Trucks were secured and fitted out as quarters for the General Officers, and an M-20 Armored Car was obtained for the use of the Army Commander. It was found advisable to provide trailers, either 1/4-ton or 1-ton, for practically all vehicles.

To service this motor transportation, the 545/7th Ordnance Medium Automotive Maintenance Company was attached to Headquarters Special Troops.

The 6th Cavalry Band (later redesignated 61st Army Ground Forces Band) was attached to Headquarters Special Troops to serve as the Headquarters Band.

ARMY AIR FORCE

Headquarters, XIX Tactical Air Command was designated by higher Headquarters to support the Army. Subsequently in combat it physically joined the Forward Echelon at some of its Command Posts, but did not displace forward with each move made.

OTHER TROOPS

The following Troops habitually served the Headquarters:

- 501st Signal Operations Battalion
- 33rd Signal Construction Battalion
- 34th Signal Construction Battalion
- 503rd Military Police Battalion

(Note: After arrival on the continent, the following Troops were added to the above):

- 56th Antiaircraft Automatic Weapons Battalion (Mobile)
- 293rd Engineer Combat Battalion (less two companies)
- Headquarters, 6th Cavalry Group (with varying detachments from 6th Cavalry Squadron and 43rd Cavalry Squadron to provide security in the field)

- Unit had its own Mess.

DISPOSITION OF THE HEADQUARTERS

Early in April a Third U. S. Army Liaison Office was established in Bryanston Square, LONDON. It consisted of the Deputy Chief of Staff and a group of approximately eleven officers and eight enlisted men. Its mission was to maintain contact with Supreme Headquarters Allied Expeditionary Forces, Headquarters European Theater of Operations, United States Army, and Headquarters First Army Group. The Liaison Office rejoined the Headquarters in the SOUTHAMPTON area.

On 1 May the Headquarters Commandant was directed to plan for the establishment of the Headquarters in three echelons as follows:

a. An advance command group, consisting of representatives of those sections of the general and special staff which would be indispensable in combat operations, together with the necessary troops to provide for their security and housekeeping. This group, known as "Forward Echelon, Group A," would be entirely mobile, and be capable of proceeding ahead of the regular forward echelon to conduct operations.

b. "Forward Echelon, Group B," that portion of the forward echelon remaining after the departure of "Forward Echelon, Group A."

c. The Rear Echelon.

It was planned to move the Headquarters to the continent over the beaches, in the event no major port was available. Therefore loading lists for all three echelons were published on 23 and 31 May to facilitate loading the Headquarters on landing craft.

On 22 May the BUCO (Build Up Control Organization) Section of the Headquarters, consisting of four officers, four enlisted men and two vehicles, departed for [illegible], where it operated under BUCO West, supervising the priorities and loading of Third U. S. Army units moving to the Continent. (Note: This section rejoined the Headquarters in early August in the SOUTHAMPTON (T-23) area).

Shortly after D Day, two liaison groups left to take station as follows:

a. With Headquarters VIII Corps: Representatives from G-2, G-3, Provost Marshal, Quartermaster and Signal Sections -- eight officers, nine enlisted men and five vehicles.

b. With Headquarters Advance Section, Communications Zone: Representatives from G-1, G-4, G-5, G-6, Engineer, Medical and Quartermaster Sections -- eight officers, four enlisted men and three vehicles.

The Forward Echelon was phased in to be lifted to the continent on D plus 2½ days; the Rear Echelon, on about D plus 14 days. On 10 June (D plus 14 days) it became apparent that there was a possibility the Forward Echelon might become operational while the Rear Echelon was still in the United Kingdom. Furthermore, on D plus 20 the great bulk of the troops assigned to the Army would still be stationed in the United Kingdom -- indeed, many were still to arrive from the United States. Their equipping and preparation for combat was a task of considerable magnitude. Accordingly, the following decisions were made:

Digitized by Google

a. The Commanding General, XII Corps, was designated as Deputy Army Commander, to assume command of Third U. S. Army troops in the United Kingdom upon the departure of the Army Commander for the continent.

b. The normal Forward Echelon of the Headquarters to be provided with operational groups from the following sections normally in the Rear Echelon: G-3, Adjutant General, Chaplain, Finance, Inspector General, Judge Advocate, Medical, Ordnance and Quartermaster.

This new grouping of the staff was known as Forward Echelon, Group "X".

c. The Rear Echelon of the Headquarters to be provided with operational groups from the following sections normally in the Forward Echelon: G-1, attached G-2 teams, G-4, Artillery, and attached Engineer teams. This grouping was known as Rear Echelon, Group "Y".

d. To reinforce the staff of the XII Corps so it could perform the Army mission given it, in addition to its own responsibilities, another group of personnel, designated as Group "Z", was formed consisting of twenty-four officers and twenty-nine enlisted men, with three vehicles and a number of impressed British civilian sedans. Sections represented were: G-1, G-2, G-3, G-4, G-5, G-6, Adjutant General, Artillery, Chemical Warfare Service, Engineer, Inspector General, Medical, Ordnance, Quartermaster and Signal Sections. It was planned to have Group "Z" rejoin the Headquarters when the XII Corps arrived on the continent. Actually, while most of them did so, a few of the officers and men remained in the United Kingdom dealing with problems of personnel and supply long after the XII Corps had been committed to action.

Loading Lists for Groups "X" and "Y" were published on 19 and 20 June, 1944.

On 5 July the Headquarters was organized for combat operations, and was disposed as follows:

Forward Echelon, Group "X" in the SOUTHAMPTON area.
Rear Echelon, Group "Y" and Group "Z" in the KNUTSFORD (MACCLESFIELD) area.
The HUCO Section at PORTSMOUTH.
Liaison group with Headquarters, Advance Section, Communications Zone, on the continent.
Liaison group with Headquarters, VIII Corps, on the continent.

CHAPTER 1
PLANNING IN UNITED KINGDOM

On 25 March all officers and enlisted men of the Headquarters were massed on the grounds of PEOVER HALL, the Army Commander's residence, and addressed by him. The Headquarters became operational a few days later, and was established as follows: At PEOVER HALL and PEOVER CAMP, the Army Commander, the Command Group, and the Forward Echelon; at TOFT CAMP, the Rear Echelon.

Both PEOVER and TOFT camps were British camps containing semi-permanent and temporary buildings. Officers of field grade were billeted in KNUTSFORD and vicinity. Even with the erection of a great many additional buildings for staff section offices, officers quarters, messes, latrines and bath houses, it was necessary to quarter the majority of the enlisted men under canvas. Some units were billeted in KNUTSFORD; the G-5 Section was housed at THE HERMITAGE, a large manor house several miles distant; the truck companies and Utilities Detachment camped on the heath in KNUTSFORD.

Messes for the Headquarters proper were established as follows: At PEOVER HALL and PEOVER CAMP, the Army Commander's Mess, a colonels' mess, an officers' mess and an enlisted mess. At TOFT CAMP, an officers' mess and an enlisted mess.

The War Room and Top Secret Control Office were established in PEOVER HALL. As a security measure, the office buildings of the Forward Echelon were surrounded by a high barbed wire fence and guarded day and night. Special passes were required to secure admittance to these areas.

This was a period of intense activity. Organization of the Army, planning its part in the coming invasion, receiving advance parties of all Army troops arriving in the United Kingdom, visits of distinguished visitors, schools for officers, conferences, and visits to higher headquarters consumed much time. A few ceremonies were held for the purpose of awarding decorations, and, on Flag Day, 14 June, for the blessing of the Army Colors by the Chaplain.

With the advent of D Day on 6 June, all activities were intensified. On 19 May the Headquarters Commandant had been directed to reconnoiter south of the line LONDON-BRISTOL for suitable accommodations for the Headquarters in order to be nearer the designated embarkation area and to the bulk of the troops assigned to the Army. Several trips were made and the area within a 10-mile radius of BRAMSHOTT HALL (VU 53), Hampshire (west of SOUTHAMPTON) was finally selected.

PEOVER HALL

On 14 and 15 June advance detachments proceeded to BRAMSHOTT HALL to prepare for the reception of Forward Echelon, Group "X". On 21 June the Chief of Staff directed Group "X" to move by motor to the new area and designated the Army Provost Marshal as the Commander of the columns. The march was made on 29 June; distance traveled was 218 miles.

On 2 July, Forward Echelon "X" was ordered to be prepared to embark at SOUTHAMPTON on 5 July; destination, UTAH BEACH, NORMANDY, France. All vehicles were to be prepared to land in four feet of water, and the waterproofing of the vehicles was rushed day and night.

On 031200 July, loading lists and Ship Sheets were received indicating that two military transports (Liberty Ships) and six LST's were to be used to transport the Headquarters. The Chief of Staff arranged with the Commanding General, Southern Base Section, to have the 301st Signal Operations Battalion and one company of the Military Police Battalion with the Headquarters on LST's.

On 4 July Forward Echelon, Group "X", the 301st Signal Operations Battalion, the 33rd Signal Construction Battalion and the 503rd Military Police Battalion closed messes at 1300, entrucked starting 1800, and moved to SOUTHAMPTON, a distance of twenty miles, during 4 and 5 July. Embarkation was accomplished during the 5 and 6 July.

Meanwhile, the advance detachment of Rear Echelon, Group "Y" arrived at BRAMSHOTT HALL 041500 July. On 7 July Rear Echelon "Y" moved by motor to NINE YEWS (BRAMSHOTT area). PEOVER and TOFT CAMPS were turned over to Western Base Section by 9 July. Group "Y" began to move to SOUTHAMPTON on 14 July. By this time, the waterproofing of vehicles had been discontinued. The Group was loaded on three military transports and one LST.

Group "Z" moved to the BRAMSHOTT area with Group "Y" and joined Headquarters, XII Corps, which moved into BRAMSHOTT HALL as soon as Forward Echelon "Y" cleared the area on 4 July.

CHAPTER 2
PRE-OPERATIONAL ON CONTINENT

During the period 5-7 July, Forward Echelon, Group "X" sailed from SOUTHAMPTON for UTAH BEACH, covering a distance of approximately 150 miles in convoy; average time for transit was fourteen hours. The military transports were anchored offshore and their loads transferred to small landing craft and amphibious trucks for unloading on the beach. The LST's were beached at high tide; left dry when the tide ebbed, debarkation was carried out and all vehicles moved inland about eight miles to a transient area, where vehicles were initially de-waterproofed (after coming ashore on dry land) and each convoy proceeded a distance of twenty-eight miles to the Headquarters Bivouac Area near NEHOU (G 19) fifteen miles south of CHERBOURG and eight miles from the front lines of the VIII Corps. The Commanding General and Chief of Staff flew to France and joined the Headquarters, which was set up entirely under canvas in the orchards and fields of Normandy, lined by the now famous hedgerows. Two officers' messes and two enlisted messes, in addition to the Army Commander's mess, were established, and the first hot meal was served the evening of 7 July. Overnight visitors were accommodated in pyramidal tents supplied with cots and blankets.

Canvas immediately became a critical item of supply; tables of Basic Allowances proved to be entirely inadequate, and the Headquarters Supply Officer exerted every effort during the next six weeks to procure a sufficient stock of heavy tentage. Passenger vehicles, notably 1/4 ton 4 x 4 Trucks were also insufficient in number and more were procured.

The Army was not yet operational, but on 10 July it established two control points, one on UTAH BEACH and the other on OMAHA BEACH to receive and direct to assembly areas all arriving troops assigned to Third U. S. Army. This proved to be a task of considerable magnitude during the remainder of the month.

By 19 July, Rear Echelon "Y" closed with the Forward Echelon "X" in the NEHOU area.

During the remainder of July, the Headquarters continued receiving and organizing Army troops and preparing for the forthcoming operations.

CHAPTER 3
AUGUST OPERATIONS

Headquarters Third U. S. Army became operational for combat for the first time at noon on 1 August 1944, under the Twelfth U. S. Army Group.

The subsequent displacements forward of the Forward and Rear Echelons are covered below. In general, the Forward Echelon moved forward by bounds of from thirty to seventy miles; the Rear Echelon moved less frequently, locating in the vicinity of the Forward Echelon about every second move the latter made. The rapidity of the Army's advance necessitated frequent and long displacements.

At 0030 on 7 August the Headquarters, then in the BEAUCHAMPS area, was bombed and strafed. One stick of bombs fell into a Headquarters Company area but caused neither casualties nor damage.

CHAPTER 5
OCTOBER OPERATIONS

Continued bad weather impelled many units of the Army to seek shelter in towns. To meet this situation the Accommodations Sub-section of the G-3 Section was reactivated to control the assignment of all covered accommodations.

Meanwhile, preparations for the move to NANCY were being rushed. In this connection, the report of Headquarters, 1137th Engineer Combat Group, indicating the magnitude of the task of rehabilitating the three casernes selected as the site of the Command Post, is quoted herewith as a matter of interest:

"1. Work accomplished by this headquarters in clean-up and repairs to buildings for occupancy by Third Army consisted of principal tasks summarized as follows:

a. Electrical Repairs: Wiring, new fixtures, switches, fuse-ox, boxes, etc., were replaced or repaired and tie-in with city current completed. Work consisted of installing 6,000 feet of various types of wire; 1,250 fuses; 2,000 sockets; 1,500 light bulbs; 2,500 switches; etc.

b. Roof Repair: This work accomplished by civilian and military personnel. Materials were on the site.

c. Plumbing: Repairs to plumbing in place and installation of two toilet rooms complete; 14 toilet seats; 38 faucets; 1,0[illegible] feet of galvanized pipe; and miscellaneous items, as [illegible], etc., was completed by military personnel assisted by two civilian French plumbers.

d. Blackout curtains: Approximately 750 windows provided with blackout shades, requiring acquisition of materials, framing of several sizes, covering and hanging by troop labor.

e. Window Panes: 31[illegible] thousand window panes requiring acquisition of materials, clean-up old frames, glass-cutting and installation completed almost entirely by troops.

f. Building clean-up: Before plumbers, carpenters, or electricians could start work all buildings, thoroughly scattered by Germans upon evacuation, were cleared of debris and furniture, toilets, latrines and plumbing fixtures cleared of obstructions; and damaged furnishings and rubble removed from premises.

g. Clearing grounds: Wrecked German vehicles, radar equipment, bedding, [illegible] removed by troop labor, bulldozers and wreckers.

h. Map removal: Approximately 450 tons or 120 truck loads of German maps removed from premises.

2. Manpower of personnel required executed to approximately [illegible] civilian plumbers, [illegible] civilian electrician; [illegible] civilian carpenter, and [illegible] interior decorator and painters."

On 4 October the Rear Echelon moved from [illegible] to NANCY ([illegible]), a distance of seventy miles, occupying office and barracks space in CASERNE [illegible]. The [illegible] of the Forward Echelon moved from [illegible] to CASERNE [illegible] on 5 October, followed by the [illegible] troops, as well as by the Forward Echelon of the XIX Tactical Air Command, on the following day.

It is interesting to note that on 10 October, the Forward Echelon had been operational for seventy-three days. It had traveled from the [illegible] FRANCE, [illegible] to NANCY, forty miles from the German frontier, covering a distance of [illegible] miles, and had occupied thirteen different sites. The Rear Echelon had occupied eight different sites in the same length of time over the same distance.

The many problems incident to locating the Headquarters in a city, instead of in the field, can best be appreciated when it is realized that the Headquarters Commandant, on the last day of October, had taken over under leases from the respective owners and was operating the following establishments:

Three large casernes.
Five hotels quartering 321 officers, and providing accommodations for sixty overnight visitors.
Five apartment houses quartering 122 officers.
Twelve other billets quartering thirty officers.
A tailoring and dry-cleaning establishment for all personnel.
Seven garages.
Fourteen other buildings.

The following messes were in operation:

The Army Commander's Mess.
Grand Hotel Mess for seventy-six officers of all grades.
Hotel Thiers Mess for 155 officers of field grade.
Cafe de Deux Hemispheres Mess for 276 officers of company grade.
An enlisted mess for 1,450 men.

In addition, a bus line was chartered and operated to provide transportation for officers between the Headquarters, their messes and their billets.

Finally, approximately 300 French civilians were employed as chefs, waiters, and interpreters on the staffs of the hotels, and as janitors and charwomen for the apartment houses.

Forward [illegible] in city of [illegible]

CHAPTER 6
NOVEMBER OPERATIONS

DECLASSIFIED

On 31 October, the Chief of Staff directed the Headquarters Commandant to reconnoiter the front for possible locations for the Forward Echelon, as the Third's attack which started on 8 November was making steady progress northeastward. Among the sites reconnoitered during the balance of November were CHARLEVILLE (Q 12), MONTHOIS (Q 93), FAULQUEMONT (Q 15), and ST AVOLD (Q 25), all of which lie from fifteen to thirty-five miles northeast of NANCY.

On 26 November announcement was made of a revised division of Staff Sections into Forward and Rear Echelons. Relative strength (exclusive of Headquarters Commandant's Section, Headquarters Special Troops, Headquarters Company, the Aid Stations and all attached troops) was as follows:

	OFFICERS	ENLISTED MEN	VEHICLES
Forward Echelon	235	506	325
Rear Echelon	190	500	248
Other Areas	110	211	202

On 6 November the Chief of Staff directed the Headquarters Commandant to be prepared to move and quarter a Mobile Command Group consisting of thirty-five officers, 187 enlisted men and fifty-four vehicles from these sections:

Command Section
[illegible]
[illegible]
[illegible]
Artillery
Engineer
Signal

together with small detachments of signal troops, military police, Civil Affairs Engineers, the Aid Stations, and Headquarters [illegible]. One mess was to feed all personnel.

CHAPTER 7
DECEMBER OPERATIONS

Early in December the Chief of Staff directed the Headquarters Commandant to prepare [illegible] for occupancy by the Forward Echelon.

On 11 December, the advance party of the Headquarters Commandant's Section, with a [illegible] signal, engineer and service troops proceeded to erect and [illegible] repairs on all installations. However, following the German attack in the ARDENNES [illegible] December, the Chief of Staff directed, on 16 December, that this move cease and all troops return to NANCY. [illegible] the Chief of Staff Group (see Chapter 6) proceeded to the [illegible] on 17 December. During the next week many officers and men of the Forward Echelon proceeded to [illegible], and on 24 December the remainder of this echelon closed. Distance traveled was ninety miles.

The Headquarters was comfortably located in one large modern building having all staff sections.

Messes were established as follows:

The Army Commander's Mess.
Two Officers' Messes (225 members).
One Enlisted Mess (750 members).

Remnants of the shift north, reconnaissances for a location for the Rear Echelon were made, starting 21 December, in the towns of METZ (U 96), THIONVILLE (U 96), LUXEMBOURG (P 50), and EPCH sur ALZETTE (P 70). The latter place was selected by the Chief of Staff on 29 December, and the advance party proceeded thereto immediately. The actual move of the Rear Echelon [illegible] 9 January, 1945.

The Mess Attendant was [illegible] duties.

[illegible]

CHAPTER 9
FEBRUARY OPERATIONS

[illegible]

The Army Commander's Mess.

Four Officers' messes, each in a separate hotel.

Two Enlisted Messes.

[illegible]

By 15 February the Purchasing and Contracting Officer [illegible] the hunt for [illegible] and requisitioned furniture in [illegible] our Airbase.

At the end of the month, there were [illegible] the headquarters [illegible] personnel, principally [illegible] Mess Officer, Messing Stewards, and [illegible].

CHAPTER 10
MARCH OPERATIONS

[illegible]

[illegible]

[illegible]

[illegible]

CHAPTER 11
APRIL OPERATIONS

On 1 April the Rear Echelon working party left for FRANKFURT am MAIN (M66). On 3 April, the Forward Echelon moved to FRANKFURT am MAIN (M66), a distance of eighty-five miles, and located with all installations inside of the ADMINISTRATION 6ird KASERNE and the BLAUBACH KASERNE. Officers were quartered in barracks buildings.

The next day the Headquarters Commandant reconnoitered ALSFELD (M84) and, on 5 April, LAUTERBACH (M74), BAD SALZSCHLIRF (M82) (which was entirely occupied by wounded soldiers of the German Wehrmacht) and HERSFELD (M35). The latter place was designated and the Forward Echelon working party, reinforced by one Engineer Combat Battalion and 600 prisoners of war moved out on 6 April.

On the same day the Rear Echelon closed in the FRIEDBERGER WARTE KASERNE in FRANKFURT am MAIN, traveling a distance of 135 miles. Just north of this area was located the Forward Echelon of the XIX Tactical Air Command.

The Forward Echelon moved to HERSFELD (M35), a distance of eighty-five miles, on 11 April, occupying the KRAFTFAHRER KASERNE east of the city. Officers were quartered in the apartments and dwellings formerly occupied by German officers and non-commissioned officers. The Forward Echelon of XIX Tactical Air Command moved into buildings inside the city itself.

On 12 April the cities of OHRDRUF (J15) and GOTHA (J06) were reconnoitered and, the following day, WEIMAR (J57). The Chief of Staff designated the latter place and on 14 April the working party, with a battalion plus a company of combat engineers and 600 prisoners of war left for the site and commenced work. On the same day the rear echelon selected an adjoining kaserne area in WEIMAR (J57).

However, because of a major change of direction in its zone of advance which was given to Third Army, all work at WEIMAR (J57) was cancelled the afternoon of the 16th, and the working party returned to HERSFELD (M35).

The Chief of Staff directed the Headquarters Commandant to reconnoiter the area WURTZBURG (N53) - NURNBERG (Q40) - BAMBERG (Q24), which was done by air on 18 April. ERLANGEN (O35) was designated and on 19 April the working party, with a battalion plus two companies of combat engineers and XX prisoners of war proceeded thereto. Two days later the working party of the Rear Echelon arrived in the same city to prepare the RHEINLAND and ST. MIHIEL kasernes for occupancy.

The Forward Echelon moved to the new location on 22 April, occupying the VILLERS BRETONNEAUX KASERNE, a former German Panzer establishment, plus various private residences and the former quarters of German officers and non-commissioned officers. This move was the longest one the Forward Echelon ever made under combat conditions - 150 miles.

The Rear Echelon started to displace to ERLANGEN (O35) on 21 April, closing thereat two days later.

The Forward Echelon of the XIX Tactical Air Command also moved to ERLANGEN (O35), occupying office and factory buildings in the city itself.

On 28 April the Headquarters Commandant reconnoitered REGENSBURG (U15) by air, and the next day inspected several kaserne areas. The city and kaserne had been badly damaged by heavy air strikes and a very large amount of rehabilitation was necessary in any area selected. The Chief of Staff ordered the working party to proceed to REGENSBURG (U15) on 30 April. It was reinforced by a battalion plus a company of combat engineers and 800 prisoners of war.

CHAPTER 12
MAY OPERATIONS

What was destined to be the last displacement of the Forward Echelon in combat in Europe commenced on 2 May, from ERLANGEN (O35) to REGENSBURG (U15), a distance of 87 miles, and was concluded on the next day. In this move the Headquarters crossed to the south bank of the Danube River.

The Army Headquarters proper, at the end of the war, was disposed as follows:

At REGENSBURG, GERMANY (U15)

a. Forward Echelon of Headquarters and Headquarters Detachment, Headquarters Company, Headquarters Special Troops, Medical Detachment Special Troops, and 1092nd Engineer Utilities Detachment.

b. 502d Quartermaster Car Company (less 1½ platoons).

c. 1st Platoon, 3467th Ordnance Medium Automotive Maintenance Company.

d. Attachments of various sections.

At ERLANGEN, GERMANY (O35)

a. Rear Echelon of Headquarters and Headquarters Detachment, Headquarters Company, Headquarters Special Troops, Medical Detachment Special Troops, and 1092d Engineer Utilities Detachment.

b. 1½ Platoons, 502d Quartermaster Car Company.

c. 3467th Ordnance Medium Automotive Maintenance Company, less 1st Platoon.

d. 61st Army Ground Forces Band.

e. 572d Army Postal Unit.

f. 99th Machine Records Unit.

g. Attachments of various sections.

CHAPTER 13
LESSONS LEARNED & CONCLUSIONS

1. The Headquarters must be able to displace and set-up ready for operation on very short notice - as little as a day - in any season of the year, regardless of weather or existing facilities.

2. The primary minimum needs of the Headquarters from this Staff Section are food, shelter and light.

3. Personnel and equipment must be organized to enable the Forward and Rear Echelons to function either separately, or together, and so that either or both Echelons can be temporarily split for short periods.

4. Next to mess personnel, the utilities personnel (electricians, plumbers, carpenters, masons, mechanics, sign painters) is one of the most important groups for which to provide.

5. Canvas must be kept on hand ready for instant use where covered accommodations are not available.

6. A control of both the officers and enlisted messes, designed to exclude the large number of unauthorized personnel "stopping-in", is imperative. The solution at this headquarters in October 1944, was the issue of mess cards to all personnel, and the issue of guest cards by the interested sections to all authorized visitors.

7. The personnel assigned was adequate to perform its missions. On 8 May it consisted of the following:

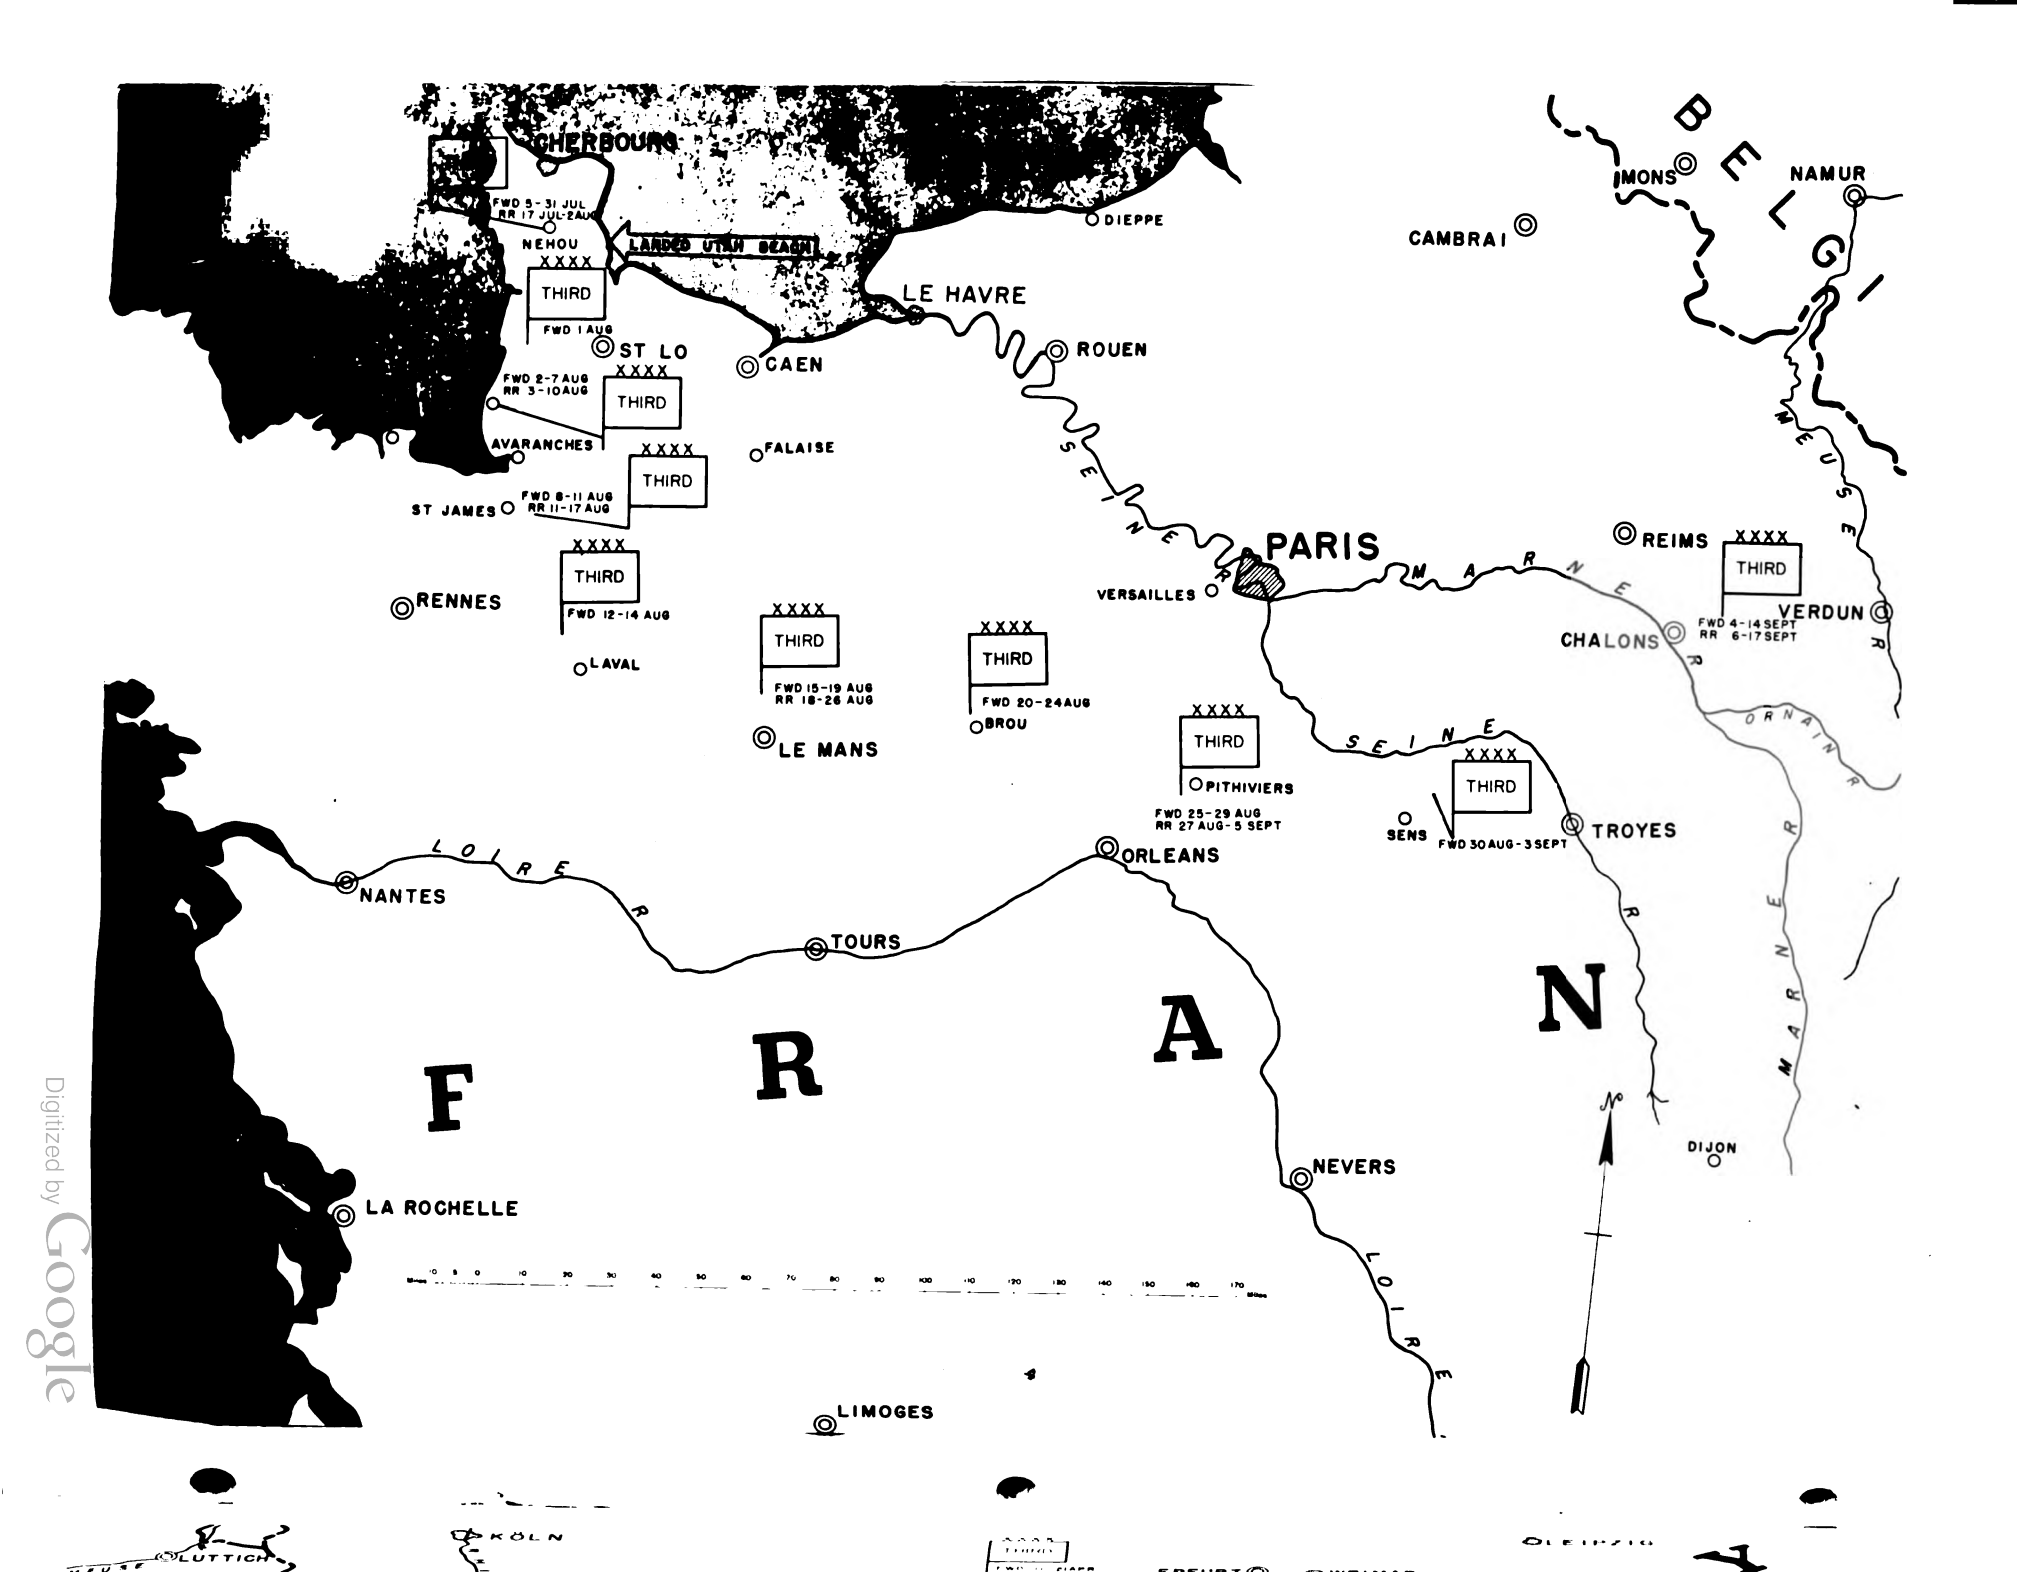
	Off	WO	EM
Hq Sp Trs	7	1	22
Hq Co (less Postal Section)	10	2	368
1092d Engr Utilities Det	2	0	38

8. The following materials should be carried on hand in ample stocks:

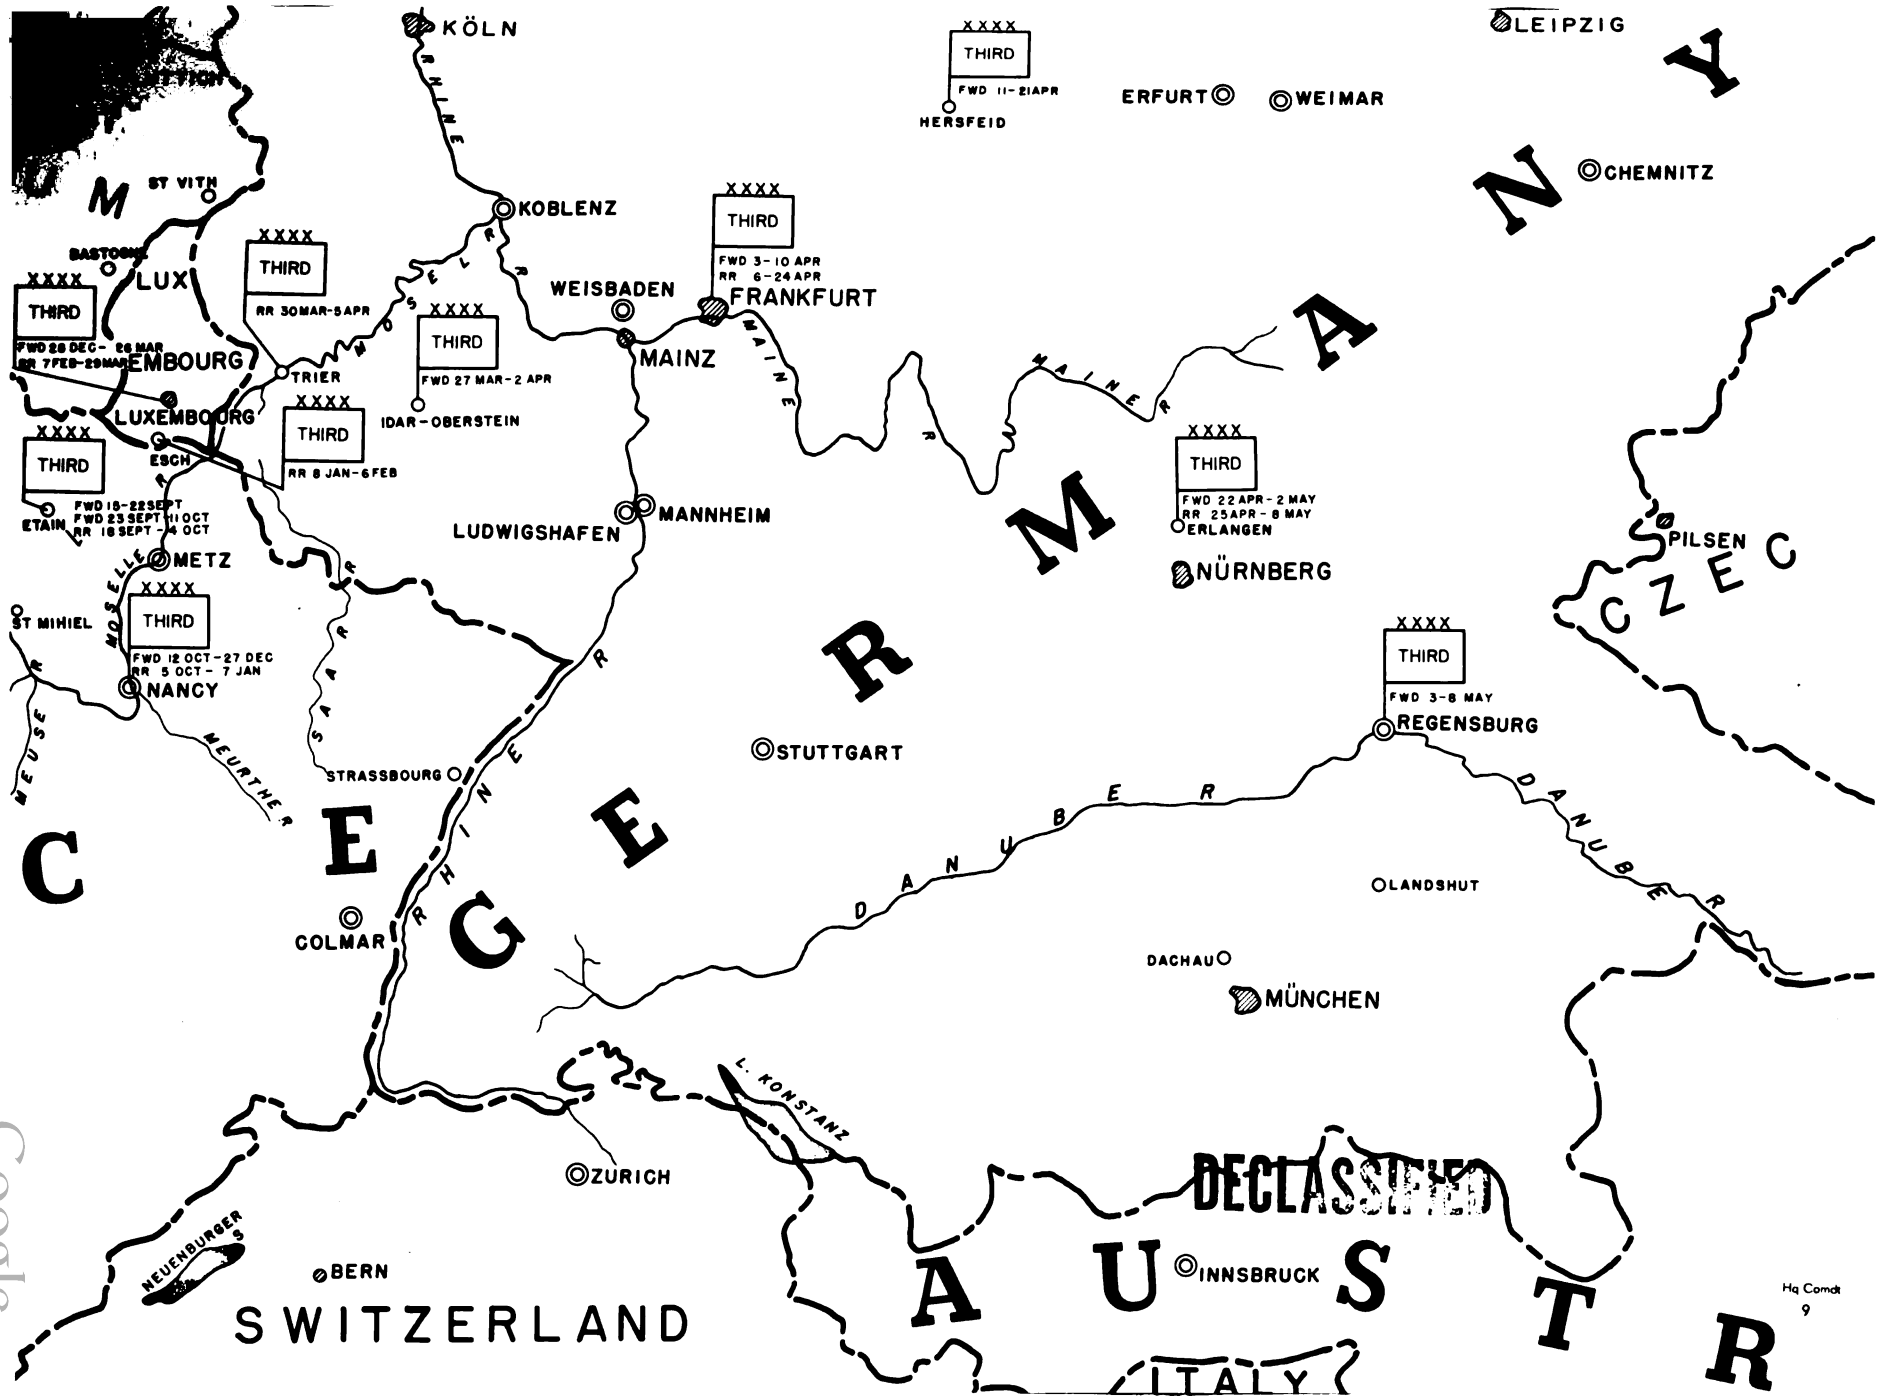
a. Electric Supplies: Lamps, wire, fuses, plugs, switches, etc.

b. Pipe, tees, els, and other fittings.

c. Blackout materials.



d. Hardware - nails, screws, bolts, angles, etc.



e. Lumber - All types of medium and light thicknesses.

f. Paint - all colors for signs, touch-up, etc.

9. This section must be augmented for any special tasks, such as preparing new covered accommodations in minimum time. Engineer troops and prisoners of war proved the best solution to this problem.

HEADQUARTERS
THIRD UNITED STATES ARMY
Office of the Inspector General
APO 403

Subject: Section Reports in Volume II, War Report.

To : Commanding General, Third U. S. Army.

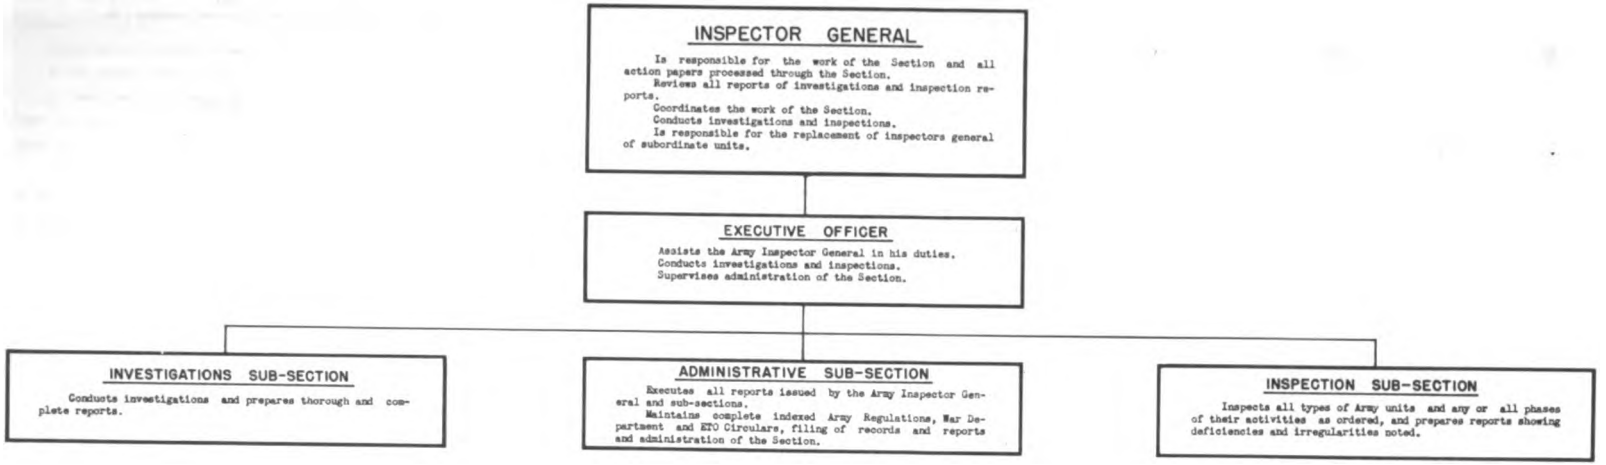
1. Submitted herewith is the After-Action Report of the Inspector General's Section, Third U. S. Army Headquarters, beginning with August, 1944, and continuing at the properly designated intervals by chapters.

2. Throughout the entire campaign, the Inspector General's Section assisted the Army Commander and the general and special staff sections in processing and effecting the following:

a. Numerous and sundry investigations.

b. Inspections of units and organizations throughout the Army.

c. Recommendations on proposed Army policies and drafts of appropriate action.



3. In all of the above the underlying principle of the Inspector General's Section was the promoting of the efficient administration of the command.

C. C. PARK,
Colonel, IGD,
Inspector General.

INSPECTOR GENERAL SECTION

Organizational and Functional Chart

CHAPTER 1
PLANNING IN UNITED KINGDOM

The Inspector General's Section arrived in England 23 March with the main body, Headquarters Third U.S. Army, and was quartered at KNUTSFORD until 17 July.

During this period the Section made "Alert Inspections" and "Contact Visits." "Contact Visits" were made to insure that Army units were receiving publications issued by Headquarters European Theater of Operations, and complying with Theater policies. Special attention was given to the matter of "indoctrination" of troops. "Alert Inspections" were conducted in compliance with "Preparation for Overseas Movement," Short and Long Sea Voyage. This Section worked closely with other sections in the Headquarters to determine supply shortages existing in the units alerted for continental operations. Based on Priority Schedules published by the G-4 Section, units were contacted and checked for Tables of Organization and Equipment shortages. Reports were submitted to the Chief of Staff and appropriate action taken.

On 5 July the Chief of Section left SOUTHAMPTON, England, and embarked for the Continent. He was accompanied by two officers, one warrant officer, and four enlisted men. On 17 July the second contingent, consisting of three officers and four enlisted men, left SOUTHAMPTON, England, and embarked for the Continent. Effective the same day (17 July) one officer and two enlisted men were attached to XII Corps and remained in England to assist in processing Army units to the Continent.

This concluded the first phase of operations.

CHAPTER 2
PRE-OPERATIONAL ON CONTINENT

On 18 July the Section was reunited and complete, except for those who had remained in England attached to XII Corps. The Section was bivouacked at MEHOU, France (019).

While in bivouac (awaiting arrival of units) the Section made inspections of Third U.S. Army Supply Distributing Points which were then set up and functioning.

During this period a study was made of the problem of self-inflicted wound cases and neuropsychiatric casualties. This problem had caused considerable apprehension in some echelons. Visits were made by senior assistants to the Army Inspector General to Headquarters First U.S. Army and hospitals, in connection with this study. It was concluded after preliminary investigation and study that this problem could be solved under existing regulations.

CHAPTER 3
AUGUST OPERATIONS

Visits were made by the Army Inspector General to the Headquarters of each Corps to discuss personnel and procedure in preparation for active operations.

The Section was stationed in its entirety in the Army Rear Echelon from which visits were made to the Forward Echelon and other Army installations, and [illegible] the Army area, as necessary.

DECLASSIFIED

The principal functions performed were the following:

1. Investigations directed by the Army Commander or higher authority.

2. Inspections of units with respect to compliance with directives on Soldier Voting.

3. Inspections (with Medical Corps Sanitary Inspections) of areas as vacated by the various parts of the Headquarters and supporting units.

4. Numerous pretrial investigations preparatory to further action on Court-Martial charges.

5. Required periodic inspections of disbursing accounts of Finance Sections.

6. Check inspections of Army service establishments.

7. Studied and advised with respect to administrative problems presented by subordinate units and sections of the Army Headquarters.

8. Investigation of accidents and claims pertaining to the Headquarters.

9. Provided personnel for six different Court-Martial boards of the Army Headquarters.

10. Instructed hospitals and units as to application of existing regulations and instructions to neuropsychiatric cases and self-inflicted wounds.

11. Visited Headquarters of VIII and XV Corps in regard to voting matters.

The widespread operations and rapid movements of units made it necessary to obtain a total of four motor vehicles for the Section to accomplish its tasks.

The extent of the administrative matters referred to the Section for recommendation is indicated by the following statistical summary:

	In	Out
Action papers	501	517

CHAPTER 4
SEPTEMBER OPERATIONS

On 2 September one officer and two enlisted men rejoined the Section at FITHIVIERS, France.

During the month the Section performed regularly assigned duties as directed by the Army Commander. Special emphasis was given to Soldier Voting, and, in all, 136 Army units (companies) were contacted and checked on Soldier Voting.

During this period Special Inspections were made as follows:

1. Three required periodic inspections of disbursing accounts of Army Finance Sections.

2. Five inspections of areas vacated by Army Headquarters upon change of bivouac locations.

3. One Special Inspection directed by the Army Commander.

Investigations completed during this period were as follows:

1. Four Formal Investigations.

2. Four Pretrial Investigations.

3. One Informal Investigation.

This Section provided personnel for six different Court-Martial boards of the Army Headquarters.

During the period covered by this report the Section administratively handled [illegible] action cases referred for recommendation.

CHAPTER 5
OCTOBER OPERATIONS

During the month the Section performed regularly assigned duties as directed by the Army Commander.

During this period Special Inspections were made as follows:

1. Six inspections of Army Postal Units and Army Post Offices.

2. One inspection of area vacated by Army Headquarters upon change of bivouac locations.

3. Two Special Inspections directed by the Army Commander.

Investigations completed during this period were as follows:

1. Seven Formal Investigations.

2. One Informal Investigation.

3. One Pretrial Investigation.

Continual emphasis was placed on Soldier Voting. Seventy-four Army Units were contacted and checked on Soldier Voting.

Fifty-five Army Units were contacted and checked on Conservation of Supplies and on Maintenance of Personnel Records (Section II, Circular 99, European Theater of Operations, U.S. Army, 1944).

This Section provided three officers for three different Courts-Martial of the Army Headquarters.

During the period covered by this report, the Section administratively handled 155 action papers referred for recommendation.

CHAPTER 6
NOVEMBER OPERATIONS

During the month of November the Section performed regularly assigned duties as directed by the Army Commander.

On 22 November three additional officers were assigned to the Section by Headquarters European Theater of Operations for special training in the Inspector General Department, with a view to filling existing vacancies in subordinate commands.

During this period the Section prepared Administrative Check-Lists to be used in connection with inspection of administrative records of subordinate units.

Inspections made during this period were as follows:

1. One Special Inspection directed by the Army Commander.

2. Ten Special Inspections on Maintenance of Personnel Records (Section II, Circular 99, European Theater of Operations, U.S. Army, 1944) and Conservation of Supplies.

3. Six Inspections of Army Postal Units and Army Post Offices.

Investigations completed during this period were as follows:

1. Seven Formal Investigations.

2. Twenty-eight Formal Investigations were conducted on Unauthorized Federal Ballots directed by the Theater Commander.

3. Three Informal Investigations.

This Section provided three officers for three different Courts-Martial of the Army Headquarters.

During the period covered by this report, the Section administratively handled the following number action papers, referred for recommendation: In - 266, Out - 317.

CHAPTER 7
DECEMBER OPERATIONS

The Section performed regularly assigned duties as directed by the Army Commander during the month of December.

One Captain from this headquarters was assigned to fill the existing vacancy as Assistant Inspector General in the 26th Infantry Division.

Inspections made during this period were as follows:

1. One Special Inspection directed by the Army Commander.

2. Twenty-one Inspections on Maintenance of Personnel Records (Section I, Circular 111, ETO US Army, 1944) and Conservation of Supplies.

3. Five Army hospitals were inspected as directed by the Chief of Staff relative to the preparation, serving, quality, and quantity of food.

4. Inspection of office quarters and billets vacated by Forward Echelon, Army Headquarters, and three subordinate units upon change of location.

Investigations completed during this period were as follows:

1. Seven Formal Investigations.

2. One Informal Investigation.

3. Five Pretrial Investigations.

This Section provided three officers for three different Courts-Martial of the Army Headquarters.

Chief of Section was appointed President of Board of Officers for the purpose of making recommendations to the Army Commander for Awards and Decorations.

Two officers were appointed on two separate Boards of Officers for conducting investigations as required by AR 420-5.

During the period covered by this report the Section administratively processed the following number action papers referred for recommendation: In - 146, Out - 163.

CHAPTER 8
JANUARY OPERATIONS

The Section performed regularly assigned duties as directed by the Army Commander during the month of January.

On 11 January three additional officers were assigned to the Section by Headquarters European Theater of Operations for special training in the Inspector General Department, with a view to filling existing vacancies in subordinate commands.

One Lieutenant Colonel assigned this headquarters was placed on Detached Service as Acting Inspector General of the 5th Infantry Division.

Two Captains, IGD, assigned to this headquarters from subordinate units were placed on Detached Service with European Theater of Operations for assignment to position vacancies of the next higher grade in the Communications Zone.

Four Captains from this headquarters were assigned to fill existing vacancies as Assistant Inspectors General in subordinate units, namely, 35th Infantry Division, 4th Armored Division, 80th Infantry Division, and 87th Infantry Division.

Inspections made during this period were as follows:

1. Four Special Inspections directed by the Army Commander.

2. Messes of three Army Hospitals were inspected as directed by the Chief of Staff with particular attention to the preparation, serving, quality, and quantity of food.

3. Inspections of accommodations vacated by Rear Echelon, Army Headquarters, and seven subordinate units upon change of location.

Investigations completed during this period were as follows:

1. Six Formal Investigations.

2. Five Informal Investigations.

3. Three Pretrial Investigations.

One officer from this Section served as a member of a General Court-Martial appointed by this headquarters.

One officer and one enlisted man were provided to take inventory of accommodations occupied by the Forward Echelon, this headquarters, in the City of LUXEMBOURG (YU 8513).

The Chief of Section served as President of Board of Officers for the purpose of making recommendations to the Army Commander for Awards and Decorations.

During the period covered by this report the Section administratively processed the following number action papers referred for recommendation: In - 200, Out - 204.

CHAPTER 9
FEBRUARY OPERATIONS

The Section performed regularly assigned duties as directed by the Army Commander during the month of February.

On 14 February three additional officers were assigned to the Section by Headquarters European Theater of Operations for special training in the Inspector General's Department, with a view to filling existing vacancies in subordinate commands.

Two Captains from this headquarters were assigned to fill existing vacancies as Assistant Inspectors General in subordinate units, namely, 4th Infantry Division and 26th Infantry Division.

Inspections made during this period were as follows:

1. Two Special Inspections as directed by the Army Commander.

2. Messes of four Army Hospitals were inspected as directed by the Chief of Staff with particular attention to the preparation, serving, quality, and quantity of food.

3. Inspections of accommodations vacated by Rear Echelon, Army Headquarters, and five subordinate units upon change of location from [illegible] to LUXEMBOURG (P-71).

The 702d Railway Grand Division and one of its battalions, the 714th Railway Operating Battalion, were visited and inspected.

Investigations completed during this period were as follows:

1. Three Formal Investigations.

2. Three Pretrial Investigations.

One officer from this Section served as a member of a General Court-Martial appointed by this headquarters.

One officer was provided to take inventory of accommodations occupied by this headquarters in the city of LUXEMBOURG (P-71).

The Chief of Section served as President of Board of Officers for the purpose of making recommendations to the Army Commander for Awards and Decorations during the entire month of February.

During the period covered by this report the Section administratively processed the following number of action papers referred for recommendation: In - 143; Out - 148.

81-CSI-4858

CHAPTER 10
MARCH OPERATIONS

The Section performed regularly assigned duties as directed by the Army Commander during the month of March 1945.

The following personnel changes were effected during the month:

1. One officer and one enlisted man returned to United States on temporary duty.

2. One Lieutenant Colonel was assigned as Inspector General of 6th Armored Division.

3. One Lieutenant Colonel on detached service as Acting Inspector General of the 5th Infantry Division returned to this headquarters.

4. Two Captains from this headquarters were assigned to fill existing vacancies as Assistant Inspectors General in subordinate units, namely, XX Corps and 28th Infantry Division.

5. Two Captains were assigned to this headquarters from subordinate units to fill existing vacancies in this command.

Inspections of accommodations vacated by the Forward and Rear Echelons, Army Headquarters, and 9 subordinate units upon change of location from LUXEMBOURG (P81).

Investigations completed during this period were as follows:

1. Four Formal Investigations.

2. One Informal Investigation.

3. Three Pretrial Investigations.

One officer of this Section served as President of a General Courts Martial Board appointed by this headquarters.

During the period covered by this report this Section administratively processed the following number of action papers referred for recommendation: In - 121; Out - 126.

CHAPTER 11
APRIL OPERATIONS

The Section performed regularly assigned duties as directed by the Army Commander during the month of April 1945.

Inspections made during this period were as follows:

1. Inspections of accommodations vacated by the Forward Echelon, Army Headquarters, upon changes of locations from [illegible] (W71), FULDA (W69), and HERSFELD (W85), GERMANY.

2. Inspections of accommodations vacated by the Rear Echelon, Army Headquarters, upon changes of locations from METZ (Y41), and [illegible] (W69), GERMANY.

3. Inspections of accommodations vacated by thirteen subordinate units.

4. Three inspections on maintenance of personnel records (FTC Circ 111 and 30, 1944, and 1945, respectively) and conservation of supplies.

Investigations completed during this period were as follows:

1. Two Formal Investigations.

2. Two Informal Investigations.

One officer visited the Displaced Persons Camp, Allied Prisoner of War Camp, and Prisoner of War Camp, located at METZ (Y41), GERMANY.

The Buchenwald Concentration Camp near WEIMAR (U51), GERMANY, was visited and report of observations rendered.

One officer from this Section served as a member of a General Court-Martial appointed by this headquarters.

During the period covered by this report the Section administratively processed the following number of action papers referred for recommendation: In - 121; Out - 124.

CHAPTER 12
MAY OPERATIONS

The Section performed regularly assigned duties as directed by the Army Commander during this period.

Inspections made during this period were as follows:

1. Inspections of accommodations vacated by Forward Echelon, Army Headquarters, upon change of location from ERLANGEN (W36), GERMANY, and thirteen subordinate units.

2. Three Special Inspections.

3. Administrative records of Headquarters Third U.S. Army and the 474th Infantry Regiment (Sep) were inspected in compliance with Staff Memorandum Number 12, this headquarters.

Investigations completed during this period were as follows:

1. Two Formal Investigations.

2. One Pre-Trial Investigation.

One officer from this Section served as a member of a General Court-Martial appointed by this headquarters.

During the period covered by this report the Section administratively processed the following number of action papers referred for recommendation: In - 36; Out - 34.

LESSONS LEARNED & CONCLUSIONS

Lessons Learned: No material changes in method or procedure were found necessary or desirable.

Conclusions: That currently prescribed methods and procedures of the Third Army generally are sound.

HEADQUARTERS
THIRD UNITED STATES ARMY
Office of the Judge Advocate

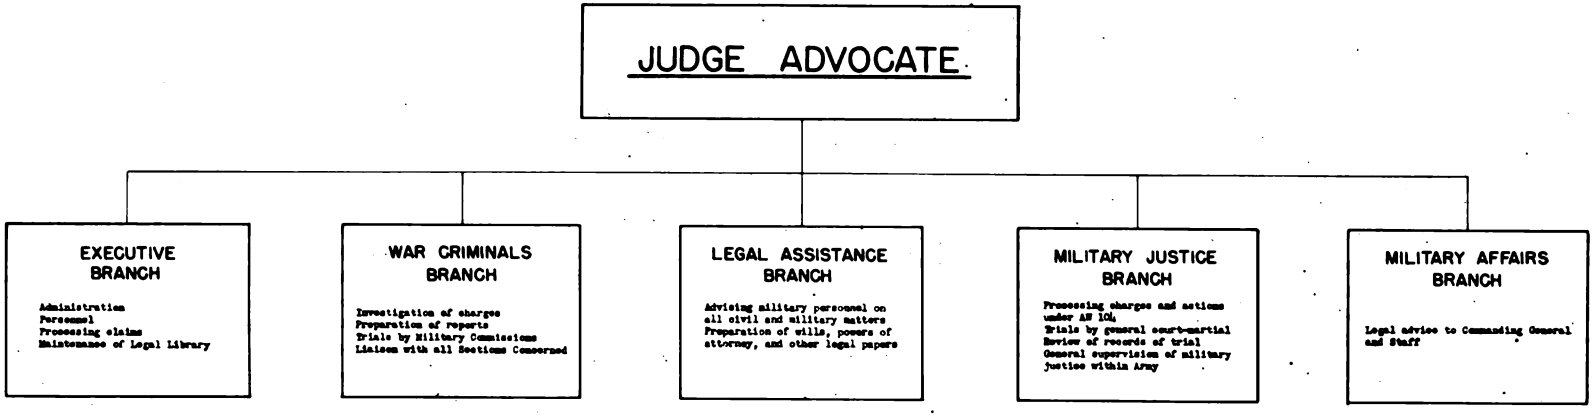
SUBJECT: After-Action Report.

TO : Commanding General, Third US Army, APO 403, US Army.

1. Submitted herewith is the After-Action Report of the Judge Advocate Section, Third U. S. Army Headquarters, beginning with March 1944 and continuing at the properly designated intervals by chapters.

2. Included in this report are the various problems faced by the Section during the Third U. S. Army's campaign, and statements of how these problems were met. Difficulties of an inadequate Table of Organization and the procurement of skilled personnel on temporary duty assignments to supplement the regular T/O were among the primary problems, and the report indicates how the Section reacted to the unforeseeable events as they developed. The types of cases handled, and the volume and nature of the work performed, are herein described, in order to indicate all the aspects of an Army Judge Advocate Office in time of war.

Charles E. Rhetts



CHARLES E. RHETTS,

JUDGE ADVOCATE SECTION

Organizational and Functional Chart

DECLASSIFIED

CHAPTER 1
PLANNING IN UNITED KINGDOM

Prior to leaving the United States the enlisted personnel of the Judge Advocate Section had been selected with a view to their competence as court reporters as well as other matters. While this Headquarters was stationed in the United Kingdom the training in court reporting, previously begun by the enlisted personnel, was continued.

During the time the Headquarters was in the United Kingdom, an effort was made to increase the officer strength of the Section, as experience of other armies had shown the inadequacies of the officer strength (three) prescribed by the Table of Organization. As a result of the endeavors made, two officers of the Judge Advocate General's Department were placed on detached service with this Section shortly before the rear echelon left the United Kingdom.

In anticipation of such problems arising during operations, this Section began in the United States an intensive study of the laws of warfare and military government, which was continued in the United Kingdom.

CHAPTER 2
PRE-OPERATIONAL ON CONTINENT

7 July - 18 July: Advice was given on various legal problems and charges were prepared in a number of cases.

19 July - 1 August: From the time the rear element of the Section joined the forward element, 19 July until 1 August, ten general court-martial cases were tried at the Headquarters. Since the regular heavy duties of the other officers of the Headquarters and army units prevented the expeditious handling of the charges, officers of this Section were detailed as Trial Judge Advocate and Defense Counsel. This policy also promoted the fair, professional presentation of the serious charges referred to the general courts-martial. In all cases the proceedings were reported by enlisted men of this Section.

CHAPTER 3
AUGUST OPERATIONS

1 August - 10 August: Five general court-martial trials involving eight accused were tried at the Headquarters during this period. All proceedings were reported by enlisted men of this Section and in all but one case both the Prosecution and the Defense were presented by officers of the Section.

Two enlisted men were attached and another vehicle was secured in order to facilitate the task of finding and assembling witnesses from the various, rapidly-moving units and to give the regularly assigned enlisted men more time for reporting and transcribing court proceedings and for other stenographic duties. The smaller units ordinarily having no telephone, personal visits were found to be the most practical and expeditious means of interviewing witnesses and accused during this period when the area held by units of the Third U. S. Army was small.

10 August - 17 August: Seven general court-martial trials were [illegible] Headquarters during this period, all being reported by enlisted men of this Section. [illegible] Section represented the

DECLASSIFIED

REPRODUCED BY Co B, 942nd ENGR AVN TOPO BN
185th A/C US ARMY APR 1945

Digitized by Google

Prosecution in all cases and presented the Defense in all but two cases. Since the officers appointed as Assistant Trial Judge Advocate and Assistant Defense Counsel were ordinarily unable, in addition to their regular duties, to assemble the witnesses and produce the accused for trial with sufficient expedition, these tasks were performed by the Trial Judge Advocate and Defense Counsel. Also, in the interests of technical accuracy of procedure and to insure the quick punishment of those committing crimes of violence, such as rape, murder, and aggravated assaults, against French civilians, this Section, in this and later periods, prepared the charges and arranged for the formal pre-trial investigation in such cases. As an example of the expedition achieved, two soldiers were on 15 August tried and convicted of a serious offense committed on 9 August.

Since the then existing officer strength of the Section (five officers and one warrant officer) was insufficient to handle the extraordinary volume and variety of work, another officer was placed on temporary duty with the Section. Additional vantage was requested, but pending receipt thereof the courts sat, during the good weather prevailing in this and the next period, in the open air in the bivouac area of this Section.

17 August - 27 August: Ten general court-martial cases were held at this Headquarters. Personnel of this Section participated in all these trials, the officers acting as Trial Judge Advocate, Defense Counsel and Law Member and the enlisted men serving as court reporters. Of the ten trials, three involved aggravated assaults or other offenses against civilians by five soldiers. In order to relieve the Trial Judge Advocate and Defense Counsel, so far as possible, of the burden of assembling witnesses and producing the accused, now that units of the Third U. S. Army were operating over such large areas of France, radio messages were sent to the accused's unit requesting the commanding officer thereof to produce the accused and necessary military witnesses for trial at earliest practicable date. The attendance of civilian witnesses and interpreters continued to be secured by personal contact. Completion of trial preparations were made upon arrival of the accused and the witnesses and the cases were then tried.

In the interests of expedition and in accordance with the Theater policy that crimes against civilians should be tried near the scene of the offense and the residence of the witnesses, three other sets of serious charges relating to six accused and three cases involving aggravated assaults upon French civilians were processed during this period and sent to the appropriate general court-martial authority of the Communications Zone for trial.

During this period, also, a letter was prepared for the signature of the Commanding General informing all troops under his command of the extreme punishment which had been and would be imposed upon those committing crimes of violence against French civilians.

Another officer and another enlisted man, previously requested reported for duty with this Section during this period.

27 August - 31 August: During this four day period, the personnel of this Section arranged for and otherwise participated in six general court-martial trials. Another officer reported for duty with the Section.

1 August - 31 August: In addition to serving as Trial Judge Advocate, Defense Counsel, and reporter in nearly all the general court-martial cases tried at this Headquarters during the month of August, as law member of the court in many cases and as investigating officer in some, personnel of this Section wrote reviews of fifteen general court-martial proceedings. The regular flow of work relating to military affairs, laws of warfare, legal assistance to military personnel, review of proceedings of inferior courts, and similar matters was also handled.

CHAPTER 4
SEPTEMBER OPERATIONS

1 - 6 September: Six cases were tried at the Headquarters by general court-martial. Officers of this Section participated in the Prosecution and Defense of all six cases, and an officer of this Section sat as Law Member in three of the cases. The enlisted men of this Section acted as court reporter in three of the six proceedings.

Two new officers, captains of infantry, reported for detached service with this Section during this period.

6 - 18 September: Sixteen general court-martial cases were tried at the Headquarters. Officers of this Section represented the Prosecution in all cases and participated in the Defense of all but two. In a number of instances the Law Member of the court was furnished by this Section; and in a majority of the cases the proceedings were reported by the enlisted men of the Section.

The military justice activities of the Section during this period also included the preparation of a procedural guide for the summary court officers appointed by the Headquarters Commandant for the trial of traffic, uniform and other minor offenses occurring within the operational area of the Third U. S. Army. These summary courts tried 535 cases from 10-30 September.

During this period two additional officers, first lieutenants of infantry, reported for temporary duty with this Section. An increase in the enlisted strength of the Section to ten was also authorized during this period. Two enlisted men reported for temporary duty with the Section at this time, both of whom were subsequently assigned to the Section.

18 - 30 September: Thirteen general court-martial cases were tried at the Headquarters before the end of the month. One of the cases involved a common trial of twenty-three soldiers accused of rioting. One case concerned civilians residing in or near PARIS, and in accordance with Theater policy, their testimony was given before a court sitting in PARIS, the military witnesses being heard before the court sitting at the Headquarters. Officers of the Section participated in the prosecution and defense of all the cases and in some instances the Section furnished the Law Member for the court. Enlisted men of the Section acted as court reporter in the riot case and most of the more difficult cases tried during this period.

One officer, lieutenant colonel, infantry, reported for duty with this Section during this period while one officer, a major in the Judge Advocate General's Department, left to assume his new duties as Assistant Judge Advocate of XX Corps.

1 - 30 September: In addition to the military justice activities above set forth, personnel of this Section wrote reviews of twenty-one general court-martial proceedings, reviewed the proceedings of many inferior courts-martial, formally investigated numerous charges, and made recommendations with respect to the trial of many charges. Concurrently with these matters of military justice, the Section dealt with various questions of military affairs, rules of land warfare, military government, and legal assistance to military personnel. Personal liaison and contact was established with the officers of the Communication Zone with respect to matters of military justice, military affairs and allied matters.

Of the total cases tried by general court during the month of September, only one, charges of robbery and larceny, involved an offense against civilians.

Digitized by Google

CHAPTER 5
OCTOBER OPERATIONS

Thirty-two general court-martial cases were tried at this Headquarters. Officers of the Section participated in the Prosecution and Defense of all of them and as Law Member in thirty. They also served as additional members of the court in a substantial number of the trials. Twenty-six of the cases were reported by enlisted men of the Section.

The first trial of spies in the Third U. S. Army was held this month before a Military Commission at this Headquarters. The trial judge advocate, one member of the commission, and the reporter were furnished by this Section. Both Defense Counsel were attorneys and in addition the two accused were aided throughout every stage of the proceedings by individual interpreters. The two accused were convicted of acting as spies and sentenced to be shot to death with musketry.

Of the Thirty-two general court-martial cases tried in October, nine were of officers and one of a warrant officer as compared with thirty-five cases tried in September, seven of which were of officers and one of a warrant officer. Only two of the cases in October and one in September involved offenses against civilians, while during August, seven were for crimes of violence against civilians. The death penalty was imposed upon four accused, including the spies, during October.

During this month two general courts-martial were in session at the same time on several occasions. In a number of cases interpreters of French, German or Polish were used.

Numerous questions were submitted to the Section for advice to the summary court officers appointed for the trial of traffic and uniform violations within the territorial limits of Third U. S. Army by the Headquarters Commandant and for which this Section had previously prepared a procedural guide. Eight hundred sixty-seven cases were tried by these courts during October.

In addition to the activities recounted above, personnel of the Section performed the following work:

1. Wrote twenty-three general court-martial and one military commission reviews.
2. Reviewed several hundred special and summary court-martial records.
3. Wrote eighteen reprimands and admonitions.
4. Conducted eleven pretrial investigations.
5. Referred fifty-one charges for trial by general court-martial.
6. Made many recommendations with respect to trial of charges by inferior courts.
7. Processed numerous claims and reclassification matters.
8. Rendered opinions of various questions concerning military justice, military affairs, rules of land warfare, and military government.
9. Furnished legal assistance to military personnel in approximately seventy-five instances.

The Section continued to operate on a seven day work week, and in addition inaugurated the policy of maintaining an officer on duty each night to handle such matters of an emergency nature as might arise. After moving into permanent billets, the night guard previously necessary was discontinued.

Three enlisted men who were stenographers reported for temporary duty with the Section during the month. During this period the staff judge advocate of the III Corps spent ten days in the Section observing its functioning and holding conferences with the judge advocate and the chiefs of the sub-sections in order to familiarize himself with the Third U. S. Army policy.

The Section moved into buildings previously used by the German Army, occupying thirteen rooms, four of which were used as courts-martial and witness rooms. In addition, all its enlisted personnel were quartered in the same building. This improvement in the physical setup made a division of work feasible, resulting in the establishment in addition to the executive sub-section of separate sub-sections for military justice, military affairs, international law and rules of land warfare and miscellaneous matters. It also permitted increased efficiency in the operation of the chief clerk's office by the assembling of the enlisted personnel and all records in one large room.

CHAPTER 6
NOVEMBER OPERATIONS

Thirty-two general court-martial cases were tried at this Headquarters. Officers of the Section participated in the prosecution and defense of all but one of them and contributed the court's law member in all but three of the cases. In several instances, an additional member of the court was furnished by this Section. All but one of the proceedings were reported by enlisted men of the Section.

The second trial of spies in the Third U. S. Army was held before a military commission at this Headquarters. The trial judge advocate, one member of the commission and the reporters were furnished by this Section. Both defense counsel were attorneys and the accused were aided throughout every stage of the proceedings by individual interpreters of their own choice. In addition, there were the official German and French interpreters for the commission. The two accused were convicted of acting as spies and sentenced to be shot to death with musketry. The accused were members of the 1st and 3rd Companies, 73rd Regiment, 19th Division, German Army.

The two German soldiers convicted of spying during the month of October were executed this month. Moreover, four U. S. Army soldiers, convicted of rape during the month of August and sentenced to death by hanging, were executed this month, following due approval and confirmation of their sentences. These six executions were the first carried into effect pursuant to sentences imposed by courts and commissions of the Third U. S. Army.

The thirty-two general court-martial cases tried in November involved five officers and thirty-four enlisted men. Nine officers and one warrant officer were involved in the same number of cases in the preceding month. One trial of two officers and one noncommissioned officer for several offenses including the sale by the accused of French champagne at prices in excess of those established pursuant to French law, was held in the court room in the local Palais de Justice in the presence of many civilian spectators. The officers were sentenced to dismissal, total forfeitures and confinement at hard labor for five years and the noncommissioned officer to dishonorable discharge, total forfeitures and confinement at hard labor for three years, the results of the trial being published in the French press. The publicity given the trial served as a dramatic demonstration of American cooperation with the French in the protection of the French economy against inflation.

An examination of eighty general court-martial orders and fourteen actions under Article of War 48 covering general courts-martial on which action had been taken by the Commanding General between 1 August 1944 and 18 November 1944, disclosed that the following personnel were concerned:

White 61

Colored 60

Those proportions are to be interpreted in light of the following figures respecting the total number of colored and white troops under direct control of this Headquarters as shown below:

	Colored EM & Officers	White EM & Officers
31 August 1944 . . .	10,991	63,758
30 September 1944. .	9,965	68,766
31 October 1944. . .	12,663	54,752
18 November 1944 . .	12,641	55,992
Total .	46,260	243,268

Digitized by Google

Numerous questions were submitted to the Section for advice to the Summary Court Officers appointed for the trial of traffic, uniform, and other minor offenses within the territorial limits of the Third U. S. Army by the Headquarters Commandant and for which this Section had previously prepared a Procedural Guide. 866 cases were tried by these courts during November.

In addition to the activities mentioned above, personnel of this Section performed the following work:

1. Wrote nine reprimands and admonitions.

2. Referred thirty-one sets of charges for trial by general court-martial.

3. Referred twenty-nine sets of charges for trial by inferior courts.

4. Reviewed 700 records of trial by summary court-martial and 135 records of trial by special court-martial.

5. Prepared 54 reviews of trials by general court-martial, and one review of a trial by a military commission, the most reviews prepared by this Section in any single month.

6. Handled the correspondence necessary to effectuate the release or evacuation of all general prisoners in the hands of the Provost Marshal, Third U. S. Army.

7. Prepared a circular letter respecting the place of non-commissioned officers in the enforcement of military discipline. A copy of the circular is attached as Annex 2.

8. Caused the distribution for divisional and special troops of the Third U. S. Army of Soldier's Handbook of The Rules of Land Warfare, prepared by the Chief of this Section. A copy of the pamphlet mentioned is attached as Annex 4.

9. Investigated the report of a number of related violations of the Geneva Convention and processed various other reports of violations.

10. Reviewed for legal accuracy a guide prepared for military government legal officers operating under the jurisdiction of the Third U. S. Army, its Corps and Divisions.

11. Reviewed for legal sufficiency memoranda prepared in other sections pertaining to the exchange of currencies, the processing of enemy soldiers captured in civilian clothing and other administrative matters involving questions of international law.

12. Rendered legal advice in a number of cases pertaining to looting and pillaging.

13. Processed numerous claims.

14. Caused the distribution of a circular letter previously prepared in this Section covering the investigation of automobile accidents, a copy of which is attached as Annex 1.

15. Furnished legal assistance to military personnel in approximately 75 cases.

16. A field officer of the Section served as a member of the War Decoration Board.

A memorandum of the Branch Office of The Judge Advocate General, European Theater of Operations, reporting on general court-martial records received by the Branch Office during the month of November 1944 gave the following figures respecting the military justice operations of three of the United States Armies operating in the theater:

	No. Accused Tried	No. Cases Tried
First U. S. Army	14	13
Third U. S. Army	63	38
Seventh U. S. Army	9	9

The authorized personnel of the Section was augmented by the allotment of the following officers and enlisted men for use in connection with investigations of violations of the Geneva Convention: 1 Colonel, 2 Majors, 2 Captains, and 5 Privates.

CHAPTER 7
DECEMBER OPERATIONS

Thirty-two general court-martial cases were tried at this Headquarters. Officers of this Section represented the prosecution and the defense in all but seven of the general court-martial cases and contributed the court's law member in all but one of the cases. In several instances an additional member of the court was furnished by this Section. All these proceedings were reported by enlisted men from this Section, and an enlisted man from this Section acted as interpreter in two of the cases.

Of the 32 general court-martial cases tried in December only two involved crimes against French civilians. The attendance of civilian witnesses was secured by personal contact, and transportation was supplied by this Section.

Four murder cases, none of which involved civilians, were tried during this period, whereas none was tried during the previous month and only three since the start of the year. In one of the cases, the offender was sentenced to be hanged and in two others the offenders were sentenced to life imprisonment. The fourth case resulted in an acquittal. Four officers were tried, three of them being sentenced to dismissal and confinement and one to dismissal only.

For the first time since arrival on the Continent several cases involving long absences without leave were tried. Previous cases under the 61st Article of War had consisted of absences of brief duration tried in conjunction with other more serious offenses.

Two German soldiers convicted of spying during November were shot to death with musketry after the sentences were confirmed by the Commanding General of the Twelfth U. S. Army Group. There were no trials by Military Commission during the month of December, but study of war crimes was intensified and the ground work has been laid for the eventual trial of war criminals and violators of the Geneva Convention.

Eleven officers from the 2nd European Civil Affairs Regiment, who were awaiting assignment in Germany, were appointed members of a general court-martial. This court was so constituted in order to reduce to a minimum the disruption inherent in calling officers away from important duties in other sections of the Headquarters and in subordinate units while at the same time giving court-martial experience to officers of the 2nd European Civil Affairs Regiment at a time when their regular duties were light. One enlisted lawyer, a Technician Fifth Grade, was newly assigned to the Section.

In addition to the activities mentioned above, personnel of this Section performed the following work:

1. Wrote five reprimands and admonitions.

2. Referred nine pre-trial investigations, three of which were referred to officers from this Section.

3. Referred forty-five sets of charges for trial by general court-martial.

4. Referred nineteen sets of charges for trial by inferior courts.

5. Wrote sixteen letters directing redrafting or withdrawal of charges.

6. Reviewed 534 records of trial by summary courts-martial, and 123 records of trial by special courts-martial, taking necessary corrective action.

7. Handled the correspondence necessary to effectuate the release or evacuation of all general prisoners in the hands of the Provost Marshal, Third U. S. Army.

8. A circular letter, previously prepared by this Section respecting relations with the German people, was signed and distributed. A copy of this letter is attached as Annex 3.

9. Processed numerous matters concerning accidents and claims.

10. Prepared thirty reviews of trials by general court-martial.

11. Numerous miscellaneous legal opinions were given to other sections in the Headquarters.

12. Furnished legal assistance to military personnel in approximately 70 cases.

Digitized by Google

CHAPTER 8
JANUARY OPERATIONS

Fifty-five general court-martial cases were tried at this Headquarters. Officers of this Section represented the prosecution in 48 of the cases and the defense in the vast majority. This Section contributed the court's law member in 51 of these cases, and in several instances an additional member of the court was also furnished. All these proceedings were reported by enlisted men of this Section, in courts held contemporaneously at both NANCY (U8512) France, and ESCH (P7301) Luxembourg. An enlisted man from this Section acted as French interpreter in four of the cases.

The number of cases tried this month exceeded by more than 60 per cent the number tried by this Headquarters during any previous month, and placed a considerable strain on all the personnel of the Section. Of the 55 general court-martial cases tried, only six involved commissioned officers, two of which resulted in an acquittal, whereas one officer was sentenced to dismissal and confinement for 10 years for selling captured liquor for his personal gain, and another officer was sentenced to dismissal and confinement for five years for being drunk in public and absent without leave for a total of 30 hours. Of all the cases tried, there were only six acquittals. The one case of rape brought a sentence of life imprisonment, while two soldiers convicted of assault with intent to rape were sentenced to 20 years. There were two murder cases tried during the month, one of which resulted in life imprisonment and the other in imprisonment for 25 years. There were severe sentences imposed in several cases which involved black-market operations. In all cases, where required, the attendance of witnesses was secured by personal contact, and transportation was supplied by this Section.

Although no trials of war criminals were held in this Headquarters, a circular, previously prepared, was distributed to Interrogation of Prisoners of War and Counter Intelligence Teams, advising them of the procedure to be followed at prisoners of war enclosures to detect war criminals and to bring them to justice.

A memorandum on discipline was prepared, listing the results of significant courts-martial cases tried in the European Theater of Operations during the month, and distributed for publicity throughout the command for its deterrent effect.

A member of this Section who had done outstanding work, was given a direct commission as a second lieutenant in the Army of the United States to fill an existing vacancy in the Section. A candidate for the Judge Advocate Officer Candidate School was attached to this Section for about two weeks so that his qualifications could be determined.

When the Headquarters moved to its new position at ESCH (P7301), Luxembourg, this Section occupied 10 rooms on two floors of a large office building. In addition, there were two large court-rooms with adjoining witness rooms. This improvement in the physical set-up permitted increased efficiency in handling the mounting volume of cases.

In addition to the activities mentioned above, personnel of this Section performed the following work:

1. Received, reviewed, and passed on 33 general courts-martial cases.

2. Received, reviewed, and passed on 485 cases tried by summary courts-martial.

3. Received, reviewed, and passed on 147 cases tried by special courts-martial.

4. Referred 23 charges to jurisdictions not under the Third United States Army.

5. Referred 25 sets of charges to trial by general courts-martial.

6. Referred 16 sets of charges to inferior courts.

7. Wrote 24 letters regarding irregularities in trials by special and summary courts-martial.

8. Handled the correspondence necessary to effectuate the release or evacuation of all general prisoners in the hands of the Provost Marshal, Third United States Army.

9. Wrote 85 letters requesting confinement and transfer of prisoners.

10. Wrote 8 reprimands and administrative restrictions.

11. 53 letters were written regarding accidents and claims.

12. 17 letters were written on various matters concerning violations of the Geneva Convention.

13. 21 miscellaneous legal opinions were given to other sections in the Headquarters.

14. Legal assistance was furnished to military personnel in approximately 85 cases.

15. In addition, 256 miscellaneous letters, indorsements, and buck slips were prepared.

CHAPTER 9
FEBRUARY OPERATIONS

Throughout February the bulk of general courts-martial appointed at this Headquarters was made up of officer personnel from nearby civil affairs detachments who were awaiting assignment to active operations in Germany. This policy was begun in December, 1944, for the use of these officers had the advantages of permitting staff officers at this Headquarters to devote a maximum amount of their time to matters of an operational nature, and also gave the civil affairs officers practical training in disciplinary problems which would be encountered in their work in Germany.

Forty-four general court-martial cases were tried at this Headquarters, and officers of this Section represented the prosecution in 33 of the cases and the defense in 13 of them. A member of this Section sat as Law Member in 32 of the cases, and all but five of the cases were reported by enlisted men of this Section.

The three murder cases tried during the month resulted in two death sentences and one sentence to life imprisonment. One mutiny case, involving 7 accused, resulted in acquittal of two of the accused and a sentence of 15 years for each of the other five. Two enlisted men were sentenced to imprisonment for 30 years for sleeping on post and leaving post before being properly relieved, respectively, and a lieutenant colonel was fined a total of one thousand dollars for violating censorship regulations. Forty-seven enlisted men and three officers were tried during the month.

The nucleus of a War Crimes Branch was enlarged within the Section and investigation of reported war crimes continued. The object in each case was to obtain sufficient evidence, as soon after the violation as practicable, to establish a prima facie case against the malefactors. Persons, regardless of nationality, who had personal knowledge of violations of the Geneva Convention and the Laws and Usages of War were interviewed, in their native tongue, by officers through enlisted interpreters, from the Section, and their sworn statements were taken. Among the cases investigated during February were the torturous murder of a wounded American aviator by enraged German women, the inhuman treatment of civilians by Gestapo and SS troops, and the murder of French children by a retreating Panzer Division. Though crimes against all allied nationals were examined, the main emphasis was placed upon offenses committed against U. S. troops and U. S. nationals, and a growing portion of the work of the office was concerned with crimes committed by the

DECLASSIFIED

Digitized by Google

Two officers were transferred from the Section to assume responsible assignments in other Sections of this Headquarters where their training heretofore acquired was utilized, and a chief warrant officer, who was a lawyer in civilian life, was brought into the Judge Advocate Section from a combat unit where he had rendered outstanding service for the past several years, for seasoning and training in Judge Advocate work. In addition, three enlisted men, two lawyers and a court reporter were attached to the Section on temporary duty for training, giving the Section 6 officers, 1 warrant officer, 10 enlisted men and 5 attached enlisted men, as compared to the 5 officers, 1 warrant officer, and 5 enlisted men who comprised the Section when it arrived on the continent.

The following work was also performed by personnel of this Section:

1. Received, reviewed and passed on 30 general court-martial cases.

2. Received, reviewed and passed on 126 special court-martial cases.

3. Received, reviewed, and passed on 90h cases tried by summary court-martial.

4. Referred 56 charges to jurisdictions not under Third U. S. Army.

5. Referred 34 sets of charges to inferior courts.

6. Wrote 29 letters regarding irregularities in records of trial by summary and special court-martial.

7. Handled the correspondence to effect release or evacuation of all prisoners in the hands of the Provost Marshal, Third U. S. Army.

8. Wrote 90 letters requesting release from confinement or transfer of general prisoners.

9. Wrote 6 reprimands or punishment under the 104th Article of War.

10. 57 letters were written regarding accidents or claims.

11. Several investigations were made by officers of this Section regarding violations of the Geneva Convention and reports thereon were submitted to higher headquarters. 25 letters were written regarding such violations.

12. A circular letter requiring court-martial action against all military personnel who sustain self-inflicted wounds was prepared for distribution through the command.

13. Numerous legal opinions were given to other sections of the Headquarters.

14. Legal assistance was furnished to military personnel in approximately 80 cases.

15. In addition, 175 miscellaneous letters, indorsements, and buck slips were prepared.

CHAPTER 10
MARCH OPERATIONS

Throughout March the military justice work of the office was stabilized and an increasing emphasis was placed upon crimes committed by the enemy in violation of the Geneva Convention and the Laws and Usages of War. There were 47 general court-martial cases tried by this Headquarters during this period, and all but 2 of them resulted in a conviction. Forty-four enlisted men and three officers were tried. The one murder case resulted in a sentence to life imprisonment and the one rape case brought the death penalty. Seven soldiers were tried for looting and severe penalties were imposed.

The War Crimes Branch was faced with reports of 42 violations of the Geneva Convention. An immediate problem was the procurement of trained personnel who were capable of coping with the language difficulties that would be involved in a thorough investigation of these cases. Two interpreters of the Dutch Army were assigned to this Headquarters on temporary duty. One enlisted man who had a knowledge of French, German and Russian was assigned to this Section. Teams consisting of an officer, an interpreter and a driver were dispatched from this Headquarters to the scene of the various crimes and a thorough investigation was made. Many of the offenses involved the murder of Allied pilots. Wherever possible, the bodies were disinterred, and after being identified, were removed to an American cemetery for proper burial. Evidence was taken of crimes committed against any Allied nationals, and reports were prepared which would establish the prima facie case against the malefactors. Sworn statements, in the witnesses' own handwriting, were taken and all the details were included. One of the problems of the office was liaison with other sections of the Headquarters. G-2 and G-3 were very helpful in providing information to identify the German units which were present at a particular place where a war crime occurred. The Signal Section furnished photographers to take pictures wherever they were necessary as evidence. Graves Registration helped in the identification of unknown victims and disinterred the bodies. CIC, Psychological Warfare and Military Intelligence sent in many clues to show a violation of the Laws of War, and the Provost Marshal took custody of all the German civilian prisoners apprehended. Most of the crimes investigated during this period took place in Belgium, France, Luxembourg and the western part of Germany. The offenses covered mistreatment of Allied prisoners of war and the murder of individual Allied soldiers by members of the SS and Gestapo. It was expected that with the advance of Allied armies into Germany a greater variety and number of cases would be encountered and plans were being made for a further extension of the War Crimes Branch.

The following work was also performed by personnel of this Section:

1. Received, reviewed and passed on 35 general courts-martial.

2. Received, reviewed and passed on 803 cases tried by summary courts-martial.

3. Received, reviewed and passed on 156 cases tried by special courts-martial.

4. Reviewed 26 charges , jurisdiction not under the Third United States Army.

5. Referred 62 sets of charges to inferior courts.

6. Wrote 27 letters regarding irregularities in records of trial by special and summary courts-martial.

7. Wrote 91 letters requesting release, confinement or transfer of prisoners.

8. Wrote many reprimands and notifications of punishment under Article of War 104.

9. Fifty-five letters were written regarding accidents and claims.

10. Seventy letters were written expediting final disposition of cases being held for investigation as self-inflicted wounds.

11. Numerous legal opinions were given to other sections of this Headquarters and legal assistance was rendered in about 100 cases.

12. A circular letter, regarding looting, pilfering and pillaging was prepared for distribution throughout the command (Annex 1).

13. In addition, about 300 miscellaneous letters, indorsements and buck slips were prepared.

CHAPTER 11
APRIL OPERATIONS

The Military Justice work of the Judge Advocate Section continued to set new records in the volume handled, while the War Crimes Branch reached its peak in intensity and volume of investigations. There were 38 general court-martial cases tried by this Headquarters during April and all but 2 resulted in convictions. In addition, there was a total of 890 records of trial by special and summary court which were reviewed for legal sufficiency. The War Crimes Branch has to this date investigated or are in process of investigating a total of 129 cases involving violations of the Geneva Convention and/or Rules of Land Warfare by Enemy Forces and/or Enemy Nationals. Many large prisoner enclosures in which American and other Allied Prisoners of War were maintained and a

Digitized by Google

number of concentration and extermination camps for allied nationals required intensive investigations by War Crimes teams which were composed and sent out from this office. Included in these camps were those of Buchenwald (Weimar) Germany, Arnstadt Concentration Camp, Ohrdruf Concentration Camp, and the extermination camp at Mauthausen, Austria. The investigating teams were composed of varying members of officers, interpreters, typists and photographers needed to cover the particular assignment in question. Moving pictures and still pictures were taken in order that the conditions at each establishment might be recorded as they were left by the enemy. Almost every type and form of cruel and inhuman treatment was discovered to have been committed upon the prisoners. Often bodies were disinterred in order that photographs and autopsies might be made to determine cause of death and to show the evidence of mistreatment. A number of arrests were made of war criminals following these investigations to insure their presence in court at the proper time.

The following work was also performed by personnel of this Section:

1. Received, reviewed and passed on 38 general court-martial cases.

2. Received, reviewed and passed on 740 cases tried by summary courts-martial.

3. Received, reviewed and passed on 150 cases tried by special courts-martial.

4. Referred 51 charges to jurisdictions not under the Third United States Army.

5. Referred 62 sets of charges to trial by general court-martial.

6. Referred 28 sets of charges to inferior courts.

7. Wrote 44 letters regarding irregularities in trials by special and summary courts-martial.

8. Handled the correspondence necessary to effectuate the release or evacuation of all general prisoners in the hands of the Provost Marshal, Third United States Army.

9. Wrote 138 letters regarding confinement and transfer of prisoners.

10. Wrote 15 reprimands and administrative restrictions.

11. Sixty letters were written regarding accidents and claims.

12. Twenty-three letters were written on various matters concerning violations of the Geneva Convention.

13. Seventeen miscellaneous legal opinions were given to other sections in the Headquarters.

14. Legal assistance was furnished to military personnel in approximately 85 cases.

15. In addition, approximately 300 miscellaneous letters, indorsements, and back slips were prepared.

CHAPTER 12
MAY OPERATIONS

Ten general court-martial cases were tried at this Headquarters. This Section furnished the Trial Judge Advocate and Defense Counsel in five of them while the Law Member and court reporters were furnished by the Section in all of the cases. The formal pre-trial investigation was conducted in several of the cases by officers of this Section and all interpreters were furnished for the investigations and the trials where there were any civilian witnesses involved.

Of the ten general court-martial cases tried during this period, all resulted in convictions. Two of these cases involved commissioned officers as the accused, while the remaining eight pertained to enlisted men as accused. One officer was sentenced to dismissal from the service and the other officer case resulted in a sentence by the court to forfeit from his pay $50.00 per month for six months. In all the cases, the civilian witnesses were secured by personal contact and transportation was furnished by the Section.

The War Crimes continued to require much administrative and investigative attention. Fifteen new cases of War Crimes were reported during the period, and at the cessation of hostilities, this Section had six investigating teams operating in the field. These cases involved the investigation of mass atrocities and murders committed at liberated concentration and extermination camps, as well as cases involving mistreatment and murder of individual Allied Prisoners of War and Allied Nationals. One of the cases investigated during this period involved an offense against the Geneva Convention in the illegal use by the enemy of the red-cross emblem by displaying it on barges in which were stored poisonous gas materials.

Fourteen officers and twenty-nine enlisted men are engaged in the War Crimes Branch of the Judge Advocate Section in the capacities of investigating officers, interpreters of German, French, Russian, Polish, Italian, Dutch and Czechoslovakian languages, stenographers, typists, photographers, and drivers. In addition eleven officers and eighteen enlisted men devote their full time to the Military Justice Branch of the Judge Advocate Section. This total of twenty-five officers and forty seven enlisted men represents a substantial growth in the Section as it was constituted, when embarking overseas on 13 March 1944. At that time, the Section was composed of three officers, one warrant officer and five enlisted men.

In addition to the activities recounted above, personnel of this Section performed the following work during the period:

1. Received, reviewed and passed on 14 general court-martial cases.

2. Received, reviewed and passed on 289 cases tried by summary court-martial.

3. Received, reviewed and passed on 65 cases tried by special court-martial.

4. Referred with a view to trial 18 charges to jurisdictions not under Third U. S. Army.

5. Referred 15 sets of charges to trial by general court-martial.

6. Referred 15 sets of charges to inferior courts.

7. Wrote 25 letters regarding irregularities in trials by special and summary court-martial.

8. Handled the correspondence necessary to effectuate release or evacuation of all general prisoners in the hands of the Provost Marshal, Third U. S. Army.

9. Wrote 25 letters requesting confinement or transfer of prisoners.

10. Prepared 21 letters regarding accidents and claims.

11. Prepared 18 letters of various violations of the Geneva Convention and Rules of Land Warfare.

12. Rendered six written legal opinions to other Sections in the Headquarters.

13. Furnished legal assistance to military personnel in approximately 25 cases.

14. Prepared 95 miscellaneous letters, indorsements and bank slips.

CHAPTER 13
LESSONS LEARNED & CONCLUSIONS

1. Court reporters are almost as essential in the trial of general court-martial cases as the court itself. Experienced court reporters are rarely available in the Army. Court reporters are consequently developed and trained from the most alert and efficient stenographers.

2. In an active campaign, the front-line soldier should know the more important Rules of Land Warfare and the main points covered by the Geneva Convention. The Judge Advocate Section prepared a booklet on this subject and approximately 35,000 copies were distributed to units of the Third Army during the campaign.

DECLASSIFIED

Digitized by Google

3. Skilled interpreters are often needed in court-martial cases, particularly where there are civilian witnesses appearing before the court. This Section has learned during the European campaign the importance of having immediately at hand interpreters among enlisted men of the Section.

4. The necessity of the Judge Advocate Section working closely with Sections of the forward echelon of the Headquarters and supporting troops and services caused considerable loss of efficiency during those periods when the forward and rear echelons of the Headquarters have been separated by great distances. At times the rear echelon was so far behind the units that unit commanders and other personnel were required to make long trips to the rear in connection with Judge Advocate activities.

CONCLUSIONS

1. Court reporters are essential to the Judge Advocate Section during an active campaign and the tables of organization of the Army Headquarters should be increased so as to provide eight court reporters. The present enlisted strength authorized makes no provision for court reporters.

2. All soldiers in the field during an active campaign should know the principal Rules of Land Warfare and the main points covered by the Geneva Convention for their protection and guidance.

3. Skilled interpreters should be procured and included among the enlisted personnel of the Judge Advocate Section prior to an active campaign in a foreign country.

4. The Judge Advocate Section should be included in the forward echelon of the Headquarters.

SUBJECT: Automobile Accidents.

TO : See Distribution.

The number of motor vehicle accidents in this command indicates the existence of negligence and the failure to obey directives of this and higher headquarters. Consequently, the following procedure will be effective immediately:

a. Every accident involving vehicles of this command driven by military personnel will be immediately investigated. Charges will be preferred against both the driver of the vehicle and the senior officer or noncommissioned officer riding therein when the investigation reveals negligence, disobedience of directives, or any misconduct.

b. In aggravated cases, the charges will be referred for the formal investigation required by paragraph 35a, Manual for Courts-Martial, with a view to trial by general court-martial.

c. Any military driver involved in a vehicle accident resulting in his conviction by court-martial will have his driver's permit suspended for not less than three months or revoked, depending on the circumstances.

d. Action as outlined above will in no way change or modify standing operating procedure as to the processing of claims.

e. The commanding officer of each unit is charged with the responsibility of compliance with the foregoing.

f. Commanders will maintain a careful record of all accidents occurring within the units and organizations of their respective commands. This record will be carefully considered when preparing the Efficiency Reports of the unit and organization commanders concerned.

SUBJECT: Noncommissioned Officers.

TO : See Distribution.

1. It has been clearly demonstrated in this war, as in past wars, that noncommissioned officers are the backbone of the Army. All unit commanders must give their personal attention to improving the quality and prestige of noncommissioned officers, especially those who exercise command responsibility. Attention is directed to the means for attaining this desired result suggested in Circular #0, War Department, 16 February 1944, particularly the necessity for delegating to noncommissioned officers all authority that is rightfully theirs, and the necessity for creating increased opportunity for noncommissioned officers to exercise command and initiative.

2. In general, officers must deal with enlisted men through the appropriate noncommissioned officers. The proper utilization of noncommissioned officers will result not only in the development of their initiative and leadership, but will result also in a corresponding improvement in overall discipline and efficiency. The innumerable situations in which noncommissioned officers may be used to advantage range from the handling of a disorderly soldier to the execution of a combat mission. The success and effectiveness of every commander is due largely to the degree he develops and maintains a thoroughly competent corps of noncommissioned officers.

3. The great number of court-martial cases in which private soldiers are charged with offenses against noncommissioned officers committed while under the influence of liquor, including disobedience of orders or disrespect, indicates that the proper use of noncommissioned officers is not being made.

4. Each unit commander is charged with the responsibility of carrying into effect the views herein expressed.

By command of Lieutenant General PATTON:

AG 091

SUBJECT: Relations With the German People.

TO : See Distribution.

1. The friendship and cooperation of the French people will be replaced in Germany by universal hostility, which will require that we regard all Germans, soldiers and civilians, men, women, and even children, as active enemies. It is expected that we shall encounter sniping, guerilla warfare, sabotage, and treachery. Everyone must be warned of these probabilities and prepared to take all possible protective measures. Particular care must be taken to insure the proper performance of guard duty.

2. Fraternizing or friendly association with any German is absolutely forbidden and will be punished. Any pretense of friendship must be viewed with the utmost suspicion. Individuals claiming to have escaped from German prisoner of war camps or to be non-German members of the German Army or forced laborers will be considered as enemies until cleared by careful investigation.

3. German inhabitants who behave peacefully and refrain from hostile acts will not be molested and their lives, persons and property will be respected. All German inhabitants will be required to fulfill requisitions duly made upon them for military purposes, but anyone within this command who takes food, occupies billets or makes any demands for property, public or private, without proper authority, who engages in looting, or who commits any other offense against the persons or property of German inhabitants will be punished. Immediate action, appropriate to the circumstances, will be taken against German civilians who wrongfully commit hostile acts against us. Those who are taken prisoner will be tried by military courts.

4. Each unit commander at a special formation held as soon as practicable after the receipt of this communication will personally impress upon all members of his command this information. Should military circumstances make a formation of an entire unit at one time impracticable, a number of formations of smaller groups may be utilized, provided all members of the unit are included in one such formation.

ANNEX NO. 4

SOLDIER'S HANDBOOK ON THE RULES OF LAND WARFARE

By

CHARLES E. CHEEVER

Colonel, Judge Advocate General's Department, United States Army

THE combat soldier very often knows little, if anything, of the rules which even in war not only control what may be done against an enemy, but also set up certain rights which the enemy must respect. This pamphlet does not contain an extensive treatment of these rules. It is intended to provide a general knowledge of the most important ones, without attempting to decide the great number of specific or doubtful questions which will come up in the field and be decided on the basis of orders and interpretations of superior authority.

BASIS OF RULES

The rules for carrying on war on land are called the Rules of Land Warfare. These rules are found both in agreements between nations and in so called unwritten rules which are so established by custom although perhaps not included in a written agreement that they are generally followed. The rules which are considered as binding upon United States forces in the field have been published in War Department Field Manual 27-10, dated 1 October 1940.

The rules of land warfare are based on the principles of military necessity, humanity, and chivalry. Generally, it may be said that it is proper to use any amount and kind of force to compel the complete surrender of the enemy at the smallest possible cost of time, life, and money, provided that violence not actually necessary is not used and dishonorable means or conduct are not involved.

Some rules are binding only on the nations which have signed the agreements in which they are included. However, in general, the enemy's soldiers and people are expected to live up to the same rules as the Allied soldiers and population. If they do not, the severe penalties which the laws of war permit may be imposed upon them.

DIVISIONS OF ENEMY POPULATION

The laws of warfare divide the population of a country at war into its armed forces and its civil or peaceful population. Ordinarily soldiers do not attack civilians unless the civilians have attacked them. However, it is not necessary to avoid firing at enemy troops only because civilians will be unavoidably injured by such fire. In turn, enemy civilians are not permitted to attack soldiers except in very limited cases. If a soldier violates this rule, he would not have the right to be treated as a prisoner of war by the enemy in the event he were captured and he might also give the enemy grounds for not complying with the rules of war. Naturally, he would also provide ammunition for propaganda to counteract the enemy's own violations. The enemy civilian who improperly attacks a member of the armed forces can of course be counter attacked and, if captured, may be tried as a war criminal and perhaps put to death. He also might provide grounds for action against the enemy population in reprisal which otherwise would not have been proper.

Some members of the armed forces, particularly medical personnel and chaplains, are entitled to special protection and are not subject to attack as long as they are doing their special jobs and do not actively fight. However, if an attack on combat soldiers incidentally kills or wounds medical soldiers or a chaplain it is not an offense against the rules of war.

TYPES OF WEAPONS

There is no unwritten rule definitely forbidding the use of poisonous gas. The United States is not a party to any agreement now in force which forbids its use. The possibility of the use of gas by the enemy must always be kept in mind since the failure to use it during the present war is not because there is a rule against it. The use of all types of mines is common and ordinarily not illegal. Poisoning of a water supply or of abandoned food is considered as a violation of the rules of war. Water supplies can be made unfit for use, however, by means which can be seen, such as placing dead animals in the water.

AERIAL BOMBARDMENT

The rules with respect to bombing from the air had not been fully developed before the present war. Probably the heavy bombings of this war are making new rules as well as history. Civilians, of course, are not proper targets for bombs. However, the presence of civilians will not protect a proper military objective. Nor is there a ground for complaint because civilians are killed or injured unavoidably as the result of an attack upon military objectives. The same is true as to civilian property. The enemy, as well as the Allied forces, have regarded such privately owned property as shipyards and plants producing war materials as proper military objectives.

ARTILLERY BOMBARDMENT

Shelling of undefended towns, villages, or dwellings is forbidden. A city protected by combat troops, by forts, or similar means, is not undefended. Very often the question of whether a town or city is defended or undefended is doubtful. These cases are decided by the proper officer or commander, or even by the commander in chief, depending on the circumstances involved and after considering all the facts and obtaining legal advice if necessary.

Private as well as public property may be destroyed in the shelling of a defended place. Churches, museums, libraries, hospitals, and historic monuments should not be fired upon deliberately, assuming, of course, they are not being used for military purposes by the enemy. Damage to such buildings, accidentally or because they are near proper targets, is not a violation of the rules of war. It is the policy of the Allied forces to take all measures consistent with military necessity to avoid damage to all structures, objects, or documents of religious, cultural, architectural, archaeological, or historical value. President Roosevelt himself said some time ago, speaking of the war in Italy, that: "We have tried scrupulously, often at considerable sacrifice, to spare religious and cultural monuments, and we shall continue to do so."

TREACHERY AND QUARTER

All is not fair even in war. It is unfair and illegal for a soldier who throws down his rifle and holds up his hands in surrender to pick up his weapon and shoot the soldier who has just spared his life. A soldier, however, cannot rely on the law to protect him against a trick. Even though it is forbidden to play dead or wounded in order to surprise a careless enemy, some soldiers who seem to be dead or wounded may not be. The rules of war are not always followed by everyone. They do not do away with the combat lessons which soldiers have been taught. Soldiers cannot take chances on the basis that the enemy will always do what the rules of war say he should. A soldier must be practical and obey the orders which will be given on the basis of the situation at the time. A soldier must not shoot an enemy who has laid down his arms and surrendered, but he can keep a very close watch on him. It is forbidden to kill an enemy soldier who is disabled or wounded and has stopped fighting or to mutilate a body by gunfire or in any other way. This does not forbid, however, making certain that the enemy soldier who seems to be dead or wounded is not playing a trick.

When a soldier or a group of soldiers offers to surrender and stop fighting, which is sometimes called asking for quarter, the offer should ordinarily be accepted. Sometimes it is impracticable, however, to give quarter when some of the enemy continue to fight and then it is proper to deny quarter. Refusal of quarter may be authorized if the enemy has previously refused to give quarter.

RUSES AND STRATAGEMS

A battle is a contest of wits as well as of force and violence, but tricks which involve treachery or bad faith are forbidden. The following quotation from paragraph 40 of United States War Department Field Manual 27-10 shows in general the means which can be used to fool the enemy:

> "Among legitimate ruses may be counted surprises, ambushes, feigning attacks, retreats, or flights, simulating quiet and inactivity, giving large outposts or a strong advance guard to a small force, constructing works, bridges, etc., which it is not intended to use, transmitting false or misleading signals and telegraph messages, and sending false dispatches and newspapers with a view to their being intercepted by the enemy, lighting campfires where there are no troops, making use of the enemy's signals, bugle and trumpet calls, watch words, and words of command, pretending to communicate with troops or reinforcements which have no existence, moving landmarks, putting up dummy guns or laying dummy mines, removing badges from uniforms, clothing the men of a single unit in the uniform of several different units so that prisoners and dead may give the idea of a large force."

The use of the enemy's flag, insignia, and uniforms is permitted under some circumstances. They are not to be used during actual fighting, and if used in order to approach the enemy without drawing fire should be thrown away or removed as soon as fighting begins. It is definitely a war crime to use a flag of truce or the Red Cross emblem improperly.

Spies, that is, persons who disguise themselves for the purpose of obtaining information, may be sentenced to death if captured. However, a soldier acting as a spy is not a war criminal. He may be put to death not because he has violated a rule of law but in order to discourage the enemy's use of spies.

ENEMY PROPERTY

The rules of land warfare forbid pillage, that is, taking property both private and public from the field of battle or occupied areas. Taking property such as watches and money from the enemy sick or dead, or articles for personal use from enemy civilians, or from civilians of a free country temporarily held by the enemy, is forbidden.

Military equipment left on the battlefield may not be taken for the personal use of individual soldiers. Such property ordinarily goes to the soldier's government. The United States Articles of War in Article 79 declare that all public property taken from the enemy is the property of the United States and shall be secured for the service of the United States, and directs punishment of persons subject to military law who wrongfully take such property. The right to seize or destroy private property on enemy territory depends on the military needs of the Army. Destruction simply for the sake of destruction is forbidden, but buildings may be used for shelter, or wood cut for fuel or to clear a field of fire. The proper military authorities will decide what may be done.

COMMUNICATION WITH THE ENEMY

There are times when communication with the enemy is necessary. For example, the enemy may wish to arrange a surrender or to ask for a truce in order to bury the dead. Such communication is permitted under certain conditions. A white flag may show merely a wish to arrange for a surrender or for a meeting. It does not necessarily mean a surrender. The force which sends a messenger with a white flag should stop firing. If it does not stop firing it is not safe to believe that the enemy commander has authorized the use of the white flag and the messenger may be simply an individual soldier trying to surrender. If the enemy stops firing as the white flag advances and there are no suspicious circumstances, a group of not more than four people approaching in daylight with the white flag should not be shot at. Ordinarily communication in this way at night should not be permitted. It is entirely proper to insist that a messenger approach in such a way that any surprise or trick can be prevented.

SICK, WOUNDED AND DEAD

After a battle the force in possession of the field is required to make a search for the sick and wounded and to take care of the sick and wounded of the enemy as well as they take care of their own men. Sick and wounded soldiers in the enemy's hands, aside from their right to care and protection, are generally subject to the same treatment as other prisoners. When sick and woun-

Digitized by Google

ded must be left behind, medical soldiers should be left with them if at all possible.

MEDICAL UNITS AND CHAPLAINS

It has already been mentioned that medical soldiers and chaplains must not be attacked if they are not taking part in actual fighting. They also have the right to be returned to their own forces as soon as practicable, if they are captured, instead of being held as prisoners of war. While waiting to be returned, medical soldiers may be used to take care of the sick and wounded with preference being given to members of their own forces. The proper military authorities decide when the return of medical soldiers or chaplains can be permitted without danger of their taking back valuable information. The authorities will also decide when the military situation makes such a return possible.

The equipment of a mobile hospital unit such as its ambulances, litters, surgical instruments and hospital equipment, if captured, will be returned at the same time as those who belong to the unit. The building and material of a more or less permanent hospital may under some circumstances be used for other purposes if captured, but only after arrangements have been made to take care of the sick and wounded being treated in that kind of hospital.

PRISONERS OF WAR

Prisoners of war had no rights until fairly recently in the history of war. They could be killed and were often made slaves. The rights of prisoners of war in the present war are found principally in the Geneva Convention of 1929, an agreement which is binding upon most of the nations in the war.

An Allied soldier who is captured is entitled to be treated as a prisoner of war unless he has lost the right to be so treated by violating one of the rules of war. This means, among other things, that he has the right to be treated decently and protected against violence, insults and public curiosity. He must not be confined as a criminal except in punishment for a crime. He cannot be forced to give information other than his true names and rank, or else his serial number, and it is unlawful for the enemy to use force, refusal of privileges, or any other means to make a prisoner of war give any other information. Of course, a prisoner of war can be questioned about anything, but he cannot be made to answer. He may keep personal things, such as his gas mask, uniform, toilet articles, and jewelry such as a watch. His money may be taken from him if a receipt is given. All weapons, ammunition and military equipment and papers, personal or not, may be taken from him.

The names of captured soldiers are exchanged through neutral nations, such as Switzerland. Generally, prisoners of war are removed from combat zones as soon as possible. They are not confined in jails or cells like common criminals, but are usually placed in enclosed and guarded areas. They are entitled to adequate and healthy camps, proper heat, ventilation and bedding, and air space and food equal to that of troops at base camps of the nation which holds the prisoners. Prisoners of war are entitled to freedom of religion and to send and receive mail and parcels. Of course, mail is limited and censored. Sick and wounded prisoners must be cared for in the same way as troops of the army which has captured them.

Prisoners of war, with the exception of officers and persons entitled to be treated as officers, such as war correspondents, may be required to do some work. The management, cleaning, and upkeep of camps and farm labor are included in the type of work permitted. Work which is degrading, unhealthy or dangerous or directly related to war operations is improper. A prisoner of war cannot be legally required to do work for which he is not physically fit. Noncommissioned officers can be required to do only supervisory work.

Prisoners of war are not paid for work in connection with the maintenance, administration, and management of the camps. They usually receive for other work the same pay as is received for similar work by soldiers in the army of the government by which they are held, or if there is no such rate of pay they are paid according to the work they do. Where work is done for a private employer, such as a farmer, the government may keep amounts which the private employer pays over the amount which it would pay the prisoner for similar work. A prisoner is not entitled to receive all of the money he earns as he earns it. Some of it can be held back to be given to the prisoner when he is released.

Officers usually are held in separate camps or at least separate quarters. They cannot be forced to work, but are entitled, unless there are other agreements, to be paid an amount equal to an officer of similar rank in the army by which they were captured, but not above the amount they are paid by their own country.

Certain neutral nations have been appointed as "protecting powers" to enforce the rights of prisoners of war. Their agents are entitled to visit and inspect camps and prisoners and to receive complaints and requests. Prisoners of war may also complain to the nation holding them, individually, or through an officer or agent whom they have selected, if such selection is permitted by the authorities in charge of the prisoners. A prisoner of war cannot be punished for making a complaint even if there is no basis for it. If improper treatment of prisoners of war is found, protests are made, as has been done in the case of American prisoners held by the Japanese, and everything possible is done to obtain the treatment to which prisoners of war are entitled.

Prisoners of war are subject to the same laws and regulations as the soldiers in the army of the country by which they are held. They are subject to the same punishment for crimes, except that bodily punishment and cruel treatment are forbidden. The military rank of a prisoner of war cannot be taken away or a number of men punished for the action of one man. Prisoners of war must salute officers of the army by which they are held. Officer prisoners must salute enemy officers of a higher rank. Punishment for minor offenses by prisoners of war may not be for a period of more than 30 days. Such punishment is like company punishment and as to prisoners held by the United States would usually be given under Article of War 104. Serious offenses are tried by military courts. A number of things have been done to make sure that a prisoner of war receives a fair trial in such cases, including a notice of the trial to the nation which is acting as the "protecting power". Death sentences can be imposed.

A prisoner of war who attempts to escape is guilty only of violating disciplinary regulations and his punishment cannot be for a period of more than 30 days. However, a prisoner of war who committed another offense while attempting to escape, such as killing a guard, would be subject to trial and punishment for that offense. A prisoner may be confined temporarily to prevent his escape.

The armistice or treaty ending a war usually controls the release of persons of both sides held as prisoners of war. The rule in general is that prisoners of war will be returned to their own countries. However, the return of prisoners of war does not always begin as soon as combat has ended. For example, many French soldiers are still being held as prisoners by the Germans, and Italian prisoners of war were not released as soon as the armistice between the Allied forces and the Badoglio government was made in Italy. Prisoners of war serving sentences for violations of the laws of war, for ordinary crimes, such as murder, or awaiting trial for ordinary crimes, are not always returned. The release and return of prisoners of war in the present war will no doubt be fully provided for in the armistices and final treaties of peace.

Prisoners of war may be released under some circumstances even before the war has ended. Return of sick and wounded prisoners who are not likely to be able to take part in further fighting has already taken place. The types of wounded or sick prisoners who are entitled to be returned are set out in detail in the Geneva Convention. Of course, nations at war may make special agreements for the exchange of prisoners at any time.

PAROLE

A parole is a promise made by a prisoner of war in return for his release. As a rule, the prisoner will be required to agree not to take part for a certain time, or not at all, in further fighting against the enemy. Soldiers in the United States Army are generally not permitted to give parole and cannot be forced to do so by the enemy. The giving of a parole for limited purposes only, such as medical treatment, is permitted in the United States forces. Enlisted men will, if possible, give their parole through an officer and an officer will not give his parole without the permission of a military superior if one is present. A soldier or officer who without authority promises not to take part in further fighting against the enemy in exchange for his release may be sent back to combat. If he is captured by the enemy, he may be punished for breaking his promise, since it is no excuse to the enemy that his promise is not recognized by his own army.

ARMISTICES

An armistice suspends the fighting for a particular time and at a particular place. It may be general, such as the armistice which ended the fighting in World War I, or it may be local, affecting only some of the forces engaged in the war. The kind most often used in the field is that known as a suspension of arms, which is a truce entered into for local military purposes, such as the bringing in of the wounded and burying of the dead. All troops concerned will be notified of the terms of the armistice. Violation of these terms must be avoided because the soldier who commits the violation will be subject to punishment by the enemy if he is captured and the violation may also give the enemy an excuse to break the armistice.

MILITARY OCCUPATION

The military occupation of enemy territory or friendly territory regained from the enemy is a complicated matter which will be handled by the special forces assigned to that task. Generally, the lives, religious convictions and practices, family honor and private property of the inhabitants will be respected. The relationship of the armed forces to the people of occupied territory and the requirements which will be made of these people will no doubt be fully set out by the proper authorities.

PENALTIES FOR THE VIOLATION OF THE LAWS OF WAR

Penalties for violations of the laws of war are severe. They may affect not only the person guilty of the violation, but many others as well. The nation against which the violation was committed may punish the individual if he is captured, protest to the enemy, and demand the punishment of the individual offender, publish the facts to influence public opinion or make reprisals. The penalty of death is provided for many violations. It should also be remembered that offenses against laws of war by a soldier may also result in a trial under the articles of war provided for United States forces or similar articles in other forces.

As has already been indicated, the orders of superior officers are to be obeyed at all times in combat with the enemy. It is declared to be the rule in paragraph 347, Field Manual 27-10, provided for the armed forces of the United States, that individual members of the armed forces guilty of a violation of the rules of land warfare will not be punished for these offenses in case they are committed under the orders or sanction of their government or commanders. Those ordering the act have the responsibility and will be subject to punishment if it is illegal.

Reprisals are the most serious results of violations of the rules of land warfare. They are actions taken against the enemy to prevent him from gaining an advantage from his offenses and to cause him to stop his wrongdoings. Reprisals include acts such as taking hostages and burning towns or houses under some circumstances, which except as a reprisal would not be permitted.

Reprisals are not a matter for the individual soldier. In general the highest available military authority must be consulted before a reprisal is made. Revenge is not the reason for reprisals and they must not be out of proportion to the acts of the enemy, although they need not be the same as the act of the enemy.

COURTS AND TRIBUNALS

All persons accused of violations of the rules of land warfare are entitled to trial. Executions without trial are not permitted. Usually these trials are before courts-martial, military commissions, provost courts or similar courts. In the Army of the United States, courts-martial are most often used for the trial of soldiers and other persons subject to the military law of the United States, while others are tried by military commissions, provost courts or specially established courts of similar jurisdiction.

CONFIDENTIAL

HEADQUARTERS
THIRD UNITED STATES ARMY
APO 403

AG 250.1
GNGCJ

14 March 1945

SUBJECT: Looting, Pilfering and Pillaging.

TO : All Corps, Divisional and Separate Unit Commanders.

1. I am much displeased with the numerous reports which have reached this Headquarters of acts of looting, pilfering and pillaging by American soldiers in France, Luxembourg, Belgium and Germany. Even if committed in enemy countries, looting and pilfering are reprehensible crimes, indicative of a relaxation of necessary standards of discipline on the part of our troops. Condonation of such violations, wherever committed, will tend to destroy the discipline and morale of our soldiers as well as the good reputation of the American Army.

2. All commanders will immediately institute and maintain the most forceful measures to stop these dereliction and breaches of discipline. Particular attention will be paid to the guarding of areas and buildings, in which there is a likelihood that looting may occur, as well as to the censoring of outgoing packages.

3. All military personnel will be warned that offenses of this character will not be tolerated and will be strictly dealt with and that failure on the part of any officer, regardless of rank, to take the strongest measures necessary to prevent these crimes will result in his trial by courts-martial.

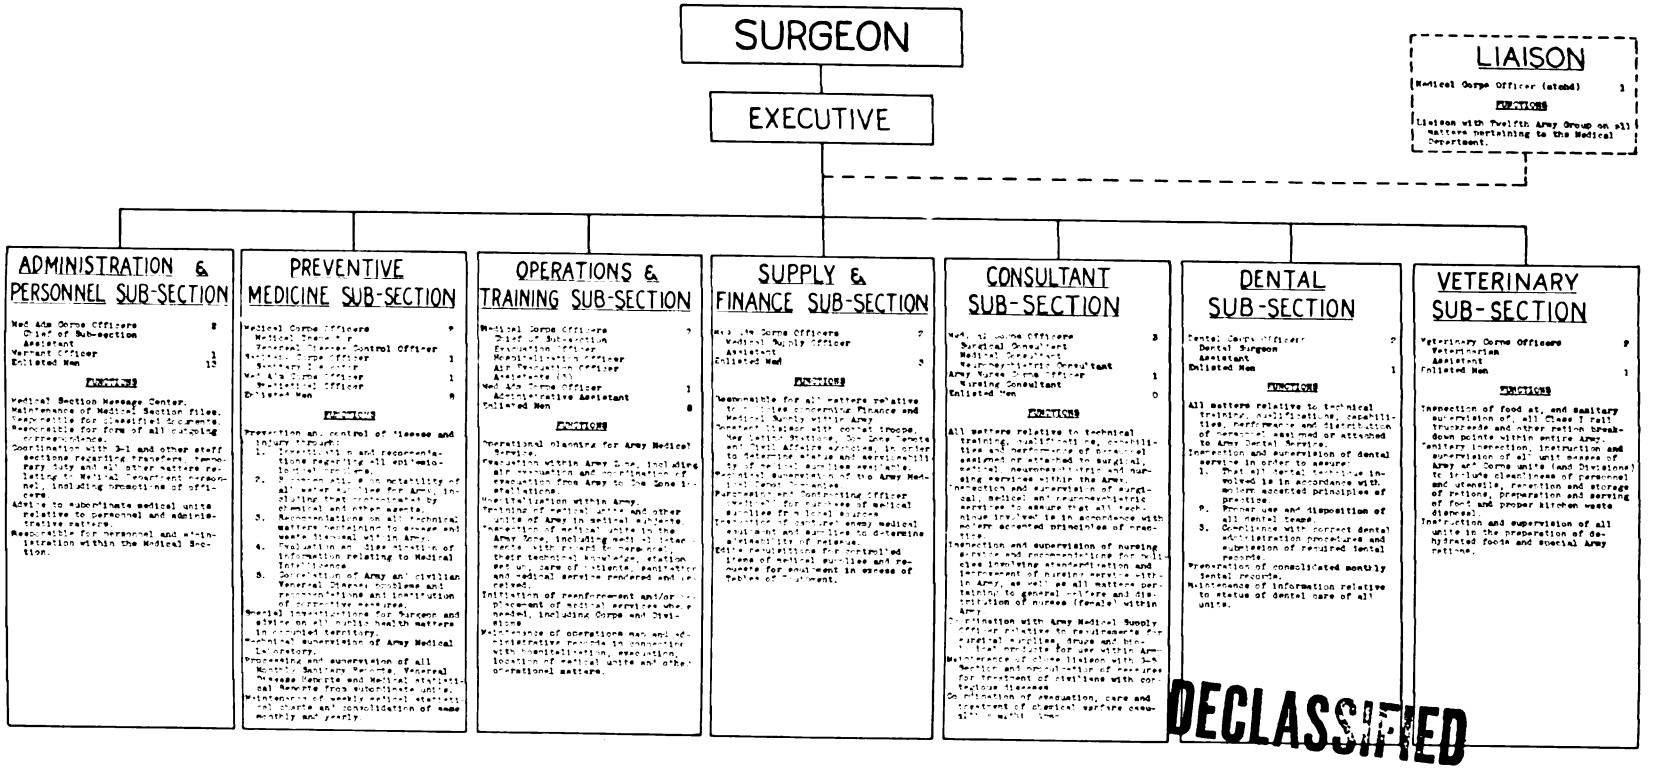
Headquarters Third U. S. Army
Office of the Surgeon
APO 403

SUBJECT: After Action Report, Medical Section, Headquarters Third U.S. Army.

TO : Commanding General, Third U. S. Army, APO 403, U. S. Army.

1. Submitted herewith is the After Action Report of the Medical Section, Headquarters Third U. S. Army, beginning with 24 March 1944, and continuing at properly designated intervals by chapters.



2. Essentially, the major effort of the Third U. S. Army Medical Service has been to save lives, to conserve military strength and to insure the earliest possible return to duty of all casualties. This, in turn, has called for the provision of prompt medical attention and surgery in forward areas, coincident with expeditious and efficient evacuation to army hospital units, where more adequate facilities are available. Operating under all types of weather conditions, terrain, and tactical situations, the Medical Service of this army has been able to achieve a mortality rate in its installations of consistently less than two percent each month from all causes. This has constituted one of the lowest mortality rates achieved by the Medical Service of any Army in military history.

MEDICAL SECTION

Organizational and Functional Chart

REPRODUCED BY Co B, 942nd EMER AVN TOPO BN
325th R/C US ARMY

Digitized by Google

CHAPTER 1
PLANNING IN UNITED KINGDOM

Section 1 - Organization of the Medical Section

Upon its arrival in the United Kingdom, the Medical Section was composed of the following number of officers, by branch:

4 - Medical Corps Officers
2 - Dental Corps Officers
2 - Veterinary Corps Officers
1 - Sanitary Corps Officer
6 - Medical Administrative Corps Officers

In addition, the section included one warrant officer and thirty-five enlisted men.

Headed by the Army Surgeon and the Executive Officer, the Medical Section is broken down into seven sub-sections. To these sub-sections were delegated specific duties involved in discharging the responsibilities of the Army Surgeon. A description of the functions of each sub-section will be found in the accompanying organizational and functional chart. The Liaison Sub-Section, shown in the chart, was added on the Continent, but for purposes of completeness is included here.

As the result of efforts to reduce the number of personnel in all staff sections to an absolute minimum in April, the Medical Section was reduced to an allotment of thirty-four enlisted men instead of the thirty-five called for under Table of Organization 20A-1. This enlisted man was taken from the Personnel and Administrative Sub-Section and is not accounted for in the personnel shown in the chart as assigned to that sub-section.

A further change in the organizational setup of the Medical Section occurred during the latter part of May when the Medical Consultant assumed duties as Assistant Executive Officer of the Medical Section. This change was due to pressure of work throughout the Medical Section in the consummation of plans for operations on the Continent and was due also to the comparative scarcity of purely medical problems, as distinct from surgical, which were being encountered. The Medical Consultant, however, was held available at all times in his advisory capacity should major medical problems arise within the command.

Top Secret Control Procedure

Due to a necessity for the maximum amount of secrecy concerning planned operations a "Top Secret" room was set aside in one of the buildings occupied by the Medical Section, to which room entrance was denied to all except classified officers and enlisted men. In this room all "Top Secret" papers were kept in a locked safe, and access to this safe was possible to classified officers only after clearance with the Executive Officer of the Section. Suitable furnishings were available in this room to allow study of all "Top Secret" documents within the room itself. No "Top Secret" documents or extracts from same were allowed to be carried from this room.

Nine officers of the Medical Section were "Complete Knowledge" officers, and seven additional officers had "Limited Knowledge" of the impending Operation "OVERLORD". The warrant officer of the section, as well as six enlisted men, were classified as "Top Secret Security Clerks" in order to assist with preparation of details concerning the operation itself.

Though the above entailed considerable lack of knowledge on the part of the remaining officers and enlisted men of the Medical Section during the planning phase, it was felt that the secrecy required justified such a procedure.

Section 2 - Operations

1. Training

During the entire period spent in the United Kingdom no Army medical units actually functioned as such with the exception of a few which were placed in operation under Southern Base Section shortly prior to and after D-Day. This period was therefore devoted primarily to inspection of medical units, to the training of same and to the preparation of plans for operation of these units on the Continent.

As of 23 March there were forty-one medical units assigned to Third U. S. Army which had just previously been under the control of Headquarters VIII Corps prior to the arrival of this Headquarters in the United Kingdom. Numbers of units by types assigned at this time and totals to be assigned were as follows:

	Units assigned	Total to be assigned
Medical Collecting Company	9	16
Ambulance Company, MAr	7	21
Clearing Company	6	10
Hq & Hq Detachment, Med Bn	7	17
Hq & Hq Detachment, Med Gp	3	5
Medical Gas Treatment Bn	1	3
Evac Hosp (750 bed)	1	1
Evac Hosp (CM) (400 bed)	5	14
Field Hospital	0	8
Convalescent Hospital	2	3
Medical Depot Company	0	3
Medical Laboratory	0	1
Medical Auxiliary Surg Gp	0	1
	41	105

Appraisal of all units was necessary. This was done immediately in the case of those medical units already in the United Kingdom, and the process was continued with regard to all other medical units as they arrived. The inspections were conducted by one or more officers primarily with a view to an ascertaining the training status of these units, but in addition, each inspection included appraisal of related matters such as personnel, supply, mess, motor maintenance and administration.

After several inspections it was noted that certain deficiencies in training were common to the majority of units. The most prevalent of these were lack of training in mine disposal, mine detection and airplane identification. To correct these deficiencies and to include in one document all Theater training directives a brief training memorandum No 17, Headquarters Third U. S. Army, Subject: "Training in Medical Units," dated 10 April 1944, attached hereto as annex [illegible] Master training directives submitted to this Headquarters by all army medical units were an additional means of maintaining close supervision of the training of the various units. When a unit was rated unsatisfactory, it was reinspected within ten days. At all times high standards were required.

Training inspections of Army medical units, including division medical service, was a continuous process during the stay in England. These, combined with many personal visits by the Surgeon, kept the Surgeon constantly informed of the efficiency and capabilities of medical units.

All training of hospitals in the United States, including Third U. S. Army maneuvers, had stressed wide dispersion of tents and camouflage. All reports indicated that the German army observed the provisions of the Geneva Convention with respect to medical units. This necessitated a change in the physical setup of hospitals. After consultation with Third U. S. Army hospital commanders and with commanders of hospitals which had been in combat on the Mediterranean Theater, a basic hospital setup was devised. The 11th Evacuation Hospital (CM) demonstrated this to all hospital commanders and their staffs. Tents were placed in relatively compact units on their own several yard tents laced together for greatest functional value. At a later date, a demonstration setup for convalescent and field hospitals was conducted for commanders concerned.

Medical battalions and medical companies were attached to medical groups on the basis of former command attachments in the United States, where possible, and on geographical location in England. This did not make the medical group a tactical unit. It was realized that this would have to wait until arrival on the Continent. Medical groups and medical battalions were active in supervising the functions and training of their sometimes widely dispersed companies.

Six weeks after arrival in England the Medical Section sent a liaison officer to [illegible] to work closely with First U. S. Army Group in planning the Continental operations. Constant interchange of information was maintained in all phases of the planning. Medical units were placed with [illegible] to train with the troops to which they were to be attached. Many changes occurred before the Troop List, that was published in final, unalterable form. The Medical Plan [illegible] No. 10 to Third U. S. Army Plan for operation "OVERLORD", was published 11 May.

At the request of the Chief Surgeon, European Theater of Operations, certain medical units were selected for use in the Southern Base Section before D-Day. These units included headquarters & headquarters detachments of medical battalions, medical collecting companies, ambulance companies, clearing companies, one assorted evacuation hospital and the 750-bed evacuation hospitals. These units obtained valuable experience in the operation of actual hospital facilities as they were made from the Southern Base Section. The two evacuation hospitals handled a total of [illegible] casualties during the eighteen days they were in operation under Southern Base Section. Examination of patients returning from the Continent demonstrated that even during the first few days of the invasion, the medical care had been excellent.

Twelve general surgical teams, less nurses, were loaned to First U. S. Army to secure experience relative to the handling of battle casualties, as well as to provide additional surgical service for that Army's operations subsequent to D-Day. To augment naval medical personnel on Landing Ships, Tank, forty-five general surgeons and ninety surgical technicians from Third U. S. Army medical units were loaned to European Theater of Operations before D-Day for use until approximately D plus 20. The majority of the general surgeons was furnished by hospital units, as were the surgical technicians. This also constituted important training for the personnel involved. Four of this number became casualties.

A number of courses were offered at the American School Center at SHRIVENHAM, England, which were calculated to enhance the value of field services rendered by officers of the Medical Department. Approximately one hundred Medical Corps officers attended Medical Field Service School at this location, as well as a more specialized course in the treatment of gas casualties.

The Office of the Chief Surgeon, European Theater of Operations, likewise provided facilities for field training for Army Nurses at the 14th Medical Center, CIRENCESTER, England. Approximately 250 nurses attended this course, commencing in the latter part of May. Due to the advent of D-Day and the alerting of many hospital units, this course did not run the entire thirty days originally planned for it.

To supplement courses available in this particular field at the American School Center and in order to provide intensified instruction to as many personnel as possible, a two-day course in the treatment of gas casualties was organized to be conducted by members of a company of the 92d Medical Gas Treatment Battalion. Practical demonstrations were given to practically all Medical Department personnel as well as to line units on the principles and techniques involved in the handling of gas casualties. Every effort was made in this connection to drive home the need for early treatment of all such cases, thereby eliminating the necessity for mass evacuation of such casualties. All divisions received this training.

After liaison had been established with medical personnel of the Ninth U. S. Air Force, special attention was given to the training of personnel in the medical groups in the technique of loading patients on airplanes for evacuation by this means. Fine cooperation on the part of the Air Force made possible the actual use of airplanes for demonstration and application of this important phase of training.

2. Evacuation

This problem was not faced from an actual operational standpoint during the planning phase in the United Kingdom. Those medical units which were loaned to Southern Base Section for use in operations immediately subsequent to D-Day performed under the control of Southern Base Section. However, preparation of plans for evacuation on the Continent consumed a considerable portion of time. A brief description of these plans follows.

It was planned that medical groups would be assigned to certain definite sectors from front to rear in the Army area. In the particular sector assigned the medical group commander would be in charge of all evacuation. In addition to furnishing evacuation facilities for division and corps clearing stations by Army, the groups would also be concerned with furnishing medical service to Army troops in the Army area.

Specifically, it was planned that Army medical groups, in so far as practicable, be reconstituted with "normal" medical battalions to consist of two medical collecting companies, one ambulance company and one clearing company as the units arrived on the far shore. Medical groups, after being assigned to sectors from front to rear, would be responsible for their respective sectors for:

a. Evacuation of division and corps clearing stations and field hospital platoons to evacuation hospitals.

b. Evacuation from evacuation hospitals or field hospitals to air fields, entraining points or beaches.

c. Providing reinforcements for corps and division medical service requested by the Army Surgeon.

d. Providing holding units at air fields.

e. Augmenting litter bearers at evacuation hospitals, air fields, and train loading points, when required.

Digitized by Google

f. Furnishing prophylactic teams, when required.

g. Providing the Army Surgeon with operational information.

h. Providing courier service for transmission of periodic reports on request of the Army Surgeon.

i. Providing medical service for Army prisoner of war enclosures.

j. Providing clearing stations and dispensary service, where needed, for Army troops.

k. Delivering reports of status of division and corps clearing stations to the Army Surgeon by phone or courier, daily, as of 2400, indicating:

(1) Number of patients in clearing stations.
(2) Number of patients capable of being evacuated.
(3) Number of patients in active field hospital platoons.
(4) Number of patients transportable in field hospital platoons.
(5) Potential bottlenecks in any installation serviced.

l. Reporting ambulance losses - number destroyed; number deadlined and approximate time when reavailable.

Since it was felt that the Communications Zone would have only a limited amount of transportation at its disposal, it was considered likely that Third U. S. Army would have to furnish its own evacuation transportation, possibly directly back to the ports or beaches. It was stressed throughout this planning that constant contact and liaison between Army Headquarters all the way to divisions, as established and maintained by medical groups, was the keynote to the solution of all evacuation problems that might arise.

It was planned that the entire evacuation system should be made as flexible as possible. It was contemplated that collecting companies, for instance, might be attached to evacuation hospitals, thereby making available evacuation by ambulance, as well as the physical presence of personnel of the litter bearer platoons for intra-station and inter-station transportation. Possible use of clearing platoons or of an entire clearing company as holding units at air evacuation strips was also foreseen, as well as the need for at least one ambulance section at each such holding unit.

Flexibility was the guiding principle in all planning concerning evacuation of casualties on the Continent. The medical groups setup was relatively untried in military history, and it was for this reason that their function and use was stressed during the all too brief period of training allotted in the United Kingdom.

3. Hospitalization

The 400-bed Evacuation Hospital and 750-bed Evacuation Hospital loaned to Southern Base Section for use in the Southern Base Section before and after D-Day were not under Third U. S. Army control at the time. No other hospital units were in operation prior to their embarkation for the Continent.

4. Additional Temporary Medical Service

Upon its arrival in England, each new unit of Third U. S. Army was informed of the location of the nearest station hospital; it was also provided with dispensary service from a nearby unit, if none existed within its command.

Medical service, in some instances, was furnished to units not provided organically with such service by Tables of Organization and Equipment. This was particularly true of such separate companies as Signal Radio Intelligence Companies, the nature of whose duties involved some degree of isolation from other units in the United Kingdom. In such cases "medical detachments", consisting of one or more medical officers together with enlisted technicians and necessary equipment, were placed on temporary duty with these units.

Section 3 - Professional Services

1. General

During the planning stage the professional staffs of the evacuation, field and convalescent hospitals assigned to this Headquarters were thoroughly investigated. The experience of the unit as a whole, as well as the professional abilities of its individual members, were evaluated.

To evaluate the professional staff of each of the units, questionnaires were sent to all officers and record made in this Headquarters of their experience and professional qualifications. Through these questionnaires and through personal interviews it was determined that in some staffs there was a shortage in particular specialties, and that in other staffs there were duplications of personnel qualified in similar specialties. Through transfers among Third U. S. Army medical units it was possible to balance many of the hospital staffs. When this source of qualified talent was exhausted, help from the European Theater Medical Staff was requested. Help was particularly needed from the Theater in the specialties of x-ray, anesthesia and neurosurgery.

In addition to constant effort toward rearrangement of the professional staffs of the various hospital units assigned to this Army, an effort was made to train hospital units to establish compact practical physical setups in the field in contrast to the dispersion and camouflage which had been practiced by these units on maneuvers in the United States. Demonstrations were arranged, put on by units with combat experience, for the benefit of Third U. S. Army hospital units in this connection.

In order to provide a maximum amount of background to personnel performing duties in the surgical and medical specialties of Army hospitals, a seven-day conference was held at KNUTSFORD, England, to which were invited Medical Corps, Dental Corps, and Army Nurse Corps personnel of the various hospital units assigned to this Army. At these conferences the Chief Consultant of the European Theater of Operations in each specialty (i.e.: surgery, medicine, neuropsychiatry and the like), as well as other professional speakers with combat experience, addressed the medical commissioned personnel interested in the particular subjects discussed on a given day. It was felt that much benefit accrued as a result of these conferences, and that a proper background was provided on which medical commissioned personnel could base further study of the difficulties which they were about to face in operations on the Continent.

During this planning phase, also, a comprehensive directive covering Medical Policies for Planned Tactical Operations was prepared and distributed to all Third U. S. Army medical units. This directive constituted a downgraded extract of pertinent material which may be found in Annex 16 (Medical Annex) to Operation "OVERLORD".

During the planning phase there was opportunity to train a large number of medical officers and nurses in a variety of professional subjects. All existing facilities in the Army, as well as in European Theater of Operations installations were used for this purpose. Among those offered were courses in anesthesia, neuropsychiatry, orthopedic surgery, laboratory technique (especially darkfield interpretation), x-ray, treatment of gas casualties, and combat exhaustion.

The course attended by the largest number of medical officers was the instruction offered at the 312th Station Hospital by European Theater of Operations in the early recognition and management of combat exhaustion. This course was attended by approximately 275 medical officers of hospital and line units assigned to Third U. S. Army.

A course for the Army Nurse Corps, designed specifically for the training of Chief Nurses and other key nurses, was conducted at the American School Center, SHRIVENHAM, England. Instruction in shock and transfusion at the British Blood Supply Depot, BRISTOL, was also available for a small number of medical officers.

By arrangement with the Office of the Chief Surgeon, European Theater of Operations a four-day course in anesthesia for medical officers and nurses and a one-day course in plaster technique was conducted at the 10th Station Hospital, in the MANCHESTER area. These courses were designed to precede a thirty-day period of temporary duty in those specialties in station and general hospitals.

Many difficulties were encountered as the date for Continental operations approached. However, it was possible during a three months' period to train approximately 1,000 officers and 300 nurses in a number of professional and military subjects.

2. Surgery

For details of surgical procedures planned for use in operations, see Annex 16 (Medical Annex) to Operation "OVERLORD".

3. Neuropsychiatry

The field of neuropsychiatry is relatively new and untried in military experience and will, therefore, bear some discussion in the body of this chapter.

The policy of this Headquarters in regard to the handling, treatment and disposition of neuropsychiatric casualties was based on the concept that the essential functions of medical officers are to preserve the health of the command, to conserve manpower and to keep as many men at the fighting front as possible. Emphasis was therefore placed on preventive neuropsychiatry. Since virtually all preventive measures are command functions, the division neuropsychiatrists, by virtue of their assignments, were in a position to disseminate pertinent information to officers of the line. Especial importance was placed on the necessity for differentiation between cases of physical fatigue and neuropsychiatric casualties. Provision was made to handle these in unit rest areas at the regiment or battalion level to prevent their being placed in medical evacuation channels. The Army policy included the statement "no such case will be evacuated unless he has unmistakable symptoms which are neither mild nor transient. The decision (to evacuate) is essentially one of command unless the medical aspects are clear and pronounced." Levels of therapy were to be placed, in echelon, at:

a. The line.
b. The unit rest area.
c. The battalion aid station.
d. The clearing company, from which point the division psychiatrist was to work.
e. The evacuation hospital.
f. The convalescent hospital.

The avoidance of indiscriminate evacuation and the proper selection for treatment on the spot were considered to be imperative. Formal neuropsychiatric diagnosis leaves in the mind of the soldier the firm conviction that he will never again perform combat service. It was directed, therefore, that no diagnosis other than "exhaustion" would be placed on the Emergency Medical Tag except in the case of the obviously psychotic.

Each evacuation hospital and each division had its assigned neuropsychiatrist. This group of men had an average of five years' formal training and experience in neuropsychiatry. All were sent to the Theater course in combat neuroses. Division medical officers were systematically sent to this highly practical course at the rate of twenty per week. Each evacuation hospital neuropsychiatrist chose and trained two nurses and six enlisted men as narcotherapy teams.

Because of the tactical necessity for relatively short periods of therapy in the evacuation hospitals (due to their expected admission rates and probable rapid moves) it was anticipated that many neuropsychiatric casualties who might otherwise be returned to full combat duty would be lost to the Army. The convalescent hospital was equipped with a clinical section and a comprehensive, intensive and graded rehabilitation program. It seemed ideally adapted for handling this particular group of casualties. Therefore, each convalescent hospital was assigned one neuropsychiatrist and six enlisted medical technicians who had been trained as a narcotherapy team.

4. Dental

On 21 April a dental directive was published which, among other matters, ordered that upon arrival of troops in the United Kingdom an immediate dental survey should be made and that routine dental work be accomplished as soon as possible.

Plans were also formulated during this period for adequate dental service to be furnished on the Continent, including emergency dental work, routine treatment wherever possible, repair and replacement of dentures which might be lost or broken in combat and the proper treatment of maxillo-facial injuries prior to evacuation of such casualties to the Communications Zone.

In many instances separate companies were too far removed from a unit having assigned dental personnel to make practical their treatment by dental personnel of such a unit. Dental service was furnished by placing a dental officer and an enlisted assistant from either a medical battalion or field hospital on temporary duty for a period of from fourteen to twenty-one days with the separate company requiring dental service.

Dental laboratory trucks for the 4th Auxiliary Surgical Group prosthetic teams did not arrive until 1 June. During the interim permission was obtained from the Dental Surgeon, European Theater of Operations, to place the nine technicians comprising a part of these prosthetic teams on temporary duty with Central Dental Laboratory Number 1 in LONDON for duty and training in that laboratory. During the first week of June three dental laboratory trucks arrived and the prosthetic teams to operate them were assigned to the XII, XV and XX Corps to be placed at the disposal of the corps surgeons in furnishing prosthetic treatment, where necessary, to the respective corps units.

Two more dental laboratory trucks were shortly thereafter made available for an indefinite length of time to Third U. S. Army; the personnel to operate these two trucks to be furnished by this Army.

Digitized by Google

The fourth truck with its dental prosthetic team was dispatched to VIII Corps on 15 June to remain with them until they left for the Continent. The fifth dental laboratory truck was assigned on activity to duties at PA[illegible] CAMP (northeast of [illegible], England) at which there was a considerable concentration of units assigned to this Army.

A consolidated report of dental service furnished to Third U. S. Army during the period March 1944 to June 1944 is shown below:

	Mar.	Apr.	May	June
Strength (Reported)	[illegible]	[illegible]	[illegible]	[illegible]
Admissions Routine	1041	1103	1211	[illegible]
Admissions Emergency	456	2167	1761	[illegible]
Sittings	6444	17056	21912	17944
Officer Personnel	117	247	256	236
Enlisted Personnel	115	239	261	258
Restorations	2447	11407	13611	10770
Dentures	124	347	420	[illegible]
Gingivitis	119	948	1357	1087
Gingivitis Treatment	684	1703	3034	2404
Stomatitis, Vincent's	111	448	485	521
Stomatitis, Vincent's Treatment	315	1434	1595	1330

5. Veterinary

With the establishment of four messes in Headquarters Third U. S. Army the Headquarters Commandant requested the veterinary services of the Medical Section to supervise their sanitation and cleanliness. They were inspected daily until departure from the United Kingdom of this Headquarters.

On 24 March inspection of Class I distributing points was inaugurated. These inspections were largely confined to the supply points located at [illegible] and [illegible] Detachment of [illegible]. Even though these supply points were under Western Base Section control, the veterinary service of this Headquarters was authorized by the Depot Quartermaster to point out deficiencies when noted, and to offer constructive advice to railhead personnel. Most common deficiencies noted were:

1. The failure to issue individual pieces of meat and cheese with protective covering.
2. Insanitary dividing of meat and cheese.
3. Issue of bread without any protective covering.

Lack of an adequate number of bread sacks was common throughout the entire period of stay in the United Kingdom.

From 5 April until departure from the United Kingdom, over 200 Third U. S. Army troop messes were inspected. Many of these were joint-messes and therefore represented many more troops than would have been the case if each mess had been operated separately. The mess problem was largely of a sanitary and mechanical nature.

Personnel of many messes were not properly informed regarding the use of lemon crystals. This matter was discussed at each mess inspection and instructional material was published as a Third U. S. Army directive.

6. Personnel

As new medical units arrived in the United Kingdom from the Zone of the Interior, they were not completely at Table of Organization strength. This was true particularly in regard to Medical Corps officers. A shortage of Medical Corps officers, therefore, principally developed, and as of the end of June the following shortages existed throughout the Third U. S. Army:

Medical Corps	- 25
Medical Administrative Corps	- 18
Dental Corps	- 7
Army Nurse Corps	- 5

By means of continuous shifting of medical personnel, all units had embarked for the Continent prior to the end of June with full Table of Organization strength. The above shortages were only partly filled in medical units phased in later, prior to their departure for the Continent.

Shortages of commissioned officers qualified in the specialties, particularly x-ray, neurosurgery, and anesthesia, existed throughout this period. Through constant survey of the professional qualifications of all medical personnel, together with resulting transfers, the shortages in these specialties were minimized to some extent.

Section 4 - Medical Supply

During this phase problems involving medical supply resolved themselves into three major and distinct efforts.

1. Procurement of initial T/E and T/BA equipment for medical units.
2. Implementation of substitutes for T/E and T/BA medical equipment not readily in sufficient quantities in this theater for distribution to all units.
3. Preparation of a medical supply plan for operations on the Continent.

The provision of T/E and T/BA equipment for medical units was a continuous process from the time this Headquarters reached the United Kingdom until approximately the end of August, two and a half months after D-Day, when the Army medical units were so equipped prior to their evacuation for the Continent. In addition, T/E and T/BA medical equipment was procured for line units, including major commands, such as divisions.

Three general depots, under the control of Western Base Section, were primarily utilized as sources for Third U. S. Army medical equipment. These depots were located in the general area between [illegible] and [illegible]. The modus operandi included close coordination with the [illegible] Section of this Headquarters, AC of S [illegible] of First U. S. Army Group, AC of S [illegible] of Headquarters European Theater of Operations, the Office of the Chief Surgeon, European Theater of Operations, and the various general depots concerned.

To increase the facility with which medical items could be handled and distributed to Third U. S. Army medical units, provision was made, in the middle of April, for the use of Army medical depots as distributing points for equipping and supplying these units. The two depot companies set up distributing points in the LIVERPOOL area. At approximately the same time, the Army Medical Supply Officer was appointed Purchasing and Contracting Officer for all types of medical supplies for Third U. S. Army.

Requisitions for pre-scheduled medical supply requirements were submitted to Headquarters European Theater of Operations for approximately 300 tons. Pre-scheduled medical supply requirements for Civil Affairs units for Third U. S. Army were also computed and submitted, at this time.

Among items which proved difficult to procure for medical units were tentage of all types and pioneer tool sets for vehicles. The shortages in tentage alone resulted in a requisition, on 3 May, for 1,534 pyramidal tents and 477 hospital ward tents. Essential expendable medical supplies such as aspirin, ammonia chloride troches, terpin hydrate and other drugs used in the treatment of upper respiratory diseases, were comparatively non-available.

Particular difficulty was experienced in equipping the 8th Convalescent Hospital and the 79th Infantry Division. As of the end of April, the 8th Convalescent Hospital had still received none of its equipment. It was learned that no equipment for a convalescent hospital was, at that time, in the United Kingdom. It was therefore necessary that a radiogram be sent to the United States to have complete equipment for this unit placed on the next available transport. The equipment arrived just prior to the scheduled departure of that unit for the Continent.

Due to a sudden change in the priority of the 79th Infantry Division early in June, it became necessary to equip this unit immediately. The major shortage of this division was lack of assault medical pack equipment in accordance with recent changes in Tables of Equipment. The only source in the United Kingdom for this equipment proved to be in the 29th Infantry Division. Trucks from one of the Army medical depot companies were dispatched immediately to the 29th Infantry Division to pick up this equipment and transport it to the docks where it was turned over to the 79th Infantry Division just prior to its departure. Shortly thereafter the priorities of the 5th and 8th Infantry Divisions were also raised and it was necessary to institute considerable transfer of medical supplies between the United Kingdom and Northern Ireland for the purpose of completely equipping these units in time.

It was learned early in June that the Office of the Chief Quartermaster, European Theater of Operations, had not been able to furnish Red Cross ground markers for Third U. S. Army medical units, and also that sufficient flies, for marking them properly, would not be available as substitutes. It was thus necessary to secure 60,000 square yards of canvas, and contract was initiated with a local firm in LIVERPOOL to sew 548 fly-type markers and forty-eight, fifty-foot-square ground markers on which to paint the Red Cross.

Since certain medical units were phased in under VIII Corps, which was attached to First U. S. Army in its assault wave on the Continent, it was necessary that certain medical units be provided with means of amphibious packing of medical supplies. In this connection, AOC 65-mm shell cases were secured from an ordnance ammunition company and one of the Army medical depot companies was given the assignment of changing the markings of these cases, and packing and sealing them so as to be watertight. In addition, 5,000 British-made packing boxes were secured for use by hospital units in packing equipment for movement to the Continent.

In addition to procurement of T/E and T/BA equipment for medical units assigned to Third U. S. Army, FROCO (Project for Continental Operations) units were secured for use by the 4th Auxiliary Surgical Group under FROCO Project No. 1 and FROCO Project No. 2.

Under FROCO Project No. 1, one FROCO unit consisted of three 1½ ton 6x6 trucks, cargo, complete with special surgical equipment and one, 250-gallon water trailer. Ten such units were procured for the 4th Auxiliary Surgical Group.

Under FROCO Project No. 2, one FROCO unit consisted of one 2½ ton truck, specially fitted with x-ray equipment. Three of these units were ultimately received by the 4th Auxiliary Surgical Group.

A Blood Bank Detachment consisting of eight 2½ ton trucks, for use in transporting blood was also secured and attached to one of the Army medical depot companies.

In connection with the procurement of complete unit assemblies for hospital units, adequate storage facilities were not always available at locations occupied by the various units. In instances such as these, efforts were made to obtain tentage, or in the event that that failed, recommendations were made to move the unit to a new location or to obtain local storage facilities.

Preparation of a medical supply plan for operations on the Continent was submitted to Headquarters First U. S. Army Group, early in April, and was subsequently approved. Details of this plan will be found in Annex 16 to Operation "OVERLORD."

Under Operation "OVERLORD", an advance platoon of the 93d Medical Depot Company was attached to First U. S. Army for operation on the OMAHA BEACH. Advance Section No. 2, of the 93d Medical Depot Company was attached to VIII Corps for initial operation on the UTAH BEACH. Initial planning in regard to Third U. S. Army operations included the furnishing of the two medical depot companies at an early stage.

Section 5 - Preventive Medicine

1. General

Upon arrival of Headquarters Third U. S. Army in the United Kingdom, it was evident that five major problems were to be considered from the standpoint of Preventive Medicine.

a. Venereal disease control.
b. Communicable diseases.
c. Medical reports and records.
d. Non-battle injuries.
e. Sanitation.

As a basis for all plans in this particular field, considerable data was assembled and studied from experiences of troops on maneuvers in the United States, other troops based in Iceland and in the United Kingdom, results accruing from the North African, Sicilian and Italian campaigns, and information secured from United States Army Air Force operations in the European Theater of Operations. It became obvious, early in the planning phase, that much of the above data would not apply in the case of proposed Continental operations. During the planning period, constant coordination was in effect with observers from Supreme Headquarters Allied Expeditionary Forces, North African Theater of Operations, First U. S. Army Group, and First U. S. Army. As a result of this constant study and coordination, repeated changes were made in policies and procedures as the planning period progressed. All available medical intelligence reports from the above mentioned headquarters were carefully studied and evaluated in the light of their applicability to the needs of this Army.

The details of all plans and policies promulgated in the field of Preventive Medicine will be found in Annex 16 (Medical Annex) to Operation "OVERLORD." Pertinent extracts from this Plan were downgraded and published in the form of directives, for use in the medical service of this Army.

Digitized by Google

2. Venereal Disease Control

Available intelligence reports indicated that there was a great increase in venereal disease incidence among the civilian population in Nazi occupied countries; therefore, it was anticipated that the control of venereal disease amongst Third U. S. Army troops during Continental operations would be a definite military problem. With this in mind, a Venereal Disease Control Officer was designated as such, on a full time basis, on 1 May.

A comprehensive venereal disease program was instituted while troops were still located in the United Kingdom, this program becoming a basis for similar control on the Continent.

During this period also, preparations were made for the operation of venereal prophylactic stations in towns and cities on the Continent by institution of training whereby medical collecting and clearing companies would become qualified to operate such stations.

The control of venereal diseases during the stay of Third U. S. Army troops in the United Kingdom, at no time constituted a serious problem. The various base sections had established venereal disease prophylactic stations in all large cities in the United Kingdom. Most venereal disease cases occurring among Third U. S. Army troops originated from contacts in LONDON, BIRMINGHAM, MANCHESTER, and LIVERPOOL. A summary of the statistics shown in Annex II to the Medical Section report, for the period 24 March to 7 July, reveals that for an average strength of 138,364 officers and men, a weekly average of sixty-eight new cases were reported, this being a rate of 16.49 per 1,000 per annum. A complete breakdown by weekly periods will be found in the above referred to Annex.

3. Communicable Diseases

In general, communicable diseases presented no problem to Third U. S. Army troops during their stay in the United Kingdom; upper respiratory diseases were widespread, but mild in nature. Predisposing to this type of infection was the cold, damp, foggy English weather, as well as heating and housing facilities to which United States troops were unaccustomed.

Figures shown in Annex II to the Medical Section report, reveal that during the period 24 March to 7 July, on an average total strength of 138,364 officers and men, 1,023 cases of communicable diseases occurred weekly, or an average weekly rate of 384 per 1,000 per annum. Weekly breakdown of figures on which this summary is based will be found in Annex II.

Common respiratory diseases revealed high seasonal rates during April and May and a few cases of pneumonia were reported.

Diarrheal diseases were few and sporadic, with the exception of a small outbreak during the weeks of 7 April and 16 June.

The incidence of influenza was low throughout the entire period.

Both measles and mumps were fairly prevalent during the first eight weeks of the period. Scarlet fever cases were extremely low, one small outbreak occurring in a medical unit on 30 May. The total personnel affected in this outbreak consisted of ten cases.

Sporadic cases of recurrent malaria, epidemic hepatitis and meningococcic meningitis, were seen.

The daily non-effective rate gradually decreased from 18.04 per 1,000 per annum, at the beginning of the period, to 6.68 per 1,000 per annum at the conclusion of this phase.

4. Medical Reports and Records

The projection of medical policies and plans and the attainment of results in the field of preventive medicine, are largely dependent upon the assembly and analysis of an enormous number of statistical reports. Therefore, interwoven with every aspect of the Medical Section's activities during the planning phase in the United Kingdom, was the necessity for the setting up of a system of accurate medical reports and records, whereby conclusions could be properly drawn and plans promulgated and effected. The details of the system evolved will be found in Annex 16 (Medical Annex) to Operation "OVERLORD", and amendments thereto.

5. Non-Battle Injuries

During the period 24 March to 7 July, inclusive, an average of 216 cases per week of non-battle injuries occurred among an average strength of 138,364 officers and men. This constituted an average weekly rate of seventy-five cases per 1,000 per annum, as will be seen by reference to Annex II of the Medical Section report. The highest rates were experienced from the fifth through the thirteenth weeks of this period. The high rate of non-battle injuries was at least partially due to heavy traffic on narrow winding roads, foggy days and nights which reduced driving visibility, and the necessity for driving on the left hand side of the road.

6. Army Medical Laboratory Service

The 7th Medical Laboratory arrived in the United Kingdom on 16 May. It was the only medical laboratory assigned to Third U. S. Army. No actual laboratory work was performed during the period of its stay in the United Kingdom. Professional training of the personnel of the unit, together with orientation courses calculated to better its performance of its mission on the Continent, procurement of necessary equipment, and study of the operations of other Army medical laboratories in the North African Theater of Operations, and in the Pacific Theater, occupied the unit during this entire phase.

7. Sanitation

U. S. Army troops were housed in the United Kingdom under a wide variety of conditions, varying in degree from field bivouac areas to shelter in requisitioned buildings. In many respects, standards of sanitation were quite different from those to which our troops had been accustomed in the United States. This called for the use of some temporary expedients, compromises, and in some instances, changes in standards, to meet local conditions.

Water supplies for troops in the United Kingdom were obtained largely from municipal sources, practically all of which provided some degree of artificial treatment, including chlorination. The capacity for which English water systems were designed, was approximately one quarter that of American practice for a comparable number of people. In addition, the presence of a large number of Allied troops throughout the entire United Kingdom necessitated conservation measures in order to prevent the overtaxing of local systems and the occurrence of serious shortages.

Due to the overcrowded conditions throughout the United Kingdom, it was frequently expedient to utilize halls and large buildings on estates, for the housing of various troops. These estates were provided with a private water supply in most instances and a policy was followed of artificial chlorination of such water.

The disposal of sewage and human wastes varied from fairly satisfactory flush-toilet installations, almost invariably connected to sewer systems having sewage facilities, to the less satisfactory "bucket-latrine" method commonly used in many British camps.

Disposal of garbage and other waste materials presented few problems. Local collection and use of garbage for stock feeding was reasonably satisfactory, depending on the capability and care exercised by the individual collector.

Insect control was greatly facilitated by climatic conditions. Cool weather precluded any appreciable or serious development of flies or mosquitoes. Routine local control measures were effective in most instances.

A review of reports and authoritative accounts of experiences in other theaters of operations, indicated that sanitation could become a major military problem unless commands were thoroughly instructed in the difficulties which might be encountered and methods of handling them. Expected conditions on the Continent, as made available through medical intelligence and related channels, were taken into account in the preparation of directives relating to sanitation. The principles involved in these directives will be found in Annex 16 (Medical Annex) to Operation "OVERLORD."

CHAPTER 2
PRE-OPERATIONAL ON CONTINENT

Section 1 - Organization of the Medical Section

The following officers of the Medical Section accompanied the movement of the Forward Echelon of this Headquarters to the Continent, preceding the main body of the Medical Section:

Surgical Consultant
Medical Consultant
Neuropsychiatric Consultant
Operations and Training Sub-section:
Chief of Sub-section
Hospitalisation Officer
Air Evacuation Officer
Administrative Assistant
Venereal Disease Control Officer
Chief of Finance and Supply Sub-section
Assistant, Veterinarian
Assistant, Personnel & Administrative Sub-section

Nine enlisted men also accompanied this movement.

Upon arrival of the main body of this Headquarters on the Continent, the organization of the Medical Section remained essentially unchanged. However, two officers and two enlisted men of the Medical Section remained behind in the United Kingdom as representatives of this section, with Headquarters III Corps, Medical Section. Of this personnel, one officer was from the Finance and Supply Sub-section, one officer was from the Operations and Training Sub-section, and one enlisted man each, was from those respective sub-sections.

An additional 1st Lieutenant, Medical Administrative Corps, was placed on temporary duty with Headquarters III Corps, to aid the representative of the Finance and Supply Sub-section, Medical Section, this Headquarters, in equipping medical units still in the United Kingdom.

A 1st Lieutenant, Medical Administrative Corps, was also placed on temporary duty with the Finance and Supply Sub-section, on the Continent, due to the necessity for locating equipment of various medical units as they arrived on the Continent, which often arrived separately from the personnel of the units.

Section 2 - Operations

1. Training

As of 6 July, all Third U. S. Army medical units already on the Continent were attached to Headquarters VIII Corps, which was in operation under the control of First U. S. Army. These units were:

Hq & Hq Det, 167th Medical Battalion
Hq & Hq Det, 106th Medical Battalion
429th Medical Collecting Company
465th Medical Collecting Company
635th Clearing Company
16th Field Hospital
44th Evacuation Hospital (2M)
31st Evacuation Hospital (2M)
33d Medical Depot Company

In addition, the Advance Depot Platoon of the 32d Medical Depot Company was in operation for First U. S. Army on the OMAHA BEACH.

Due to the fact that Third U. S. Army did not become operational for some time and it was found that hospitalization facilities would be required by First U. S. Army in excess of that possessed by hospitals already in operation under that Army, Twelfth U. S. Army Group directed that all evacuation hospitals upon their arrival on the Continent would be attached to First U. S. Army. These hospitals were to be moved and operated by that Army as the need arose, until Third U. S. Army became operational. A total of eleven evacuation hospitals assigned to Third U. S. Army operated for varying lengths of time under First U. S. Army during the period 6 July to 31 July. At the end of this period all evacuation hospitals except the 106th Evacuation Hospital and the 109th Evacuation Hospital were returned to Third U. S. Army control, the latter two being relieved of their attachment at a later date.

One field hospital was used during this period by First U. S. Army. On 16 July the 54th Field Hospital moved to the vicinity of LA HAYE DU PUITS (T-18) to support the 9th and 79th Infantry Divisions. The units of this hospital remained in this vicinity during the period 16 to 31 July.

In addition to the above-mentioned medical units, occasional need arose for operation of other units by First U. S. Army. For example, the 436th Medical Collecting Company was utilized to augment the 44th Evacuation Hospital which was receiving a large volume of casualties in the CARENTAN (T-28) area. There was especially a need for the litter bearer platoon and less urgent necessity for the station platoon. The ambulance platoon was used to supplement evacuation of the hospital. A need for another unit arose when the 83d Infantry Division arrived in France with only one platoon of its clearing company. The other pla-

DECLASSIFIED

DECLASSIFIED

Digitized by Google

tion had become separated in the marshalling area in England and did not rejoin the unit until three weeks after the division reached the Continent. The 46th Clearing Company was attached to the 4th Infantry Division to supplement the one platoon. It operated with the division until about 25 July.

The majority of Army medical units, as they arrived in sporadic groups, were concentrated in bivouac in an area several miles north of [illegible] (T-09). From one to seven units would arrive in a day's time. As the units arrived on the beach, they were directed to a transit area and from there guided to [illegible] (T-10) or to ST [illegible] (T-17) by a Military Police escort. The CO of G-4, of that Headquarters, was notified in advance of the units scheduled to debark on the beach and in turn notified the Medical Section. An officer guide from the Medical Section was then dispatched to the designated transit to meet the unit and guide it to the concentration area. As more units arrived, officers were designated from units in the concentration area to lead in the new arrivals. Difficulties were encountered. Most of the units arrived in more than one serial, some in four or five. At times only one vehicle of a unit would arrive. Moreover, because of the large volume of units arriving on the beach and the relatively limited communication facilities, the notification of a unit's arrival often came after the unit had already reached the rendezvous point. Nevertheless, with reasonable facility eighty-six of 104 medical units assigned to Third U. S. Army arrived on the Continent during the pre-operational period 7-31 July. The principal units which had not arrived were:

12th Evacuation Hospital
108th Evacuation Hospital (SM)
110th Evacuation Hospital (SM)
56th Field Hospital
7th Convalescent Hospital
8th Convalescent Hospital
92d Medical Gas Treatment Battalion
94th Medical Gas Treatment Battalion
95th Medical Gas Treatment Battalion

2. Evacuation

During the pre-operational period of Third U. S. Army on the Continent, definite plans were made for the tactical employment of medical units. In brief, they were as follows:

a. Each corps was assigned a corps battalion consisting of one battalion headquarters, one clearing company, two collecting companies and one ambulance company. The corps battalion was to be under the control of the corps surgeon with the mission of providing corps medical service.

b. Each medical group was to evacuate a corps zone from division clearing stations to an Army installation. Groups were organized to consist of two medical battalions similar in so far as possible, to the corps medical battalion. In advance section Communications Zone was to evacuate as many evacuation hospitals as possible.

c. From the division clearing stations, where triage of patients was performed, non-transportable patients were to be sent to an adjacent platoon of a field hospital. The transportable patients requiring further evacuation were to be sent to an evacuation hospital.

3. Hospitalization

Hospitalization facilities were needed for the care of Third U. S. Army troops during the pre-operational phase on the Continent. The 101st Evacuation Hospital was therefore opened on 13 July at a location two miles northwest of ST [illegible] LE VIC (T-10), and authority was obtained for Third U. S. Army to retain control of this hospital during the entire pre-operational period.

The following plans were made covering the use of hospital units when Third U. S. Army became operational:

a. Evacuation Hospitals: Evacuation hospitals were to be used in the accepted orthodox manner.

b. Field Hospitals: By attaching field hospitals to the various corps, the corps surgeon was further enabled to attach one hospitalization unit (one section of a field hospital) to each division clearing station. Platoons of field hospitals were to be used, in addition, as holding units at air strips, augmented by one or more clearing companies of a medical gas treatment battalion.

c. Convalescent Hospitals: Convalescent hospitals were to be used for those patients not requiring more than a fifteen-day convalescent period.

d. Army Clearing Companies: Army clearing companies were not to be employed in the orthodox manner. The clearing companies (or platoons of same) were to be attached to the evacuation hospitals to provide medical service for the less seriously wounded, and also to act as holding units for non-transportable patients when evacuation hospitals displaced forward.

e. Army Collecting Companies: It was also planned to attach one Army collecting company to each evacuation hospital with the exception of the ambulance platoons of those companies. It was felt that such an attachment to an evacuation hospital would aid in the transporting of patients within the hospital area and free the personnel of the evacuation hospital for more intensive medical care of the patients.

4. Additional Temporary Medical Service

A few Signal and Ordnance companies, as well as a number of Quartermaster companies, located in the vicinity of ST MARTIN (T-05), were without medical service. An Army collecting company was therefore given the responsibility of establishing and maintaining a roving dispensary and ambulance service for these companies from the middle to the end of July.

Section 3 - Professional Services

1. General

The pre-operational phase of Headquarters Third U. S. Army on the Continent, in so far as the professional services of the Medical Section were concerned, was one primarily of orientation and study of results already obtained in First U. S. Army.

2. Surgery

In the field of surgery, through constant contact with First U. S. Army, it was noted that frequent transfers of auxiliary surgical teams from one hospital unit to another were the rule rather than the exception; such transfers depending almost exclusively upon the tactical situation and the surgical backlog of the hospitals concerned. This problem was watched very closely in as much as it was felt that Third U. S. Army hospitals would be faced with fundamentally the same circumstances upon becoming operational. Several surgical teams from the 4th Auxiliary Surgical Group (a Third U. S. Army unit), attached to First U. S. Army hospital units to supplement their surgical services, benefited considerably from their experience.

3. Neuropsychiatry

A high percentage of the neuropsychiatrists in Third U. S. Army units had intensive experience in the combat zone during a month or more prior to Third U. S. Army becoming operational, through work with First U. S. Army.

The Third U. S. Army divisions attached to First U. S. Army experienced a variable rate of neuropsychiatric casualties. From the standpoint of predictability concerning such casualties when Third U. S. Army became operational, a consideration of the factors involved led to the conclusions that:

a. A high percentage of replacements would have already taken place in officers and men in these divisions. A higher incidence of neuropsychiatric casualties might be expected in this group of replacements than had occurred in the various divisions' original assigned strength.

b. The remaining troops (including replacements) would be seasoned, but tired.

c. Many seasoned troops would enter combat under officers who had little or no battle experience.

d. To offset the above considerations remained the fact, that men who should never have originally been sent to foreign service, would, to a great extent, already have been weeded out in actual combat.

4. Dental

During the month of July, of the five dental laboratory trucks available to Third U. S. Army, two were attached to First U. S. Army for duty with the 4th Convalescent Hospital, and two were attached to the 101st Evacuation Hospital, which was the only evacuation hospital servicing Third U. S. Army troops during the pre-operational period. The remaining dental laboratory truck was attached to Headquarters Third U. S. Army to perform necessary prosthetic work among personnel of the Headquarters.

Due to the experience of First U. S. Army, it was decided to attach the dental prosthetic teams (dental laboratory trucks) of the 4th Auxiliary Surgical Group to evacuation hospitals when Third U. S. Army became operational, rather than to corps or division headquarters. It was also decided to enlarge the dental services of the 6th Convalescent Hospital in order to provide routine treatment for all patients admitted to that hospital and to treat those who had lost or broken their dentures, the latter to be held in this hospital until treatment was completed. Necessary equipment was requested to be ready for issue at such time as the 6th Convalescent Hospital became functional.

A consolidated report of dental service rendered to Third U. S. Army troops during the month of July is shown below:

	July 13 Days
Strength (Reported)	132598
Admissions Routine	5650
Admissions Emergency	994
Sittings	15756
Officer Personnel	226
Enlisted Personnel	224
Restorations	6681
Dentures	295
Gingivitis	726
Gingivitis Treatment	1409
Stomatitis, Vincent's	520
Stomatitis, Vincent's Treatment	935

5. Veterinary

It was the function of the veterinary service to advise concerning possible purchases of local excess foodstuffs to augment Army rations and to inspect Class I supply points.

During this early period on the Continent it was felt that the purchase of local foods should be prohibited, particularly butter, because of:

a. Failure of the local products to meet sanitary requirements of the Army.

b. The impracticability involved in attempts by a fast moving force to procure and inspect large quantities of foodstuffs and to distribute same to the troops.

This position was later compromised by agreement that certain foodstuffs could be purchased locally and served to the troops, provided that a germicidal rinse had been used to wash same prior to consumption.

Between 16 July and 1 August, a total of three Class I supply points were placed in operation for Third U. S. Army units. These were inspected regularly, particular attention being paid to the handling of perishable rations and the avoidance of waste. It was directed that all ration trucks be made spotlessly clean before rations were loaded. The initial supply of "C" and Ten-in-One rations were continually inspected, this being in addition to the inspection of "B" rations and perishable substitutes.

Each of the three bakeries of these supply points were also inspected during this period. Bread prepared by quartermaster mobile bakeries, in general, was handled in a satisfactory manner. Bread sacks were usually available and it was found that care was necessary in stacking the bread at the supply points to avoid crushing.

6. Personnel

Shortages in Medical Department commissioned personnel continued to exist throughout the month of July. As of the end of that month, the following deficiencies existed:

Medical Corps	35
Medical Administrative Corps	20
Dental Corps	5

Shortages were due partially to casualties which had occurred in Third U. S. Army units while attached to First U. S. Army, and partially to the inability of replacements to report physically to our units. The previous shortage of nurses, mentioned in Chapter 1, had been adjusted by the end of July.

Shortage of qualified personnel in the specialties, particularly that of anesthesia, continued to exist, both in regard to Medical Corps officers and Army Nurse Corps. Constant survey of qualifications possessed by commissioned personnel in all medical units were made, in an attempt to reduce the extent of this deficiency.

DECLASSIFIED

Section 4 - Medical Supply

Medical supply problems experienced in July involved three major efforts:

1. Completion of equipping medical units still in the United Kingdom, prior to their departure for the Continent.

2. Coordination of the arrival of medical units in a bivouac area with the arrival of their equipment, which in many instances had been shipped separately from the United Kingdom.

3. Deployment of the two medical depot companies in the most advantageous manner for actual use in impending operations by Third U. S. Army.

Medical units still in the United Kingdom were equipped through the efforts of a Medical Administrative Corps officer and an enlisted man left on temporary duty with Headquarters XII Corps, by the Medical Section of this Headquarters.

Upon departure of the 33d and 33d Medical Depot Companies, for the Continent, Company "C" of the 92d Medical Gas Treatment Battalion was set up to operate a supply point for Army medical units at ASHFORD, England. This company functioned as such until the completion of the equipping of all medical units of Third U. S. Army.

When this Headquarters arrived on the Continent, the advance platoon of the 33d Medical Depot Company, attached to First U. S. Army, was in operation with the 1st Medical Depot Company on the OMAHA BEACH. The advance section, 33d Medical Depot Company (attached to VIII Corps) was operating with the advance platoon, 1st Medical Depot Company, on the UTAH BEACH.

Problems were encountered in finding organizational equipment of units which arrived on the Continent separately from the personnel. A plan was set up with the Medical Supply Officer, Advance Section, Communications Zone, to have an officer assigned to the specific job of checking each ship as it arrived at either beach, to determine whether or not the equipment was unloaded, and when it would be ready to pick up.

On 18 July, Third U. S. Army was notified by the Advance Section, Communications Zone, that medical depot companies assigned to the latter, had not yet arrived on the Continent; that they did not have the necessary personnel to operate a depot at CHEF DU PONT (T-14), which was to relieve the UTAH BEACH medical dump. It was agreed that the 33d Medical Depot Company (assigned to Third U. S. Army) should well be attached for this purpose. Over 900 tons of medical supplies were handled and processed swiftly and efficiently.

On 18 July, the 33d Medical Depot Company was moved into MONTEBOURG (T-10), immediately upon its arrival, in order to supply Third U. S. Army medical units, which were then arriving on the Continent in increasing numbers and going into operation for First U. S. Army.

As the VIII Corps started its drive toward COUTANCES (T-26), the advance section of the 33d Medical Depot Company moved in to directly support the troops at LA HAYE DU PUITS (T-18). The depot was established two and one half miles from the front line.

Due to imminent operations by the Third U. S. Army, the 33d Medical Depot Company was moved by shuttle to BRICQUEVILLE (T-10), having been relieved of its assignment at CHEF DU PONT (T-14) by the arrival of an Advance Section, Communications Zone medical depot company. BRICQUEVILLE was selected as being the southernmost point within the Army boundary that could support the Army when it became operational.

In view of the fact that the Advance Section, Communications Zone, had been unable to fill the requisitions to stock Third U. S. Army medical depots, it was agreed by the Third U. S. Army and the Advance Section, Communications Zone, to place ten medical maintenance units in the 33d Medical Depot Company at BRICQUEVILLE. This provided medical supplies for 200,000 men for fifteen days.

The experience of First U. S. Army, and known planned operations of Third U. S. Army, made it apparent that the minimum of supplies in a medical maintenance unit would not meet the demands of Third U. S. Army hospitals. Therefore, Advance Section, Communications Zone, was requested to release immediately all supplies arriving on the Continent bearing markings for Third U. S. Army units. Advance Section, Communications Zone, agreed to this, thereby providing a ten percent reserve of T/E and T/A non-expendable items.

Section 5 - Preventive Medicine

1. General

After the establishment of this Headquarters in France, all the various phases of Preventive Medicine were again gone over in detail with unit medical officers in all Third U. S. Army units. Many of the anticipated problems did not materialize and liaison was constantly maintained with various corps and division surgeons, Civil Affairs, and with the First U. S. Army, as many of our troops were fighting under its command.

2. Venereal Disease Control

The problem of venereal disease control was at its minimum. Troops were being moved from the United Kingdom to the Continent, and the venereal disease rates among troops still in the United Kingdom remained low.

On the Continent the incidence of venereal disease among troops was also quite low. This was primarily due to the fact that all towns, cities and homes were placed "off limits", and these restrictions were rigidly enforced. In addition, most troops were committed to action under First U. S. Army, soon after arrival.

3. Communicable Diseases

No real problems or epidemics were encountered during this period despite intimate contact with French civilians in the NORMANDY sector. One small outbreak of gastro-enteritis occurred during the week ending 21 July. All other cases of communicable disease were small in number and sporadic in nature. (See Annex III to the Medical Section report).

4. Medical Records and Reports

These continued to be an administrative problem due to the rapid movement of all units over the beach from the United Kingdom and due to the frequent changes of assignment and attachment of these units. Repeated conferences were held with unit and medical officers, with a view to attaining accuracy and efficiency in the handling of these reports.

5. Non-Battle Injuries

Such injuries were reduced by fifty per cent, with the establishment of various unit headquarters in France and with the reduction of movement over the beaches by large convoys and large numbers of troops. (See Annex III to the Medical Section report).

6. Army Medical Laboratory Service

The 7th Medical Laboratory, with partial equipment, reached France on 16 July and went into bivouac. The rest of the period was devoted to unpacking equipment and setting up the necessary supplies and equipment for an operational mobile section. The bulk of the essential equipment failed to arrive in France before Third U. S. Army became operational, but this one small section had sufficient equipment and supplies to go into immediate operation.

7. Sanitation

Experience on the Continent during this phase showed that, although some of the anticipated and possible sanitary problems did not materialize, previous planning was justified. Only in relation to water supply control was any modification deemed desirable. In as much as water from Engineer water supply points would be the only water a proved generally, for the use of troops, greater reliance was placed on chlorine residual tests to determine potability at the point of consumption.

Greater emphasis was found necessary on mess and field sanitation, with a view primarily to putting into routine practice standard procedures set forth in current operational directives.

CHAPTER 3
AUGUST OPERATIONS

Section 1 - Organization of the Medical Section

Early in August the Medical Section was split into a Forward and a Rear Echelon. Originally the Forward Echelon consisted of five officers including the Army Surgeon, and nine enlisted men. However, due to the speed of advancement of Third U. S. Army, it was found necessary to move the Executive Officer and the entire Operations and Training Sub-section to the Forward Echelon. Approximately one week later, the Finance and Supply Sub-section was also moved to the Forward Echelon. This left the following sub-sections in the Rear Echelon:

Personnel and Administrative Sub-section
Consultant Sub-section (less Surgical Consultant)
Preventive Medicine Sub-section
Dental Sub-section
Veterinary Sub-section

The Medical Consultant was appointed Surgeon of the Rear Echelon. The Surgical Consultant was the only consultant in the Forward Echelon.

Due to the rapidity with which events moved, it was found necessary to bring in a 1st Lieutenant, Medical Administrative Corps, on temporary duty with the Operations and Training Sub-section to perform statistical duties connected with the bed status of various hospital units and the placement of hospital surgical teams with these units.

It was also found advantageous to place a major, Medical Corps, on temporary duty with this Section, as Liaison Officer with the Twelfth U. S. Army Group. This was a full time job and it was not considered possible to spare an officer already assigned to the Section for this duty.

During this period, also, the Chief of the Operations and Training Sub-section, Medical Section, Headquarters Ninth U. S. Army, was on temporary duty with the Forward Echelon of the Medical Section, this Headquarters, for purposes of orientation.

Late in the month the Army Veterinarian was transferred to the Communications Zone, at the request of that headquarters. From that time and during the ensuing month the Medical Section had only one Veterinary Corps officer assigned.

Section 2 - Operations

1. Training

Practical application of months of training now ensued. As in other departments of the Army, this type of training is the most beneficial in its results.

2. Evacuation

Soon after the Third U. S. Army became operational it became evident that evacuation was to become the most serious problem faced by the Medical Service during the month of August. Prior to the onset of operations, attachment of subordinate units to Medical Groups had been accomplished and Corps Zone responsibilities had been assigned in accordance with projected plans made in the United Kingdom and during the pre-operational phase on the Continent previously discussed in this history in Chapters 1 and 2.

The Corps Zone responsibilities were assigned as follows:

64th Medical Group to support the VIII Corps
65th Medical Group to support the V Corps
66th Medical Group to support the XX Corps
67th Medical Group to support the XII Corps

The group commanders were given the responsibility of preparing medical plans of evacuation. For this purpose fifteen ambulance companies and eighteen collecting company ambulance platoons were available.

The 69th Medical Group was given the mission of evacuating all Army evacuation hospitals, until such time as Advance Section, Communications Zone, could take over this function.

Constant leapfrogging of the evacuation hospitals during the first ten days was inadequate to keep hospital units close to the front lines. Long ambulance hauls were therefore necessary. Excellent care in the forward area was very effective in counteracting possible deleterious effect of these hauls.

Daily contact was maintained with the commanding officers of the medical GP Army, and a situation map showing the location of all Army medical units was published as of 0600 daily. Wide distribution of this publication through medical channels eliminated undue delay which might otherwise have been caused through rapid changes in location of evacuation hospitals and consequent inability of ambulance drivers to locate them.

The success of the evacuation system during this period was due in

DECLASSIFIED

A Staff Nurse of a Field Hospital Platoon Makes Out the Daily Report on Patients.

Digitized by Google

Digitized by Google

Digitized by Google

Unit	Location	Days of Supply	Tonnage
10d (-) Med Dep Co	LE MANS (C-43)	4	400 tons
33d Med Dep Co	ORLEANS (F-62)	5	200 tons
Adv Sec, 10d Med Dep Co	DREUX (E-18-1)	3	120 tons
Adv Sec, 33d Med Dep Co	RAMBOUILLET (H-77)	7	100 tons (for VIII Corps only)

The above figures represent maximum requirements. It was considered that at the then present rate of casualties and demands for medical supplies, there was sufficient stock within Third U. S. Army supply installations to make the Army self-sufficient for twenty to thirty days.

Further disposition of medical depots during August, resulted in establishment of depots at FONTAINEBLEAU (H-29) and CHARTRES (F-27) with plans completed for the movement of one of the depots to VERDUN (U-26).

Transportation of medical supplies, as well as of depot companies themselves, constituted a major problem during the entire month of August. Considerable ingenuity was required in many instances in order to get critical items to their point of consumption. During the second week of August it was found that Army medical supply depots were constantly running short of certain Class III items of medical supply. These items consisted mostly of sutures, needles, intravenous solutions and sheet wadding. Since a shortage of such items was considered critical, arrangements were made with the Chief of the Supply Division, Office of the Chief Surgeon, European Theater of Operations, whereby the items were made available at an airport in the United Kingdom. A pilot of the Ninth U. S. Air Force made a special trip to the United Kingdom, upon the recommendation of the Air Liaison Evacuation Officer attached to Third U. S. Army. While this procedure by-passed all channels of supply, the action enabled Third U. S. Army to meet all demands of hospitals for these items.

When Twelfth U. S. Army Group became operational, it functioned to allocate critical items on a priority basis. Status reports on all critical items were submitted to Twelfth U. S. Army Group, as well as a daily report on the amount of whole blood received, on hand, and required.

During the third week of August, 200 tons of medical supplies were actually backlogged in Communications Zone medical depots. In order to supplement the efforts of the Communications Zone in this regard, fifty trucks were made available from Third U. S. Army hospitals to haul these supplies from Communications Zone depots at CHEF DU POINT (T-36) and near LONGUEVILLE (T-68), involving a roundtrip of several hundred miles. The situation was further alleviated by the simultaneous arrival of cargo trucks, weapons carriers, and ambulances from Communications Zone depots, as well as twenty ambulance loads of medical supplies loaded in the United Kingdom and shipped direct to Army medical depots.

A notable achievement in the history of air transportation occurred on 26 August when C-47 planes landed at the HEFTY (H-41) air strip with cargoes including eighty tons of medical supplies such as blankets, litters, plasma, and surgical supplies. These planes were unloaded in less than ten hours.

Use of trucks from Army medical gas treatment battalions for movement of medical depot companies was frequent. Due to higher priorities exercised by Quartermaster truck companies that might otherwise have been available, the latter source for movement was not advantageous in view of time elements involved in the entire operations.

During the month of August, a large quantity of German medical supplies and equipment was captured. Wherever possible, these supplies were turned over to Army medical depot companies and reissued for use by this Army. However, in certain instances, it was impossible to carry all of the equipment captured, and in such instances, medical units were notified of the location of the captured supplies and instructed to help themselves. Following is a list of captured medical equipment and supplies:

6 August 44 - location REMMES (T-05); estimated amount, valued at $1,000,000.
10 August 44 - location ST MALO (S-71); estimated amount, 10 tons.
12 August 44 - location LAVAL (T-64); estimated amount, 4 tons.
15 August 44 - location ALENCON (L-39); estimated amount, 10 tons.
22 August 44 - location ORLEANS (F-62); estimated amount, 15 tons.
25 August 44 - location MELUN (S-33); estimated amount, 15 tons.
25 August 44 - location FONTAINEBLEAU (H-29), estimated amount, 20 tons.
26 August 44 - location SENS (K-66); estimated amount, 15 tons.
26 August 44 - location ETAMPES (H-89); estimated amount, 20 tons.
28 August 44 - location east of SENS (K-76); estimated amount, 12 tons.
31 August 44 - location SOMMESSOUS (T-42); estimated amount, 10 tons.

In instances where captured equipment was of no particular value to Army hospital units, such supplies were released to Civil Affairs personnel for distribution to French hospitals, since Civil Affairs reported an urgent need for all medical items in this category.

A sketch will be found in Annex VII of the Medical Section report of the various locations of Third U. S. Army medical depots during the month of August.

Section 3 - Preventive Medicine

1. General

Due to the speed with which operations of the Third U. S. Army progressed during the month of August, Preventive Medicine measures became secondary to the more important phases of medical care for wounded troops.

2. Venereal Disease Control

Incidence of venereal disease during the month of August is shown in Annex VIII to the Medical Section report. An analysis of these figures reveals that with an average mean strength of 248,196 officers and men, an average of twenty-four cases per week occurred, being an average weekly rate of 5.09 per 1,000 per annum.

During this month, almost all towns and cities remained "off limits". Due to the large and rapidly expanding area occupied by Third U. S. Army troops, it was difficult to enforce these off limits restrictions. The low venereal disease rate, therefore, was largely due to the fact that most troops were in direct contact with the enemy during this month.

3. Communicable Disease

All communicable diseases (including venereal disease) and daily non-effective rates for the month of August revealed an unprecedented low for Third U. S. Army. (Figures supporting this statement will be found in Annex VIII to the Medical Section report). These figures reveal that for an average mean strength of 248,196 officers and men, a daily non-effective rate from all diseases of 1.15 per 1,000 per annum occurred.

4. Medical Reports and Records

The speed of advance and the tempo of the warfare carried on during the month of August, posed very serious problems and barriers to the ability to keep medical reports and records current. Due to the fact that channels of communication were strained to the limit, and forward combat elements and rear administrative elements were continuously changing locations, many instances occurred in which it was almost impossible to prepare the required reports. Continuous front-line liaison by representatives of the Medical Section was necessary to provide such information. Due to constantly changing attachments and assignment of units, there was a considerable tendency towards confusion, inadequacy and unreliability of all medical reports. Every effort was made by all medical officers of all levels (Division, Corps, and Army) to remedy this situation, and during the last week of August, it became somewhat less confused. As an indication of the volume attained by the medical reports and records referred to, following is a brief summary of the reports handled during this month:

MD Form 51	303
MD Form 52 series	16,131
MD Form 8048	507
RTC U.S. Army, MD Form 310	310
RTC U.S. Army, MD Form 329	937
Monthly Venereal Disease Reports	59
Monthly Sanitary Reports	200
Miscellaneous	1,400
Total	20,147

5. Non-battle Injuries

Concurrent with the lightning-like advance of this Army, and the mass movement of armor and all types of supply and liaison vehicles, there was a marked increase in all non-battle injuries incurred during this month. The average rate per 1,000 per annum was 110 (details can be found in Annex VIII to this report). The increase in non-battle casualties was undoubtedly due to the presence of heavy traffic on the roads, together with long hours of driving and maximum efforts to keep essential supplies flowing forward to the fighting troops.

6. Army Medical Laboratory Service

An advance section of the 7th Medical Laboratory set up in VITRY (T-15) on 9 August. Complete equipment for this laboratory did not arrive until two days following, so that the base section did not begin operation until 12 August. One mobile section was dispatched to investigate an outbreak of diarrhea in the Rear Echelon of VIII Corps, on 14 August, returning to the organization two weeks later. Minor sanitary deficiencies were corrected and the outbreak controlled.

A venereal disease diagnostic section was established at the 6th Convalescent Hospital on 16 August, consisting of one Medical officer and two enlisted men. The section was established for diagnosis of primary syphilis and treatment of primary syphilis, chancroid, and complicated gonorrhea. The section also acted as a collecting point for laboratory specimens. From the commencement of its operation to the end of the month, this section performed twenty dark field examinations, eighteen urethral smears, and consulted in fifteen cases of venereal disease.

The highly mobile nature of the tactical operations made it necessary to divide the base laboratory into two sections performing similar functions, except where duplicate equipment or trained personnel were not available (e.g. pathology and complement fixation). Requisitions were submitted to obtain the necessary additional equipment to provide for this inadequacy.

Observations showed that the use of copper sulfate kits or solutions which had been distributed to evacuation and field hospitals was not completely understood by these units. An officer from the 7th Medical Laboratory was therefore assigned to cooperate with the surgical staff of one of the evacuation hospitals in evaluating this method as a guide to diagnosis and treatment of shock hemorrhage.

A breakdown of laboratory tests completed by the 7th Medical Laboratory during the month of August, is given below, the breakdown being by the section of the laboratory performing these tests.

SECTION	NO. OF TESTS	PERCENTAGE OF TOTAL
Serology	477	67.6
Bacteriology (Including water analysis)	145	20.6
Pathology (Including Dark Fields)	50	7.1
Chemistry	25	3.6
Parasitology	6	0.8
Hematology	2	0.3
	705	100.0

It must be pointed out that procedures in bacteriology and pathology consume a great deal more time and material than in serology and can not be evaluated on test-unit basis. Moreover, the chemistry section in addition to its technical work was charged with the function of supplying solutions and reagents to other sections of this laboratory and to all field units.

A breakdown of the same tests, by type of unit requesting same, is shown below:

TYPE OF UNIT	NO. OF UNITS	NO. OF TESTS	PERCENTAGE OF ALL TESTS
Evacuation Hospitals	13	442	62.7
Convalescent Hospitals	1	93	13.2
Engineer Units (Water Points)	15	62	8.8
Other Medical Installations	5	14	2.0
Tactical Organizations	22	94	13.3
	56	705	100.0

7. Sanitation

With the frequent and sometimes daily movement of water points, further revision of water supply control was found necessary. It became impractical to attempt submission of samples for bacteriological examination from each water point in accordance with principles set forth in Annex 16 to operation "OVERLORD." Accordingly, a directive was issued requiring inspection and submission of samples from each engineer water point at least monthly and whenever, in the judgment of Army, corps, and division surgeons such samples were deemed necessary to insure a proper supply of potable water.

As a result of bacteriological analyses of eighty-five water samples performed by the Army medical laboratory during the month of August, it was found that twenty-six of these samples were raw, untreated water, and therefore non-potable. Of the forty-nine remaining samples examined (treated), sixteen (thirty-three percent) were found to be non-potable due to fecal contamination; eight (sixteen percent) were found to be questionable; and twenty-five (fifty-one percent) were found to be potable. Though no serious outbreak of disease had occurred due to consumption of non-potable water, it was felt that the above analyses were indicative of a situation which might develop at some time to serious proportions.

Digitized by Google

Insect control required no more than minimum attention. A large number of hornets were constantly present at all messes throughout the Third U. S. Army area, but this constituted a nuisance problem rather than one of health. Absence of flies was noted in the presence of hornets and bees.

Other sanitary problems, such as sewage and waste disposal, were negligible, inasmuch as prior static conditions of the troops were now changed to rapid advance on all fronts.

CHAPTER 4
SEPTEMBER OPERATIONS

[redacted]

[redacted]

By the end of the first week in September the gasoline situation had become so acute that it was necessary to assign first priority on gasoline to units of the Army medical services. This priority was necessary particularly in regard to the medical supply evacuating Army hospitals to air strips in view of the distances involved. Evacuation of divisions was comparatively unaffected by the gasoline shortage inasmuch as Third U. S. Army hospitals were [redacted] part of the divisions.

The First Hospital Train Leaves YOKOHA with its Load of Patients (19 Sep 1964)

DECLASSIFIED

Digitized by Google

[illegible] Preparation of Wire in the Field Laboratory" by the [illegible] Hospital

[illegible] 6 September a drive was made to cross the MEUSE River. The enemy had had an opportunity to reorganize and dig in to resist this assault. As a result there was a very marked increase in all types of casualties admitted to division clearing stations. The highest casualty rates occurred in the 329th, 11th, and 3d Infantry Regiments of the 9th Infantry Division. On 10 September the clearing company of this division admitted 558 casualties of all types and the following day admitted 466. Due to the difference in type of warfare, the types of objectives, strong enemy opposition, the beginning of cold weather and the onset of heavy rains, there was also a proportionate increase in neuropsychiatric casualties in all divisions. Those divisions which had made every effort toward handling physical exhaustion and combat exhaustion cases in battalion and regimental areas, such as the 35th Infantry Division, 79th Infantry Division and 90th Infantry Division, continued to have a relatively low incidence of neuropsychiatric casualties. The 9th Infantry Division which had little or no provision for treatment of neuropsychiatric casualties at aid station level, and the 80th Infantry Division which had emphasized treatment of these cases at clearing station level showed a marked increase in neuropsychiatric casualties during this phase. In the 80th Infantry Division, neuropsychiatric casualties represented fifteen and eight-tenths percent of total admissions to the clearing station, and in the 9th Infantry Division twenty-four and four-tenths percent of all clearing station admissions for the month of September. The 90th Infantry Division created a convalescent station at clearing station level to prevent this influx of patients, including the slightly wounded, from leaving the division area so that they would not be lost to the division. In the 5th Infantry Division the division evacuation system and the clearing station were swamped with patients, which resulted in large numbers of patients being evacuated to evacuation hospital level. This resulted in overloading the Army evacuation

[illegible] dation of the evacuation hospital according [illegible]

[illegible] [illegible] [illegible] [

patient's own unit. Those broken or lost, however, required more skilled care and equipment than was feasible organically in forward units. At the end of September an additional dental clinic was established at the 32d Medical Depot Company for the purpose of providing prosthetic treatment in a location more accessible to a large number of troops than that normally afforded by the 6th Convalescent Hospital. It was possible to send these troops to the medical depot on trucks proceeding there for medical supplies.

On 8 September an additional dental prosthetic team reported to this Headquarters and was immediately placed on temporary duty with the 4th Armored Division, which was badly in need of assistance in repairing and replacing the dentures which had been broken and lost since that division arrived on the Continent.

Also during this month one of the three remaining dental prosthetic teams was transferred from its location at an evacuation hospital and attached to the 6th Armored Division.

The consolidated monthly report for September, shown below, indicated a considerable increase in September in the treatments rendered over the previous month:

	Sept
Strength (Reported)	213747
Admissions Routine	9709
Admissions Emergency	2979
Sittings	16610
Officer Personnel	306
Enlisted Personnel	301
Restorations	10582
Dentures	982
Gingivitis	911
Gingivitis Treatment	1443
Stomatitis, Vincent's	451
Stomatitis, Vincent's Treatment	1770

Of the reports received, approximately five and four-tenths percent of battle casualties admitted to Third U. S. Army hospitals during the month of September were maxillo-facial injuries. The death rate was approximately eight-tenths of one percent of those admitted with maxillo-facial injuries.

5. Veterinary

During the month of September thirty-five inspections were made of a total of fourteen Class I Supply Points, which were operated for varying periods of time during the month. The most common deficiency found was the failure to thoroughly police the areas of ration dumps. This was complicated by the arrival and departure of convoys at all hours of the day or night and by frequent rains. Government owned foodstuffs continued to arrive in a highly satisfactory condition. Only in the case of oranges and shell eggs was it necessary to recommend an increased basis of issue to avoid loss through spoilage.

Early in the month, approximately 1,200 metric tons (2,600,000 pounds) of German frozen carcass beef and 17,000 cans of roast beef (each weighing 850 grams), were found at a large, modern refrigeration and meat packing plant at MONTMEDY (U-72). Through contact with the owner of the plant, it was established that this food had been shipped from Germany to escape bomb damage and that the beef had been processed in the plant for the German Army. There was no evidence of sabotage.

During the month of September, in excess of 1,400,000 pounds of this captured beef was approved by the Army Surgeon and made available for issue to Third U. S. Army personnel. Large quantities of this meat were consumed by combat troops and provision was also made for distribution of generous quantities to medical installations handling patients. Distribution of the remainder of this meat was made to U. S. Army troops during the following month.

6. Personnel

During September the substitution of Medical Administrative Corps officers as assistant battalion surgeons, under the provisions of War Department Circular No. 99, 1944, was completed. Although it had been contemplated that substitution would result in the existence of a surplus of Medical Corps officers, such a surplus did not in fact result. After transfers of Medical Corps officers from units under Third U. S. Army with surpluses to units with shortages, it was found that the entire Third U. S. Army was almost exactly at an even Table of Organization strength with regard to Medical Corps officers. This was due to the absorption of the originally contemplated surplus by battle and non-battle casualties among Medical Corps officers.

Preliminary reports from division surgeons, concerning the efficiency and usefulness of the Medical Administrative Corps officers furnished as assistant battalion surgeons, were highly favorable. Only in isolated instances was it found that these officers were unequipped for the duties assigned to them.

Preliminary plans were made toward a rotation of Medical Corps officers. The plans were designed to effect permanent transfers of Medical officers with combat units to hospital units and vice versa. Due to the nature of the contemplated operations of Third U. S. Army, the rotation was planned to affect only the most deserving cases.

Section 4 - Medical Supply

Coincident with the decrease in forward movement of the combat elements of Third U. S. Army during the month of September was a lack of necessity for frequent movements of the two medical depot companies assigned to this Army. As of the end of August the 32d Medical Depot Company was located at FONTAINEBLEAU (U-24) and the 33d Medical Depot Company at JOINVILLE (T-27). During the first week of September an advance section of the 32d Medical Depot Company moved forward to VERDUN (U-26) to support corps and Army troops in that area. Immediately subsequent to this movement, steps were taken to move the entire depot consisting of approximately 35% long tons of medical supplies into this location. The entire depot opened in VERDUN at 081800 September.

At 201500 September, the 33d Medical Depot opened at TOUL (U-61), the movement having been accomplished by rail transportation consisting of thirty-five boxcars supplemented by two passenger cars.

The two depot companies remained at the above locations during the remainder of the month of September.

With the locations of the depots comparatively static a major effort was devoted to the actual procurement and distribution of medical supplies of all types. The Communications Zone had allocated a specific tonnage of supplies of all types which were to be transported to this Army by Communications Zone vehicles. As part of this total tonnage, approval was secured for the allocation of eighteen long tons daily of medical supplies. This allocation did not include supplies transported by Army transportation or supplies delivered by air. The railhead for Army medical supplies was designated by Communications Zone as SEZANNE (T-05). The modus operandi for reception of medical supplies was as follows:

Army requisitions were accepted by the Regulating Group who in turn forwarded them to Advance Section, Communications Zone. Requisitions reaching Advance Section, Communications Zone were sent out on daily telegram to the Communications Zone. Requisitions were filled by Communications Zone and forwarded to the Army railhead by Red Ball Express. The following tonnages were received from the Communications Zone by this method on the dates indicated:

13 September 1944	-	15 tons
14 September 1944	-	10 tons

By the middle of the month it became evident that the daily requisition for eighteen long tons of medical supplies for Army was not working out satisfactorily. Arrangements were therefore made to discontinue this procedure and requisition a ninety long ton maximum each ten days.

Delivery of medical supplies to the Army railhead, now located at SOMMEVOIRE (T-42) improved considerably during this period. Medical supplies in the amount of 128 tons were received on 16 September, ten tons on 18 September and 361 tons on 19 September.

Among items on which particular effort was necessary for procurement during this month were blankets and litters. These had become critical, largely due to losses sustained regarding such items in the process of air evacuation of patients. After it became apparent that emergency requisitions for these two items were becoming far too frequent, steps were taken to set a definite figure on the number of each item to be kept in reserve at each air strip. The figures arrived at were 4,000 blankets and 1,500 litters. All litters and blankets above these amounts were to be stocked in Army medical depots. A policy was also established with the Chief of the Supply Division, Office of the Chief Surgeon, European Theater of Operations, whereby blankets and litters used in air evacuation would be replaced daily on the basis of the number of patients evacuated and the number of blankets and litters needed to replace those lost. The Army Surgeon was to report this information each day by telephone, to Communications Zone, and Communications Zone, in turn, was to make arrangements to have replacements flown to the Army air strips.

In order to prepare the medical service for proper operation in winter, requirements were estimated and requested involving 26,400 blankets, 10,150 woolen pajamas and 800 stoves, tent.

Due to the fact that hospital messes, in general, were expanded to sizes not contemplated by Tables of Organization and Tables of Equipment, it was necessary that additional immersion water heaters be furnished for proper handling of the messes. Information was secured that these items were not available in this theater in quantities sufficient to warrant issues in excess of Tables of Equipment allowances. It was further stated, however, that efforts were being made to procure them and that hospital units would receive first priority when sufficient stocks were received.

During the latter part of the month it was also learned that practically all biologicals were now stocked on the Continent. A list was therefore procured of depots where stocks were maintained, and it was estimated that the movement of these biologicals to the points of consumption would now be greatly facilitated.

Lack of spare parts also became a major supply problem during this period. Maintenance sections of Army medical depots were unable to make some repairs on certain items due to this shortage. The difficulty was solved through agreement with the Communications Zone whereby a representative from Communications Zone medical depots, well qualified in maintenance and repair of medical equipment, was sent to the Army medical depots with a stock of maintenance equipment and spare parts. This aided materially in the program of repair and conservation of items of medical equipment.

Captured German medical supplies were found in the following locations:

Location	Type of Material and Equipment	Disposition
MONTREAU (U-48)	1 Ton of miscellaneous medical supplies	Stocked in 32d Medical Depot Company.
VERDUN (U-26)	20,000 pairs of pajama trousers	Stocked in 32d Medical Depot Company for reissue to hospital units.
COMTERCY (U-22) and vicinity	20 Tons miscellaneous Medical supplies	1-1/2 tons stocked in 33d Medical Depot Company, remainder to Communications Zone.
NANCY (U-81)	4 Tons miscellaneous Medical supplies	Stocked in 33d Medical Depot Company.

In addition to the above, twenty-two 15-KVA generators captured at TOUL (U-61) were taken over by the 32d Medical Depot Company for reissue to hospital units. Also, approximately 150 tons of coal captured at TROYES (T-37) and 8.77T (T-54), and fifteen tons of coal captured at NANCY were made available to hospital units.

The locations of Third U. S. Army medical depots during the month of September will be found in Annex VII to the Medical Section report.

Section 5 - Preventive Medicine

1. General

Due to the fact that the month of September was characterised by a slowing down of tactical operations, preventive medicine problems approached equal importance with those posed by the care of actual battle casualties.

2. Venereal Disease Control

"Off Limits" restrictions on troops entering towns and cities were lifted on 1 September. The presence of brothels, street walkers, and casual "pickups" in these towns and cities, therefore, resulted in an increase in the number of venereal disease contacts made by troops. A rise in the venereal disease rate was therefore to be expected. The rate rose from 8.82 per 1,000 per annum in the first week of the month to 32.56 per 1,000 per annum during the last week of the month.

During September, Army prophylactic stations were established at ORLEANS (N-44), CHATEAUDUN (N-45), FITHIVIERS (N-21), FONTAINEBLEAU (U-24), ST. DIZIER (U-12), BAR LE DUC (U-13), VERDUN (U-26) and COMERCY (U-22). Approximately 5,000 prophylactic treatments were given in these stations during this month. In addition, prophylactic stations were established by corps surgeons in the [illegible] towns in their respective areas.

CHAPTER X

[illegible] OPERATIONS

The most [illegible] of Third U. S. Army's [illegible] was the [illegible] of a large number of battle casualties since the summer [illegible] of operations. The fact that there was a [illegible] of improvements in Army hospitals was a further [illegible] of a cooperative will.

A month such as this was of [illegible] to benefit to the medical service. [illegible] medical services was [illegible] some instances, every all [illegible] it was [illegible] to all [illegible] of a careful study of the [illegible] of the previous [illegible] months of action. [illegible] are detailed [illegible] from evaluation [illegible] [illegible] and surgery [illegible] [illegible] [illegible]

hospitals were attached by corps to divisions. Most of the platoons made few or no moves and the problem of their employment became relatively simple. In addition, the 16th Field Hospital (less the first platoon) and the 59th Field Hospital (less the third platoon) augmented the air evacuation holding unit at TORI (U-61) for a time. Later in the month, all but one platoon were relieved of this mission. The second platoon of the 59th Field Hospital augmented the 12th Evacuation Hospital at BAINY (U-81) during the latter part of the month. At the close of the month XX Corps had two complete field hospitals, the 16th and 60th, while XI Corps had attached to it the 30th Field Hospital and the 59th Field Hospital (less the first platoon).

With the arrival of III Corps, it was planned to attach the 164th Field Hospital to this corps when it became operational. This was to depend, however, on where and when this corps went into action. The 65th Field Hospital was assigned to this Army but did not arrive in the Army area before the end of October.

Third U. S. Army commenced the month with one 750-bed and ten 400-bed evacuation hospitals. These consisted of the following:

12th Evacuation Hospital (750-bed)
32d Evacuation Hospital (HE)
34th Evacuation Hospital (HE)
35th Evacuation Hospital (HE)
59th Evacuation Hospital (HE)
101st Evacuation Hospital (HE)
103d Evacuation Hospital (HE)
106th Evacuation Hospital (HE)
108th Evacuation Hospital (HE)
109th Evacuation Hospital (HE)
110th Evacuation Hospital (HE)

The 110th Evacuation Hospital was relieved of assignment to this Army on 22 October and assigned to First U. S. Army.

The relative inactivity of combat troops during October was reflected in the comparatively slight changes in location of Army hospitals. Movement of hospitals, only four in number, was easily accomplished with available pooled transportation of medical units, as necessary. The decreased number of casualties likewise permitted two evacuation hospitals to remain closed for almost the entire month, thus providing a well-earned rest for those units. At the end of the month five 400-bed evacuation hospitals were in reserve, prepared to open in the same location or move, as the tactical situation required.

The locations of all evacuation hospitals and the convalescent hospital during the month of October will be found in Annex XIII to the Medical Section report.

During this month buildings were utilized to great advantage for housing of evacuation hospitals. The 12th Evacuation Hospital and the 34th Evacuation Hospital operated for the entire month in buildings. The 35th, 59th, 101st, and 106th Evacuation Hospitals made similar use of buildings during the greater part of the month. Toward the latter part of the month the 103d Evacuation Hospital had a portion of its station in buildings at BRIEY (U-67) and the remainder under tents in the adjacent grounds. The 106th Evacuation Hospital was in reserve most of the month and remained under tentage. The 32d Evacuation Hospital was in reserve and for part of the month occupied buildings in METZ (U-47) where it operated a small (25-bed) hospital. Only the 109th Evacuation Hospital remained in operation under tentage during the entire month, except during a short movement from DONCOURT-AUX-TEMPLIERS (U-55) to THIAUCOURT (U-44).

There were 3,000 beds available in hospital buildings in the vicinity of NANCY (U-81) and TOUL (U-61) supporting III Corps. Toward the end of the month, when the 35th and 59th Evacuation Hospitals closed in those respective locations, there still remained 2,000 beds available which could be readily increased by expansion of existing facilities. Similarly, there were 1,600 beds available in the XX Corps zone. Considering the number of casualties, the bed space available in both corps was more than ample.

The 6th Convalescent Hospital remained in the vicinity of ST MIHIEL (U-44) and on 30 October began to move to higher ground about two miles away. As there were less than 800 convalescent patients in the hospital it was expected that the move could be accomplished without difficulty.

A detailed analysis of battle casualties hospitalized during the month of October is shown below:

a. Number of wounded admitted "direct" (i.e., not by transfer):

Designation	Number
(1) U. S. Army Troops	9984
(2) British Army Troops	[illegible]
(3) French Army Troops	
(4) U. S. Navy and Marine Corps	
(5) British and French Navy	
(6) Enemy Forces Personnel	
(7) Civilians	
(8) Others - specify (b)(3)	

Note: All of the following in b through f pertains to U. S. Army troops only.

b. General Classification of Wounds:

(1) Serious	917
(2) Slight	207

c. Anatomical Classification of Wounds:
(Patients with multiple wounds are classified according to most extensive wounds).

	Admissions	Deaths
(1) Wounds other than burn:		
(a) Abdominal	181	24
(b) Thoracic	292	28
(c) Maxillo-facial	74	4
(d) Neurologic		
Head	282	27
Spine	38	2
Nerve	7	0
(e) Extremities		
Upper	88	1
Lower	1267	19
(f) Buttocks	213	7
(g) Other	38	3
Sub-total	2500	111
(2) Burns - all locations	60	6
Total	9984	117

d. Number of patients with multiple wounds: 1054 — 26

e. Classification of wounds by causative agents:

(1) Gunshot wounds (rifle, pistol, or machine gun)	1085	27
(2) Shell wounds (HE, flak, mortar, or cannon)	5941	71
(3) Bomb wounds (aerial, grenade, booby-trap, or mine)	237	8
(4) Blast injuries (bomb, shell, or mine)	161	1
(5) Wounds from secondary missiles	7	0
(6) Burns (petrol, flash, flame-thrower, phosphorus, etc.)	61	6
(7) Others (NEC and unclassified missiles)	176	4
Total	9984	117

f. Number of deaths by primary and secondary causes:

5. Veterinary

A total of twenty-seven inspections were made of Class I supply points during the month. Food stuffs continued to arrive at the distributing points in excellent condition. The most important problem was the prevention of damage and waste occasioned by inclement weather. This was largely prevented through adequate use of dunnage.

The inspection and issue of the captured German beef in storage at HERBECOURT (U-72), FRANCE, was completed during the month. A total of 22,150 pounds was condemned.

6. Personnel

Early in the month a directive was issued by this headquarters to commanders of evacuation hospitals, the convalescent hospital, and the two medical depot companies, clarifying the uses to which prisoners of war labor were to be put. Their attention was called to the fact that they must be maintained under strict military discipline, that routine inspections of prisoners of war and their quarters were to be conducted and that all like matters involving military discipline should be rigidly enforced. Conversations between American or Allied military personnel and prisoners were forbidden except in line of official duty. Separate messing hours, separate details and all similar countermeasures were to be taken, in order to avoid fraternization of any sort whatsoever.

The numbers of prisoners of war present in hospitals remained approximately the same as during the month of September. However, during October the medical depot companies were authorized to utilize fifty prisoners of war each, for labor details.

During August and September, considerable difficulty had been experienced in the filling of requisitions by this Army for nurses. Since the tables of organization of evacuation and field hospitals had cut the number of nurses allotted to a minimum, it was vital that when a nurse was lost to a unit, she be replaced immediately. On 17 October, therefore, ten nurses were assigned by Headquarters European Theater of Operations to Third U. S. Army for use as a pool, to fill present and future requisitions. These ten nurses were assigned for duty by this headquarters to various evacuation and field hospitals. In the event that requisitions for nurses were received, the requisitions would be filled rapidly from this pool. Under the plan, as the available pool of nurses diminished, they were to be reinforced by the further assignment of sufficient nurses to maintain the pool at a constant number of ten nurses.

It was tentatively planned that Third U. S. Army would make available five medical officers weekly for permanent transfer to Communications Zone general hospitals under a rotation policy being projected by the Chief Surgeon, European Theater of Operations, U. S. Army. Under the plan, preference would be given by this Army to medical officers over forty years of age who have had the longest service in line units under combat conditions. The Communications Zone would furnish replacements under thirty-five years of age, of company grade and fit for general service.

Shortages which occured during this month due to battle and non-battle casualties among Medical Department commissioned personnel were as follows:

Medical Corps	11
Medical Administrative Corps	19

Commissioned reinforcements of both categories continued to be difficult to obtain.

In order to aid in the ability to select proper assignments for patients of the Army medical installations being returned to duty, a directive was issued on 1 October, placing in effect the following classifications of duty status of patients being released from hospitals to reinforcement installations:

Class I - Full duty
Class II - Limited duty, but meeting the minimum requirements of MR 1-6, as amended.
Class III - Limited duty, but below the minimum standards as prescribed by MR 1-6, as amended.

Section 4 - Medical Supply

Due to the relative inactivity of combat troops during October, it was not necessary to move either of the two medical depot companies. The 324 Medical Depot Company remained at VIRTON (U-26) and the 334 Medical Depot Company remained at TOUL (U-81). The 334 Medical Depot Company continued to be minus its Advance Section which had been attached to Ninth U. S. Army in September.

A system was set up whereby one unit of torniere allocation regulations was furnished by [illegible] to the Army Surgeon, Chief Surgeon's Office, European Theater of Operations, where immediate action could be initiated. It was felt that such a procedure would alleviate occasional slowness in processing requirements through normal supply channels.

During the month the following deliveries of supplies were received from the Communications Zone:

2 October	20½ Long Tons
4 October	5 Long Tons
8 October (by air)	5 Long Tons
8 October	10 Long Tons
9 October (by air)	4 Long Tons
10 October	5¼ Long Tons
11 October	23 Long Tons
12 October	14½ Long Tons
14 October	57½ Long Tons
15 October	45½ Long Tons
16 October	5½ Long Tons
17 October	8 Long Tons
18 October	7½ Long Tons
19 October	14½ Long Tons
22 October	8½ Long Tons
23 October	6 Long Tons
25 October	11 Long Tons
26 October	5 Long Tons
27 October	14½ Long Tons
30 October	3 Long Tons
Total	295½ Long Tons

In order that complete knowledge of the status of medical supplies would be available, Army medical depot companies were directed to submit semi-monthly physical inventories to the Army Surgeon. These inventories were to show maximum and minimum levels of supply.

During this month, a requisition was placed on the Communications Zone for 100,000 ccs of typhoid vaccine, in order to meet requirements of current directives in the Theater, that all personnel receive booster shots.

Of the scarce items which had existed during the months of August and September, it was learned that brassards, Benzedrine inhalators, and terpin hydrate would be made available in the near future, the latter being an important ingredient of a cough mixture made up by Army pharmacists in connection with the treatment of upper respiratory diseases.

Major efforts were directed toward provision of Army medical units with supplies necessary for winterization. All hospital units were authorized to increase the number of blankets per bed, to five; the requisition covering this increase was to be based on total bed capacity. This authorization was ultimately extended to all medical units throughout the Army. In addition, 10,000 winter pajamas were requisitioned from the Communications Zone. Stoves and extra tentage were also authorized for use by the few hospitals still remaining under canvas and by other medical units. It was necessary to provide 125 additional ward tents in view of the approach of winter.

The 12Oth and 1O9th Evacuation Hospitals, still under canvas, were given lumber for experimental purposes to floor one ward tent each. Due to the problem of transporting the flooring, complete equipping of these hospitals was considered impractical at this time.

During October a pharmacy was established at each Army medical depot company for the preparation of pharmaceutical items to be issued to units not authorized the personnel or equipment to prepare these types of medicinal products.

Also during this month, transfusion sets, direct, were made available to Army hospitals on the basis of forty per evacuation hospital and thirty-six per field hospital.

Captured medical supplies during the month included approximately thirty tons captured at [illegible]NAG CITY (U-81) and NANCY (U-81). Equipment deemed of value to the Army was removed and placed in depot stock and the remainder, approximately fifteen tons, was released to the Communications Zone for further use and study.

Due to difficulties which had constantly occurred in medical units, in respect to generators, it was decided during October that procurement, storage, issue, maintenance, and repair of this item would henceforth be accomplished by engineer units rather than by the repair and maintenance sections of the two Army medical depots.

Section 5 - Preventive Medicine

1. General

The month of October was characterized by a moderate amount of rest and rehabilitation of combat units. During this period local contact with the enemy was maintained, but comparatively little hard fighting or sustained progress was made. As a result, battle casualties decreased and preventive medicine problems increased.

The month was characterized by heavy and frequent rains, and unseasonal cold, including snow and sleet. The rains were the heaviest in many years, causing the MOSELLE River and its tributaries to flood the lowlands. This increase in rain and cold made preventive medicine standards difficult to maintain. The subject will be discussed in more detail in paragraph 7, below.

2. Venereal Disease Control

During October, many line troops were given rest periods and the opportunity to visit some of the larger towns. This fact and the fact that many service troops were billeted in or near towns, were important factors in the rise of the venereal disease rate.

Army prophylactic stations were established in ST MIHIEL (U-41), NANCY (U-81), TOUL (U-81), and THIONVILLE (U-27). Stations set up during September in TOUL (U-81) and METZ-NANCY (U-47) continued in operation throughout October. During this month, 6,755 prophylactic treatments were given.

The supply of mechanical prophylactics was adequate. Two units reported an inadequate supply of individual chemical prophylactic units. An investigation revealed that there were no individual chemical prophylactic kits on hand for issue during the last week of October.

Individual venereal disease contact reports were received in 162 instances during the month. Only in rare cases was the information on these reports inadequate for the specific location of female contacts. Those reports having the necessary information were turned over to the Civil Affairs Public Health Officer for necessary action with the local authorities. The reports indicated a very low incidence of venereal disease among troops having station prophylactics.

As during previous months, letters were sent to all units with venereal disease rate above 100 per 1,000 per annum, calling the attention of the unit commanders to the fact that the control of venereal disease is a command responsibility.

During the four-week period ending 27 October, the average venereal disease rate was 91.05 per 1,000 per annum, based on an average mean strength of 241,000 officers and men.

The incidence of venereal disease during the month of October will be found in Annex #3 to the Medical Section report.

3. Communicable Diseases

Communicable diseases continued to be relatively few in number with the exception of upper respiratory diseases, which showed a slight increase, and venereal diseases which rose sharply.

During the third and fourth week of the period, approximately fifty percent of Third U. S. Army troops of all echelons had a mild form of bacillary dysentery and/or gastro-enteritis, which was apparently due to consumption of non-potable water. This outbreak was not serious, very few cases requiring hospitalization, and all responded quickly to proper sanitary measures and the use of sulfadiazine therapeutically. The extent of the outbreak and number of cases involved are not accurately reflected in Annex #1 to the Medical Section report, inasmuch as over ninety-five percent of the cases were treated on a duty status. The division (the 80th Infantry Division) suffered the most cases of bacillary dysentery, and Third U. S. Army Headquarters was the hardest hit with gastro-enteritis.

There were 568 cases of bacillary dysentery found in the 80th Infantry Division during the period 1 October to 14 October, exclusive. Since the observation was somewhat limited, this does not reflect the total number of cases. The organisms recovered in nineteen percent of the cases inspected recovery, fifteen to twenty-five percent) were of the Shigella paradysentery group. Water consumed by the troops was non-potable upon analysis and showed evidence of fecal contamination.

The outbreak of gastro-enteritis in Headquarters Third U. S. Army represented a percentage incidence of forty-seven and five-tenths percent of the personnel. Investigation of this outbreak by the 7th Medical Laboratory resulted in the conclusion that it was also water borne.

Digitized by Google

For a detailed breakdown of statistics on communicable diseases during October, see Annex IV to the Medical Section report.

c. Medical records

A total of [illegible] Medical Department reports were processed during the month, representing a substantial increase over the two previous months. As the result of continued efforts along these lines, the quality of these reports and the promptness of their rendition continued to improve.

5. Non-battle Injuries

A slight reduction in the incidence of non-battle injuries occurred during this month, the rate being [illegible] per 1,000 per annum, based on a mostly average strength of [illegible] officers and men.

Detailed statistics regarding non-battle injuries may be found in Annex XV to the Medical Section report.

6. Army Medical Laboratory Service

The base laboratory continued to be divided into two sections for operational purposes. Section I remained at NANCY [illegible] and Section II remained at NANCY [illegible] during the entire month. There were 8,560 tests performed during this month compared to the [illegible] during the previous month, an increase of approximately two hundred and sixty-three percent. Since the capacity of an Army medical laboratory is estimated at [illegible] tests per month, this represented an operational load of forty-two percent over its estimated capacity.

The total work is broken down for comparision with the previous month, as follows:

BASE LABORATORY	SEPTEMBER No. of Tests	SEPTEMBER % of Total	OCTOBER No. of Tests	OCTOBER % of Total
Serology	1525	[illegible]	[illegible]	61.2
Bacteriology	447	14.8	1340	15.6
Chemistry	41	2.5	83	1.0
Pathology	87	2.9	174	2.0
Parasitology	18	0.6	45	0.5
Parasitology	7	.2	70	.8
Subtotal	2125	70.4	7275	85.1
[illegible]				
General Hospital Section (6th Convalescent Hosp	402	16.5	1283	12.0
Shock Section				
94th Evac Hosp	170	5.6	208	2.7
Subtotal	926	29.6	1251	14.9
GRAND TOTAL	3038	100.0	8526	100.0

The significant changes are shown in the Venereal Disease Section where the volume of work doubled and in the Serology Section where the work practically tripled over that of the previous month. The increase in work in other sections reflected the relatively static phase of the Third U. S. Army, with consequent demand for more detailed medical services. The three-fold increase in bacteriology, however, was the result of water-borne dysentery, which is seasonal in character due to heavy pollution of streams. It is noteworthy that [illegible] in the Army area for the month of October was thirty percent above the average.

A breakdown of the above tests by type of unit requesting them during the month of October is shown below:

Type of Unit	No. of Units	Tests	No. of Units	Tests	Percentage of Total Tests
Evacuation Hospitals	13	[illegible]	[illegible]	[illegible]	46.2
Convalescent Hospital	1	[illegible]	[illegible]	[illegible]	15.0
Other Medical Installations	24	[illegible]	[illegible]	[illegible]	7.5
Tactical Organizations	114	[illegible]	[illegible]	[illegible]	31.3
Total	152	8526	[illegible]	[illegible]	100.0

7. Sanitation

The comparatively static tactical situation during the month, together with unseasonal weather, a scarcity of billets in an [illegible] and environment factors among the troops, rain and cold weather, with occasional snow and sleet proved varied, revolving threats of [illegible] problems affecting the health and well-being of the command. Rain fell in the Army area on twenty-eight of the thirty-one days of the month.

During the month many of the troops moved into buildings. The Army Headquarters itself moved into buildings in the city of NANCY [illegible]. Occasional bedbug infestation of buildings formerly occupied by German personnel were successfully combatted by proper housekeeping and the use of DDT powder, as well as a complete DDT spray.

Insects other than bedbugs did not constitute a problem. Flies, restricted in a few instances during the first part of the month, practically disappeared with the advent of colder weather.

The disposal of wastes, including garbage and refuse, became a difficult problem in some instances due to the limited number of sites available for this use. It became necessary to establish a few additional new disposal sites, with constant regulation and maintenance by military personnel, in the vicinity of troop concentrations. Instructions were issued by Administrative Orders of this Headquarters forbidding the establishment of dumps within the Army area without the approval of the Army Surgeon.

A continued shortage of overshoes increased the health hazards to the troops from water and mud throughout the area. Efforts of the Army Quartermaster were continued unremittingly and toward the end of the month receipts of this item were increasing, and the shortage was alleviated.

The outbreaks of diarrhea, gastro-enteritis, and/or bacillary dysentery, discussed in a previous section of this report, were considered to be, to a large extent, water-borne. In this connection, work had been in progress for sometime to change the standard military method of treatment of water because of conditions pre-out in water sources throughout this Theater. Water on the Continent had been found to be more turbid and more contaminated with organic matter than that found in any similar condition in the United States. Efforts were being made to provide a method of water treatment which would include a one-hour period for coagulation, settling and preschlorination, followed by filtration at reduced rates in order to insure the availability of water more closely approaching medical standards. The change in procedure recommended was calculated to give greater assurance of the removal of the cysts of endamoeba histolytica where the water source was so contaminated. The results obtained by the new method of treatment led eventually to adoption of this method throughout the entire Theater.

It was felt that the increasing incidence of diarrheal diseases was by no means entirely due to heretofore imperfect methods of water treatment. In view of this fact, a directive was also issued toward the end of October emphasizing again the constant need for water discipline among the troops, to the end that water for drinking and culinary purposes would be obtained only from an engineer water point or distributing point and from no other source, unless adequately treated and approved by competent medical authorities. Disinfection and sterilization of all water containers was also directed.

A summary of analyses of water collected from engineer water points during October indicates a marked improvement in the qualities of the water processed and only [illegible] samples dropped from twenty-one percent in September to twelve percent in October. With adoption of the recommended new method of operating the engineer water units, further improvement was confidently expected.

Evacuation hospital occupying a French Military Hospital in NANCY [illegible].

CHAPTER 6
NOVEMBER OPERATIONS

November was a welcome month for Third U. S. Army, and the Medical Department was no exception in this regard. The attitude of this Army has been characterized by restlessness since its first commitment in action, and progress in some direction is its only cure. On 8 November, amid some of the most violent storms and floods that had raged for over three decades in the sector assigned to Third U. S. Army, it began the arduous push from the MOSEL R iver to the SAAR and the German Border.

The encirclement of METZ (U-05) by XX Corps on the northern flank and progression by the III Corps toward the SAAR on the southern flank necessitated river crossings of the MOSELLE and smaller rivers, under flood conditions of an unprecedented nature. Under such conditions troops were often exposed to water, snow and sleet for days at a time. All precautions possible from a tactical standpoint were taken, but in spite of these, Third U. S. Army had its first cases of trench foot in significant numbers. Extraordinary measures taken will be described elsewhere in this report.

The enemy had had time to dig in, and the results are reflected in the fact that battle casualties quadrupled over those of the previous and relatively static month.

The locations of Army medical units, particularly of hospitals, had been established so far forward by the end of October that only five additional zones of evacuation hospitals were required during November to support our advance.

November was a welcome month, but a hard one.

Section 1 - Organization of the Medical Section

Although the Medical Section continued to operate with a Forward and Rear Echelon in the same manner as during the three previous months, in November these echelons were located within approximately a city block of each other.

On 9 November a new Army Veterinarian joined the Medical Section, having been transferred from Headquarters Ninth U. S. Army. This officer replaced the previous Army Veterinarian who was transferred in August to Headquarters European Theater of Operations.

Section 2 - Operations

1. Training

Impetus was given to extensive training in means and methods of prevention of trench foot. This was definitely considered to be a command function, and secretaries and primary effort was directed toward proper education of personnel with command responsibilities.

An officer from the Medical Section attended the course on "Information and Education" offered by Headquarters European Theater of Operations.

2. Evacuation

There was no change in the general plan for evacuation. The 66th and 67th Medical Groups continued to evacuate the divisions of XX and III Corps respectively. Plans were made for evacuation of III Corps by the 66th Medical Group. However, this corps did not commence operations during the month of November. The 66th Medical Group was therefore held in reserve and many of its units reattached to other medical groups during the month. On 30 November the 67th Medical Group was relieved of assignment to Third U. S. Army and its mission was given at that time to the 66th Medical Group.

The 67th Medical Group continued to evacuate the majority of Army hospitals. Advance Section, Communications Zone ambulance companies did not evacuate more than three Army hospitals at any one time during November. They did, however, provide ambulance service at the Army air rail medical evacuation holding unit at TOUL (U-01) as well as at air and rail medical evacuation holding units operated by Advance Section, Communications Zone in support of the Army area.

Many new medical units, including six medical collecting companies and two clearing companies, had been assigned to Third U. S. Army during the previous month. Two of the collecting companies arrived in the Army area by the end of November.

CONFIDENTIAL

Digitized by Google

The use of facilities for evacuation by road from Army hospitals increased markedly. More than two-thirds of a total of 18,587 patients were evacuated by road, with 5,413 being evacuated by rail and only 5ch by air. The change in these statistics was largely a technicality. During November general hospitals were opened in much closer support of the Army, and by the end of the month all medical holding units for purposes of evacuation from Army areas were being operated by Advance Section, Communications Zone units. Since statistics on evacuation from Army are based on the type of conveyance used from the Army installation to the supporting "service" installation, it was only natural that with general hospitals in such close support the majority of the evacuation from the Army area should be by road. As a matter of general information, it must be pointed out that many of the patients included in the total for road evacuation were further transported by rail or air from the Advance Section, Communications Zone medical holding unit in the Army area.

At the beginning of the month of November, the air/rail medical evacuation holding unit operated by the 94th Medical Gas Treatment Battalion remained adjacent to the air field at TOUL (U-61). Air evacuation was actually available at this field on only four days during the month. Repeated efforts were made to increase air evacuation from this field, but the use of the field by tactical fighter units, coupled with many days of poor weather, hampered all such attempts. It was impossible on most days for planes based in the United Kingdom to make a round trip in the few hours of good flying weather. The policy of higher headquarters prohibited the use of Continental based planes and also the evacuation of patients to the PARIS (S-CL) area by air. Evacuation of patients to PARIS (S-CL) by air was also not feasible because of the fact that the unloading personnel and capacity of the medical holding units there were not adequate to handle incoming traffic in addition to the large volume of patients being evacuated by air from the general hospitals in the PARIS (S-CL) area.

On 21 November, the air/rail medical evacuation holding unit at TOUL (U-61) closed. During the remainder of the month, Advance Section, Communications Zone operated the three medical holding units at NANCY (U-81), TOUL (U-61), and ETAIN (U-47). At the latter location both air and rail evacuation were available throughout November. At NANCY (U-81) and at TOUL (U-61) the medical holding units operated by Advance Section, Communications Zone were purely for purposes of rail evacuation.

Minor alterations in evacuation policy were made as needs arose, especially following the offensive begun by Third U. S. Army on 8 November. During the week 8 to 14 November, facilities were seriously taxed. A peak was reached of more than 2,100 patients evacuated from division clearing stations to evacuation hospitals in one day.

Slightly wounded casualties were burdening the hospitals, and arrangements were made to send these patients directly from the ambulance regulating post operated in NANCY (U-81) by the 67th Medical Group to the air/rail medical evacuation holding unit at TOUL (U-61) still operated at that time by the 94th Medical Gas Treatment Battalion. More than 800 slightly wounded patients were admitted directly to this holding unit without being treated or processed at an evacuation hospital. Wounded prisoners of war casualties were evacuated in the same manner, and in addition, many prisoner of war casualties who had been treated at Army evacuation hospitals were sent from these units direct to the 50th General Hospital (an Advance Section, Communications Zone unit) at COMMERCY (U-42), by-passing the holding unit at TOUL (U-61). Daily quotas were given to each Army hospital for evacuation back to the Communications Zone and to the 6th Convalescent Hospital. This was necessary to regulate the flow from the Army area and to prevent flooding of rear installations.

The locations of evacuation facilities in the Third U. S. Army during the entire month will be found in Annex XVI to the Medical Section report.

3. Hospitalization

The use of field hospitals remained much the same as in the past but was given greater flexibility through greater use of auxiliary units.

Each corps had available a field hospital platoon for each of its divisions and an additional platoon for corps reserve. The XII Corps employed the 10th and 60th Field Hospitals and the XX Corps employed the 30th and 59th Field Hospitals (less the first platoon). The First Platoon, 59th Field Hospital remained attached to the 94th Medical Gas Treatment Battalion, augmenting the medical holding unit operated by that battalion at TOUL (U-61). The facilities of field hospital platoons in support of divisions were augmented by several means. Both corps used some type of holding unit to take over the non-transportable patients from the field hospital platoon when it displaced forward. This prevented undue immobilization of the platoons due to the presence of post-operative patients requiring several days' care before they would become transportable. The holding units were formed in XII Corps from the two medical collecting companies of the corps medical battalion. The XX Corps personnel were obtained from the two clearing platoons attached to the corps. In each instance the field hospital platoon augmented the holding unit with surgical and nursing personnel according to the number of patients left behind when it moved forward.

In addition to the use of holding units, it was possible for XII Corps to leapfrog field hospital platoons. The fact that an armored division and an infantry division were frequently operating in the same center made it possible to permit only one field hospital platoon in support of both divisions, holding the remaining platoon in readiness for movement.

Transportation for movement of field hospital platoons was furnished in many instances by Army medical units. In other cases, it was obtained from corps medical units. A few divisions, however, were able to utilize division transportation to effect the movement of the field hospital platoon attached to them. In every case the source of transportation depended on other operational considerations. Most movements were planned at least twenty-four hours in advance, and transportation from some source could then be more easily arranged.

As of 1 November, Third U. S. Army had assigned to it the same evacuation hospitals as on 1 October with the exception that the 110th Evacuation Hospital had been relieved of assignment and transferred to First U. S. Army.

All evacuation hospitals operated in buildings during this month with the exception of the 109th Evacuation Hospital which remained under tents throughout the month. The use of buildings by hospitals was considered essential for the welfare of the patients, and hospitals were given priority in the choice and selection of available buildings, wherever possible.

It was found that the operation of a hospital in buildings was less economical in the use of personnel than when functioning in the field. As previously, the hospitals were augmented by collecting and/or clearing company personnel. The usual attachment to an evacuation hospital consisted of a litter bearer platoon of a medical collecting company and one platoon, where possible, of a clearing company. Quartermaster service troops were attached to serve at the hospitals and civilian help was likewise employed where necessary. Prisoner of war labor was used only in those hospitals which remained located more than twelve miles from organized enemy resistance.

During the period immediately following 8 November surgical backlogs as high as 200 were encountered in some hospitals. A total of four surgical and eight shock teams were obtained on temporary duty from the 50th General Hospital in COMMERCY (U-42) and the 90th, 95th, and 100th General Hospitals in BAR-LE-DUC (U-12), through arrangement with the Surgeon, Advance Section, Communications Zone. Likewise, thirty-four additional nurses from Communications Zone hospitals were attached to Army hospitals for a short period of temporary duty. When their parent hospitals opened later in the month these teams and nurses were returned and a group of four surgical and four shock teams and thirty-five nurses was obtained from the 50th General Hospital in COMMERCY (U-42) which was not yet operational.

The peak hospital census was reached on 18 November when all Third U. S. Army hospitals, including the 6th Convalescent Hospital, had a total of 9,752 patients. At that time the hospitals had an expanded capacity of 8,921, although their normal capacity without additional personnel would have been 7,350. One evacuation hospital expanded on 17 November to 857, more than twice its normal capacity.

There was no difficulty encountered in the movement of hospitals since the ten evacuation hospitals occupied only fifteen locations during the month. However, the location of suitable new sites presented some difficulty. In accordance with the policy of using covered accommodations, reconnaissance for new sites was done with a view to finding suitable buildings. In XX Corps zone of advance such buildings were scarce. In XII Corps zone there were a number of towns with barracks which could be converted to accommodate evacuation hospitals. Although hospitals were given priority over other service units, the availability of some buildings was delayed due to occupation by tactical units. On other occasions, a change in plans was necessitated. Where buildings were not immediately available, consideration was given to moving a hospital to the field in order to maintain close support. However, representatives of the Engineer Section who accompanied reconnaissance parties strongly advised against this because of the poor terrain which would require considerable road construction and maintenance. Fortunately, with few delays, buildings were found in all new locations.

Transportation for movement of evacuation hospitals was obtained exclusively from Army medical units. The gradual accumulation of more personnel and more equipment by all hospitals continually raised the transportation requirements. For example, the 36th Evacuation Hospital which moved from [illegible] (Z-34) to METZ (U-95) transported ninety two-and-one-half-ton trucks and eighty one-ton trailer loads of equipment and personnel. Besides this, some personnel were moved by ambulance. In all, the hospital hauled about four and one-half times the amount that could be carried on its organic vehicles.

The 6th Convalescent Hospital remained in operation in the vicinity of ST MIHIEL (U-44) until 27 November. Reconnaissance was made for a new site and a large group of barracks was found at [illegible] (Q-15). Movement to the new site was not made during the month. Essentially, though officially closed, the convalescent hospital continued to receive patients with venereal diseases.

Locations of hospitals during November are shown in Annex XVII to the Medical Section report.

An analysis of wounded personnel by types hospitalized during the month of November is shown below:

a. Number of wounded admitted "direct" (i.e., not by transfer):

Designation	Number
(1) U. S. Army Troops	13,406
(2) British Army Troops	[illegible]
(3) French Army Troops	[illegible]

4. Additional Temporary Medical Service

The 92d Medical Gas Treatment Battalion, less certain elements, continued to be held in reserve for use in the event of the employment of chemical warfare by the enemy.

Section 3 - Professional Services

1. General

With the resumption of the offensive beginning on 8 November there was an expected increase in total battle casualties. The number increased from 3,581 in October to 13,406 in November. However, in addition to this total for November, which involves actual wounds and/or burns, there were during the month 4,587 cases of trench foot, almost all of them were evacuated to the Communications Zone.

The percent of deaths to total dispositions from all causes in Third U. S. Army medical installations during this month was one per-cent, representing a very slight increase over the previous month.

2. Surgery

Of the 13,406 battle casualties admitted during the month the number of serious injuries totalled 2,928 and slightly injured 10,478 men.

The addition of 4,587 cases of trench foot to the total number of battle casualties did not reflect an accurate total of all battle casualties inasmuch as many cases with battle wounds developed this complication because of the cold and rain and the fact that because of these conditions it was at times difficult to evacuate casualties early from the battlefield. With a campaign to stress the command responsibility in the proper care of the feet and the prevention of trench foot, the number of casualties from this source was reduced. It was found in regard to trench foot that surgical measures were not of any great value and paravertebral block was found to be of little use in those cases where the condition was well established.

In some sections of the front, large mine fields were encountered and this fact was reflected in an increase in injuries to the lower extremities, with a higher number of amputations being necessary than in any previous like period. There were 160 amputations of the lower extremities required as against forty-six during the previous month.

A higher incidence of gas gangrene also occurred, there being six-

Digitized by Google

Digitized by Google

tion cases in October and forty-eight in November. The majority of such cases were present in wounds of the extremities, and the increase was undoubtedly a result of the combination of factors involving unfavorable weather and consequent slower evacuation.

5. Neuropsychiatry

The incidence of neuropsychiatric casualties in Third U. S. Army during the month of November was influenced by several factors. This Army, which has swept across France and emerged in prolonged and static warfare along the MOSELLE River and before METZ (U-84), now bores the slow and arduous push from the MOSELLE river to the SAAR and the German border. The weather had become extremely cold with sleet, snow, and ice. Water crossings were necessary, and the Third U. S. Army had been unable to obtain enough overshoes to equip it completely. Many divisions had been in combat since D-Day; others since the Third U. S. Army became operational on 1 August 1944. Each division had instituted rest areas at the battalion division areas, regimental train areas, or the division rear, to which tired men were sent for one to three days to rest and resupply themselves. A Third U. S. Army rest center in NANCY (U-41) was functioning in a more than adequate manner for units of the III Corps. Aesters of the line, divisional officers, and nurses were being sent for three-day rest periods in PARIS (S-OL) at the rate of 500 per month from the Army. Every effort was being made from the standpoint of command to combat cold and fatigue. The combat soldier was supplied with one hot meal or some hot elements with one meal daily wherever humanly possible, which resulted in hot foods being brought to his position after dark. The 10th Armored Division was placed in the line ready for its first combat. The entire 90th and all or a part of the 4th and 6th Armored Divisions were placed in reserve between 1 November and 9 November.

On 8 November and 9 November, Third U. S. Army attached on a front extending from SIERCK (Q-09) to a point half-way between NANCY (U-81) and CHARMES (Z-97). Enemy opposition was fierce along the entire line, and particularly in the never-conquered city of METZ (U-85). Casualty rates pyramided as of 8 November, and by the end of the month of November, the total non-fatal casualties (including diseases) amounted to 30,492, which was an all-time monthly high for this Army.

The incidence of neuropsychiatric casualties compared to the total non-fatal casualties have been for four months as follows:

August	7.4 Percent
September	10.5 "
October	10.5 "
November	9.1 "

The influx of more than 30,000 patients in a period of thirty days resulted in shorter periods of care at aid stations, clearing stations, evacuation hospitals, and the convalescent hospital. Of the 4,338 neuropsychiatric casualties, 911 were returned to duty at division clearing station level, this being somewhat fewer than were returned from the same level in previous months. This was due to the fact that clearing companies were highly mobile, frequently moved, and fewer patients could be held at that level. Evacuation hospitals each received from 1,100 to 5,000 patients, and the convalescent hospital was, in many instances, filled to capacity. As a result, only 2,220, or sixty-six and five-tenths percent of the neuropsychiatric casualties were returned to duty. The divisions sustained from 2,000 to 4,800 non-fatal casualties; however, the neuropsychiatric rate was lower than it had been since August.

4. Dental

The three prosthetic dental teams assigned to the 4th Auxiliary Surgical Group, as well as an additional prosthetic team loaned to this Army by the Communications Zone in October, were used throughout November in division areas. During this month it was also demonstrated that the mobility of these teams was of a high order and that little working time was lost due to movements of division units.

The English bus-type dental laboratory truck placed on detached service in October with this Army continued to work at the location of the 12th Evacuation Hospital in NANCY (U-81).

The dental clinic previously established at the 6th Convalescent Hospital consisted of a total of seven dental officers, together with appropriate enlisted assistants. Although the clinic was closed for an entire week, it processed 156 prosthetic cases, and 401 restorations were inserted during the month of November, in addition to routine examinations and other treatments.

During the first week of the month an investigation was made into a new anti-concussion device being made for personnel in a 155-mm field artillery gun battalion by a dental officer of that unit. Approximately thirty of these devices had been made and were being tried under actual firing conditions. Praise for them was unanimous by all individuals who used them. The devices were being made of dental-type acrylic, and through a process of successive molds with a dental material were constructed to fit the individual ear.

Facilities were provided in the 3rd Medical Depot Company to complete these devices for the entire field artillery battalion in order that a more comprehensive survey could be made concerning the results that accrued. In order to economize on the time of the men assigned to the field artillery battalion the impressions of the ears were made in the battalion area, were processed in the medical depot company laboratory, and the devices were then brought back to the battalion where they were individually fitted. It was found that when the men were made readily available in the battalion area it was possible for the dental officer and his two assistants to take impressions of the ears of approximately 100 men in one day. Laboratory work necessary for processing that many devices required approximately five days. Thus it was possible to complete anti-concussion devices for 100 men in six to seven days, or approximately two weeks for a battalion.

Dental clinics at the two medical depot companies operated for approximately three weeks during the month. One clinic treated ninety-five prosthetic cases, and the other clinic 107 prosthetic cases, completing the laboratory work on sixty-two additional cases.

Approximately five and three-tenths percent of battle casualty admissions to hospitals during the month were maxillo-facial injuries, there being a total of 721 such cases. Among these cases there were seven deaths, or ninety-eight one-hundredths of one percent of the maxillo-facial cases admitted.

Following is a chart showing the number of dental treatments accomplished throughout the Army during the month of November:

Strength Reported	236117
Admissions Acutae	11,498
Admissions Emergency	2902
Sittings	20,941
Officer Personnel	502
Enlisted Personnel	321
Restorations	1,502
Fixtures	1427
Gingivitis	805
Gingivitis Treatment	1,043
Stomatitis, Vincent's	374
Stomatitis, Vincent's Treatment	716

5. Veterinary

Inspections were made of forty-four Class I supply points, five division ration breakdown areas, five messes and two quartermaster bakeries during November. It was again noted that food usually arrived at the railhead in good condition and that major efforts must be toward the prevention of waste and deterioration after arrival. Inclement weather and the sanitary conditions which result, continued to be the major problem. Dunnage and pallets were the chief means employed to avoid damage.

Subsequent to the fall of METZ (U-85), approximately 100 tons of carcass fresh beef and twenty tons of carcass fresh pork were discovered frozen in the city abattoir which belonged to the civilians. German garrison stores consisted of canned beef, canned corned beef, cheese and sardines. This supply was issued to Third U. S. Army troops after being carefully inspected. In addition to meat, there was flour, canned plums and dehydrated vegetables.

6. Personnel

In response to a letter from the Chief Surgeon, European Theater of Operations, U. S. Army, recommendations were made to the Chief of Staff, through the AC of S, G-1, this headquarters, regarding a proposed policy for rotation of Medical Department officers between Communications Zone installations and Army installations. It was recommended that five Medical Department officers weekly be recommended for permanent rotation from this Army based on the age of the officer, his length of time in his present unit, length of service in combat, professional and military qualifications. These officers were to be replaced by the Communications Zone with officers under thirty-five years of age and fit for general military service. Emphasis was to be placed on the permanent rotation of medical officers from combat units such as divisions. It was further recommended that two medical officers from each 400-bed evacuation hospital, three from the 750-bed evacuation hospital, and six from the Auxiliary Surgical Group be made available for temporary rotation to Communications Zone hospitals for a sixty-day period only, these officers to be replaced temporarily by medical officers of like professional qualifications during each sixty-day period. The above recommendations were incorporated later in the month in an improvement to the letter from the Chief Surgeon, European Theater of Operations, U. S. Army.

Due to a high rate of casualties in this Army as a result of its offensive commenced on 8 November, it was necessary to secure the additional surgical and shock teams as well as nurses on temporary duty from general hospitals, mentioned previously in this report.

Shortages in Medical Corps officers increased from eleven during the previous month to seventeen by the end of November. Shortages also continued to exist in Medical administrative Corps officers, in which there was a shortage of twenty-one at the conclusion of the month. Also the establishment of a pool of ten nurses assigned to this Army in October, to be kept at a constant level, tables of organization shortages did not exist in the Army Nurse Corps. However, as will be noted from the above, tables of organization no longer provide adequate nursing personnel during a period of extended military operations.

During this month a directive was issued to the effect that all medical units would turn back all prisoners of war being used as labor to advance Section, Communications Zone prisoner of war inclosures prior to entering Germany. Several hospitals had already turned in prisoners of war due to the fact that they were operating close to the front lines and to the German border. Two quartermaster service companies were placed at the disposal of the Army Surgeon in lieu of prisoner of war labor and their use in hospitals was projected during this month.

Section 4 - Medical Supply

Movements of the Army medical depot companies were again at a minimum. On 7 November Advance Section Number 1 of the 92d Medical Depot Company opened in METZ (U-79) to support more closely the troops of XX Corps. No other movements of medical depots occurred.

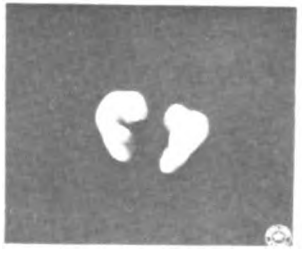
Delivery of medical supplies by Communications Zone had fallen off shortly after the middle of October. On 14 November, a survey was made and it was discovered that of 130 tons requisitioned since 15 October only twenty-two and one-half tons had been received. This was resulting in a critically short supply of many back-ordered items. During the month a total of 438 long tons of medical supplies was actually delivered to Army medical depots. However, the majority of these supplies was secured by sending Army transportation to the Communications Zone depots which involved long trips by forward transportation.

In the middle of the month, 250,000 ccs of typhus vaccine were secured from Communications Zone medical depots to be used in typhus inoculations throughout Third U. S. Army.

Among other unusual items which were procured were 215 sets of litter brackets to be used in making litter attachments on jeeps within Third U. S. Army divisions. These brackets were distributed to medical detachments of forward elements of divisions, to engineer battalions, and to other similar units. The Army Engineer were available 500 rolls of captured "Hessian" matting and these were placed in stock at the 93d Medical Depot Company for issue to hospitals and air/rail medical evacuation holding units for use as flooring. Action was also initiated during this month to increase the allowance of pajama suits, winter, to 1,000 per evacuation hospital. Also, 44,000 copper sulfate pads were made available to each division. These were issued to individual soldiers for their protection against white phosphorous burns.

Disproportionate exchanges of blankets were being effected at air evacuation holding units. Steps were taken during the last week of November to remedy this situation and a proper method of exchange was finally accommodated early in the following month through the timely cooperation of the Supply Division, Office of the Chief Surgeon, European Theater of Operations, U. S. Army.

During the month a new plan for delivery of blood to hospitals was instituted. Under this plan, two blood trucks serviced each corps area daily, one of these carrying blood for evacuation hospitals only, and one for field hospital platoons only. The trucks destined for field hospital platoons would report to the corps medical battalion, a representative of which would accompany and guide the truck to its destination. In addition, each corps medical battalion was to keep on hand thirty or forty pints of blood and several hundred units of penicillin. Necessary refrigerators for this purpose were authorized to the corps medical battalions.



A small quantity of captured medical supplies was found in two military hospitals and the police hospital in METZ (U-85) toward the close of the month. A small percentage of this was placed in stock in Army medical depots and the rest released to Civil Affairs and Advance Section, Communications Zone. A representative of the Medical Intelli-

Digitized by Google

gence Branch, Office of the Chief Surgeon, European Theater of Operations visited this office to investigate new items of captured medical material. Most important of the items studied were a new type gas casualty kit, several types of trench and insecticide powder, and some anti-frostbite ointment. Samples of these items were shipped to the Medical Equipment Laboratory, Carlisle Barracks, Pennsylvania, for further investigation.

Section 3 - Preventive Medicine

1. General

During this month there was heavy fighting throughout the Third U. S. Army area, characterized by difficult river crossings over the MOSELLE and SAAR Rivers and the assault of METZ (U-25). Heavy and frequent rains continued, with temperatures ranging from the low thirties to the low forties. The tactical situation and frequent troop movements throughout the period made preventive medicine standards difficult to maintain.

2. Venereal Disease Control

The venereal disease rate remained high for the first two weeks of November. However, with the onset of heavy fighting beginning on 8 November a moderate decrease in the incidence of venereal disease was noticeable. During the period the weekly rates varied between 31.61 and 18.64 per 1,000 per annum. The average for the period was 21.47 per 1,000 per annum, based on an average mean strength of 240,288 officers and men.

Prophylactic stations were established in TOUL (U-61), ST NICHOLAS (U-90), and ESCH (P-70). During the month 15,834 prophylactic treatments were given in Army operated prophylactic stations. The supply of mechanical and individual chemical prophylactic units was adequate.

Venereal disease contact reports were received on 512 individuals. The reports showed an increase in the number of cases of syphilis. Those reports which contained the necessary information for identification of the contact were turned over to Civil Affairs and the Provost Marshal for necessary action.

The practice of sending letters to commanders of units with rates above 100 per 1,000 per annum was continued.

For a weekly breakdown of figures showing the incidence of venereal disease during the month of November see Annex XVIII to the Medical Section report.

3. Communicable Diseases

Communicable diseases continued to constitute a minor problem. Upper respiratory infections showed a sharp seasonal increase.

Diarrheal diseases rose moderately during the fourth and fifth weeks of the period. No single factor was responsible and there was no clinical or bacteriological evidence of a new disease entity such as "virus diarrhea" as was reported by the First and Ninth U. S. Armies. Investigations (chemical and laboratory) revealed that most of the cases were of bacillary origin or due to food poisoning. It was felt that lowered sanitation standards under difficult conditions of active combat and consumption of unauthorized food, drink and water were responsible for the increase. No specific outbreaks occurred, the cases being uniformly spread throughout Third U. S. Army.

A detailed breakdown of statistics on communicable diseases in November will be found in Annex XVIII of the Medical Section report.

4. Medical Records

The total number of records and reports processed during the month reached a new high of 14,450. Their quality and promptness of rendition continued to improve.

5. Non-battle Injuries

The rate in this category increased to 14.5 per 1,000 per annum, based on a weekly average of 240,288 officers and men. Exclusive of the above figures, however, there also occurred a tremendous increase in the number of trench foot cases. From 8 November to the end of the month trench foot constituted a serious and major problem to this Army. Due to the necessity for constant exposure of the men's feet to water and cold, a sharp increase in this type of casualty occurred.

In this connection it was estimated that sixty-five percent of all men developing trench foot would probably be of no further value for combat during, at least, the winter months. However, the experience of this Army with trench foot was not extensive enough to be absolutely certain on this point.

A policy was established of evacuating patients with trench foot to the Communications Zone for further treatment and evaluation.

All possible efforts were made toward prevention of trench foot inasmuch as specific treatment has not yet been developed for this condition. All echelons of command were made fully cognizant of their responsibilities in this respect.

Daily statistics showing the incidence of trench foot as revealed by total admissions to division clearing stations is shown below:

DATE	CASES
8 November	11
9 November	21
10 November	129
11 November	387
12 November	501
13 November	432
14 November	424
15 November	433
16 November	431
17 November	126
18 November	193
19 November	104
20 November	78
21 November	92
22 November	98
23 November	199
24 November	225
25 November	81
26 November	150
27 November	152
28 November	70
29 November	76
30 November	165
Total	3987

The downward trend of these statistics after the peak had been reached reflects the beneficial results of instruction and education toward prevention and superhuman efforts of all concerned to keep the men supplied with dry socks and overshoes.

Differences between the figures given above and those shown in Annex XVIII to the Medical Section report are due to the fact that the latter are based on reports from the respective organizations in which the cases occurred. Later changes in diagnoses accounts for the fact that the above figures reflect a greater number of cases, being based on reports from evacuation agencies.

6. Army Medical Laboratory Service

The 7th Medical Laboratory continued to operate throughout the month in two sections as follows:

Section I - SAMPIGNY (U-32)
Section II - NANCY (U-81)

There were 8,177 tests performed during the month, or 349 less than the tests performed in October. This represented only a five percent drop from the peak load and was surprisingly small considering the mobile state of the tactical situation. The total remained well over the estimated capacity of an Army Medical Laboratory of 6,000 tests per month.

The above total of tests, by section performing them is broken down below:

BASE LABORATORY SECTIONS	NO. OF TESTS	PERCENTAGE OF TOTAL
Serology	5272	64.4
Bacteriology	1110	13.6
Chemistry	467	5.7
Pathology	169	2.1
Hematology	53	0.7
Parasitology	105	1.3
Sub-total	7176	87.8
MOBILE SECTIONS:		
Venereal Disease Section (6th Convalescent Hosp)	746	9.1
Shoes Section (60th Field Hosp)	255	3.1
Sub-total	1001	12.2
GRAND TOTAL	8177	100.0

The drop largely occurred in the mobile venereal disease section due to the temporary closing of the 6th Convalescent Hospital. Also the elimination in the laboratory itself of unnecessary water examinations. There was also a drop in the number of stool samples submitted.

A breakdown of the above tests by type of unit requesting them during the month of November is shown below:

TYPE OF UNIT	NO. OF UNITS	NO. OF TESTS	PERCENTAGE OF ALL TESTS
Evacuation Hospitals	11	2259	27.6
Convalescent Hospital	1	2519	30.8
Other Medical Installations	23	790	9.7
Tactical Organizations	172	2609	31.9
TOTAL	207	8177	100.0

7. Sanitation

The cumulative effect of continuous rains during the month, with abnormal precipitation during the latter phase of this period, resulted in aggravated mud conditions and record floods in practically all of the streams. These conditions of the terrain, coupled with heavy type fighting and low temperatures throughout the Army area, contributed to the high incidence of upper respiratory infections and trench foot discussed above.

Problems from insects and rodents were at a minimum during the month. Only a few instances of bedbug infestation were encountered and prompt correction was effected through the use of DDT preparations.

Garbage and refuse disposal presented few problems. Authorized military dumps were established in areas having a concentration of troops.

A shortage of overshoes which was acute during the month of October was corrected during November to a great extent.

During the month there were sporadic cases of diarrhea, but a definite total reduction over the previous month. In no instance could the cases be proven attributable to a specific cause. In two instances frozen food was suspected, and in one instance discrepancies in water discipline and mess sanitation were indicated. Steps were taken in every instance to reemphasize sanitation in all its phases. The summary of analyses of water samples from engineer water points showed further gratifying improvement in the potability of the water produced. Non-potable samples dropped from twelve percent in October to six percent of those examined in November. General application of the modified method of operating water purification units projected in October was in actual effect in Army, Corps and Division engineer units during November.

Representatives of the Office of the Chief Surgeon and the Office of the Chief Engineer, European Theater of Operations, visited the area to investigate the modified water treatment policy in effect throughout Third U. S. Army. The methods employed were favorably considered for adoption throughout the European Theater of Operations.

CHAPTER 7
DECEMBER OPERATIONS

The progression of the Third U. S. Army in an easterly direction up to and across the German Border and constant preparation for a major attack on the SIEGFRIED LINE led to a consequent disposition of medical units to support these operations. Relentless efforts in regard to the problem of cold injuries (trench foot and frostbite) on the part of the respective commands produced definite results and decreases in this type of injury.

In December, for the first time, Third U. S. Army overran German enclosures which contained a mixture of Allied prisoners of war and Allied displaced personnel. The medical care of these abandoned personnel who were sick or wounded became the responsibility of the Medical Department. Since there was a high percentage of morbidity among them, the Medical Department assumed responsibility for a large proportion.

Digitized by Google

Late in the month, the movement of medical units to the north, in order to support the attack of the Third U. S. Army on the southern flank of the ARDENNES bulge, was achieved with a speed as incredible as the shift of the combat elements involved.

The details of all of the above circumstances will be found below in this chapter.

Section 1 - Organization of the Medical Section

There was no change in the physical organizational setup of the Medical Section during this month.

Shortly after the breakthrough of the Germans in the ARDENNES area, an officer from this section was placed on temporary duty with Headquarters III Corps, and one with Headquarters VIII Corps for liaison purposes. This action was necessitated by the fact that operations were somewhat nebulous during the first few days, and were also initially being carried on at a considerable distance from the location of this headquarters.

Four enlisted men from the Medical Section were furnished for training as riflemen. These men were not replaced in the section.

Section 2 - Operations

1. Training

One officer, each, from the 65th and 66th Medical Groups attended the course on "Information and Education" offered by Headquarters European Theater of Operations at Cite Universitaire, PARIS (T-24). Requests were also submitted during the month to the AC of S, G-1 for allotment to medical units of a proportionate share of future quotas for attendance at other courses to be held at the Army Information-Education Staff School.

Officers and nurses of the 65th Field Hospital were placed on temporary duty with various hospitals for orientation purposes. The 65th Medical Group was given the responsibility of training this unit.

2. Evacuation

When the III Corps became operational on 6 December with the mission of mopping up in METZ (U-85), the 66th Medical Group assumed the responsibility for medical evacuation of this corps, in addition to its responsibility for evacuation of XII Corps. This was possible due to the fact that the latter corps was assigned a front on the SAAR River, stretching roughly from SAARBURG (L-11) to SAARBRUCKEN (Q-47), although the former had not yet been approached closely. The sector surrounding METZ (U-85) covered by III Corps was geographically in the rear of this area; and the 66th Medical Group, which was located in METZ (U-85), was in an admirable position to combine evacuation of both corps. By 15 December, the evacuation of all isolated forts at METZ (U-85) had been completed, and III Corps was assigned a sector on the SAAR River front to the south of XX Corps, and responsibility for its evacuation was at that time taken over by the 65th Medical Group, located at MORHANGE (Q-23). A corps medical battalion had been attached to III Corps prior to its commencement of operations, consisting of Headquarters and Headquarters Detachment, 152d Medical Battalion, 411th Medical Collecting Company, and the 608th Clearing Company. This battalion was later augmented by the attachment of the 667th Medical Collecting Company. On 22 December, the 608th Clearing Company was relieved by the 624th Clearing Company.

Exciting days prevailed for this Army beginning 20 December, when it was given the mission of bringing pressure on the southern flank of the German bulge in the ARDENNES area to crush the German counter-offensive. The III Corps moved north to the vicinity of ARLON (P-62), and became operational in the area north of that point on 20 December. XII Corps followed two days later, moving to the vicinity of LUXEMBOURG CITY (P-81). The 65th Medical Group continued to support both of these corps during the movement of the corps and their units, establishing its own headquarters at ESCH (P-70).

VIII Corps was established west of III Corps, and was being evacuated by the 64th Medical Group. This corps was assigned to Third U. S. Army, effective 21 December. The 64th Medical Group was not actually assigned by order until 26 December, but continued to evacuate this corps, except that it was relieved of the responsibility of evacuating the evacuation hospitals in its area. The latter function was assumed by the 69th Medical Group, which moved north to ESCH (P-70). Close cooperation between the 64th and 65th Medical Groups during this period resulted in smooth evacuation in situations where the division of responsibility was not always clear.

Units attached to the 64th Medical Group, in support of VIII Corps, included the following:

Sq A Hq Det, 170th Med Bn	595th Amb Co, Mtr
Sq A Hq Det, 240th Med Bn	6234 Clearing Company
580th Amb Co, Mtr	42d Field Hospital
581st Amb Co, Mtr	107th Evac Hosp (Mtr)
590th Amb Co, Mtr	110th Evac Hosp (Mtr)

An unusual problem developed as a result of the isolation at BASTOGNE (P-55) of the 101st Airborne Division and elements of the 9th and 10th Armored Divisions. Evacuation of casualties from these forces was not possible for a period of about six days; and, as a result of the capture of the medical company of the 101st Airborne Division, the units isolated were supported essentially by first echelon medical personnel, only. Intensive liaison activity by representatives of the Army Surgeon and of the III and VIII Corps Surgeons, under particularly difficult conditions, early established the fact that approximately 1,000 casualties were present in BASTOGNE (P-55), who would require third echelon medical care when the breakthrough to that town was completed. As an initial step, medical supplies were dropped to the besieged forces on 23, 24, and 25 December. Meanwhile, alternate plans were developed for the provision of third echelon medical care, as well as evacuation in the event that the breakthrough by the 4th Armored Division and the 80th Infantry Division occurred on any given day. The former aspect will be discussed below under the heading, "Surgery". The breakthrough actually occurred on 26 December, and on the following day, 652 of the 1,150 casualties in the town were evacuated by units of the 64th Medical Group.

To support the 101st Airborne Division and its attached units, a provisional medical battalion was formed. It included the Headquarters and Headquarters Detachment, 439th Medical Battalion, the 695th Medical Collecting Company, and Company "A", 92d Medical Gas Treatment Battalion. These units were gathered from their various and distant locations and dispatched to the vicinity of BASTOGNE (P-55) on 27 December. The first two units mentioned were relieved of this attachment on 31 December, and Company "A" of the 92d Medical Gas Treatment Battalion continued its mission of operating a clearing company for the relieved forces until transfer of that division, early in January, to the Seventh U. S. Army.

To regulate casualty flow to hospitals supporting VIII, III, and XII Corps, the 64th Medical Group established an ambulance regulating post at VIRTON (P-41), and the 65th Medical Group established similar posts at ARLON (P-61) and at LUXEMBOURG CITY (P-81).

The 69th Medical Group, assisted by ambulance companies of the Advance Section, Communications Zone, continued its mission of evacuating Army hospitals. Advance Section, Communications Zone, gradually assumed responsibility for evacuation of a total of five evacuation hospitals, as well as the provisional hospital operated by the 92d Medical Gas Treatment Battalion at THIONVILLE (U-88). In addition, Advance Section, Communications Zone, furnished ambulance service to all medical holding units supporting this Army.

The movement of Army medical troops to the southern flank of the bulge constituted a transportation achievement comparable to that of the mass movement of armor and infantry units to the same point. Movement was accomplished by infiltration, and generous credit is due to the respective Sections of G-3 and G-4 of this headquarters, without whose cooperation the achievement would not have been attained.

Four new medical collecting companies (the 413th, 660th, 667th, and 687th) and two new clearing companies (the 606th and 624th) arrived in the Army area during the month. At the end of this period, there were still four medical collecting companies and one clearing company assigned by order to Third U. S. Army which had not yet arrived.

On 26 December, the 606th Clearing Company was attached to the 64th Medical Group, which had its headquarters at VERDUN (P-25). The platoons of this clearing company were subsequently employed to operate two Army clearing stations west of the MEUSE River in support of tactical units, which included the 17th Airborne Division then protecting that river. This constituted the first orthodox use of an Army clearing company since Third U. S. Army became operational. Patients from these clearing platoons were evacuated directly to the 170th General Hospital (a Communications Zone unit) located at REIMS (V-05). Prior to the assignment of this mission to the 606th Clearing Company, the evacuation of the 17th Airborne Division and the 11th Armored Division in this area had been provided by two provisional clearing companies formed from a Communications Zone hospital located in REIMS (V-05).

The Army air/rail medical evacuation holding unit, operated by the 64th Medical Gas Treatment Battalion, was located throughout the month at THIONVILLE (U-88). The unit opened at this location on 6 December, and two days later railroad facilities, as well as air evacuation, became available at that point. During the month, 1,741 patients were evacuated from this unit by air. This represented a minority of those evacuated, but was a considerable increase over the month of November. It was also accomplished during a period marked by snow and murky weather. When the axis of the Army turned north, the air/rail medical evacuation holding unit was still in an excellent position to support the hospitals.

Advance Section, Communications Zone continued to operate an air/rail evacuation holding unit at STAIN (U-47) and HARCY (U-81). The latter unit, however, had only rail evacuation facilities available. An additional field hospital of Advance Section, Communications Zone moved to HARCY (U-81) early in December, and operated an auxiliary rail evacuation holding unit until the end of the month when it was closed and prepared for movement to the north.

A total of 24,092 patients were evacuated from Third U. S. Army during the month. In addition to the 1,741 evacuated by air, 12,886 were evacuated by road to Advance Section, Communications Zone medical holding units, or to general hospitals, and 9,465 were evacuated by rail.

The locations of evacuation facilities throughout the month are shown in Annex XIA to the Medical Section report.

3. Hospitalization

The attachment of field hospitals and their platoons remained rather stable until after 16 December. The 65th Field Hospital arrived in the Army area early in the month, and was attached to the 65th Medical Group for orientation purposes.

The mass movement of divisions which occurred after the third week of the month resulted in considerable changes in the attachment of field hospital platoons. Some of the platoons accompanied the divisions to which they were attached on all movements, but others remained behind to support new divisions. One platoon, the 3d Platoon of the 60th Field Hospital, completed the following odyssey of attachments during December: XII Corps, III Corps, XX Corps, XII Corps and III Corps. At the end of the month, the following attachments of field hospitals were in effect:

III Corps	XII Corps	XX Corps
16th Fld Hosp	1st Plat, 30th Fld Hosp	2d Plat, 30th Fld Hosp
2d Plat, 59th Fld Hosp	3d Plat, 30th Fld Hosp	3d Plat, 59th Fld Hosp
3d Plat, 60th Fld Hosp	2d Plat, 42d Fld Hosp	
	2d Plat, 60th Fld Hosp	

64th Medical Group	65th Medical Group	69th Medical Group
1st Plat, 42d Fld Hosp	65th Fld Hosp	1st Plat, 59th Fld Hosp
3d Plat, 42d Fld Hosp		
1st Plat, 60th Fld Hosp		

The 42d Field Hospital was assigned to Third U. S. Army concurrently with the assignment of VIII Corps, and its various units. It had been attached to the 64th Medical Group, and was supporting the divisions of VIII Corps at the time of the German counteroffensive. The first platoon was in support of the 28th Infantry Division at WILTZ (P-75) with twenty-two non-transportable patients on hand. On 18 December, trucks were obtained and the bulk of the equipment and personnel of this platoon was removed to BASTOGNE (P-55). However, two officers, including the platoon commander, and sixteen enlisted men of the platoon, plus one general surgical team (minus nurses) from the 3d Auxiliary Surgical Group remained with the non-transportable patients. All of these personnel were captured. On the following day, the remaining personnel were removed from BASTOGNE (P-55), but it was necessary to leave the equipment behind. The third platoon of this hospital was in support of the 106th Infantry Division at ST VITH (P-88). On 17 December, the majority of the personnel withdrew, and on the following day all patients and remaining personnel, except two enlisted men, left to guard the equipment, withdrew from ST VITH (P-88). The equipment and two enlisted men were also presumed to have been captured.

In general, field hospital platoons were employed in accordance with past procedure. Through the use of holding units, consisting of a headquarters and station platoon of a medical collecting company, it was possible to free these platoons for earlier movement in support of division clearing stations when the latter displaced forward.

An innovation in the use of a field hospital in Third U. S. Army was the employment in the latter part of the month of the 65th Field Hospital as a single unit. This hospital actually opened on 31 Decem-

Digitized by Google

ber at ARLON (P-62) with a capacity of approximately 200 beds. The capacity was limited by the size of the building available to this unit. The attachment of the 65th Field Hospital to the 65th Medical Group continued in its new operation.

During the first two weeks of December, movements of evacuation hospitals were deemed necessary to support an impending attack westward by PATTON'S U. S. Army through the ARLON-BASTOGNE LINE. The 95th and 107th Evacuation Hospitals had moved east to VITRY (Q-25) and BAYLAY-MONTOIR (Q-06) respectively. The 105th Evacuation Hospital was closed at METZ (U-67) and prepared to move east to CHATTENAID (Q-26). The 10Lth Evacuation Hospital began a move to MERIBEUX (Q-42), a move which was never completed due to subsequent radical changes in plans.

Following the German counteroffensive, the great majority of the evacuation hospitals and other medical units had to be moved north to support the Army effort in that direction. The 105th, 95th, 113th, 109th, and 101st Evacuation Hospitals moved in that order to respective new locations at LUNEVILLE (P-49), VITRY (P-41), LUXEMBOURG CITY (U-81), MONTMEDY (P-25) and ARLON (P-62). The 16th Evacuation Hospital remained open at NANCY (U-81), and was the only Third U. S. Army hospital south of METZ (U-65) at the end of the month. Meanwhile, arrangements were being made for a new site for the 12th Evacuation Hospital in LUXEMBOURG CITY (U-81).

Two additional evacuation hospitals became Third U. S. Army units during the month. The 107th Evacuation Hospital, located in the vicinity of CLERVAUX (P-48) on 16 December was closed and prepared to move. The 110th Evacuation Hospital was open at ESCH (P-70) and remained there throughout the month. The 107th Evacuation Hospital was required in a period of seven days to make three retrograde movements and was located during this period at LIBIN (P-25), CARLSBOURG (P-02) and at SEDAN (P-05). This hospital, in an eighty-two-hour period at LIBIN (P-25) admitted 781 patients and performed 326 surgical operations. There were 400 patients in the hospital when the next move became necessary. In a space of three hours, 500 patients were loaded in ambulances for evacuation to the 130th General Hospital at CHEST (P-19). Several times during this period the hospital was directly in the line of advance of the enemy forces and hasty departures were in order. On the move from LIBIN (P-25) it was necessary to leave a volunteer detachment of five officers and fifty enlisted men with the remaining patients and equipment. However, all the personnel and the greater part of the equipment were recovered later.

The 6th Convalescent Hospital was reopened early in December at ST MIHIEL (U-44) with a capacity of 1,500 beds. It opened in ZEMMING (Q-15) on 15 December. Due to subsequent changes in the tactical situation after 16 December, the location at ZEMMING (Q-15) became far from ideal, and a new site was selected at MONTIGNY-LES-METZ (U-45) in the vicinity of METZ (U-65). By the end of the month, the unit completed its movement to the new location, but had not yet opened.

An analysis of wounded hospitalized in the month of December is shown below:

a. Number of wounded admitted "direct" (i.e., not by transfer):

(1)	U. S. Army Troops	11405
(2)	British Army Troops	0
(3)	French Army Troops	25
(4)	U. S. Navy and Marine Corps	1
(5)	British and French Navy	0
(6)	Enemy Forces Personnel	167
(7)	Civilians	277
(8)	Others	29

Note: All of the following in b through f pertains to U. S. Army troops only.

b. General classification of wounds:

(1)	Serious	5326
(2)	Slight	6118

c. Anatomical classification of wounds:
(Patients with multiple wounds are classified according to most extensive wounds).

		Admissions	Deaths
(1)	Wounds other than burns:		
	(a) Abdominal	596	88
	(b) Thoracic	1136	176
	(c) Maxillo-facial	803	3
	(d) Neurologic:		
	Head	347	177
	Spine	219	15
	Nerve	10	0
	(e) Extremities:		
	Upper	2236	10
	Lower	3798	40
	(f) Buttocks	761	11
	(g) Others	891	12
	Sub-total	11358	343
(2)	Burns - all locations	137	1
	Total	11495	344

d. Number patients with multiple wounds 3183

e. Classification of wounds by causative agents:

		Admissions	Deaths
(1)	Gunshot wounds (rifle, pistol, or machine gun)	2937	83
(2)	Shell wounds (HE, Flak, mortar, or cannon)	6081	204
(3)	Bomb wounds (aerial, grenade, booby trap, or mine)	447	7
(4)	Blast injuries (bomb, shell, or mine)	388	8
(5)	Wounds from secondary missiles	61	1
(6)	Burns (petrol, flash, flame-thrower, phosphorus, etc.)	178	2
(7)	Others	583	9
	Total	11495	344

f. Number of deaths by primary and secondary causes:

Locations of hospitals during December will be found in Annex XX to the Medical Section report.

4. Additional Temporary Medical Service

The 60th Medical Group provided medical care and evacuation for three groups of Allied military prisoners recovered during the month at DIEDING (Q-16), CREUTZWALD (Q-26) and SARREGUEMINES (Q-55). On 13 December, the Commanding Officer, 69th Medical Group assumed command of the camp at DIEDING (Q-16). There were approximately 800 Russian and Italian prisoners at CREUTZWALD (Q-26), about 110 being bedridden, eighty-five percent of these with nutritional deficiencies. At SARREGUEMINES (Q-55) there were 100 prisoner patients who required immediate evacuation because the prisoner of war enclosure was under enemy artillery fire. Arrangements were made to evacuate these patients to the 36th Evacuation Hospital at METZ (U-86), and the 64th Medical Treatment Battalion at THIONVILLE (C-84). The bedridden patients at CREUTZWALD (Q-26) were transferred to the camp at DIEDING (Q-16) which was being operated as a medical installation. Arrangements were completed with Advance Section, Communications Zone for evacuation of about 500 patients from DIEDING (Q-16) and for eventual operation of the camp there by Advance Section, Communications Zone. Conforming with this plan, 300 patients were evacuated to the air/rail medical evacuation holding unit at THIONVILLE (C-84) to await rail evacuation to the Communications Zone. On 19 December, these patients were still at THIONVILLE (C-84). Because of an expected flood of battle casualties, these 300 patients were, therefore, returned to DIEDING (Q-16) to give the air/rail medical evacuation holding unit necessary bed space for battle casualties.

Section 3 - Professional Services

1. General

Total battle casualties during the month of December, involving actual wounds and/or burns amounted to 11,095. In addition to this total, there were 2,852 cases of trench foot and twenty-one cases of frostbite admitted to all division, corps, and Army clearing stations during this month. Approximately 600 cases were returned to duty at clearing station level, and an additional estimated 300 cases returned to duty from hospitals.

Based on total dispositions from all causes in Third U. S. Army medical installations, there was a mortality rate of one percent during this month.

2. Surgery

As will be seen from the above figures, the surgical services of Army hospital units were extremely busy in December. The fact that only 314 deaths occurred among the total battle casualties mentioned above reflects a high degree of experience and skill attained by the entire Army Medical Service.

A study of the detailed statistics presented in the paragraph devoted to "Hospitalization" in Section 2 of this report reveals an interesting breakdown of these figures according to regions of the body effected. The largest group comprises wounds of the extremities and involves 5,625 cases, or approximately sixty percent of the total battle casualties. Of these cases, only fifty died, and the great majority of the remaining cases will eventually return to duty. It is in this salvage role that the Army evacuation hospital is doing its greatest service in the present war. However, the low mortality rate in the entire Army is a great accomplishment, and is a result of a combination of the efforts of all medical personnel, from the battalion aid station on back to the rearmost hospital.

Mortality rates were as low as any in military history. The figures which support this conclusion are shown below:

TYPE OF WOUND	NUMBER	NUMBER OF DEATHS	MORTALITY RATE
Wounds of the Abdomen	559	82	14%
Chest Injuries	1149	70	6%
Head Injuries	787	77	10%
Buckshot Wounds of the Spine	213	6	2.8%
Wounds of the Buttocks	561	11	2%
Burns	137	1	0.7%

One of the epics of this war was the magnificent stand of the 101st Airborne Division, together with one combat command each of the 9th and 10th Armored Divisions, at BASTOGNE (P-55), where they were cut off for approximately ten days until the 4th Armored Division and the 80th Infantry Division broke into the pocket to relieve them. When these divisions were cut off, they were completely without surgical personnel. The only medical personnel available to them were in the various medical detachments of the divisions concerned. These medical officers were equipped neither with experience nor instruments for major surgical procedures.

Outside of the pocket a field hospital platoon, with surgical team attached, was held in readiness to rush into the besieged town as soon as a corridor was established. In addition, another field hospital platoon with its surgical team was set up just outside the encircling ring to care for those casualties which could be transported out after relief of the forces. Other measures taken are described in Section 2 of the Medical Section report, under the sub-section devoted to "Evacuation".

With the relief of the forces not yet established, a general surgeon flew into BASTOGNE (P-55) by liaison plane on 25 December. On the following day three more general surgeons, an orthopedic surgeon, an anesthetist, and four enlisted technicians were flown in by glider. In both cases, enemy fire was encountered, but all personnel and their equipment arrived safely.

The make-shift hospital consisted of a large garage with one very large room and a small adjoining room. Approximately 150 seriously wounded men were in the large room on litters and straw pallets. Four battalion aid station surgeons, who had treated all casualties until the arrival of this medical relief, were completely exhausted. The general surgeon who had flown in by liaison plane had set up an operating room in the small adjoining room. All casualties other than the most seriously wounded were scattered throughout the town in cellars, basements, and other buildings. In the garage there was no heat, and there was only one light in the larger room.

The supply of blood was very low, as most of the containers had been broken when dropped by parachute on the previous day. However, the supply of plasma was plentiful. The garage had apparently been the site of a field hospital that had hastily withdrawn prior to encirclement. Part of the hospital equipment had been left behind. An operating lamp and an autoclave were available. The surgical teams which had flown in had on hand all the surgical instruments necessary to go into immediate operation.

Within one and one-half hours, all the patients in the garage were carefully triaged by the surgical teams. Those cases that required immediate surgery were selected, and priority for surgery was thereby established. Four operating tables were set up in the small room by placing litters on tables. Two anesthetists, one of whom had accompanied the surgical teams, and the other of whom was a battalion aid station surgeon with the 10th Armored Division, alternated between the operating tables. The medical officers from the 101st Airborne Division medical detachments provided medical care for those patients in the large room. Operations were begun by 261830, and continued throughout the night until the following noon.

Concurrent with the arrival of relief on 27 December, which included twenty-three ambulances of the 64th Medical Group, a truckload of blood also arrived early in the afternoon. After a few hours' rest, the surgeons were back at work. With the evacuation of part of the casualties, the situation was greatly alleviated. The hospital was then organized into a pre-operative and post-operative section with a consequent improvement in the post-operative care. The surgeons again operated throughout the entire night until the following afternoon (28 December), when all patients were evacuated and a field hospital platoon (1st Platoon, 60th Field Hospital) went into operation in the area. In all, fifty major operations were performed, with only three post-operative deaths occurring.

During this period, bombing and shelling of the hospital area was intermittent. On the night of 27 December, a bomb landed near the hospital and blew in the door of the hospital room, and considerable plaster fell from the ceiling. For a time, operations had to be continued by flash light.

The services of three Belgian women were secured to assist in the care of the wounded. No drapes or gowns were available, and sterile towels were used about the wounds. The wounds of the patients were from two to eight days old, with the average case about three days old.

Mortality rates were gratifyingly low in spite of the handicaps encountered. It is noteworthy that casualties in the BASTOGNE (P-55) area are included in the figures quoted in the beginning of this section.

3. Neuropsychiatry

During the first week of December, slow but steady advances were continued until Third U. S. Army was disposed along the SAAR River and within the boundries of Germany along that river on a front of sixty miles. SAARLAUTERN (Q-28) and SARREGUEMINES (Q-55) were taken.

Enemy resistance was, at all times, stiff, and our casualties high. It had been the experience of this Army that a tactical situation which included severe artillery fire from the enemy, resulting in more or less placing down our own troops, usually resulted in a higher neuropsychiatric rate. A slight increase during the first two weeks of December was therefore to be expected. By the end of the second week the situation again became somewhat static, and at the end of the third week, Third U. S. Army divisions were drawn from their positions and moved rapidly northward. The number of neuropsychiatric cases, therefore, evened itself off and resulted, for the entire month, in a percentage less than that which occurred during the previous month.

The figures for the month of December revealed that there were 33,222 non-fatal casualties, which was a reduction over those suffered in November. Of these, 1,587 were neuropsychiatric cases, or seven and seven-tenths percent of the total non-battle casualties. Seventy-five percent of these were returned to duty from either division clearing station or hospital level.

DECLASSIFIED

THE FLIGHT

Digitized by Google

TO BASTOGNE

Digitized by Google

A survey revealed that from 1 August to 31 October, there had been 1[illegible] admissions from all installations from all causes, sick and injured. Of these, [illegible] were admitted for neuropsychiatric reasons. A total of [illegible] were admitted for neuropsychiatric incidents as low over a 3-month period. Of the [illegible] cases, [illegible] were returned to duty, either from a forward psychiatric unit, or from [illegible]. Of the [illegible] cases which were not returned to duty, but were evacuated from the Army area, [illegible], [illegible] constitutional psychopathic states, mental deficiencies, and through progressive neurological diseases characterized the primary causes.

4. Dental

The dental service for the month of November followed much the same course as it did in October. In spite of difficulties attending the movement of troops as they attempted to [illegible] during the first ten days, and the [illegible] for protection of units participating in the southern flank of the [illegible] during the latter part of the month, more dental treatments were accomplished than during the month of November. A chart showing the breakdown of these treatments follows:

Strength (Reported)----------	2[illegible]70
Aid Station, Routine----------	1[illegible]4
Aid Station, Emergency--------	[illegible]
Division Dives----------	27[illegible]
Officer Personnel----------	[illegible]
Enlisted Personnel----------	[illegible]
Prosthetics----------	16[illegible]
Dentures----------	17[illegible]
Gingivitis----------	1[illegible]
Gingivitis Treatments----------	1[illegible]
Stomatitis----------	[illegible]
Stomatitis Treatments--------	[illegible]

The processing of acrylic anti-concussion devices had been further refined so that they were more comfortable and more effective than before. Previously, the thickness and size of these devices had resulted in their bumping against the helmet during strenuous exertion by the wearer. Another chance in the device consisted of shortening the part which fits in the cavity of the ear. This improvement allowed a greater volume of air between the device and the eardrum, and afforded greater protection against the shock waves produced by the blast effect of heavy artillery, which normally caused damage to the inner ear. With improvements also made in the design of flasks and presses used in the processing of the devices, together with the production of a smaller size, it was possible to speed up the processing to the point where the production could be completed for the first personnel of an entire battalion, consisting of approximately 17% officers and enlisted men, within ten days.

The percentage of maxillo-facial injuries to the total casualties admitted to hospitals during the month was six and nine-tenths percent, there being a total of [illegible] such cases. Three deaths occurred as the result of maxillo-facial injuries, constituting thirty-seven one-hundredths of one percent of all maxillo-facial cases admitted during December.

5. Veterinary

Inspections were made of twenty-one Class I supply points, four division ration breaks or dumps, two messes, and one quartermaster bakery. Some improvement was noted in the proper utilization of dumps. Sanitary conditions were also better, due to the arrest of freezer weather, with a consequent diminishing in the mud. The problem of fresh supplies freezing, however, arose during December and caused some difficulty.

On 10 December [illegible] pounds of fresh beef was inspected, which had been captured by liberating troops. This beef was found to be in good condition, and was turned over to Civil Affairs representatives.

6. Personnel

The names of five Medical Corps officers were submitted to the Chief Surgeon, European Theater of Operations, for permanent rotation to general hospitals in the Communications Zone. All of these officers have been in combat units for over two years, and had served in actual combat with these units since D-Day.

The names of twenty-seven Medical Corps specialists from evacuation hospitals, the intermediate hospital, and the auxiliary surgical group were also submitted to the Chief Surgeon for temporary rotation of sixty days to Communications Zone hospitals for educational purposes.

Due to the battle casualties in this Army, as well as to shortages sustained by the assignment of VIII Corps and its units to Third U. S. Army on 1 December, which units had suffered losses in the Hurtgen-Roer offensive, a total shortage of medical Corps officers existed as of that date of approximately fifty. This shortage was a serious one, but was alleviated somewhat by the arrival of fifteen Medical Corps officers furnished by the Communications Zone. Immediately their arrival in the Army area, Headquarters European Theater of Operations directed several Medical Corps officers, including these officers on temporary duty for a period of seven days with Headquarters Third U. S. Army. Upon their arrival, further orders were immediately issued by this headquarters placing them on temporary duty with the divisions in which the most serious shortages existed. Transportation was furnished largely by the Medical Section of this headquarters down to the corps level, where corps either furnished supply and transportation, or had division transportation call for them at that point. Reassignment orders by Headquarters European Theater of Operations assigned these officers to this headquarters, and additional orders were then cut assigning them to the Division in which they had previously been placed on temporary duty. Approximately fifteen additional Medical Corps officers were placed on temporary duty with Medical Corps officers from Army medical units, pending the arrival of further reinforcements.

Simultaneously, there also existed a shortage of twenty-five Medical Administrative Corps officers. Approximately sixty applications for appointment as Second Lieutenant, Medical Administrative Corps, had been forwarded from this Army to Headquarters European Theater of Operations.

Due to a high rate of casualties in Third U. S. Army, which had begun in November and continued during the first two weeks of December, the nursing service of the Army was extremely hard pressed. Fifty nurses were secured on temporary duty from a few unit[illegible] some general hospital, and were distributed among Third U. S. Army hospitals to the best advantage, thereby augmenting our 28% organic nurses. These nurses replaced thirty-five nurses returned previously in a similar manner who were returned to their parent unit on the same date.

On 8 December, 311 Medical Department enlisted reinforcements arrived at the reinforcement depot supporting this Army. This was the first group of Medical Department enlisted reinforcements received by Third U. S. Army since the beginning of the offensive on 8 November, though constant efforts had been made to secure them.

Also during this month two additional shock teams were borrowed from Advance Section, Communications Zone medical units. These teams were of inestimable value in handling the large flow of casualties which was being received in Army hospitals, and properly preparing these casualties for surgery.

Section 4 - Medical Supply

There were more movements of the depot companies during the month of December than there had been since the month of September. During the first week, Advance Section Number one of the 43d Medical Depot Company moved from A METZ [illegible] to METZ [illegible] to join its parent unit. After several days of reconsolidation, on 17 December the 43d Medical Depot Company moved from [illegible] and became operational in CHATEAU-SALINS (Q-42), prepared to support Third U. S. Army's expected push to the East.

Due to the German breakthrough in the ARDENNES area, and the subsequent absorption by Third U. S. Army of VIII Corps, provision was made for the return to this Army of the Advance Section, 43d Medical Depot Company, which had been transferred to Third U. S. Army in September. This separate section became operational at LONGUYON ([illegible]) on 20 December. The remainder of the 43d Medical Depot Company moved from CHATEAU-SALINS (Q-42) to LONGUYON ([illegible]) and became operational there on [illegible].

With the 3d Medical Depot Company located throughout the month at METZ [illegible], the two depot companies were disposed toward the close of the month in the most advantageous positions to support both flanks, as well as the center, of this Army.

A sketch, showing the disposition of the medical depot companies throughout the months of October, November, and December, will be found in Annex XXI of the medical section report.

Difficulties continued to exist in the way of actual reception of medical supplies at the Army medical depot companies. During the first two weeks of December, approximately [illegible] trips were necessary on the part of Army transportation to Communications Zone depots to obtain items that were in great demand. There were fifty or sixty of these items in critical shortage. The majority were Class I and Class III items. This condition was to some extent alleviated by the end of the month. In cases where transportation was sent to Communications Zone depots from Army, coordination was effected between the Surgeon's Office and AC of S, G-4 of this headquarters.

During this month, the allowance of anesthesia apparatus, portable, was increased from two to three per evacuation hospital, and field hospitals were authorized an additional three apparatus, suction, foot pump, vacuum type, Item 8a8-3.

The 95th Field Hospital arrived in the Army area short a considerable percentage of its T/E equipment. Items that were not available at Army medical depot companies were extracted to the Chief Surgeon's office, Communications Zone by telephone for purposes of expediency.

Losses among VIII Corps units incident to the German counter-offensive shortly after the middle of the month included the following:

42d Field Hospital----------	All equipment of 1st and 3d Platoons was lost.
101st Airborne Division----------	All equipment of the medical company was lost.
28th Infantry Division----------	All equipment of one platoon of the clearing company was lost; in addition, all medical equipment for one complete infantry regiment and one artillery battalion was lost.
107th Evacuation Hospital---------	Miscellaneous Class I, III, and IV items were lost, but no major items of medical equipment were lost. The majority of the teentage and quartermaster equipment, however, was lost.

Replacement of a majority of the above equipment was attained in an expeditious manner largely through arrangements by this Army to proceed to Communications Zone medical depots for purposes of picking up the equipment and speeding up delivery of same. In the case of medical equipment for the 101st Airborne Division medical company, it was flown into the Army area by air, and transported to the 3d Medical Depot Company where it was picked up by division transportation.

Arrangements were also made with the 66th Medical Group and the 107th Evacuation Hospital, while operating in the VIII Corps Zone, to set up a provisional medical depot for VIII Corps units, to fill emergency requisitions from those units. Eight truckloads of such supplies were dispatched from the 3d Medical Depot Company to the 107th evacuation hospital for further distribution.

The displaced filled personnel found in concentration camps, and referred to under section 2, Sub-section L of the Medical Section report for December, required considerable amounts of supplies for their care. Blankets, sheets, pots, and stoves were issued to the 66th Medical Group, which was in charge of these personnel who needed treatment. Arrangements were also made with the Army Quartermaster for additional mess equipment and fire units. German medical supplies in the Army medical depot companies were set aside and issued to the 66th Medical Group for this purpose. Difficulty was experienced in securing DDT Powder for delousing purposes, but within forty-eight hours, [illegible] tons were located in a Communications Zone depot and shipped to the 3d Medical Depot Company for immediate issue to the 66th Medical Group. Two days later, a release was obtained for 1,000 pounds of DDT Powder for the same purpose.

Though discussion is made elsewhere in this report of events incident to the relief of the battered forces in BASTOGNE ([illegible]) on 26 December, it is pertinent to mention here that supplies were in fact furnished by air on [illegible], and 27 December. These supplies included whole blood, blood plasma, Carlisle dressings, and morphine syrettes, among other items.

Also toward the close of the month, it was arranged in conjunction with Advance Section, Communications Zone, that VIII Corps units might use their medical supplies from either Depot Number [illegible] (Communications Zone), at LONGUYON ([illegible]) from the 43d Medical Depot Company at LONGUYON ([illegible]), from the Advance Section, 3d Medical Depot Company, at METZ ([illegible]), or, for those for which it might be closer, from First U. S. Army depots.

Captured enemy medical supplies during the month were inspected at METZ ([illegible]). These amounted to[illegible] tons of miscellaneous supplies, about half of which were deemed of value to this Army and placed in depot stock. The remainder was turned over to Communications Zone

deputes.

Section 5 - Preventive Medicine

1. General

Variations in the tactical situation, which ranged from the establishment of a bridgehead in the [illegible] (Q-25) and [illegible] (Q-26) areas to the dash northward to the southern apex of the [illegible] Bulge, had little effect on preventive medicine problems, compared to those of the previous month. Some problems associated with the [illegible] tion of potable water did arise, and these are discussed in toi. in part under the paragraph dealing with "[illegible]". Temperatures ranged from near zero to the low thirties throughout this period.

c. General Disease Control

The fact that the latter half of November was characterized by a mass movement of many [illegible] in the [illegible] of [illegible] relatively [illegible] was the [illegible] factor in the [illegible] disease rate for the month.

CHAPTER 8

AN ARMY MEDICAL ACTIVITY

The month of January was characterized by rapid and far-reaching changes in the employment of medical units. The gradual retraction of the ridge in the Ardennes area caused a significant improvement by Third U.S. Army, giving a wide front, stretching generally from [illegible] in the north to the vicinity of Saint-Vith in the south. Changes in medical evacuation and hospital units were made to support the new situation.

Freezing weather, snow and ice, and extremely bitter fighting prevailed throughout the month. The combination of these factors resulted in the largest number of casualties ever suffered in this area since the beginning of the operations. The large casualty figure, however, was also frequently due to the fact that the Third U.S. Army was employing a larger number of divisions than during any previous month.

The problem of trench foot and frostbite, with which the Army had been so much concerned since early November, were further alleviated by a continuous distribution, by the use of a [illegible] specialist in the Army area, of the latest type of equipment to all front line units, and by closer [illegible] of the individual soldier. The overall effect was a marked decrease in trench foot, an overall increase in cold injuries as an accompaniment thereto.

Because of the cold and inclement weather, ice road surfaces and short hauls to the [illegible] were difficult for all evacuation [illegible] ambulance, as well as for all other Army and Service [illegible]. Despite these hazards, the mortality rate among [illegible] was the lowest of any [illegible] campaign.

Section II - Operations

1. Training

The training program for Information-Education officers of medical units was continued. Four officers from Army Medical Units attended the Information School at the Staff [illegible] in Paris, and one officer attended the Allied Civil Affairs School, and one officer attended the course in Instructor Training offered at that school.

2. Evacuation

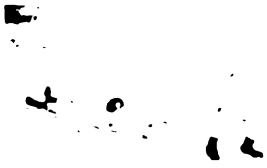
January was marked by a gradual, steady evacuation of the enemy salient in which Army [illegible] were engaged. There were a number of [illegible] operations in the [illegible] area, and hospitalization facilities of every [illegible] were increased, a number of [illegible] units were withdrawn from Third U.S. Army with a consequent reduction in the number of evacuation agencies available. The 14th Medical Battalion, and [illegible] were withdrawn from the Medical Battalion, and [illegible] were assigned to Third U.S. Army. The 4th Medical Battalion was attached to the 7th Medical Group, and was stationed in the area [illegible] on 1 January. The 4th Medical Battalion was still [illegible] during January, and on 1 January was attached to the 56th Army Group of the [illegible] Army and was effected

[illegible]

Some of the units previously assigned or attached to Third U.S. Army by order of higher headquarters had not arrived by 1 January. By that date the 56th Medical Group, the 14th Medical Battalion, the 4th Medical Battalion, and the 91st Medical Battalion were assigned to Third U.S. Army. [illegible] during the month which had not yet arrived, was relieved if its attachment to Third U.S. Army.

Following [illegible] battalions, there were assigned and in operation with Third U.S. Army, seven [illegible] companies, two [illegible] companies, a clearing [illegible] and the 94th Medical Depot. The motor [illegible] companies performed a number of vital functions, including litter-bearer platoons for evacuation hospitals, providing [illegible] units for field hospitals, platoons and squads for ambulance facilities. Platoons of the clearing companies were augmenting evacuation by [illegible] as in June, July and [illegible], and the [illegible] companies [illegible] in the [illegible] manner with some exceptions. The 1st Airborne Division and 18th Airborne Division had inadequate facilities organically for evacuation, and Army ambulance platoons were attached for purposes of ground evacuation in these divisions, during the latters' deployment as infantry divisions.

The 14th Medical Group supported the VIII Corps until 10 January. The 56th Medical Group supported VIII and XII Corps until 10 January, and thereafter supported VIII and III Corps. The 16th Medical Group supported XX Corps until 10 January and the VII and IX Corps thereafter.



Improvised Litter-Sled in Folded Position

Litter-Sled in Use

Simplicity of Runner Mounting on Litter

Demonstrating Method of using Litter-Sled

Digitized by Google

At the beginning of the month, the 69th Medical Group was evacuating seven evacuation hospitals and the 66th Field Hospital. Advance section, Communications Zone units were evacuating five evacuation hospitals and the provisional hospital being operated by the 92d Medical Treatment Battalion. During the month, Advance Section, Communications Zone units gradually took over the evacuation of all but three evacuation hospitals. Third U. S. Army was responsible for supply and evacuation of a maximum of eighteen divisions during January.

The air/rail medical evacuation holding unit operated by the 46th Medical Air Treatment Battalion and attached units remained at [illegible] during the entire month. The limitation imposed on air operations by poor weather, restricted the number of patients evacuated by this medium during the month to 2,441, which, however, constituted an increase over the previous month. During hospital trains, rail evacuation evacuated 10,[illegible] patients. Ambulance evacuation, including the utilization of Advance Section, Communications Zone ambulances, was responsible for 7,[illegible] patients being moved to the rear of the Army area. The total number evacuated by air the month of January thus totalled 20,[illegible] patients. An air rail medical evacuation holding unit was also operated by the 5th Field Hospital Advance Section, Communications Zone) at [illegible] in support of Third U. S. Army.

Representation of a sketch showing the locations of evacuation facilities in Third U. S. Army during the month of January will be found in Annex XIII to the Medical Section report.

1. Hospitalization

The use of field hospitals continued along lines previously established in the [illegible] Army with some effort having been made to [illegible] platoons of a field hospital in one corps or, failing that, with units that were geographically adjacent. Some platoons were still [illegible] separated from their parent organization. This was permitted in order to preserve the normal arrangement between a field hospital and the division which it supported. The use of the field hospital was generally in accordance with previously established Third U. S. Army policy. Occasionally, exception was made in order to meet the emergency of some special requirement.

The 55th Field Hospital, reinforced with a surgical team, continued to function as an evacuation hospital in [illegible], providing 200 beds during a period when they were urgently needed for support of units eradicating the bulge.

The first and third platoons of the 3d Field Hospital were refitted while attached to the 11th Medical Depot. Two trucks were used to transport equipment of this unit from [illegible] (P-55), where it had been abandoned due to lack of vehicles when the unit made a retrograde movement to avoid capture during the counteroffensive. The remainder of necessary equipment was requisitioned and supplied through normal supply channels.

At the end of the month, the attachments of field hospitals were as follows:

III Corps	VIII Corps
2d Plat, 18th Fld Hosp	2d Plat, 42d Fld Hosp
3d Plat, 14th Fld Hosp	3d Plat, 42d Fld Hosp
	1st Plat, 45th Fld Hosp
	2d Plat, 59th Fld Hosp
	3d Plat, 60th Fld Hosp

XII Corps	XV Corps
1st Plat, 16th Fld Hosp	2d Plat, 30th Fld Hosp
1st Plat, 45th Fld Hosp	3d Plat, 42d Fld Hosp
1st Plat, 94th Fld Hosp	3d Plat, 59th Fld Hosp
2d Plat, 66th Fld Hosp

1st Plat, 42d Fld Hosp
66th Fld Hosp

The month of January saw the efforts of Third U. S. Army directed toward the reduction of the bulge and restoration of the lines in effect before the German counteroffensive. At the start of the month, all Third U. S. Army evacuation was in a southerly direction. The 12th Evacuation Hospital closed at its site in [illegible] and moved to the [illegible] Luxembourg, [illegible] With the arrival of this unit, three evacuation hospitals were located in [illegible] City [illegible] the 66th, 12th, and 45th in the depiction of the bulge progressed, the drive of the Combat troops was in a northeasterly direction. It was apparent that the previously favorable positions of the evacuation hospitals in the southern flank were rapidly lengthening ambulance hauls over roads that became almost impassable due to the damage by armored vehicles, snow and ice. With only a mild, several of the hospitals were moved to new sites. The 107th Evacuation Hospital moved from [illegible] to Marche (X-53).

In January the First U. S. Army reverted to the command of Twelfth Army Group. Under this was a communications zone extending between the First and Third Armies and also responsible for [illegible] The 21st Corps was on the northern flank of First Army [illegible] In order to minimize the problem of [illegible] it was necessary to move the evacuation hospitals to [illegible] the units of the corps. The [illegible] and operated in the [illegible] at [illegible]

An evacuation hospital was re-established in the Army area for temporary assignment to the [illegible] The 11th Evacuation Hospital [illegible] and was [illegible] for transportation to this purpose.

During January the enemy air raided in force [illegible] the city of Liege [illegible] These attacks caused very little damage to the hospitals, but, during the height of the [illegible] was erratic and the service was severely [illegible] The 21st Evacuation Hospital was the object of [illegible] on the night of [illegible] and fired fragments [illegible] Three were [illegible] the hospital nurses, but several members of the quartermaster laundry platoon attached to the hospital sustained injuries from the flying fragments and one soldier was killed to an extent requiring amputation of his right arm. The 21st Evacuation Hospital also suffered some damage, but no [illegible]

The 8th Convalescent Hospital, opened at its new site in [illegible] remained there during the entire month. Despite the fact that a maximum capacity of 4,000 beds was utilized, there still were more patients ready for evacuation to the Communications Zone [illegible] than could be accommodated. This necessitated a revival of the daily [illegible] system for each evacuation hospital, which had been used previously and had proved satisfactory. The allocation of [illegible] to various Third U. S. Army hospitals was made by telephone by the Operations and Training Subsection of the Medical Section.

For locations of hospitals during the month of January, see Annex XIIV to the Medical Section report.

An analysis of wounded hospitalized in Third U. S. Army hospitals during the month of January is shown below:

a. Number of wounded admitted "direct" (i.e., not by transfer).

	Designation	Number
(1)	U. S. Army Troops	[illegible]
(2)	British Army Troops	[illegible]
(3)	French Army Troops	[illegible]
(4)	U. S. Navy and Marine Corps	[illegible]
(5)	British and French Navy	[illegible]
(6)	Enemy forces personnel	[illegible]
(7)	U. S. Civilians	[illegible]
(8)	Others - specify	[illegible]

Note: All of the following in b through f pertains to U. S. Army troops only.

b. General classification of wounds:

(1)	Serious	[illegible]
(2)	Slight	[illegible]

c. Anatomical classification of wounds:
(Patients with multiple wounds are classified according to most extensive wounds.)

	(1) Wounds other than burns	Admissions	Deaths
(a)	Abdominal	[illegible]	[illegible]
(b)	Thoracic	[illegible]	[illegible]
(c)	Maxillo-facial	[illegible]	[illegible]
(d)	Neuromuscular		
	Head	[illegible]	[illegible]
	Spine	[illegible]	[illegible]
	Nerve	[illegible]	[illegible]
(e)	Extremities		
	Upper	[illegible]	[illegible]
	Lower	[illegible]	[illegible]
(f)	Buttocks	[illegible]	[illegible]
(g)	Others	[illegible]	[illegible]
	Sub-total	[illegible]	[illegible]
(2)	Burns - all locations	[illegible]	[illegible]
	Total	[illegible]	[illegible]

d. Number of patients with multiple wounds: [illegible] [illegible]

e. Classification of wounds by causative agents:

(1)	Gunshot Wounds (rifle, pistol or machine gun	[illegible]	[illegible]
(2)	Shell, B. and M. (HE, Flak, Mortar or Cannon)	[illegible]	[illegible]
(3)	Bomb, Missile (aerial, grenade, booby trap or cannon)	[illegible]	[illegible]
(4)	Blast (by enemy A. and M., or mine)	[illegible]	[illegible]
(5)	Missile (Rotary Missiles)	[illegible]	[illegible]
(6)	Flame (jet-propelled, flash, flame thrower, [illegible], etc.)	[illegible]	[illegible]
(7)	Other (specify)	[illegible]	[illegible]
	Total	[illegible]	[illegible]

4. Additional Temporary Medical Service

In an attempt to salvage some of the valuable trained personnel of the Army who were afflicted with trench foot, the 92d Medical Gas Treatment Battalion established a provisional hospital for the treatment of this condition in THIONVILLE (U 88). This hospital, which previously had been established to care for minor medical and surgical cases, now devoted its entire facilities to caring for cases of trench foot. The policy was to treat them for fifteen days. Those who could return to duty at the expiration of an additional fifteen days were sent to the 6th Convalescent Hospital. The remainder were evacuated to the Communications Zone. The original capacity of 200 was found to be inadequate and was increased to 440 patients.

Company "A", 92d Medical Gas Treatment Battalion, remained attached to the 101st Airborne Division to replace the medical company of that unit which was captured by the enemy when the Pernal Eagle Division was encircled at BASTOGNE (P 55). It was relieved from this attachment when the 101st Airborne Division was relieved from Third U. S. Army on 19 January, and the company reverted to its battalion at that time.

Section 3 - Professional Services

1. General

A combination of bitter fighting, very rough terrain, and subfreezing temperatures, which kept snow on the ground throughout the period, produced the highest number of battle casualties in a single month since the commencement of operations of Third U. S. Army.

There were 16,035 battle casualties (wounds and/or burns) treated in Third U. S. Army hospitals in January. Of these patients, 436 died.

Based on total dispositions from all causes in Third U. S. Army medical installations, there was a mortality rate of one percent among U. S. Army personnel.

2. Surgery

It is interesting to note that 332 of the 436 deaths among battle casualties, were due to high explosive shelling, and only eighty-eight were caused by small arms fire. It is obvious from these figures that close-in fighting was not the rule, as the majority of deaths from long range fire constituted a ratio of almost four to one.

Cold injuries caused much concern, and it was necessary for all medical installations to be on the alert for combinations such as frostbitten feet or hands occurring in patients brought in for battle wounds. When the wounded could not, for tactical reasons, be almost immediately evacuated from the battlefield, frostbitten feet or hands were likely combinations.

There were eight deaths during January from anuria. These patients had responded well after surgery, but the kidney complications caused death in three to five days. All of these cases had serious wounds which were multiple in type, and were associated with rather severe shock. They all received multiple blood transfusions. Alkalinization was attempted in all instances to no avail. A team from the Army medical laboratory was given the problem of investigating the possible causes of such complications, and initiated rather extensive studies in this connection, including laboratory work and post-mortem on all deaths in which anuria was associated.

3. Neuropsychiatry

The previous five months of varying types of combat had demonstrated that good leadership is a prime factor in the prevention of neuropsychiatric casualties. The incidence of such casualties is also influenced by such factors as operational conditions, including the type of operation, terrain, climatic conditions, and the ability from a tactical standpoint to rotate combat troops. Morale is particularly important. The type of leadership and type of operation have a great bearing on morale.

During the month of January, the bulge produced by the German breakthrough in the ARDENNES area was reduced to the German border. This battle resulted in the greatest number of total non-fatal casualties yet sustained by Third U. S. Army. During this period, there were 47,409 admissions to hospitals of Third U. S. Army from all causes. Five and five-tenths percent of these were neuropsychiatric casualties. There were 3,672 actual neuropsychiatric cases admitted to division clearing stations and/or hospitals in January. Of these, 2,936 or seventy-seven percent were returned to duty, 929 being effected at clearing station level and the remainder at hospital level.

Although Third U. S. Army had consistently had the lowest incidence of neuropsychiatric casualties of any Allied Army, the incidence in January was the lowest of any of its six months of combat. Outstanding leadership, plus the fact that Third U. S. Army was again "on the move", and the awareness of every soldier that Germans were losing this battle and being forced back into Germany contributed to the exceptionally high level of morale throughout the Army.

4. Dental

The amount of dental work accomplished continued to increase over that of previous months. Following is a chart showing the breakdown of dental treatments for the month of January:

Strength (reported)	298280
Admissions (routine)	20772
Admissions (emergency)	4564
Sittings	35569
Officer Personnel	417
Enlisted Personnel	433
Restorations	25461
Dentures	2342
Gingivitis	1436
Gingivitis Treatment	2413
Stomatitis, Vincent's	548
Stomatitis, Vincent's (Treatment)	1138

By this time, it had been proved that the anti-concussion devices being constructed from dental acrylic had definite merit, and the Artillery Section of this headquarters was anxious to obtain devices for the gun crews of all field artillery battalions using the 155 millimeter gun. Through slight revision in methods and provision of additional equipment, it was possible to process 200 pairs of these devices in approximately a week.

The dental clinic established at the 6th Convalescent Hospital now included six assigned officers and ten dental technicians. In addition, two dental officers and four enlisted technicians were on detached service with the clinic during the month of January. Each patient of the hospital was examined by a dental officer upon his transfer from the clinical section of the hospital to a convalescent company. During the month of January, 6,740 patients were examined, of which 702 received dental treatment. All patients were placed in dental Class IV before they were discharged from a convalescent company to duty. During the month, 427 restorations were accomplished, together with 122 new prosthetic cases and eighty-one dentures repaired.

During the same period, the 32d Medical Depot Company dental clinic processed 180 denture cases. Of these, seventy were new cases, and the others were repairs, rebases, and reconstructions. In the same dental laboratory, the processing of 145 pairs of acrylic anti-concussion devices was completed. This laboratory was instrumental in caring for the prosthetic cases of one division which was in a rest area near the depot company location. In addition to this work, the clinic furnished dental treatment necessary for the smaller units in the same area.

The number of maxillo-facial cases reported for the month decreased slightly from those admitted during the previous month. Third U. S. Army medical installations had 763 admissions with maxillo-facial injuries, with eight deaths resulting from these wounds. The percentage of admissions with maxillo-facial injuries was four and seventy-five one-hundredths percent of the total battle casualties admitted during January. Of these, one and four-tenths percent died.

5. Veterinary

Nineteen inspections of Class I supply points were made during the month. Owing to the prevailing freezing weather, many problems usually encountered were eliminated. The need for dunnage was not acute, and the danger of spoilage in fresh meat products by defrosting was at a minimum. The greatest difficulty encountered was the freezing of vegetables. The problem was finally solved by erecting squad tents where buildings were not available, and by covering the products with straw. In some instances, stoves were used. In spite of all precautions, considerable loss through freezing of these products occurred.

Eight bakeries were inspected during the month, which provided bread for the supply points mentioned above. Six civilian establishments processing food, such as bakeries and ice cream manufacturing plants, were also inspected.

6. Personnel

The names of nineteen additional Medical Corps officers were submitted to the Chief Surgeon, European Theater of Operations, U. S. Army, for permanent rotation to general hospitals in the Communications Zone. During January, permanent rotation was actually effected on four Medical Corps officers to Communications Zone units. This was the first permanent rotation effected between Army and Communications Zone.

During the month, thirty-five Medical Corps officers were received as reinforcements. It helped to absorb an original shortage of fifty Medical Corps officers existing on 31 December 1944. Additional casualties and the arrival in Third U. S. Army area of new divisions which were short Medical Corps officers, resulted in a continuing shortage of approximately twenty-five Medical Corps officers.

The shortage of twenty-five Medical Administrative Corps officers was not rectified during January. Twelve of these officers were received from the Reinforcement System during the month, but only six second lieutenants, Medical Administrative Corps, were appointed out of approximately sixty applications sent to the Office of the Chief Surgeon with recommendations for their appointment. Every effort was made to have these appointments made immediately, in order to absorb the serious shortage in Medical Administrative Corps officers in Third U. S. Army.

Approximately 1,000 Medical Department enlisted men were received from the Reinforcement System during the month. The shortage at the conclusion of the month, however, remained well over 500, and constant efforts were made to expedite the reception of additional Medical Department enlisted men through the Reinforcement System.

Approximately fifty nurses were on detached service with Third U. S. Army hospitals during the month, on loan from general hospitals which were not in operation. Similarly, a number of surgical and shock teams were also on detached service with Army hospitals during the month. These teams rendered invaluable assistance in handling the high flow of casualties which took place during the month.

Section 4 - Medical Supply

At the beginning of the month, the 32d Medical Depot Company (minus one advance section) continued in its location at METZ (U 85). The Advance Section, 32d Medical Depot Company was at ARNETZ (U 79). The 33d Medical Depot Company was also continuing in its location at LONGUYON (U 49).

No movement of the medical depots occurred during the month, with the exception of the setting up on 29 January of an advance section of the 33d Medical Depot Company at BASTOGNE (P 55).

At the beginning of the new year, the overall medical supply situation was satisfactory. Medical depot stocks were balanced, and approximately a sixteen-day supply of medical supplies was on hand. During the first two weeks, the supply picture continued to improve, and shipments were received regularly. A constant and vigorous follow-up policy was maintained on items which were on requisition and not yet received. The reequipping of units whose equipment had been lost due to enemy action during the ARDENNES breakthrough in December was completely completed by the middle of the month.

Where shipments of medical supplies were received by rail, considerable difficulty had previously been experienced in identifying particular shipments in subsequent dealings with Communications Zone which might pertain to them. During this month, therefore, the Medical Section initiated a report to be submitted to this section by the Army medical depot companies subsequent to the receipt of each shipment. This report contained the following information:

1. Rail car or truck number.
2. Consignor.
3. Waybill number.
4. Requisition number, against which it was shipped.
5. Time and date received.
6. Date unloaded.
7. Tonnage.
8. Discrepancies in markings and documentation.

These reports proved invaluable in proper identification in the case of any contingency which might arise with reference to a particular shipment.

Approximately 635 long tons of medical supplies were received from the Communications Zone in Third U. S. Army medical depots during this month. Shipments were being received in a more satisfactory manner than at any time during the previous months. In an effort to expedite the shipment of medical supplies, a new system was initiated in the middle of the month. Under this plan, carload shipments were to be attached to hospital trains at PARIS (S 04) and destined for THIONVILLE (U 88) for the 32d Medical Depot Company, and PETANGE (P 60) for the 33d Medical Depot Company. Less than carload shipments were to be placed in hospital train litter cars and delivered to the above places.

Digitized by Google

Initially, during the month, whiskey was authorized for medicinal purposes on the following basis:

Divisions	24 quarts per week
Medical Detachments	4 quarts per week
Army and Corps Clr Coy (non-divisional)	4 quarts per week

Later in the month, and after a survey had been made among the divisions, it was decided that the above allowance of twenty-four quarts per week was not sufficient. The allowance was therefore increased to a maximum of forty-eight quarts per week.

The Medical Section was notified by the Office of the Chief Surgeon European Theater of Operations, U. S. Army, that stocks of Medical Department blankets and litters were becoming exceptionally low and were rapidly disappearing from continental reserves. Conservatory measures were therefore undertaken by this Army, and the fact that these items were in critical shortage was emphasized to all medical units under this command. A letter was prepared directing that all Medical Department blankets and litters not actually required be returned to the nearest Army medical depot, and that necessary action be taken to prevent loss and wastage of these items.

A total of 2,000 vials of diphtheria antitoxin and 1,000 vials of smallpox vaccine, on which the expiration date had passed, were turned over to Civil Affairs personnel for their use.

In the middle of the month, the problem of deadlined ambulances first arose. It was found that, as of 16 January, thirty-seven ambulances were in Ordnance for repair, and eleven others had been captured or destroyed and required replacement. The Ordnance Section of this Headquarters was contacted, and arrangements were made to give first priority to ambulances in the shop for repair. In addition, information was received that approximately forty ambulances could be expected by the end of the month, or shortly thereafter.

Approximately 16,000 packets, first aid, parachute, modified by the addition of one tube of boric acid ointment, were received from the Communications Zone during this month. These packets were issued to all armored divisions on a basis of 2,000 per division. This item had been issued to troops of armored units prior to D-Day, and had been used successfully in early invasion days. The tubes of boric acid ointment were included in place of tourniquets.

Around the middle of the month two maintenance teams were formed, each consisting of one Medical Administrative Corps officer and two enlisted men, for the purpose of checking the maintenance of equipment and status of medical supply in Army medical laboratories, in Army hospital units, and Army medical gas treatment battalions. One of these teams was attached to each of the two medical depot companies, and operated from those locations. These teams, in addition to inspecting equipment, were responsible for making repairs of a minor nature and instructing unit maintenance men in proper methods of maintenance and repair. Reports on each unit inspected were submitted to the Medical Section of this Headquarters.

Toward the close of the month, the Army Quartermaster informed the Army Surgeon that stoves, tent, M-1941 were now available, and that a limited quantity of burner, oil, stove, tent, M-1941 would be available in the near future. All Army medical units were therefore requested to submit a report to the Medical Section, showing the amounts authorized, on hand, and required of these items.

As of 31 January, it was determined by a survey that there were approximately 160,200 Medical Department blankets and 20,300 litters on hand in units and medical depots of Third U. S. Army. This information was forwarded to Headquarters European Theater of Operations.

Section 5 - Preventive Medicine

1. General

Preventive Medicine problems consisted of the production of potable water, the prevention of cold type injuries to the feet and an increase in upper respiratory diseases.

2. Venereal Disease Control

Army prophylactic stations were established in LUNEVILLE (P 50), FRANCE, VITRY LE (P 41) REIMS (P 40), and EPERNAY (P 70) and LUXEMBOURG CITY (P 81), LUXEMBOURG. Army prophylactic stations gave 11,072 prophylactic treatments during the month.

Individual venereal disease contact reports were received in 374 instances. Of these, thirty-six and eight-tenths percent were contacts made outside the Army area.

The supply of individual chemical and mechanical prophylactics remained adequate throughout the month.

The fact that most divisions were in the line, favorably affected the venereal disease rate for the month of January. Weekly statistics on venereal disease during this month may be found in Annex XIV to the Medical Section report.

3. Communicable Diseases

These diseases showed a slight increase over the previous monthly period. A marked increase was experienced in upper respiratory disease, with the rate of diarrheal diseases remaining approximately the same as during the previous month.

The incidence of epidemic hepatitis increased from approximately four cases per week during December to sixteen cases per week in January.

No outbreaks of significant proportions were encountered.

A detailed breakdown of statistics on communicable diseases occurring during the month of January will be found in Annex XIV to the Medical Section report.

4. Medical Records

A new high for these reports was reached in January. A total of 55,149 were processed, representing an increase of approximately 10,000 over those processed in December. The quality continued to be good.

5. Non-Battle Injuries

The rate of these injuries increased from 165 to 194 per thousand per annum. The increase was mainly attributable to the icy, dangerous condition of roads, and poor visibility throughout the Army area.

Non-battle injuries represented fifteen percent of the total direct admissions as compared with twelve percent for December.

Cold type injuries, especially of the feet, increased from 128 to 264 per thousand per annum. A number of factors contributed to this tremendous increase, especially of frostbite (128 per thousand per annum). These factors included constant exposure to bitter cold, heavy snow, the emergency of the tactical situation, and the fact that practically all combat troops were committed continuously during the period.

6. Army Medical Laboratory Service

In January, the two base sections of the 7th Medical Laboratory operated throughout the month in the following locations:

Section I - METZ (U 85)
Section II - LUXEMBOURG CITY (P 81)

The combined sections performed 9,535 tests, an increase of approximately 2,000 tests over those performed during December. This was the heaviest month of operations, in so far as the 7th Medical Laboratory was concerned.

The total work for the month of January is broken down as follows:

BASE LABORATORY SECTIONS	NO OF TESTS	PERCENTAGE OF TOTAL
Serology	5678	59.5
Bacteriology	1542	16.1
Chemistry	485	5.1
Pathology	246	2.6
Hematology	87	0.9
Parasitology	96	1.0
Sub-total	8124	85.2
MOBILE LABORATORY SECTIONS		
Venereal Disease Section (66th Conv Hosp)	1411	14.8
Sub-total	1411	14.8
GRAND TOTAL	9535	100.0

A breakdown of the above tests by type of unit requesting them during January is shown below:

TYPE OF UNIT	NO OF UNITS	NO OF TESTS	PERCENTAGE OF ALL TESTS
Evacuation Hospitals	12	2907	30.5
Convalescent Hospital	1	3165	33.2
Field Hospitals	9	334	3.5
Misc Medical Installations		443	4.6
Misc Tactical Installations		2686	28.2
Totals	22	9535	100.0

The increase in total work is reflected primarily in an increase of requests from the 6th Convalescent Hospital (plus 1,100), the evacuation hospitals (plus 454), and the Venereal Disease Section (plus 588). Roughly, one-third of the work continued to come from the tactical units, which used the laboratory consultations and diagnoses of the 7th Medical Laboratory.

7. Sanitation

With continued cold and a snow-covered terrain throughout the month, environmental sanitary conditions remained satisfactory. The health of the command was generally satisfactory during the month.

Sanitary problems due to insects, rodents, garbage and refuse disposal were practically non-existent during the period.

Difficulties in operation of water units continued during the extreme cold weather. As indicated in the December report, many improvisations were necessary to combat freezing of the tanks, filters, pumps, valves and hose lines. Treatment results were, however, better than in any previous month.

Requests for approval of modified and simplified operating procedure for water treatment units because of the cold weather conditions were approved in only three instances after determination that the water supply was being obtained from protected ground water sources.

The summary of the results of 144 bacteriological analyses of treated water from engineer water points showed an all time high for potable water samples. Less than two percent (1.8%) of the samples were non-potable as compared with forty-nine percent questionable or unsafe for human consumption during August, 1944.

Following is the summary of improvement during the past six-month period, expressed in percentage of samples:

	Aug	Sep	Oct	Nov	Dec	Jan
Potable	51%	72%	85%	89%	95%	98%
Non-potable	49%	28%	15%	11%	5%	2%

Change to the recommended new method of operation of water treatment units was effected during the latter part of October and the month of November throughout the Third U. S. Army.

During the month a new directive was issued from the Office of the Chief Engineer, European Theater of Operations, U. S. Army, embodying the Third U. S. Army method of water treatment for adoption throughout the Theater.

CHAPTER 9
FEBRUARY OPERATIONS

Highlights of the month included the presence of roads which, as a result of spring-like thaws, became almost impassable. Medical evacuation was difficult under such circumstances. Heavy snow in the early part of the month posed similar difficulties. Unorthodox methods of evacuation, plus the fact that a lower number of casualties was being experienced, eased the situation to some extent.

Difficulty was encountered in the location of suitable covered accommodations for hospitals. Changes in Army boundaries had left Third U. S. Army with an area containing fewer suitable sites.

An innovation in February was the setting up of a provisional hospital to care exclusively for patients with self-inflicted wounds.

Unusual procedures in the field of internal medicine were instituted and are covered in a new sub-section to Section 3 of this report.

Digitized by Google

The last week of the month saw the 4th Armored Division push to the vicinity of BITBURG (L-14), and the fall of TRIER (L-12) with a period of rapid movement of all units soon to be in the offing.

Section 1 - Organization of the Medical Section

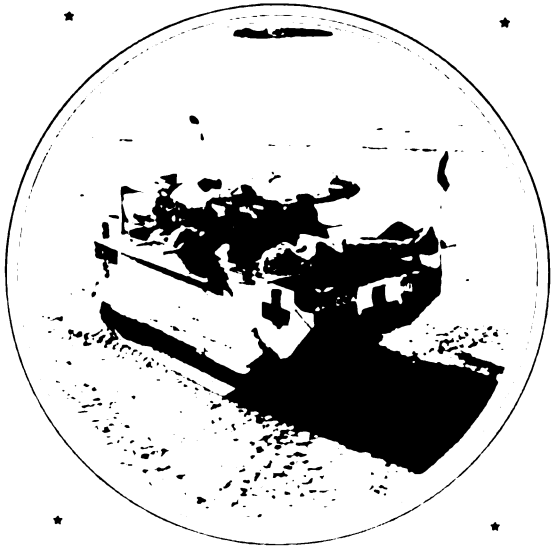
One captain, Medical Corps, from the Operations and Training Subsection, and one captain, Veterinary Corps, departed from the Medical Section to their new assignments with medical units of Third U. S. Army. This was in conformity with Staff Memorandum Number 71, this Headquarters, dated 16 December 1944.

The Medical Section now consisted of a total of twenty-four officers (including one Army Nurse Corps, one warrant officer, and twenty-eight enlisted men.

Section 2 - Operations

1. Training

The training program for Information-Education officers was continued. Two officers from Army medical units attended the Information-Education Course at the Staff College in PARIS (Group 3). In addition, two officers attended the Education Advisement Course, and two officers attended the course in Instructor Training at the Staff College.



2. Evacuation

By 1 February, the concentrated efforts of the Allied armies had reduced the "German Bulge" to its former proportions, and they were ready for an offensive of their own. The First and Ninth U. S. Armies and the Armies of the British Twenty-First Army Group were to furnish the impetus for the proposed push. Third U. S. Army was designated to continue its activities, at least in a defensive role, in the Saar-Moselle triangle. By the middle of the month, however, with the U. S. Third Army's clear of the enemy, the 4th Armored Division was ordered to the front in a hurry, over muddy roads that were rendered almost impassable. Roads in the area were in such poor condition that the heavy traffic which was brought about by the German breakthrough in the Ardennes offensive, and particularly the melting snow which left the roadbeds a mass of mud and slush.

With roads in such a deplorable state, and military traffic at an accelerated pace, evacuation of casualties became one of the main problems of the offensive. Movement of ambulances was extremely slow, and the majority of the evacuation hospitals were located too far to the rear to permit expeditious delivery of patients by road. On 14 February the 115th Evacuation Hospital was moved at [illegible] to substantially alleviate the situation. However, due to the condition of the roads, it was necessary to use a combination of evacuating patients by transferring them from ambulances to [illegible] and by carrying litter patients. The 33rd Medical Battalion, [illegible] and the Medical Section of that section from the [illegible] were pressed into service. Faster transportation of patients developed, and it frequently occurred that four hours after arrival, or one half of the time which it had taken to move these patients by road. This [illegible] for three days (13-15 February), and a total of [illegible] casualties were evacuated by such means. Of these, [illegible] were ambulatory patients, and seventy-eight litter patients. On 15 February the 56th Evacuation Hospital received a more suitable road net leading out from its location and [illegible] from 115th Evacuation Hospital was discontinued at this date.

During February several units were transferred from Third U. S. Army. The 45th Field Hospital and 4 Ambulances were assigned to Ninth U. S. Army, the 147th Medical Group and the 94th Medical Collecting Company were assigned to Sixth Army Group, and the 160th Medical Collecting Company was ordered to the Seventh U. S. Army, to which it was assigned to First U. S. Army. The 147th Medical Collecting Company was relieved from its temporary attachment to Sixth Army Group and returned to Third U. S. Army. They were assigned to and operating with Third U. S. Army eleven ambulance companies.

When III Corps was assigned to First U. S. Army on 24 February, the units of the corps medical battalion, consisting of one battalion headquarters, two medical collecting companies, and one clearing company, remained with Third U. S. Army. Fourteen of units attached to the medical battalions, thus bringing the total number of clearing companies to thirteen and the clearing companies to six. Ambulance and collecting companies were employed as in the past, except in the case of ten ambulances of the 147th Medical Collecting Company. These remained attached to the 12th Armored Division for the remainder of medical service until 10 February, at which time that division was relieved of attachment to Third U. S. Army and returned to the First Allied Airborne Army.

"Weasel" Carrying Two Litter and Three Ambulat[illegible] Patients

During January, [illegible] litter bearer platoons of collecting companies and clearing companies were employed to augment the staffs of the evacuation hospitals. [illegible] were also organized from headquarters and station platoons of collecting companies to care for nonambulatory and post-operative patients when field hospital platoons moved forward.

Until the end [illegible] of III Corps to First U. S. Army, the 94th Medical Group was supporting it and the VIII Corps, the 147th Medical Group supported XIX and XX Corps, and the 94th Medical Group evaluated the 16th, 26th, and 104th Evacuation Hospitals. Advance sections [illegible] were responsible for the evacuation of the remaining hospitals.

The 56th Medical Gas Treatment Battalion continued to operate the air [illegible] evacuation which is [illegible] for the entire month. [illegible] were forced to operate under weather conditions [illegible] Patients [illegible] air evacuation. The number of casualties evacuated by air was limited to 2,[illegible] as compared to a total of 7,[illegible] evacuated by rail.

It was during this month that the first hospital train to see [illegible] U. S. War Department, [illegible] from Third U. S. [illegible] the Front), 238 litter and [illegible] patients were evacuated from the 16th, 26th, 104th, and 115th Evacuation Hospitals at [illegible] and [illegible] Hospital at [illegible] Center at [illegible]. An operation proceeded, however, the use

"Weasel" Carrying Three Litter Patients

of this station for the evacuation of patients was discontinued because of the [illegible] number of patients did not justify its operation [illegible] Likewise, the small number of casualties requiring evacuation prompted the closing on 23 February of the 56th Field Hospital which had been operating as a holding unit for Third U. S. Army at PETANGE (P-61). It was the original plan to employ the 7th Field Hospital (also an Advance Section, Communications Zone unit) as a holding unit for Third U. S. Army at BASTOGNE (P-55), but this plan was thwarted when fire destroyed the buildings which the unit was to occupy and by certain rail traffic difficulties.

The seriousness of the problems which confronted the Army Medical Service with respect to the evacuation of patients is amply reflected by the fact that, because of heavy snow and practically impassable roads, extreme measures were initiated to continue the normal flow of casualties within the division areas. Regardless of the comparatively small number of casualties during February, the fact remained that satisfactory evacuation was extremely difficult. To illustrate the urgency of a suitable means of carrying out proper evacuation of patients in the division areas, it is only necessary to review some of the methods employed in an attempt to overcome the obstacles brought about by the elements. After a trial with litters on sleds and track-laying cargo carriers (weasels), it was decided that the use of dog teams would prove more desirable in the evacuation of casualties within the division echelons. Hence, it was determined to order thirteen dog teams of the Air Rescue Service from Labrador. The final contingent of a total of [illegible] dogs, fourteen enlisted men, and thirteen officers arrived at the [illegible] on 11 February. During the ensuing period between the request and the delivery, however, the snow had melted, and the teams were never employed.

Total evacuations for the month follow:

Air [illegible]	2,671
Ambulance [illegible]	3,021
Road [illegible]	10,105
Total	15,639

For locations of evacuation facilities during the month, see Medical Annex [illegible].

3. Hospitalization

With the exceptions of using the 69th Field Hospital as a provisional evacuation hospital and attaching the first platoon of the 43d Field Hospital to the 34th Medical Battalion, the field hospitals were utilized in the same manner as Third U. S. Army had previously employed them. At the end of the month, the attachments of the field hospitals were as follows:

VIII Corps	XII Corps
3d Plat, 16th Fld Hosp	1st Plat, 16th Fld Hosp
2d Plat, 43d Fld Hosp	2d Plat, 16th Fld Hosp
3d Plat, 43d Fld Hosp	1st Plat, 30th Fld Hosp
1st Plat, 59th Fld Hosp	2d Plat, 60th Fld Hosp
2d Plat, 59th Fld Hosp	3d Plat, 60th Fld Hosp

XX Corps

2d Plat, 30th Fld Hosp
3d Plat, 30th Fld Hosp
3d Plat, 59th Fld Hosp

With the complete reduction of the bulge, resulting from the German counteroffensive, Third U. S. Army continued the attack. In the early stages of the attack, VIII Corps on the northern flank was making the principal effort. There was considerable difficulty in locating covered accommodations for evacuation hospitals in this sector because the fierce fighting had reduced the majority of the buildings to rubble and ventilated them to an extent that was considered extreme. The 101st Evacuation Hospital was established in the GRAND DUCHESS OF LUXEMBOURG's Summer Palace in BERG (P-83), and on 8 February patients were received at that installation. Six days later, the 110th Evacuation Hospital was moved from ESCH (P-70) to CIERF (P-76) to augment the 101st Evacuation Hospital. With the former unit only four miles from the front, and the 101st Evacuation Hospital relatively close to enemy activity, the critical situation which had existed for several days began to assume a more normal aspect. With these two hospitals established in the north and central area of the front, immediate plans were made and executed to bring others nearer to the zone of activity. The 69th Field Hospital, still functioning as an evacuation hospital, moved from ARLON (P-62) to ETTELBRUCK (P-95), and the 34th Evacuation Hospital moved from METZ (U-85) to LUXEMBOURG CITY (P-81). A total of four evacuation hospitals were now located in LUXEMBOURG CITY (P-81); namely, the 12th, 34th, 35th, and 104th.

Advantage of this ample support was taken to close the 35th and 104th Evacuation Hospitals at different times, in order to rest the personnel, who had been furnishing medical support from the beginning of the reduction of the bulge.

The 109d Evacuation Hospital, which had been temporarily attached to Sixth Army Group, was assigned to First U. S. Army on 26 February.

During the month of February, extensive use was made of civilian labor for the essential duties of housekeeping in Army hospitals. As in previous months, this aid was secured through civilian agencies on a reverse lend-lease basis.

The 6th Convalescent Hospital remained at its location in MOULINS-LES-METZ (U-85) during the entire month. The large number of upper respiratory infections, brought on during the month by exposure to freezing temperatures, placed a tremendous strain on the convalescent hospital. The daily quota system continued to be employed. In order to relieve the burden on the 6th Convalescent Hospital, a provisional hospital was formed by the 436th Medical Battalion and put in operation at MONDORF-LES-BAINS (P-90) to care for convalescent medical cases which would otherwise go to the 6th Convalescent Hospital.

At MONDORF-LES-BAINS (P-90) seven hotels in the famous Spa provided a 900-bed capacity for the hospital proper. Four more hotels, and several boarding houses and villas, were used as accommodations for organic and attached hospital personnel. The beautiful parks and surrounding environs provided an ideal locale for convalescent patients. The baths of MONDORF-LES-BAINS (P-90) perfected the setup.

The location of Third U. S. Army hospitals during February will be found in Medical Annex XXVII.

An analysis of wounded hospitalized in Third U. S. Army hospitals during the month of February is shown below:

a. Number of wounded admitted "direct" (i.e. not by transfer).

Designation	Number
(1) U. S. Army Troops	10631
(2) British Army Troops	3
(3) French Army Troops	12
(4) U. S. Navy and Marine Corps	0
(5) British and French Navy	0
(6) Enemy Forces Personnel	1095
(7) Civilians	135
(8) Others	29

Note: All of the following in b through f pertains to U. S. Army troops only.

b. General classification of wounds:

(1) Serious	2927
(2) Slight	7674

c. Anatomical classification of wounds:
(Patients with multiple wounds are classified according to most extensive wounds).

	Admissions	Deaths
(1) Wounds other than burns		
(a) Abdominal	500	67
(b) Thoracic	378	67
(c) Maxillo-facial	719	4
(d) Neurologic		
Head	687	43
Spine	241	9
Nerve	3	1
(e) Extremities		
Upper	2624	9
Lower	3854	41
(f) Buttocks	443	9
(g) Others	506	3
Sub-total	10439	253
(2) Burns - all locations	72	2
Total	10631	255

d. Number of patients with multiple wounds: 3500 46

e. Classification of wounds by causative agents:

(1) Gunshot Wounds (rifle, pistol or machine gun)	2440	61
(2) Shell Wounds (HE, flak, mortar or cannon)	6302	157
(3) Bomb Wounds (aerial, grenade, booby trap or cannon)	721	22
(4) Blast Injuries (bomb, shell or mine)	455	6
(5) Wounds from secondary missiles	81	2
(6) Burns (petrol, flash, flame thrower, phosphorus, etc.)	81	1
(7) Others	551	6
Total	10631	255

f. Number of deaths by primary and secondary causes:

U. S. Army 7% Other 14

4. Number of wounded evacuated to other hospitals.

U. S. Army 79% Other 6%

4. Additional Temporary Medical Service

The 52d Medical Gas Treatment Battalion continued to operate its provisional hospital at [illegible] LEAP for acid in jury trench foot and frostbite cases, on a fifteen-day basis.

In accordance with the policy of the Army Commander, all patients with self-inflicted wounds were held in Army evacuation hospitals, pending investigation and/or trial by courts-martial. Investigations of many of these cases were not completed for as long as four to six weeks. In order to relieve the burden on evacuative hospitals of caring for such patients during their extended hospitalization, and to release these beds for normal use, it was decided to form a provisional hospital to be specifically charged with the care of patients with self-inflicted wounds. On 14 February, the 54th Medical Battalion opened a provisional hospital at the former site of the 11 th Evacuation Hospital in Pich [illegible] Calang "A" of the 3d Medical Gas Treatment Battalion, the first platoon, 52d Field Hospital, and the 52d Clearing Company were attached to the 54th Medical Battalion as augmentation for this purpose. On the first day of operation, ninety-five cases of self-inflicted were admitted by transfer from Third U. S. Army hospitals.

Section 3 - Professional Services

1. General

During the month of February, [illegible] battle casualties were treated in Third U. S. Army medical installations. Of this number, [illegible] died.

Based on total disposition from all causes in Third U. S. Army personnel, once again the mortality rate was only one percent.

2. Surgery

February, 1945 marked the end of six months of operation in Third U. S. Army. Throughout this period, the activity of the troops was clearly reflected in the battle casualties and in the variety and the intensity of the offensive undertaken. The intensity of the offensive is specifically stated, as not only was the troop activity of the before us. With our lines always moving forward, it was impossible to maintain very close medical support during the early part of the month. Battle casualties were admitted to our medical installations.

Of these casualties, [illegible] percent were caused by small arms fire, i.e. rifle, machine gun, [illegible] the remaining seventy-three percent were caused by artillery fragments, [illegible] grenades, mortars, mines, or bombs. [illegible] casualties. It is interesting to note that [illegible] wounds received from small arms fire, [illegible] thirty percent of all battle casualties had multiple wounds.

The evaluation of the results obtained in the treatment of the casualties gives us a true picture of the surgery that was accomplished during the six months. There were [illegible] types of treatment, namely the [illegible] and the evacuation hospitals, and the [illegible] were dead on arrival. This gives a mortality rate of [illegible] for the entire [illegible] and, [illegible] the mortality rate for [illegible] six months period of [illegible] and seven-tenths percent.

A further study of the battle casualties [illegible] is clearly revealed that [illegible] were treated by [illegible] the wound [illegible]. Most of these cases were treated [illegible] hospitals, [illegible] for [illegible] and [illegible] early [illegible] for [illegible] the [illegible] at the evacuation hospitals [illegible] mortality rate of [illegible] of these cases was [illegible] percent.

Most casualties in these [illegible] hospitals and [illegible] [illegible] [illegible]

3. Neuropsychiatry

With the ARDENNES bulge eliminated during the month of January, the Third U. S. Army confined its efforts in February to what might be called an aggressive defensive. The enemy's counteroffensive, extending into January, which resulted in a record number of casualties within Third U. S. Army for any one month, was replaced by a type of warfare somewhat similar to that employed by this Army; that is, primarily a holding operation. The result was that Third U. S. Army's total non-fatal casualty admissions for the month of February dropped to approximately 15,000 less than those for the previous month. Five and seven-tenths percent of the total of 32,189 non-fatal casualties admitted during February were neuropsychiatric, and seventy-three percent of the 1,847 cases of this type were returned to duty as compared to seventy-seven percent returned to duty during the previous month. The percentage of neuropsychiatric casualties to the total admissions showed a two-tenths percent increase over the five and five-tenths recorded during January. A comparison of the two months' percentages and ratios shows no marked variation with relation to neuropsychiatric casualties.

The fact that proper rotation of troops to division rest areas is a command function was stressed as heretofore, and continuous emphasis was placed upon the fact that this rotation is very definitely a contributing factor to the reduction of neuropsychiatric conditions.

4. Dental

During February, five prosthetic dental detachments were activated by Headquarters Third U. S. Army upon authority received from Headquarters European Theater of Operations. These detachments, based upon the T/O and E in column BH, 8-500, consisted of one captain, Dental Corps, and three enlisted dental technicians. The organization provided for each detachment to operate from a dental prosthetic truck. Since only three trucks would ultimately be available, one detachment each was attached to the two Army Medical Depot Companies. The Surgeons of each of the three corps requested that a detachment be assigned to them for operation with the clearing company attached to the corps headquarters. These assignments were made since the prosthetic treatment available to Army troops would thus be distributed where the greatest numbers of troops could best be served.

It was believed that the addition of the five prosthetic detachments would supplement the already excellent denture service available in Third U. S. Army to the point where all echelons could receive attention with a minimum of time lost from duty.

Officer and enlisted personnel were drawn from experienced, well qualified groups so little time would be lost in establishing a well-rounded and smoothly-functioning detachment. The headquarters of the 44th Auxiliary Surgical Group was chosen to administer the five detachments and serve as their headquarters.

The Army Dental Surgeon's inspections of dental installations revealed that evacuation hospitals were receiving many maxillo-facial cases which were being well-handled prior to evacuation. All clinics were devoting much of their time to the treatment of routine operative cases who were being placed in Class IV without delay. The latter cases were receiving the necessary prosthetic attention upon completion of the required operative and surgical procedures.

Although there were a fewer admissions for routine dental treatment during the month of February, a greater number of restorations were completed than during any month since October, 1944. The incidence of Vincent's infection was lower than it had been since March, 1944.

A chart is shown below giving the breakdown of dental treatments for the month of February:

Strength (Reported)	374493
Admissions Routine	22103
Admissions Emergency	4065
Sittings	32698
Officer Personnel	343
Enlisted Personnel	369
Restorations	21626
Dentures	2128
Gingivitis	1364
Gingivitis Treatment	2070
Stomatitis Vincent's Treatment	469

5. Veterinary

Seventeen inspections were made of Class I supply points. Thawing weather and rain, together with rapid movement of the Army, made it difficult to find proper sites for supply points. Constant check was necessary to prevent loss from moisture.

Five bakeries supplying the above points were inspected and found to be satisfactory.

6. Personnel

Names of Medical Department officers and enlisted men were submitted to the Chief Surgeon, European Theater of Operations, U. S. Army, for permanent rotation to general hospitals in the Communications Zone, in the following numbers:

Medical Corps officers	6
Dental Corps officers	4
Medical Administrative Corps officers	2
Enlisted men	24

Permanent rotation was actually effected in February of eleven Medical Corps officers. In addition, rotation was offered within Army on a much larger scale than heretofore, in an attempt to salvage the services of Medical Department personnel, particularly in division areas. Nine Medical Corps officers were so rotated. Division Surgeons were apprised of the fact that rotation was available to Army units of Medical Department officers, on forty-eight hours' notice.

During the month, ten Medical Corps officers were received as reinforcements. Shortages among Medical Department commissioned personnel, as of the end of the month, were as follows:

Medical Corps	32
Dental Corps	9
Medical Administrative Corps	40

Consistent efforts were continued to obtain proper reinforcements from the Communications Zone. However, Theater shortages, particularly in regard to Medical Corps officers, continued to exist and made difficult the obtainment by Third U. S. Army of sufficient reinforcements in this category to bring it up to T/O strength. There were still sufficient applications for appointments as second lieutenants, Medical Administrative Corps, which had been approved by this Headquarters and forwarded to Headquarters European Theater of Operations during January, to make up the deficit existing within Third U. S. Army in that branch. Appointments, however, were slow in coming through.

Shortages in enlisted men continued to approximate a consistent total of more than 500. Constant efforts were made to secure such a number in a block from Communications Zone general hospitals, with the thought in mind that this would even out the shortage curve to a point closely approaching zero. Reinforcements of Medical Department enlisted men were being sent to Third U. S. Army in sufficient numbers to counteract current casualties and losses.

Approximately fifty nurses remained on detached service with Third U. S. Army hospitals during the month. These nurses were on loan from general hospitals which were not in operation. As the general hospitals to which the particular nurses were assigned went into operation, exchange was effected for a similar number of nurses from other general hospitals, not yet in operation.

A number of surgical and shock teams were also on detached service with Army hospitals during the month, on loan from general hospitals.

Section 4 - Medical Supply

Few changes occurred in the locations of the medical depot companies during February. The 32d Medical Depot Company (minus one advance section) continued in its locations at METZ (U-84). The advance section of this company remained at AMNEVILLE (U-79) throughout the month. The 33d Medical Depot Company also continued in its location at LONGUYON (U-49). At the close of the month, however, the 33d Medical Depot Company closed at that location in preparation for a movement to ETTELBRUCK (P-84). An advance section of the 33d Medical Depot Company remained at BASTOGNE (P-55) until 26 February. It became operational on 27 February at ETTELBRUCK (P-84).

There was little change in the overall medical supply situation. Through extraordinary shipments of medical supplies from Communications Zone in January, an adequate stock of medical supplies had been accumulated. During February, shipments were received regularly, and a total of 880 long tons of medical supplies were actually received from Communications Zone during this month. The major difficulty encountered was the continued inability of hospital trains to make an even property exchange on blankets. This problem had been a bothersome one for several months, and further corrective action was initiated.

Due to the poor condition of roads to the rear in the vicinity of REIMS (T-37), caused by February thaws, restrictions were placed by appropriate authorities in the Communications Zone, barring these roads from travel by two and one-half ton trucks, or heavier vehicles. As a result, an excessive amount of salvage material accumulated at both Army medical depots. On 10 February, two highways to REIMS (T-37) were opened, and twelve trucks were obtained from the 24th Regulating Station (an Advance Section, Communications Zone unit) to carry salvage material from the Army medical depots to Depot M-408 at REIMS (T-37).

Also during the early part of the month, Twelfth Army Group requested the Army Surgeon to prepare a list of medical items to be used for an emergency air drop, in the quantity required to support 15,000 men for one day. This list consisted of fourteen items, and weighed approximately 18,377 pounds, occupying a space of approximately 10,798 cubic feet.

In the middle of the month, information was received that the air field T-33 at THIONVILLE (U-88) was closed for cargo and that all shipments of supplies by air would be sent to A-82-C at ETAIN (U-47) until further notice.

Approximately 200 cases of captured liquors were released by AC of S, G-4, for issue to Army medical units for medicinal purposes. Distribution was made to the units on a strength basis from one of the Army medical depot companies.

Among unusual items received during the month were 20,000 bags, patients, efforts. Basis of issue from the Army level included one for every two beds in units other than divisions and for divisions, not to exceed an estimated seven days' consumption. Sufficient quantities of tray, food, six compartment, were received from the Communications Zone to allow each evacuation hospital 300 of this item. Limited quantities of markers, Red Cross, nine feet, six inches by twenty-one feet, six inches, and burners, oil, stove, tent, were available. Distribution was made on the oil burners on the following basis:

50 per Evacuation Hospital and Medical Gas Treatment Battalion
60 per Field Hospital
100 per Convalescent Hospital

Four additional stoves, two-burner, gasoline, were authorized each division for use in battalion aid stations.

Due to previous difficulties involving the use of Army transportation to pick up emergency supplies from Communications Zone depots, as well as to deliver salvage material to those depots, corrective measures were instituted. Arrangements were made with the 24th Regulating Station (Advance Section, Communications Zone unit) whereby that station would furnish trucks to the Army medical depot companies for the purposes outlined.

During the last week of the month, an extract of Medical Department Supply Catalogue - 1944, listing only items stocked in Army medical depot companies was sent to all divisions and to separate battalions of corps, as well as to Army medical units. The extract was reproduced and printed through the efforts of the Army Surgeon's Office.

Section 5 - Preventive Medicine

1. General

February was marked by continued hard fighting, with the additional problem of successfully executing several river crossings in prevailing temperatures which, though somewhat elevated in comparison with those of the previous month, were contributing factors toward the continuing prevalence of cold type injuries (trench foot and frostbite) and upper respiratory diseases. At the same time, temperatures rose to a sufficient level to permit the ice and snow to melt, thereby creating sanitary problems resulting in an increase in diarrheal diseases and infectious hepatitis. Water pollution again demanded serious attention.

2. Venereal Disease Control

There was a slight increase in the venereal disease rate over the month of January, despite the fact that heavy fighting continued. Ordinarily, this increase would not be expected; however, the policy of issuing passes to cities outside the Army area was credited with the venereal disease increase. Nine Army prophylactic stations were established in ARLON (P-52), BELGIUM, CHEPPAMS (U-66), FRANCE, and ESCH (P-70), LUXEMBOURG. There were 4,734 prophylactic treatments given by Army prophylactic stations during the month.

The supply of new type individual chemical and mechanical prophylactic units was adequate.

Digitized by Google

During this period, 350 individual venereal disease contact reports were received, of which approximately one-half represented contacts made outside the Army area--ninety-two of them originating in PARIS (S-Ok). Statistics, by months, on venereal disease during February may be found in Annex XXIX to the Medical Section report.

3. Communicable Diseases

Infectious hepatitis showed the sharpest increase of any malady in the communicable disease category with a weekly incidence of thirty-one cases, as compared to sixteen per week during January. There was a slight increase over the previous month in upper respiratory infections, and the diarrheal rate was almost doubled. The majority of the infectious hepatitis cases originated in the 26th Infantry Division. Annex XXIX to the Medical Section report shows a detailed breakdown on the communicable diseases occurring during the month of February.

4. Medical Records

A total of 48,072 reports were processed during the month, a decrease over the previous month. This decrease was expected in view of the fact that in February a number of units were transferred from the Third U. S. Army.

5. Non-battle Injuries

The melting of the ice and snow which resulted in less slippery roads was responsible for a decrease in non-battle injuries during the month. During the first week, the rate was 228 per 1,000 per annum, with a subsequent progressive decrease to 137 for the last week of the month. Non-battle injuries represent fifteen percent of the total direct admissions for the month. Although there was a slight increase in the trench foot rate, due to the mud following the thaw, the frostbite rate dropped so sharply that the total cold injury rate per 1,000 per annum decreased to approximately fifty percent of that for the month of January.

6. Army Medical Laboratory Service

During the month of February the 7th Medical Laboratory continued to operate in two sections as follows:

Section I - METZ (R-85)
Section II - LUXEMBOURG CITY (P-81)

The combined sections performed 9,829 tests during the period, which represented a slight increase over the 9,535 tests performed during January, and established an all-time high for any one month since the commencement of operations.

The total work for the month of February is broken down as follows:

BASE LABORATORY SECTIONS	NO OF TESTS	PERCENTAGE OF TOTAL
Serology	6113	62.3
Bacteriology	1508	15.4
Chemistry	434	4.4
Pathology	218	2.2
Hematology	122	1.2
Parasitology	129	1.3
Sub-total	8544	87.0
MOBILE LABORATORY SECTIONS		
Venereal Disease Section (4th Conv Hospital)	1120	11.3
Shock Section (30th Field Hosp, 1st Plat)	165	1.7
Grand Total	9829	100.0

A breakdown of the above tests by type of unit requesting them during February is shown below:

TYPE OF UNIT	NO OF UNITS	NO OF TESTS	PERCENTAGE OF ALL TESTS
Evacuation Hospitals	12	2821	28.7
Convalescent Hospital	1	2918	29.7
Field Hospitals	10	620	6.3
Misc Medical Installations		625	6.3
Misc Tactical Installations		2845	29.0
Total	23	9829	100.0

There was no appreciable variation in the distribution of work between this and the preceding month.

7. Sanitation

Weather conditions were the influencing factor which brought about an increase in the problems of sanitation, including water supplies, camp sanitation, and personal hygiene.

There were scattered instances of louse infestation, but these were effectively dealt with by the use of DDT Powder. There was a definite absence of bedbug, rodent, garbage, or refuse disposal problems. A continuation of the policy of establishing military dump sites in troop centers brought favorable results.

Pollution of the soil from animal and human wastes was extensive in the occupied villages. There were twelve reported instances of a high diarrheal rate, and undoubtedly there were many which escaped reporting due to the comparatively mild and short-lived nature of the outbreaks. Sporadic cases continued generally throughout the month with diminishing frequency. The source or cause of the diarrhea was not determined, although investigations were carried out in several instances.

The operation of water treatment units when treating grossly polluted sources by the new method of treatment received a thorough test. Out of a record of 201 samples of treated water analyses, only three were found polluted during the month, which is considered exceptionally low in view of the stream conditions at that time.

A new directive on water supply was received from the European Theater of Operations (Section II, Circular No 17, dated 10 February 1945) incorporating Third U. S. Army's policy on water treatment and sampling.

CHAPTER 10
MARCH OPERATIONS

Section 1 - Organization of the Medical Section

The Assistant to the Army Dental Surgeon, a captain, Dental Corps, who had been with Headquarters Third U. S. Army since before its embarkation for ENGLAND, was transferred to an evacuation hospital. A replacement reported to the Medical Section.

No other changes occurred during the month in the organization of the Medical Section.

Section 2 - Operations

1. Training

Two officers from Army medical units attended the Information-Education Course, and one officer attended the Instructor Training Course at the Army Information-Education Staff School in PARIS (S-Ok).

2. Evacuation

The problems of evacuation in March provided a repetition, more or less, of the difficulties faced in the sweep across FRANCE in August, 1944. Following its breakthrough on the SIEGFRIED LINE east of the GRAND DUCHY OF LUXEMBOURG, Third U. S. Army's rapid advance was broken only for short periods by the natural obstacles offered by terrain and rivers. The Army faced the tactical problem of establishing bridgeheads across three rivers - the MOSELLE, the RHINE, and the MAIN. However, except for the retarding effect of these river assaults, the advances were sweeping. The speed with which the advances were executed, for the most part, placed a heavy burden upon evacuation facilities, since patients had to be hauled longer distances than normal speeds of advance would require. Fortunately, however, more favorable weather conditions had resulted in improved roads which permitted more successful evacuation by road.

There were only two changes in Army evacuating units for the period. The 580th Ambulance Company, Motor, was attached to Sixth Army Group about the middle of the month; and, subsequently, the 583d Ambulance Company, Motor, was relieved from First U. S. Army and assigned this Army.

The 65th Medical Group supported the VIII and XII Corps, and the 66th Medical Group supported the XX Corps. The 69th Medical Group, with the additional aid of ambulances from Advance Section, Communications Zone, provided evacuation for Third U. S. Army hospitals.

A grand total of 23,192 patients were evacuated from the Army area during March. Of this number, seventy-five percent were evacuated by road, due to the fact that Third U. S. Army was not operating an air medical evacuation holding unit after 13 March. Nevertheless, 5,698 patients were evacuated by air, and 2,081 were evacuated by rail from the Third U. S. Army medical holding unit during the month.

The 94th Medical Gas Treatment Battalion operated the Third U. S. Army air/rail medical evacuation holding unit at THIONVILLE (U-88) during the first half of the month. That unit was then alerted to prepare itself for the role of furnishing medical support in the event of chemical attack by the enemy. Both rail and air facilities were utilized during its operational period. The 28th Field Hospital (an Advance Section, Communications Zone unit) replaced the 94th Medical Gas Treatment Battalion at THIONVILLE (U-88) when the latter unit closed on 13 March. The 28th Field Hospital was then closed on 23 March, and one of its platoons was moved to ST WENDEL (Q-99) to care for Allied prisoners of war recovered from the camp at BAUMHOLDER (L-71).

The 7th and 58th Field Hospitals (both Advance Section, Communications Zone units) also operated air/rail medical evacuation holding units in support of Third U. S. Army. The 7th Field Hospital moved to Airfield Y-62 at NIEDERMENDIG (L-69) on 14 March. However, the field could not be used for air medical evacuation until 27 March because of the fact that the field was under observation of the enemy, who was deployed on the east bank of the RHINE River prior to that time. The 58th Field Hospital opened a rail medical evacuation holding unit at PITTELANGE (P-84) on 12 March, where it remained for five days. The unit then moved to TRIER (L-12) to operate an air/rail medical evacuation holding unit for the remainder of the month.

Locations of evacuation agencies of Third U. S. Army during March will be found in Annex XXX to the Medical Section report.

3. Hospitalization

The field hospitals continued to operate in the support of division clearing stations as they had in the past. The 65th Field Hospital was the only exception; this unit functioned as an evacuation hospital. At the end of the month, the attachments of the field hospitals were as follows:

VIII Corps	XII Corps	XX Corps
3d Plat, 42d Fld Hosp	1st Plat, 16th Fld Hosp	2d Plat, 30th Fld Hosp
2d Plat, 59th Fld Hosp	2d Plat, 16th Fld Hosp	3d Plat, 59th Fld Hosp
1st Plat, 60th Fld Hosp	3d Plat, 16th Fld Hosp	2d Plat, 60th Fld Hosp
	1st Plat, 30th Fld Hosp	3d Plat, 60th Fld Hosp
	3d Plat, 30th Fld Hosp	2d Plat, 42d Fld Hosp
	1st Plat, 59th Fld Hosp	

Third U. S. Army completed its penetration of the SIEGFRIED LINE; and by the middle of the month had advanced to the RHINE River in that part of its sector north of the MOSELLE River. This rapid advance left the hospitals a considerable distance to the rear of front line operations. To correct this undesirable situation, the 101st and 107th Evacuation Hospitals were established in the vicinity of MAYEN (L-69), where they could give excellent support to both the VIII Corps, operating in the vicinity of KOBLENZ (L-89) and XII Corps, which was changing direction to cross the MOSELLE River for a drive south. At the same time, the 104th and 109th Evacuation Hospitals had moved to TRIER (L-12) to support XX Corps, which was launching an attack toward the East in the sector south of the MOSELLE River. The 69th Field Hospital, functioning as an evacuation hospital, was brought up to SIMMERN (L-85) to support the southward drive of XII Corps; and, subsequently, the 110th, 39th, and 121st Evacuation Hospitals were moved to BAD KREUZNACH (M-03) in rapid succession. This marked the initial operational opening of the 121st Evacuation Hospital, which had become a unit of this Army on 9 March. Meanwhile, the 106th Evacuation Hospital followed up the advance of XX Corps, and moved to ST WENDEL (Q-99). Shortly thereafter, the 32d Evacuation Hospital moved to ALZEY (M-22).

Hospitals were limited to buildings in their choices of new sites until after Third U. S. Army crossed the RHINE River. The assault of the RHINE River by Third U. S. Army was carried out without serious op-

MEDICAL
AIR EVACUATION
HOLDING UNIT
AT THIONVILLE, FRANCE

Digitized by Google

position, and was adequately supported by the hospitals at BAD KREUZNACH (M-09) and at ALZEY (M-22). Immediately following the establishment of a secure bridgehead east of the RHINE, the 109th and 35th Evacuation Hospitals made reconnaissance to the East. The 109th Evacuation Hospital had the distinction, by setting up in the vicinity of HEPPENHEIM (M-55) on 28 March, of being the first Third U. S. Army evacuation hospital to open east of the RHINE River, and it was also the first to go under canvas since the commencement of winter. The 35th Evacuation Hospital opened the next day at Paul Lander Krankenhaus in DARMSTADT (M-64).

The 6th Convalescent Hospital remained at HOMBURG-LES-METZ (B-05) throughout the month. This unit, however, closed on 22 March, pending a move forward. The non-availability of transportation during this time immobilized the hospital, except for the Venereal Disease Section which moved to the site of the 39th Evacuation Hospital in BAD KREUZNACH (M-09), where it opened on 31 March.

For several weeks prior to the first of March, the 6th Convalescent Hospital had been operating at capacity. To alleviate this situation, and prevent patients from leaving the Army area, due to capacity having been reached at the 6th Convalescent Hospital, a provisional convalescent hospital was organized. The Headquarters and Headquarters Detachment, 436th Medical Battalion, was charged with the operation of the provisional convalescent hospital. Attached to it were: Headquarters and Headquarters Detachment, 182d Medical Battalion; 2d Platoon, 423d Clearing Company; and the 424th Clearing Company. The hospital was set up at HOMBORF-LES-BAINS (P-90) and opened on 3 March to care for ambulatory convalescent medical cases less neuropsychiatric cases. This unit operated for nineteen days and was closed on 22 March.

For one week during the last half of the month, there were no convalescent hospital facilities available, and convalescent patients were evacuated to Communications Zone. Though this was disadvantageous, it was deemed necessary to empty the 6th Convalescent Hospital and the 436th Medical Battalion (provisional convalescent hospital) which were falling far behind, due to rapid advances of the Army. The latter was able to move and was established at OBERSHEIM (M-35) on 29 March.

The 24th Medical Battalion (provisional hospital) continued to operate at ERCH (P-70), providing care for self-inflicted wound cases who were being retained in the Army area awaiting investigation and/or court-martial. This unit closed on 28 March in preparation for a move eastward.

Locations of Third U. S. Army hospitals during the month of March will be found in Annex XXXI to the Medical Section report.

An analysis of wounded hospitalized in March is given below:

a. Number of wounded admitted to medical installations:

(1) U. S. Army Troops	11072
(2) British Army Troops	22
(3) French Army Troops	37
(4) U. S. Navy and Marine Corps	1
(5) British and French Navy	0
(6) Enemy Forces Personnel	171

4. Additional Temporary Medical Service

During the early part of the month, there were reports of the possible use of chemical agents by the enemy. To be adequately prepared, the 82d and 94th Medical Gas Treatment Battalions were alerted for support of the Army in the event of such attack. The 82d Medical Gas Treatment Battalion closed its provisional hospital for gas injury cases at THIONVILLE (U-668) and the 94th Medical Gas Treatment Battalion ceased its function as an air and rail evacuation holding unit.

For the remainder of March, these battalions were mobilized to close support of the divisions and conducted refresher training for all personnel, as well as checking all equipment for serviceability. Radio equipment was furnished each battalion and the 55th and 94th Medical Groups to facilitate communication. Fortunately, these battalions were not required to perform their primary mission during this period.

As the Army progressed through Germany, more and more German hospitals came under Third U. S. Army control. During the latter part of March, the medical group supporting the particular sector in which a hospital was uncovered assumed control and became responsible for supervision and supply of the installation. It soon became apparent that many more such installations were to be found, and it was deemed advisable to place the responsibility for supervising all German military hospitals on a single medical group. Plans to that end were being made as the month ended.

A Nurse Prepares a Laparotomy Pack with Forceps, Retractors, Scalpels and Hemostats, for the Steriliser

Section I - Professional Services

1. General

There were 11,072 battle casualties during March. Based on total dispositions from all causes among Third U. S. Army personnel, there was a mortality rate of one and two-tenths percent.

2. Surgery

Surgical units were kept close up behind the rapid advance of the Third U. S. Army columns during the month. The problem was made more difficult by a number of major river crossings. However, through the use of surgical trucks and PROCO units attached to the field hospitals, the armored columns were well supported. The distances to evacuation hospitals were greater than had been the rule, but no harm was done, as the non-transportable cases were cared for well forward. Through the proper use of PROCO units, it was felt that the problem of handling the casualties of armored divisions was solved. The armor of the Third U. S. Army moved fast and over great distances, and the commanders of the divisions were well satisfied with the surgical support they were given. The method by which these results were accomplished is as follows:

A field hospital platoon was attached to the armored division. The organic personnel of this platoon was reinforced with two general surgical teams and two shock teams. These surgical teams were furnished with two two-and-one-half-ton trucks with sufficient tentage, instruments, and supplies to function in conjunction with the clearing company of the division. The trucks also carried the surgical personnel; and, as the division moved forward, they went with it. They set up with the clearing station and did the non-transportable cases encountered. The field hospital platoon later moved up and established itself at the same level and took over the job of nursing and caring for these casualties. The PROCO unit was then free to move forward again. The field hospital platoon, in turn, was relieved by a holding unit made up from collecting company personnel. The hospital platoon could move up very quickly to again join the surgical teams. Such moves were possible every few days, and great distances were covered, thus shortening the ambulance haul and lowering the mortality.

In addition to the 11,072 battle casualties from our own troops, there were eight-ten allied wounded and 5,424 of the enemy who received surgical care in Third U. S. Army medical units. In spite of this relatively high number of casualties and the distances involved, the surgical standards of the Army were maintained at their usual high level.

Depot

A Dental Clinic at an Army Medical Depot

uses "Acquired" Equipment

A manuscript, "Dental Supply Shipments," was written by a dental officer of the Base Section, for the Army Surgeon's consideration and remarks. The device, method of construction, and utilized materials contained in Chest Number 60 made possible the proportioning of every ingredient required for every cavity, and large fillings, thus effecting a saving of filling material. The manuscript was forwarded to the Chief Surgeon, European Theater of Operations, with a recommendation from Headquarters, Army Dental Surgeon that its publication be considered.

A decreased number of admissions, readmissions, and treatments resulted from the rapid movement of the Army. In that dental officers and their potential patients were following the advance across FRANCE, with no opportunity to give corrective treatments other than those of an emergency nature.

A chart is shown below giving the breakdown of dental treatments for the month of March

Stomatitis, Vincent's Treatments	[illegible]

*. Veterinary

Due to lengthening supply lines and shortage of transportation during the month of March, inspections of Class I supplies continued to be relatively low in number. However, no difficulties were encountered with respect to sanitary conditions. The remaining 40 per cent of the various Class I supplies were instructed to receive close attention, and especially was this policy stressed in the case of canned beef.

Thirteen messes and one quartermaster issue were visited during March, and corrective action recommended where indicated.

Two divisions were visited for the purpose of investigating the method of food handling in the division Class I dumps.

6. Personnel

Shortages continued to exist in the appropriate numbers of previous months in Medical Corps, Dental Corps, and Medical Administrative Corps officers. Though constant efforts were made to obtain adequate reinforcements to bring Third U. S. Army units up to full strength, Theater shortages continued to prevent attainment of this end. Approximately fifteen Medical Administrative Corps officers were appointed from the ranks in March. These appointments were effected as the result of applications for transfer to Headquarters Third U. S. Army in January. Further efforts were maintained, and are still in force, to obtain a sufficient number of these applications to effect appointments of second lieutenants, Medical Administrative Corps, of the proper calibre to relieve the entire shortages of Third U. S. Army in this category.

Approximately fifty nurses and a number of surgical and shock teams continued on detached service with the Third U. S. Army hospitals during the month, on loan from general hospitals.

Section 2 - Medical Supply

Despite the fact that March ushered in one of the most active periods from a tactical standpoint, a period in which the problem of long supply lines was developed, definite progress was made toward a better medical supply situation within Third U. S. Army. Improved road conditions, more favorable flying weather, and the increasing mobility of train vehicles all contributed to the receipt of many more tons of medical supplies during the month. Especially was there a marked improvement in the delivery of supplies by air from the Communications Zone. There were approximately 641 long tons of medical supplies received from Communications Zone depots during March, whereas, during the previous month, only 381 long tons were delivered. At this meeting, the Chief of Air Medical Supply from the Chief Surgeon's office visited this headquarters during the month and checked on shipments of medical supplies by air. He left with the Army Surgeon that all future shipments of medical supplies required for

[illegible] Army hospitals from depots in the SOS, Third Army would be utilized [illegible] at Depot [illegible].

The Army Surgeon, Chief of the [illegible] and the Medical Supply Officer attended a conference [illegible] with representatives of the Chief Surgeon's office and Quartermaster. The meeting was called in the interest of [illegible] with regard to the [illegible] of the present depot [illegible] and the [illegible] of the Army. [illegible] was made to [illegible] the [illegible] of the Army [illegible] fewer [illegible] and [illegible] the [illegible] of the Army was [illegible] the [illegible] of the Army [illegible] the [illegible] of the Army [illegible] the [illegible] of the Army

Releases were obtained from the Communications Zone on two dental laboratory trucks, four dental operating trucks, and four surgical operating trucks. Also notification was received from the Chief Surgeon's Office that release had been secured on six M-7 Generator Trailers which would come to Third U. S. Army through Ordnance channels.

One additional anesthesia apparatus, portable, was authorized each evacuation hospital, bringing the total on hand to four in each hospital.

The problem of handling the increasingly large stores of enemy medical supplies uncovered by Third U. S. Army's rapid-moving forces was becoming one of great import.

To deal effectively with the situation, a captured enemy material team was organized, which consisted of one officer and ten enlisted men whose duty it would be to investigate, inventory, and guard all captured German medical supplies. The team was placed on detached service with the captured enemy material platoon, operated by Quartermaster Field Service. As the Army moved deeper into [illegible], a number of large medical supply depots were captured, resulting in the immediate functioning of this valuable addition to the Army Medical Service.

Reproduction of a sketch showing the locations occupied by medical depot companies during January, February and March will be found in Annex XXXII to the Medical Section report.

Section 5 - Preventive Medicine

1. General

With the exception of an increase in the incidence of infectious hepatitis, preventive medicine problems of every category were reduced during the month of March. Rising temperatures, accompanied by a number of sunny days, was one of the factors which contributed in large measure to the decrease in non-effective rates within Third U. S. Army. By the end of the month, however, the incidence of infectious hepatitis, which showed a monthly increase over February of almost three hundred percent, was causing some concern.

2. Venereal Disease Control

As a result of the advance of large numbers of combat troops into GERMANY, where the rules of non-fraternization [illegible], the rate of venereal disease continued [illegible] bringing about an overall reduction in the [illegible] despite the continuing abundance of [illegible] areas outside the army [illegible] of all individual venereal disease reports received, [illegible] one-half of the total [illegible] areas outside the Army area at the [illegible] a subject of venereal disease, or activities [illegible] for March prevailed a relative decrease in the incidence of [illegible] ca. breakdown by weeks of venereal disease is shown in Annex [illegible] to the Medical Section report.

3. Communicable Diseases

Exclusive of the increase in infectious hepatitis, there was a decrease in all communicable diseases. [illegible] disease rates declined from February's rate of thirty-eight per thousand per annum to seventeen, and upper respiratory diseases to [illegible] thirty-two per thousand per annum, as compared to February's 46 cases.

4. Medical Records

There were [illegible] of reports processed during the month. Upon comparing this figure with the [illegible] reports processed during the previous month, it is obvious that there was a considerable [illegible] reduction in admissions of all types.

5. Non-battle Injuries

Cold type trench foot and frostbite injuries, which had previously taken their [illegible], were practically [illegible] during the month of March, as the few cases weather conditions [illegible] necessity of keeping the troops [illegible] freezing temperatures. The [illegible] non-battle injury rate [illegible] per thousand per annum [illegible] for March to maintain a figure which represented thirteen percent of the total direct admissions [illegible] Improved [illegible] conditions, as the result of less rainfall, was a factor in the monthly reduction in non-battle injuries.

6. Army Medical Laboratory Service

The 7th Medical Laboratory continued its policy of operating in two sections which were located as follows:

Section I - 1 to 30 March - METZ (U-95);
30 to 31 March - BAD KREUZNACH (M-03)
Section II - LUXEMBOURG CITY (P-81)

The combined sections performed 9,168 tests during March as compared with 9,829 for the previous month.

The total work for the month of March is broken down as follows:

BASE LABORATORY SECTIONS	NO. OF TESTS	PERCENTAGE OF TOTAL
Serology	5209	56.8
Bacteriology	1801	19.6
Chemistry	906	9.9
Pathology	208	2.3
Parasitology	195	2.1
Hematology	66	0.7
Sub-total	8483	89.6
MOBILE LABORATORY SECTIONS		
Venereal Disease Section (6th Convalescent Hospital)	1185	13.0
Grand Total	9168	100.0

A breakdown of the above tests by type of unit requesting them during the month of March is shown below:

TYPE OF UNIT	NO. OF UNITS	NO. OF TESTS	PERCENTAGE OF TOTAL TESTS
Evacuation Hospitals	4	2230	24.3
Convalescent Hospital	1	2626	28.8
Field Hospitals	2	364	3.9
Misc Medical Installations		416	4.5
Misc Tactical Installations		2332	25.5
TOTAL	26	9168	100.0

The total figure of 9,168 marks a decrease of several hundred over, compared with the totals for the two previous months.

7. Sanitation

Improved environmental conditions [illegible] by favorable weather resulted in fewer instances of diseases associated with poor sanitation. [illegible] to [illegible] did not present a problem during the month. Reports of [illegible] were numerically insignificant, as they represented less than thirty cases throughout the entire Army. Rodent [illegible] were effectively dealt with [illegible] and proper use of [illegible]. The most [illegible] was attained in the eradication of [illegible] Liberal issues of DDT powder were effective in the [illegible] and [illegible] of American and allied prisoners of war, displaced persons, [illegible] and refugees of war found in the many camps which had been opened or established during the month.

With the advent of improved sanitation, a noteworthy decrease was registered in the [illegible] diseases. There were only [illegible] cases during the entire [illegible] compared with the twelve [illegible] during the month of February.

The summary of [illegible] for the thirty-one-day period showed the following [illegible] of the [illegible] total of 107 [illegible] and [illegible] diseases with three non-[illegible] cases found in the previous month's total of [illegible].

CHAPTER 11
APRIL OPERATIONS

In April, the medical picture changed from one largely concerned with treatment of battle casualties among our own forces to one of control over captured German hospitals, displaced persons camps, Allied prisoner of war encampments, and the like. In no instance was there time to devote the desired complement of attention to the almost inexcusable things which were uncovered. In all instances there was the desire to accomplish better the tasks which unfolded.

There was confusion. Third U. S. Army, as well as other Armies, was burdened with the two-fold task of carrying on its tactical operations and, at the same time, giving assistance to some of its occupational duties. People were homeless, people were sick. Operations proceeded with such rapidity that it was reminiscent of August, 1944; occupational problems were like hundreds of huge disasters rolled into one. The scope of governmental problems, including such as the treatment of the sick, both Allied and enemy, were the most complex that have been faced, perhaps, in all history; the operational end of the war was a dire necessity. Each problem was huge in itself. The dual role into which this and other Allied Armies were forced was unimaginable.

Section 1 - Organization of the Medical Section

Two Medical Corps officers from the Operations and Training Subsection were transferred to units under that command. This constituted a reduction in personnel for the Medical Section, in conformity with Staff Memorandum Number 75, this headquarters, dated 16 December 1944.

The Army Surgeon was promoted from the rank of Colonel to Brigadier General. The Army Surgeon was evacuated through medical channels, during the month to the Zone of the Interior. Colonel Thomas J. Hartford, Medical Corps, reported for duty as the Army Surgeon.

Also during April, under a directive from Twelfth Army Group, public health activities were placed directly under the Army Surgeon. One Medical Corps officer, one French medical officer, and one enlisted man, formerly with the G-5 Section, were transferred physically to the Medical Section, with a view to attaining a closer degree of coordination and control of such matters.

Section 2 - Operations

1. Training

The training of officers from Army medical units in the fundamentals of the "Army Education Program - Post Hostilities" was given more emphasis, in view of the apparent certainty that the end of hostilities was approaching. Eight officers attended the Information-Education Course, and one officer attended the Instructor Training Course at the Army Information-Education Staff School in PARIS (S-04).

2. Evacuation

The disintegration of the German defenses was quite evident in April; the advances of the Army were extended and were accordingly at maximum speed. As in the past under similar tactical situations, there was a great strain placed on the evacuation facilities as a result of long ambulance hauls. This handicap, however, was offset to some extent by the simultaneous reduction in the number of casualties. Longer hauls of fewer patients has been the general rule during all fast-moving situations.

By the middle of the month, Third U. S. Army had advanced as far east as it was permitted to go under the then existing tactical plan. Because of past experiences under like conditions, a complete change in the Army's mission and direction came as no great surprise. The new plan called for an attack toward the South and the reputed German redoubt. Though a certain disruption of carefully-laid evacuation and hospitalization plans was unavoidable, the change was accomplished without a great deal of difficulty.

Several evacuation problems arose during the month. Three new armored divisions (the 11th, 14th, and 16th) were assigned to Third U. S. Army. All were short at least sixty percent (60%) of their authorized number of ambulances, and the 66th Medical Group was required to furnish ambulances to these divisions for intra-division evacuation. Since the 66th Medical Group was now evacuating all divisions of the Army, its ambulances were scattered throughout the entire Army area with a maximum effective strength at all points.

Road evacuation accounted for most of the total of 17,312 patients who were sent out of the Army area during the month. Of this number, 11,739 went by ambulance to Advance Section, Communications Zone units. The Advance Section, Communications Zone units which operated evacuation holding units for Third U. S. Army were the same as in previous months. They were the 7th, 28th, and 56th field hospitals.

Air and rail medical evacuation holding units functioned in the customary manner with one exception. Consequent to the overrunning of large areas of Germany, many Allied military personnel were recovered from German prison camps, a great number of whom were sick. The Americans, British, and French required evacuation through normal medical channels. In addition, however, large numbers were not sick, but suffered only from malnutrition. These, too, required evacuation. In two areas, they were evacuated through the Third U. S. Army air medical evacuation holding unit operated by the 54th Medical Gas Treatment Battalion. Located at Airfield #47 in [illegible] (M-47), this unit evacuated 1,496 American and British non-patient military personnel. At [illegible] several more thousands of this type personnel were evacuated by air from that unit. In addition, the 54th Medical Gas Treatment Battalion cleared 2,908 U. S. Army patients through its holding unit.

Third U. S. Army and Advance Section, Communications Zone holding units were located at five airfields during the month. At the end of the month, the 7th Field Hospital was located at M-26, BAD HOMBURG (D-75), the 28th Field Hospital was at M-44, [illegible] (D-81), and the 56th Field Hospital was closed at M-26, BAD HOMBURG (D-75), awaiting a move forward.

There was no rail evacuation from Third U. S. Army holding units during the month of April. However, 519 patients were evacuated from the 45th Medical Battalion (provisional hospital for self-inflicted wound cases) at ESCH (F-70) to the 195th General Hospital in VERDUN (C-29). Seventeen other patients were evacuated directly to a train from the 142th Evacuation Hospital in TRIER (L-12).

The locations of evacuation facilities during the month of April will be found in Annex XXIV to the Medical Section report.

3. Hospitalization

During this period, the field hospitals continued to operate in support of division clearing stations, with the exception of the 65th Field Hospital. This unit was relieved from attachment to the 66th Medical Group and attached to the 44th Medical Group to provide assistance to the latter group in giving necessary care to German military hospitals and Allied prisoner of war hospitals and camps.

On 1 April, a report was received that the First Platoon, 16th Field Hospital, attached to the 4th Armored Division, was ambushed by troops of the SS Heinrich Heydrich Division. Two members of the platoon were wounded, the remainder captured intact. The Commanding Officer, 106th Evacuation Hospital and his Chief of Surgery were accompanying this platoon while on reconnaissance for a new site for the 106th Evacuation Hospital. The Chief of Surgery was killed during the initial shooting. The captured personnel and equipment were removed from the scene at ALSFELD (F-68) to BAD HERSFELD (D-46). In that area were about twenty wounded soldiers from the 4th Armored Division. The platoon was placed in operation at that location by the Germans.

On 2 April, the platoon was recaptured by American troops. While in German hands, the unit had cared for fifty-nine patients, of whom thirty-three were American and twenty-six were German. Losses in equipment included the x-ray truck and equipment, one jeep and most of the personal clothing and equipment.

At the end of the month, the attachments of the field hospitals were as follows:

III Corps	XII Corps
1st Plat, 30th Fld Hosp	4th Plat, 16th Fld Hosp

As Third U. S. Army continued its advance into GERMANY, the month of April was characterized by rapid movements of the evacuation hospitals. As always in a rapidly-changing situation, hospitals had difficulty in keeping pace with the advancing troops, thereby necessitating longer ambulance hauls for evacuation. Light casualties, however, removed the necessity of hauling large numbers of patients over long distances, thereby creating a compensating effect upon what would have otherwise proved to be a critical situation.

With the advent of warm spring weather, a policy was adopted which provided that hospitals would set up for operation in the field. This facilitated movement and decreased the time required to open in a new site.

The major difficulty encountered during the period occured toward the middle of the month when Third U. S. Army changed direction and proceeded southward. The subsequent change in Army boundaries left the 11th, 14th, 16th, 107th, 130th, and 121st Evacuation Hospitals in First U. S. Army Zone, with the result that it was necessary for these units to move. The 101st Evacuation Hospital at ENGLMARK (D-42) was just outside the Army area, but the location was considered satisfactory for a short period. Most of the evacuation hospitals were closed, pending movement to the south, and on 20 April, only four hospitals were open, including the 12th Evacuation Hospital at FRANKFURT (M-66), which was operating, generally, as a "station hospital". The 130th and 109th Evacuation Hospitals were open in the new Army area, and the 101st Evacuation Hospital was open just outside the Army area.

The change in Army boundary also resulted in the shift of VIII Corps to First U. S. Army and the assignment of III Corps to Third U. S. Army.

On 25 April, the 95th Evacuation Hospital moved to SCHLIERSEE (D-41); the 94th Evacuation Hospital moved to ROSENHEIM (F-12), while the 107th and 121st Evacuation Hospitals planned to move to bivouac sites in the same vicinity as the 12th Evacuation Hospital. The 104th Evacuation Hospital opened at BAD REICHENHALL (D-32).

The 94th Evacuation Hospital began to move into III Corps Zone, and on 29 April opened at SANKT WOLFGANG (F-84). The 107th Evacuation Hospital moved into III Corps Zone at BERCHTESGADEN (D-17) prior to setting up north of BERCHTESGADEN (D-15).

An unusual incident occurred on 14 April when the 52d Evacuation Hospital was strafed by a single German plane attacking a convoy on the nearby autobahn. One officer of an ambulance platoon, stationed at the hospital, was wounded in the attack.

At the close of the month, another temporary change in boundary left the 95th, 93th, and 110th Evacuation Hospitals in the new First U. S. Army Zone. The 110th Evacuation Hospital closed then, but the other two remained open, pending establishment of First U. S. Army hospitals in the area.

In view of transportation shortages and frequent moves over long distances, the G-4 Transportation Section provided three truck companies, one on each of three separate occasions, for movements of the evacuation hospitals. This represented the largest number of vehicles required during any similar period, in addition to the resources of the various hospitals.

The 6th Convalescent Hospital, which had remained at MOULINS-LES-METZ ([illegible]) throughout March, had been closed since 22 March. Non-availability of transportation immobilized the unit, except for the Venereal Disease Section. On 8 April, the unit was moved by rail to KAUB (K-35), and from there to a field site east of KIRRLACH (K-13), where it opened with 1,000 beds on 16 April. Uninterrupted treatment was administered to 117 patients who moved to the new site, even though a large percentage of the patients were receiving penicillin therapy.

On 21 April, the hospital was closed in preparation for movement southward, the Venereal Disease Section having moved to the 104th Evacuation Hospital at BAD REICHENHALL (D-32), where it opened on 20 April.

Toward the end of the month, reconnaissance was made in the vicinity of [illegible] (D-40); although, due to lack of transportation, the unit was again immobile. However, rail transportation was expected to be available within ten days. There were 400 tons of the unit equipment at MAINZ (M-55) and the same amount at KIRRLACH (K-13), to be moved.

Locations of Third U. S. Army hospitals during the month of April will be found in Annex XXIV to the Medical Section report.

An analysis of wounded hospitalized in April is shown below:

a. [illegible] wounded admitted to medical installations "direct" (i.e., [illegible] transfer):

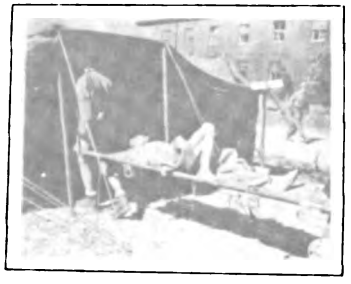
k. Number of wounded evacuated to other hospitals:

(1) U. S. Army	4710
(2) Other	384



4. Additional Temporary Medical Service

Ever-increasing numbers of German military hospitals were being uncovered during the advance of Third U. S. Army. At the beginning of the month, the mission of supervising and controlling these installations was given to the 66th Medical Group. In addition, the group became responsible for the medical care at all allied prisoner of war camps. The 65th Medical Group assumed responsibility for evacuation of XX Corps, in order to free the 66th Medical Group for its important task.

Because of the large number of German medical installations which were being overrun by the Third U. S. Army, a directive was issued on 11 April, effective 1 April, defining the specific responsibilities of the Army Medical Service in regard to such installations.

Under the terms of this directive, German prisoners of war uncovered on the field of battle were to be treated and evacuated through normal medical channels. In the case of German prisoners of war un-

covered in German military or civilian hospitals, a "stay put" policy was to be followed, the tactical situation permitting. At such time as the latter individuals were ready for discharge from the hospital, evacuation to a prisoner of war enclosure was to be permitted. Consolidation of German patients in military or civilian hospitals was to be accomplished wherever possible, and maximum use of German Medical Department personnel, equipment, and supplies was to be made.

With regard to sick and injured Allied prisoners of war which were being uncovered, the directive established a "stay put" policy, with the exception of United States and British prisoner of war patients, which patients were to be transferred to a U. S. hospital and evacuated normally as rapidly as the chain of evacuation load would permit.

Other instructions contained in the directive referred to the policies to be followed in regard to captured German Medical Department personnel, and specific instructions to the Commanding Officers of the 66th and 69th Medical Groups, which were responsible in the forward and intermediate Army area, respectively.

The job of the 66th Medical Group included responsibility for provision of rations and medical supplies which, where possible, were obtained from captured stocks. Necessary fuel was also provided. The German installations were checked frequently to assure proper sanitation, correct triage of the patients, and evacuation of the well prisoners of war to prisoner of war enclosures. Where the situation permitted, smaller hospitals were closed and the patients transferred to other hospitals with available space. By decreasing the number of installations, better control could be maintained.

During this period, it was established that no German patients in these hospitals would be evacuated out of the Army area; only those German wounded uncovered on the field of battle could be evacuated through normal U. S. Army medical channels. Even these patients were sent to German hospitals if their condition permitted and the hospitals were available.

On 15 April, Advance Section, Communications Zone, assumed responsibility for twenty-two of the nearest German hospitals, and established a Medical Center at BAD NAUHEIM (M-66). Two days later, the 69th Medical Group took over the German hospitals in an intermediate zone between the 66th Medical Group and Advance Section, Communications Zone. A total of twenty-six hospitals were taken over by the 69th Medical Group at that time.

The notorious concentration camp (Camp BUCHENWALD) was uncovered at ETTERSBERG (J-47) during April. Approximately 21,000 persons were in the camp when it was overrun, living under most horrible conditions. The 120th Evacuation Hospital, newly arrived in the Army area, was dispatched on 15 April to this camp to provide medical service for the large number of sick, estimated to be 5,000. This unit, plus a clearing platoon, operated for about ten days until relieved by First U. S. Army units. During this time, the hospital did outstanding work in caring for the sick and improving the sanitation of the camp. The 120th Evacuation Hospital was attached to the 66th Medical Group during this period, which attachment continued throughout the month. At the close of the month, the 120th Evacuation Hospital was moving to the vicinity of CHAM (T-48) to care for a large number of displaced persons there.

On the last day of the month, a camp was overrun at HORSTEL (E-19). This camp was reported to contain approximately 30,000 Allied military personnel, with many thousands of them sick. The 153th Evacuation Hospital, which had recently arrived, was immediately dispatched to MUENSTER (E-24) to take over the situation.

Section 3 - Professional Services

1. General

The type of warfare waged during the month of April was definitely reflected in a change in emphasis with the category of professional services rendered. With the uncovering of captured German hospitals, displaced persons camps, and Allied prisoner of war enclosures in large numbers, the medical services, as distinct from the surgical, became of greater relative importance.

2. Surgery

With the crumbling of German resistance, the number of casualties in Third U. S. Army dropped to less than half of the number reported during the previous month. Of a grand total of 5,362 wounded and processed through Army medical installations, 4,071 were minor injuries, leaving only 1,291 seriously wounded cases. There were 152 deaths, and of this number, fifty-three were suffering from abdominal wounds, thirty-eight from thoracic wounds, and thirty-seven from wounds of the head. About one-third of these casualties received multiple wounds.

The character of the fighting is further reflected in the types of casualties, in that, for the first time during this campaign, the number of casualties resulting from small arms fire (rifle, pistol, or machine gun) outnumbered those which were incurred as a result of shell fragments. There was considerable sniping, ambushing along the roads, and road block skirmishes where small arms were employed. Small arms fire accounted for 2,484 casualties and eighty deaths, while, 1,291 casualties and fifty-one deaths resulted from shell fragment wounds. In previous months of this campaign, this ratio had been between three and four casualties from shell fragments to one from small arms fire.

2a Medical Services

General medical problems among Third U. S. Army troops presented little change when compared with those encountered during the previous month. There was an overall ratio of medical admissions to surgical admissions of approximately sixty-five to thirty-five, favoring the latter. Medical admissions were largely composed of the type individuals seen in station hospitals and on daily sick call, there being very few of a type to present distinct and difficult diagnostic problems among U. S. Army personnel. Careful and exhaustive study of the latter cases was required.

The most serious problem confronted by the Medical Service was in the form of scattered outbreaks of typhus fever among Allied prisoners of war and displaced persons. This illness appeared in several camps and increased rapidly until adequate sanitary measures were instituted and all personnel, buildings, and clothing were delouused. Within a very short period after the delousing procedures were instituted and made constant regimen, the incidence of the disease began to wane. In addition, malnutrition was very pronounced among the personnel of these categories. To meet the malnutrition ailedy, small feedings of high caloric and high protein content were given these patients. In these groups also there was a high incidence of open cases of pulmonary tuberculosis, which required expert medical and nursing care and early evacuation to proper hospital facilities. Probably the greatest problem in this group was that of educating the patients in proper sanitation and of preventing them from expectorating wherever they might choose, thereby spreading the disease. As a rule, camps were initially dirty beyond description, and the police and institution of proper and adequate sanitation was time-consuming, as well as difficult. The large numbers of individuals of various nationalities in these camps complicated the problems.

During the month of April, a survey of all field artillery liaison pilots was accomplished to determine those suffering from flight fatigue and to make such recommendations as deemed necessary for the adequate conservation of personnel in this group. It was found that out of 290 pilots, only four were suffering from marked fatigue and fourteen from moderate fatigue. These men were recommended for leaves to rest areas, and it was the opinion of the surveying officers that all would be salvaged. The only recommendations forthcoming from this survey was that pilots receive their yearly examinations at Air Corps dispensaries, and that rest and recreation centers be established in the Army Zone for men in this group so that some degree of rotation could be carried out.

Contagious diseases were not prevalent to any appreciable degree during the period. Scattered cases of diphtheria and mumps made their appearance throughout the command; but, in no instance, was anything approaching an epidemic found in any single organization. There were three diphtheria deaths during the month, all of which were of an extremely virulent type, and which resulted from complications rather than the disease itself.

3. Neuropsychiatry

Rapid advances by troops of Third U. S. Army in the face of light resistance was the prime factor in elevating the morale of combat troops to a degree which was probably unapproached at any time since D-Day, with the possible exception of the period which involved the dash across FRANCE in August.

Records of past performances prove that high morale and low neuropsychiatric casualties go hand in hand, and the relationship between these two factors during April, with its light resistance, rapid advances, and consequent high morale, is emphasized more than ever. Out of a total of 23,431 direct admissions during this period, 706 were diagnosed as neuropsychiatric casualties. This marked an all-time low in Third U. S. Army from a percentage standpoint. Seventy-eight and six-tenths percent (78.6%) of the neuropsychiatric casualties were returned to duty, which left an accumulation during the month of only 151 non-effective neuropsychiatric individuals out of the total direct admissions.

With the low record of neuropsychiatric cases, a relatively new problem arose--that of rendering neuropsychiatric opinions on an increased number of administrative and disciplinary cases. In general, these were admitted from combat units for further neuropsychiatric opinion; and, in many instances, with the request that administrative and disciplinary cases be evacuated through medical channels. There was also an increase in the number suffering from chronic alcoholism. This type of individual was, of necessity, returned to a parent unit for administrative or disciplinary action.

4. Dental

The month of April found the Army Dental Surgeon again faced with the necessity of providing dental service to combat units which had driven far in advance of most units where provision of dental facilities was normally available. The laboratory facilities provided in the two medical depot companies and in most of the evacuation hospitals were rendered ineffective because of their inability to follow closely behind the Army's forward elements. Their mission became that of servicing supply and service echelons behind the combat divisions. The extreme value of the mobile type of prosthetic unit was proved beyond all question, once the lines had become extended beyond the point at which semi-fixed installations were effective. Mobile prosthetic teams were sent forward with the combat divisions to insure that dentures would be constructed or repaired without the necessity for evacuating men from the division area.

In the interest of mobility and economy of transportation, the Army Dental Surgeon directed that evacuation hospitals rid themselves of all heavy dental equipment in excess of the Tables of Basic Allowances, retaining only the items necessary to provide an efficient dental service. Hydraulic chairs, dental cabinets, and units which had been used during the winter months when the hospitals operated in buildings were stored with the medical depot companies, to be held until such time as the hospitals could again function in fixed accommodations. The elimination of this heavy equipment expedited movement without impairing the service rendered in the field.

By 14 April, four dental operative trucks which had been attached to Third U. S. Army were completely equipped and manned so that they could begin operation at their respective corps headquarters to work with the medical clearing companies assigned to corps headquarters. The operative teams worked in conjunction with the mobile prosthetic units which had previously been assigned to the medical clearing companies. It was found that this combination permitted complete preparation of all patients for prosthetic appliances, thus accomplishing a most efficient service. The fourth truck was attached to Headquarters Third U. S. Army (Rear) to provide dental service for personnel of headquarters and attached units. No dental officer is provided for in Tables of Organization to service troops of the Army Rear echelon.

Units which had received captured German field equipment were found, upon inspection, to be employing it to its maximum advantage. Of particular value was the combination electric and foot engine and the electric operating light contained in Chest Number 2. Distribution was made chiefly to evacuation hospitals where generators were available for the employment of electrical equipment.

Interest in the newly devised acrylic anti-concussion device, which had been produced under the direction of the Third U. S. Army Dental Service increased to the point that the Artillery Section, Headquarters Third U. S. Army, submitted a request to the Army Dental Surgeon for information relative to the fabrication, use, and results of this invention.

Statistical information relative to dental treatments in Third U. S. Army for the month of April is shown below:

Strength (Reported)	309947
Admissions, Routine	15277
Admissions, Emergency	1205
Sittings	26273
Officer Personnel	417
Enlisted Personnel	441

UNIFORMS WORN BY THIRD U. S. ARMY NURSES

Digitized by Google

The absence of rain and the abundance of sunshine during April assisted in the maintaining of excellent sanitation at the Quartermaster Class I Supply Points. Ideal weather conditions made the complete utilization of all stocks possible. The greatest losses were sustained in fruits and vegetables. These losses were attributed partially to the extreme perishability of such items as oranges, potatoes etc., and partially to the fact that the packing and handling procedure was not up to the desired standards.

The captured enemy materiel team was notified of numerous newly discovered stockpiles of captured enemy materiel. Included in these stores were two cold storage plants, well filled. One plant, located at FRANKFURT (M-66), contained considerable quantities of tub butter, cheese, frozen beef, pork, veal, and fowl. The other, uncovered at NUERNBERG (Q-40), was filled with a large supply of frozen beef, pork, canned meat, and frozen vegetables. Some of this food was issued to Army troops, but was made available for feeding prisoners of war and displaced persons, the latter through Military Government.

Other captured stores of less perishable nature, such as canned beef, canned pork, and dried vegetables, were placed under guard by the officer in charge of the captured enemy materiel team. These food supplies were issued to prisoners of war and displaced persons, by order of the Military Government, and were conveyed to and issued from six depots, located at FURTH (Q-30), BAMBERG (Q-24), WUERZBURG (M-53), HEIDENHEIM (M-15), ULM (V-89), and PILSEN (L-84). Condition of the items referred to above was generally good. About thirty percent (30%) of the butter at FRANKFURT (M-66) was very rancid, and was reworked by a local dairy. Fowl in cold storage at NUERNBERG (Q-40) was moldy and very badly dressed, but was not otherwise decomposed.

6. Personnel

As the war approached its close, the situation with respect to availability of Medical Corps officers became more and more untenable. New divisions assigned to Third U. S. Army were invariably ten Medical Corps officers short, new evacuation hospitals were eight Medical Corps officers short, each. Accumulation of a number of new divisions and evacuation hospitals during the month resulted in a shortage of approximately 100 Medical Corps officers throughout the Third U. S. Army. Twenty-five Medical Corps officers were secured from Headquarters European Theater of Operations, to help alleviate the shortage. This was all that could be furnished.

Fortunately, casualties were relatively light. Had it not been for this fact, it is possible that there would have been a serious breakdown in the medical service available. In spite of the handicaps involved, all operations divisions were kept up to full strength in Medical Corps officers.

Previous shortages in Medical Administrative Corps officers were absorbed through completion of appointment as Second Lieutenants of a number of applicants whose applications had been pending since January, 1945.

Section 4 - Medical Supply

The rapid advances of Third U. S. Army during April is amply reflected by the number of moves which were required by the units of the two medical depot companies, which are outlined as follows:

Adv Sec No 2, 32d Medical Depot	- from ST WENDEL (Q-59) to HERSFELD (H-35) on 4 April
Adv Sec No 1, 33d Medical Depot	- from MAYEN (L-69) to KAISERSLAUTERN (L-76) on 9 April
32d Medical Depot	- from ST WENDEL (Q-59) to BIRKENFELD (H-76) on 13 April
Adv Sec No 1, 32d Medical Depot	- from HORSTADT (M-23) to GERA (R-06) on 17 April
32d Medical Depot	- from BIRKENFELD (H-76) to WILDEN (P-12) on 26 April
33d Medical Depot	- from KAISERSLAUTERN (L-76) to FURTH (Q-30) on 30 April
Adv Sec No 2, 33d Medical Depot	- from KAISERSLAUTERN (L-76) to FRANKFURT (M-66) on 5 April

Some difficulty was encountered in obtaining transportation for depot movements. As a result, supply lines were sometimes stretched to distances up to 200 miles or more. With a comparative shortage of available transportation, the delivery of supplies to the Advance Sections of the depot companies became a taxing problem. To add to the handicaps mentioned above, notification was received from the Chief Surgeon's Office that, due to the critical nature of air life, only "battle urgency" supplies would be flown across the RHINE River. In addition, all air lift had to be approved by the Army AC of S, G-4, who in turn was required to set up the air lift with SHAEF. This policy resulted in a decided decrease in tonnage received by air. On the 15th of the month, rail facilities were established across the RHINE, and an allocation of five rail cars per day (approximately eighty tons) was made for medical supplies.

The close support rendered the combat troops in the face of long supply lines and minimum transportation is explained by two factors: first, the advance sections of the depot companies were kept in proximity to the fighting troops; second, the relatively small numbers of casualties sustained by the combat troops resulted in a reduction in medical supply requirements.

Three large German medical depots were uncovered during April at TRIER (R-20), KASSEL (H-30), and LAUTERBACH (H-12), respectively, with a combined stock of approximately 11,000 tons. The largest of these depots, located at TRIER (R-2), carried a stock of approximately 7,000 tons. On 15 April, arrangements were made with Advance Section, Communications Zone whereby they took over all captured medical supplies at FRANKFURT (M-66), WIESBADEN (M-36), HAINSTADT (M-36), DARMSTADT (M-64), and MUNSTER (M-04). Three days later, all other captured medical supplies located in the Army area were released to First U. S. Army, as a result of a change in the Army boundaries.

In order to meet the increasing demand for captured medical supplies by prisoner of war enclosures, displaced persons camps, and German hospitals, it was found necessary to establish captured enemy medical supply dumps. Advance Section Number 2, 33d Medical Depot Company, was assigned the task of operating these dumps, and it followed that supply dumps were opened at FRANKFURT (M-66), LAUTERBACH (H-12), and FURTH (Q-30) during the month. The substitution of captured enemy supplies proved invaluable, in that it conserved Army supplies in large quantities.

At a conference with the Chief of the Supply Section, Office of the Chief Surgeon, it was decided to build up the 33d Medical Depot Company at FURTH (Q-30) with an additional 1,500 tons of medical supplies and have them operate as a Communications Zone medical depot until such time as a Communications Zone depot could move in. Plans were made for shipment of approximately 500 tons of medical supplies by rail to this depot weekly.

At the end of April, the 32d Medical Depot Company was located at WILDEN (P-12) in support of XII Corps, while the 33d Medical Depot Company was at FURTH (Q-30) supporting III and XX Corps. There was an estimated 1,000-ton total of medical supplies in Army depots, with no critical shortages existing.

Section 5 - Preventive Medicine

1. General

Rising temperatures and fair weather were favorable for military operations, and did not increase preventive medicine problems for Third U. S. Army troops. However, the uncovering of thousands of displaced persons camps, Allied prisoner of war camps, and German military and civilian hospitals gave rise to new and multitudinous problems of sanitation, water supply, lice infestation, malnutrition, tuberculosis, scabies, furunculosis, and avitaminosis. The squalor, the inadequate of human misery, and the bestiality of planned Nazi atrocities were appalling and defied adequate description. Over 1,000 cases of typhus fever were discovered in the Third U. S. Army area during the period.

2. Venereal Disease Control

A fast-moving tactical situation is invariably accompanied by a low venereal disease rate, and the month of April, with its "blitz" type warfare, was no exception to the rule. No new prophylactic stations (chemical) were established during the month; however, the supply of chemical and mechanical prophylactic materials was adequate. There were only 362 cases of venereal disease reported within the Army, as compared with 419 for March. Of these, over fifty percent (50%) were contracted in PARIS, BRUSSELS, and the RIVIERIA. Fifty-seven cases of syphilis were reported. A statistical breakdown by weeks on venereal disease is shown in Annex XXXVI to the Medical Section report.

3. Communicable Diseases

There was a moderate decrease in the weekly rate of these diseases among Third U. S. Army troops from the last period, a drop from 473 to 428 per 1,000 per annum. Diarrheal diseases decreased from seventeen to seven, and upper respiratory diseases from ninety-two to fifty-five per 1,000 per annum. Infectious hepatitis, however, rose slightly from eighty-six to 110 cases for the month. Diseases represented fifty-two percent (52%) of the total direct admissions. A weekly breakdown of communicable diseases will be found in Annex XLVI to the Medical Section report.

4. Medical Records

A total of 57,980 reports were processed, a decrease of approximately 4,200 reports, when compared to those of the month of March. The decrease was incident to the decrease in total casualties.

5. Non-battle Injuries

The average weekly rate remained unchanged from the previous period. Non-battle injuries represented eighteen percent (18%) of the total direct admissions for the month.

6. Army Medical Laboratory Service

The 7th Medical Laboratory made no deviations from its policy of operating in two sections. Locations during the month of April were as follows:

Section I - 1 to 10 April - BAD KREUZNACH (Q-09)
11 to 30 April - SIEGEN (H-46)

Section II - 1 to 3 April - LUXEMBOURG CITY (P-81)
4 to 25 April - FRANKFURT (M-66)
26 to 30 April - LAON (O-50)

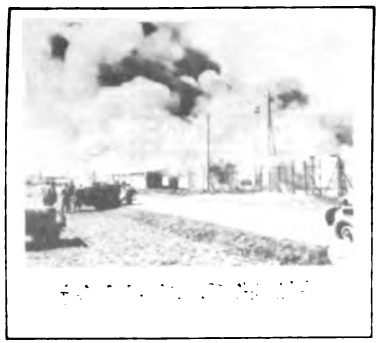
The number of tests performed by the two sections continued to drop, and there were only 7,953 completed for this period, as compared with 9,168 for the month of March.

The total work for the month of April is broken down as follows:

BASE LABORATORY SECTIONS	NO OF TESTS	PERCENTAGE OF TOTAL
Serology	4833	60.8
Bacteriology	1088	13.6
Chemistry	242	3.7
Pathology	106	1.3
Hematology	24	0.3
Parasitology	8	0.1
Sub-total	6547	79.8
MOBILE LABORATORY SECTIONS		
Venereal Disease Section (6th Convalescent Hospital)	1606	20.2
GRAND TOTAL	7953	100.0

A breakdown of the above tests by type of unit requesting them during the month of April is shown below:

TYPE OF UNIT	NO OF UNITS	NO OF TESTS	PERCENTAGE OF ALL TESTS
Evacuation Hospitals	15	3256	40.9
Convalescent Hospital	1	2635	33.1
Field Hospitals	9	134	1.7
Miscellaneous Medical Installations		265	3.3
Miscellaneous Tactical Installations		1663	21.0
TOTAL	25	7953	100.0



7. Sanitation

The prevalence of moderately cool temperatures during the month of April precluded any appreciable visitation by flies and other warm weather insects to the extent that they created a menace to the health or welfare of the troops. Few cases of lice infestation were reported among U. S. troops, and those cases which were reported were adequately dealt with by the proper use of DDT Powder.

The completion of organization of additional facilities and personnel for delousing and disinfestation of the camps of Allied nationals, overrun during the month, was effected and work carried out on an extensive scale. Diarrheal outbreaks were minor, and only three such cases were reported during the month. In no case was any definite causative agent found, but emphasis was continuously placed on the practical aspects of mess sanitation, personal sanitation, and water discipline.

Due to the rapidity of movement and the difficulty of travel to the laboratory, there was a great reduction in the number of water

CHAPTER 12
MAY OPERATIONS

Med
61

Digitized by Google

On 6 May, the 67th Evacuation Hospital at HAMELN (D-75) and the 128th Evacuation Hospital were relieved of assignment to First U. S. Army and assigned to Third U. S. Army.

On 8 May, when the war ended, several evacuation hospitals were in the process of making reconnaissance for semi-permanent sites where they might occupy suitable accommodations in the occupation zone of Third U. S. Army. The following hospitals were making reconnaissance in the areas indicated below:

24th Evacuation Hospital	LAUTERHOFF (U-20)
35th Evacuation Hospital	[illegible] (W-43)
36th Evacuation Hospital	[illegible] (Y-84)
101st Evacuation Hospital	[illegible] (Y-15)
110th Evacuation Hospital	PASSAU (S-21)
121st Evacuation Hospital	AMORBURG (Y-97)

The 6th Convalescent Hospital was crossed throughout this period. Reconnaissance was being made for a site in the vicinity of [illegible] (Y-15) which would be a suitable semi-permanent location. Suitable buildings were not available, however. Therefore, the unit prepared to set up in the field in the vicinity of NURNBURG (U-40).

Locations of Third U. S. Army hospitals during the month of May will be found in Annex XXXVIII to the Medical Section report.

An analysis of wounded hospitalized in May is given below:

a. Number of wounded admitted "direct" (i.e., not by transfer):

Designation	Number
(1) U. S. Army Troops	576
(2) British Army Troops	121
(3) French Army Troops	19
(4) U. S. Navy and Marine Corps	4
(5) British and French Navy	0
(6) Enemy Forces Personnel	34
(7) Civilians	149
(8) Others	26

Note: All of the following in b through f pertains to U. S. Army troops only.

b. General classification of wounds:

(1) Serious	182
(2) Slight	394

c. Anatomical classification of wounds:
(Patients with multiple wounds will be classified according to most extensive wounds).

	Admissions	Deaths
(1) Wounds other than burns		
(a) Abdominal	41	7
(b) Thoracic	42	4
(c) Maxillo-facial	23	0
(d) Neurologic		
Head	29	6
Spine	6	0
Nerve	3	0
(e) Extremities		
Upper	123	0
Lower	211	0
(f) Buttocks	17	0
(g) Other	30	0
Sub-total	535	18
(2) Burns - all locations	21	0
Total	556	18

d. Number of patients with multiple wounds 128 7

e. Classification of wounds by causative agents:

(1)	Gunshot wounds (rifle, pistol or machine gun)	265	14
(2)	Shell wounds (HE, flak, mortar or cannon)	182	2
(3)	Bomb wounds (aerial, grenade, booby trap or cannon)	16	1
(4)	Blast injuries (bomb, shell or mine)	10	1
(5)	Wounds from secondary missiles	10	0
(6)	Burns (petrol, flak, flame thrower, phosphorus, etc.)	15	0
(7)	Others	68	0
Total		576	18

f. Number of deaths by primary and secondary causes:

FCC, skull, parietal region, midline, perf W mult, left forearm and left arm. FCC left ulna. Pen W foot. LE amps. GSW		1
Pen W bomb, head, FC	Evulsion of brain	1
Pen W brain, SW (MA)	Cerebral hemorrhage & shock	1
Perf W neck with transection spinal cord - gunshot		1
Perf W, GSW, neck	DOA	1
Perf W, GSW, chest	Shock	1
Pen W of abdomen	Perf W of liver	1
SF Pen W abdomen	Peritonitis, acute, fibropurulent with ex toxemia & terminal pulmonary edema	1
Pen & perf W abdominal cavity, SW	Hemorrhage & shock	2
Pen W thoraco-abdominal GSW	Hemorrhage & shock	1
Pen W chest GS	Hemorrhage & shock	1
Basal skull fracture, MBI GSW	Cerebral hemorrhage extending to spinal cord	1
Pen W chest, SSW	Pulmonary hemorrhage	1
Pen W chest, SSW	DOA	1
GSW, perf sv, abdomen with mult perf of jejunum & ascending colon	Peritonitis & gangrene of abdominal wall	1
GSW, Pen W abdomen	Urinary suppression with uremia	1
No cause listed		1

g. Number of transfusions of:

(1) Fresh whole blood	18
(2) Stored blood	535
(3) Dry plasma	952
(4) Other blood substitutes (do not include crystalloids)	96
Total	1651

h. Number of units of penicillin administered 771,316,000

i. Number of amputations:

(1) Upper extremity	6
(2) Lower extremity	13
Total	19

j. Number of cases showing clinical evidence of gas gangrene:

(1) U. S. Army	1
(2) Other	1

k. Number of wounded evacuated to other hospitals:

(1) U. S. Army	426
(2) Other	105

4. Additional Temporary Medical Service

As in the previous month, the 66th Medical Group had the mission of supervising and controlling all German military hospitals in forward areas and also furnishing medical care for recovered Allied military personnel and displaced persons camps. The 66th Medical Group had the same mission in the intermediate Army area; while, in the rear, Advance Section, Communications Zone had control.

For use in recovered Allied military personnel and displaced persons camps, the 120th, 150th, and 151st Evacuation Hospitals were attached to the 66th Medical Group. The 150th Evacuation Hospital was being assigned to Third U. S. Army from Fifteenth U. S. Army, but some of its personnel and equipment had not arrived. The 120th Evacuation Hospital was operating a hospital for displaced persons at CHAM (Z-69). The 150th Evacuation Hospital at WOOSWING (Z-19) was operating a hospital for recovered Allied military personnel. Camps in that vicinity contained 26,748 Americans, British, and French personnel, as well as an unknown number of Russians and Poles. About 2,000 of these were patients in the hospital. The 151st Evacuation Hospital was operating a displaced persons hospital at MADTHAUSEN (W-08). The five concentration camps for political prisoners in that area contained approximately 16,000 persons, 6,000 of whom were patients.

Other camps uncovered and requiring medical services were located as follows:

LAUTERHOFF (U-20) - 5,500 recovered Allied military personnel, with an unknown number of patients.

NEUBAU (Y-77) - approximately 16,000 persons, with 5,000 sick.

EBENSEE (W-52) - approximately 16,000 persons, with 5,000 in need of medical care.

The 34th Medical Battalion, attached to the 69th Medical Group, continued to operate at its location in BAMBERG (U-24) as a provisional hospital for self-inflicted wound patients.

Section 3 - Professional Services

1. General

Battle casualties were comparatively insignificant during the first part of May. In fact, there were only 576 among U. S. Army troops during that period. Of these, 182 were classified as serious and 394 as slight wounds.

2. Surgery

Gunshot wounds predominated during the first eight days of May, as they had tended to do in April. Of the total of 576 wounded, 265 were classified as having received gunshot wounds. Another 182 suffered shell wounds; the remainder were from miscellaneous sources.

The surgical services were not particularly hard pressed by reception of Third U. S. Army casualties. The high quality of the service, however, remained the same.

2a. Medical Services

The early days of May presented problems to the Medical Service which heretofore had not been encountered. Foremost among these problems was the initiation of physical profiles for all personnel. The profile system was something entirely new to all medical officers and required considerable study and interpretation before the actual examinations could be accomplished. The Medical Consultant, in conjunction with the Supply Sub-section, formulated equipment lists for the establishment of a number of Phase IV hospitals for prisoners of war. These hospitals were predicated upon the Table of Equipment for a platoon of a field hospital, with minimum utilization of equipment.

Coordinating with the Artillery Section, arrangements were completed whereby observers in the various liaison squadrons would be examined at XIX Tactical Air Force installations to complete requirements for their return to the Zone of the Interior for pilot training.

3. Neuropsychiatry

The previously established fact that light resistance, favorable weather conditions, and high morale are all contributing factors to a low neuropsychiatric rate was borne out very conclusively during the first eight days of May, with the crumpling of the German Armies facing the combat troops of Third U. S. Army. The all-time low rate for Third U. S. Army of three and three-tenths percent of total admission during the month of April was reduced still further in May to the remarkably low figure of two and two-tenths percent. Out of a total of 5,391 total admissions, 103 were neuropsychiatric, and eighty-eight, or seventy-one and five-tenths percent of the latter number were returned to duty. Throughout the entire operational period from 1 August 1944 to 8 May 1945, inclusive, seven percent (7%) of all admissions were neuropsychiatric, and of these seventy-two and four-tenths percent (72.4%) were returned to duty.

4. Dental

Arrangements were made with the Surgeon, V Corps, to provide prosthetic service to the corps forward units through the assignment of a mobile prosthetic detachment. The Corps Surgeon made provisions for the assignment of this truck and team to the medical clearing company supporting the corps, thereby placing the services within range of all units in the corps area.

The Army Dental Surgeon inspected dental supplies from the Siemens Factory, ERLANGEN (U-41) with the officer in charge of captured medical supplies. Certain items, such as lathes, x-rays, transformers, and lathe chucks, were requisitioned for certain units of Third U. S. Army which required them. All supplies were placed in stock at

the 5th Medical Depot Company for later use.

5. Veterinary

On 1 May, a month after the [illegible] there were 176 cases of foot and mouth disease in the [illegible] Veterinary Corps officer investigated the outbreak and, upon investigation, found that the disease had been inherited with the livestock. A [illegible] officer was secured at [illegible] and with the assistance of [illegible] began vaccinating the [illegible].

An intensive [illegible] of the [illegible] area of [illegible] for the Quarantine [illegible] for [illegible].

4. Personnel

As is typical in the [illegible] there was a shortage of [illegible] officers throughout the [illegible]. This was [illegible] of both a [illegible] and [illegible]. Numerous requisitions [illegible] for additional officers [illegible] as the [illegible] officers [illegible] the [illegible] officers [illegible] the [illegible] officers [illegible]

CHAPTER 13
LESSONS LEARNED & CONCLUSIONS

1. Operations

a. Medical Group

(1) Evacuation

(a) There should be a single agency with which the Army Surgeon accomplishes all evacuation and miscellaneous medical service. The headquarters and headquarters detachment, medical group, is an admirable instrument for this purpose. By means of headquarters and headquarters detachments, medical battalions, attached to the medical group headquarters, one per corps, all evacuation can be controlled centrally without administrative difficulty and with greater economy of personnel and ambulances.

(b) In a rapid advance, such as took place in August and September, 1944, it is impossible for Communications Zone to evacuate Army hospitals. Initially, at least, the Army should plan to evacuate its own hospitals to Communications Zone. For this purpose, the medical group headquarters serves admirably to operate such evacuation and provide control by the Surgeon.

(c) A complete kitchen and mess section should be included in the T/C and T/E for the headquarters and headquarters detachment medical group. It is impractical for the medical group headquarters to mess with either a hospital or with one of its attached units. Hospitals are not located where the medical group headquarters must be established in a war of movement. Medical group headquarters messing with an attached unit immediately immobilizes the unit or a part thereof. To meet the demands of the tactical situation, the medical group headquarters, as currently organized, may often find itself with a choice of non-strategic location or a place with nothing to eat. A mess team, "A", T/O and E 8-500 should be added in combat to the headquarters and headquarters detachment, medical group, and also to headquarters and headquarters detachment, medical battalion.

(2) Medical Service for Displaced Persons, Recovered Allied Military Personnel, and Captured Military Hospitals:

(a) Where an advancing Army uncovers huge numbers of political prisoners and displaced persons in concentration camps, Allied prisoners of war, and enemy military hospitals, the Army Medical Service is bound to be severely strained. To provide medical service for these overrun installations, it is necessary to have a single Army agency make early contact and provide the necessary medical service and supervision. Such an agency is the medical group headquarters with the necessary units and hospitals attached to perform the mission. Such a task is too complicated and extensive to be combined with the mission of normal Army evacuation. Thus it is necessary to assign this responsibility alone to a single medical group headquarters when confronted with such a problem.

b. Air Evacuation:

(1) Communications Zone must not be expected in a rapid advance to provide medical evacuation holding units at airfields within reach of Army hospitals. Army must have at least one such unit organized and ready. The capacity must be at least 600, and preferably 1,000 patients. The large capacity is necessary when communications with hospitals are difficult and flying weather uncertain. Under such circumstances, the medical air evacuation holding unit must be provided with surgical facilities such as a field hospital platoon. This will provide for surgical emergencies which arise when patients must of necessity be held longer than desirable, due to bad weather precluding air lift. Surgical emergencies also arise in normal evacuation, i. e., hemorrhage under a cast, etc. Nursing care for certain patients is almost essential even though patients are perfectly transportable, e. g., cord transection cases. A complete ambulance company must be provided for such a holding unit to permit rapid loading of planes. Less than this number of ambulances seriously slows the clearing of patients to planes with resulting delay in clearing runways and loading ramps. Weather and season modify the number of flying hours in the day so that rapid loading of planes becomes a very important factor. It is necessary to have eight-man litter squads available to load planes. Necessary litter bearers should be obtained by attaching the litter bearer platoon of a medical collecting company. There should be a Theater reserve of evacuation aircraft set up which will not be effected by supply and tactical demands such as airborne operations.

(2) The air medical evacuation holding unit must be capable of splitting and sending a part to the most advanced field while the remainder of the unit continues to operate. Throughout the campaign, there was no constant system of communication with agencies from which planes were dispatched. Radio communications between airfield and the dispatching agency in Communications Zone is the only practical method, basing requests on actual patients remaining at the holding unit.

(3) The fundamental lesson of air evacuation, which was learned early in the campaign, is that patients must be transportable, as with any means of evacuation. Flying a patient out of the Army area when he is too sick to travel is lethal rather than life-saving. Under the stress of large numbers of battle casualty admission to hospitals, a very careful check on transportability of each patient must be made prior to his trip to an air medical evacuation holding unit.

c. Medical Collecting Companies:

(1) The Army has no use for the medical collecting company as a whole. This does not mean such a unit should be discontinued; however, until such time as a litter bearer platoon is included in the T/O for the evacuation hospital (SH), the litter bearer platoons of collecting companies should be attached to evacuation hospitals, one per hospital. The company headquarters and the station platoon provide the source of medical officers and technicians necessary for medical holding units for field hospital platoons employed as surgical hospitals at division clearing stations to treat non-transportable patients.

(2) The field hospital platoon was of no continued use to the division after the clearing station displaced forward, since it had to remain with the non-transportable patients on hand. The use of the headquarters and station platoon of a collecting company as a holding unit to retain the non-transportable patients made it possible to free the field hospital platoon for movement with the clearing station for continuous support.

d. Clearing Companies:

(1) In rapidly advancing open warfare with a limited number of Army clearing companies available, it is inexpedient to establish Army clearing stations for Army troops. The distance Army troops must evacuate in such situations to obtain second or third echelon medical service is not great enough to warrant the dispersion of Army medical service. Evacuation hospitals must, on the other hand, be augmented to handle unpredictably large influxes of casualties. This is best accomplished by attaching platoons of clearing companies to the hospitals. The clearing platoon may function as a separate unit in conjunction with the hospital, receiving only slightly wounded and sick. The personnel and equipment of the platoon may, on the other hand, be incorporated in the hospital giving it additional capacity for such cases.

(2) The clearing company, as a unit, proved very valuable in the provision of hospitalization for recaptured Allied prisoner of war enclosures and displaced persons camps. When an airborne division was employed as an infantry division, it was found that the second echelon medical service was inadequate. It was necessary to attach a clearing platoon or clearing company to such a division.

e. Evacuation Hospital (SH):

(1) The 400-bed evacuation hospital is not semi-mobile. Given only the organic equipment, this unit could not move the entire T/O and T/E personnel and equipment with its organic transportation by shuttling the organic transportation in two echelons. It was necessary to augment the T/O and T/E with additional equipment, and additional personnel were also required to handle the load when such a hospital was supporting a division. This was due to the fact that, in a war of movement, approximately half of the available hospitals had to be constantly closed and in movement in order to maintain any close support of combat troops. Thus, an evacuation hospital had to be prepared to expand to at least fifty percent above its rated capacity. The additional transportation required to move such an augmented unit complete at one time was approximately twice its organic motor transport. Only in rare instances was it possible in this type of warfare to depart transportation from the Army G-4. It was discovered that the application of available transportation of other evacuation hospitals, or the medical gas treatment battalion, was the only means by which this type hospital could be moved. An important factor, which had to be considered in regard to the availability of transportation from other hospitals to move one of their number, was the hospital's requirements for normal housekeeping and supply functions. Such necessities as hauling of Class I, II, and III supplies, bodies to Graves Registration Section, shifting of surgical teams to other hospitals, returning patients to duty, motor maintenance, etc. often reduced the availability twenty-five to seventy-five percent. All these transportation requirements involved the factor of distance, which was consistently great. The factor of returning to duty of patients remained a fairly constant one, averaging about twenty percent of admissions. It was found that the difficulties of procuring transport of these cases forced hospitals to use their organic transportation in returning personnel to reinforcement installations.

(2) It was proved conclusively that the T/O authorization of skilled surgical personnel was inadequate to handle either the constant volume of surgery or the peak loads. Hence, it was necessary to provide attached surgical teams which might be shifted from hospital to hospital to cope with the demands. This was met by the use of the auxiliary surgical group. During peak load periods, usually immediately after opening of a hospital as the most forward in a sector, the minimum requirement of such teams was two general surgical and two shock teams.

(3) When faced with the necessity for forward displacement the disposition of non-transportable patients presented a problem, since the hospital had insufficient personnel and equipment to leave behind as a holding unit for a week or more and still carry on at capacity in the forward location. This required the attachment of a platoon of a clearing company as a holding unit. It was necessary to leave little or no organic personnel or equipment with such a unit, particularly if the unit had been attached and was working with the hospital to gain familiarity with the type of patient and required care.

(4) Close contact had to be maintained with the Corps Surgeon when an evacuation hospital made reconnaissance for a new site. The evacuation hospital reconnaissance party had to be sent to the Corps Surgeon to obtain or confirm a suggested location, the aim being to get the evacuation hospital within ten miles or less of the front line in offense. This insured evacuation hospitals being placed well forward within adequate support of divisions. The Army level view could not very often locate an evacuation hospital as far forward as necessary.

f. Field Hospitals:

(1) The field hospital had most value in the employment of individual platoons with each division clearing station giving adequate surgical and nursing care for non-transportable casualties. The early surgical care thus provided saved many which would not have survived the longer trip to an evacuation hospital. Here, as in the evacuation hospital (SH), the unit required augmentation of surgical personnel by surgical teams from the auxiliary surgical group. The minimum number of teams to provide round-the-clock operation was two general surgical and two shock teams.

(2) The field hospital platoon is not a mobile unit, unfortunately, and must be attached to the division which must utilize medical battalion transportation and/or quartermaster truck company transportation to move it. Minimum additional transportation was twelve trucks, 2½-ton. A completely mobile surgical hospital of this general type, but with additional surgical staff, was a necessity for the support of a division. To keep the field hospital with the division clearing station in forward displacement, it was necessary to attach the headquarters and station platoon of a medical collecting company as a holding unit for the post-operative patients. This type of emergency should be provided for in the T/O of such a surgical unit to support the division by a two-platoon organization which would permit leap-frog movement of the platoons or forward displacement of one while the second retained the post-operative cases until they became transportable.

(3) It is absolutely essential that this type unit be trained under tactical or ground force supervision rather than by Army Service Forces to insure field and maneuver training. The field hospitals selected for this operation were trained for operation as station hospital type units and not prepared for field operations.

(4) With field hospital platoons attached to corps and/or divisions, the life-saving value of them was soon apparent. Knowing this, the corps or division kept the field hospital platoon close to division clearing station with no urging on the part of the Army Surgeon. Division Surgeons know better than the Army Surgeon could ever know what his present and future needs are.

Digitized by Google

c. Evacuation Hospital (75-bed):

(1) This type unit has little or no place in a field Army in a war of rapid and extreme movement, especially when the axis of advance of the Army is frequently and violently changed. The evacuation hospital (75-bed), as presently organized, has barely sufficient transportation to maintain its own housekeeping. In static or semi-static conditions of warfare, and where casualties are heavy, this unit has distinct advantages and can well be utilized by the field Army.

b. Convalescent Hospital:

(1) The convalescent hospital, large and immobile though it may be, was a highly important institution for an Army when well trained replacements were not available from the rear. The size and amount of transportation required to move the unit required that a site be chosen, and movement thereto initiated, which was as far advanced as the most forward evacuation hospital in a rapid advance. The hospital must be closed prior to the time that the evacuation hospitals were so far distanced as to the extent that the ambulance trip reaches the fifty-mile mark. To allow the convalescent hospital to remain open longer, unnecessarily delayed the forward displacement of a portion of the hospital and hence the remaining. In a rapid advance, it was essential that the hospital be closed prior to attaining full capacity in order that one or more sections of the hospital might displace quickly to a forward site.

(2) Prior to initial opening, arrangements must be made to provide transportation through rail for return of patients to reinforcement installations as soon as the first increment of such patients became ready for discharge. This transportation should be allowed to remain at the hospital throughout its period of operation. Failure of such transportation not only causes the hospital to become quickly filled, due to inability to clear beds for more admissions, but requires the hospital less mobile since it must clear some patients before any section can move.

(3) Shortage of qualified medical personnel for diagnosis of syphilis made it necessary to establish a center for diagnosis and treatment of the disease. This is best located at the convalescent hospital. Here ambulatory or chronic gonorrhea is also treated by specialized personnel. This was expedient to lighten the census of evacuation hospitals and also prevent evacuation of such cases to Communications Zone.

(4) Commanding officers of convalescent companies within the convalescent hospital should be combat veterans of the line, who have been reclassified for such work as the result of physical disability incurred in combat. The type of patient handled in the convalescent hospital, men fresh from combat, demands the leadership of combat trained line officers, rather than non-combat trained medical administrative officers of junior grade. Personnel fresh from the battle field respect the leadership of the latter type of officer.

i. Mail Evacuation:

(1) Mail evacuation is only practical when a medical evacuation holding unit can be established within a short distance, not to exceed five miles, of the rail siding to be used. Sufficient ambulances are not likely to be available for rapid loading if the holding unit is more distant or if trains are loaded directly from several distant hospitals. The holding unit must have a capacity of approximately two hospital trainloads. A lesser capacity inevitably results in overcrowding and repeated interruption of the normal flow of evacuation. Here, as in air evacuation, patients must be carefully screened for transportability before transfer from evacuation hospitals lest the holding unit become clogged with non-transportable cases which it will be obliged to hold. Like the holding unit for air evacuation, surgical facilities must exist.

j. Covered Accommodations:

(1) When weather conditions become sufficiently rigorous to require hospitals such as evacuation hospitals and field hospitals to abandon tentage and occupy buildings, a number of problems arose. The procurement of such accommodations itself became a complicated administrative procedure and one which retarded the prompt opening of the hospital in a new location. To speed up the procurement of the necessary approval by the army authorities, it was imperative that all concerned be thoroughly acquainted with the administrative procedure and a uniform system adopted. The reconnaissance of an evacuation hospital for a building site had to be coordinated directly with the corps in which conducted. It was most expedient to have the reconnaissance party secure the approval of the division controlling the area. Rent, clearance of the site had to be obtained from corps. The final Army approval was then obtained in writing by sending the necessary papers to the surgeon. All this was handled through medical channels, with the surgeon at each level obtaining the clearance from his proper general staff section.

k. Evacuation:

(1) The old concept that the higher echelon will evacuate the lower "on call" proved completely inadequate with open warfare and rapid movement. Communications are the prior and directives too great to permit any such system to work. It is necessary for each echelon of medical service to take the necessary evacuation with the next lower echelon so that a system of constant contact and constant evacuation remains in effect through all operations. It was found that the Army must provide a minimum of ten ambulances for evacuation of infantry division clearing stations at all times. This increased during certain operations to as much as thirty ambulances. An armored division requires an entire ambulance company of thirty ambulances at all times when operational. As soon as a new division enters the Army area, contact must be made by evacuation agencies and more ambulances allowed to remain at division clearing station to cover the lag between initiation of operations and the provision of the full ambulance requirement, which is a function of communications. To wait until the clearing station has received motor ambulances before requesting ambulance evacuation would result in overloading that installation, thereby jeopardizing the patients awaiting evacuation.

(2) This same concept of constant evacuation carried down to the first and second echelon medical service. Collecting not any ambulances were kept at or near battalion aid stations where possible or the next-quarter-ton truck ambulance was used. Litter bearers of the medical detachments were kept available near company CP's and aid stations, rather than waiting for someone to locate the aid stations prior to sending up litter bearers.

(3) When an airborne division was employed with a field Army as an infantry division, it was necessary to attach ambulances from Army for use in second echelon evacuation within the division. The T/O and T/E for such an organization provides only one-quarter-ton, 4 x 4 trucks for this purpose which are unsuitable for winter or for anything but short distance evacuation in fair weather. As many as thirty ambulances may be required in certain situations.

(4) Evacuation of evacuation hospitals or clearing stations by ambulance convoy is obsolete. It is impossible for such installations to commit to remain patients a long enough period to make up ambulance convoys. Patients must be evacuated as rapidly as necessary and as ambulance loads are ready for evacuation.

2. Medical Supply:

a. Pharmacy Section in Medical Depots: During the first part of November, a pharmacy was established at each Army medical depot for compounding, storing, and issuing of a limited number of pharmaceuticals. This service was intended for and made available to units, particularly divisions and small medical detachments who were not authorized either personnel or equipment to prepare such pharmaceuticals. Units obtained these by presenting a prescription, signed by a medical officer, to the pharmacy. A few of the more common preparations stocked were paregoric and bismuth, elexir of terpin hydrate with codeine, Brown's mixture, one percent ephedrine sulfate, tincture of green soap, Whitfield's ointment, and calamine solution. The pharmacy section of the depots proved most popular and beneficial to these units, as can readily be seen by the number of prescriptions filled the first three months; an average of approximately 1,550 prescriptions were filled during the months of November, December, and January.

b. Employment of Advance Sections of Medical Depots: During a fast-moving operation, it was found advantageous to have two and sometimes three advance sections mail forward of the base depot. In this type of warfare, transportation was usually very critical and sufficient trucks were seldom available to move the base depot. Locations of advance sections were always coordinated with the corps headquarters, and continuous liaison was maintained between the Corps Surgeon's office, the depot, and the Medical section of the Army Headquarters. This resulted in the advance sections always being located where they could service the maximum number of troops. When picking out or selecting a site for an advance section, a large enough plane to accommodate the base depot was invariably sought. By so doing, a location was readily available for the base section to move into if the tactical situation demanded.

c. Purchasing and Contracting: A purchasing and contracting section was established at each depot for procuring supplies not available through normal channels, and for payment of civilian personnel hired by hospitals of Third U. S. Army. Each section was made up of one officer and two enlisted men, one of whom could speak the native language fluently. Such needs must be anticipated by having available in the company, personnel familiar with this type of work, and linguists who can perform in this capacity.

d. Prosthetic Dental Laboratories in Medical Depots: A prosthetic dental laboratory and clinic was established at each medical depot. It was found through several months' experience, that a laboratory of this type and mechanism had facilities which would better service Corps and Army troops, than mobile dental laboratory trucks. During the period 29 October to 31 December, 1944, approximately 900 prosthetic jobs were completed, which indicates that this section of the depot performed more work with limited personnel than could have been accomplished under mobile conditions.

e. Captured Supplies: Since a field Army is faced with the problem of collecting, classifying, sorting, and disposing of large quantities of captured enemy material, it was found necessary to organize a captured enemy material platoon, consisting of one officer and fifteen enlisted men. This team investigated, guarded, and evacuated captured medical supplies. In addition, it was later found necessary to set up a captured material section in the depot to take charge of sorting and issuing these supplies to displaced persons camps, prisoner of war enclosures, and captured German hospitals. This proved of great value, in that large amounts of American supplies were conserved by the substitution of this captured material.

f. Maintenance Teams: A maintenance team consisting of one officer and two enlisted men, was attached to each medical depot. These teams visited all hospitals bi-monthly to check the maintenance of equipment and status of supply. In addition, they made minor repairs and instructed the personnel in the units on methods of repair and maintenance of their equipment. First and second echelon preventive maintenance in the units is most important in combat when equipment is used to the maximum and replacements of equipment are not always available. Teams of this nature can help immeasurably in keeping equipment in the hospitals in good condition and at the same time keep the Army Surgeon and the medical depots informed as to spare parts and replacement requirements.

g. Maintenance Factors: Depot stock record cards were prepared, which in addition to indicating amounts received, issued and balance remaining, indicated what were issued and amounts issued to all type units. This, in turn, was compiled in a report which indicated the amount of each item that was issued to each different type of unit over a monthly period. From this report and from items authorized by T/E, T/BA etc., and from the recommendations of the Army Medical Laboratory, Consultant Sub-section and Dental Sub-section, a list of essential items to be stocked in army depots was determined. Therefore, only essential items in required amounts were stocked in depots, which, in turn, rendered these installations much more mobile. Mobility is of extreme importance in this type warfare.

3. Professional Services:

a. Surgery:

(1) Early skilled surgical care of the wounded proved its worth. Close-up support with trained surgical teams working in the platoon of a field hospital at the same level as the division clearing station was a big factor in lowering mortality and morbidity in battle casualties in this campaign.

(2) The best support for armored division casualties was achieved through the use of two surgical teams and two shock teams equipped with a PMCO unit, i. e., (sufficient tentage, surgical instruments, and supplies in two trucks) which could move along with and set up next to the collecto-clearing company of the armored combat command. A field hospital platoon then followed to take over the casualties that had been operated upon and the teams were free to move forward again.

(3) Surgical teams were also found to be of value in bridgeheads, across rivers where the wounded could not be readily evacuated. With troops on the offensive, it was found that definitive surgery could be accomplished by surgical teams much farther forward than previously realized.

(4) Adequate shock therapy, using stored whole blood, was one of the most important factors in lowering mortality and morbidity in battle casualties. Blood plasma was of value as a temporary expedient, but was not a substitute for whole blood.

(5) Shock, if not treated early and vigorously, soon becomes irreversible. Some cases which did not respond readily to shock therapy developed anuria and subsequently died. In a series of casualties which developed anuria, deep shock seemed to be the one outstanding factor. Transfusion reactions seemed to be of no particular importance as a cause of anuria in these cases. Alkalinization was not found to be of value in the prevention or treatment of anuria.

Digitized by Google

(6) Injuries to the extremities comprised sixty percent of all battle casualties. These injuries were often very mutilating in character. A policy of extreme conservatism in regard to amputations was followed. Sympathetic blocks were performed routinely in those cases where the blood supply had been interfered with. In the majority of cases, this procedure was not found to be of a great deal of value as often the collateral circulation had also been interrupted by the injury. Sixty-five percent of the amputations were traumatic in type, with mutilation often involving the bone, blood vessels, nerves, and muscles. Fifteen percent of the amputations were due to gas gangrene, and twenty percent to major blood vessel injuries.

(7) The repair of major blood vessels was encountered and various materials for anastomosis, including Blakemore tubes, glass tubing, and plastic tubing, were used. None of these methods were found to be universally applicable in the field. However, the incidence of gangrene was twenty percent less in those cases in which vascular repair was attempted than those in which ligation of the injured vessel was practiced.

(8) Surgical measures such as sympathetic block, sympathectomy or injection of novocaine preparations seemed to be of no particular value and contributed little toward lowering the mortality in cases of cold injuries to the extremities (frostbite and trench foot).

(9) The use of sulfanilamide crystals in battle wounds was found to be of little value and in fact contra-indicated where the drug was being administered by mouth or vein. It was felt that wound healing was delayed in those cases where the crystals were used, in some cases the wounds broke down when activity was resumed, and reactions were not uncommon.

(10) The incidence of infection in wounds was very low. The routine use of penicillin by injection coupled with early adequate debridement is felt to be the most important contributing factors.

b. Medical Services:

(1) Penicillin proved effective in the treatment of certain spirochetal infections; namely, syphilis and leptospiral jaundice (Weil's Disease). While it was known before the onset of the campaign that penicillin was a specific for treatment of syphilis, it was during the campaign that the drug was found to cure Leptospiral Jaundice.

(2) A well established blood bank is essential in treating any large numbers of battle casualties. There is no substitute for fresh whole blood in treating the severe shock seen in the wounds of modern warfare. Blood banks should be near enough to the combat zone, to assure delivery of blood with an expiration date of at least seven and preferably ten days. All units hospitalizing patients should have a small refrigerator, so that fresh blood can be available at all times in the most forward areas.

(3) The treatment of venereal disease, other than acute gonorrhea, is best carried out in the detention section of the convalescent hospital. This centralizes contacts and conserves personnel and supplies.

c. Neuropsychiatry:

(1) All of the measures which can be instituted to prevent neuropsychiatric casualties are command prerogatives. First and foremost, the psychotic, mentally deficient, severe psychoneurotic, epileptic, and those with chronic progressive neurological diseases not only are incapable of fighting, but require the time and interest of others who should be in combat. These are unsatisfactory for any form of military service and should not be retained in service in the interest of manpower conservation. When such individuals reach foreign duty and combat units, they constitute a severe liability in their respective units and on the medical evacuation system.

(2) It is necessary for line officers to exercise judgment in evacuating men through medical channels. Soldiers should not be evacuated unless, to the line officer, the medical aspects are clear and unmistakable and not transient in character. The avoidance of indiscriminate evacuation and the selection of proper treatment on the spot is considered imperative.

(3) Neuropsychiatric casualties which can be returned to duty in a period of twelve hours should not be evacuated from the battalion aid station. Those who can be returned to duty with an additional thirty-six hours of rest and treatment should be handled at the regimental aid station. Only those which require a longer period of treatment should be evacuated to clearing station level.

(4) Because of the nature of their assignment, division neuropsychiatrists are in a position to disseminate pertinent information to officers of the line and act in a consultant capacity to Battalion Surgeons. The division neuropsychiatrists must be provided the transportation which they require. In view of the fact that he personally treats from five to thirty percent of total admissions to the clearing station, it is necessary that an adequate T/O and E be provided. Supplies, personnel, and equipment necessary to the psychiatrist were obtained at the expense of the division clearing company, which has an adequate T/O and E for its own needs, but none for others, including the neuropsychiatrists.

(5) The importance of assigning well trained neuropsychiatrists to the divisions cannot be over-emphasized. Those divisions have such men assigned continually committed a lower neuropsychiatric incidence and a higher return to duty rate than those in which an individual without such training was arbitrarily assigned as neuropsychiatrist.

(6) On becoming operational, several divisions attempted to treat all neuropsychiatric problems at division rear. It was the invariable experience that the more men sent to the rear the more it was necessary to return to the rear. All divisions eventually instituted therapy in forward areas and found that the fewer men sent the smaller the number necessary to evacuate. This was graphically demonstrated particularly in those divisions which first set up an exhaustion center in the division rear and then changed the therapeutic policy to the treating of such patients at battalion aid station level.

(7) It was notable that every effort to prevent trench foot and to provide warm clothing contributed to a low neuropsychiatric incidence.

(8) Armored divisions are so constituted that it was at times difficult and sometimes impossible to handle neuropsychiatric casualties at aid station level. This was particularly true in rapidly moving tactical situations. It was necessary to set up a clearing element in each armored division in which the division neuropsychiatrist could treat all neuropsychiatric casualties evacuated from the aid station. The neuropsychiatric incidence rose in armored divisions when the men felt that their objectives were not essentially armored objectives and when they developed a feeling that they were "break troops" and could therefore be used for the duration without a rest. For every such case among the tankers, there were six in the armored infantry. The rate, prevailed among the tankers on one occasion when it was necessary for them to function as foot troops.

(9) Rumors were found to contribute to peaks in the incidence of neuropsychiatric casualties.

(10) Terrain, climatic conditions, type of enemy opposition, and quality of leadership were all found to influence the neuropsychiatric incidence. Those divisions which rotated units whenever the tactical situation permitted had a lower incidence than those which could not or did not.

(11) It was found that after 120 days of continuous combat, riflemen and particularly key noncommissioned officers, through the process of normal wear and tear began to exhibit loss initiative, lower efficiency, and decreased ability to lead troops into battle. This was even more marked at the end of six months of combat. Several divisions found that only three percent of the riflemen who had been in combat for 180 days still remained in the division. Those who did remain were key men and in general repeatedly decorated. These divisions estimated that half of this group had become useless for combat in the same manner that equipment may be worn out to the extent that it is of no further service. These individuals, although numerically present, represented liabilities.

(12) Although many neuropsychiatric cases to all intents and purposes were well when returned to duty, there was, in many instances, lack of confidence, which returned only after the individual had again engaged in combat. Many of these after return earned awards for heroism, some received battlefield commissions, and a high percentage were promoted.

(13) Soldiers who had been wounded and who had been returned to duty were more apt to become neuropsychiatric casualties when returned to duty than those who had not been wounded, or those who had been wounded and not returned to combat duty because of the severity of the wound.

(14) Neuropsychiatric patients who were ready for return to combat when sent directly to combat, in general, did not recur. Among those retained for several days in replacement areas a high percentage tended to recur.

(15) A divisional increase in neuropsychiatric casualties can usually be traced to one regiment and ordinarily to one battalion. As a rule, the increase occurs in the unit which is experiencing the most severe combat.

(16) [illegible] accede positive command or encouragement, the [illegible] to him without evacuation through medical channels. [illegible] rest, his commanding officer should provide it.

(17) It was found necessary to permit neuropsychiatrists in all echelons to have facilities for the practice of medicine. At division clearing station level the psychiatrist had an opportunity for mutual consultations with other doctors and access to x-ray service in the field hospital platoon assigned to his division. A psychiatrist functioned at each evacuation hospital. As a result, neuropsychiatric casualties did not cross normal channels of evacuation. On leaving the division, they went directly to the nearest evacuation hospitals. Here the neuropsychiatrist was called in consultation on a minimum of five percent of all admissions other than neuropsychiatric. He had at hand every facility for x-ray and laboratory diagnosis and consultation with other specialists. This contributed to more accurate diagnosis and therefore a higher rate of return to duty.

(18) Because of the fairly frequent moves of the evacuation hospitals, and the Army evacuation policy, neuropsychiatric casualties could be retained in the evacuation hospitals an average of six days. At the end of this time, neuropsychiatric cases were found to fall roughly into four groups:

(a) Those which had other medical or surgical conditions and in whom there was little or no evidence of nervous or mental disease.

(b) Those cases which could be returned to duty within the six-day period.

(c) Those who in the opinion of the psychiatrist were incapable of further duty because of psychosis, epilepsy, mental deficiency, severe prolonged psychoneurosis.

(d) Those who could be returned to duty with two or three weeks of additional therapy.

The first group was transferred to other hospital services. The second was returned to duty. The third was evacuated to Communications Zone. If the fourth group had been evacuated out of the Army area, many of the individuals would have been lost if they had been transferred to Communications Zone hospitals. It was found necessary to provide an additional echelon of therapy for this group. Three competent neuropsychiatrists and eighteen trained enlisted men were placed in the convalescent hospital for the practice of good clinical medicine. There were facilities for mutual consultation with other specialists and for x-ray and laboratory diagnosis, as well as intensive individual and group physiotherapy, recreational and occupational therapy and a graded intensive physical training program. Eighty-five percent of this group returned to duty of all types within the Army, and fifty percent to full combat duty.

(19) The necessary echelons of therapy were found to be:

(a) The line.

(b) Battalion aid station.

(c) Regimental aid station.

(d) Division clearing station.

(e) Evacuation hospital.

(f) Convalescent hospital.

d. Dental:

(1) Dental officers assigned to field hospitals have the opportunity to do very little professional work in the combat zone. The T/O of field hospitals should be changed to include only one dental officer assigned to the headquarters of the field hospital. By rotation among the platoons of the hospital, one dental officer can provide dental care for all hospital personnel. Patients are held in field hospitals for too short a time to permit definitive dentistry.

(2) Convalescent hospitals offer the opportunity for establishing large dental installations. Convalescent hospitals move less frequently than evacuation hospitals, hence the dental service is [illegible] periods of time without interruption. The T/O [illegible] include eight dental officers and fourteen en-

DECLASSIFIED

DECLASSIFIED

Digitized by Google

listed technicians to provide operative, surgical, and prosthetic service for patients and out-patients. Experience in the Third U. S. Army proved that this increase in personnel and the augmentation of MD Chests No 61 and 62 is required to eliminate the necessity of holding patients in excess of the normal convalescent period.

(3) The assignment of dental officers to group headquarters (i. e., quartermaster, Engineer, Ordnance, Field Artillery, etc.) proved unsatisfactory. Due to a constant change in the number of battalions assigned to groups, the great distance between battalions and lack of close contact, dental officers assigned to group headquarters were unable to fulfill their mission of providing adequate treatment for the troops of the command. Mobile dental teams, assigned to Army or Corps headquarters would provide more adequate treatment for Corps and Army troops.

(4) Excellent prosthetic facilities may be established in Army medical depots. Army medical depots, because of their location in the Army area, and the necessity for all units to send transportation for supplies, offered the most ideal location for dental prosthetic service. The depots moved with the Army's advance, remaining accessible to combat units. Transportation used for supplies was used also for carrying patients to and from troop areas. Prosthetic facilities can usually be provided from a fixed medical depot for Corps and Army troops, with divisions being serviced by mobile units.

(5) Field units authorized an electric generator should be furnished electrical dental equipment. Field dental dispensary equipment is the electrical appliances (operating lights, dental engines, and sterilizers). It was found that a combination electric and/or foot engine is desirable for use with combat troops. The efficiency of dental service with field units was impaired by the absence of a field operating light as a standard item of equipment.

(6) Infantry division dental officers were best employed with the division medical clearing company during combat. In combat, one dental officer could render emergency dental treatment at the regimental aid station. The second of the two regimental dental officers should operate with the division medical clearing company to do definitive dentistry during combat to action. This employment of dental personnel permits those troops who are not committed to action to receive dental attention.

(7) Experience has shown that a dental surgeon is required on the staff of a Corps Surgeon. The employment of such large numbers of organizations within the army prevents the Army Dental Surgeon from keeping in close contact with, and inspecting, all dental facilities throughout the command. The Army Dental Surgeon could coordinate the dental service much more efficiently if a Corps Dental Surgeon were provided.

(8) A greater number of mobile dental laboratories and operative teams are required in warfare involving rapid movement. It was found that mobile dental units (prosthetic and operative teams) offer the maximum service to forward units. These trucks, when attached to division medical battalions, provide uninterrupted dental care and eliminate the evacuation of troops from divisional areas.

(9) Field Dental Prosthetic Chests, MD No 61 and 62 require supplemental equipment. Additional denture flasks are required since only a limited number of cases can be processed in the three flasks contained in MD Chest No 61. An electric dental lathe is essential to prosthetic dentistry. The hand lathe contained in MD Chest No 62 requires an additional man for operation, thus preventing his employment for other work. A Bunsen, gas-lick, two burner, stove is required for the processing of acrylic dentures.

(10) Replacement troops arrived at combat units from reinforcement depots in need of Class I dental treatment. Many combat hours lost because of the necessity for providing reinforcements with dentures or emergency dental treatment, would have been saved if this work had been done on all troops before assignment to combat units, from reinforcement depots.

e. Veterinary:

(1) During the later phases of the campaign and particularly during the last two months, transportation was at a premium, and it was frequently not possible to secure transportation for all personnel requiring it. Each Veterinary Corps officer should be assigned a car, since his work must be done in the field.

(2) Perishable products, such as fresh eggs, oranges, all fresh vegetables, etc. were, particularly during the winter and during wet periods, in very poor condition upon arrive. in the Army area. Assuming that sound products were purchased, but have deteriorated, they should be re-sorted, or boxed if necessary, before being forwarded to the Army area.

(3) It was frequently necessary to break down the fifty-pound cans of powdered milk, thirty-seven-pound lard cans, and twenty-five or seventy-pound cheeses to smaller units in order to issue them. Under conditions which usually prevail in supply points, this is an insanitary procedure. The products become soiled and wet. Milk, lard, and cheese should be processed into units of not more than ten pounds, except for bakery use.

4. Preventive Medicine:

a. Venereal Disease Control: The venereal disease control program in Third U. S. Army was very satisfactory as evidenced by monthly venereal disease reports. However, certain lessons were learned as follows:

(1) That army chemical prophylactic stations must be established in the larger cities and towns in Army areas, regardless of whether or not the area is liberated or conquered; i. e., where women are, there is venereal disease.

(2) That chemical prophylaxis (Station Pro) is the most effective method for prevention of venereal disease.

(3) That all prophylactic stations must be equipped with accessory material to provide hot water, especially during winter months.

(4) The present-day M packette contains a picric acid compound that irritates and is painful to the urethra and because of this, soldiers do not use them after the first experience.

(5) Much of our venereal ointments have a leucite or wax base which will not spread in cold weather. All ointment bases should be similar to bases of our better cold creams.

(6) Each prophylactic station team should be equipped with a small generator and a two-burner stove for setting up stations in areas where heat and light are not available. Light metal collapsible equipment is necessary for setting up a prophylactic station in any place where needed.

(7) Re-emphasis should be made on cartoons, posters, and training films as a part of the venereal disease control program.

b. Immunizations: Field experience proved that the U. S. Army policies and procedures are without equal in the world today. However, typhus fever immunization should be given in the late fall or early winter rather than at other times of the year. This insures maximum protection during months when troops are apt to be more lousy or come in contact with louse infested civilians.

c. Personal Hygiene: During combat personal hygiene, change of clothing and bathing were always far below Army standards. This was especially true during the winter months. This can be remedied to a great extent by providing ample numbers of one and two burner stoves in forward echelons on the basis of one gas stove (one or two burner) per four officers or men.

d. Food supplies and the nutrition of troops during this period were adequate. Monotony of diet is one of the vicissitudes of war. However, the need for hot drinks (coffee and bouillon) in aid stations must be emphasized. In addition to hot drink, ample supplies of whiskey are needed in aid stations during the winter months for use by patients passing through such installations. A small drink helps to relieve tension, and is useful in combatting shock.

e. Transportation: The Medical Inspector of each division must have transportation twenty-four hours per day to accomplish his job in combat.

f. Sanitary Corps Officers: There is a definite need of Sanitary Corps officers--one per division as Assistant division Medical Inspector, and two per corps as members of the Corps Surgeon's staff. These officers are essential for the handling of sanitary problems, thus relieving the Medical Inspector for medical activities alone.

g. Preventive Medicine and Public Health: Every line officer, regardless of rank, in command of troops should have formal practical education in public health medical problems. The G-5 and Military Government officers of all categories should especially receive adequate instruction in these matters.

h. Trench Foot (cold Type Injuries):

(1) It was self-evident that cold type injuries were preventable in seventy-five to ninety percent of the cases. Prevention depends upon a combination of factors:

(a) Adequate, properly fitting winter clothing.

(b) Adequate, properly fitting foot gear or combination of foot gear (shoepacs, regulation shoes, combat boots, and overshoes).

(c) Adequate, proper sized socks.

(d) Continuous, daily sock exchange to combat troops during the winter months.

(e) Rotation of small and large units of combat troops out of the line at frequent regular intervals to enable warming, drying, and changing of individual soldier's wet shoes and socks. Providing tents, huts, dugouts, etc., wherein these things may be done.

(f) Instruction and training of troops in the early recognition of signs and symptoms preceding injury of tissue due to cold and dampness and the individual precautions necessary to prevent frostbite.

(g) Continued emphasis of the command responsibility for the above items.

(h) Frequent inspections (at least once weekly) of feet and foot gear of the command. Necessary corrective action, insofar as possible, being taken on the spot.

(2) Peaks of cold type injuries occurred in very instances when the tactical situation was most acute - units making river crossings against opposition, units pinned down by fire before fortifications, where both the supply of equipment and the normal disciplinary care was difficult to maintain.

(3) New divisions in combat invariably had higher rates of cold injuries for the first few weeks. This was due to the negligence of ordinary personal hygiene with a lack of understanding of the seriousness of the results.

(4) A way of preventing a breakdown in individual foot care and therefore a mass development of cold injury at such a time, is rotation of small groups (ten to twenty) to rear areas daily for short periods of time to allow change of socks, massage, and other methods of warming the feet.

(5) Trench foot control teams at Army and Division levels are worthwhile and necessary in combat during the winter months.

(6) Recommendations:

(a) That a more thorough comprehensive training program in cold type injury prevention be instituted at all command levels, augmented by the use of actual photographs and training films of the results of cold type injuries to the feet and hands.

(b) That all shoepacs be manufactured with steel arch supports, regular heels and high toes.

(c) That continually increasing emphasis be placed upon the command responsibility for cold type injury prevention.

i. Army Medical Laboratory:

(1) Field laboratory experiences in the European campaigns, 1944-45, have shown certain operational problems which were not anticipated in the T/O and E training manuals. Some of these problems and their improvised solutions are presented below.

(2) The medical laboratory as organized and equipped is limited in the scope and of necessity had to be augmented in personnel and equipment to perform satisfactorily.

(3) Mission:

(a) The general mission of the laboratory is to perform such investigations as will protect the health of the Army, determine the cause of epidemics, and provide such laboratory service to medical installations as will aid in rapid diagnosis, minimize evacuation, and speed up restitution of personnel to duty.

(b) It is not possible to provide research facilities and to perform tests which are of theoretical rather than pre-

Digitized by Google

tical value. It is therefore essential that such tests be held to a minimum.

(4) Location and Movement: The immediate problems arising in operation were two: first, to be the laboratory close enough to the medical installations so that it was accessible, and second, to have the laboratory in operation at all times so that the performance of needed tests would not be delayed. This was solved by dividing the laboratory into two sections, each able to perform bacteriology and serology. It was felt that pathology and toxicology could be temporarily closed for movement to new locations without impeding essential operations; so these sections were not duplicated. The sections were located near the center of each flank, one thirty to forty miles in advance of the other. As the front advanced, the rear section was closed and reopened on the new location ahead of the other section. During the period of movement, the open section carried on the entire work for the Army without interruption. This two-section arrangement was possible by adding of extra equipment and clerical personnel. The alternate solution in stable situations was to have the smaller units send their specimens to the evacuation hospitals. The latter, in turn, sent the specimens to the base laboratory, through the medical group carriers. This procedure minimized transportation problems for the units, but produced a delay in getting the specimens to the laboratory and the reports to the units.

(5) Added Technical Procedures:

(a) To expedite closing out of syphilitic registers, a complement fixation technique for spinal fluids was established at one of the sections. There was no provision for this originally; and, as a result, additional equipment, animals, and lyophilized complement had to be provided.

(b) Many accidental deaths and medico-legal cases required toxicological examinations, and, as a result, the chemistry section had to be expanded to meet these needs. This was essential, since in combat areas board actions could not be delayed while awaiting reports from the medical general laboratories. A similar limited service had to be provided for the Criminal Investigation Department, since no other facilities were available. Personnel trained in toxicology and certain minimal equipment should be an integral part of the medical laboratory.

(6) Venereal Disease section: In order to expedite the early diagnosis of syphilis by trained personnel, a department consisting of one officer, two technicians, and one clerk was detailed to the 6th Convalescent Hospital. This group more than justified its existence. Its duties called for doing darkfields (as many as fifty a day) urethral smears, and drawing blood for serology.

(7) Personnel:

(a) Additional clerks were essential to maintain the records and send out the reports. Three additional clerks were added, including one for the venereal disease section.

(b) No provision have been made in the T/E for trained personnel qualified to do medical supply and maintenance work. The highly specialized and complicated apparatus and chemicals required skilled individuals for their classification and maintenance. Often, unless repairs could be made at the laboratory, technical sections would be paralyzed while the equipment was sent to the Medical Depot for repairs, which usually required several weeks. One sergeant and one assistant were assigned to do this work, which also included sterilization and maintenance of generators.

(c) Due to the fact that water outlets were not numerous, central washing facilities were established under the supervision of one man. This was augmented by hiring civilian help to do the actual work.

(d) Mobile sections:

(a) Mobile sections are set up at present under impractical plans. Most investigations can be done by an officer in a one-quarter-ton truck and the specimens sent to the laboratory for technical work.

(b) A different type of mobile section to do routine Kahns, bacteriology, and some clinical pathology is needed for servicing an Army Corps operating separately or at a distance from the Army laboratory, e. g. Anzio Campaign, Kiska Pocket. Here a laboratory truck equipped as a small laboratory would have been of great value. Such trucks were not available, though authorized.

2. Sanitation:

(1) Water supply:

(a) Experience showed conclusively that the Army water purification units, especially operated at the start of combat, were unsatisfactory for producing adequate potable water from the grossly polluted streams encountered. In order to produce potable water, it was necessary to provide additional treatment by coagulation and sedimentation before filtration, and reduce the filter rate of portable units to ten gallons per minute.

(b) At a rate of ten gallons per minute, the filter in the portable water purification unit ceases to be the limiting factor in the production of water. The maximum amount of potable water which could be safely produced in a twenty-four hour operative day is approximately 15,000 gallons, or if of seven gallons during daylight hours (winter). An additional filter unit, or a new filter with increased capacity should be provided.

(c) Training of water unit operators should include more of the basic principles of water treatment and care in the maintenance of pumps and equipment.

(d) Serious operating difficulties were encountered during cold weather. Many temporary expedients were required. Study should be made of practical methods and means of protection and operation of water units during below-freezing weather.

(e) With the use of ammonia-alum as currently practiced a chlorine contact period of at least two hours is considered necessary for disinfection of the water. The normal thirty minute period of chlorine contact has been found insufficient to produce potable water based on bacteriological examination of samples.

(f) Consideration should be given to the use of potassium alum as the coagulant in view of the retarded chlorine forcaster and greater disinfectior value of the residual chlorine content, as measured by the orthotolidin test.

(g) The use of the sodium arsenite-orthotolidin method for determining effective residual chlorine should be considered for adoption in Army water treatment control.

(h) Daily residual chlorine tests of the water supply at the point of consumption (faucets) should be carried out under supervision of unit surgeons and records of the results of such tests maintained.

(i) Halazone tablets are not completely effective in treatment for disinfection of water supplies. Burnoline should be made available for all troops.

(j) All water for military personnel used for drinking and culinary purposes should be obtained from chlorine water points, or, in extreme emergency, treated by boiling or with halazone or hypochlorite ampules.

(2) Mess sanitation:

(a) Greater emphasis on personal and mess sanitation is necessary under climate weather and combat conditions to prevent the all too frequent breakdown in sanitation leading to sporadic and even epidemic diarrheal outbreaks. Responsibility for such is one of command, but can only be carried out by frequent and forceful exercise of the essentials of sanitary practices, even under the rigors of combat.

(b) There are two primary purposes of a mess gear washing line. One is the washing and physical removal of all food materials, and the second is the sterilization of the mess gear. Third U. S. Army has consistently recommended sterilization of mess gear immediately before being served, carried out preferably in boiling water; or, in emergency, in a solution of compound, germicidal rinse. The pre-sterilizing dip at the entrance to the mess serving line is considered the most important single point for carrying out sterilization of mess gear. Army regulations should be amended to require such treatment and an additional immersion type heating unit should be included in T/O and E's for each 200 men or fraction thereof.

(3) Insect and Pest Control:

(a) DDT insecticides, judiciously used, proved effective in treatment and control of insect infestations.

(b) In the delousing and disinfecting of personnel in camps, particularly allied prisoner of war and displaced persons camps, the use of insecticide powder alone was not effective in eradicating lice from the camps. Reinfestations occurred in periods as short as eight days. "House cleaning" and treatment of blankets, bunks, and bedding with a DDT insecticide (liquid) should be included in the delousing program for persons who are not to be immediately evacuated.

(4) In the Army Surgeon's Office, there should be at least two Sanitary Corps officers with wide experience in military sanitation, sanitary engineering, and administrative work relative thereto. Liaison and supervisory functions of the Army Sanitary Engineer should be facilitated in the field while one Sanitary Corps officer devotes most of his time to the large volume of routine work.

5. Public Health:

a. Personnel for the performance of Public Health field operations was not freely available because they were pin-pointed with Civil Affairs/Military Government detachments. There was considerable difficulty of transfer of personnel where the need was greatest, and there was no security in personnel, especially when Army boundaries shifted. The number of Public Health officers were also inadequate.

b. Indigenous medical personnel and facilities were not able to cope with the problem of the care of civilian sick and wounded. The Civil Affairs/Military Government directives were dependent upon local medical services to handle this problem.

c. There was no organic transportation for the use of Public Health officers in their field operations. Transportation was procured only by request from Military Government detachments, who were themselves deficient in transport, or by accompanying other officers on missions, which limited the Public Health officers' activities. Without transportation, Public Health officers' value is almost entirely nullified.

d. A. A. B. basic medical units were too bulky, and breakdown for issue, which was necessary many times, was difficult. They were not well balanced units. Many items included were not desired by civilian health officials. They could not meet the demand of displaced persons camps or small institutions.

e. Public Health personnel should be attached to Army Headquarters in adequate numbers in the form of a Public Health Group, to be deployed when the need arises. They should be attached to the Medical Section for better coordination of all military and civilian problems.

f. Civil Affairs/Military Government planning should have made medical units available by Army for specific purposes of caring for civilian emergencies when the situation warranted it.

g. Adequate organic transportation for Public Health officers with drivers should be available to carry out field operations.

h. Smaller emergency medical units should be provided for distribution to civilian institution and displaced persons camps.

HEADQUARTERS
THIRD UNITED STATES ARMY
APO 403

COPY

30 April 1944

TRAINING MEMORANDUM:

NUMBER 17 :

TRAINING OF MEDICAL UNITS

1. PURPOSE: The purpose of this memorandum is to furnish a general guide for the training of medical units.

2. OBJECTIVE: The objective of the training in the United Kingdom is to insure that all medical units can efficiently perform their primary missions in combat.

3. SCOPE: Further training should perfect the technical training of individuals and perfect the functioning of the unit in the field. Unit commanders should conduct frequent training inspections to determine which subjects require emphasis in training. Practical application will be emphasized; lectures will be reduced to a necessary minimum.

a. All medical personnel will receive training in the following subjects as directed by Hq, ETOUSA:

(1) Mines, Minefields, and Booby Traps. (Trg Memo No 2, Hq ETOUSA, 10 Jan 44 and Trg Memo No 5, Hq TUSA, 21 Apr 44)

(2) Camouflage Training. (Trg Memo 25, Hq ETOUSA, 7 Aug 43)

(3) Defense against chemicals in combat. (Trg Memo No 42, Hq ETOUSA, 23 Dec 43)

(4) Bomb Reconnaissance. (Trg Memo 43, Hq ETOUSA, 23 Dec 43)

(5) Aircraft Recognition Training. (Trg Memo 44, Hq ETOUSA, 29 Dec 43)

b. In addition, training in the following subjects will be included as required:

(1) Physical Conditioning: To develop and maintain the individual's ability to participate in combat.

(2) Discipline: Develop alertness, neatness, and courtesy.

(3) Technical Training: Perfect the technical proficiency of each enlisted man. Wherever possible at least two (2) replacements should be trained for each technical assignment.

(4) Tactical Training: Each unit will set up its complete equipment in the field at least once each week, except evacuation, convalescent and field hospitals, which will set up in the field at least twice each month.

(5) Night Training: At least one (1) night per week will be devoted to night training.

(6) Treatment of Gas Casualties: All personnel will be thoroughly trained in the recognition and treatment of the various types of chemical casualties (Reference OCS ETOUSA, Med Bul No. 17, 15 Mar 44).

(7) First Aid: All personnel will be proficient in rendering first aid treatment to all types of casualties.

(8) Map and Aerial Photograph Reading: All personnel will be proficient in map reading, in the use of the compass and in the use of foreign maps. Application in the field will be emphasized.

(9) Defense Against Mechanized Attack: Identification of friendly and hostile mechanized vehicles and passive protective measures should be stressed.

(10) Defense Against Air and Parachute Attack: Personnel should know the defensive measures which can be used by Medical Department troops.

c. Training will be conducted whenever possible, in the form of field exercises under tactical conditions. Prevailing weather will not alter these field exercises

4. TRAINING AREAS: Training areas may be obtained as outlined in Training Memorandum 11, Hq ETOUSA, 10 Apr 44. Units having difficulty obtaining training areas will notify this headquarters.

5. REPORTS: Formal training reports will not be submitted. Each Army medical unit (except detachments) will forward one (1) copy of each master program to this headquarters. Weekly training programs will not be submitted.

By command of Lieutenant General PATTON:

/s/ R. W. HARTMAN
R. W. HARTMAN,
Lt. Col., A. G. D.,
Asst. Adj. Gen.

ANNEX NO. XIV

On 15 October a directive was published by this headquarters incorporating some changes in surgical procedures and detailing other surgical procedures only generally covered in Annex 16 (Medical Annex) to Operation "OVERLORD".

The changes and further details concerning certain of the surgical procedures are summarized below:

1. Debridement of Wounds: Emphasis was again placed on the wide excision of all damaged muscle, the thorough mechanical cleansing of wounds and the removal of minimal amounts of skin with particular stress on forbidding the excision of circular sections of skin around small wounds, which results in prolonged convalescence and difficulty in making secondary closure.

2. Fractures: Field and evacuation hospitals are responsible for the debridement of compound fractures, and the preparation of the patient for early evacuation in comfort and safety.

a. Fractures of the Femur: It was recommended that these be immobilized in a double circular plaster of paris spica bandage from the toes of the affected leg and from the knee of the sound leg; this should be reinforced by a strut placed posteriorly, with legs spread no more than litter width, with knee slightly flexed. The use of the Foubrut splint for selected fractures of the femur will be permitted.

b. Fractures of the Tibia and Fibula were to be immobilized in the circular plaster of paris bandage from toes to groin.

c. Fractures of the Humerus were to be immobilized by a plaster of paris spica bandage with arm held forward and medially rotated so that the forearm rested in front of the body, with elbow flexion no less than ninety degrees. A plaster of paris velpeau bandage was considered a less satisfactory substitute for the spica. Hanging casts were prohibited.

d. Fractures of the Arm, Wrist and Hand were to be immobilized by circular plaster of paris, extending to the mid-brachial region.

e. For Fractures of the Foot and Ankle: a circular plaster of paris boot was to be used, extending from the toes to just below the knee. All plaster dressings were to be split to the skin and spread.

f. Compression Fractures of the Spine were to be reduced by hyper-extension, and a plaster of paris jacket applied with the patient in this position. For fractures of the lumbar or lower dorsal vertebrae, the jacket must extend from the symphysis pubis to the sternal notch, with an extension of the jacket to and including the head, in the case of cervical and upper dorsal spine fractures.

g. Gunshot Wounds with Fractures of the Spine and Involvement of the Spinal Cord: All spinal injuries with neurologic involvement were to be transported to the nearest evacuation hospital for examination by the neurosurgeon and orthopedist. If the patient could be transported to a general hospital so that surgery could be accomplished there within thirty-six hours he was to be immediately evacuated. If this were not possible all cases in which there was any doubt as to the complete severance of the spinal cord would be given the benefit of exploratory laminectomy by the neurosurgeon. The use of casts for the transportation of these cases was prohibited.

h. Thomas Splints: Thomas full or half-ring splints were to be used only in emergencies by forward medical installations and replaced as soon as possible by plaster of paris circular splints.

i. Metallic External Fixation of Fractures: The use of Steinmann pins incorporated in plaster of paris bone plates and metallic external fixation splints were prohibited.

3. Wounds Involving Major Joints: The earliest possible closure of wounds by secondary suture or skin graft was recommended. The synovia was to be closed at time of debridement, with removal of all foreign bodies in the joints effected. Penicillin solution was to be placed in the joint following closure of the capsule.

4. Amputations: Circular amputation, as described in Circular Letter 101, Office of the Chief Surgeon, dated 30 July 1943, was directed with skin traction applied to effect closure of all stumps.

5. Injuries to the Bones:

a. Danger of prolonged immobilization was stressed. Their treatment as soft tissue injuries with effort directed toward closure of the wound by suture or skin graft, and early active motion was insisted upon. In cases where tendons and bone fragments were exposed, transfer to the nearest plastic center was directed. In selected cases, where skeletal traction was required to secure reduction and immobilization of the metacarpal fractures, its application was to be made through the proximal phalanges, with emphasis on early active motion; this procedure to be employed for a maximum of two weeks and the remaining phalangeal or metacarpo-phalangeal joints left free. Pulp traction was prohibited.

b. Amputation of hands or fingers were to be performed only in extreme cases and then at the most distal point possible.

c. In the case of compound fracture of the digital portion of one finger accompanied by destruction of the flexor and extensor tendons, a prompt amputation of this digit and early active motion of the rest of the hand and fingers were recommended.

6. Neurosurgical Problems:

a. Peripheral Nerve Injuries: A close neurologic examination of all cases in which there are lacerations, no matter how small, of the extremities, was stressed. The ultimate end to be attained was early repair of nerves at special treatment hospitals for neurosurgery. When there was evidence of a nerve injury, the nerve ends were to be approximated as soon as possible and where loss of tissue made this impossible, the ends were to be marked with silk and the patient evacuated promptly to the special treatment hospital in the Communications Zone.

7. Care of the Bladder in Patients with Injury of the Spinal Cord:

a. In the cases of suspected spinal injury and inability by the patient to void, catheterization was recommended, with the catheter left laying.

b. Tidal Drainage was recommended as early as possible, to be continued until complete neurological evaluation, with proper ascertainment that the bladder was properly emptying. After neurological evaluation, it was to be continued if there was evidence of early bladder recovery.

c. Early High Suprapubic Cystostomy was recommended in the following conditions:

(1) Cord bladder secondary to permanent cord damage.

(2) Absence of early bladder recovery.

d. Care of Suprapubic Cystostomies:

(1) Use of large Mushroom or Malecot catheter.

(2) Frequent changes of tubes to prevent infection and encrustation.

(3) Daily bladder irrigations.

8. Care of Nasal Mucosa:

a. In facial wounds where the missile possibly penetrated the nasal mucosa, a complete preliminary examination was directed, to determine possible mucosal damage. If found, the cavity must be packed with gauze strips impregnated with sulfa ointment at the site of injury, to insure healing on both surfaces of the mucosa, and not across the airway at the site. Protection of the gauze from the nose was recommended, and replacement at least every five days to ten days.

b. Prior to discharge, transfer, or evacuation from the hospital of any patient with facial injury which could have penetrated the nasal mucosa, a complete nasal examination for adhesions was directed; any adhesions to be severed and gauze placed to prevent reforming.

9. Management of Colostomies:

a. Performance of Colostomy: Immobilization of the large intestine, when possible, to permit approximation of two and one-half to three inches of bowel within the peritoneal cavity in the formation of the double-barrelled colostomy, was directed.

b. Initial opening in the loop type of colostomy, not exceeding one inch in length and made through the region of the presenting taenia, parallel to the long axis of the presenting bowel, was recommended. Stress was placed on the necessity of a severance of the bowel to completely interrupt the fecal stream in injuries of the rectum or sigmoid below the colostomy site.

10. Litter cases were set to be evacuated to the convalescent hospital.

11. All cases of elective surgery were to be sent to Communications Zone hospitals.

Analysis of 64,389 U. S. Battle Casualties Treated in Third U. S. Army Medical Installations - 1 Aug 1944 to 1 Feb 45

Anatomical Location and No. of each type		% of Total No. of Battle Casualties	Mortality for each sep group
Head & Spine 5075 cases		8%	9.4%
Face & Neck 3770 cases		5%	1%
Chest 5877 cases		10%	8%
Abdomen 2907 cases		5%	15.5%
Buttocks 3745 cases		6%	2%
Upper Extremity 16327 cases	25%		3%
Lower Extremity 23273 cases	35%		1%
Total Extremities 39600 cases		60%	
Others 3615 cases		6%	1.4%
Total 64389 cases		100%	
Mortality from all types of battle casualties treated in Third U. S. Army for six month period			2.9%
The overall mortality including medical and non-battle casualty admissions for same period			1.6%

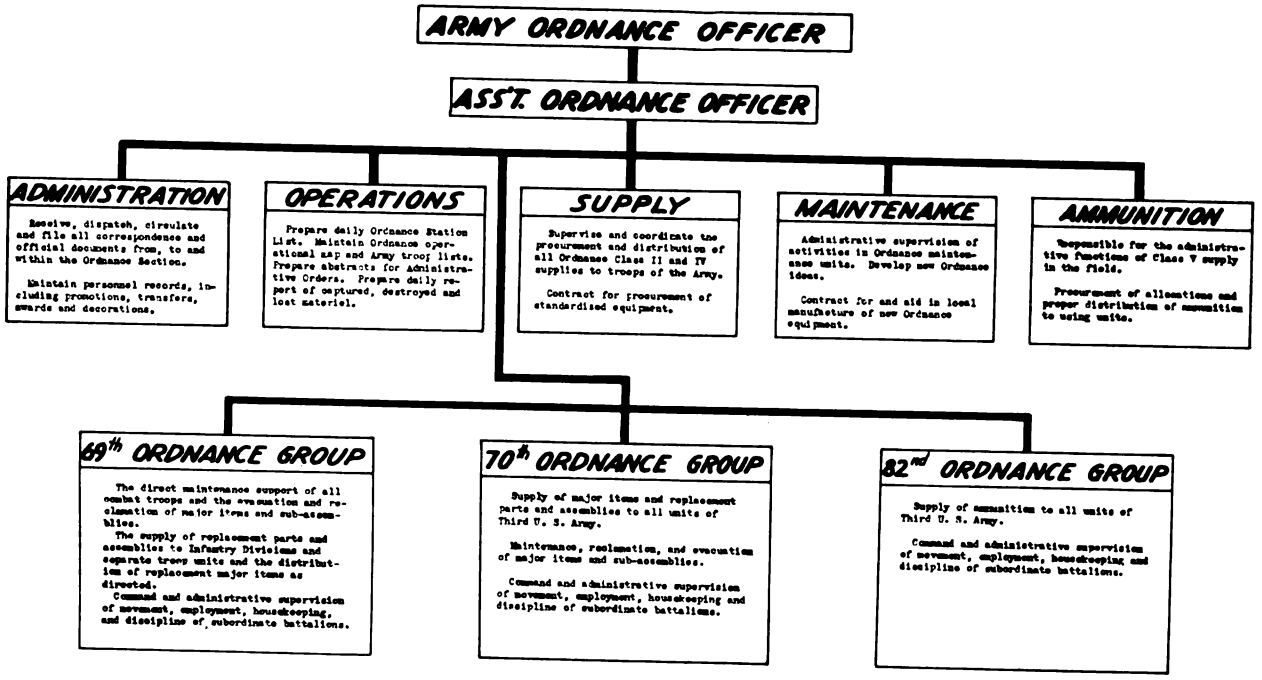
HEADQUARTERS
THIRD UNITED STATES ARMY
Office of the Ordnance Officer
APO 403

SUBJECT: Transmittal of After-Action Report, Ordnance Section, Headquarters, Third U.S. Army.

TO : The Commanding General, Third U.S. Army.

1. Submitted herewith is the After-Action Report of the Ordnance Section, Third U.S. Army Headquarters, beginning with 23 March 1944 and continuing at the properly designated intervals by chapters.



2. This report endeavors to portray the history of Ordnance Service in the Third U.S. Army. Many details have necessarily been omitted but the report describes the more important features of Ordnance Service and the outstanding problems which were met and solved in providing the ammunition, supplying replacement equipment, and maintaining the weapons and vehicles essential for successful combat. The report covers the planning phase in the United Kingdom, the pre-operational phase on the Continent, and finally, the highly successful campaigns in Normandy, Brittany, Luxembourg, Belgium, the Rhineland, and the ultimate defeat of the enemy in Germany.

T. H. NIXON,
Colonel, Ordnance Dept.,
Ordnance Officer.

CHAPTER I
PLANNING IN UNITED KINGDOM

SECTION I - GENERAL

The Ordnance Section, Headquarters Third U. S. Army, at the time of their arrival in the UNITED KINGDOM on 29 March 1944, had no indication as to their ultimate destiny. As time went on and plans of the Army were being formulated, it became apparent that the day of actual commitment to combat was near at hand. Some of the numerous problems confronting the ordnance troops are mentioned in the sections that follow. The outstanding responsibilities were the initial planning phase and the equipping of the Army prior to actual commitment.

SECTION II

ADMINISTRATION SUB-SECTION

The Ordnance Section, Third U. S. Army, arrived in the UNITED KINGDOM with complete authorized strength of eighteen officers, two warrant officers (junior grade), and thirty-three enlisted men. The entire section was in the rear echelon. The section was located at TOFT CAMP near KNUTSFORD, CHESHIRE, ENGLAND, with other service sections of the headquarters and was housed in three small frame buildings.

Immediately upon arrival in the UNITED KINGDOM files were started on all Ordnance officer personnel assigned and attached to Third U. S. Army. As officers of the headquarters visited Ordnance units, pertinent statements were made on the units concerned in order that the Army Ordnance Officer would be familiar with their capabilities.

All sub-sections began operations on 2L March. Instructions were issued directing them to maintain telephonic records in their respective sub-sections. These would be periodically forwarded to the Administration Section for consolidation. A weekly report was required from each sub-section which was consolidated by the Administration Section into a diary.

On 14 April, a bomb disposal officer was attached to the section from the theater headquarters for the purpose of passive air defense organizing, and planning of schools for training of personnel in same.

Staff Memorandum 37, this headquarters, dated 6 May, reduced Ordnance Section authorized enlisted personnel to twenty-eight men and one warrant officer; increased officer strength to nineteen. Five enlisted men were transferred to other staff sections in accordance with this directive.

At the request of the Chief Ordnance Officer, European Theater of Operations, a weekly informal letter was prepared emphasizing various technical problems with which the Ordnance Section had dealt during that week. This letter proved to be very valuable since it kept the Chief Ordnance Officer constantly familiar with current problems of supply and maintenance of Ordnance material.

Headquarters, 179th Ordnance Battalion and 317th Ordnance Battalion were reorganized as the First and Second Ordnance Provisional Group Headquarters respectively on 20 May. The complete battalion personnel was placed on detached service with the provisional groups and the balance of Group T/O brought up to authorized strength by augmentation from attached units.

On 25 May, Ordnance Bulletin Number 1 was prepared and distributed to all Third Army Ordnance units. (See Annex I). This initial bulletin contained Ordnance technical information and a brief analysis of the plan for future bulletins of a similar nature. On 12 June, Ordnance Bulletin Number 2 was published and distributed. (See Annex II). On 23 June, Ordnance Bulletin Number 3 was published and distributed. (See Annex III).

The 69th Ordnance Group was activated on 23 June. Personnel for this group was obtained from the First Ordnance Provisional Group Headquarters which was disbanded. On 25 June, the 70th Ordnance Group was activated. Personnel for this group was obtained from the Second Ordnance Provisional Group Headquarters which was disbanded.

On 29 June, the Ordnance Section was divided into three echelons. The "X" Echelon consisted of ten officers and seventeen enlisted men; the "Y" Echelon consisted of seven officers, one warrant officer, and nine enlisted men; the "Z" Echelon consisted of two officers and two enlisted men. The "X" Echelon departed from TOFT CAMP on this date and proceeded to HIGH WYCH, in southern ENGLAND, southeast of SALISBURY. On 4 July, this echelon moved from HIGH WYCH to SOUTHAMPTON and proceeded to the Continent, arriving there 6 July and was camped three miles north of ST. SAUVEUR LE VICOMPTE, FRANCE. (T-19).

In order to accomplish the required work during this planning period, it was found necessary to augment the Ordnance Section with attached personnel as follows:

Dates	Officers	Warrant Officers	Enlisted Men
April	3	1	15
May	4	0	5
June	6	0	6
July	6	0	6

The maximum number of personnel attached at any one time was three officers, one warrant officer, and fifteen enlisted men. The average was five officers and eight enlisted men which indicates that the Ordnance Section of an Army Headquarters is too small, particularly during a planning phase.

SECTION III

OPERATIONS SUB-SECTION

An operation journal was started and an operations log was set up for recording telephonic conversations and the results of conferences. This log was used as a source of information for the compilation of the historical record.

The location of Ordnance units was spotted on a map in order to determine their geographical location with respect to each other. As a result of this study, recommendation was made to G-3 to attach Ordnance companies to Ordnance battalions for administrative control on a geographical basis.

A study was made to determine if Ordnance units were located to provide Ordnance service to tactical and other service units. It was found that the Ordnance units were not located with respect to the maintenance and supply load but apparently had been placed where billets were available. Recommendations were submitted to the G-3 Section for immediate movement of these units in order to insure Ordnance service to all units. New units arriving in the UNITED KINGDOM were immediately notified of their supporting Ordnance unit.

Upon completion of a study of the administrative requirements of Ordnance units, a request was submitted to the Commanding General, European Theater of Operations, for the assignment or authority to activate two Headquarters and Headquarters Detachments, Ordnance Groups (T/O & E 9-12, 15 April 1944) in order to expedite the organization, administration, training, and operations of Ordnance battalions. Authority was received to organize two Provisional Group Headquarters. This was accomplished by reorganizing the Headquarters 179th Ordnance Battalion and 317th Ordnance Battalion as the First and Second Provisional Groups, respectively. These Provisional Groups were later disbanded by General Order No. 35, dated 3 July 1944, and then activated as Ordnance Groups, per T/O & E 9-12, 15 April 1944. The 69th Ordnance Group which was activated on 23 June was given the mission of operating all forward battalions in direct support of Corps. The 70th Ordnance Group which was activated on 26 June was given the mission of supply for the entire Third U. S. Army, as well as maintenance support to the 69th Ordnance Group and any other Army troops assigned. The 70th Ordnance Group Headquarters was to be the only contacting agency for supply and maintenance with the Advance Section, Communications Zone.

Prior to the activation of the Ordnance Groups, a meeting was conducted by the Army Ordnance Officer which was attended by all Corps Ordnance Officers, all Provisional Group Commanders and their executives, and all Ordnance Battalion Commanders and their executives. During this meeting the Army Ordnance Officer and his staff discussed the Ordnance plan for Continental operations. Copies of "Instructions to Ordnance Units", which in itself was the Ordnance Plan, were distributed with accompanying Ordnance forms reproduced as Annex IV of this report, to be used for the submission of Ordnance reports required by this headquarters. (For complete text of "Instructions to Ordnance Units" see pages 94 through 97 of OVERLORD PLAN) Copies of the Maintenance Plan for Continental operations were also distributed. (See Annex V) Battalion commanders were informed of the companies to be attached to their battalions for this operation. Copies of these plans were furnished to the Chief Ordnance Officer, European Theater of Operations, Ordnance Officer, First U. S. Army Group, and Ordnance Officer, Forward Echelon, Communications Zone.

A tentative troop list for Third U. S. Army was studied and then broken down into the types of tactical units. Estimates were made of the number of Ordnance companies and battalions necessary to support these tactical units. After the number of Ordnance units required had been determined, they were phased in with the tactical units in order to furnish adequate ordnance support.

The Army Ordnance Officer attended a conference at Headquarters First U. S. Army Group with reference to the number of Ordnance units that would be necessary to support Third U. S. Army, by type, and the required phasing of these Ordnance units with the tactical units. For this necessary support, a shortage was found to exist of depot companies, evacuation companies, ammunition companies, heavy maintenance tank companies, and ammunition battalion headquarters.

The Chief Ordnance Officer, European Theater of Operations, called a meeting of Army Ordnance Officers, representatives of Headquarters European Theater of Operations, and First U. S. Army Group, and Ordnance units were assigned based on availability. This list was later revised since units expected from the states had not arrived. The final ordnance troop list is shown in Annex VI.

Ammunition battalion headquarters shortages were eliminated by taking three Ordnance battalion headquarters and making ammunition battalion headquarters out of them.

It was planned that the Ordnance companies being lifted to the Continent during the period up to D + 41 for the Continental operation would take with them vehicles and towed artillery to establish a replacement pool for the tactical units then ashore. Therefore, a driver training program was immediately drafted for the purpose of training ordnance personnel to drive half-track and track-laying vehicles.

The Ordnance Section, Communications Zone, was contacted and arrangements were made for ordnance personnel to attend training courses for waterproofing of armored vehicles and artillery at Ordnance Depot O-617, located at BICKERTON. Training courses for general purpose vehicles at Ordnance Depot O-616 was located at WALLESLEY.

Quotas for training in Waterproofing at Ordnance Depot O-616 and O-617 were not in sufficient quantity to complete training prior to movement date. Therefore, a school was established at CORBLETON by Third U. S. Army. This school was first placed under the operation of VIII Corps to train students in waterproofing of all types of general purpose vehicles. Students who had completed training at the Communications Zone Ordnance depots were selected from units within the Corps to act as instructors in this school. Upon completion of training of the VIII Corps, this school was then placed under control of the Army. Training courses were then allocated to Army units. Corps instructors were relieved as Army instructors were trained.

As more armored units were assigned to Third U. S. Army, it was necessary to immediately establish another school to train the necessary number of instructors in the waterproofing of combat vehicles and artillery before the movement date of the Army units.

The Ordnance Section, Communications Zone, was contacted with reference to waterproofing of vehicles and the availability of materials to be used for training. A training program was drafted whereby all drivers and their assistant drivers would be taught the correct method of waterproofing. This plan was submitted to the AF of S, G-3, for approval, together with a plan for the establishment of a waterproofing school. Communications Zone agreed to provide a limited number of combat vehicle instructors and the waterproofing material for instructional purposes. Communications Zone instructors would be used until such time as Army instructors could be trained. This school was established in the vicinity of MARLBOROUGH and placed under XX Corps for operation.

Digitized by Google

This school trained instructors for Army units in combat and general purpose vehicles and artillery. As instructors were developed, they were returned to their units and the units in turn established waterproofing schools for their drivers. By this pyramid method all drivers and their assistants were instructed in waterproofing within a period of two months.

Considerable trouble had been reported from other combat areas on vehicles becoming disabled during beach landings. Subsequently, instructions were drafted for trouble-shooting vehicles which stalled on the beach due to mechanical troubles. These instructions were distributed to students and proved valuable as a training aid since similar troubles developed as a result of wading during waterproofing tests.

A memorandum was submitted to the Chief of Staff for the reorganization under T/O & E 9-7, dated 28 February 1944, with Change 1, dated 28 February 1944, of all Ordnance Medium Maintenance Companies under control of Third U. S. Army. All Ordnance Bomb Disposal Squads (Separate) were reorganized under T/O & E 9-500.

It was recommended that all Ordnance units be attached to Corps for movement to the Continent and to revert to Army control upon arrival. Furthermore, Third U. S. Army units that had been attached to First U. S. Army were likewise to revert to Third U. S. Army control. One unit was excepted, the 457th Ordnance Medium Automotive Maintenance Company, which was attached to Headquarters Special Troops for administration and supply

A list of Third U. S. Army maintenance and depot companies which were in actual operation in the UNITED KINGDOM was submitted to the Ordnance Officer, Southern Base Sector, so that they could be placed in the same supply priority as Communications Zone shops for spare parts. The 444th, 857th, and 781th Ordnance Depot Companies were designated as the main depot companies.

A copy of Third U. S. Army troop priority list, dated 5 June 1944, was forwarded to Western Base Sector, Services of Supply, for use in the distribution of waterproofing materials to Third U. S. Army units in order of priority.

SECTION IV

SUPPLY SUB-SECTION

Upon arrival in the UNITED KINGDOM, the Supply Sub-Section immediately initiated an intensive study of Services of Supply administrative orders and policies currently in effect in the European Theater of Operations.

The supply portion of the Ordnance Annex to Administrative Order Number 1 was immediately prepared. Policies were set forth as indicated in FM 9-5, 11 July 1942, Ordnance Service In The Field, and coordinated with those already set up by the Services of Supply for the UNITED KINGDOM.

The supply of major items of T/E and T/BA equipment to units upon arrival in the UNITED KINGDOM were issued automatically by the Services of Supply. "Must" items listed in the pertinent Standard Nomenclature Lists were shipped with the major items to which they pertained. First echelon tools and spare parts kits for general purpose vehicles were issued with the vehicles. Likewise, organizational spare parts, tools, and equipment for combat vehicles were issued with the vehicles.

Units dealt directly with the Services of Supply base section concerned regarding the availability of initial issue of T/E and T/BA equipment. When trouble was experienced by the units in obtaining critical items of T/E and T/BA equipment, they contacted the supply section of Army who in turn contacted Headquarters Services of Supply as to the availability, and at times specified priority of units to be equipped on critical items of supply.

The supply of material other than the initial T/E and T/BA was made through the following channels:

1. Divisions were supplied through their ordnance companies.

2. Army and Corps troops were supplied through the ordnance depot company of the battalion furnishing ordnance service.

3. Units without organic ordnance support, or without Army or Corps ordnance units to provide supply, submitted their requisitions to the nearest Services of Supply ordnance installations.

Three Army depot companies were put in operation in the UNITED KINGDOM. All other depot companies were completely involved in the task of setting up their vans and requisitioning basic loads.

Tactical units were instructed to submit requisitions for organizational spare parts and accessories direct to Services of Supply depot installations rather than to Army depots first for consolidation. This method was found to be more satisfactory as units were being moved during this period to the concentration area and trouble had been experienced, because of lack of communications, by Army depots in contacting tactical units when their requisitions were filled. Services of Supply experienced the same difficulty on a reduced scale therefore Army liaison officers and enlisted men were placed in all Services of Supply depots for the purpose of notifying units when their requisitions were filled.

Forms that were furnished to Army by Services of Supply to be used in the requisitioning of organizational spare parts and accessories by tactical units were found to be incomplete and outdated and were discontinued after being used a short period of time.

Requisitions for controlled expendable items were submitted through Corps Ordnance Officer (or Army Ordnance Officer in case of Army troops) approved and forwarded to the Chief Ordnance Officer, Headquarters Services of Supply, for action.

Requisitions for controlled non-expendable items were submitted through the Army Ordnance Officer after approval by the Corps Ordnance Officer (for Corps troops) and after approval and consolidation by the Division Ordnance Officer (for Divisional troops). Army troops submitted such requisitions to the Chief Ordnance Officer, Services of Supply, through the Army Ordnance Officer.

Immediately before the shipment of Army to the Continent, arrangements were made by the Army Ordnance Officer with Headquarters Services of Supply to simplify the requisition channels so that troops remaining in the UNITED KINGDOM could continue to be supplied without so much paper work coming through the "S" Echelon of Army.

Instructions for the preparation of requisitions were also included in the Ordnance Annex to Administrative Order Number 1, and complete information was given as to the form and stock numbers necessary to expedite these requisitions through Services of Supply depots.

All units in the Army were required to submit to the Army Ordnance Officer as of the twentieth of each month a "Special Material Status Report" of all authorized and on hand major items. A card system was set up by the supply section for the purpose of recording these figures so that information as to the status of equipment of units in the Army would be available. Between reports, items released by Services of Supply on shipping orders were posted on these cards so as to keep this information current.

Shortly before Army left for the Continent this form was changed to the "Ordnance Material In The Hands of Troops and Combat Loss Report" and made to include additional information necessary for combat operations.

A project to provide items above T/E necessary for the efficient operation of ordnance companies was completed and submitted for approval. Approval was not obtained in time for the items to be issued to the ordnance units while in the UNITED KINGDOM.

Work was started on the requirements of all ordnance items for Continental operation. An extensive study was made of requirements submitted by other Armies in previous operations.

Requirements for vehicles and towed artillery for Phase II (D / 29 to D / 42) were set up by First U. S. Army Group based on fourteen days of maintenance with a reserve of seven days. These major items were phased in by days for transportation to the Continent. The supply section in turn phased these items in accordance with ordnance units ability to carry them to the Continent during this period. Requirements were not put in for Phase III (D / 42 to D / 90) as Headquarters Services of Supply informed Army that depots would be in operation on the Continent to handle requirements during this period. In connection with this a letter was written to the Commanding General, European Theater of Operations, United States Army, a copy of which is reproduced as follows

AG 475 (Ord) 15 May 1944

Subject: Ordnance Supplies, Operation "Overlord".

To : Commanding General, European Theater of Operations, United States Army, APO 887, U. S. Army.

1. [redacted] (Ord) [redacted] Third United States Army, [redacted] Operational Supply Requirements ([redacted]).

b. Joint Administrative Plan for Operation "Overlord" to Accompany Joint Operations Plan, United Forces, 19 April 1944, Paragraph 1. General, a(4) and (6); Paragraph 2. Supply, a. General, (1)(b) and 3.

c. "Neptune" Initial Joint Plan, EJC 100, 1 February 1944, Section II, Paragraph 2, Supply, a. General (1)(c).

2. It is the understanding of this headquarters that the Commanding General, Communications Zone, for Operation "Overlord" is prepared to assume normal supply functions for all types of Ordnance Supply by D / 41.

3. Based on this assumption, only tonnage was bid in for the maintenance requirements and a seven (7) day reserve for the Third U. S. Army units ashore as of D / 41 (inclusive). First U. S. Army was responsible for bidding in tonnage for the VIII Corps for the same period. In addition, the major items ashore by specific periods was furnished in letter referred to in paragraph 1 a, from D / 42 to D / 90. No ordnance tonnage has been bid in for the period D / 42 to D / 90 for any Third U. S. Army units. The assumption is that the Commanding General, Advance Section, Communications Zone, or Communications Zone, will bid in the necessary tonnage for maintenance requirements and the establishment of a seven day reserve for Third U. S. Army units ashore as of D / 90. This reserve to be in addition to any reserve to be established by the Commanding General, Communications Zone, to support the Ground Forces.

4. To confirm the above assumption, it is requested that the following question be answered:

a. Will the Advance Section of the Communications Zone or the Communications Zone be prepared to meet the maintenance and Third U. S. Army operational reserve demands including the replacement of major items for Class II, Class IV, and Class V Ordnance Supply for all Third U. S. Army troops ashore after D / 41?

For the Commanding General:

/s/ E. L. SLOSSON, JR.,
Capt., A.G.D.,
Asst. Adj. Gen.

AG 475 (Ordnance) 1st Ind. 7 June 1944
Headquarters European Theater of Operations, APO 887, U. S. Army.

To: Commanding General, Third United States Army, APO 403, U. S. Army.

1. For the period of contemplated operations D plus 42 to D plus 90, calculations of maintenance and reserve supply requirements were made on the basis of all troops ashore and not broken down into supplies for any one command.

2. However, the Ordnance Service has advised that its provision of supplies for all troops ashore beginning at D plus 41 is adequate to meet the maintenance and authorized reserve demands of the Third U. S. Army.

By command of General EISENHOWER:

/s/ T. I. HARRIS,
Capt., A.G.D.,
Asst. Adj. Gen.

Requirements for major items other than rolling stock were set up in chart form based on modified War Department replacement factors for a fifteen day supply for all ordnance maintenance and depot units in the Army. A chart was prepared allocating these items to the various types of ordnance companies as basic loads.

DECLASSIFIED

Digitized by Google

Authorized spare parts basic loads for divisional ordnance companies were in accordance with the appropriate Standard Nomenclature Lists. Because of the critical nature of supply, basic loads of major items, as listed in appropriate Standard Nomenclature Lists for divisional ordnance units, were not authorized.

Basic load basis for spare parts for non-divisional ordnance maintenance companies was compiled. A chart was produced showing the number of each type major item to be supported by the various types of maintenance companies. These figures were arrived at by taking the total number of each type major item in the Army and dividing by the number of maintenance units that would support these items. This gave each maintenance company a percentage share of each type major item they would support and meant that each company would have a balanced stock of parts for everything they could support. A fifteen day supply was requisitioned in accordance with pertinent Standard Nomenclature Lists Addendas. Restrictions were added by the Army Ordnance Officer that basic loads must be mobile and ordnance units were authorized to vary basic loads to comply with this requirement.

Basic load basis for spare parts for depot companies was compiled. In coordination with this project, the depot companies were divided into two distinct classes: Forward and Main Depots. The forward depots were in turn divided into two types: Forward General and Forward Armored. The forward general depots to carry a preponderance of general purpose parts for the support of infantry divisions. The forward armored depots to carry a stock of combat vehicle and general purpose parts in order to support armored units. The main depots were in turn divided into three types: Main General Purpose, Main Combat Vehicle, and Main Armament. These depots were to stock parts as their titles indicate. The main depots were also to operate the main Army vehicle and tracked artillery pool.

The basic load basis for spare parts for forward depot companies was based on a fifteen day supply in accordance with the quantities of various type major items to be supported which was figured on the same basis as for the maintenance companies. The main depot companies were to carry a thirty day supply based on the total number of each type of item that they would support in the Army.

Restrictions were again added that forward depot loads must be mobile and units were authorized to vary basic loads to comply with this requirement. The main depots were to transport reserve pool vehicles and were to load these vehicles with parts. Additional transportation was to be obtained by use of Ordnance Evacuation Companies, to carry a portion of their load to the Continent.

A cleaning and preserving requirement chart was reproduced and distributed to all tactical units and ordnance units to be used in the requisitioning of fast moving cleaning and preserving materials. This chart was based on figures compiled by the Ordnance Board, Aberdeen Proving Ground.

Basic load charts for the stockage of tires and tubes were compiled and submitted to Headquarters Services of Supply for automatic issue to ordnance units. No figures were available as to replacement factors on these items and the only limiting factor was space needed to carry them. Consequently only a small part of these needs of the Army were carried to the far shore by ordnance units.

Basic loads for the stockage of tools for replacement purposes were compiled and submitted to Headquarters Services of Supply for automatic issue to the main general purpose depot. No figures were available as to replacement factors on these items and again the limiting factor was space to carry these items.

Requirements for artillery tubes, recoil mechanisms, equilibrators, and gun cheek pads were prepared and submitted to Headquarters Services of Supply for shipment to the Continent. The figures used as a basis were obtained from those developed by other Armies in previous campaigns. (See Artillery Tube Chart on Page 118 of OVERLORD PLAN)

The supply section prepared, for the use of ordnance maintenance and depot companies in requisitioning spare parts loads, a special requisition form for each Standard Nomenclature List sub-group. A crew of one officer and twelve enlisted men, all parts specialists, were brought into the Army supply section for this purpose. Two thousand stencils were prepared in two weeks time for the production of these special forms.

The prepared requisition forms reduced, by a large percentage, the man hours normally necessary for the preparation of basic load requisitions. All available interchangeability information was listed with each item on the face of the requisition. Cross-reference between the many ordnance parts numbers was included with each item listed. Complete nomenclature description, and where applicable, size information was given. On subgroups, such as 2½T, requisitions were broken down into many separate requisitions. For example, 2½T Number 1 requisition was for parts that are common to all 2½T vehicles. Numbers 2 to 10 inclusive were requisitions for parts peculiar to the various models of 2½T vehicles. Separate requisitions were prepared for Auto-Lite and Delco-Remy electrical parts and anti-friction bearings using the unit manufacturer's number and interchanging into all the various ordnance numbers that might be used.

Use of the prepared requisition forms did not stop with the requisitioning of a basic load. A retained copy was used by the ordnance unit as follows:

1. Reference list of items stocked by main depots.
2. Quick reference interchangeability list.
3. Cross-reference of various ordnance part numbers.
4. Check list in the editing of requisitions.
5. Parts numbers used for the stocking of all groups.
6. Items stocked in parts common under Federal stock numbers.

Favorable comment was made by Services of Supply depots in regard to these requisitions because much time was saved in the filling of basic loads. Copies were sent to Services of Supply depots to be used in extracting requisitions to other depots. Request was made by the Chief Ordnance Officer, Washington, D. C., for a copy of these requisitions so that they could be studied for use in other theaters.

The supply section interchangeability personnel compiled interchangeability sheets on anti-friction bearings, Auto-Lite and Delco-Remy electrical parts. These charts were distributed to all ordnance maintenance and depot companies.

Upon completion of all basic load charts, a meeting was held with battalion supply officers, depot commanders, and depot officers in order to disseminate this information. The general supply layout was discussed showing channels of supply and naming depot companies designated as forward general, forward armored, main general purpose, main combat vehicle, and main armament. A complete explanation was given as to the use of the specially prepared requisition forms. A simplified and standardized method of depot operation was set forth for use by Third U. S. Army depots.

From this time until the movement of Army to the Continent, the supply section efforts were devoted to expediting critical items of 2½T and 7½A equipment and spare parts loads.

SECTION V

MAINTENANCE SUB-SECTION

The Maintenance chapter of the Ordnance Annex to Third U. S. Army Administrative Order Number 1 was completed on 7 April.

Ordnance units having been located where billets were available resulted mostly in using units being too far removed from proper supporting maintenance units. A study was made to determine the feasibility of relocating the maintenance units so they could support the same using units in the UNITED KINGDOM as planned for Continental operations. Such a rearrangement was found to be too impracticable because tactical units of different Corps were so intermingled that separate maintenance to each Corps could not be furnished in any given area. Another plan, which was also feasible, was finally adopted and put into use. In this, the UNITED KINGDOM was divided into maintenance areas and a maintenance battalion was assigned to each with the responsibility of contacting all Third U. S. Army troops within it and arranging for ordnance service.

The XV Corps at this time was located in the NORTH IRELAND Base Section and operating according to the desired plan of having supporting maintenance units within their area.

At this time Ordnance maintenance units did not have sufficient equipment or material to adequately maintain all the equipment in the respective areas. Arrangements were made for the maintenance units to do as much of the work as was possible and to refer any overflow to the proper Services of Supply installations.

A standard operating procedure for spot inspections was compiled and check forms prepared in order to facilitate and standardize all maintenance inspections.

Interchangeability charts for automotive spare parts, bearings, starters, generators, etc., were prepared and distributed to all Third U. S. Army Ordnance units. These charts, in many instances, enabled units to consolidate their stockages of spare parts and conserve valuable storage space, as well as their initial intent of showing what parts were interchangeable.

During the latter part of April, instructions were prepared on waterproofing vehicles for an amphibious landing on the Continent. This program was so arranged that all drivers and assistant drivers would receive adequate training in the waterproofing and de-waterproofing of vehicles. It was necessary to construct wading pools for testing waterproofed vehicles and this was accomplished with the assistance of the Third U. S. Army Engineer Section.

A series of check charts for required modifications throughout the Army were prepared and distributed to all Ordnance maintenance units. With the charts as a guide, the units checked the status of modifications on all Ordnance equipment of the using units and in turn accomplished the necessary requisitions for modification kits. This method of requisitioning kits was decided upon as it enabled the maintenance section to keep a constant check on the status of modifications.

In practically all cases units that were authorized ¼-ton and ¾-ton trucks with 12-Volt ignition systems were issued trucks with 6-Volt ignition systems in lieu thereof. A project had been approved authorizing additional radios in Third U. S. Army in connection with an artillery net. The radio sets required 12-Volt ignition systems and the supply of the required modification kits for conversion of these vehicles was critical. It was found necessary for the Army Ordnance Officer to control the release of these kits on a priority basis.

Early in June, the 2nd French Armored Division was assigned to the Third U. S. Army. This organization presented many maintenance problems as the type of equipment it had was different from that issued in the UNITED KINGDOM. Due to the unavailability of a heavy maintenance tank company, the 7th Ordnance Medium Maintenance Company was assigned in direct support of the division to facilitate maintenance and supply and to acquaint the division with the Third U. S. Army maintenance and supply channels. Later this company was augmented by combat vehicle repair teams from a heavy maintenance tank company and by supply teams from a depot company.

A survey of the equipment in the division disclosed that a great percentage of its combat vehicles had been driven over many miles of desert and considerable maintenance was necessary. Difficulty had been experienced with its W-670 Engines in the M4A1 Light Tanks, and with the final drives of the Motor Carriage, M7. The M7 deficiencies were corrected by maintenance personnel of the division and 105 model W-670 Light Tank Engines were ordered from the UNITED STATES. All 2 1/2-ton trucks requiring fourth and fifth echelon repairs were turned in to Services of Supply and were repaired or replaced. In general, the division was able to supply its own maintenance and the supporting medium maintenance company then acted primarily as a supply agency.

In order to insure a standard procedure for the keeping of maintenance, as well as supply and evacuation records, a system was devised and forwarded to all Ordnance maintenance companies. A copy of subject letter, which is self-explanatory, is shown in Annex VIII.

Reports from the Continent indicated that the enemy was stringing wire across the roads at about a height of four feet. This action resulted in wrecking a number of ¼-ton and ¾-ton vehicles. Instructions were immediately prepared for mounting a wire cutter on the front of these types of vehicles.

Digitized by Google

SECTION VI

AMMUNITION SUB-SECTION

Conferences were held with Headquarters Services of Supply and units already established in the UNITED KINGDOM relative to current policies and procedures in the supply of ammunition.

The initial problem was to supply training ammunition to meet current requirements of units assigned to the Third U. S. Army. As no Army ammunition supply points were in existence, it was necessary to make arrangements with the Ordnance Office, Headquarters Services of Supply, to effect supply of ammunition from their installations until such time as Army installations could be established.

As units of the Third U. S. Army moved into areas originally occupied by First U. S. Army troops, ammunition installations formerly operated by the latter were taken over. At the same time new installations were established in strategic locations. The three principal installations were located near CAMMARTHEN (WALES), BRADLEY and BICKLAND.

After the supply procedure for ammunition had been firmly established, work was started on the preparation of basic load data to serve as the basis for combat loading of Third U. S. Army units. Conferences were held with representatives of various type units and with general and special staff sections in order to obtain a sound basis of combat loading. Upon approval by the interested staff sections, this basic load data was incorporated into basic load tables which were published as a directive to all troops. Third U. S. Army units then submitted requisitions to the Ordnance Officer and necessary steps were taken to furnish required amounts and types from Army or Services of Supply installations.

Concurrently with the supply of basic load ammunition, it was necessary to prepare and submit estimates of operational requirements on the Continent. These estimates were to include the ammunition necessary to build up an authorized reserve in addition to current maintenance requirements at such time as the Third U. S. Army became operational on the Continent. These estimated requirements were broken down into two phases, D ∕ 29 to D ∕ 42, and D ∕ 42 to D ∕ 90. As these estimated requirements were limited within tonnage allocations to the Third U. S. Army, several revisions were necessary. Basis of requirements was the unit of fire prescribed by the European Theater of Operations in a letter of 10 December 1943. A reserve of seven units of fire for units on the Continent by D ∕ 41 was planned and a maintenance requirement of one-third unit of fire per day was estimated from D ∕ 29 to D ∕ 90 broken down in two phases as indicated above.

Several weeks after the submission of these pre-scheduled supply requirements, new information was received concerning consumption of ammunition as experienced in other theaters; hence, requirements were revised and extended to include D ∕ 104. These requirements submitted on 25 May were subsequently revised again on 22 June with respect to anti-aircraft ammunition in view of additional new information received regarding consumption of that type of ammunition. (See chart - Annex VIII).

Ammunition companies of unknown ability were arriving in the UNITED KINGDOM from time to time. In order to insure that these companies were properly trained, the Army Ordnance Officer caused frequent visits and inspections to be made. Arrangements were made whereby those companies not operating Army installations were placed on duty in Services of Supply ammunition depots in order that they might become thoroughly familiar with handling of service types of ammunition. The training of these units was closely supervised in order that they might operate more efficiently upon arrival in the combat area.

As only one ammunition battalion headquarters was available in the Third U. S. Army, it was necessary for the Army Ordnance Officer to convert maintenance battalion headquarters into ammunition battalion headquarters for Continental operations. Courses of instruction were provided by a representative of the Ordnance Section to assist the battalion commanders in training their detachments for their new functions. A study was made of existing War Department publications and of directives which were published by various theaters of operation then active. On the basis of this study, a standard operating procedure for Ordnance ammunition groups, battalions, and companies was prescribed.

A general plan for the disposition of ammunition battalions and companies, as well as bomb disposal squads into forward, intermediate, and rear areas was formulated. Also, a tentative command channel for assignment of ammunition units was established. This plan was based on the employment of one battalion headquarters as an ammunition group headquarters which would act as the operating agency for the Army Ordnance Officer. This plan is diagrammatically illustrated by a chart. (See Annex IX).

Tonnage charts, indicating the amount of ammunition, in number of containers and number of rounds, that could be carried in each type standard vehicle were prepared. These tonnage charts were distributed to all combat troops as well as to ammunition units. A copy of the chart is shown in Annex X.

The ammunition portion of the Ordnance Annex to Administrative Order Number 3, dated 20 June 1944, (For Continental Operations) was prepared and is covered in Section I, paragraph 1.a (3), Section II, paragraph 2.a, 2.b, and Section IV, paragraph 13.a. (See Annex XI). Resupply to combat units was to be based on the replacement of expenditures from basic loads. To further eliminate unnecessary paper work, no requirement for the submission of daily expenditure reports by combat units was included in this directive. Instead of cumbersome written allocations, the only requirement placed upon combat units to obtain ammunition at ammunition supply points was the submission of a transportation order containing a certificate to the effect that amounts requested were to replace expenditures from basic loads.

In mid-June, as this headquarters was making final preparations for the supply of ammunition to those Army units still remaining in the UNITED KINGDOM, the Ordnance Officer, XII Corps, was charged with the responsibility of maintaining this supply until all such units departed for the Continent. In order to avoid leaving excess stocks of ammunition in supply points when Army ammunition companies were moved to the Continent, only minimum amounts of ammunition to meet basic load requirements of small units were stocked. Arrangements were made whereby large units would be authorized to draw basic load requirements direct from Services of Supply depots on the basis of transportation orders approved by XII Corps.

Waterproofed Armor

CHAPTER 2
PRE-OPERATIONAL ON CONTINENT

SECTION I

GENERAL

The pre-operational phase on the Continent was largely a matter of maintenance liaison between combat troops, Ordnance units and supply agencies in order to coordinate ordnance support for the proposed operation. Once again the major problem was supply and it was necessary to have expediting personnel on this matter at all times. To this end, the "Z" Echelon was left at CHELTENHAM and proved invaluable in expediting supplies to the Continent and in equipping the units still in the UNITED KINGDOM.

As Ordnance units were being broken in to field conditions during this period, frequent inspections were made for the purpose of stressing field sanitation, guard duty, dispersion, and camouflage discipline.

SECTION II

ADMINISTRATION SUB-SECTION

On 8 July, the "Y" Echelon proceeded from TORT CAMP to NINE YEWS.

On 11 July, Ordnance Bulletin Number 4 was published and distributed to Ordnance units. (See Annex number XII).

The "Y" Echelon arrived on the Continent 18 July, disembarking at OMAHA BEACH. This made the section complete on the Continent except for two officers and two enlisted men ("Z" Echelon) remaining at CHELTENHAM.

Plans were drawn up to divide the Ordnance Section into two echelons, forward and rear. The original plan called for a small forward command group consisting of the Ordnance Officer, the operations subsection complete, and one officer and one enlisted man from the ammunition sub-section. The Executive Officer, together with the administration, supply, maintenance, and the balance of the ammunition subsections were to be contained in the rear echelon. This plan was later modified (as shown in Chapter III) during operations since the rapid movement of the Army presented adequate communications between the two echelons.

During this pre-operational period of 6 July to 1 August, it was necessary to augment the Ordnance Section with attached personnel consisting of six officers and six enlisted men to assist meeting operational requirements.

SECTION III

OPERATIONS SUB-SECTION

After arriving on the Continent contacts were made with Ordnance units that were to be under Third U. S. Army control and as additional units arrived on the Continent they were assigned bivouac areas. Companies were assigned to battalions and battalions to groups in accordance with the general maintenance and ammunition plan for Third U. S. Army.

At this time the VIII Corps was operational under the First U. S. Army and supported by Headquarters and Headquarters Detachment, 84th Ordnance Battalion with the following Ordnance companies:

833rd Ordnance Depot Company.

Digitized by Google

[illegible]th Ordnance Evacuation Company.
[illegible]1st Ordnance Heavy Maintenance Company (Tank).
[illegible]51st Ordnance Heavy Maintenance Company (Tank).
[illegible]7th Ordnance Medium Automotive Maintenance Company.
[illegible]8th Ordnance Medium Automotive Maintenance Company.
16th Ordnance Medium Maintenance Company.
[illegible]0th Ordnance Medium Maintenance Company.
[illegible]0th Ordnance Maintenance Company (AA).

As a result of a conference between the Ordnance Officers of the First and Third U. S. Armies, the Ordnance Officer of the latter agreed to furnish Ordnance support to the tactical units loaned to the First U. S. Army. In general this support consisted of one medium maintenance company for each Infantry Division and one heavy maintenance company (tank) for each Armored Division.

Ordnance troops of the Third U. S. Army were organized into three groups. Headquarters and Headquarters Detachment, 69th Ordnance Group headed the forward maintenance and supply battalions and their attached companies, while the rear maintenance and supply battalions were controlled by Headquarters and Headquarters Detachment, 70th Ordnance Group. The 51th Ordnance Battalion acted as a provisional group headquarters, controlling ammunition and bomb disposal activities.

About the last of July, a check list was received for Ordnance observers which included questions pertaining to information which was desired by the Military Training Division, Office of the Chief of Ordnance, and the Ordnance School, Aberdeen Proving Ground. The purpose of this questionnaire was to collect information which could be used to train replacements of both officers and enlisted men from the Ordnance schools in the UNITED STATES.

A situation map and maps showing locations of Ordnance units were prepared and plans were made for the support of tactical units in accordance with various tactical plans then being considered. Many changes in the plans and utilization of Ordnance units were discussed. These changes were made necessary because many of the units were not as yet present on the Continent, and their availability was more or less indefinitely postponed. Furthermore, since the Order of Battle was changed completely before the Army became operational and frequently thereafter, regrouping of Ordnance units to furnish adequate support was a continuous problem.

On 26 July, in anticipation of the rapid changes in the disposition of Ordnance troops, a daily station list was established and distributed to all units. This list gave the coordinates, road location, and attachment. On 31 July, fragmentary changes of administrative orders were also published after being submitted to AC of S, G-4, by 1600, daily.

At the close of this period the personnel status was as follows:

Personnel assigned and present on the Continent

Officers	Warrant Officers	Enlisted Men
[illegible]430	50	9197

Personnel assigned but not yet arrived

Officers	Warrant Officers	Enlisted Men
211	21	5560

(The above figures include those of the units attached to the First U. S. Army.)

SECTION III

SUPPLY SUB-SECTION

The supply section, after arrival on the Continent, made numerous visits to the Ordnance Section, First U. S. Army, and the Advance Section, Communications Zone, for the purpose of discussing supply procedures. Since First U. S. Army controlled Advance Section Communications Zone and all ordnance supply during the initial stages of our preoperational period, it was necessary to go through that office to obtain urgently needed items which our depot companies were unable to supply from the stock brought over. Arrangements were made with Advance Section Communications Zone and First U. S. Army for certain of their depots to support Third U. S. Army until Communications Zone arrived on the Continent and took over supply responsibility. These conferences and visits continued throughout the month of July. The method used by the First U. S. Army of controlling issues of major items and and certain critical items was studied, but it was decided that the procedure for the Third U. S. Army would be as outlined in Ordnance Annex to Administrative Order Number 5, i.e., items would be obtained on properly authenticated requisition, certificate of combat loss, or direct exchange.

During the pre-operational period much difficulty was experienced because units arrived on the Continent short initial T/E equipment and organizational spare parts and accessories. Individual requisitions for the shortages were approved and forwarded to Communications Zone for action through Advance Section Communications Zone. During a visit to the Ordnance Section, Communications Zone Headquarters at a later date, a representative of the supply section was advised that it was impossible for Communications Zone to handle the requisitions on an individual basis and requested that they be consolidated for T/E shortages and one requisition submitted to cover all shortages regardless of whether they were initial issue or replacement. This was accomplished and units were instructed to submit new requisitions for shortages on supporting ordnance units.

Many ordnance units arrived on the Continent with shortages of major items such as shop trucks, tool sets, and shortages in basic load of spare parts. These shortages were relieved to a great extent by the action taken by the representative of the Army Ordnance Officer in CHELTENHAM who was able to obtain releases for most of the shortages which were lifted to the Continent by ordnance units arriving at later dates. The evacuation companies were used to good advantage in this respect. Several truck companies were utilized to deliver spare parts to the Continent for the Second French Armored Division and Third Army Ordnance depots and maintenance companies.

During the month of July the Army Ordnance Officer made two visits to the UNITED KINGDOM to further expedite the supply of tools and equipment to ordnance units remaining there, and to expedite equipping of the Second French Armored Division inasmuch as plans had been formulated to commit this division earlier than originally anticipated.

Ordnance units were assigned to support specific tactical organizations both in supply and maintenance. Divisions were authorized to contact depot companies through their respective maintenance battalions or companies, whereas other tactical organizations were supported by the proper type maintenance unit which was responsible for their supply and maintenance.

At the request of the Ordnance Officer, Twelfth U. S. Army Group, figures were compiled on major assemblies and major item reserves required to fill the Army "pipeline", i.e., within army maintenance and supply units, and that which the Army Ordnance Officer considered necessary for the Communications Zone to maintain as marked for the Third U. S. Army in order to give proper support.

Much of the time of the supply section was spent on reports, the responsibility for the preparation of which was charged to that section. The most important of these reports were:

1. Consolidated Monthly Status Report on major ordnance items showing "Authorized" and "On Hand" quantities, compiled from "Ordnance Materiel in the Hands of Troops and Combat Loss Reports" received from units as of the 20th of each month. Units submitted reports in quintuplicate for distribution, one each to Chief Ordnance Officer, Communications Zone; Ordnance Officer, Twelfth U. S. Army Group; Army Ordnance Officer; AC of S, G-4; and supply file. The same distribution was made on the consolidated report except that three additional copies were furnished AC of S, G-4, for forwarding; two to AC of S, G-4, Communications Zone; and one to AC of S, G-4, Twelfth U. S. Army Group.

2. Weekly Ordnance Supply Activity Report to Army Ordnance Officer based on reports from forward and rear Ordnance groups listing major items and tonnage received and issued.

3. A Daily Report on the Status of Stocks included only those items of a critical nature and was rendered to AC of S, G-4, for consolidation and submission to Twelfth U. S. Army Group.

SECTION V

MAINTENANCE SUB-SECTION

As maintenance units arrived on the Continent they were assigned to either the forward (69th) Group or the rear (70th) Group. The forward Group was to be composed of forward and intermediate battalions with the forward battalions in direct support of combat units. Medium maintenance companies were to be in support of infantry divisions and heavy maintenance tank companies for armored divisions. The intermediate battalions were to receive the overflow of work from the forward battalions and would either repair the material or evacuate it to the rear Group, depending upon the tactical situation and the time element involved. The intermediate battalions would also be responsible for the evacuation of unserviceable equipment from the forward collecting points operated by the maintenance companies of the forward battalions. The rear Group having mainly heavy maintenance companies was to evacuate from the forward Group. Major items, major and minor assemblies, and parts were repaired and returned to depot stock. Unrepairable material was stripped of serviceable accessories.

During the latter part of July, the hedgerow cutter, to be placed on medium tanks, light tanks, and self-propelled 105mm Howitzers, was developed and tested. The Commanding General witnessed the tests and directed that all tank units be equipped with this device.

The first target was one per platoon and when this target had been accomplished, then two per platoon. Some of the steel was preserved at the beaches from tetrahedrons that had been placed there by the Germans as beach blocks. One wrecker was lost during this operation as a result of a land mine exploding.

The Navy was approached and asked to procure welding rod and oxygen from ENGLAND as all available stocks on the Continent were exhausted. The Navy cooperated fully in this situation and also obtained from their own stocks many bottles of oxygen and acetylene in addition to tons of welding rod. This material was delivered by them to CHERBOURG for the Third U. S. Army. Upon completion of this fabricating mission 1147 hedgerow cutters had been constructed.

SECTION VI

AMMUNITION SUB-SECTION

Upon arrival on the Continent it was realized that even though all units arriving should have complete basic load of ammunition in their possession and that all personnel should have been qualified in the use of their personal arm, there would be many calls for ammunition to fill shortages in basic loads. The Ammunition sub-section of the Advance Section Communications Zone was contacted in order to learn the source of supply to meet these anticipated demands.

As Advance Section Communications Zone had not yet become operational, First U. S. Army controlled all ammunition supply points on the NORMANDY Peninsula, and it was therefore necessary to obtain approval from the Ordnance Officer, First U. S. Army, for any issues made to Third U. S. Army units. First U. S. Army Ordnance agreed to Third U. S. Army units being supplied from ammunition depot #101 until this headquarters became operational.

In most instances the quantities of ammunition requested from Depot #101 were negligible, the only major issues being to the 4th Armored Division. This division obtained permission to turn in the basic load of anti-tank mines and to displace tonnage space on vehicles with other types of ammunition, principally small arms. Due to hedgerow fighting it was also permitted to draw a considerable amount of 57mm canister ammunition in excess of its basic load.

As no ammunition supply points or depots were required during the month of July, ammunition companies were assigned the duties of collecting abandoned United States ammunition and storing enemy ammunition located in the Army area. After collection and segregation, this ammunition was delivered to Communications Zone depots.

Even though the Army was non-operational, bomb disposal squads were indispensible, as unexploded bombs, artillery duds, and booby traps were plentiful.

Digitized by Google

About the 29th of July it was evident that due to inadequacy of port facilities and the clearance of unloading ships across over the beaches, previous plans for ammunition supply to the Third U. S. Army must be disregarded. On 28 July, a revised plan covering immediate and future minimum requirements was submitted to the Commanding General, Advance Section Communications Zone. In general this plan, which was approved by higher headquarters, provided for sufficient ammunition to fill the pipelines to the Army and to maintain a reserve of three units of fire in Army and Communications Zone depots and ASPs. A copy of the letter requesting these requirements was as follows:

HEADQUARTERS
THIRD UNITED STATES ARMY
APO 403

SECRET
Auth: CG, TUSA
Init: TPW
Date: 28 July 1944

28 July 1944

AG 471 GNMCO

Subject: Ammunition for Future Operation.

To : Commanding General, Advance Section, Communications Zone, APO 113, U. S. Army.

1. In order that Third Army may be prepared to undertake a future operation, it is considered necessary that a sufficient amount of ammunition to charge the army "pipe lines" be readily available to the Army.

2. There is attached hereto a list of ammunition, marked Inclosure #1, which it is desired be placed north of the probable area of entry into combat of the Third Army. It is suggested that the area in the vicinity of BRICQUEBEC is highly desirable for this purpose. This list does not include sufficient ammunition to charge the entire "pipe line" of the Third Army but includes that which based on present forecast will be sufficient to charge the "pipe line" of the troops engaged in initial Third Army operations. The amount of artillery ammunition is definitely predicated on the probable mission and the anticipated expenditure rate. Such additional ammunition should also be available in Advance Section Communications Zone hands to maintain a level of the quantities listed on the attached chart so as to replace daily expenditures. In this connection, for initial operation, the Army Ordnance Ammunition Group (313th Ammunition Battalion) will be the sole agent of the army in drawing such ammunition.

3. There is inclosed herewith a list of ammunition, marked as Inclosure #2. The ammunition listed on this inclosure has a weight of approximately 7,000 tons. It is requested that immediate releases be given for this ammunition so that Third Army may place it in a static dump to be immediately available to form an Advance ASP when Third Army becomes operative. Upon receipt of approval of this request, information will be furnished as to the location to which delivery of ammunition should be made.

4. It is requested that this headquarters be informed at the earliest practicable date when Third Army may start drawing ammunition against these requirements.

For the Commanding General:

2 Inclosures:
#1 - Ammunition List (for area north of combat)
#2 - Ammunition List (for static dump)

Ammunition companies of Third U. S. Army were loaned to Advance Section Communications Zone for the purpose of giving them field training in the handling of ammunition and also to help the Ordnance Officer, Advance Section Communications Zone, handle the large quantities of ammunition being moved from the beaches to depots.

The Army Ordnance Officer and the Ordnance Officer, VIII Corps, agreed to expand VIII Corps ASPs in order to have a small Army reserve of ammunition properly located when operations commenced. Army ammunition companies were loaned to the VIII Corps in order to handle this ammunition.

CHAPTER 3
AUGUST OPERATIONS

SECTION I - GENERAL

The Third U. S. Army became operational at noon on 1 August 1944. Its rate of advance was considerably faster than had been anticipated and a great deal of adjustment was necessary in order to maintain close ordnance support. A good example of this was the placing of heavy maintenance tank companies in support of armored divisions. In such a rapidly moving situation it was almost impossible for this type of unit with its heavy equipment to keep pace with the division and still perform its primary mission. Subsequently, companies of this type were attached to ordnance collecting points, which arrangement proved more satisfactory to all concerned.

The supply of ammunition was a major problem at this time and a considerable amount of transportation was needed. To this end the Army Ordnance Officer had tank transporters utilized as auxiliary transportation.

A standard system of requesting transportation from the AC of S, G-4, for transporting ammunition was attempted but failed because trucks were not always available at the moment they were needed. Therefore, eight Quartermaster Truck Companies were attached to the Ordnance Section for this purpose, and in addition all Evacuation Companies were made available.

Movement of units and supplies during this period was very difficult. The long main supply roads were heavily loaded with traffic and were bottle-necked at AVRANCHES where the fighting was heaviest. This exceedingly rapid movement of the Army necessitated equally rapid displacement of Ordnance maintenance and supply in order to maintain close Ordnance support.

SECTION II

ADMINISTRATION SUB-SECTION

Upon becoming operational the Ordnance Section commenced functioning in two echelons, with the forward echelon moving to a new location near BEAUCHAMPS (T-22). The forward echelon consisted of the Ordnance Officer, the Operations Section, and part of the Ammunition Section. Later it became necessary to augment the officer personnel of this forward group with three officers from the rear group. These included an executive for the forward echelon and two officers for the Ammunition sub-section. On 3 August, the rear echelon moved to a new location at BEAUCHAMPS (T-22). On 9 August, the forward echelon moved to a location west of POILLEY (Y-99), one mile off Highway N175 on 0715. On 11 August, the rear echelon moved to a location two miles east of POILLEY (Y-99).

On 12 August, an Ordnance Technical Intelligence Unit assigned to Headquarters European Theater of Operations, and attached to Headquarters Twelfth U. S. Army Group was further attached to the Ordnance Section, Third U. S. Army. This intelligence unit, consisting of four officers and four enlisted men, sent one copy of its reports directly to the following: Headquarters European Theater of Operations, Headquarters Supreme Headquarters Allied Expeditionary Forces, and Headquarters Twelfth U. S. Army Group. Two copies were sent to the Army Ordnance Officer, one of which in turn was sent to the AC of S, G-2. All information available to the Army Ordnance Officer as to enemy installations, enemy equipment, and other technical data of interest was furnished to the intelligence group.

The forward echelon moved to a location approximately five miles north of LE MANS (Z-90) on 15 August and the rear echelon moved to a location north of LE MANS (Z-90) at ST. SABINE (Z-82) on 17 August. On 20 August, the forward echelon moved to a location northeast of BRAIN (W-15) on 0715. On 25 August, the forward echelon moved to a location near COUCY (W-85) and on 27 August, the rear echelon moved to the same location. On 30 August, the forward echelon moved to a location five miles northeast of SENS (X-62) on 0725 near THORIGNY (X-77).

DECLASSIFIED

SECTION III

OPERATIONS SUB-SECTION

At a special conference, original plans for the commencement of operations were reviewed. At the same time, the Ordnance Officer instructed each sub-section to submit a weekly report of their activities, as of 1800 each Saturday. These reports were consolidated and presented to the Commanding General for his information. They furnished a brief summary of Ordnance activities for the preceding week, hitting only the highlights which could affect tactical decisions.

A Scoreboard Section, consisting of two officers and two enlisted men, was set up to keep a record of captured, destroyed, and lost material. This scoreboard was corrected by factual evidence once a week.

Fragmentary changes to Administrative Orders were prepared by the Operations Section and submitted to AC of S, G-4, showing supply points opened as of 011200 August, as follows:

ASP A01 - Three and one-half miles east of ST. SAUVEUR LE VICOMPTE (T-19) on Highway 0715.

ASP A02 - On Highway N805, three miles west of CARENTAN (T-18).

ASP A03 - On 0101, six miles southwest of PERIERS (T-27), one mile from road junction 0753 and 0666.

3d4th Ordnance Depot Company (Main Armament Depot) - three miles southwest of BRICQUEBEC (Q-10) on Highway N802.

98th Ordnance Depot Company (Main General Purpose Depot) - three miles southwest of BRICQUEBEC (Q-10) on Highway N802.

837th Ordnance Depot Company (Main Combat Vehicle Depot) - one mile southwest of road junction N802 and 0750.

899th Ordnance Depot Company (Advance Depot) - 1 mile southwest of ST. SAUVEUR LE VICOMPTE (T-19) off Highway N400 near CATTEVILLE.

The Group Commanders submitted plans for the operation of their organizations, and after discussion with the Army Ordnance Officer, in the light of the current tactical situation, were adopted. These plans resulted in rearrangement of units within the Groups.

Personnel of the Maintenance Section implemented the Supply Section. This was made necessary since the rapid movement of the Army during this period required that emphasis be placed on supply of major items rather than maintenance work. This personnel was employed particularly to expedite critical supply items.

As in previous months, it was necessary to augment the number of personnel in the various sub-sections to assist in meeting operational requirements. Attachments were made to the extent of thirteen officers and sixteen enlisted men. The specific needs for this personnel were as follows:

Officers

4 - Ordnance Technical Intelligence Unit
1 - Liaison, from Ninth U. S. Army
1 - Liaison, from Twelfth U. S. Army Group
1 - Liaison, from French Forces.
2 - Attached and then assigned to complete T/O strength.
4 - Assist in sub-sections.

Enlisted Men

4 - Ordnance Technical Intelligence Unit.
12 - Assist in sub-sections.

During this period the following awards were given to personnel of Third U. S. Army Ordnance units:

Purple Heart.....32

First casualties (killed and wounded) among personnel in Army Ordnance units due to enemy action occurred during this period and totaled seventy.

Digitized by Google

The Operations Section at this time assumed the duties more nearly conforming to its normal function. Furthermore, constant liaison with G-4 was established to maintain situation maps indicating the disposition of tactical and service troops.

To move the large amount of tonnage carried by the Main Depot Companies, Quartermaster Truck Companies were used. A portion of a depot was moved forward to a new area and set up before the remaining portion left the old area, thus continuous operation was maintained.

The 2Lth, 51Lth, and 105rd Ordnance Battalions were placed in direct support of VIII Corps, XV Corps, and XX Corps, respectively. These were the "Forward Battalions", supported in turn by the Intermediate Battalions, and the 70th Ordnance Group.

The total number of Army Ordnance troops under the command of the Army Ordnance Officer at this time, in FRANCE, were:

Officers	Enlisted Men
717	11,856

The number of troops assigned but not yet arrived were:

Officers	Enlisted Men
68	2,028

During the second week of August the combat loading of vehicles was begun. This was accomplished by certain units in the 70th Ordnance Group. This procedure was according to the Ordnance Plan for operations on the Continent.

Various and rapid changes of the tactical situation made it necessary to keep the organization of battalions in the 70th Ordnance Group very flexible. As a result, no using unit was without adequate ordnance support at any time.

Following is a copy of the Operations Report as of 26 August:

1. In the BREST area, one battalion, with attached companies, is providing maintenance and supply for the VIII Corps. The BRITTANY Base Section supplements this battalion with maintenance and supply, and, as the situation develops will take over all collecting points, captured depots, ammunition dumps, and other similar installations. BRITTANY Base Section is providing maintenance to the VIII Corps to the maximum of their ability. After the reduction of BREST and LORIENT, Ammunition Depot #13, and any other Third Army ASPs, will immediately revert to the BRITTANY Base Section, and all Third Army Ordnance Troops will be withdrawn from this area.

2. It was necessary to again move the 70th Ordnance Group, with its three heavy depots, further east to the FOUGERES-VITRE-FOREST. Because of widely separated operations, the responsibility for maintenance and supply has been divided as follows:

(a) The area between the N and S line through STE CALAIS and the N and S line through ORLEANS has been made the responsibility of the 70th Ordnance Group.

(b) The 69th Ordnance Group is responsible for the area forward of the N and S line through ORLEANS.

(c) The area from the N and S line through STE CALAIS, west of the support battalion of VIII Corps, is now the responsibility of the Advance Section Communications Zone or BRITTANY Base Section.

3. Group Commanders have been charged with providing the following in their respective areas:

1. Maintenance and supply of all troops within the area.
2. Maintenance and supply of all troops passing through the area.
3. Provision of Ordnance Road Patrols.
4. In conjunction with Corps, where applicable, provision of Collecting Points.
5. Salvage of unusable Ordnance material - either repair or evacuate to the rear echelon.

4. The 69th Ordnance Group is now constituted as follows:

Supporting	Supporting
3[illegible] Ordnance Battalion	**2Lth Ordnance Battalion**
12[illegible] Ord MM Co (83rd Inf Div)	7th Ord MM Co
10Lth Ord MM Co (29th Inf Div)	L7th Ord MM Co (35th Inf Div)

85[illegible]st Ord MAM Co	
911th Ord MAM Co	

6. ASPs and Ammunition Depots are still being kept well forward. Reconnaissance is made well in advance so that the installations are set up immediately as needed. The following installations are now open:

ASP 4605	ASP 4[illegible]	ASP 16
ASP 46	ASP 4[illegible]	ASP 4[illegible]
Ammo Dep #13	Ammo Dep #19	Ammo Dep #17
ASP 18		

7. Personnel and vehicles present on the Continent are as follows:

Officers:	717
Enlisted Men:	11,856
M/V Vehicles:	3,[illegible]34
Total Vehicles:	3,790

SECTION IV

SUPPLY SUB-SECTION

In order to conserve track, particularly of the medium tank chassis type, from unnecessary wear and tear, the Commanding General directed that no heavy track laying vehicles except light tanks would be issued to units operating on the BREST Peninsula until they started east and had passed a North-South line through MENDES (T-00). The armored divisions (Lth and 6th) were to be refitted in the FOUGERES area but because of the rapid movement of the Army, the refitting of these two divisions actually took place further east. All types of track were critical and every effort was made to conserve them.

At a conference held by the Chief Ordnance Officer, Communications Zone, about the middle of August, arrangements were made whereby major items and major unit assemblies would be supplied to the Third U. S. Army based upon a daily status report furnished by the Third U. S. Army. Replenishment requisitions for spare parts storage were to be submitted three times a month: on the fifth, fifteenth, and twenty-fifth. Any emergency requisitions would be filled by Advance Section, Communications Zone. This basis was agreed to providing that the Third U. S. Army pipeline would be filled with parts since the Army was still not fully equipped with initial issue of second echelon parts.

In response to a request from the Communications Zone for reports of battle losses of materiel, the following reports were submitted.

Consolidated Report, 1 to 1L August.
Consolidated Report, 15 to 20 August.
Daily Report, beginning 21 August.

The Daily Report on the Status of Stocks was discontinued and AC of S, G-4 Periodic Report substituted therefor. This report was submitted each Sunday for the preceding week and included the following supply information:

Critical Items.
Battle Losses of Vehicles and Artillery.
Adequacy of Artillery, Small Arms and Combat Vehicle Replacement.
Enemy Equipment Released.
Tonnage received in Army Area.

The Daily Ordnance Status Supply Report compiled from daily reports received from each Ordnance battalion was revised to include the following information:

Authorized Reserve.
Available.
Repairable but not ready for issue.
Backorder (Main battalions only).
Shortage of established level.
Battle losses previous 2L hours.

As of 8 August, axes of supply from the FOUGERES area extended in several directions: to the BREST Peninsula, to ST. NAZAIRE, to ST. MALO, and to ALENCON through LAVAL and LE MANS. By the end of August, the latter axis had been extended eastward and branched to REIMS, CHALONS, and VITRY-LE-FRANCOIS.

On 21 August, the BRITTANY Base Section was charged by the Communications Zone with the supply of all units operating on the BRITTANY Peninsula. Thus the VIII Corps, which was in action on the peninsula, was authorized to deal directly with the base section depots at RENNES since the Main Army Supply Battalions had been moved to the east and supply from that source was impracticable.

Battle losses at this time were considerable, particularly of M8 Armored Cars and Medium Tanks. Much difficulty was encountered in the replacement of this equipment since great distances were involved and tank transporters had to be used in order to conserve track. Lack of rail transportation, and heavy traffic on the main supply roads, further aggravated the situation.

Ordnance units continued to lift to the Continent major items, tools, spare parts and rolling reserve. The release of these items had been obtained by the representative of the Army Ordnance Officer at CHELTENHAM to fill shortages in units already on the Continent.

Digitized by Google

Replacement personnel being sent to the Continent were organized into companies and utilized to transport replacement vehicles loaded with spare parts and towed artillery destined for Third U. S. Army depots and replacement pools.

For the period of August the total receipts and issues of the following major items were:

	Received	Issued
Light Tanks	150	117
Medium Tanks	319	289
Combat Vehicles	526	257
Artillery (over 57mm)	135	77
General Purpose Vehicles	2,869	2,794

It was necessary during this month to move the three main depots as follows:

Armament--3[illegible]th Ordnance Depot.

Closed in the vicinity of BRICQUEBEC (Q-10) and opened in vicinity of LANDEAN (Y-48), 6 August.

Closed in the vicinity of LANDEAN (Y-48) and opened in the vicinity of STE. SABINE (Z-25), 17 August.

Closed in the vicinity of STE. SABINE (Z-25) and opened in the vicinity of FONTAINEBLEAU (X-28), 27 August.

General Purpose--98[illegible]th Ordnance Depot.

Same as Armament Depot.

Combat Vehicles--837th Ordnance Depot.

Same as Armament Depot.

These depots performed the mission of supplying Army Ordnance Depots.

SECTION V

MAINTENANCE SUB-SECTION

As a means of expediting and controlling maintenance, the 70th Ordnance Group was directed to establish a Control Point. This was accomplished and a battalion within the group was designated to operate it.

As all equipment and material, that was meant for maintenance, repair, exchange or salvage, was directed to this point, the flow of work to the maintenance companies in the battalion was controlled and regulated. In this way a large volume of work was systematically and efficiently handled. It was found that by locating maintenance companies close to the control point the amount of work that could be handled was further increased.

To assist in salvaging, sorting, and distributing the work to the various maintenance units, a number of qualified mechanics were taken from the companies and stationed at the control point.

During the first half of August, hedgerow cutters were still being constructed. Up to 1 August, the 2nd French Armored Division had received a total of forty-nine of these devices. The cutters had not been produced in sufficient quantities to meet the total requirements of the 5th Armored Division but production was continued on a twenty-four hour basis and all requirements were eventually met. By the end of August, the mission of fabricating the cutters was completed and the following totals had been constructed: for Light Tanks - 230; for Medium Tanks - 87[illegible]; for Self-Propelled 105 Howitzers, M7 - 43.

After the break-through at AVRANCHES and the subsequent rapid advance of the Army, it was found unnecessary to have a heavy maintenance tank company in support of an Armored Division. The divisions had adequate support from the organic maintenance battalion and the tank companies were required to support self-propelled artillery, separate tank battalions, and tank destroyer battalions.

During the month of August the Maintenance Section, in addition to its normal duties, also assisted the Supply Section in expediting critical items of supply and maintained close contact with the Ordnance Control Points. Maintenance was controlled by the Army Ordnance Officer by means of daily meetings with the Group Commanders, Maintenance personnel, and other personnel concerned.

The Maintenance area on 27 August were as follows:

1. The area between the North and South line through STS. CALAIS (Y-79[illegible]) and the North and South line through ORLEANS was made the responsibility of the 70th Ordnance Group.

2. The area forward of the North and South line through ORLEANS (P-6725) was made the responsibility of the 69th Ordnance Group.

General locations of Headquarters of Maintenance Battalions were as follows:

69th Ordnance Group

SECTION VI

AMMUNITION SUPPLY [illegible]

As the Third U. S. Army became operational it immediately assumed control of four ammunition supply points which had been previously established by the VIII Corps. As three of these installations were too far to the rear adequately serve the using units they were ordered forward to Advance Section Communications Zone on 3 August. In one retained installation, namely, Ammunition Supply Point #4[illegible], in the vicinity of [illegible], storage was built [illegible] tons and continued to serve VIII Corps. At the same time Army Ammunition Depot #1 was established in the vicinity of [illegible]. The original target level of this depot as originally prepared shortly was [illegible] tons, a [illegible] which was later [illegible] to meet the Corps requirements. Rear depots were used to good advantage at this time for completing and consolidating basic loads.

In the night of 3-4 August, the Army ammunition units received their first real combat experience as Depot Number 1 was heavily bombed by the enemy. Approximately 6,000 tons of ammunition was destroyed (about 90%), principally by direct hits and as a result of fragments caused by the [illegible]. Little damage was done to the [illegible] by the [illegible] Automatic weapons fire [illegible] to fly over the [illegible]. A Army Ordnance Officer [illegible] that safety distances should be increased to the extent that it would be impracticable for the enemy to attack other installations. The following safety distances were established on 7 August:

1. Maximum of six tons per stack and minimum of ten yards between stacks.

2. Maximum of thirty tons per group (groups contain stacks) and minimum of [illegible] between groups.

3. Maximum of [illegible] tons per bay (bays contain groups) and a minimum of 150 yards between bays. The bays [illegible] as a single line of ammunition, i.e., along a road.

4. Maximum of 1,500 tons per area and minimum of 1/2 mile between areas.

As a result of cool-headed leadership and many instances of individual heroism, the personnel in and near this area were evacuated with only a small number of casualties. No lives were lost and only four men were seriously injured.

About 20 August, roadside storage of ammunition was tried and found to be an efficient method for a rapidly moving Army. Furthermore, it proved to be a comparatively safe method inasmuch as it was stored according to the safety regulations set up by the Ordnance Officer, and enemy aircraft activity was not very prevalent.

At times it became necessary to augment the ammunition companies for the purpose of transporting ammunition. This was accomplished by utilizing commercial and vehicles from Ordnance maintenance companies and organizing special provisional companies. Maintenance for such periods was accomplished as all available transportation had to be used, including tank transporters.

As Advance Section Communications Zone was responsible for the hauling of ammunition to Army depots only, it was necessary when selecting sites for ammunition supply points that appropriate sites be chosen in anticipation of their eventual expansion into Army depots.

For the month of August the Third U. S. Army ammunition installations were as follows:

Installation	Opened	Closed	Serving	Location
Depot 1	2 August	17 August	ASPs	[illegible]
Depot 2	12 August	17 August	ASPs	[illegible]
ASP #66	12 August	29 August	VIII Corps	[illegible]
ASP 3	14 August	17 August	VIII Corps	[illegible]
ASP 4	14 August	17 August	XV Corps	[illegible]
ASP 5	15 August	17 August	XX Corps	[illegible]
ASP 6	15 August	29 August	XX Corps	[illegible]
Depot 7	16 August	29 August	ASPs	[illegible]
ASP 8	15 August	29 August	VIII Corps	[illegible]
ASP 10	18 August	29 August	XV Corps	[illegible]
ASP 11	17 August	29 August	XII Corps	[illegible]
ASP 12	19 August	29 August	Provisional	[illegible]
ASP 13	22 August	29 August	VIII Corps	[illegible]
ASP 14	23 August	29 August	XII Corps	[illegible]
ASP 15	24 August	29 August	XV Corps	[illegible]
ASP 16	24 August	29 August	XX Corps	[illegible]
Depot 17	28 August	29 August	ASPs	[illegible]
ASP 18	[illegible] August		XII Corps	[illegible]
Depot 19	[illegible] August		ASPs	[illegible]
Depot 22	31 August		XII Corps	[illegible]

Due to long supply lines, shortages of transportation, traffic congestion, and the speed with which the Army was moving forward, there were times when the supply of ammunition was limited to points ten to twenty miles in advance of their original destination. ASPs and ammunition dumps were well [illegible] to meet this emergency for suitable sites were not always available [illegible] which [illegible] units so that installations could be immediately set up as needed. On several occasions ammunition dumps were temporarily located while a particular area was [illegible] for a minor operation. In other instances, because of similar situations, the initial shortage for forward ammunition supply points [illegible] as much as a period of three to four days.

There were [illegible] during the month on stocks in forward ammunition supply points dropped to a dangerously low level due to a four day period when [illegible] all Army transportation was immobilized because of a [illegible] resulting shortages. However, from an ammunition standpoint, [illegible] operate. Only [illegible] to affect the combat efficiency [illegible] as long as supplies had been anticipated and [illegible] transportation was utilized to carry ammunition in excess of [illegible] levels. [illegible] tactical plans based on the [illegible] of ammunition to be carried was [illegible] of the units to support the operations on [illegible] conditions. The quantity handled on this [illegible] 1,173 tons, and the distance traveled by the [illegible] companies in transporting it varied approximately [illegible] miles.

On 27 August the greater portion of Army ammunition supply was established in [illegible] Army Ammunition Supply Points. [illegible] was [illegible] from Chartres, [illegible] was [illegible] of the Army Ammunition Supply Point [illegible] the [illegible] from the [illegible] would be [illegible].

CHAPTER 6
SEPTEMBER OPERATIONS

SECTION I

GENERAL

The rapid advance of the Army caused supply lines to be stretched from a distance approximating fifty miles on 1 August to more than 400 miles by 1 September. The problem of supply became increasingly more difficult as the troops moved forward. By mid-September the forward elements were meeting stiff resistance along the MOSELLE River. As this fire Army ordnance maintenance units were grounded and their organic transportation, together with evacuation companies, were used to bring ammunition forward to the Army area. As a result Class II and IV supplies became extremely critical and the Armored Divisions and Corps Artillery both drivers and transportation to move these classes of supplies from the beaches. The lack of replacement units and major assemblies caused maintenance units to perform many major repairs that normally would have been evacuated.

During this period a new plan of maintenance was evolved to guarantee continuous and efficient maintenance support to the forward units. The Advance Section Communications Zone stationed at least one maintenance company in each of the rear[illegible] points of the 70th Ordnance Group to assist in the work and to take over the operation of the points when the Group moved forward. Likewise, the 78th Ordnance Group maintained at least one maintenance company at each of the collecting points of the 66th Ordnance Group. When the forward group (60th) established a new collecting point, then the company which had been operating the 78th Ordnance Group Control Point in conjunction with the Advance Section Communications Zone, was transferred to the most forward collecting point. In this manner, companies were able to work on the control point stock miles of materials for the longest possible time.

SECTION II

ADMINISTRATION [illegible]

The forward echelon of the Ordnance Section moved to a location twelve miles southeast of CHALONS SUR MARNE (T-54) near LEPINE (T-64) on 4 September. The rear echelon joined the forward at this location on 6 September, but continued to function separately as in the past. On 15 September, the forward echelon moved to a location south of REIMS(T-47) near WITRY(T-57). The forward echelon moved into permanent buildings in REIMS (T-47) on 22 September for the first occupation of buildings by the Ordnance Section since arrival on the Continent.

On 25 September, Headquarters and Headquarters Detachment, 82nd Ordnance Group was activated per General Order No. 61, this headquarters, under T/O A E G-12. This unit was designated to function as the ammunition group headquarters which previously had been a provisional operation carried on by Headquarters and Headquarters Detachment, 313th Ordnance Battalion. Personnel for this newly activated group was transferred from Headquarters and Headquarters Detachment, 313th Ordnance Battalion and supporting ammunition companies. Sufficient personnel to form a nucleus for reorganizing the 313th Ordnance Battalion Headquarters was transferred in from other ammunition companies.

The following priority list for the issue of winter clothing and equipment to Ordnance units was recommended to the Quartermaster on 30 September:

Ammunition Companies.
Evacuation Companies.
Maintenance Companies.
Depot Companies.
Battalion Headquarters.
Group Headquarters.

Digitized by Google

Casualties (killed and wounded) among personnel of Army Ordnance units due to enemy action during this period totaled five. Accumulative total to date numbered seventy-five.

Status of awards to Ordnance personnel were as follows:

For the current month

Purple Heart.....4
Bronze Star.....7

Accumulative totals to date

Purple Heart.....36
Bronze Star..... 7

The various sub-sections continued to be augmented with the same personnel as in the previous month except that one more enlisted man was added as a driver for the liaison officer from the French Forces.

SECTION III

OPERATIONS SUB-SECTION

As a means of controlling the movement of Ordnance troops into new areas, the following procedure was used: After a thorough reconnaissance by Group Commanders or their representatives, recommendations as to the displacement of units forward were submitted to the Army Ordnance Officer. Upon his approval it was then necessary to receive the further approval of the desired areas from the Town Major (if in a town), from each AC of S, G-4, of the major tactical units controlling the areas, and finally the approval of the AC of S, G-3, Accommodations Section. After completion of the move, the Ordnance Operations Sub-Section furnished fragmentary orders to be published as amendments to the current administrative orders.

Due to the loss of so many units to the First and Ninth U. S. Armies, complete reorganization of the 69th and 70th Ordnance Groups was necessary. Companies were transferred between Groups, and Groups themselves reorganized their battalions as follows:

Units of 69th Ordnance Group

24th Ordnance Battalion	193rd Ordnance Battalion
74th Ord MM Co	15th Ord MM Co
147th Ord MM Co	116th Ord MM Co
129th Ord MM Co	256th Ord MM Co
501st Ord MM Co (Pk)	556th Ord MM Co (Pk)
838th Ord Dep Co	840th Ord Dep Co
3447th Ord MAM Co	3445th Ord MAM Co
3446th Ord MAM Co	3511th Ord MAM Co

316th Ordnance Battalion	30th Ordnance Battalion
899th Ord MM Co (AA)	140th Ord Dep Co
520th Ord MM Co (PA)	275th Ord MM Co (AA)
3446th Ord MAM Co	537th Ord MM Co (PA)
3514th Ord MAM Co	3482nd Ord MAM Co
	3525th Ord MAM Co

32nd Ordnance Battalion	14th Ordnance Battalion
13th Ord MM Co	281st Ord MM Co (AA)
32nd Ord MM Co	3461st Ord MM Co
534th Ord MM Co (Pk)	3511th Ord MAM Co
841st Ord Dep Co	3519th Ord MAM Co
3524th Ord MAM Co	

Units of 70th Ordnance Group

66th Ordnance Battalion	79th Ordnance Battalion	26th Ordnance Bn.
1841th Ord Evac Co	849th Ord MAM Co	847th Ord Dep Co
1471st Ord Evac Co	901th Ord MAM Co	981th Ord Dep Co
1472nd Ord Evac Co	911th Ord MAM Co	341th Ord Dep Co
1482nd Ord Evac Co	902nd Ord MAM Co	3417th Ord Dep Co
1484th Ord Evac Co	911th Ord MAM Co	3441th Ord MM Co
1661st Ord Evac Co	861st Ord MAM Co	
1899th Ord Evac Co	861st Ord MAM Co	
	3056th MM Co (AA)	

117th Ordnance Battalion	19th Ordnance Battalion
3447th Ord MAM Co	552nd Ord MM Co (Pk)
2861th Ord MM Co	531st Ord MM Co (Pk)
560th Ord MM Co (Pk)	660th Ord MM Co (FA)
	510th Ord MM Co (FA)
	521st Ord MM Co (FA)
	3510th Ord MAM Co
	3508th Ord MAM Co

Ordnance units lost to First U. S. Army were as follows:

910th Ord MAM Co	301th Ord MM Co (AA)
180nd Ord Dep Co	26th Ord MM Co
185th Ord Bn (Hq/Hq Det)	590th Ord Bn (Hq/Hq Det)

Units lost to Ninth U. S. Army are listed below:

Hq/Hq Det 179th Ord Bn	Hq/Hq Det 312th Ord Bn
Hq/Hq Det 65th Ord Bn	Hq/Hq Det 320th Ord Bn
3430th Ord MAM Co	3537th Ord MAM Co
3532nd Ord MAM Co	447th Ord MAM Co
300th Ord MM Co (AA)	547th Ord MM Co (PA)
525th Ord MM Co (PA)	563rd Ord MM Co (Pk)
844th Ord Dep Co	845th Ord Dep Co
91st Ord MM Squad	667th Ord Am Co
599th Ord Am Co	670th Ord Am Co
666th Ord Am Co	14th Ord MM Co
104th Ord MM Co	128th Ord MM Co
293rd Ord MM Co	3469th Ord MM Co

The responsibility for maintenance and supply was designated as follows: east of the North and South line through CHALONS-SUR-MARNE - 69th Ordnance Group. The area west of the North and South line through CHALONS-SUR-MARNE (T-45) - 70th Ordnance Group.

It was projected to move the 70th Ordnance Group and its three main depots forward to an area in the vicinity of VERDUN (T-26). This was necessary because of the Army's rapid advance.

Troops and vehicles then present on the Continent were as follows:

Officers	281
Enlisted Men	18,555
T/E Vehicles	1,119
Total Vehicles	5,111

SECTION IV

SUPPLY SUB-SECTION

Instructions were issued by the Army Ordnance Officer that the 70th Ordnance Group would have complete control over the technical operation of all depot companies in the Third U. S. Army. The 26th Ordnance Battalion (Depot) Battalion in the 70th Ordnance Group) was authorized by the 70th Ordnance Group to balance and transfer stocks, or take any other action necessary, to accomplish control of the technical functions of the depot companies. The armored divisions were authorized to draw replacement of items and major items from the 70th Ordnance Group (26th Ordnance Battalion and 317th Ordnance Battalion) by-passing the forward supporting Ordnance Battalions. This was considered desirable for two reasons in particular. First, the mobile depots in the forward group could not carry the large volume of supplies required by armored divisions, and second, the armored divisions could supply their own transportation for hauling the heavy units peculiar to their organization. Forward ordnance battalions had insufficient transportation to perform this function. However, the armored units were allowed to draw small amounts of supplies from these forward depots.

Instructions were received from the Twelfth U. S. Army Group that whenever there was a transfer between armies, divisions or other organizations all battle losses of materiel and equipment would be made up to the extent practicable prior to the effective date of transfer. These instructions would not act to delay the effective date of transfer.

In addition to the usual reports, AC of S, G-4, was advised daily as to the tonnage of Class II and IV supplies received in the Army area and the method of delivery, i.e., air, Communications Zone transportation or Third U. S. Army transportation.

Agreement was made with the office of the Chief Ordnance Officer, Communications Zone, whereby the Daily Ordnance Status Family Report would be used as the basis for issue of major items to the Third U. S. Army.

XII Corps requested that a major items replacement pool consisting of the following items be established in the 26th Ordnance Battalion to support Corps operations:

10 - Tank, Medium.
10 - Tank, Light.
200 - Launcher, Grenade, M7.
200 - Launcher, Grenade, M8.
12 - Car, Half-Track.
5 - Car, Scout, M3A1.
25 - Truck, 1/4-ton.
10 - Truck, 2 1/2-ton, 6x6, Cargo.
25 - Gun, Submachine, Cal..45.
10 - Gun, Machine, Cal..50, HB, Flexible.
10 - Gun, Machine, Cal..30, M1917A1, Flexible.
3 - Engine, Tank, Medium, AV 075.
6 - Sets, Track, Medium Tank.
6 - Sets, Track, Light Tank.

The pool was established, but it was only possible to supply a few of these items due to overall shortage in the Army.

Medium tanks were in short supply during this period principally because of the heavy losses inflicted in two divisions. Every effort was made to obtain replacements for these two combat organizations. As a result when they left Third U. S. Army's control practically all their shortages had been replaced.

Further replacement of battle losses on medium tanks for armored units of the XII, XV, and XX Corps, during the week ending 16 September completely depleted the reserve at that time in the Third U. S. Army.

Maximum use of transportation was made by utilizing replacement vehicles released by Communications Zone to transport spare parts and major items destined to Third U. S. Army Ordnance depots. Extra track was stripped to tanks being delivered to the replacement pool. Evacuation units, due to their large carrying capacity, were of great assistance when transportation was at a premium.

A request was made on the Twelfth U. S. Army Group for various types of equipment, which it was anticipated would be required for crossing rivers and making attacks on fortified positions. It was contemplated that approximately 150 Assault Tanks, M4A3C, 200 Cargo Carriers M29, and 200 Landing Vehicles, Tracked, would be required.

Instructions were received from Headquarters Communications Zone that it would be unnecessary for the Third U. S. Army to go west of PARIS to secure replacement combat vehicles. Communications Zone would make the transfer to Army transportation at Depot O-6(A) in the vicinity of PARIS.

For the period of September the total receipts and issues of the following major items were:

	Received	Issued
Light Tanks	83	109
Medium Tanks	150	143
Combat Vehicles	992	992
Artillery (over 57mm)	21	30
General Purpose Vehicles	1,667	1,550

By the end of the month the three main supply axes of the previous month were changed and extended as follows:

Main Supply Road No. 1 - REIMS (T-98), MEHRHOLD (T-95), and VERDUN (T-26).

Main Supply Road No. 2 - VITRY-LE-FRANCOIS (T-61), ST. DIZIER (T-50), LUNEY (U-21), TOUL (T-60), and NANCY (U-81).

Main Supply Road No. 3 - TROYES (V-27), JOINVILLE (Z-08), NEUFCHATEAU (Z-43), and EPINAL (V-01).

In order to keep supply abreast of the rapid changes in the tactical situation it was necessary for the three main supply depots to move frequently during this period as follows:

Vicinity of CHALONS-SUR-MARNE (T-55), 13 September.
Vicinity of ATRY (T-75), 19 September.
Vicinity of THIAUCOURT (U-63), 25 September.

SECTION V

MAINTENANCE SUB-SECTION

In an effort to reduce the number of disabled vehicles on the main supply routes, a network of Ordnance road patrols was formed. To conserve gasoline, workers used for this work, were placed at central points and 1/4-ton trucks were used to patrol the roads. Each patrol had qualified mechanics equipped with hand tools and many on-the-spot repairs were made. This system was quite successful, both in reducing the tire loss on repairs and in keeping many minor maintenance jobs out of the Ordnance shops.

A large German Ordnance depot was captured at SAMPIGNY and was found to contain a huge quantity of ball and roller bearings. A detail from the maintenance section was sent to classify these bearings and to list interchangeability with American stock numbers. Approximately thirty tons of bearings valued at ten hundred and fifty thousand dollars were boxed and turned over to the 70th Ordnance Group for stock in Army depots.

During September several interesting maintenance problems arose. In one instance, much trouble was experienced with the over-riding clutch on the Tractor, High Speed, M4. As replacement assemblies were not available at this time, several methods of field repair were tried. One successful method was finally developed and information regarding it was disseminated to all other Ordnance shops. A considerable number of the captured German bearings were used in this repair, as well some materials that had been locally procured.

Reports of voltage deficiencies on the M7 Generator were investigated and it was found that installation of the Silverstat Voltage Regulator (Ranger T-22V-4E) only partly corrected the condition. The chief cause of low voltages was discovered to be the lack of compression in the Hercules WXL Engine. No parts or unit replacements were available for this type of engine. However, parts were obtained through local purchase and by the modification of captured enemy equipment.

Because of the lack of replacement units it became necessary to rebuild all types of engines. An arrangement was made through the Communications Zone, Ordnance Section, for all radial type engines to be rebuilt commercially while general purpose engines were rebuilt by Communications Zone Ordnance installations. Commercial contracts resulted in an average of twelve rebuilt jobs per day. In many instances, of necessity, engines were rebuilt in the field.

The maintenance report on certain reconditioned major Ordnance items was as follows:

Total General Purpose Vehicles Repaired	1,691
Total Combat Vehicles Repaired	1,72
Total Artillery Repaired	430
Total Small Arms Repaired	1,977
Total Instruments Repaired	1,750

By 8 September the axes of maintenance responsibility were as follows:

East of the North and South line through CHALONS-SUR-MARNE (T-66) to the 69th Ordnance Group. The area west of the North and South line through CHALONS-SUR-MARNE (T-66) to the 70th Ordnance Group.

During the week ending 16 September the above axes changed as follows:

West of the North-South line through VERDUN (U-26) was the responsibility of the 70th Ordnance Group.

East of the North-South line through VERDUN (U-26) was the responsibility of the 69th Ordnance Group.

General locations of the headquarters of maintenance battalions were as follows:

Opening Date September	Location	Coordinates
	69th Ordnance Group	
9	7 Miles E CHALONS-SUR-MARNE	T-28
14	5 Miles SE TROYES	U-66
	10th Ordnance Battalion

20	Vicinity of ST BENOIT-EN-WOEVRE	U-54

SECTION VI

AMMUNITION SUB-SECTION

As the Army continued its rapid movement east, all supply services were handicapped by a lack of transportation to move their respective supplies. The Army Ordnance Officer diverted all organic vehicles from ordnance maintenance and supply units in order to move the vital ammunition supply forward. Tank transporters, as well as cargo trucks, were used in this movement. A railhead was opened near MONTIERAUX (T-44) and ammunition was also moved by rail from that point to the vicinity of CHALONS (T-54). As traffic across the SEINE River was congested, it was necessary to establish priority for the movement of ammunition trucks from Depot Number 19 in the FONTAINEBLEAU Forest (X-25) to the railhead. Through the combined efforts of all concerned 19,000 tons of ammunition were moved in a period of approximately five days. In addition to hauling ammunition, the loaded vehicles were routed through replacement depots and thereby furnished transportation for personnel replacements going to the front line units.

During the rapid movement across FRANCE, expenditures of small arms, tank, and light artillery ammunition were relatively high. At the same time it was necessary to move all medium and heavy artillery ammunition forward to insure a supply of these items being available when the tactical situation dictated their use.

As the supply lines became extended the amount of tonnage authorized to be moved to the Army area from the Communications Zone was restricted. Ordnance supplies were allocated a total of 1,780 tons per day, all of which was used for ammunition supply. This small tonnage, together with the fact that the supply of most artillery types of ammunition, particularly 105mm Howitzer, had become critical, made it evident that restrictions on the amounts authorized for expenditure would be necessary.

In September the rationing of critical types of ammunition was put into effect. However, the tonnage allocation authorized for ammunition supply was not adequate to bring in to the Army area the entire amount of critical types authorized for expenditure. As a fairly large stock of non-critical items had previously been established, it was necessary to move forward only those items which had become critical. By careful planning only minimum quantities of these critical items were requested within the authorized tonnage allocation. Rail transportation was augmented by Ordnance truck transportation thus keeping up the flow of supplies.

The attack on the MOSELLE River line was imminent and requests were submitted to the Twelfth U. S. Army Group by the Army Ordnance Officer indicating the ammunition requirements for the XX Corps and to carry out the mission assigned.

Throughout the month of September, the ammunition situation remained critical. It was necessary to establish a system whereby Corps reported daily on the status of critical types in the basic load of units. With this information, the Army Ordnance Officer was able to control the flow of ammunition in such a manner to insure that available supplies were placed in the most strategic place. In many instances battle emergencies necessitated the transfer of ammunition from trucks hauling into the ammunition supply points direct to those of the using units.

During the rapid advance of the Army, careful consideration was given to the use of mobile ammunition supply points, or rolling reserves. However, this plan could not be carried out due to the limited amount of truck transportation available. In one instance, during the advance of the XX Corps from DONCHERY (X-65) to DOMBASLE (U-70) a rolling reserve of approximately 500 tons was maintained behind the Corps. This reserve was accompanied by an ammunition crew; the personnel riding with the ammunition. After four intermediate stops were made, at which time units were resupplied, the remaining rolling reserve was unloaded at DOMBASLE (U-90) and provided the initial stockage for Ammunition Supply Point Number 23.

For the month of September Third U. S. Army ammunition installations were as follows:

Installation	Open	Closed	Serving	Location
ASP 18	27 August	15 September	XII Corps	E of SAULNY (X-76)
Depot 19	27 August	20 September	ASPs	W LA CHAPELLE (X-14)
Depot 30	29 August	7 September	XX Corps	E DONNEMARIE (X-41)
Depot 22	31 August	29 September	XII Corps	SW CHALONS (T-54)
ASP 21	2 September	10 September	XII Corps	NE MONTMORENCY (T-32)
ASP 23	4 September	20 September	XX Corps	DOMBASLE (U-16)
ASP 24	4 September	XII Corp	XII Corps	SW CONFLANT (U-41)
Depot 25	9 September		ASPs	E VERDUN (U-36)
ASP 26	14 September	30 September	XV Corps	SE MONTMORENCY (T-38)
ASP 27	15 September		XX Corps	E MAYVILLE (U-46)
ASP 28	22 September		XV Corps	E MAYVILLE (U-28)
ASP 29	25 September		XII Corps	W NANCY (T-58)
Depot 30	29 September		ASPs	E TOUL (U-70)

During this period 142,220 tons of ammunition were handled and the mileage traveled by the Quartermaster Truck Companies in transporting this tonnage totaled 755,000 miles.

CHAPTER 5
OCTOBER OPERATIONS

SECTION I - GENERAL

Ordnance Class II and IV supply had greatly improved in October although a few items remained critical. The development of local resources and the formulation of a purchasing plan indicated some relief was at hand.

Class V supply was extremely short and rationing of artillery ammunition became necessary. During this rationing period much effort was directed toward consolidating Army ammunition stocks for the purpose of supporting any possible operation on either of the two Corps fronts. Further economy resulted within the line units by self-rationing when the total availability of ammunition was made known to them.

A decision to equip all medium tanks with extended end connectors resulted in a huge program of local purchasing. The extended end connectors, also known as 'duck feet', provided greater flotation for tanks enabling them to negotiate muddy terrain.

SECTION II

ADMINISTRATION SUB-SECTION

The rear echelon of the Ordnance Section moved to the city of NANCY (U-81) on 5 October. The forward echelon moved to the city of NANCY (U-81) on 11 October.

Twelfth U. S. Army Group informed this headquarters that upon request of the Army Ordnance Officer qualified personnel would be supplied for any special problems or difficulties that would arise.

By direction of the Ordnance Officer, Twelfth U. S. Army Group, requisitions were forwarded to his office for five recent graduates of West Point in the grade of Second Lieutenant to be assigned to the 60th Ordnance Group.

Casualties (killed and wounded) due to enemy action during this period totaled seven, thus making the accumulative total to date eighty-two.

The status of awards by the close of the month were as follows:

	Current	Accumulative to Date
Silver Star	1	1
Soldier's Medal	1	1
Purple Heart	13	49
Bronze Star	5	10

Augmentation of the number of personnel in the various sub-sections to assist in meeting operational requirements continued as in previous months, however, slight reductions were made and resulted in the following total personnel being attached:

Officers	Enlisted Men
4 - Ordnance Technical Intelligence Unit	4 - Ordnance Technical Intelligence Unit
1 - Liaison, from French Forces	1 - Liaison from French Forces
	10 - Assist in sub-sections

SECTION III

OPERATIONS SUB-SECTION

October found the tactical troops engaged along the MOSELLE River where stiff resistance was encountered. Ordnance troops were moved into buildings during this period and as a result maintenance capabilities were greatly improved.

Personnel and vehicles present on the Continent are as follows:

Officers	962
Enlisted Men	11,181
T/E Vehicles	2,408
Total Vehicles	3,890

The following units were lost by Third U. S. Army to Ninth U. S. Army:

464th Ordnance Evacuation Company
462nd Ordnance Evacuation Company
558th Ordnance Ammunition Company
559th Ordnance Ammunition Company
5610th Ordnance Medium Automotive Maintenance Company
5625th Ordnance Medium Automotive Maintenance Company

SECTION IV

SUPPLY SUB-SECTION

During October many items of equipment were obtained from various captured enemy installations. Material deemed useable included jacks, paints and brushes, floor cranes, motorcycle parts, engine blocks, and other items. This material was turned in to Army depots for issue.

Battlefield recovery of small arms was emphasized and a collection drive throughout the Army was instituted. All units were instructed to turn in excess weapons. Unit commanders were held responsible that unauthorized weapons were not retained by personnel under their control. Recovery squads were designated by commanders of all companies, the duties of these squads being to collect and turn in all abandoned small arms. Periodic visits, by Ordnance personnel, were made to all aid stations, hospitals, collection points, and cemeteries for the purpose of collecting weapons. Excess reserves of small arms in Army depots were turned in to Communications Zone depots.

The overall supply picture in the Army indicated that local purchase would be necessary. A representative of the Army Ordnance Officer visited the Advance Section, Communications Zone, the Twelfth U.S. Army Group, and the Communications Zone to enlist their services in the development of local purchases.

The Army representative obtained the concurrence of the above-mentioned agencies and arrangements were made for the Communications Zone, Ordnance Purchasing Section, to let contracts for a number of items of critical supply for the Third U. S. Army. Those first items were of simple construction and therefore easy to manufacture. If these were successfully procured then more difficult items were to be added at a later date.

Ordnance Class II and IV supply had been a decided head to month existence since the Army became operational, with steady loss of ground among certain critical items. Infantry automatic weapons and fire control equipment were in extremely short supply. By the end of October the supply situation had greatly improved although there were a few remaining chronic shortages. Comparative figures of some of the critical items for the month of October are shown in the table below:

Item	On Back Order 6 October	On Back Order End of October
Sub-Machine Gun	1200	None (760 on hand)
Cal..30 Machine Gun	800	90
Cal..30 B.A.R.	730	198
Cal..45 Pistol	1500	None (1997 on hand)
M5 and M13 Binoculars	1650	2466
60mm Mortar	387	177
81mm Mortar	6	0
Compass, M2	366	190
Tanks, Medium	40	10
Launcher, Grenade, M7	1981	390

The improvement in the status of small arms was attributed in part to the recovery drive mentioned in the second paragraph. However, the situation on fire control equipment remained critical and it was [illegible] that no immediate relief was in sight.

By the end of the month the status of tires and tubes had become critical. Communications Zone informed the Army that they would release to them 12 [illegible] days' supply of an anticipated shipment, which was inadequate to supply current needs. Other than this issue, the prospect for future deliveries was not bright. It was not expected that tires and tubes would be received in quantity before sixty days.

U. S. Army registration numbers were assigned and releases written for 897 captured enemy vehicles during the month.

For the period of October the total receipts and issues of the following major items were:

	Received	Issued
Light Tanks	90	88
Medium Tanks	114	88
Combat Vehicles	934	434
Artillery (over 57mm)	127	166
General Purpose Vehicles	2488	2499

The changes in the tactical situation caused the supply lines to be moved more to the North so that the supply zone by the close of this period were as follows:

a. LIBBY (U-21), TOUL (U-60), to NANCY (U-81).

b. [illegible]-LE-DUC (U-12), ST. MIHIEL (U-43), to PONT-A-MOUSSON (U-79).

c. VERDUN (U-86), to METZ (U-66).

d. VERDUN (U-86), METZ (U-47), METZ (U-77), and THIONVILLE (U-69).

The three main supply depots were relocated by 7 October to COMMERCY (U-42), and SAMPIGNY (U-32), the 611th Ordnance Depot Company (General Purpose) being located at the latter.

SECTION V

MAINTENANCE SUB-SECTION

During October the maintenance section was primarily engaged in routine inspections of maintenance installations and collecting points. No major deficiencies were noted and minor on the spot corrections were made. The principal problem was to correct minor dislocations in service and operating methods incident to movement from field conditions into billets.

The maintenance officer contacted the Ordnance Officer, the division ammunition officer and the G-4 of the 86th Infantry Division, newly arrived in the Theater, and explained to them the principal features of Third U. S. Army Ordnance support.

Arrangements were made to bring additional tank and heavy automotive maintenance companies forward to support the XII Corps and Forward Collecting Point No. 2. This move eliminated the necessity of evacuating heavy major units for repair and salvage.

On 16 October the 70th (rear) Ordnance Group put a new plan of maintenance in effect for the rear Army area. A copy of the plan which is self-explanatory, is attached as Annex No. XIII.

Many items of Ordnance equipment being in short supply it became increasingly important for Ordnance maintenance units to develop the resources at hand. Several instances of ingenuity and diligent experimentation on the part of Ordnance personnel are given below:

a. GMC transfer cases were on deadline for lack of high and low range shifting forks. The maintenance section instructed the units to build up the worn surfaces with weld and machine them down to the correct size. This method worked satisfactorily and the information was disseminated to Ordnance maintenance troops.

b. Experiments conducted by the 69th Ordnance Group proved that medium tank brake lining can be used as a satisfactory substitute for light tank brake lining with a minimum of modification.

DECLASSIFIED

Digitized by Google

[illegible] ammunition and [illegible] the Army, a program of the highest priority was instituted. It was anticipated that a large [illegible] of ammunition in these items would be made [illegible] by [illegible] the former source.

4. A fix was developed for remachining the threads on armored Jerome spark plugs for use in M-4 Tank Engines. Approximately 1,700 of these plugs were rethreaded and put into stock during October.

Operational necessity dictated the immediate procurement of extended end connectors (track feet) for medium tank tracks. A total of 200,000 was set for 10 November. An order was placed with Advance Section, Communications Zone on operational priority and 24,000 were received. It was evident that local contracts would have to be let in order to meet the target. Local resources were developed by the Ordnance Section in cooperation with representatives of the XII Corps and Advance Section, Communications Zone. Several local contracts were let to manufacture the track feet with Army to supply the end connectors. All tank track in Ordnance installations was evacuated to Collection Point No. 1 or to the Central Point at [illegible] operated by the 13th Ordnance Battalion. At these points Ordnance crews removed the end connectors from worn or damaged track for shipment to local foundries or to Advance Section, Communications Zone, who meanwhile had made arrangements for some of the "feet" to be manufactured in their area. By the end of October, Third U. S. Army Ordnance was turning over approximately 11,000 connectors a day to the manufacturers. There were no fixtures available or completed and installed end connectors at the end of the month but it was believed that the target could be reached. While the above progress was getting under way the representative from the XII Corps suggested, as an emergency measure due to the slow shipment involved, that reinforced channel iron track feet be welded to the track while it was still on the tank. Welding crews were immediately assigned this task on tanks belonging to XII Corps units.

[illegible] Medium tank M-4 fitted with [illegible] end connectors of [illegible] and M-4 [illegible].

[illegible] [illegible] medium tank [illegible] end connectors [illegible] (welded anti-compactor).

The maintenance report on certain reconditioned major Ordnance items was as follows:

Total General Purpose Vehicles Repaired	8,156
Total Combat Vehicles Repaired	1,452
Total Artillery Repaired	1,125
Total Small Arms Repaired	15,[illegible]
Total Instruments Repaired	3,[illegible]

The general locations of the headquarters of maintenance battalions were as follows:

Opening Date (October)	Location	Coordinates
12	490th Ordnance Group In [illegible]	[illegible]
	10th Ordnance Battalion In Change	
14	11th Ordnance Battalion Vicinity of [illegible]	[illegible]
6	24th Ordnance Battalion In [illegible]	[illegible]
19	121st Ordnance Battalion In the [illegible] Area	[illegible]
9	124th Ordnance Battalion In [illegible]	[illegible]
14	114th Ordnance Battalion In [illegible]	[illegible]
6	70th Ordnance Group Vicinity of [illegible] In [illegible]	[illegible]
26		[illegible]

9	53rd Ordnance Battalion Vicinity of [illegible]	[illegible]
14	In [illegible]	[illegible]
11	55[illegible] Ordnance Battalion In Third U. S. Army	

Opening of

Ammunition Supply

The month of October found the rate of advance of the Army slowing down as the former border was approached. This made it possible to consolidate existing ammunition stocks into one main depot, Depot Number 26, in the vicinity of [illegible]. However, as the combat units were being reorganized and for operational reasons were being formulated, it was evident that a division of supplies would be advantageous. Foreseeing a possible requirement for close support of an attack along either of two lines of advance, part of the existing and incoming ammunition stocks were diverted into a second depot, Depot Number 11, in the vicinity of [illegible]. This division of supplies provided close support to each of the two forces. It further provided a safety factor to the extent that probable damage to both depots by a single action of the enemy would not be possible.

During the time that Advance Section depots were being stocked, shipments to the Army were curtailed and very little ammunition was received at the Army depots. This lull in operations afforded an opportunity to segregate artillery ammunition by lot numbers, particular emphasis being placed on 105mm Howitzer ammunition.

An example of the necessity for this lot number segregation is the situation found in one supply point. Inspection of 7,145 rounds of 105mm Howitzer ammunition revealed a total of 308 different lot numbers. To cite extreme situations, there were 101 lot numbers consisting of from one to five rounds per lot and only in one instance were there more than 200 rounds of the same lot number found. Ammunition received from Communications Zone contained mixed lot numbers, so a letter was prepared to the Ordnance Officer of that headquarters advising him of the situation. Immediate steps were taken by all concerned to improve the condition and in a short time great improvement was in evidence.

Further advantage was taken of this relative lull to review current methods of operation for the purpose of instituting any changes which would improve the supply of ammunition to combat troops. One of the principal developments resulting from the study was the establishment of a system whereby all ammunition on credit to the Army could be accounted for from the time requisitions were submitted until it was actually received at the ammunition supply points or depots.

For the month of October Third U. S. Army ammunition installations were as follows:

Installation	Open	Closed	Serving	Location
ASP #21	1 September	8 October	XII Corps	5 mi SW [illegible] (U-41)
Depot #25	9 September		ASPs	5 mi E VERDUN (U-56)
ASP #27	10 September		XX Corps	E MAILLY (U-55)
ASP #28	22 September	7 October	XV Corps	E DAINVILLE (U-58)
ASP #29	25 September		XII Corps	N NANCY (U-71)
Depot #30	29 September	13 October	ASPs	E TOUL (U-70)
Depot #31	3 October		ASPs	4 mi S NANCY (U-80)

During this period 102,341 tons of ammunition were handled and the release traveled by the Quartermaster Truck Companies in transporting this tonnage totaled 450,000 miles.

On 12 October a very critical situation in ammunition supply developed as allocations from the Twelfth U. S. Army Group for the period 5 October to 15 October were cancelled and expenditure authorizations for that period were rescinded. In lieu of these allocations, revised amounts were authorized for the period 5 October to 7 November. In several instances the amounts authorized for the new period of thirty-three days were less than those authorized for the original eight day period. This unfortunate situation caused practically all field artillery weapons to be silenced immediately.

Plans were made for the possible future curtailment in the authorized expenditures of ammunition for field artillery weapons by building up relatively large stocks of ammunition for the 75mm, 76mm, 3", and 90mm tank and anti-tank guns. Thus, when the supply of ammunition for field artillery weapons became critical, it was possible to employ tank and anti-tank weapons in their secondary role as artillery. The use of the latter weapons as supporting artillery proved very valuable as the Army continued its advance and took limited objectives despite curtailed expenditures of ammunition for field artillery weapons. Meanwhile, to insure that enough ammunition for tank and anti-tank weapons was on hand at all times to permit their use in their primary mission, minimum Army reserve levels were established. These reserve levels served to maintain a minimum of an estimated three day supply in Army installations.

The accumulation of captured enemy weapons and ammunition of major calibers had been encouraged and as a result a fairly large stock of these items were available to the combat troops. This supply of weapons and ammunition proved valuable as it was very effectively employed against the enemy during the time our own supplies were curtailed. In addition to causing enemy casualties, the employment of his own weapons against him was of great morale value to our troops.

Immediately following the drastic reduction in expenditure authorizations, several conferences were held by representatives of the Twelfth U. S. Army Group, Communications Zone, and the Armies. The primary purpose of these meetings was to develop a supply procedure which would prevent future recurrences of the situation that the Armies had just faced.

On 21 October, the credit system of ammunition allocations was put into effect by the Twelfth U. S. Army Group. Under this system allocations would be made to the Armies on the basis of overall availability and the missions assigned the armies. Only ammunition on hand in Advance Section, Communications Zone, depots would be available to the Armies on credits established by Communications Zone.

CHAPTER 6
NOVEMBER OPERATIONS

SECTION I - GENERAL

The supply situation, as a whole, at this time was brighter than it ever had been although some items were still critical. On the other hand, certain items that had constantly been on the critical list were removed for the first time and depots were stocked to a much greater extent than ever before.

The lack of sufficient amount of anti-freeze caused much concern but a temporary relief was brought about by use of alcohol obtained through channels and from French sources, pending the receipt of a supply of Prestone from the UNITED STATES.

The shortage of ammunition had been relieved to a limited extent by this time although heavy artillery ammunition was still critical. Formal letters of allocation were compiled and forwarded to Corps Commanders specifying the maximum number of rounds per weapon per day that could be expended. These authorized amounts were based on the status of ammunition in the Army area and on anticipated receipts from Advance Section, Communications Zone.

SECTION II

ADMINISTRATION SUB-SECTION

The forward and rear echelons of the Ordnance Section remained in the city of NANCY (U-81) during this entire period.

Two officers assigned Ordnance Technical Intelligence Unit were relieved from attached to the headquarters thereby reducing to three the number of officers attached. The augmentation of enlisted personnel amounting to fifteen remained the same as in the previous month.

Ordnance Bulletin Number 5 was published and distributed. (See Appendix 14)

Casualties (Killed and wounded) due to enemy action during this period totaled six, thus making the accumulative total to date sixty-eight.

The status of awards by the close of the month were as follows:

	Current	Accumulative to Date
Silver Star		1
Soldiers Medal	1	2
Bronze Star Medal	20	30
Purple Heart	7	56

SECTION III

OPERATIONS SUB-SECTION

Units, within the Groups, were reorganized in November as follows:

69th Ord Group

10th Ord Bn	14th Ord Bn	314th Ord Bn
Personnel now being utilized in other Bns.	299th Ord HM Co (AA)	32nd Ord HM Co
	3514th Ord MAM Co	562nd Ord HM Co(Tr)
	3519th O-d MAM Co	81st Ord Dep Co
		3528th Ord MAM Co
		520th Ord HM Co(PA)

314th Ord Bn
7th Ord HM Co

Enlisted Men	11,845
T/E Vehicles	2,452
Total Vehicles	4,495

SECTION IV

SUPPLY SUB-SECTION

By 1 November, of the 114,500 gallons of Prestone requisitioned on 8 September, only 2,000 gallons of this critical item had been received. Of the initial requisition 66,000 gallons had been requested for immediate shipment to fill requirements of troops. As time went on, the number of back-orders continued to rise and totaled 69,000 at this time. Since no immediate relief was in sight, the Chief of the Supply Section contacted the Supply Officer of the Communications Zone and requested that the possibilities be investigated of purchasing alcohol for use as an anti-freeze pending the receipt of Prestone. This was successfully accomplished but the problem of transporting it arose as tank cars were not available. This was overcome, however, by the Ordnance Section by use of 200 fifty-gallon metal containers transported by trucks. By the close of the month an additional 5,000 gallons of alcohol were received. Prestone was still in short supply and only 38,500 gallons had been received while back-orders totaled 68,000 gallons.

Tires and tubes of all sizes had by this time been placed on the critical list for a long period and the situation was steadily getting worse. In order to help alleviate this condition the Commanding Officer of the 70th Ordnance Group was instructed that all spare tires and tubes, sizes 7:50 x 20 and 6:00 x 16, on replacement vehicles in the 317th Ordnance Battalion, and all spare tires and tubes of the same size on Ordnance Shop trucks, should be removed and placed in depot stock for issue against back-orders. Replacement vehicles equipped with 6:00 x 16 and 7:50 x 20 tires would be issued less spare tires and tubes as long as those items remained critical. Information was received from the Communications Zone that it was expected that 7:50 x 20 tires would be available within a short period of time in sufficient quantities to fill all existing back-orders but it was not expected that issues of total requirements (approximately 4,500) could be met for sixty days.

The shortage of hot patches was another item of concern during this period. By the middle of the month all back-orders had been filled and the situation was no longer critical but before the end of the month they were back on the critical list again and the back-orders continued to increase in number.

The additional amount of tonnage on hand in the three main depot companies made it desirable to eliminate all stock in excess of current or anticipated requirements. Therefore, instructions were issued to the main depot companies to submit to the Army Ordnance Officer, on the 15th and 30th of each month, a list of items which were considered [illegible]

DECLASSIFIED

[illegible] certain of the items could be made only upon instructions from the Ordnance Officer.

At the request of the Chief of the General Supply Division, Ordnance Section, Communications Zone, it was agreed to submit the periodic requisitions on the 3rd and 18th of each month, instead of on the 5th, 15th, and 25th, as had been the practice for the past several months. It was also agreed that no tonnage bid would be submitted by us inasmuch as our requirements were stated in periodic requisitions and in our daily Major Items Report.

For this period the total receipts and issues of the following major items were:

	Received	Issued
Light Tanks	18	16
Medium Tanks	118	161
Combat Vehicles	691	670
Artillery (over 57mm)	105	92
General Purpose Vehicles	1,955	1,962

The Supply Area and locations of the Main Supply Depots remained the same as in the previous month, except the Armament Depot which moved to the vicinity of TOUL (U-60).

SECTION V

MAINTENANCE SUB-SECTION

The manufacturing program on extended and connectors was in full swing and deliveries of light connectors from local sources was approximately 3,500 per day. All contracts for the medium type connectors were handled by the Advance Section, Communications Zone, while all Third U. S. Army contracts were switched over to the production of light type connectors. The current status of delivered connectors by type is given below:

	Light	Medium
Advance Section, Communications Zone Contracts	0	100,000
Third U. S. Army Contracts	15,000	5,000
TOTAL	15,000	105,000

Due to the complete lack of certain types of spare parts and equipment, it was necessary once again for the maintenance section to resort to local purchase and improvisation. Several examples of this condition are given below:

a. There were no spare parts of any kind for the Chevrolet Truck, 1-1/2 ton, w/earth borer, used by the Signal Construction Battalions. A number of these vehicles were on deadline for lack of rear axles when some English Bedford axles were located and found to fit after being turned down on a lathe. Local contracts were let for the manufacture of pinions and shafts for the earth borer on these trucks.

b. A quantity of blank engine valves and piston rings were supplied to ordnance maintenance units for the repair of M-7 Generators currently on deadline. The only source of supply for these Generators was from captured materials or local purchase.

Operational needs for tanks were quite high during this period, and in an attempt to alleviate this condition the following method of tank resupply was followed: The 552nd Ordnance Heavy Maintenance Tank Company was set up in NANCY, FRANCE (U-81), an ideally located city in view of the current tactical situation, and operated as a provisional mass tank repair shop. All tanks brought into this company were repaired [illegible] the Army pool. When a using unit turned in a tank [illegible] issued a tally which authorized them to pick up a [illegible] from the pool. In this manner the tactical units [illegible] tanks with scarcely any loss of time.

Digitized by Google

The following individuals visited Ordnance installations on the afternoon of 28 November:

President, American Locomotive Company.
President, Oldsmobile Company.
President, Thompson Products Company.
President, Sahlage Lock Company.
Brigadier General, Representative from the Office of the Chief of Ordnance.
Colonel, From Visitors' Section, Twelfth U. S. Army Group.

The party visited the 14th Ordnance Battalion in the vicinity of CHAMPIGNEULLES (U-81) where they witnessed the maintenance of general purpose vehicles, small arms, and artillery. They visited the 552nd Ordnance Heavy Maintenance Company where they witnessed maintenance and repair of tanks. They further visited the collecting point in the vicinity of NANCY (U-81) where they noted the character of battle damage and the 857th Ordnance Depot Company in the vicinity of TOUL (U-61) where they observed the tremendous quantities of parts required to service the armored vehicles of the army. The party was accompanied by the Army Ordnance Officer, the Army Maintenance Officer, Commanding Officer of the 69th Ordnance Group, and the Executive Officer of the 70th Ordnance Group.

They observed several tanks being repaired by cutting out sections of the hull or turret and inserting similar sections cut from salvaged tanks. They also were very much interested in the home made extended end connectors which were welded on so many of our medium tanks before local manufacture of them was begun. At the 857th Ordnance Depot Company, they watched the installation of new type end connectors on medium tank track by the use of an inclined roller table and some extemporized pneumatic equipment.

Major items repaired during the month of November were as follows:

Total General Purpose Vehicles	9,147
Total Combat Vehicles	3,018
Total Artillery	1,413
Total Small Arms	11,654
Total Instruments	3,364

The area of Ordnance Maintenance for November was unchanged.

The general locations of the Headquarters of Maintenance Battalions were as follows:

SECRET

SECTION VI

AMMUNITION SUB-SECTION

By early November the flow of ammunition from the Communications Zone had increased and the critical shortage in the Army area was relieved to a limited extent. On the first day of the month an informal compilation of the status of critical items was prepared and furnished to Corps Commanders to be used as a guide in the formulation of plans for future operations. This informal information was followed on 5 November by a formal letter to each Corps Commander specifying the maximum number of rounds per weapon per day that could be expended during the period 8 November to 17 November, inclusive. The amounts authorized were based on the status of ammunition in the Army area and on anticipated receipt at that time.

On 15 November a similar letter for the period 18 - 30 November was prepared and forwarded to the Corps Commanders. The amounts specified for this period were considerably less than for the preceding period. The amounts of ammunition which the Army Ordnance Officer obligated was in excess of that physically present in the Army area, but sufficient credits had been established by the Twelfth U. S. Army Group to meet this obligation. This procedure necessitated the expeditious calling forward of ammunition from Advance Section, Communications Zone depots as soon as credits were established by the Communications Zone.

In order to provide close support to the XII Corps for the impending attack to the East, it was decided to establish an ASP well forward in the Corps area. The site selected was East of the MOSELLE River between NANCY (U-81) and CHATEAU SALINS (Q-12). This entire area was extremely difficult for operations due to promiscuous and patterned mine fields which had been planted by the enemy before retreating. In addition to the hazard of mines, the ASP was subjected to enemy artillery counter battery fire directed at Corps artillery batteries located within the ASP boundaries. In spite of these unusual hazards this ASP, No. 35, opened as scheduled, on 8 November.

Based on the disposition of troops and the tactical situation, the Army Ordnance Officer decided to establish a second ASP East of the MOSELLE River to support XII Corps and specific XX Corps units located on the south flank of the latter Corps. This installation ASP No. 34, with an initial stockage of 1,195 tons, opened on 8 November. Resupply to the ASP was suspended for approximately 24 hours due to the flooding of all main supply routes leading to the site. However, alternate routes were located and supply was resumed on 10 November. This ASP was used for a period of approximately three weeks and during this time had the greatest rate of turnover of stocks.

As the XX Corps advanced the Army Ordnance Officer ordered the establishment of a new ASP for the Corps East of the MOSELLE River. This was done in order to eliminate the necessity for using units to cross the river to obtain their resupply. In keeping with the Army policy this ASP, No. 36, was located well forward in the Corps area. As in the case of other installations East of the MOSELLE River extensive mine fields were encountered. In addition to the removal of mines, it was necessary for the ASP commander to call on the Graves Registration Section of the 90th Infantry Division to remove numerous enemy dead from some areas before ammunition could be placed on the ground.

During the month of November a total of approximately 117,863 tons of ammunition were handled by ASP personnel. This tonnage represented the greatest turnover of ammunition for any similar period of time since the Army became operational. The mileage traveled by the attached Quartermaster Truck Companies in transporting this tonnage totaled 1,781,468 miles.

For the month of November the Third U. S. Army ammunition installations were as follows:

Installation	Open	Closed	Serving	Location
Depot	25	9 Sep	15 Nov	ASFs	S VERDUN (U-56)
ASP	27	15 Sep	25 Nov	XX Corps	S HANVILLE (U-55)
ASP	29	25 Sep	16 Nov	XII Corps	W NANCY (U-71)
Depot	31	3 Oct		ASFs	S NANCY (U-84)
Depot	32	7 Nov		XX Corps	In SOMMEDIEU (U-58)
ASP	33	8 Nov		XII Corps	NE CHAMPENOUX (Q-01)
ASP	34	10 Nov		XII Corps	N PONT-A-MOUSSON (U-85)
ASP	35	21 Nov		XX Corps	DISTROFF (U-98)

CHAPTER 7
DECEMBER OPERATIONS

SECTION I - GENERAL

An enemy break-through of the front line in the First U. S. Army area on 16 December caused many changes in the tactical situation, proposed plans, use and method of issue of Ordnance material of the Third U. S. Army. Ammunition that had been located in preparation for an attack by the Army had to be immediately re-located to the northern flank of the Army boundary. Special ammunition that was scheduled to be used on a certain date was used ahead of time. Formal letters authorizing specific amounts of ammunition that could be expended were discontinued and informal letters issued as expenditure guides. Ammunition depots that were about to be placed under control of the Advance Section, Communications Zone, were re-stocked and again became very active installations. In order to maintain close support, mobile rail distribution points were necessary. As another expedient, ammunition from the Advance Section, Communications Zone depots was issued regardless of existing credits. Such a deviation from the usual channels was in cooperation with the efforts being made to expedite supplies in the existing emergency.

Due to the extreme shortage of spare parts and replacement assemblies, the maintenance section resorted to all manner of procurement with emphasis on systematic salvage and local purchase. As a result, many items of ordnance were speedily returned to the using units.

Manpower shortage was alleviated in many instances by the employment of civilians to supplement military personnel. This arrangement proved to be helpful but necessitated additional tools and equipment for the units concerned with this labor.

SECTION II

ADMINISTRATION SUB-SECTION

The forward and rear echelon of the Ordnance Section remained in NANCY (U-81) during the entire month, except that on 26 December personnel consisting of two officers and one enlisted man, to function as a forward liaison group, moved north with the command echelon of the headquarters to the city of LUXEMBOURG (P-81). Another officer was added to this group on 30 December. The balance of the Ordnance Section remained in NANCY (U-81) with the rear echelon which consisted of AC of S, G-4, and other supply services.

Two quotas for transfer of enlisted men to infantry units were accomplished and resulted in losses in personnel from Army Ordnance units totaling 998. Two enlisted men from the Ordnance Section were also lost to the Infantry as part of the headquarters quota.

One officer from the Ordnance Section and each group headquarters attended a one week course of instruction for Information-Education Officers at the Cite Universitaire in PARIS. This school was for the purpose of postwar planning and activities.

Staff Memorandum Number 73, this headquarters, 16 December 1944, increased the number of enlisted personnel authorized the Ordnance Section to thirty. A requisition was immediately placed with AC of S, G-1, to increase assigned personnel to equal this amount. The augmentation of personnel in the Ordnance Section remained as reported previously.

Casualties (killed and wounded) due to enemy action during this period totaled sixteen, thus making the accumulative total to date 104.

The status of awards by the close of the month were as follows:

	Current	Accumulative to Date
Silver Star	0	1
Soldiers Medal	0	2
Bronze Star	32	62
Purple Heart	8	44

Meritorious Service Unit Plaques were awarded to the following Army Ordnance Units:

2nd Ordnance Bomb Disposal Squad
275th Ordnance Maintenance Company (AA)
837th Ordnance Depot Company
984th Ordnance Depot Company

SECTION III

OPERATIONS SUB-SECTION

Due to the rapidly changing tactical situation, the 69th Ordnance Group was reorganized as follows:

VIII CORPS	III CORPS	XII CORPS
990th Ordnance Bn	4th Ordnance Bn	21st Ordnance Bn
561st Ord Dep Co	193rd Ord Dep Co	561st Ord Dep Co
87th Ord HW Co	3463rd Ord MM Co	82nd Ord HW Co
256th Ord HW Co	129th Ord HW Co	47th Ord HW Co
553rd Ord MM Co (Tr)	562nd Ord MM Co (Tr)	501st Ord HW Co (Tr)
3425th Ord MAM Co	3558th Ord MAM Co	92nd Ord HW Co
484th Ord Coll Co		3417th Ord MAM Co

	14th Ordnance Bn	316th Ordnance Bn
	131st Ord MM Co (PA)	537th Ord MM Co (PA)
	5804th Ord MM Co (PA)	281st Ord Mt Co (AA)
	299th Ord Mt Co (AA)	275th Ord Mt Co (AA)
	3514th Ord MAM Co	3482nd Ord MAM Co
	3519th Ord MAM Co	

XX Corps
193rd Ordnance Bn
3424th Ord Dep Co
15th Ord HW Co
3444th Ord HW Co
556th Ord MM Co (Tr)
116th Ord HW Co
3515th Ord MAM Co
3511th Ord MAM Co

Personnel and vehicles present on the Continent was as follows:

Officers	564
Enlisted Men	10,176
T/E Vehicles	2,474
Total Vehicles	4,097

SECTION IV

SUPPLY SUB-SECTION

The supply picture for the first half of the month was mostly one of expediting and coordinating shipment of Class II and IV supplies. In addition, necessary reports were submitted which provided the basis of re-supply, from the Communications Zone, of stocks in the Army depots and replenishment of theater stocks in the Communications Zone from the Zone of the Interior.

The break-through of the enemy caused many First U. S. Army tactical and service troops to become separated from their commands. As a temporary solution to the situation, these units were placed under the command of the Third U. S. Army with the Ordnance units being placed directly under control of the Army Ordnance Officer. Battle losses of these organizations were such that with additional losses resulting from accidents caused by icy and snow covered roads the problem of re-supply became great. Army reserves of stock were soon depleted but with the cooperation of the Supply Section, Communications Zone, urgently needed items were forwarded and the critical situation was eased. The supply of combat vehicles became favorable once again but General Purpose Vehicles continued to remain critical; more so than at any other time in the entire campaign.

DECLASSIFIED

To expedite resupply at this time, two officers from the Ordnance Section were dispatched to the III and VIII Corps to get all possible information on troops, installations, shortages, and any other data deemed necessary.

As a result of the counter offensive, traffic circulation was directed northward and the main supply roads became as follows:

a. TOUL (U-61) to VAUCOULEURS (U-46), to ST AMAND (U-47), to AULNOIS (P-62).

b. TOUL (U-61) to ST. MIHIEL (U-74), to CHAMBLEY (U-65), to COMPLAINS (U-66), to AUMETZ (U-79), to METZ (P-70), to LUXEMBOURG (P-81), to WITTLICH (P-84) to KOBLENZ (P-86).

c. NANCY (U-81) to PONT-A-MOUSSON (U-73), to AUBREVILLE (U-74) to METZ (U-89), to PHILIPPEVILLE (P-80), to LUXEMBOURG (P-81), to ECHTERNACH (L-09), to DIEKIRCH (L-15).

By 17 December the three main supply depots had moved to METZ (U-89).

SECTION V

MAINTENANCE SUB-SECTION

Local purchasing and the placing of contracts had become a very large part of the maintenance picture at this time. It was necessary to maintain almost daily contact with local manufacturers in the NANCY (U-81) region in order to expedite production. In addition to the contracts placed for the manufacture of extended light end connectors, production of which was currently running about 3,500 per day, many other items of a critical nature were being turned out for the Third U. S. Army Ordnance Section.

The increase in deadlined equipment in Ordnance shops was attributable to the extreme shortage of replacement parts and major unit assemblies. Thus, the maintenance section resorted to all manner of procurement in order to get ordnance equipment off the deadline and back into the hands of the troops. Representatives of this section were dispatched to LYONS (X-98) and PARIS (S-04) where they procured fan belts from the Goodrich Tire and Rubber Company. These belts were urgently needed in order to get medium tanks and tank destroyer units back into action. An officer of the section flew to the UNITED KINGDOM to obtain releases on other vitally needed spare parts and assemblies.

A magnetic road sweep was designed with the cooperation of the Engineer Section, and was completed in less than one month. This device was tested and found to be highly successful in sweeping shrapnel and nails from the highways. The plans and specifications were forwarded to Communications Zone with a request that a number of these units be made available to Third U. S. Army for the purpose of sweeping all main roads in the Army area. The great reduction in tire trouble that was noted by the use of this device was sufficient to warrant its manufacture. In many instances there was evidence that the enemy had deliberately thrown nails upon some of the main roads.

The maintenance section conducted a demonstration of a "Gun Submerged Bolt Driving and Punching" gun (also known as the "Dynamite" gun), which had been obtained from the BRITISH Royal Navy salvage crew at TOULON, FRANCE. This weapon was to be used to seal up the doors on captured enemy pill boxes to prevent the reoccupation of them by the Germans after our first wave of troops had passed. Twenty such guns with sufficient ammunition were kept available in the Third U. S. Army depots.

Approximately 40,000 extended end connectors for medium tanks were given to the Southern Line of Communications for the Seventh U. S. Army. In return, that headquarters made available from their stocks many items of supply that were extremely short in this section of the theater.

Many tanks had been rendered hors de combat in the battles raging in the BELGIAN bulge and ordnance maintenance shops were overloaded with tank repair jobs. Through an arrangement with Advance Section, Communications Zone, one of their Ordnance Maintenance Battalions was made available for tank repairs, and to give direct support to our reserve troops along the MEUSE River line. All tanks repaired by this battalion were returned to Army for the replacement pool. Maximum capacity of the battalion shops was fourteen major tank repair jobs at any one time.

Digitized by Google

The enemy break-through in the north necessitated exceptionally fast movement of Ordnance Maintenance Battalions in order to maintain ordnance service in the new tactical situation. This was accomplished with no major interruptions of service to the troops.

The maintenance area for 1 December through 16 December was as follows: The area West of the MOSELLE-MEUSE River to the 70th (rear) Ordnance Group. The area East of the River to the 69th (forward) Ordnance Group. When the Third U. S. Army was committed on the southern flank of the BELGIAN bulge, the area of maintenance was changed as follows: Area West of the MOSELLE-MEUSE River and South of the line through METZ-SUR-ALLETTE (P-70), LUXEMBOURG, to the 70th Ordnance Group. Road patrols were maintained on all principal roads in these areas. Radio repair teams were attached to Ordnance Control Points for the installation and repair of radios.

General locations of the headquarters of Ordnance Maintenance Battalions for the month were as follows:

Opening Date December	Location	Coordinates
	69th Ordnance Group	
29	In LUDELANGE	U-98
	44th Ordnance Battalion	
20	In MORHANGE	Q-23
	24th Ordnance Battalion

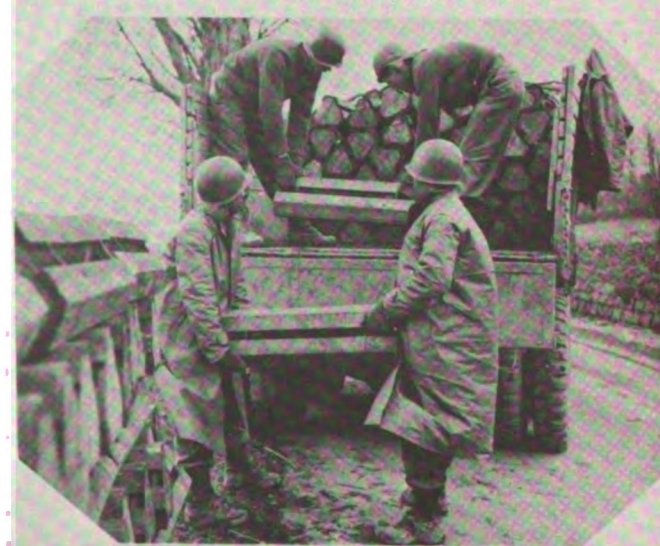
The number of major items repaired in ordnance shops for the month of December was as follows:

Total General Purpose Vehicles Repaired.....	9,031
Total Combat Vehicles Repaired.....	1,719
Total Artillery Repaired.....	1,445
Total Small Arms Repaired.....	22,013
Total Instruments Repaired.....	4,121



SECTION VI.

AMMUNITION SUB-SECTION

During the early part of December 1944, emphasis was placed on the establishment of a large well balanced supply of ammunition in ASP No. 36 to provide close and adequate support for the proposed attack of the SIEGFRIED Line by the XII Corps. By 15 December this ASP contained 7,640 tons of well balanced stock. In addition to this supply on the ground, the "pipe line" between the Advance Section, Communications Zone Depots, and the Army area was filled with an approximately equal quantity to provide the necessary re-supply as the attack progressed. Included in the stockage of this ASP was a large amount of specially prepared high explosive shell with a red colored smoke mixture for 90mm anti-aircraft guns. This special ammunition was intended to provide a "flak line" which could be easily identified by aircraft in a closely coordinated ground and air attack. As the requirement for such special ammunition was not known until a few days before the anticipated use, a special request was made to the Commanding General, Advance Section, Communications Zone, to expedite the shipment of this item.

The change in the tactical situation on 16 December necessitated a complete revampment of the ammunition supply plan. To meet this radical change, all incoming shipments were diverted to the northern flank of the Army boundary. In addition, a large amount of ammunition already on the ground was ordered moved to more appropriate locations. Advantage was taken of every conceivable means of transportation to move ammunition to the new front. As an expedient, an entire maintenance battalion headquarters and headquarters detachment was utilized to help coordinate intra-Army rail shipments of ammunition.

By 19 December ammunition was readily available not only to Third U. S. Army troops, but to any and all units that had been cut off from their previous sources of supply by the enemy counter offensive. The

Loading 75mm Ammunition from roadside ASP.

focal point in the new ammunition plan was Depot No. 32, located near ATTON-LE-WOHAN (U-69). This installation, subsequent to the counter offensive, was scheduled to be turned over to the Advance Section, Communications Zone, but was immediately restocked and again became a very large and very active installation. As Depot No. 32 would not provide close enough support to all troops engaged in halting the enemy drive, mobile rail distribution points were established at ATHUS (P-60), FOUCHES (P-52), and FLOWERVILLE (P-22). As the situation at the forward part of the enemy drive was unstable, it was deemed advisable to move the ammunition at the latter point to VIRTON (P-41). The exact composition of the troops which had become dependent on Third Army for support was unknown and it was therefore necessary to provide all types of ammunition at as many points as possible. In addition to these new installations, re-supply was maintained to ASPs 35 and 36, in direct support of the XX, III, and XII Corps. To meet this sudden increase in demands, arrangements were made with Advance Section, Communications Zone, Depot U-611 to make issues to the Army, regardless of existing credits. Through full cooperation of Depot U-611 personnel, it was possible to establish this procedure and then later make all necessary adjustments of records to re-establish the credit system.

On 20 December a recommended air lift was prepared and submitted to the Army G-4. This air lift was provided to supply ammunition, as well as other classes of supplies, to the troops that were cut off in the BASTOGNE (P-55) area. The timely arrival of these supplies played an important part in the ability of the troops in the BASTOGNE (P-55) area to not only survive, but to defeat the enemy.

An outstanding development, the "Posit" fuse, was introduced to the Army during the month of December. On 9 and 10 December, demonstrations of field artillery firing, using "Posit" fused ammunition, were conducted for the XII and XX Corps. Representatives of the Office of the Chief of Ordnance were on hand to advise and to aid in technical instructions during and after these demonstrations. This entirely new and revolutionary fuse was well received by Commanders and gun crews alike. The original plans provided for this new fuse to be first used on 25 December, however, this date was changed to 17 December in order to take full advantage of its characteristics as an aid in stopping the enemy counter offensive.

The only change in ammunition supply policy introduced during the month was the discontinuance of formal letters authorizing specific amounts of ammunition per weapon that could be expended. In lieu of these letters, an informal status of critical ammunition items was prepared and furnished Corps Commanders, the Army Artillery Officer, and Corps Ordnance Officers as an expenditure guide for planning future operations. The initial study was prepared on 1 December and was based on physical quantities of ammunition in the Army area, allocations of credit currently on hand, and amounts of ammunition predicted by the Twelfth U. S. Army Group to be available in the future. Revised studies were prepared every ten days, or at such time that there was a radical change in the predicted future supply status.

For the month of December the Third U. S. Army ammunition installations were as follows:

Installation		Open	Closed	Serving	Location
Depot	31	3 Oct	25 Dec	ASPs	S NANCY (U-80)
Depot	32	7 Nov		ASPs	ATTON (U-68)
ASP	33	8 Nov	27 Dec	XII Corps	SOMMERVILLE (Q-01)
ASP	34	8 Nov	4 Dec	XII Corps	E PONT-A-MOUSSON (U-83)
ASP	35	21 Nov		XX Corps	DIEDENHOFF (U-98)
ASP	37	3 Dec		XX Corps	MARIENTHAL (Q-16)
ASP	38	26 Dec		III & XII Corps	MAMER (P-71)

During this period 151,705 tons of ammunition were handled and the mileage traveled by the attached Quartermaster Truck Companies in transporting this tonnage totaled 1,185,090 miles.

CHAPTER 8
JANUARY OPERATIONS

SECTION I - GENERAL

As in the previous month icy and snow covered roads continued to exist and greatly added to the hazards of vehicles in the combat area.

The enemy counter-offensive gave rise to many problems. Facilities of maintenance shops became heavily ladened with work. Salvage became extremely vital as it was a means of obtaining critical materials for reclamation and repair of major units and assemblies.

The volume of issues of ammunition were still great during the earlier part of the month and it was necessary to continue the use of a railhead for direct issue to using units.

SECTION II

ADMINISTRATION SUB-SECTION

The Ordnance Section moved from the city of NANCY (U-81) to ESCH (P-70), GRAND DUCHY of LUXEMBOURG on 7 January 1945. The liaison group of three officers and one enlisted man remained on duty with the command echelon in the city of LUXEMBOURG (P-81). At this time the French liaison officer on duty with the Ordnance Section was relieved from attached. A Belgian liaison officer later reported for duty with the section on 25 January and was immediately assigned to the Maintenance Sub-Section to assist in purchasing and contracting functions being carried on with Belgian firms. Other augmentation of personnel in the Ordnance Section remained the same as previously reported.

On 8 January the 6937th Corps Pass Team (Provisional), consisting of two officers and six enlisted men, were placed on temporary duty with the section from Headquarters, European Theater of Operations, for the purpose of instruction, in an advisory capacity, to troops in the use of "POINT" fuzes.

During this period three officers and three enlisted men were added to the Ordnance Technical Intelligence Team, attached to the section, thereby completing authorized strength of five officers and seven enlisted men in the unit.

Officers from Army Ordnance units attended courses at the Army Information-Education Staff School at Cite Universitaire in PARIS (S-14) as follows:

Educational Advisement	1
Information-Education	4
Instructor Training	2

Quotas for thirty day furloughs in the UNITED STATES for rehabilitation, recuperation, and recovery, under the provisions of European Theater of Operations Circular 124, 24 December 1944, were allotted to Army Ordnance units as follows:

69th Ordnance Group	5
70th Ordnance Group	5
82nd Ordnance Group	2

Casualties (killed and wounded) due to enemy action during this period totaled eleven, thus making the accumulative total to date 115.

The status of awards by the close of the month were as follows:

	Current	Accumulative to Date
Silver Star	0	1
Soldiers Medal	1	3
Bronze Star	43	105
Purple Heart	3	67

Meritorious Service Unit Plaques were awarded to following Army Ordnance Units:

Headquarters & Headquarters Detachment, 15th Ordnance Battalion
281st Ordnance Maintenance Company (AA)
552nd Ordnance Heavy Maintenance Company (Tank)
575th Ordnance Ammunition Company
576th Ordnance Ammunition Company
61.1st Ordnance Depot Company
3511th Ordnance Medium Automotive Maintenance Company
3519th Ordnance Medium Automotive Maintenance Company

Accumulative total to date.....12

SECTION III

OPERATIONS SUB-SECTION

The rapidly changing tactical situation and the interchanging of divisions within Corps made three reorganizations of the 69th Ordnance Group necessary during the month. At the close of the period the 69th Ordnance Group was as follows:

III CORPS	VIII CORPS	XII CORPS	XX CORPS
14th Ordnance Bn	10th Ordnance Bn	514th Ordnance Bn	195rd Ordnance Bn
838th Ord Dep Co	2nd Ord MM Co	32nd Ord MM Co	147th Ord MM Co
3463rd Ord MM Co	7th Ord MM Co	189th Ord MM Co	1164th Ord MM Co
3528th Ord MAM Co	15th Ord MM Co	611st Ord Dep Co	640th Ord Dep Co
	306th Ord MM Co (AA)	3417th Ord MAM Co	3511th Ord MAM Co
	3423th Ord MAM Co	3418th Ord MAM Co	
	3441th Ord MM Co	857th Ord MM Co	
	3515th Ord MAM Co		

14th Ordnance Bn	316th Ordnance Bn
168th Ord Dep Co	275th Ord Maint Co (AA)
297th Ord MM Co (FA)	281st Ord Maint Co (AA)
299th Ord Maint Co (AA)	501st Ord MM Co (FA)
510th Ord MM Co (FA)	520th Ord MM Co (FA)
553rd Ord MM Co (FA)	537th Ord MM Co (FA)
562nd Ord MM Co (FA)	3422nd Ord MAM Co
3511th Ord MAM Co	
3519th Ord MAM Co	

The loss of Ordnance units to Third Army was as follows:

Hq & Hq Det., 19th Ordnance Battalion
472nd Ordnance Evacuation Company
3526th Ordnance Medium Automotive Maintenance Company
3554th Ordnance Medium Maintenance Company
131st Ordnance Heavy Maintenance Company (FA)
657th Ordnance Ammunition Company

Headquarters and Headquarters Detachment, 10th Ordnance Battalion opened in LIVRAMONT (P-34) on 27 January and was placed on temporary duty with the 82nd Ordnance Group as a railroad battalion operating ammunition trains into Third U. S. Army Depots and Ammunition Supply Points.

ASPs and Ammunition Depots are now located as follows:

a. Ammunition Depot No. 32 - In AUBEL-LE-ROMAN On IC 15[6] (P-663872) - Operated by 583rd Ordnance Ammunition Company.

b. ASP No. 35 - In DISTROFF (U-930826) on OC 73 - Operated by 574th and 576th Ordnance Ammunition Companies. Serving XX Corps.

c. ASP No. 38 - In MAMER on No. 6 (P-763195) - Operated by 573rd, 575th, 598th, 596th, and 657th Ordnance Ammunition Companies and 3076th Ordnance Motor Vehicle Distributing Company. Serving II & XIX Corps.

d. ASP No. 39 - In BELLEIN on Highway 160 (P-405382) - Operated by 619th and 680th Ordnance Ammunition Companies. Serving VIII Corps.

e. ASP No. 40 - In BRAS on N34 (P-686999) - Operated by 570th Ordnance Ammunition Company. Serving III Corps.

f. ASP No. 41 - In WEILER (P-780689) off Highway No. 12 - Operated by 575th, 598th, and 680th Ordnance Ammunition Companies. Serving VIII Corps.

Personnel and Vehicles present on the Continent is as follows:

Officers	695
Enlisted Men	12,351
T/B Vehicles	2,668
Total Vehicles	2,984

Total Quartermaster personnel and vehicles attached are as follows:

Officers	79
Enlisted Men	2,015
Vehicles	780

Civilians employed with Third Army Ordnance is as follows:

Machinists and Mechanics	353
Laborers	450

No change in Quartermaster units attached to the 82nd Ordnance Group.

SECTION IV

SUPPLY SUB-SECTION

On 5 January a TWX was received from European Theater of Operations requesting a report on the status of tanks as of the 5th, 12th, 20th, and 28th of each month. This report was to be dispatched prior to 2400 of the succeeding day and to be marked to the attention of the "Armored Fighting Vehicles and Weapons Section". The report was to include the following information:

a. The designation of all armored divisions, tank battalions, and armored field artillery battalions under the jurisdiction of the Army.

b. The number of serviceable Medium Tanks (with the 75mm and 76mm Guns) on hand.

c. The number of unserviceable but repairable tanks (with 75mm and 76mm Guns) on hand.

d. The number of serviceable Medium Tanks (with 105 Howitzer) on hand.

e. The number of unserviceable but repairable Medium Tanks (with 105 Howitzer) on hand.

f. The number of battle losses on Medium Tanks (with 75mm and 76mm Guns) during the last period.

g. The number of battle losses for Medium Tanks (with 105 Howitzer) during the last period.

h. All types of Medium Tanks including DD's are to be included.

Icy and snow covered roads, as in the latter part of the previous month, continued to be the main cause of many accidents, particularly among general purpose vehicles. This greatly aggravated the already critical supply of these vehicles.

Except for a number of critical major items and unit assemblies, supply activities during this period were normal and consisted mostly of expediting and coordinating shipment of Class II and IV supplies. Some of the more critical items were as follows:

Light Machine-Guns	Fire Control Equipment
Pistols	General Purpose Vehicles
Grenade Launchers	Tires and Tubes
Rocket Launchers	Mat Patches

Digitized by Google

Practices which had previously been on the list was finally received in sufficient quantity to fill all requirements.

For the period of January the total receipts and issues of the following major items were:

	Received	Issued
Light Tanks	142	366
Medium Tanks	344	430
Combat Vehicles	344	430
Artillery (over 57mm)	190	130
General Purpose Vehicles	3,140	3,126

By the end of the month as the "Belgian Bulge", caused by the enemy counter-offensive, was practically eliminated the supply lines were as follows:

a. FLAMMERATH (P-14), to LIPPERSCHEID (P-34), to HUTTERATH (P-67).

b. MONSCHAU (P-20), to FLORENVILLE (P-20), to MONSCHAU (P-34), to BAELEN (P-[illegible]), to [illegible] (P-[illegible]).

c. [illegible] (P-42), to [illegible] (P-60), to ARLON (P-62), to BASTOGNE (P-66) to WALDBILLIG (P-77), to [illegible] (P-84).

d. HUNSRUCK (P-47), to ALTRIER (P-70), to [illegible] (P-81), to DIEKIRCH (P-84), to [illegible] (P-86), to [illegible] (P-[illegible]).

e. METZ (P-48), to FRISANGE (P-80), to [illegible] (P-81), to ECHTERNACH (P-83), to BITBURG (P-[illegible]).

f. METZ (P-48), to THIONVILLE (P-88), to SAARLAUTERN (Q-28).

The location of the three main supply depots at this time remained the same as in the previous month.

SECTION V

MAINTENANCE SUB-SECTION

The facilities of ordnance maintenance shops were severely taxed as a result of the large scale enemy counter-attack in the MEUSE-ARDENNES bulge. The addition of the 567th Ordnance Base Armament Maintenance Battalion to Third U. S. Army Ordnance did much to relieve this strain. This battalion, located in METZ, (P-48) had considerable experience in previous campaigns and was a very valuable addition to the Ordnance at this particular time. They were given the responsibility of maintaining and supplying all Third U. S. Army using units in the area south of METZ (P-48) and west of the MOSELLE River. The battalion turned over all their major items and unit assemblies to companies of the 70th Ordnance Group who were currently engaged in repairing ordnance equipment in the collection point in METZ (P-48). In addition to alleviating a serious shortage of spare parts and unit assemblies, the presence of this organization enabled the 70th Ordnance Group to move several companies from the areas of PONT-A-MOUSSON (P-48), NANCY (P-81), and METZ (P-60) to the north where they were needed to assist in the great amount of work engendered by the break-through.

Maintenance units and collection points were carefully inspected to insure proper handling and care of repairable equipment. Ordnance troops were instructed to thoroughly check for salvage all unrepairable items in order that the maximum amount of critical materials be made available for reclamation and repair of major units and assemblies. Instructions were issued to promptly evacuate and classify all ordnance material uncovered in the BASTOGNE (P-66) area and to report all cases of unnecessary cannibalization to this headquarters.

An artillery calibration team was assigned to check over all condemned major artillery tubes where time and the tactical situation permitted. Their findings enabled Ordnance to better analyze artillery tubes and allow maximum use of the tubes before being condemned.

All track-like vehicles were in danger of being immobilized due to the hazardous condition of the roads caused by ice and snow. This problem was solved by welding manganese steel lugs on every fifth block of steel type track or on rubber type track, by replacing every fifth block with a steel block equipped with a lug. This enabled the vehicles to obtain the necessary traction on icy terrain and to be put back into action. Additional manganese steel was obtained for one of our armored divisions to help them with the speedy modification of their tank track.

A GARAND trigger adapter that fitted into the trigger housing of a rifle, gunshine-gun, etc., making it possible to operate the trigger, without removing gloves or mittens, was captured. The idea was adopted by the maintenance section and a similar gadget was designed and local contracts placed for the manufacture of 95,000 pieces. Deliveries at the rate of 5,000 a day were effected.

A local contract was placed for the manufacture of a strap wrench to facilitate the removal of 105mm fuzes. The strap material used was salvaged from a Quartermaster salvage point.

Close liaison was maintained with all contractors in order to expedite deliveries of the many critical items being manufactured for the Third U. S. Army Ordnance Section.

The maintenance area for January remained the same as that for the period 16 through 31 December.

The number of major items repaired in ordnance shops were as follows:

	January	Accumulative to Date
General Purpose Vehicles	8,537	39,180
Combat Vehicles	2,002	7,733
Artillery	1,907	6,540
Small Arms	19,760	77,291
Instruments	4,854	17,062

The general location of Third U. S. Army Ordnance Maintenance Battalions during January were as follows:

Opening Date January	Location	Coordinates
	69th Ordnance Group	
	24th Ordnance Battalion	
21	In HERBESTHAL	P-63
	193rd Ordnance Battalion	
12	In BASSE YUTZ	U-88
	590th Ordnance Battalion	
2	In CHARLEVILLE	Q-83
10	In WECHSELTRAT	P-34
19	In LIPPERSCHEID	P-34
	70th Ordnance Group	
	526th Ordnance Battalion	
17	Vicinity of METZ	U-85

SECTION VI

AMMUNITION SUB-SECTION

By the first of January, the enemy counter-offensive had been sufficiently contained to permit the establishment of a formal ASP to replace the railhead distributing points which had been serving VIII Corps. Even though the Corps would not concur in the establishment of an ASP close to the front lines, the Army Ordnance Officer ordered ASP No. 39 to be opened at WECHSELTRAT (P-34) on 1 January. This extremely close support contributed much to the restoration of confidence in the troops that had previously been forced to withdraw during the enemy attacks. In one instance, armored units passed through this ASP enroute to the active front lines.

The volume of issues at ASP No. 58 (P-71) serving both III and XII Corps, was so large during the early part of the month that it was necessary to continue the use of the ETHE railhead (P-67) to assist in the support of using units. During the first week of January approximately 65% of the ammunition received at this railhead was issued directly to using units, the remainder being placed in ASP No. 58.

As the combat troops advanced, constant reconnaissance for suitable ASP sites and railheads was maintained in forward areas in order to continue the close support policy of the Army. Thus, during the first week of the month daily reconnaissance trips north and northwest of the city of LUXEMBOURG (P-81) were made to find suitable locations to support the III and XII Corps.

As the Third Army attack continued and swung toward Germany, decision was made to provide new ASPs for the III and VIII Corps. These ASPs, Nos. 40 and 41, were located southeast and northeast of BASTOGNE (P-66) respectively, and were served from the railhead located in that city. These installations were established under the most adverse weather conditions yet encountered by the operating personnel, as practically all roads were covered by deep snowdrifts and ice. Snowplows and bulldozers were used throughout the area to clear roads and spaces in the snowbanks where ammunition could be stacked. In order to eliminate the truck haul across the MOSELLE River a new railroad was opened at DALSTEIN (Q-07) to serve ASP No. 35 in support of XV Corps.

At the end of January, as the tactical situation changed, the Army Ordnance Officer initiated action to gradually deplete Depot No. 52, which with its important railhead at ACHEN-LE-MONAN (P-68), had been a focal point in the ammunition supply system during this period. This railhead not only served Depot No. 52, but was used as a transfer point to route ammunition trains to vital areas during the battle against the German offensive.

Two Armored Divisions held in Army reserve, the 8th and 9th, required special assistance during the middle of the month. Since they had no ASP to service them nearby, action was taken to increase the basic load of each division by 1,00 tons. Thus, in the event of emergency, each unit could enter into combat with a comfortable margin of safety pending establishment by Army of an ASP behind them.

Another unit requiring special assistance during January was the 101st Airborne Division. Upon being relieved after its epic stand at BASTOGNE, it was attached to the Seventh U. S. Army. Consistent with the policy of having troops leaving Third Army being well supplied, the Army Ordnance Officer directed that this division be furnished 200 tons of ammunition over and above their basic load. This was accomplished 19 January 1945.

During the month there were two serious mishaps. On 2 January several tons of explosives in Depot No. 31 detonated, resulting in some casualties and damage. Investigation revealed the probable cause to have been action by enemy aircraft. On 10 January forty-four rail cars loaded with ammunition for ASP No. 39 were involved in a train wreck at WECHSELTRAT (P-61). Most of the ammunition either exploded or burned, and all but thirteen cars were destroyed. The Army Ordnance Officer visited the scene of the wreck shortly after it occurred and instructed that every effort be exerted to salvage maximum amounts of ammunition. Four bomb disposal squads, one provisional collecting squad, one ammunition company, and a platoon of a Quartermaster truck company worked forty-eight hours removing unserviceable ammunition and salvage, thereby enabling the railroad maintenance crews to immediately repair the damaged tracks.

The First U. S. Army ASP No. 129, which had been overrun by the Germans during their offensive, was recaptured by Third U. S. Army during the latter part of January. Its stacks were prepared for demolition by the Germans, but only a small portion was actually destroyed. In order to protect using units from unnecessary danger due to the probability of anti-personnel and anti-tank mines having been left by the Germans, this ASP was not reopened. Instead, an ammunition company and three bomb disposal squads were assigned to clear the area, inventory the ammunition, and incorporate it in ASP No. 41.

Another reclamation job, that of gathering up ammunition left unused by the 101st Airborne Division in the vicinity of BASTOGNE (P-66) was given to ammunition collecting squads. This ammunition had been previously supplied to that unit by "air lift".

Roadside Ammunition Supply Point.

Digitized by Google

CHAPTER 9
FEBRUARY OPERATIONS

SECTION I - GENERAL

The efficiency with which Army Ordnance units had normally operated during past campaigns was greatly hampered during this period by conditions throughout the Army read net which made travel practically impossible in some areas. Transportation of heavy equipment and supplies and evacuation by tank transporter was prohibited except when deemed highly necessary due to the tactical situation.

Modification of medium tanks with additional armor on forward hull was accomplished and proved highly successful when committed to actual combat. Equipping of all medium tanks with 76mm guns was also stressed to provide additional fire power.

Ammunition was moved forward as far as possible by rail in order to relieve haulage by truck transportation. The expenditure of artillery ammunition during the last two weeks of the month surpassed all previous records for a similar period.

SECTION II

ADMINISTRATION SUB-SECTION

The Ordnance Section moved from the city of ESCH (P-79) to the city of LUXEMBOURG (P-81) on 6 February 1945. The entire section was consolidated at this point when the small liaison group, three officers and one enlisted man, rejoined the section from the Command Echelon, thereby making the Ordnance Section complete in one location for the first time since the start of operations in August. Personnel in the Ordnance Section remained the same as in previous months, with five enlisted men being attached from Army Ordnance units, and attached teams remaining as previously reported.

Officers from Army Ordnance units attended courses at the Army Information Staff School at Cite Universitaire in PARIS as follows:

Information-Education	4
Educational Advancement	1
Instructor Training	1
On-The-Job-Training	2

Quotas for thirty days furlough in the UNITED STATES for rehabilitation, recuperation, and recovery, under the provisions of European Theater of Operations Circular 12[illegible], 21 December 1944, were allotted to Army Ordnance units as follows:

69th Ordnance Group	8
70th Ordnance Group	8
82nd Ordnance Group	4

Meritorious Service Unit Plaques were awarded to the following Army Ordnance Units:

3[illegible]50th Ordnance Medium Automotive Maintenance Company
650th Ordnance Heavy Maintenance Company (Field Army)
129th Ordnance Medium Maintenance Company
88th Ordnance Bomb Disposal Squad
Detachments "B" and "C", 158th Ordnance Fire Repair Company

Accumulative totals of this award to date were:

Group Headquarters	None
Battalion Headquarters	1
Companies	13
Detachment, Fire Repair	1
Bomb Disposal Squads	2
Total to date	17

Casualties due to enemy action during this period were as follows:

	Current Killed	Current Wounded	Accumulative Total Killed	Accumulative Total Wounded
Officers	0	0	3	2
Enlisted Men	2	5	3[illegible]	66

The status of awards by the close of the month were as follows:

Officers:	Current	Accumulative Total
Silver Star	0	2
Soldiers Medal	0	0
Bronze Star	1[illegible]	55
Purple Heart	0	5
Enlisted Men:		
Silver Star	0	0
Soldiers Medal	2	4
Bronze Star	25	89
Purple Heart	2	100

SECTION III

OPERATIONS SUB-SECTION

The following Ordnance units were assigned to Third U. S. Army during the month of February:

3562nd Ordnance Heavy Automotive Maintenance Company
666th Ordnance Heavy Maintenance Company (Tank)
256th Ordnance Medium Maintenance Company
131st Ordnance Heavy Maintenance Company
877th Ordnance Heavy Automotive Maintenance Company
667th Ordnance Ammunition Company
9[illegible]th Ordnance Bomb Disposal Squad
2[illegible]1st Ordnance Bomb Disposal Squad
267th Ordnance Service Detachment (Wess)

The following units were relieved from assignment to Third U. S. Army during the month:

Headquarters and Headquarters Detachment, 19th Ordnance Battalion
472nd Ordnance Evacuation Company
3[illegible]26th Ordnance Medium Automotive Maintenance Company
7th Ordnance Medium Maintenance Company
553rd Ordnance Heavy Maintenance Company (Tank)
568rd Ordnance Ammunition Company
853rd Ordnance Heavy Automotive Maintenance Company

The 607th Ordnance Base Armament Maintenance Battalion was relieved from attached to Third U. S. Army and returned to control of Communications Zone.

The rear vehicle replacement pool of the 70th Ordnance Group, operated by the 717th Ordnance Battalion, was moved from STAIN (P-47) to WEIL (P-68) due to the fact that the rear Army boundary was moved forward and East of STAIN (P-47).

When the III Corps was lost to First U. S. Army, the 21st Ordnance Battalion, which was supporting III Corps, moved back as an intermediate battalion supporting the 31[illegible]th Ordnance Battalion, which in turn was supporting XII Corps.

At the close of the month, Ordnance Groups providing supply and maintenance to the Army were organized as follows:

69th Ordnance Group

10th Ord Bn
[illegible]nd Ord MM Co
15th Ord HM Co
19[illegible] Ord Dep Co
3[illegible]4th Ord MAM Co
3[illegible]4th Ord MAM Co
5515th Ord MAM Co

3[illegible]th Ord Bn
3[illegible]nd Ord MM Co
129th Ord MM Co
257th Ord MM Co
6[illegible]1st Ord Dep Co
3[illegible]7th Ord MAM Co
3[illegible]8th Ord MAM Co
3[illegible]63rd Ord MM Co

194rd Ord Bn
1[illegible]7th Ord MM Co
116th Ord MM Co
256th Ord MM Co
6[illegible]0th Ord Dep Co
5[illegible]11th Ord MAM Co
5[illegible]2th Ord MAM Co

[illegible]16th Ord Bn
[illegible]th Ord MM Co (FA)
[illegible]th Ord MM Co (AA)
[illegible]th Ord MM Co (FA)
[illegible]th Ord MM Co (Tk)
[illegible]th Ord MAM Co
[illegible]519th Ord MAM Co

[illegible]th Ord Bn
[illegible]th Ord MM Co (FA)
[illegible]th Ord MM Co (AA)
[illegible]st Ord MM Co (Tk)
620th Ord MM Co (FA)
858th Ord Dep Co
3562nd Ord MAM Co

3[illegible]6th Ord Bn
[illegible]th Ord MM Co (AA)
2[illegible]st Ord MM Co (AA)
537th Ord MM Co
666th Ord MM Co (Tk)
3[illegible]82nd Ord MAM Co

70th Ordnance Group

26th Ord Bn
3[illegible]th Ord Dep Co
3[illegible]7th Ord Dep Co
837th Ord Dep Co
98[illegible]th Ord Dep Co
Det B, 158th Ord Fire Rep Co
Det C, 158th Ord Fire Rep Co

66th Ord Bn
1[illegible]5th Ord Evac Co
471st Ord Evac Co
1[illegible]5th Ord Evac Co
1[illegible]9th Ord Evac Co
1[illegible]0th Ord Evac Co
869th Ord MAM Co

79th Ord Bn
521st Ord MM Co (FA)
55[illegible]nd Ord MM Co (Tk)
902nd Ord MAM Co
91[illegible]th Ord MAM Co
877th Ord MAM Co

3[illegible]7th Ord Bn
2[illegible]th Ord MM Co
556th Ord MM Co (Tk)
3[illegible],992nd Ord MAM Co
560th Ord MM Co (Tk)

326th Ord Bn
3[illegible]th Ord MM Co (AA)
531st Ord MM Co (Tk)
550th Ord MM Co (Tk)
90[illegible]th Ord MAM Co
3537th Ord MAM Co
851st Ord MAM Co

The 82nd Ordnance Group was operating ammunition installations at the close of the month as follows:

Ammunition Depot No. 32 - In ARLON-LE-ROMAN on IC156 (T-663872), Operated by 576th Ordnance Ammunition Company.

ASP No. 35 - In DIEDORF on OC73, (T-930826), Operated by 619th Ordnance Ammunition Company. Serving XX Corps.

ASP No. 38 - In MERTZ on No. 6, (P-763195), Operated by 573rd, 575th, 592nd, 596th, and 626th Ordnance Ammunition Companies. Serving XII Corps.

ASP No. 39 - Closed 271200 February 1945.

ASP No. 40 - In PRAM on N[illegible] (P-626659), Operated by 570th, 571th, 575th Ordnance Ammunition Companies, and 3076th Ordnance Motor Vehicle Distributing Company. Serving VIII Corps.

ASP No. 41 - In WEILER off Highway No. 12 (P-720689), Operated by 620th Ordnance Ammunition Company. Serving VIII Corps.

ASP No. 42 - In STEINEM off No. 1[illegible] (P-875380), Operated by 667th Ordnance Ammunition Company. Serving XII Corps.

The following Ordnance units were reorganized during the month:

Ordnance Medium Maintenance Companies under T/O & E, 9-7, 30 September 1944.
Ordnance Bomb Disposal Squads under T/O & E, 9-500, Column EE, 11 October 1944.

Personnel and vehicles present on the Continent at the close of this period were as follows:

Officers	626
Enlisted Men	11,768
T/E Vehicles	2,594
Total Vehicles	2,906

Due to the increasing demands for Ordnance Service, it was necessary to employ the following civilian personnel in Army Ordnance units:

Machinists & Mechanics	381
Laborers	1,026

SECTION IV

SUPPLY SUB-SECTION

Poor road conditions due to sudden thaw during this period necessitated orders by the Commanding General prohibiting the travel of tank transporters over the Army road net, thereby preventing deliveries of heavy equipment, principally tanks and combat vehicles, to the using units. This ban, which permitted necessary repairs, was lifted on special occasions as required by the tactical situation.

Further action was taken on the conversion of all separate Cavalry Reconnaissance Squadrons from M59 to M24 Light Tanks. This provided a faster, more maneuverable tank mounting a 75mm Gun instead of the former vehicle mounting a 37mm Gun.

The previous shortage of all light machine guns was relieved by receipts from Communications Zone in sufficient quantities to fill existing back orders.

Requirements for brake parts and brake fluid were heavy due to the generally poor road conditions throughout the Army. Communications Zone was requested to expedite regulations on these items which had been placed by main Army supply depots.

A survey of procurement activities in which the procurement section of Army Ordnance and 70th Ordnance Group were engaged, revealed that contracts for over 500 items, ranging from automotive to small arms, artillery, combat vehicle, fire control, and other sundry items, had been negotiated within Third U. S. Army Ordnance Service. This extensive program was necessary in order to fill requirements on materiel in critical supply throughout the Army.

The situation on 2½ ton, 6x6, trucks continued critical during this month, except 2½ ton dump trucks which was critical during the early stages but was relieved near the close of the month.

The supply of combat vehicles was in excellent condition throughout the month.

For the period of February, the total receipts and issues of the following major items were:

	Received	Issued
Light Tanks	163	102
Medium Tanks	235	152
Combat Vehicles	1,401	1,115
Artillery (over 57mm)	184	164

The equipment of Tank Destroyer Battalions was converted from the Carriage, Motor, 3" Gun M10, to Carriage, Motor, 90mm, M36, in order to supply M10 equipment to Sixth U. S. Army Group as per instructions of Twelfth U. S. Army Group.

A limited stock of 76mm guns was received for the purpose of modifying medium tanks equipped with the 75mm gun. This was deemed desirable since the tank equipped with 75mm gun was not considered by the using units to have sufficient fire power to perform assigned missions.

Action was taken to obtain 200,000 stock record cards that were in critical supply and were affecting the operation of Third U. S. Army Ordnance Depots. Contact was made with U. K. Base Sector and they shipped via air express 50,000 of these stock record cards immediately. Wire was also dispatched to Headquarters Communications Zone regarding this critical shortage and action is being taken to supply the total amount required.

A critical shortage of hot patches continued to exist in Third U. S. Army units. Requirements due out to using units were approximately 20,000 boxes. Total receipts during this period amounted to 6,000 boxes, which was highly inadequate to cover requirements.

The chronic shortage of all fire control and sighting equipment was improved somewhat by receipts during the month, but numerous items of this type continued in critical short supply.

By the end of the month the supply lines were as follows:

(a) M26 from LIBRAMONT (P-34) to SCHONBERG (P-58) - 158 to ROUM (L-07).
(b) M18 from LONGUYON (T-49) to ARLON (P-62) - 84 to HOUFFALIZE (P-67) - M26 to ST VITH (P-88).
(c) M4A6 from BRIEY (T-67) to AUMETZ (T-79) - 0264 to RJ No. 4 to LUXEMBOURG (P-81) - No. 12 to WILTZ (P-86).
(d) M5 and No. 5 from ULFLANGE (T-87) to LUXEMBOURG (P-81) - No. 7 to DIEKIRCH (P-84) - No. 17 to SINSPELTEN (P-96) - 1145 to ETTELBRUCK (L-15).
(e) M5 and No. 3 from ULFLANGE (T-87) to LUXEMBOURG (P-81) - No. 11 to SCHIFFLANGE (L-05) - W0857 to ETTELBRUCK (L-15).
(f) M5 and No. 3 from ULFLANGE (T-87) to LUXEMBOURG (P-81) - No. 1 to GREVENMACHER (L-12) - RR 49 to THIER (L-22).
(g) M5 from ULFLANGE (T-87) to THIONVILLE (T-68) - M418 to SAARLAUTERN (O-07) - RR 269 to MORFELDEN (L-51).

The location of the three main supply depots remained unchanged during the month and were located in METZ (P-85).

SECTION V

MAINTENANCE SUB-SECTION

The Commanding General directed that all M4A3 Medium Tanks equipped with 76mm Gun and all M4A3W Medium Tanks in the Army, not presently equipped with heavy armor plate on the forward hull similar to that on the M4A3E2, be modified with the least practicable delay. A completed model was submitted to the Commanding General which was approved and instructions given to proceed with the modification.

Army Ordnance personnel were assigned the task of removing armor plate from wrecked tanks in collection points and in the field. Many such tanks were found in the area of BASTOGNE (P-65) and elsewhere in the Belgian Bulge. Contracts were made with three local factories for the modification as the eighty-five man hours required per tank would have seriously hampered normal Army Ordnance maintenance. The actual modification consisted of welding an additional two and one half inches of armor on the front hull of all M4A3 and M4A3W medium tanks in the hands of the troops. The tanks in three Armored Divisions were modified in three weeks time with an estimated average of thirty-six tanks per division. The rapid procurement of extra supplies of oxygen, acetylene, and welding rod by Third U. S. Army Ordnance enabled the local contractors to maintain a schedule of ten tanks per day.

Medium Tank from which armor plate has been removed to provide additional armor for modification of other tanks.

Proof of the practicability of this modification was not long in coming. A report was received from the 4th Armored Division that one of their recently modified M4A3E8 medium tanks had suffered a direct hit from a German 75mm shell with the only resulting damage being the complete separation of the additional middle section of armor from the hull. The tank continued in action and succeeded in "bucking out" the opposing vehicle. The crew whose lives were saved by this additional protection were loud in their praises of this modification.

The M4A3E2 medium tank, although equipped with additional armor plate, was still mounted with a 75mm gun. In order to make this tank a more effective assault vehicle, a program was initiated to supply this vehicle with more fire power. 76mm gun tubes were obtained through normal supply channels and the salvage of medium tanks equipped with 76mm tubes. The modification was performed in the Armored Divisions by their organic Ordnance Maintenance Battalions while the tubes in all separate tank battalions were changed over by Army Ordnance Maintenance personnel.

An Ordnance Heavy Maintenance Company (Field Army) from the Advance Section, Communications Zone, was assigned to work in conjunction with Army Ordnance units in the collection point operated by the 326th Ordnance Maintenance Battalion in ESCH (P-70). The sole mission of this unit was the dismantling of salvage material, thus obtaining many useful assemblies and spare parts critically needed in maintenance activities.

Closeup of forward hull of modified medium tank showing results of direct hit by German 75mm Gun.

M4A3W Medium Tank, w/76mm Gun, Modified w/additional armor on forward hull. Center section received direct hit by 75mm shell and was separated from tank which continued attack successfully.

Ordnance materiel reconditioned by Third U. S. Army Ordnance maintenance units during February was as follows:

	FEBRUARY	ACCUMULATIVE TO DATE
General Purpose Vehicles	9,411	48,893
Combat Vehicles	5,218	10,951
Artillery	1,941	8,154
Small Arms	27,340	104,423
Instruments	4,589	21,431

The maintenance area for February remained the same as that for the period 16 through 31 December.

Location of the main maintenance battalions during the month of February were as follows:

Opening Date February	Location	Coordinates
	69th Ordnance Group No Change	
	10th Ordnance Battalion	
1	In [illegible]	P-56
24	In COCHEM	P-78
	14th Ordnance Battalion	
1	In [illegible]	P-46
16	In [illegible]	P-74
	24th Ordnance Battalion	
16	In [illegible]	P-72
	193rd Ordnance Battalion No Change	
	314th Ordnance Battalion No Change	
	316th Ordnance Battalion No Change	
	70th Ordnance Group	
9	In [illegible]	P-60
	79th Ordnance Battalion	
12	In [illegible]	P-60
	326th Ordnance Battalion	
1	In [illegible]	P-70

SECTION VI

AMMUNITION SUB-SECTION

During the month of February ammunition supply was faced with situations that at first appeared to be impossible to overcome. As the frozen ground began to thaw many roads became impassible due to the heavy traffic necessary to move troops and supporting supplies. As all railyards had been either partially or completely destroyed by the retreating enemy these facilities were not immediately available for use. The most seriously affected area was the WITZ (P-75)-BASTOGNE (P-65)-ST VITH (P-88) sector occupied by the VIII Corps.

In order to place ammunition in locations accessible to using units, a new area East of the ST VITH (P-88)-BASTOGNE (P-65) road was opened in ASP No. 41 and stocked from the railhead at BASTOGNE (P-65), even though a large stock of the same items were on hand but not accessible.

The Army Ordnance Officer, faced with the possibility of road conditions becoming more acute, ordered the establishment of an Army reserve of approximately 1,000 tons of carefully selected items east of ST VITH (P-88). This reserve was to be used only in an emergency and in the event that it was impossible for using units to reach other supply installations. Toward the latter part of the month, the tactical situation had progressed satisfactorily and road conditions had improved somewhat so this reserve supply was opened to using units for normal issues.

Road conditions in the XX Corps sector were also bad and in order to conserve what few roads were still open, while necessary repairs were in progress, priority was placed on the rehabilitation of railheads in this area. Incoming rail shipments at the DALSTEIN (Q-07) railhead were divided and appropriate wagons shunted to each of three forward small railheads in division areas. This railhead method of supply to forward units was not considered as being very satisfactory, however, as an expedient to relieve the road conditions, it proved valuable.

Work in Army installations was further complicated by the fact that approximately 50% of all ammunition which had been stacked on snow and frozen ground toppled over as the snow and ground thawed. A large amount of personnel were used to restack this ammunition, thereby reducing the amount of personnel available for issuing and receiving ammunition in installations and railheads. During this period of time it was determined that available storage space was so limited to justify the change in existing safety distances. The size of stacks was increased from 6 tons to 8 tons in order to obtain maximum storage on the limited ground and road space available.

By the 11th of the month, strategically located dumps and installations had been built up to provide adequate supplies for the assault of the Siegfried Line. The penetration of this line completed, the Army was ready to resume its advance to the RHINE. During the last two weeks of February, expenditures of artillery ammunition exceeded amounts expended during any previous similar period since the Army became operational.

Many requests for training ammunition were processed during the early part of the month to provide training for reinforcements and for units that had no opportunity to fire for several months. Another unusual requirement was the increased demand by the Psychological Warfare Section for 105mm Howitzer M2 HC Smoke Shell for reloading with propaganda leaflets. In order to eliminate the day to day basis for supplying this type of ammunition, a request was submitted to Twelfth U. S. Army Group for 30,000 rounds for the exclusive use of Psychological Warfare. This request was approved and the ammunition placed in Army installations earmarked for that purpose.

Total ammunition received from Advance Section, Communications, Zone, during this period amounted to 69,767 long tons. Total ammunition handled by all Third U. S. Army installations amounted to 137,179 long tons.

Total truck mile hauled by trucks under Army Ordnance control for the month was 994,105. Accumulative total to date since 18 November 1944 is 1,494,104.

CHAPTER 10
MARCH OPERATIONS

SECTION I - GENERAL

Activities in Third Army Ordnance Service during the month of March were headlined by a continual forward movement in the wake of the highly successful combat troops of the Army. The problem of transportation of supplies and ammunition once again became paramount and was highly comparable with operations during the liberation of FRANCE. However, through the utilization of all available means of transportation, which included M25 Tank Transporters, M25 Trailers and provisional trucking companies composed of other organic vehicles of Army Ordnance units, this problem was successfully coped with and the vital supplies moved forward.

The movement of the main army supply depots into GERMANY and across the RHINE to the vicinity of FRANKFURT was initiated in the latter part of the month to further shorten Ordnance supply lines of the Army.

The Ordnance supply situation in general was very favorable due to receipts from Communications Zone and the elimination of many items from the critical list. The supply of combat vehicles, in particular, was excellent and afforded an opportunity to furnish immediate replacement to divisions on combat losses.

Ammunition supply under the fast-moving tactical situation into GERMANY and across the RHINE necessitated the continual establishment of ASPs further forward in support of combat units. Mileage covered by the transportation of this vital item during the latter part of the month exceeded all previous records within the Army.

SECTION II

ADMINISTRATION SUB-SECTION

Five teams consisting of one officer and one enlisted man each, which were made available from the Zone of Interior through the Ground Force Reinforcement System for the purpose of instructing on the operation, care and maintenance of the M29C Cargo Carrier, were distributed as follows in order to locate them with proper unit to carry out their primary mission:

4 Teams - 69th Ordnance Group
1 Team - 70th Ordnance Group

A liaison group consisting of two officers and the Operations Subsection complete moved forward with the Tactical Echelon from LUXEMBOURG CITY (P-81) to OBERSTEIN (L-72), GERMANY on 27 March.

A quota for seven day leaves of absence at the UNITED STATES RIVIERA Recreational Area, CANNES, FRANCE, for personnel of Army Ordnance units was received on 28 March and allocated as follows:

	Officers	Enlisted Men
69th Ordnance Group	2	20
70th Ordnance Group	2	20
82nd Ordnance Group	1	10

On 29 March, the Ordnance Officer and Forward Ammunition Subsection moved from LUXEMBOURG CITY (P-81) to OBERSTEIN (L-72), GERMANY to join the forward tactical echelon. On this same date the Assistant Ordnance Officer, Supply, Maintenance, Administration, and rear Ammunition Sub-sections moved with the rear supply echelon to the city of TRIER (L-12), GERMANY. This resulted in the Ordnance Section being again divided into two echelons similar to the setup used in operations across FRANCE.

Personnel in the Ordnance Section remained the same as in previous months, with five enlisted men being attached from Army Ordnance units, and attached teams remaining as previously reported.

Officers from Army Ordnance units attended courses at the Army Information Staff School at Cite Universitaire in PARIS as follows:

Information-Education..... 5
Instructor Training..... 3

Quotas for thirty (30) day furloughs in the UNITED STATES for rehabilitation, recuperation, and recovery, under the provisions of European Theater of Operations Circular 121, 24 December 1944, were allotted to Army Ordnance units as follows:

	Current	Accumulative Total
69th Ordnance Group	7	20
70th Ordnance Group	6	19
82nd Ordnance Group	3	9

Casualties due to enemy action during this period were as follows:

	Current		Accumulative Total	
	Killed	Wounded	Killed	Wounded
Officers	0	2	3	4
Enlisted Men	1	8	35	74

No Meritorious Service Unit Plaques were awarded to Ordnance units during the month.

Digitized by Google

The status of awards by the close of the month were as follows:

	Current	Accumulative Total
Officers:		
Silver Star	0	2
Soldiers Medal	0	0
Bronze Star	13	68
Purple Heart	2	7
Enlisted Men:		
Silver Star	0	0
Soldiers Medal	2	4
Bronze Star	7	96
Purple Heart	9	109

French decorations for services rendered in the liberation of FRANCE were awarded Ordnance personnel as follows:

Legion of Honor..... 1
Croix de Guerre..... 25

SECTION III

OPERATIONS SUB-SECTION

On 10 March 1945, the 2853rd Ordnance Ballistic and Technical Service Detachment was activated at DETTINGEN (M-89), LUXEMBOURG per authority received from Headquarters, European Theater of Operations through Headquarters, Twelfth Army Group. The unit was attached to Third U. S. Army from Headquarters, Communications Zone and further attached to the 66th Ordnance Group for operations and administrative control. Personnel for this unit was derived from a provisional ballistic team which was operating in the Army area.

The great volume of Prisoners of War captured by advancing troops at this time presented the Provost Marshal with a serious transportation problem and arrangements were made whereby all trucks from Army Ordnance units returning from forward installations, would pick up prisoners from the Division and Corps concentration areas and return them to Prisoner of War enclosures in the rear Army area.

Movement of the 26th Ordnance Battalion, which incorporates the three Main Army Supply Depots, and has been located in METZ (M-85), was started during this period in order to shorten supply lines to the rapidly advancing combat troops of the Army. It was originally planned to locate these depots in the city of MAINZ (W-95), GERMANY, but due to the highly successful forward movement of the Army, and to further shorten the supply lines, it was decided to advance even further to the City of FRANKFURT (M-67) GERMANY. It was anticipated that at least two weeks would be required to complete the movement of these large depot installations which were stocked with approximately 12,000 tons of Ordnance material.

Forward movement of the vehicle replacement pool, operated by the 317th Ordnance Battalion, from METZ (M-85) to ALTEY (M-22) was also started during the latter part of the month. Relocation of this installation, consisting of approximately 2,200 general purpose vehicles, presented a major task due to the distance of 125 miles to be traveled, plus the exceedingly heavy traffic already placed on highways by the forward movement of the Army. Combat vehicles were given priority in this movement as they were currently needed for replacement of battle losses.

The following Ordnance units were assigned to Third U. S. Army during the month:

89th Ord HM Co (Pa)	163rd Ord Bn
506th Ord MAM Co	164th Ord Bn
543rd Ord MAM Co	422nd Ord Evac Co
125th Ord HM Co (Tk)	271st Ord HM Co
67th Ord Am Co	647th Ord Depot Co
545th Ord MAM Co	

At the close of the month, Ordnance Groups providing supply and maintenance to the Army were organized as follows:

69th Ordnance Group

10th Ordnance Bn	514th Ordnance Bn	133rd Ordnance Bn
93rd Ord HM Co	15th Ord HM Co	2nd Ord HM Co
194th Ord Dep Co	47th Ord HM Co	116th Ord HM Co
271st Ord HM Co	257th Ord HM Co	129th Ord HM Co
514th Ord HM Co	401st Ord Dep Co	69th Ord Dep Co
547th Ord HM Co	514th Ord MAM Co	551th Ord MAM Co
615th Ord MAM Co	514th Ord MAM Co	545th Ord MAM Co
615th Ord MAM Co		

163rd Ordnance Bn	164th Ordnance Bn	516th Ordnance Bn
277th Ord HM Co (Pa)	131st Ord HM Co (Pa)	125th Ord HM Co (Tk)
93rd Ord Maint Co	293rd Ord Maint Co (AA)	277th Ord HM Co (AA)
562nd Ord HM Co (Tk)	501st Ord HM Co (Tk)	281st Ord HM Co (AA)
	520th Ord HM Co (Pa)	513rd Ord HM Co (Pa)
	89th Ord Dep Co	537th Ord HM Co (Pa)
	514th Ord MAM Co	565th Ord HM Co (Tk)
	615th Ord MAM Co	647th Ord Dep Co
	545th Ord MAM Co	514th Ord MAM Co
		545th Ord MAM Co

70th Ordnance Group

526th Ordnance Bn	66th Ordnance Bn	26th Ordnance Bn
905th Ord HM Co (AA)	185th Ord Evac Co	514th Ord Dep Co
531st Ord HM Co (Tk)	171st Ord Evac Co	347th Ord Dep Co
553th Ord HM Co (Pa)	145th Ord Evac Co	833rd Ord Dep Co
86th Ord MAM Co	143th Ord Evac Co	941th Ord Dep Co
941th Ord MAM Co	893th Ord MAM Co	Det. B, 154th Fire Repair Co
514th Ord MAM Co	877th Ord MAM Co	Det. C, 154th Fire Repair Co

317th Ordnance Bn	532nd Ordnance Bn	154th Ordnance Bn
2853rd Ord MAM Co	No attached units	888th Ord HM Co (Pa)
554th Ord HM Co (Tk)		902nd Ord MAM Co
560th Ord HM Co (Tk)		
514th Ord MAM Co		
521st Ord HM Co (Pa)		
552nd Ord HM Co (Tk)		

At the end of March, ASPs, Ammunition Depots, and Railheads were located as follows:

ASP No. 35 — In DIEDENHOFEN on GC 73 (T-930826) - Operated by 576th, 619th Ord Am Cos - Serving XX Corps.

ASP No. 38 — In MANDEN on No. 6 (P-763156) - Operated by 573rd, 575th, 592nd Ord Am Cos - Serving XII Corps.

ASP No. 45 — In WENSERWEILER on Highway L-262 (L-733811) - Operated by 675th Ord Am Co - Serving XII and VIII Corps.

Am Dep No. 46 — In BELLSTEIN on Highway L-118 (W-160350) - Operated by 574th, 626th Ord Am Cos - Serving XII Corps.

RHD A-8 — In MONDORF (Q-169920) - Operated by 620th Ord Am - Serving XX Corps.

ASP No. 48 — In BOLLENDORF off Highway 427 (L-823689) - Operated by 572th Ord Am Co - Serving VIII Corps.

Personnel and vehicles present on the Continent at the close of this period were as follows:

Officers.....	641
Enlisted Men.....	12,497
T/E Vehicles.....	2,678
Total Vehicles.....	3,000

Due to the increasing demands for Ordnance Service, it was necessary to employ the following civilian personnel in Army Ordnance units:

Machinists and Mechanics.....	366
Laborers.....	1,042

SECTION IV

SUPPLY SUB-SECTION

As a result of improved weather conditions and repairs to roads and highways throughout the Army road net, it became possible to increase the use of tank transporters and heavy equipment for the movement of combat vehicles and supplies to forward installations.

The supply of combat vehicles, particularly medium and light tanks, was very good throughout the month and the status of medium tanks permitted prompt replacements of battle losses, plus an opportunity to use new tanks on hand in the combat vehicle pool to replace tanks which have been in the hands of troops during all of the past operations in FRANCE, LUXEMBOURG, BELGIUM, and GERMANY and require a complete overhaul.

The critical shortages of tires (all sizes), tubes (all sizes), hot patches, brake parts, and brake fluid from the previous month were relieved during this period as the result of incoming shipments from Communications Zone.

In anticipation of future fast-moving operations, requirements were placed on Communications Zone for a reserve supply of 200 sets of medium tank track and 500 bogie wheel assemblies for medium tanks.

Army Ordnance procurement activities were curtailed during this period due to the limitation placed on procurement at Army levels by The General Purchasing Agent, European Theater of Operations. This permitted only contracts which were not in excess of $1,000 to be negotiated by Army Ordnance personnel. However, the Chief Ordnance Officer, European Theater of Operations, granted special permission to the Army Ordnance Officer to negotiate contracts at the Army level not to exceed $2,000. Contracts in excess of that amount were to be submitted to the Chief Ordnance Officer for approval and possible consolidation with total requirements for similar items in the entire theater.

Supply of fire control and sighting equipment, which had previously been critical, showed improvement and continued to do so during the remainder of the month due to receipts of items on back order.

The situation on 2½ ton trucks was critical at times during the month but was relieved by receipts from Communications Zone to meet necessary requirements.

Two Carriages, Motor, T-41, were issued to the 6th Cavalry Group, in excess of authorized allowances for the purpose of testing to determine desirability for reconnaissance work with the Cavalry. Forty of these motor carriages were allocated by Twelfth Army Group for issue to Tank Destroyer Battalions (Towed) equipped with 3" Guns.

The conversion of seven separate Cavalry squadrons and the reconnaissance squadrons of three armored divisions from M-24 to M-24 Light Tanks was completed. This provided a faster, more maneuverable tank mounting a 75mm Gun instead of the former vehicle mounting a 37mm Gun.

Total receipts and issues of the following major items during the month were:

	Received	Issued
Light Tanks	109	162
Medium Tanks	311	345
Combat Vehicles	369	397
Artillery (over 57mm)	107	100

Movement of the main army supply depots from METZ (M-85), FRANCE to MAINZ (W-95), GERMANY was started in the latter part of the month. The vehicle replacement pool was also placed in the process of being moved forward from METZ (M-85) to a new location in ALTEY (M-22), GERMANY at this time.

SECTION V

MAINTENANCE SUB-SECTION

All forward Ordnance maintenance units were moved into GERMANY with the exception of one company which was scheduled to move at an early date in the following month. This unit has been assigned to set up a main Army Ordnance control and collection point east of the RHINE River.

Digitized by Google

DECLASSIFIED

In order to facilitate movement in support of current operations, Ordnance mobile tire repair teams were organized to constantly patrol all main and auxiliary supply routes. These teams were equipped with hot patches, tubes, tires, and air compressors. To the extent of availability, tires and tubes were mounted on wheels in order to effect a direct exchange with vehicles having flat tires.

A repair and replacement program on all two and one-half ton trucks in the Quartermaster Truck Companies was initiated. An Army Ordnance maintenance company was designated to receive, repair, and reissue trucks to these companies at the rate of approximately two companies per week.

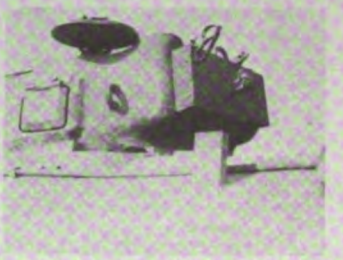
A maintenance service station was set up in ST WENDEL (Q-59) for the servicing of replacement vehicles being driven forward from the rear Army Ordnance supply depots. Vehicles were refueled, provided with a maintenance check, and the drivers were messed and billeted at this installation.

The M7 Generator, used with the 90mm AA Guns, was in critical supply due to the shortage of spare parts for the Hercules engine powering this unit. An experiment was conducted in which an M7 Generator was modified to operate with a Cadillac V-8 tank engine. The results were most satisfactory to date and further experiments were being conducted to determine whether or not it would be desirable to substitute the Cadillac or a White half-track engine in lieu of the Hercules.

Through an arrangement with the Seventh U. S. Army, a number of their salvaged M4A3 medium tanks were made available to Third U. S. Army Ordnance. This enabled the continuance of the modification of medium tanks with additional frontal armor plate as mentioned in Chapter IX.

At the direction of the Chief of Staff, a survey of approximately 100 tank casualties, both American and German, was completed. The tanks selected for this survey were those that had been damaged in the HARTGEN (P-55) area. The final report as submitted contained specific data as to the ratio of American versus German tanks rendered inoperative, caliber of projectiles causing damage, and the angle of impact.

Among the items received on local contracts, placed by the maintenance section, were 146,000 brass valve caps, 4,000 electrical control mechanisms for 7-3/4 Rocket Launchers and 150 adapter plates for tank periscope heads.



The project of installing 76mm guns in lieu of 75mm guns in medium tanks, M4A3E2, was continued with a total of forty-five tanks being completely modified. The added weight due to the longer, heavier 76mm gun tube made it necessary to place a counterbalance on the rear of the gun and on the outside rear of the turret. Lead for the counterbalance on the rear of the gun was obtained from salvage storage batteries, while the counterbalance on the rear of the turret was effected by means of heavy steel plate procured from civilian sources. Gun tubes were supplied through normal channels of supply and from salvage tanks. Sighting equipment for the 76mm Gun was not available, therefore 3" gun telescopic sights were substituted to eliminate this problem. The main difficulties encountered were the modification and rearrangement of the ammunition rack and the relocation of the radio which was removed from the turret and placed in the drivers compartment. The bustle in the turret in which the radio was originally located was converted to provide storage for seven "ready rounds" of ammunition. Approximately seventy-five man hours were required to complete the modification.

Ordnance material reconditioned by Third U. S. Army Ordnance maintenance units during March was as follows:

	MARCH	ACCUMULATIVE TO DATE
General Purpose Vehicles	11,437	60,330
Combat Vehicles	3,491	14,112
Artillery	1,882	10,236
Small Arms	86,758	141,091
Instruments	3,926	26,557

Maintenance responsibility was divided as follows:

East of the RHINE River to the 69th Ordnance Group and West of the RHINE to the 70th Ordnance Group. Road patrols and radio repair teams were available in all areas.

Rear view of modified turret showing counterbalancing required for the installation of the longer and heavier 76mm gun.

M4A3E2 Medium Tank shown with 75mm gun before being modified.

M4A3E2 Medium Tank completely modified with 76mm gun. Note the complete rounds on hull showing comparison between 75mm and 76mm shells.

Interior view of turret showing bustle with radio removed and ammunition rack for seven "ready rounds" of 76mm installed.

The location of main maintenance installations during March were as follows:

SECTION VI

AMMUNITION SUB-SECTION

During the early part of March the tactical situation was such that the establishment of large ASPs was not deemed advisable. A large part of the Army was located North of the MOSELLE River and indications were that the eventual axis of the Army's advance would be south of this river. However, to relieve the combat troops of the burden of transporting supplies over almost impassable roads, two temporary ASPs Nos. 47 and 48, were established in close support of the troops north of the MOSELLE.

The next ammunition problem confronted was that of providing support for a crossing of the MOSELLE for III Corps which would attack up the west bank of the WITTE River to cut off the enemy in front of the German border and their water barrier. In order to provide this support, ASP No. 45 was established a short distance northeast of the confluence of the WITTE and MOSELLE Rivers. This installation while only short lived, proved very valuable as it adequately supported this highly successful drive up the WITTE. Also, it later provided a source of supply for the VIII Corps when that Corps crossed the WITTE.

The fast-moving tactical situation, plus the status of rail lines in the Forward Army area, presented the Army Ordnance Officer with problems highly reminiscent of the August campaign in FRANCE. Tank transporters, M-25 Trailers and additional provisional truck companies, formed from organic transportation of Army Ordnance units, were diverted to hauling Class V supplies to ASPs No. 47 and 48, which were newly established close to the WITTE River. The other ASP, No. 47, was started west of the WITTE, however, after approximately 500 tons of ammunition had been installed, the Army boundary was changed and this ASP never opened; all ammunition enroute was diverted to ASP No. 46.

As the Army made its historic crossings of the WITTE and plunged deeper into enemy territory, it became necessary to establish an ASP across this river. ASP No. 49 was opened near ASSWEILER (R-78). This installation was soon too far to the rear for the fast-moving armor, therefore ammunition enroute to restock the ASP was diverted further east to a new location which would become ASP No. 50.

During this historic month Third Army ammunition units handled a total of 130,582 long tons of ammunition. Class V receipts by Third Army from the Communications Zone totaled 31,272 long tons. Trucks hauling ammunition to ASPs accumulated a total of 1,408,789 truck miles during the month. Of this total, 587,819 miles were traveled during the week 25 to 31 March, which is probably the greatest mileage accumulated by any Army for ammunition surely during a comparable period. Accumulative mileage total to date since 19 November 1944 is 6,100,892.

CHAPTER II
APRIL OPERATIONS

SECTION I - GENERAL

The rapid forward movement in support of the highly successful combat troops of the Army continued to create a problem of transportation of vitally important supplies as in the previous month. This was further abetted by the movement of the Army boundaries to the southeast and the mission assigned Third U. S. Army for the drive into the "REICH" area.

Numerous small pockets of enemy troops throughout the Army area resulted in Ordnance personnel being involved in actual combat with the enemy on several occasions, the outstanding action taking place when an ASP was captured by the enemy, held for two days, and then recaptured.

The extremely large quantity of enemy Ordnance installations and material captured as the Army advanced presented a serious problem and necessitated the utilization of a great number of Ordnance troops in maintaining security.

The policy of establishing small ASPs well forward during the fast moving tactical situation was continued. The number of ASPs established and operated during this month exceeded all previous figures for a like period since the Army became operational.

SECTION II

ADMINISTRATION SUB-SECTION

On 5 April the forward echelon of the Ordnance Section moved from OFFENBURG (L-72) to FRANKFURT (M-56), GERMANY. On 6 April the rear echelon moved from "WITT (L-12) to FRANKFURT (M-56), GERMANY, and set up in a casserne located about one mile from the forward echelon. The forward moved again on the 11th to HERSFELD (N-96) and thence to WIESBADEN (O-31) on the 20th. On 26 April the rear echelon moved to DARMSTADT (N-91) where they were set up with the supply services about one half mile from the casserne housing the now combined forward and tactical echelons.

Personnel in the Ordnance Section remained the same as in previous months, with five enlisted men being attached from Army Ordnance units, and attached teams remaining as previously reported.

Officers from Army Ordnance units attended courses at the Army Information Staff School at Cite Universitaire in PARIS, FRANCE, as follows:

Information-Education..... 1

Quotas for thirty day furloughs in the UNITED STATES for rehabilitation, recuperation and recovery, under the provisions of European Theater of Operations Circular 124, 21 December 1944, were allotted to Army Ordnance units as follows:

	Current	Accumulative Total
40th Ordnance Group	3	24
70th Ordnance Group	2	21
82nd Ordnance Group	2	11

Quotas for seven days leave of absence at the UNITED STATES RECREATIONAL Recreational Area, CANNES, FRANCE, for personnel of Army Ordnance units were received and allocated as follows:

	April		Accumulative to Date	
	Officers	EM	Officers	EM
40th Ordnance Group	5	40	7	60
70th Ordnance Group	5	38	7	58
82nd Ordnance Group	2	10	3	29

Casualties due to enemy action during this period were as follows:

	Current		Accumulative Total	
	Killed	Wounded	Killed	Wounded
Officers	0	0	3	4
Enlisted Men	10	82	45	96

In addition two enlisted men were reported as missing in action.

The status of awards by the close of the month were as follows:

	Current	Accumulative Total
Officers:		
Silver Star	0	2
Soldiers Medal	0	0
Bronze Star	4	72
Purple Heart	0	7
Enlisted Men:		
Silver Star	0	0
Soldiers Medal	0	4
Bronze Star	15	111
Purple Heart	32	141

French decorations for services rendered in the liberation of FRANCE were awarded Ordnance personnel as follows:

Croix de Guerre..... 4

Accumulative totals of French decorations awarded were:

Legion of Honor..... 1
Croix de Guerre.....29

Meritorious Service Unit Plaques were awarded to the following Ordnance Units:

91,496th Ordnance Medium Automotive Maintenance Company
90,11th Ordnance Heavy Automotive Maintenance Company
91,11th Ordnance Heavy Automotive Maintenance Company

Accumulative totals of this award to date were:

Group Headquarters.....	None
Battalion Headquarters.....	1
Companies.....	16
Detachment, Tire Repair.....	1
Bomb Disposal Squads.....	2
TOTAL	20

SECTION III

OPERATIONS SUB-SECTION

The 26th Ordnance Battalion, operating the three main army depots, was still engaged in making the move from FRANKFURT (M-56) to a new location in the vicinity of EISENACH (N-76) when the tactical plan of the Army was changed. The new direction of attack caused the entire Army to execute a ninety degree turn to the southeast. The forward elements of the Army moved so swiftly that it was again necessary to relocate the depots and the main Army combat vehicle pool. The depots were set up at FULDA (O-90) and the main vehicle pool, operated by the 517th Ordnance Battalion, was established in the vicinity of HUNFELD (P-90).

During the month of April all Third U. S. Army ammunition companies were reorganized under T/O & E 9-17, dated 17 February 1945.

Personnel and vehicles present on the Continent at the close of this period were as follows:

Officers	661
Enlisted Men	19,344
M/V Vehicles	2,815
Total Vehicles	3,179

Digitized by Google

The following Ordnance units were assigned to Third U. S. Army during the month:

Eq. & Eq. Det., 161st Ordnance Battalion
134th Ordnance Medium Maintenance Company
488th Ordnance Evacuation Company
699th Ordnance Heavy Maintenance Company (Tk)
928th Ordnance Heavy Automotive Maintenance Company

Civilian employees working for Third U. S. Army Ordnance had decreased considerably due to the shifting of Ordnance units into GERMANY. The total employed at the end of April was as follows:

Machinists and Mechanics	94
Laborers	250

At the close of April ASPs were located as follows:

ASP No. 35 - 1½ mi SW KULMBACH (O-6407?1) off Hwy 85 - Operated by 574th, and 596th Ord Am Cos - Serving XII Corps.

ASP No. 56 - 3/4 mi SW HAIDENDORF on Hwy 4 (O-390302) - Operated by 576th, 592nd, 619th, and 671th Ord Am Cos - Serving XX and III Corps.

ASP No. 57 - In HILPOLSTEIN off Hwy A3, (T-516713) - Operated by 570th and 575th Ord Am Cos - Serving III Corps - Open.

ASP No. 58 - In NEUNKIRNS, N off Hwy 85, (U-37?935) - Operated by 620th Ord Am Co and 3076th Ord MWD Co - Serving XII Corps.

At the close of the month, Ordnance Groups providing supply and maintenance to the Army were organized as follows:

69TH ORDNANCE GROUP

10th Ordnance Battalion	514th Ordnance Battalion	193rd Ordnance Bn
184th Ord Dep Co	15th Ord MM Co	2nd Ord MM Co
271st Ord MM Co	52nd Ord MM Co	116th Ord MM Co

560th Ord HM Co (Tk)	
877th Ord HAM Co	
3492nd Ord MAM Co	

SECTION IV

SUPPLY SUB-SECTION

The supply situation was very critical during this period due to the lengthened supply lines, caused by the exceedingly swift advances of the combat troops, and the continuous movement of the main army supply depots. It became necessary to move the three main army depots and the main army combat vehicle pool twice in less than thirty days. As a minimum of ten days was required for the complete movement of these heavy installations all the main supply depots were on the move practically twenty days out of the month. To ensure that sufficient replacement vehicles would be readily available to the using units, a number of full track vehicles were transported directly to the forward depot companies bypassing the new location of the vehicle pool then being established at NEUNKIRNS (T-39). Thus using units were enabled to draw replacement vehicles with a minimum of time and travel.

The assignment of the III Corps to the Army necessitated a long road march as this Corps had previously been engaged in the NETH. Hence, many III Corps units were suffering from a serious shortage of tank track and bogie wheels upon arrival in the Third U. S. Army zone. Some relief was obtained by shipments from the Communications Zone and by stripping salvaged tanks in the collection points. However, these items were still in short supply at the close of the month.

A number of M24 light tanks were issued to replace losses on the light tank M5A1 and as replacement on battle losses of the M24 where such issues would not jeopardize the minimum required reserve levels.

Ninety heavy tanks, the new T26E3 (Pershing), were released to the Third U. S. Army at this time. On the orders of the Chief of Staff, forty of these were delivered to the 11th Armored Division and the remainder held in the main army combat vehicle pool. Ten modified tank transporters, for hauling the T26E3 tank, were also released at this time.

DECLASSIFIED

45-TON HEAVY TANKS (PERSHING) READY FOR ISSUE

The unprecedented number of enemy ordnance installations, overrun in the rapid advance of the Army, presented many complex problems. Sufficient personnel were not available to handle all the details involved in processing, investigating, and guarding such captured enemy ordnance as factories, ammunition dumps, abandoned weapons, and large warehouses. Such items of abandoned equipment that presented a threat to security were reported to the 82nd Ordnance Group for immediate action. Arrangements were completed at the end of the month for the assignment of an Ordnance Battalion to assume control of all captured enemy ordnance materiel.

The status of GMC trucks and major unit assemblies, already critical, was further aggravated by the great distances traveled by Army vehicles due to the long supply lines and the constantly shifting Army boundaries. Back orders on GMC trucks had reached the total of 700 by the end of April.

Total receipts and issues of major items for the month were as follows:

	Received	Issued
Light Tanks	61	72
Medium Tanks	142	255
Combat Vehicles	415	645
Artillery (over 57mm)	29	44
General Purpose Vehicles	3,377	3,528

Digitized by Google

SECTION V

MAINTENANCE AND SERVICING

All Ordnance maintenance units and installations had moved east of the Rhine by the first week in April. The continuous rapid advance of the Army necessitated the constant shifting of maintenance troops throughout the month. Many of the companies moved as often as seven times in the thirty day period. Ordnance service was constantly pushed forward and at no time were the tactical troops without adequate and close Ordnance support.

The Army Center began collecting a pool of the new Pilot Tarzan heavy tanks, a central unit set up at the Army main combat vehicle park for the purpose of training crews in the maintenance and operation of this vehicle and the firing of the 90mm gun mounted therein. This school was conducted by personnel from the Aberdeen Proving Ground and the Office of the Chief of Ordnance, Washington, D. C. The training of thirty tank crews was completed during this period.

Evacuation system parts for the medium M4 tanks being in the principal item, Ordnance personnel were sent into the old Ordnance Depot at Metz to locate parts [illegible] obtain these parts from salvage. This installation was taken over from the Seventh U. S. Army and the Continental Advance Section. Considerable difficulty was obtained in removing tools, heavy, and readily repairable Pilot "A" M4 tank engines from salvaged tanks. The location of these critical tank parts enabled the Third U. S. Army Ordnance to clear many combat tanks and gun line.

A survey, similar to that conducted in the previous month, was conducted on all enemy tanks located in the Third U. S. Army area east of the Rhine. All tanks were thoroughly checked to ascertain the serial numbers, type and either of gun or machine weapons, and the cause of injury. The results of this survey were turned over to the Commanding General, Third U. S. Army.

Ordnance material reconditioned by Third U. S. Army maintenance units during April was as follows:

	April	Accumulative to Date
General Purpose Vehicles	[illegible]	[illegible]
Combat Vehicles	[illegible]	[illegible]
Artillery	[illegible]	[illegible]
Small Arms	[illegible]	[illegible]
Instruments	[illegible]	[illegible]

Maintenance responsibility was changed twice during the month. The zone of responsibility from 1 through 10 April remained the same as the previous month. Axis from 10 April to 1 April was as follows: Line running from [illegible] (R-62) to Mayen (R-48). Area east of this line to the 69th Ordnance Group and west of the line to the 69th Ordnance Group. Axis from 1 to 30 April was as follows: Route 51 running through Aachen (R-18), Bonn (R-28), Limburg (S-08) to Czech Border (P-62). Area north of Route 51 to 7th Ordnance Group and the area south of the line to the 69th Ordnance Group. Most materiel was maintained on all main routes in the areas and main repair depots were available for the repair and installation of radios.

The location of the main maintenance installations during April was as follows:

3rd Ordnance Group

SECTION VI

AMMUNITION SUB-SECTION

On the first day of April, ASP No. 49, which was operated by the 620th Ordnance Ammunition Company and situated near a large pocket of enemy troops, was overrun by the enemy when they attempted to escape to the East. The enemy troops made prisoner the one officer and seventy enlisted men who were operating the ASP and continued to hold the installations until the following day when a task force was sent in to clear the pocket. The ammunition in the ASP was not tampered with nor bothered in any manner while under enemy control, but two stacks were damaged by artillery fire during the activities. Losses to Ordnance personnel as a result of this action amounted to a total of eleven enlisted men killed and wounded.

As the Army continued the rapid advance into the heart of GERMANY the problem of supporting the combat units over long supply lines was accentuated. In the first week of April no railhead had been established east of the RHINE. The policy of establishing small ASPs well forward and leapfrogging these installations was continued. The most forward railhead was at GAU ALGESHEIM (M-25) west of the RHINE and from this point all ammunition was hauled by trucks. Road and bridge conditions did not permit the use of heavy tank transporters across the RHINE.

Rail service up to the RHINE was adequate but ammunition was arriving at the forward railhead in quantities that could not be handled by the available trucking. This was partly due to the long turn around time in hauling to forward ASPs. To relieve the rail situation and to have a balanced stock of ammunition in the Army rear area, Depot No. 46 at WOLLSTEIN (M-13) was built up from the overflow at the railhead. This depot proved extremely valuable as a source of supply for specific items that were needed to supplement the normal stocks of the forward ASPs.

On 10 April, ASP No. 50 at KIRCHHEIM (M-25) near HENNFELD (M-35) was attacked by a small enemy force. The object of the attack was apparently an attempt to obtain vehicles. Five men were hospitalized with minor wounds and one truck was missing as a result of this raid.

The change in the Army boundary on 17 April caused a quick shifting of ammunition installations. The flow of stocks was immediately diverted to the southeast and ASPs 55, at KULBACH (O-67), and 56, at BAIKENDORF (O-52), were opened in support of the XII and XX Corps respectively. The latter proved to be a very valuable installation in the ensuing operation. As the Army completed its ninety degree pivot to the southeast, this ASP was in the advantageous position of being able to serve the III Corps, recently assigned to the Army for the drive into the area of the HERCYNIA.

The shift in Army boundaries found three Third U. S. Army ASPs in the First U. S. Army zone of operations. Two of these installations, Numbers 51, at SCHWABBACH (M-82), and 52 at HEWTWEDA (M-87) were depleted by the transfer of stocks to the new ASPs in support of the XII and XX Corps. The third ASP, number 54, at HIRSCHFELD (M-16), was built up to an approximate 1,500 ton level in order to provide support to the VIII Corps until such time as the First U. S. Army could take over the supply of the Corps.

The tactical troops continued the swift advance towards the HERCYNIAN area and ammunition supply was once again pushed forward. ASP 57 at HILPOLSTEIN (T-97) was opened in support of the III Corps and number 58 at HEWTWEDA (O-59) was established to serve the XII Corps. A new railhead, east of the RHINE, was established at BELL (M-53), near HUTHEIMER (M-53). The new railhead greatly reduced the hauling distances to the forward ASPs.

The month of April found Third U. S. Army Ordnance personnel operating more ammunition installations at any one time than they had since the Army became operational. This was caused by the fast movement of the tactical troops, the constantly shifting Army boundaries, limited rail facilities and the fact that Advance Section Communications Zone were not operating ammunition installations in GERMANY. A total of ten ASPs had been opened and operated during the month.

A resume of the ASPs in operation at the end of April follows:

Installation	III Corps	XII Corps	XX Corps
Depot		46	
ASP		51	52
ASP		55	54
ASP	57	58	56

A new record for truck miles traveled was established as a total of 2,539,486 miles were accumulated by vehicles hauling ammunition. The total ammunition handled by Third U. S. Army Ordnance units amounted to 97,588 long tons while receipts from Advance Section Communications Zone amounted to 11,785 long tons for the month of April.

CHAPTER 12
MAY OPERATIONS

SECTION I - GENERAL

The closing period of the campaign in GERMANY resulted in considerably light combat losses of Ordnance material, thereby decreasing replacement requirements and subsequent forward movement of general supplies and combat vehicles. However, main depot units in the process of advancing were continued in movement. Maintenance units continued to be very active in furnishing Ordnance service on general purpose vehicles.

Enemy Ordnance installations and material continued to be a serious problem which required utilization of Ordnance troops for security purposes.

The rapid disintegration and final defeat of the Wermacht was reflected in the exceptionally low figures on receipts, issues, and handling of ammunition during this final period.

SECTION II

ADMINISTRATION SUB-SECTION

Upon movement of the forward echelon of Third U. S. Army Headquarters from ENLAUFEN (O-51) to CRIMMITSCHAU (T-85), a small Ordnance Section liaison group, consisting of one officer and two enlisted men, were sent forward. The balance of the Ordnance forward echelon joined the rear echelon and remained in ENLAUFEN with the other supply services.

Quotas for thirty day furloughs in the UNITED STATES for rehabilitation, reorganization, and recovery, under the provisions of European Theater of Operations Circular 128, 24 December 1944, were allotted to Army Ordnance units as follows:

	Current	Accumulative Total
69th Ordnance Group	2	85
70th Ordnance Group	1	22
82nd Ordnance Group	1	12
Total	4	99

Final figures on Ordnance casualties due to enemy action during the period 1 August 1944 to 8 May 1945 were as follows:

	Killed	Wounded
Officers	3	4
Enlisted Men	45	96
Total	48	100

In addition, two enlisted men were reported as missing in action.

The totals for decorations awarded Ordnance personnel during the campaign were as follows:

Decoration	Officers	Enlisted Men
Silver Star	2	8
Soldiers Medal	0	2
Bronze Star	77	128
Purple Heart	7	141

Meritorious Service Unit Plaques were awarded to Ordnance units during the campaign as follows:

Group Headquarters	None
Battalion Headquarters	1
Companies	16
Detachment, Tire Repair	1
Bomb Disposal Squads	2
Total	20

Total French decorations for services rendered in the liberation of FRANCE were awarded Ordnance personnel during the campaign as follows:

Legion of Honor	1
Croix de Guerre	89

The authorized strength under which the Ordnance Section was operating at the close of hostilities was:

Officers	19
Warrant Officers	1
Enlisted Men	30

In addition five enlisted men were attached from Army Ordnance units to augment the above. Ordnance Technical Intelligence Team No. 3 from Headquarters Communications Zone, consisting of four officers and seven enlisted men, was also attached for intelligence work on enemy equipment.

Digitized by Google

SECTION III

OPERATIONS SUB-SECTION

During this period the addition of the V Corps to Third U. S. Army resulted in Third U. S. Army receiving the following Ordnance units which were attached to the 69th Ordnance Group:

86th Ordnance Battalion
177th Ordnance Battalion
127th Ordnance Medium Maintenance Company
252nd Ordnance Medium Maintenance Company
295rd Ordnance Medium Maintenance Company
463rd Ordnance Evacuation Company
526th Ordnance Evacuation Company
547th Ordnance Medium Automotive Maintenance Company
202nd Ordnance Depot Company
[illegible]th Ordnance Medium Maintenance Company (AA)
[illegible]th Ordnance Heavy Maintenance Company (PA)
557th Ordnance Heavy Maintenance Company (Tk)
897th Ordnance Heavy Automotive Maintenance Company
587th Ordnance Ammunition Company
16th Ordnance Bomb Disposal Squad
17th Ordnance Bomb Disposal Squad

Ordnance personnel and vehicles present on the Continent at the completion of operations were as follows:

Officers	777
Enlisted Men	15,952
T/E Vehicles	3,[illegible]76
Total Vehicles	3,[illegible]46

Civilian employees in Third Army Ordnance Service were as follows:

Machinists and Mechanics	[illegible]4
Laborers	389

Operations under Third Army Ordnance Service at the cessation of hostilities were organized as follows:

69TH ORDNANCE GROUP

10th Ordnance Battalion

[illegible]4th Ord Dep Co
871st Ord MM Co
[illegible]th Ord MM Co
[illegible]63rd Ord MM Co
[illegible]34th Ord MAM Co
[illegible]39th Ord MAM Co

84th Ordnance Battalion

[illegible]4th Ord HM Co (AA)
[illegible]84th Ord MM Co (Tk)
[illegible]4th Ord MM Co (PA)
[illegible]97th Ord MM Co (Tk)
897th Ord MAM Co

177th Ordnance Battalion

127th Ord MM Co
[illegible]82nd Ord Dep Co

90th Ord HD Squad
[illegible]15th Ord HC Squad

Units attached to 82nd Gp Hqs

[illegible],90th Ord MAM Co
291st Ord HD Platoon
267th Ord Mine Detachment

SECTION IV

SUPPLY SUB-SECTION

The rapid disintegration and final defeat of the German Army during this concluding period of operations was marked by considerably light combat losses of Ordnance material, thereby decreasing replacement requirements and subsequent forward movement of general supplies and combat vehicles. However, main depot units in the process of movement were continued forward to the general vicinity of [illegible] (T-69) and POUTE (O-30).

For the purpose of portraying the tremendous task involved in Ordnance general supply to the Army, the following figures representing the issue of major items for the period 1 August 194[illegible] to 8 May 1945 are presented:

Major Items	Total Issued
General Purpose Vehicles	26,905
Combat Vehicles	7,781
Artillery Pieces	4,[illegible]58
Small Arms	197,930
Spare Parts (long tons)	47,611

SECTION V

MAINTENANCE SUB-SECTION

During the closing period of hostilities maintenance units located in the FRANKFURT (M-56) area were being moved forward to the vicinity of [illegible] (T-69).

Maintenance work on general purpose vehicles was extremely heavy due to the extensive use of truck transportation over extended supply lines during the final weeks of the campaign.

A summar of Ordnance material repaired by Army Ordnance units during the period 1 August 194[illegible] - 8 May 1945 is shown below:

Major Items	Repaired
General Purpose Vehicles	99,[illegible]4
Combat Vehicles	[illegible]1,761
Artillery Pieces	11,613
Small Arms	125,085
Instruments	[illegible]2,740

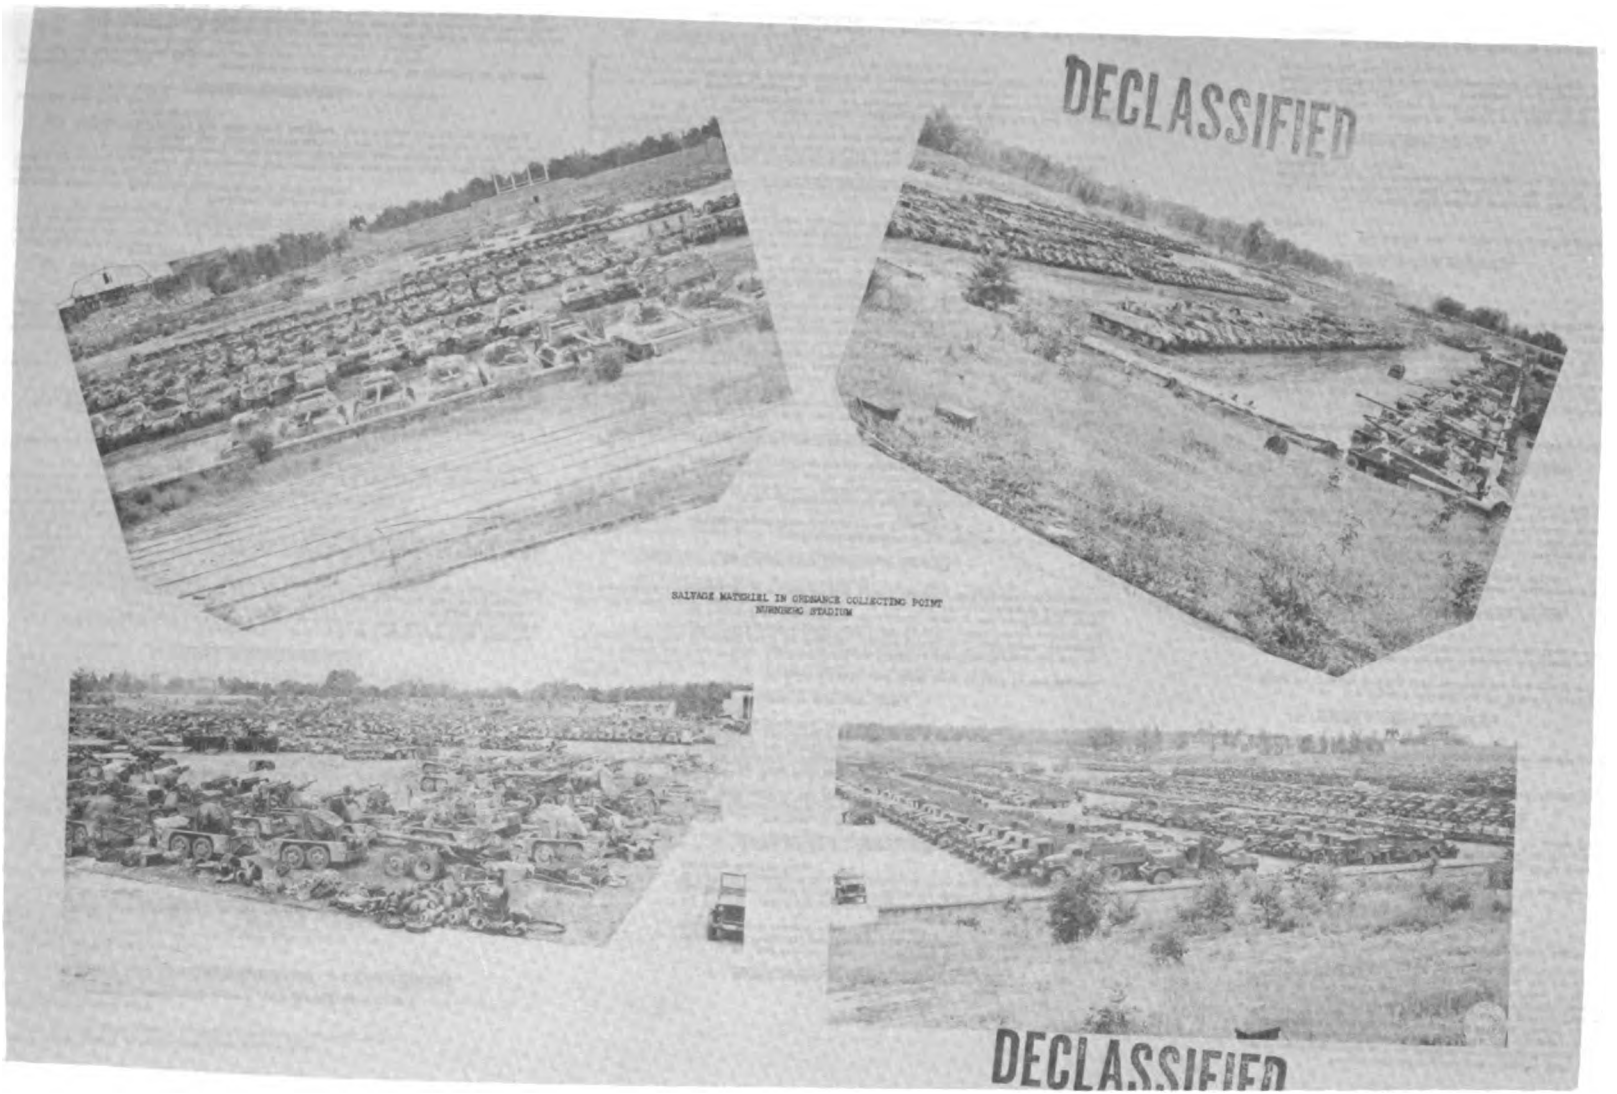
SECTION VI

AMMUNITION SUB-SECTION

As previously reported, Third U. S. Army Ordnance personnel were operating the largest number of Ammunition Supply Points in the history of the campaign. To alleviate this situation as the Army advanced, ASPs Numbers [illegible]8, 51, 53, and 55 were closed out and the ammunition transferred to forward installations. The BELL (M-53) railhead was replaced by a new railhead at [illegible] (T-69) which reduced the hauling distance in supplying ammunition to the forward ASPs.

During this period operational control of V Corps was assumed by Third U. S. Army. ASP No. 60, stocked by First U. S. Army with approximately 750 tons of ammunition, supported this new Corps for the remainder of the campaign. Units located in the southern sector of V Corps were permitted to draw from ASP No. 58, which improved ammunition supply for these troops.

Two new Class V installations, ASPs Nos. 60 and 61, opened on May 1st to support the III and XII Corps in the final stages of the campaign. The assignment of heavy artillery units to police details and the light resistance being offered by the enemy resulted in an extraordinarily low expenditure rate.



At the time of cessation of hostilities, the following is a resume of Ordnance Class V installations in operation:

INSTALLATION	LOCATION	COORDINATES	CORPS III	CORPS V	CORPS XII	CORPS XX
ASP	[illegible]EINEBURG	O-990280	56			56
ASP	WILHELMSTEIN	T-518713	57			
ASP	[illegible]EUTENBURG	U-575955			58	
ASP	[illegible]EUTENLUST	U-[illegible]5905				59
ASP	[illegible]STER-HAUSENBACH	T-998167	60			
ASP	[illegible]TTLEIN	Q-150300			61	
ASP	[illegible]UNSTRASS	P-007882		62		

The following ammunition statistics are offered in closing as evidence of the mission accomplished by Ordnance personnel in the support of Third U. S. Army during the period 1 August 194[illegible] - 8 May 1945:

Long Tons Received	533,885
Long Tons Issued	[illegible]02,345
Tons Handled	1,540,993
Total Truck Mileage	[illegible],101,977

CHAPTER 13
LESSONS LEARNED & CONCLUSIONS

1. CONTROL OF ARMY ORDNANCE UNITS.

a. Since the best planning information is available in the Army Headquarters for any operation, it is necessary that all non-divisional Ordnance troops remain under the control of the Army Ordnance Officer so that the greatest efficiency can be derived from Ordnance Maintenance, Supply, and Ammunition troops. The Army Ordnance Officer's staff, which comprises the Army Ordnance Section, is inadequate to handle the actual operation and administration of the large number of troops required to maintain and supply a Field Army. It is therefore necessary that at least three Group Headquarters be furnished as follows: (a) One Group Headquarters to operate and administer those Maintenance and Supply units in direct support of the forward combat elements; (b) One Group to operate and administer the Main Army Supply and higher echelon maintenance installations; (c) One Group to administer all of the Army Ammunition Supply.

b. That at least three Ordnance Groups, TO/E 9-12, be furnished to administer and operate directly under the Ordnance Officer, in control of the Ordnance troops assigned to a Field Army.

2. MOVEMENT OF ORDNANCE SUPPLIES.

a. Because of the great bulk of Ordnance supplies required to maintain a Field Army, it is necessary that they be moved as infrequently as possible and that they be placed in a strategic position along the main axis of the advance at all times so that no reverse movements will be required to place them in position to support combat troops.

b. The Ordnance Officer should be constantly advised as far in advance as possible of the main axis of advance and any anticipated changes of direction.

3. LOCAL PROCUREMENT OF CRITICAL ITEMS.

a. Numerous items of Ordnance Class II and IV are always in short supply. Supply of these items can often be obtained by direct purchase on local industry

b. It is necessary that the personnel of the Group Headquarters charged with operating and administering the main supply installations be supplemented with a Purchasing Section approximately the size of a Battalion Headquarters, under TO/E 9-76, for the purpose of procuring locally those items which are not immediately available through normal supply channels.

4. DIRECT SUPPLY TO COMBAT UNITS.

a. Ordnance Depot Companies in direct support of combat units must be completely mobile.

b. TO/E 9-57 should be amended to provide four 5-ton trucks, tractor, for each 6-10 ton van, in order that the entire company can move without shuttling.

5. TRANSPORTATION - ORDNANCE DEPOT COMPANIES.

a. Equipment authorized by TO/E 9-57 is inadequate for Depot Companies operating Main Army Depots.

b. Ordnance Depot Companies operating Main Army Depots should each be equipped with twenty additional semi-trailers, 10-ton, Animal and Cargo, and twenty additional 5-ton, Truck, tractors. Also required are two each heavy engineer type cranes for use in handling heavy material.

6. COMMUNICATIONS ZONE DEPOTS.

a. Communications Zone Depots must be advanced as the Army moves forward.

b. Communications Zone Depots at ports should be used only as bulk distribution points and the major portion of Communications Zone Class II and IV supplies should be kept in Depots immediately in the rear of the Army boundaries.

7. SHUTTLE SERVICE - COMMUNICATIONS ZONE TO ARMY.

a. The routine system of delivery of Class II and IV supplies to Army by Communications Zone is not dependable or satisfactory for insuring quick receipt of critical items.

b. Authority must be granted and transportation furnished to the Main Army Depot to maintain continuous shuttle service between itself and Communications Zone Depots for the purpose of delivering urgently needed items.

8. LIAISON OFFICER IN COMMUNICATIONS ZONE DEPOTS.

a. The best service for Army can be had only if a commissioned Army representative or liaison officer is placed in each Communications Zone Depot serving the Army.

b. Main Army Depots should be authorized to place one officer and the necessary enlisted assistants in each Communications Zone depot serving Army for the purpose of expediting Army requisitions, establishing priority for movement of Army supplies and arranging for movement in Army transportation of critical items.

9. MOVEMENT OF MAIN ARMY DEPOT.

a. Movement of Main Army Depot must be held to the minimum.

b. Due to the time required to pack, transport, and set up the large stock of supplies carried by the Main Army Depot, movements of less than 50-75 miles should not be made. Much better service can be rendered by a depot call established there by one continually upon by changing location. The more efficient service rendered offsets the disadvantage of a shorter turn around distance to supported organizations.

10. MOVEMENT OF MAINTENANCE COMPANIES.

a. Maintenance Companies cannot operate efficiently when moving frequently.

b. Movement must be held to the minimum, dependent upon the tactical situation. Maintenance units operating fourth and fifth echelon shops and not in direct support of using units should not move unless they are 75 miles or further behind forward maintenance units.

11. OPERATION OF COLLECTION POINTS.

a. Army rear collection points are most efficiently operated by a heavy maintenance company and the number of collection points are kept to a minimum.

b. Army collection points should be operated by a heavy maintenance company because they have the personnel and equipment required to properly inspect, classify, preserve, and guard and perform all salvage operations in connection with unserviceable ordnance materiel evacuated to Army collection points. One centrally located forward collection point is operated in each Corps by a Medium Maintenance Company. The Corps collection point is moved forward as the forward maintenance companies advance. Intermediate Corps collection points are discouraged. As Corps collection points move forward they are taken over by a rear maintenance battalion and evacuated to the central point. Two maintenance battalions in the rear are designated as collection point battalions. This permits "leap-frogging" battalions and more completely working each point to derive the most from it.

12. SHORTAGE OF EQUIPMENT IN EVACUATION COMPANIES.

a. Ordnance Evacuation Companies do not have sufficient light mobile equipment needed for the evacuation of general purpose vehicles, major units, and assemblies.

b. Ordnance Evacuation Companies should have 4-5 ton tractors and suitable low flat bed trailers for hauling unserviceable general purpose vehicles, engines, power train units, tires, etc. The only source of such equipment at present is from Army reserve.

13. CANNIBALIZING.

a. Unserviceable but repairable and salvage ordnance materiel was found to be wastefully cannibalized by using units.

b. Troops must be trained and educated that repairable ordnance equipment must not be cannibalized and that cannibalization of salvage material must be kept to an absolute minimum. Whenever cannibalization is resorted to, unserviceable item(s) removed must be replaced by unserviceable like item(s). The greatest waste caused by cannibalization is not the removing of a serviceable item, but the failure to replace it with the unserviceable item. A salvage truck from which the carburetor has been removed and not replaced results in exposing the internal parts of the engine to the elements and in all probability rendering a serviceable or repairable engine complete salvage.

14. MOBILITY OF MAINTENANCE COMPANIES.

a. All maintenance companies must be mobile.

b. Heavy maintenance companies should be issued a tractor for each authorized van. In order to provide sufficient tractors to make the companies mobile the equipment must be taken from Army reserve.

15. DIRECT SUPPORT OF ARMORED DIVISIONS.

a. Armored divisions do not require direct support of Army maintenance or supply units.

b. No Army Ordnance units should be placed in direct support of Armored divisions.

16. SUPPORT OF INFANTRY DIVISIONS.

a. The organic maintenance of Infantry divisions is inadequate to furnish the required maintenance and supply support.

b. An Ordnance Medium Maintenance Company should be placed in direct support of each Infantry division to insure adequate Ordnance support of its elements.

17. COORDINATION WITH CORPS ORDNANCE OFFICER.

a. Movement of forward ordnance maintenance troops must be closely coordinated with the Corps Ordnance Officer.

b. Close liaison must be maintained between forward maintenance units and the Corps Ordnance Officer. The Corps Ordnance Officer is always abreast of the immediate tactical situation and his recommendation as to the deployment of ordnance troops directly supporting the Corps is very closely followed. Generally two ordnance maintenance battalions are in support of each Corps.

18. WELL TRAINED AND FORWARD ECHELON OPERATIONS.

a. Rear Ordnance third and fourth echelon can be efficiently operated on a production basis.

b. Controlled salvage and reclamation operations provide lucrative sources of supply and make for efficient and complete salvage and prompt evacuation to base shops of unserviceable but repairable items. A large number of civilian laborers can be used in this operation. Specific ordnance maintenance companies are designated for repair of ordnance specialized equipment (tank transporters, etc.), high mortality vehicles (2½-ton trucks, etc.), and unit assemblies. Small arms sections, as an example, from a number of maintenance companies are pooled to make a sizable working unit.

19. REPORTING OF FIELD DEFICIENCIES.

a. The combat zone is the best proving ground for ordnance materiel.

b. Ordnance maintenance personnel must be alert to observe and report deficiencies which develop in the field. Any field expedients used to overcome deficiencies and recommendations should accompany all reports.

20. AMMUNITION DEPOT COMPANY.

a. One ammunition company per Army should be trained as an ammunition depot company to serve as a nucleus in the operation of depots or large ASPs. One such company is capable of operating two large installations when supplemented by additional ordnance and quartermaster service troops.

b. A unit of this type should be provided to accomplish this mission.

Digitized by Google

21. ENEMY AMMUNITION COLLECTING COMPANY.

a. A minimum of one "enemy ammunition collecting company" per Army is necessary to deal with the enormous quantities of enemy ammunition encountered.

b. This organization is essential and should receive special training for this mission.

22. CONTROL OF CLASS II AND IV.

a. It is impractical and involves too much administrative detail to allocate Ordnance Class II and IV items to the using units. Control of issues of Class II and IV should be kept to the absolute minimum consistent with the availability of the items.

b. Where sufficient supplies are received by the Army to cover normal combat losses, resupply should be effected upon the certificate of the unit that the items required are necessary to complete TO/E authorizations.

23. AMMUNITION COMPANY PERSONNEL.

a. The quality of the ammunition company personnel must be improved if adequate and accurate control of the enormous number and variety of ammunition items (including complications caused by component parts) is to be maintained.

b. The highest type of personnel available should be provided.

24. AMMUNITION INSTALLATIONS.

a. The actual size and number of ammunition installations is a problem which is governed by the tactical situation.

b. It has been found desirable, in general, to have one ASP well forward supporting each Corps, with at least one large Army depot located along the main army axis, generally behind the center Corps. Intermediate ASPs for Corps and Army artillery are impractical. In fast moving situations, forward ASPs of 750 - 1,000 tons are desirable, while in slow moving situations, forward ASPs of 2,500 or 5,000 tons are desirable. In general, larger installations can be run more efficiently than small ones and should therefore be favored whenever possible. It has been found in actual practice that small ASPS (750 tons) could be established and ready for operation within 24 hours after location of ASP site.

25. ROADSIDE STORAGE OF AMMUNITION.

a. Roadside storage is preferable to area storage.

b. Roadside storage should be utilized due to the fact that it offers a less profitable target to enemy air attacks, permits faster operations, prevents bogging down in mud, and presents fewer hazards to safety.

26. STOCKAGE OF AMMUNITION SUPPLY POINTS.

a. Stockages and priorities in stocking of ASPs should be determined by Army, after a study of recommendations by Corps.

b. It is essential that this be done to insure maximum use of limited transportation over long supply lines and prompt arrival of necessary items to combat units.

27. LOT NUMBER SEGREGATION.

a. Lot number segregation of ammunition is impractical in the Army area.

b. If issues to using units are to be made in separate lots, shipments into the army area must be in large, unbroken lots. Lot number records cannot practicably be kept in forward Army ASPs; hence, the importance of receipt of segregated ammunition which will permit storage and issue by separate lots.

28. HANDLING OF HEAVY ARTILLERY AMMUNITION.

a. The use of mechanical devices for lifting heavy artillery shells is highly desirable.

b. The development of lifting devices as portrayed in previous chapters should be given immediate consideration.

29. TRANSPORTATION OF AMMUNITION.

a. Transportation of ammunition supplied by Quartermaster Truck Companies often proves inadequate during a fast moving campaign involving extended supply lines.

b. In fast moving situations, additional transport can be made available by temporarily immobilizing ordnance maintenance and supply units as well as some combat units not currently active.

30. TOPPLING OF STACKS - ROADSIDE STORAGE.

a. It has been noted when employing roadside storage in frozen areas that there is a tendency for the stacks of ammunition to topple over as the ground thaws.

b. This problem can be overcome by stacking the ammunition on the verges close to the roads where, ordinarily, a firm foundation is available.

31. LOCATION OF AMMUNITION INSTALLATIONS.

a. Ammunition installations should always be situated so that subsequent troop movement will not interfere with the traffic routes used in supplying said installations.

b. Where the tactical situation permits, the combat troops, particularly armored units, in moving up to the line should not use the same roads being utilized for storage of ammunition. The majority of troop movements occur at night and frequently the ammunition becomes damaged and the life of the roads reduced due to the heavy traffic.

32. PERSONNEL FOR RAILHEAD ACTIVITIES.

a. Sufficient Ordnance personnel have not been trained in the operation of a Class V railhead.

b. In training ordnance personnel in the Zone of Interior more emphasis should be placed on all phases of the operation of a Class V railhead. This is a very important step in ammunition supply and deserves more consideration in training programs.

33. ALLOCATIONS BELOW ARMY LEVEL.

a. Allocations below the Army level are impractical. They are too slow and involve too much paper work. They are effective only when particular items become critical.

a. Ordinary supply should have as its guiding principle automatic resupply to combat units to maintain their basic loads intact. Where a generally short supply exists relative to demands, expenditure control by limiting the number of rounds fired to prescribed limits is feasible.

34. AMMUNITION REPORTS.

a. In general, the Army Ordnance Office requires no reports from Corps or from Army units. Reports on basic load status of selected items may be required at times, but can be called for as necessary. Artillery and other tactical sections of the Army Headquarters may require expenditure reports for specific purposes, but can obtain such reports through their own channels. For Ordnance purposes, with ammunition resupply based on maintenance of basic loads, ASP issues to combat units may be considered equivalent to expenditures.

b. For efficient control of ammunition supply, reports should be kept to a minimum as outlined above.

ANNEXES

ANNEX NO. 1

Ordnance Bulletin Number 1

CONFIDENTIAL

HEADQUARTERS THIRD UNITED STATES ARMY
Office of the Ordnance Officer

ORDNANCE BULLETIN) 25 May 194_.

NUMBER 1)

SECTION I

Administration

1. INTRODUCTION TO THE THIRD ARMY ORDNANCE BULLETIN:

a. The Third Army Ordnance Bulletin will be periodically published by the Army Ordnance Officer for the dissemination of Ordnance technical information and instructions to Ordnance units and personnel.

b. (1) The Bulletin will be divided and indexed into the special sections below noted:

I - ADMINISTRATION
II - OPERATION
III - MAINTENANCE
IV - SUPPLY
V - AMMUNITION

c. (2) For convenient reference, each section will bear its own sequence of paragraph numbers; reference to a subject will be by these numbers.

c. Changes, deletions, and cross-references will be published as additional paragraphs in the usual manner and will have reference to the previous paragraph which is to be changed, deleted, or modified. Certain paragraphs will make timely reference to other directives of importance to Ordnance units. Changes and deletions so indicated will be immediately posted.

d. An index will be published at intervals with the bulletin.

SECTION II

Operations
oooooooo

SECTION III

Maintenance

1. CARRYING RACKS, GAS CAN: To enable use of both Jerri-Can and Ameri-Can in present carrying racks on vehicles, it will be necessary to install in the bottom of each rack, a wooden board of about 3/4" in thickness, to fit securely. These boards should be painted O.D. color.

2. PERTINENT DIRECTIVES: Attention is directed to the following ordnance technical bulletins as published by Headquarters SOS, ETOUSA, pertaining to theater modification and maintenance of ordnance material, copies of which may be obtained by requisition upon publication section of SOS Depot O-25, while units are stationed within the U. K.

a. TB No. 12 dated 19 April 1943, Abuse of Motor Vehicle Engines.

b. TB No. 1 dated 3 January 194_, Adjustment of Shock Absorbers for M8 armored car.

c. TB No. 2 dated 5 January 194_ pertaining to modification of 57mm Gun--Spare Striker (Firing) Case Assemblies.

d. TB No. 7 dated 5 February 194_. Pre-starting Inspection of Light Tanks M5A1 and Carriage, Motor, Howitzer, M8.

e. TB No. 9 dated 1 March 194_. Charts of U. S. and British Lubricants Equivalent.

f. TB No. 10 dated 2 March 194_. Tank, Light, M5A1 and Carriage, Motor, 75mm Howitzer, M8. Bow Type Transmission Band Adjustment.

g. TB No. 11 dated 13 March 194_ covering correct wiring on Turret Fan, PESCO 6104-4R8 of Medium Tank.

h. TB No. 16 dated 16 March 194_. Modification of Left Auxiliary Shield on 105mm Howitzer Carriage M2A2, to prevent interference of shield with line of sight when sighting on aiming stakes to the front.

i. TB No. 18 dated 24 March 194_ and Change 1 dated 8 May 194_ pertaining to Modification of Handle Latch (B1509A_) on Gun, Machine, Cal. .30, M1919A_, and M1919A5, to prevent difficulty in retracting the cover latch on subject guns when mounted in light and medium tanks and armored car M8.

j. TB No. 17 dated 25 March 194_. Pre-starting instructions for Vehicle with Radial Engines which cannot be hand-cranked.

k. TB No. 20 dated 29 March 194_ pertaining to repair of carriages, Howitzer 105, M2, on which the weld of bracket C75L60 and body D56739 of Support D56740 has failed; also lubrication of Swivel Nut on traversing mechanism on Carriage Gun 3", M1, and Carriage Howitzer, 105mm, M2A2, equipped with enclosed screw traversers.

l. TB No. 22 dated 30 March 194_. Modification of Launcher, Rocket, AT, 2.36", M1A1, to prevent shearing of wire A513621-D by sharp edges of battery compartment Assy, B261129.

m. TB No. 21 dated 31 March 194_ pertaining to Test Firing of Small Arms weapons after repair. Ammunition for Third Army units will be obtained in the same manner as training ammunition.

n. TB No. 27 dated 7 April 194_. Modification of Chute, Metallic Belt Link (C61331) for Gun, Machine, Cal. .50, Browning, M2HB (Fixed and Flexible) to prevent difficulty in assembling the chute, metallic belt link to the gun.

o. TB No. 26 dated 8 April 194_. Prescribing American Wheel Bearing Lubricants and outline procedure for repacking wheel bearings.

p. TB No. 31 dated 17 April 194_. Instructions for installing Elevating Quadrant M9, on 3" Gun M7, Mount M5, on M10 and M10A1 Motor Carriages.

q. TB No. 33 dated 22 April 194_ pertaining to correct marking of Cage, Low and Reverse Transfer Unit Band Adjusting for Tank, Light, M5A1 and Carriage Motor Howitzer M8. Gages properly marked show the upper mark for Low Series and the lower mark for the Reverse.

r. TB No. 34 dated 27 April 194_. Correct tire pressure for 14.00 x 24-20 ply tires as used on truck trailer 40-ton Tank Recovery M25 is 75 lbs. per square inch.

s. TB No. 35 dated 28 April 194_ covers the Installation of Armor Plate in the driver compartment of the M8 and M20 armored cars.

t. TB No. 39 dated 4 May 194_. Modification of Carriage, Gun, 57mm, M1A2 and M1A3 to install a firing handgrip bracket to provide a means of "squeezing" instead of pulling the firing lever to overcome difficulty in holding firmly on target while firing.

u. TB No. 40 dated 5 May 194_. Pertaining to MRP Ordnance C36-4A, of Gun, 57mm, M1, re-taining to firing pin (C256515).

v. TB No. 43 dated 6 May 194_. Modification of Mount, 60mm, Mortar, M2, to reduce backlash in traversing mechanism.

w. TB No. 45 dated 11 May 194_ pertaining to correction in procedure of transmission band adjustment of Light Tank M5A1 and Gun Motor Carriage M7 as shown in TM 9-732 dated 27 November 1943 and TM 9-732B dated 31 January 194_.

SECTION IV

Supply

1. BASIC LOADS FOR ORDNANCE MAINTENANCE COMPANIES:

a. Attention of all Ordnance Maintenance units is directed to [illegible] issued by this section, listing basis for basic load of spare parts for Ordnance Maintenance Companies. (See OVERLORD PLAN, Page 110) Prepared requisition forms will be furnished by the Army Ordnance Officer. Immediate action will be taken to requisition 15 days supply of spare parts when prepared forms are made available.

b. The alert order to units specifies the number of vehicles which the units will have available to transport equipment. The vehicles specified in the alert order include T/E vehicles, addition to T/E vehicles, and TUBA reserve vehicles. If it is found impossible to carry 15 days basic load for vehicles assigned in the alert order, then one requisition will be made up for the parts that can be carried, and an additional one be prepared for later presentation to COM. Z. for immediate action, so that basic load of 15 day supply will be available for combat. In case vehicles are not made available as specified in the alert order, the unit will immediately contact the Army Ordnance Officer and request instructions. Priority will be given in requisitioning parts for the basic loads in the U.K. as follows:

(1) Major items.

(2) Binned parts.

(3) Large and/or heavy unit assemblies.

2. BASIC LOADS FOR ORDNANCE DEPOT COMPANIES:

a. Attention of Ordnance Depot Companies is directed to Annex II to this section. (See OVERLORD PLAN, Page 111)

b. Action outlined for Maintenance Companies in paragraph 1a above will be followed for the number of days supply noted in the annex for type Depot Company. As in 1b above, as much of this load as possible will be carried in all available transport.

3. PREPARED REQUISITION FORMS:

a. The Ordnance Section, TUBA, has prepared, for use of Ordnance Maintenance and Depot Companies in requesting spare parts and supply loads, a specially prepared requisition form for each SNL sub-group.

b. The prepared requisition forms will reduce by a large percentage the man hours normally necessary for the preparation of basic load requisitions. All available interchangeability information has been listed with each item on the face of the requisition. Cross-reference between the many ordnance parts numbers has been included with each item listed. Complete nomenclature description and where applicable size information has been given.

c. On sub-groups such as GMC, the requisitions have been broken down into many separate requisitions. For Example: GMC No. 1 requisition is for parts that are common to all GMC vehicles. Numbers II to X, inclusive are requisitions for parts peculiar to the various models of GMC vehicles. Separate requisitions have been prepared for Autolite and Delco Remy electrical parts and anti-friction bearings using the unit manufacturer's number and interchanging into all the various ordnance numbers that might be used.

d. Use of the prepared requisition forms will not stop with the requisitioning of a basic load. The retained copy can be used by the Ordnance unit as follows:

(1) Reference list of items stocked by main depots.
(2) Quick reference interchangeability list.
(3) Cross-reference of various Ordnance part numbers.
(4) Check list in the editing of requisitions.
(5) Parts numbers used for the stocking of all groups.
(6) Items stocked in parts common under Federal Stock Number.

e. Supplementary requisitions on Form 400 will be submitted for basic load requirements where prepared requisition forms are not furnished, as for tires, cleaning and preserving, etc.

f. Distribution of prepared requisition forms will be made according to the unit's priority. Units will be notified by Army Ordnance Officer when forms are available.

4. MAJOR ITEM REPLACEMENTS:

Listing of Major Item Replacements to be carried by type Ordnance Unit is published in Annex 3 to this section for the information and guidance of all units concerned. These Major Items will be made available to units [illegible] as current stocks permit; no action by or-

5. T/E 9-76, REVISED:

a. Pending receipt of revised T/A and T 9-76, dated 31 March 1943, the following additions and substitutions are being made available. (Authority 3rd W/Indorsement, File AG 400.34 Op O-3, Hq. ETOUSA, 19 May 1944, to letter subject "Equipment in Excess of T/E", Hq. 319th Ordnance Battalion, dated 27 March 1944) Headquarters and Headquarters Detachment, Ordnance Battalions will submit requisitions for this equipment immediately, citing above letter as authority.

(1) Additional equipment to be issued to Headquarters Detachments, Ordnance Battalions is one (1) scream, latrine, one (1) typewriter, non-portable, one (1) truck 1/4-ton, 4x4; and one (1) truck, 3/4-ton, 4x4, weapons carrier, to be substituted for one (1) truck, 3/4-ton, 4x4, command.

(2) Substitutions in vehicle allowance for the Medical Detachment, Ordnance Battalion are one (1) truck, 1/4-ton, 4x4, cargo, for one (1) truck, 3/4-ton, 4x4 weapons carrier; and one (1) trailer, one ton, two wheel cargo, for one (1) trailer, 1/4-ton, two wheel cargo.

SECTION II

Operations

SECTION III

Maintenance

3. TOW BAR FOR TANK, LIGHT, M5A1, AND CARRIAGE, MOTOR, 75MM HOWITZER, M8:

A tow bar has been designed for use with the subject vehicles for towing Ammunition Trailer, M30, which does not give ramp interference in connection with loading or unloading on LST's. Provision of this tow bar are available upon request from the Army Ordnance Officer.

4. ENGINE FAILURE - ARMORED CAR, M8.

Engine failure in Armored Car, M8, is in many cases caused by failure of the gasket which seals the passageway for the oil returning from the filter to crankcase and the water passage from the engine water jacket to the water pump. Failure of this gasket allows the pump to pull the oil from the oil passageway and thus eventually pumping all of the oil into the cooling system. This condition can be corrected by installing a new oil filter mounting gasket (Part No. HM-40852A), tightening the mounting bolts, and periodically checking to ascertain that the bolts remain tight. Two gaskets (used as one) may be required if the mounting has warped. References: Letter, 902nd Ordnance MAM Company, APO 403, dated 13 May 1944, Subject: Defect in Engines in Armored Car, M8, and 2nd Indorsement, Headquarters 3OS, ETOUSA, APO 871, dated 28 May 1944, file AG 451 OPOD.

5. TECHNICAL INFORMATION LETTER NO. 13 FROM OFFICE CHIEF OF ORDNANCE:

This letter contains the following questions upon which information is desired by the Office of the Chief of Ordnance. It is requested that replies be submitted to the Army Ordnance Office, Production Maintenance Section, where they will be tabulated and forwarded.

a. Is there excessive fire dispersion when firing to the front of Half-Track vehicles with the .50 Cal. Machine Gun as it is presently mounted?

b. Is the new water cooling process now being used on combat vehicles satisfactory? The new process has eliminated the use of waterproof tape whenever possible and substituted calcium compound. Also, is the internal rustproof process satisfactory? If deficiency reports are submitted, give all details possible.

c. The 1½ ton, 4x4, Truck, (Chevrolet) dump, is no longer in production. It has been replaced by the 2½ ton 6x6 dump (GMC). The reason for the change from the 1½ ton, 4x4, to the 2½ ton, 6x6 was because the rear axle assemblies of the 1½ ton were not adequate to withstand the loads carried. Recent reports received indicate that the rear two axle assemblies of the 2½ ton truck are giving trouble. Complete detail information is requested covering any wear and failures which have been experienced with the 2½ ton truck, dump.

d. Is any excessive trouble being experienced with the rear front spring shackle assemblies on the 1/4 ton, 4x4, Truck?

e. Reports are still being received that the GMC 2½ ton, 6x6, Trucks, are subject to frame sagging, due to their particular use. It is requested that in each case of such failure a careful check be made to see if any of these vehicles have already been reinforced in accordance with TB ORDB-2.

f. What failures are being experienced with the differential of Truck, 3/4 ton, 4x4?

g. Are failures being experienced with the new repairable type shock absorbers on Truck, ¼ ton, 4x4 (Willys)? How does the percentage of failures compare with the non-repairable type?

h. Is the spring breakage on the Trucks, ¼ ton, 4x4, considered above normal?

i. What failures have been experienced in the front flexible brake hose on the trucks, ¼ ton, 3/4 ton and 2½ ton, and 1½ ton?

j. Scattered reports of failure have been received from theaters concerning the hubs on the T8E Recovery Trailer, 40 ton. This hub has been changed from cast iron to cast steel and information is desired of any further reports of failure, as to whether the latest type cast steel hub has been involved.

6. BOMB DISPOSAL VEHICLES:

Paragraph 3, from Ordnance Weekly Letter No. 23, dated 3 June 1944, Hq. ETOUSA, quoted as follows:-

"Bomb Disposal Vehicles. All Ordnance Officers should call to the attention of their Bomb Disposal Officers the theater regulations on the maintenance, use and operation of military motor vehicles. Due to the red paint on parts of their vehicles, Bomb Disposal organizations now operate the most conspicuous vehicles in the U. S. Army. Since their vehicles are so conspicuous and since they are Ordnance troops, Bomb Disposal organizations must set the example to other U. S. troops by proper care and operation of their vehicles."

SECTION IV

Supply

6. CONSUMABLY ROLL FOR HQ & HQ DET., ORDNANCE BATTALION: Ordnance Bn. Headquarters are authorized in addition to T/A & T 9-76, one (1) Roll, Commissary. Subject equipment may be obtained by submitting properly authenticated requisition on Chief Quartermaster, APO 871, citing as a basis 3rd indorsement, Hq. ETOUSA, file AG 320.3 Op(T), dated 20 May 1944 to letter 319th Ordnance Battalion, dated 16 April 1944, subject: Change to T/E 9-76.

7. BASIS FOR STOCKAGE OF TIRES AND TUBES IN WH-DIVISIONAL ORDNANCE MAINTENANCE AND DEPOT COMPANIES: As listed in Annex I. These items will be issued automatically. Ordnance units will not submit requisition for tires and tubes.

SECTION III

Maintenance

7. STANDARDS OF SERVICEABILITY. Standards of serviceability for shipment of equipment overseas will be as prescribed in OBSF 4-17, dated 4 February 1943, and changes thereto, for combat serviceability. In addition, the following standards will apply.

a. Vehicles. After engine tune up or servicing, vehicles must satisfactorily meet the conditions outlined below before being considered serviceable for overseas operation:

(1) At idling speed with engine at normal operating temperature, the intake manifold pressure must equal or exceed 16" of mercury. This vacuum must be steady and show no great fluctuation between maximum and minimum.

(2) Compression pressure of each cylinder shall not differ from that of any other cylinder by more than 10 lbs. per square inch. This test will be made immediately after the engine has operated from 20 to 30 minutes, and is still at normal operating temperature. The test will be made with all spark plugs removed and the throttle fully opened. The engine crankshaft shall be rotated at least six revolutions per reading.

(3) At a road test including operation in all gear ratios:
   (a) No apparent engine overheating must be experienced.
   (b) Clutches must function without slipping, grabbing, chattering, or binding.
   (c) There must be no unusual noises that cannot be readily corrected.

(4) Wheel and Brake Inspection:
   (a) Tire rims that revolve free of the ground must be concentric to the axle or hub center line within 1/4" per 10" of radius, and must not have a sidewise run out greater than 3/16" per 10" radius.
   (b) Wheel, wheel rim, and wheel ring flanges must be free of indentations and cracks.
   (c) Wheel bearings and wheel bearing grease seals must be in good condition.
   (d) Brake drums must be free of cracks and not badly ridged.

(5) All pneumatic tires must be free of cuts, fabric breaks, or other damage likely to cause early failure, and must have minimum mileage life remaining as shown:
   (a) GE Truck Companies: 2,000 miles
   (b) Other units : 1,000 miles

(6) Electrical accessories, such as ignition coils, condensers, spark plugs, etc., must be capable of meeting minimum performance requirements as specified by the manufacturer in pertinent Technical Manuals.

(7) Each cell of the battery must contain electrolyte having a specific gravity equal to or greater than 1.200.

(8) Continuous band and block type rubber tracks must not have been run more than 500 miles.

(9) Steel tracks must not have been run more than 500 miles on medium tanks and 800 miles on tractors.

(10) Rubber bogie wheels must present a smooth appearance without serious cuts or large pieces torn off. Bogie wheels should be examined for heat blisters or separation of rubber and steel.

SECTION IV

Supply

9. DESIGNATION OF ORDNANCE DEPOT COMPANIES AS TO TYPE:

a. The following depot companies have been designated as Forward General Depots:

830th
859th
985th

b. The following depot companies have been designated as Forward Armored Depots:

814th
841st
182nd
184th
333rd

c. The following depot companies have been designated as Main Army Depots:

857th - Main combat vehicles
984th - Main general purpose
941st - Main armament

All depot companies designated as to type will immediately take necessary steps to requisition basic load and prepare personnel for the operation of type depot designated.

SECTION V

Ammunition

1. Ordnance Technical Bulletin No. 54, Hq. ComZ, ETOUSA, is quoted in its entirety for information on FUZE, NOSE, CONCRETE PIERCING, T105. Corps and Division Ordnance Officers will bring the characteristics and usages of this type fuse to the attention of commanders and staffs involved:

"1. PURPOSE. This bulletin is intended to furnish all concerned, especially Artillery Personnel, with information concerning the design, construction and tactical purpose of the fuse, nose, C.P., T105. It includes all available information including ballistics and instructions for assembly to the particular shell required.

"2. DESIGN AND CONSTRUCTION. Considerable development work has been done during the past year in the Zone of Interior on methods of effectively destroying concrete structures and fortifications. The tests included firings of all types of field weapons from .50 caliber thru the 240mm Howitzer. Important conclusions resulting from these tests were made:

a. H.E. shells fired with standard type P.D. fuses were effective in concrete destruction because with fuse set at delay they shattered on impact against the hard surface. On super-quick setting only surface damage resulted.

b. S.A.P., A.P., and A.P.C. type projectiles were effective against reinforced concrete because of their penetrating qualities but lacked sufficient explosive punch to do much destruction other than making a hole in the concrete.

"3. From these considerations, it was apparent that an ideal anti-concrete projectile would be one which had the penetrating properties of an AP shot and the detonating force of an HE shell. With this viewpoint in mind, additional experiments were conducted which resulted in the development of a fuse with a hardened steel nose that would strengthen a standard H.E. shell sufficiently to withstand the force of impact against the concrete and reach satisfactory depths of penetration before the functioning of the delay element. This fuse was designated the Fuse, Nose, Concrete Pierc[illegible] T105.

DECLASSIFIED

"4. DESCRIPTION. The fuse, nose, C.P., T105, consists of a hardened steel nose, body, and base assembly of standard fuse contour and containing a delay element assembly of the fuse P.D. M48 fuse (.05 sec. delay). The fuse nose solid nose is made from HD 4140 steel or equivalent, heat-treated to have a Brinell hardness of from 300 to 340. The base of the fuse is threaded to screw directly into the nose threads of the shell body. Standard type boosters cannot be used with this fuse. The T1 booster, which is a M42A2 type booster modified by removal of most of its 2" threads, must be used with the C.P. T105 fuse.

"5. ASSEMBLY AND USE. The fuse, nose, C.P., T105, can be used with standard H. E. ammunition from 75mm to 240mm without any modification to the loaded shell, and is interchangeable with any standard contour fuse (M43, M48, M51, M54, M55, and M57).

"6. For all HE projectiles which contain the standard booster (fixed and semi-fixed ammunition), the standard booster must be replaced by the T1 booster. This is accomplished by removing the booster retaining set screw on the nose end of the shell and replacing the standard booster with the T1. The T1 booster is screwed into the shell body as far as it will go hand tight, and the T105 fuse is then screwed in on top of it. The fuse must be securely tightened so that its shoulder is flush against the nose of the shell. It should be noted that both the fuse T105 and the booster T1 engage the nose threads of the shell.

"7. H.E. shells with fuse C.P. T105 are effective against earth or sandbags as well as concrete. Most earthen cover must be removed before good effect is obtained against reinforced concrete. Shells with fuse T105 are superior to standard AP projectiles in removing reinforcing bars and debris from the impact area. Experience has indicated that embrasures are the most vulnerable parts of pillboxes and should be selected as targets in preference to exposed or covered walls. When it is impracticable or unnecessary to obtain direct hits on embrasures, fire should be directed at the edges of the structure. Shells of 105mm caliber and larger which strike the earth in front of an embrasure will pile sufficient earth in the line of fire to interfere with operation of enemy gun. In order to obtain complete penetration with the least number of rounds, it is essential that repeated hits be obtained against the same impact area. Each such hit weakens the wall progressively, enabling each successive shell to obtain greater penetration than the preceding round.

"8. BALLISTIC CONCEPTS OF FUZE, NOSE, C. P., T105. Effectiveness of fire against reinforced concrete increases with (1) higher striking velocity, (2) larger size of H.E. shell, and (3) greater accuracy of fire. The large shell has several advantages; in addition to affording a higher detonating effect, its greater stability, within the gun and thru the air in general results in smaller dispersion and consequently greater accuracy of fire. Table I is a summary of pertinent information on weapons effective against concrete installations together with actual data obtained at Aberdeen Proving Ground on the number of successive hits (same impact area) of H.E. shell with fuse C.P. T105 required to penetrate reinforced concrete walls. The concrete used in these tests is estimated to be of greater strength than will be found in enemy structures.

How. 8", M1	1550	M106	200	37	5 7		2 2	1000
Gun 8" M1	2100	M103	240	21	5 7		1 2	8000
How. 240mm M1	1500	M111	360	54	5 7		1 2	8000

"9. In destroying concrete structures, direct fire at short range is the most desirable method because of accuracy and high striking velocity. However, if this cannot be accomplished because of rugged terrain or harassing enemy fire, longer ranges can be used in which case the larger weapons, i.e. 8" howitzer, M1, 8" Gun, M1, and 240 How. M1 are best to use to take advantage of the heavy shells employed.

"10. Penetration depends on striking velocity. For effective penetration a striking velocity of at least 1400 f/s has been recommended on an empirical basis with 1000 f/s as an absolute minimum. All projectiles in flight lose velocity rapidly due to gravity pull (in ascending trajectory) and air resistance. Thus there is a range (especially for the smaller weapons) beyond which the striking velocity is too low for effective hits. Table II shows the maximum effective range of certain weapons at which the limiting striking velocities of 1400 f/s and 1000 f/s are reached. Also shown in Table II is an indication of accuracy of fire. Maximum ranges are shown at which the probability of hitting three targets of different size is .3 (slightly less than 1 hit per 3 rounds fired). Ranges greater than the values shown in Table II for the weapons listed will result in greatly decreased accuracy and perhaps impractically large ammunition requirements.

TABLE II

WEAPON	MUZZLE VELOCITY PROJ. f/s	PROJ.	MAX. RANGE (YDS) FOR STRIKING VELOCITY OF: 1400 f/s	1000 f/s	MAXIMUM RANGE (YDS) FOR PROBABILITY OF .3 HITTING AGAINST FOLLOWING TARGETS: 7.5 FT SQ. AREA HIGH*	15 FT SQ. AREA 10 FT HIGH*	30 FT SQ. AREA 10 FT HIGH*
75mm M3 & M4	1975	M48	2500	5000	2000	4000	5000
90mm M1 or T7	2700	M71	6000	9000	2000	5000	5000
4.5" M1	2275	M64	6000	**	2000	5000	6000
155mm Gun M1	2800	M101	9000	**	2000	3000	5000
8" How M1	1950	M106	4000	**	6000	9000	12000

* C.I. taken as front edge of target at ground level.

** Striking velocity remains above 1000 f/s.

"11. On the basis of overall effectiveness, the 8" How. M1 with shell HE M106 and charge VII, or the 155mm Gun M1 firing shell M101, are excellent choices. For greater field mobility and good effectiveness at short ranges, the 90mm gun on gun motor carriage M10 firing HE shell M71 or the 4.5" gun M1 on carriage M1 or motor carriage T16 (Now being developed) firing shell HE M64 are excellent choices.

"12. The 8" Gun M1 and the 240mm How. M1 cannot be used easily at short ranges because they do not depress to zero elevation. However, they are excellent choices for long range destruction of concrete structures. Reports from BATAAN revealed that the Fifth Army has used the T105 fuse in these weapons for long range shelling of concrete bridges, approaches and concrete buildings with very satisfactory results. Firings were at ranges of 15,000 yards and up. In firing the 240mm Howitzer M1 at a range of 20,000 yards it was found necessary to make an adjustment of approximately 200 yards increase in range and 2 mils left in deflection from firing table values when using the T105 fuse.

"13. The T105 fuse is both squatter and heavier than the regular fuses in standard use, thereby changing to some extent the interior and exterior ballistics of the projectile with which it is fired. The chamber pressures are only slightly increased and there is a slight loss in muzzle velocity. For moderate ranges, including direct fire at short range, the quadrant elevation for most guns in which the T105 fuse is used will be greater than when using the lighter, longer, standard fuses. This effect of the T105 fuse is greater when used with the lighter projectiles (4.5" and smaller) and becomes progressively less as projectile size increases. For 8" projectiles and larger, the ballistic effect of T105 fuse becomes negligible and firing tables prepared for the standard fuses may be used directly without appreciable error.

"14. Until more adequate data is issued, the following rule and Table III will provide a rough working method for computing quadrant elevation for the T105 fuse.

TABLE III

RULE. From the appropriate firing table devised for a standard fuse but which is replaced by the T105 fuse, compute the quadrant elevation allowing for the effect of an increase in projectile weight and an increase of air density as listed below beyond that which would be used for the standard fuse. For all practicable gun elevations, both of these corrections are applied to decrease range (i.e. for a given range, a higher quadrant elevation will result from using the T105 fuse than from using the standard fuse).

CALIBER	PROJ. WT. IN SQUARES	AIR DENSITY %
75mm Gun	2.5	32
90mm Gun	2.0	19
105mm How.	1.0	14
4.5" Gun	1.5	12
155mm How. & Gun	1.0	5
8" How. or Gun & Larger	0	0

"15. SUMMARY. The foregoing information is summarized for convenience.

a. The fuse, nose, C.P. T105 is a hardened steel body fuse containing a point detonating delay action assembly. When assembled with special booster T1, a standard H.E. shell is converted into an effective destroyer of reinforced concrete structures.

b. The T105 fuse is effective when used in weapons ranging from 75mm gun thru the 240mm Howitzer M1. It is most effective when used in direct fire at longer ranges.

c. For effectiveness and accuracy at short and moderate ranges, the 8" Howitzer M1 is ideal. For mobility of weapon and effective fire power in direct fire at short range, the 90mm and 4.5" guns preferably on motor mounts are most suitable. For accuracy and destroying effect at long ranges, the 240mm How. M1 and 8" Gun M1 are recommended.

d. Ballistics of the projectile are changed when the T105 fuse replaces the standard fuse. The greatest change occurs with the small projectiles; the effect with projectiles 8" and larger is negligible. A rough correction table is provided herein; use of the T105 fuse generally will cause a decrease in range from that expected when using the standard type fuses.

"16. AVAILABILITY OF FUSE, NOSE, CP, T105, IN U. S. A fair supply of fuses CP T105 and T1 boosters is now available in the U.S. Approximately one half of this supply is now in the hands of the First Army. The contents of this bulletin should be circularized to all units using or expecting to use this fuse."

SECTION VI - GENERAL

All Ordnance personnel should read the article, "Recovery of Materiel in Combat" in the May 1944 issue of THE ORDNANCE SERGEANT. This is an excellent article on combat conditions encountered in recovery of materiel.

ANNEX NO. 4

REPORTS TO BE SUBMITTED

Form No. 1: "Materiel in Hands of Troops" and "Combat Loss". Third Army Ordnance Form No. 8, (Reproduced on Pages 98-107 of OVERLORD PLAN) submitted monthly as of 1800 hours on the 20th day of each month to reach Army Headquarters not later than 1200 on the 23rd day of each month. References "Instructions to Ordnance Units", paragraph 6a (9).

Form No. 2: "Status of Ammunition" Third Army Ordnance Form No. 1, (Reproduced on Pages 107-109 of OVERLORD PLAN) submitted daily as of 1800, to reach Army Headquarters not later than 0800 hours the following day. References, "Instructions to Ordnance Units", paragraph 6b (1).

Form No. 3: "Status of Ammunition" Third Army Ordnance Form No. 1, (Reproduced on pages 107-109 of OVERLORD PLAN) submitted monthly as of 0800 the 20th day, to reach Army Ordnance Office not later than the 23rd day. References, "Instructions to Ordnance Units", paragraph 6b (5).

Form No. 3: "Captured Enemy Materiel Report", Third Army Ordnance Form No. 3, (Reproduced on page 109 of OVERLORD PLAN) submitted weekly by designated Ordnance battalions as of 1800 hours, Saturday, to reach Army Ordnance Office not later than 0800 the following Monday. References, "Instructions to Ordnance Units", paragraph 30.

Form No. 4: "Ordnance Major Item Supply Report". Third Army Ordnance Form No. 4, submitted daily by all Ordnance Maintenance and Depot Companies as of 1800, to arrive at Army Ordnance Office not later than 0800 the following day.

Form No. 5: "Ordnance Maintenance Report". Third Army Ordnance Form No. 5, submitted weekly by Ordnance Maintenance Companies as of 1800 Saturday, to arrive at Army Ordnance Office not later than 0800 the following day. Column 1 is self-explanatory and pictures the maintenance situation for the unit reporting. Sheet No. 1 of this report, vertical columns No. 2 to No. 7, inclusive, is a general report showing the maintenance status for general types of equipment. Additional sheets with vertical columns from No. 8 to number required will report on individual major items which are classed as critical by the Army Ordnance Officer. Examples in columns 8, 9, 10 are indicated. When items are reported upon they will be listed in sequence as they appear on the critical item list published by the Army Ordnance Officer. At the bottom of sheet #1 or on additional sheets will be shown items deadlined with the information furnished as indicated.

Form No. 6: "Supply Battalion Report". Third Army Ordnance Form No. 6, submitted weekly by Ordnance Supply Battalions as of 1800, Saturday, to arrive at the Army Ordnance Office not later than 0800 of the following Monday. Under column 1 indicate requisition number of the unit requisitioning or the Supply Battalion's requisition number on Ord. R. Under column 2 enter unit designation. Under column 3 enter total days requisition has been outstanding seven (7) days or over. Under column 4 enter quantities of items on hand in the supply battalion. Under column 5 list items on requisition not filled. If over five (5) items remain unfilled on any one requisition, furnish copy of requisition and do not

Digitized by Google

list items. Show on the copy of the requisition only these items unfilled. Under column 6 make any remarks as to contacts made to fill requisition or any other pertinent matter which will aid the Army Ordnance Officer in expediting fulfillment of the requisition.

Form No. 7: Third Army Ordnance Form No. 7, will be used by all TUSA Ordnance units authorized to make allocations of equipment or ammunition.

Form No. 8: "Special Ammunition Report". This report to be submitted by ammunition companies and battalions when the stockage of specified items becomes critical, or as called for by Army.

Form No. 9: "Reconnaissance Report". Submitted by units making reconnaissance of areas for prospective future ASPs, or Depots. Reports to be forwarded to Army Ordnance Officer by Ammunition Companies, Depot Companies, and by other Ordnance Companies when required.

ANNEX NO. 7

Maintenance Supply and Evacuation Records

HEADQUARTERS
THIRD UNITED STATES ARMY
APO 403

GNMCO 513 (Ord) 29 June 194_

Subject: Maintenance, Supply and Evacuation Records.

To: All Ordnance Maintenance Companies.

1. This office has obtained and will distribute to all maintenance companies two loose-leaf binders complete with fillers and index sheets. These binders are to be used by all maintenance companies and will be the means of keeping records of maintenance, supply and evacuation operations.

2. One binder will be used to record all job order requisitions and requisitions for parts. This book will be divided into sections by branch or service. There will also be a section for each Division served by the company. There are the necessary tab sheets furnished for dividing the binder into sections. Each unit coming to the maintenance company for service will have an individual sheet on which will be recorded the date, work order number, job order request number or requisition number, description of work to be done (including vehicle or gun registration number) or parts requisitioned, whether parts required for repair work or issue are on hand or must be requisitioned (if requisitioned, list requisition number), and remarks, which should contain such information as when work is completed, parts shipped, or if work was evacuated (give evacuation point). On items requiring evacuation, if replacement is made to the using unit from the company pool, in the column marked "parts on hand or on requisition", write "pool". The sheets which are furnished for use in the binder have columns provided for recording the above information.

3. The second binder will be divided into two sections, one section to be used for keeping a record of evacuations and the other section a record of requisitions forwarded by the company.

a. Items which are evacuated will be classified according to type; that is, a section will be provided for trucks, tanks and tank-like vehicles, half-tracks, small arms, artillery and miscellaneous. Under the section for trucks, for example, there will be a sheet for each type truck; that is, 1/4-ton, 3/4-ton, 1½-ton, 2½-ton, etc. The same sheets as used in the first binder are used for recording this work. Ignore the headings on the columns and list the following information systematically: date of evacuation, work order number under which the item was received, requisition number listed in the column marked "customer's requisition number" (cross out the word customer's), unit for whom the item is being evacuated (including registration number), point to which evacuated; and when item has been replaced or repaired and returned to the maintenance company, list under remarks date received and if to be placed in company pool, write pool in parenthesis in the remarks column when evacuation is effected, and when received post the date received in the remarks column. When any sheet becomes filled, a new sheet will be inserted. The old sheet will not be removed, however, until all items are completed or two weeks after starting the new sheet, whichever is the later.

b. The requisition section of this binder will list all maintenance company requisitions. Parts, vehicles, etc., will be drawn from several supply points. In view of the supply procedure, this will, for the most part, classify your requisitions into general purpose, combat, and armament. The same sheets used for recording the other information on work orders and evacuation will be used for keeping this record. Date of requisition, work order number if parts are for any one work order, requisition number listed in column marked "Customer's Requisition Number". (Cross out the word customer's), type of material on requisition, and date requisition is filled will be listed. Do not forget the requisition number is posted in the work order binder if the requisition covers parts, etc., other than for stock. The same procedure on replacement of sheets when the old sheet has been filled will apply as outlined previously.

4. In order that all postings to these records can be made currently, completed work orders and tally-outs should be routed to the individual responsible for keeping the record. The same should apply to incoming requisitions, job request orders, and tally-ins. The procedure for extracting the necessary information for the record is a matter to be worked out in detail by company commanders.

5. The advantage and purpose of keeping these records is to facilitate compiling reports which will be required as a number of work orders completed per week, number of evacuations effected, amount of equipment on deadline and reason therefor, status of requisitions, and availability of materials. This letter is not to be interpreted as the authority for making the above reports.

a. a. There are no objections to using these binders for compiling additional data such as records of inspections, etc.

6. At such time as a unit is moved from one sector to another or withdrawn from the line, the individual sheet which is in the work order binder, will be withdrawn and forwarded to the Army Ordnance Officer by the Ordnance Company. The Army Ordnance Officer will be responsible for forwarding the sheet on to the battalion which will be maintaining the unit in the future. In this way the record of the using unit will follow it and the equipment and supplies it has on order can be gotten to the unit. This procedure will be followed whether or not there are open items on the sheet. No sheets are withdrawn from the evacuation and requisitions binder at any time for forwarding.

THIRD US ARMY AMMUNITION PLAN

AMMUNITION COMMAND CHANNEL

SECRET

ANNEX NO. 11

SECRET

Ordnance Annex to Administrative Order No. 3

SECTION I - Operations

1. Operation.

a. To expedite reaction to tactical and service requirements, Ordnance troops may be moved by the following Ordnance Commanders:

(1) By the Company Commander of a company in direct support of a division--the section parties of his company within the divisional area after consultation with and approval from the Ordnance Officer and G-4 of the division.

(2) By the Battalion Commander of a battalion in direct support of a corps--companies of a battalion within the Corps and Divisional areas after approval from Ordnance Officer and G-4 of the Corps.

(3) By Ammunition Battalion Commanders:--ASP's will be established on recommendation of the Ordnance Officer and G-4 of divisions and corps after approval by Army Headquarters. When such recommendation is forwarded to the Army Ordnance Officer, it must specifically state that Corps or Division clearance has been obtained. (As desired by Corps Commander)

(4) By Ordnance Group Commanders:--Battalion headquarters after Army approval of recommendation of the Group Commander.

(5) By the nearest Corps and Division Commanders:--in case of failure of communications or in a tactical emergency.

b. All other movements will be directly by Army.

c. Reports (accompanied by overlays and giving time of opening and closing of installations) of all movements of Ordnance organizations to new locations will be forwarded immediately to the Army Ordnance Officer through Ordnance channels.

d. The closest possible contact (both as to the tactical situation and service requirements) will be maintained by the Ordnance commanders with appropriate officers of supported line organizations. Each Ordnance unit (battalion and company) will be given a special task assignment and specific instructions regarding its execution.

SECTION II - SUPPLY

2. Ammunition.

a. All units will arrive on the Continent with a minimum supply of ammunition as shown in basic load charts.

b. Maintenance:- The estimated rate of expenditure will be available from Com. Z on demand. Estimated requirements by periods have been transmitted to Com. Z.

3. Responsibility.

a. Unit commanders are responsible that their organizations are completely equipped with ordnance material (major items, basic load of spare parts as prescribed in pertinent T/O & E's, T/BA's, SNL's) and basic load of ammunition. After being alerted, these will be obtained as prescribed in Administrative Instructions Preliminary to Mounting, Third Army, dated 26 April 194[illegible].

b. Supply Discipline - Supply Discipline will be enforced with particular attention to the following:

(1) Stocking of excess quantities of material and supplies beyond estimated or anticipated current requirements.

(2) Wasteful use of expendable supplies, such as cleaning and preserving materials, metal stocks, standard hardware, parts common, and small maintenance parts.

(3) Careless handling and storage of supplies and material including damaging of containers in opening and failure to close or reseal containers from which a portion of the contents has been removed.

c. Weapons of Hospital Patients. Weapons coming under medical control due to evacuation of patients, etc., will be turned in promptly by hospitals, and other Medical installations, to the nearest ordnance maintenance company, and a receipt obtained therefor.

4. Method of Issue.

a. General Supplies

(1) Major Items:

(a) Ordnance Maintenance and Depot Companies will issue major items to using troops whom they support in exchange for:

1. An unserviceable major item of the same type.

2. A certificate, signed by an officer, that a major item of the same type has been totally destroyed due to enemy action or accident, abandoned due to enemy action, or destroyed to prevent capture by enemy.

3. In case a unit requires a major item which cannot be supplied from stocks on hand, the unserviceable item will be tallied in on the certificate in 4 a (1) (a) 2 above will be accepted. Replacement will be procured from the depot company in the normal manner.

(b) Ordnance companies will report to the Army Ordnance Officer all major items issued troops of other nations, showing designation of organization to which issue is made.

(2) Spare Parts and Cleaning and Preserving Material Other Than Basic Loads. Normally, except for bulk requisition on spare parts and C.P., material will be issued by Ordnance Maintenance companies to the troops whom they support. Bulk requisitions will be filled by depot companies.

(3) Combat Loading.

(a) All vehicles delivered to units will be "combat loaded" and made complete with all accessories as listed in appropriate SNL's and Technical Manuals, by the Ordnance unit making the delivery. "Combat Loading" requires that the vehicle or weapon be complete and ready to enter combat.

1. All "must items", basic ammunition load, mines, CWS supplies, decontaminating apparatus, fire control equipment, radio, medical supplies, and GI items including rations, will be drawn and properly stowed in the vehicle.

2. All vehicles will be fully serviced with gasoline, oil and water, ready for operation. Standard U. S. (or French, if applicable) ground forces identification marking will be accomplished before making delivery.

(b) All weapons delivered to units in combat must be complete with all accessories. Special attention will be given to artillery pieces to insure that all "Must Items" and fire control equipment are present.

(c) Prior to issue, each weapon or vehicle will be inspected by the issuing company which will prepare "emergency" requisitions for direct delivery to the unit receiving the material covering the items that are short at time of delivery. A copy of requisitions which gives action taken and shortages, will accompany vehicle or weapon. Copies will also be sent to the supporting ordnance organization.

Digitized by Google

(4) Commercial gases and Helium - The Corps of Engineers is responsible for supplying cylinders of commercial gases (oxygen, acetylene, nitrogen, and carbon dioxide) and helium in exchange for empty cylinders. Ordnance depot companies will stock an adequate quantity of the above items for supplying the needs of ordnance units who will normally turn in empties to ordnance depots and draw full cylinders. In emergencies, ordnance maintenance companies may draw direct from engineer depots.

(5) Back Orders - Ordnance maintenance and depot companies will establish "back order systems" to insure that all requirements of the using troops for ordnance materiel are filled.

(6) Reports:

(a) "Material in Hands of Troops" and "Combat Loss" reports will be submitted by all combat and service units on the form shown in Form 2 (Reproduced on pages 98 thru 107 of Overlord Plan). Reports will be submitted as of 1200 hours on the 20th day of each month covering the period since last report and will arrive at this headquarters not later than 1200 hours on the 23rd day of each month. In case of excess over T/O & E, authorization will be given.

(b) "Initial Status report of major Ordnance items" will be submitted upon arrival of the Continent or upon reverting to Third U. S. Army control. The report will be made on form No. 2 (Reproduced on Pages 98 thru 107 of Overlord Plan), "Ordnance Material in Hands of Troops and Combat Loss Report".

b. Ammunition.

(1) All units in the Army will secure replacement of expended basic load Class V ammunition on presentation of a request or transportation order to the nearest ASP or Army depot. This request will contain a certificate to the effect that the ammunition required is to replace expenditure from basic load. No ammunition in excess of basic load will be issued except on specific authority of the Army.

(2) Unit of fire will be sent that prescribed by Hq. ETOUSA Ltr., dated 10 December 1943, AG 471 POG.

(3) Unserviceable ammunition with its location clearly defined will be reported to the nearest Ordnance Officer for disposition. U. S. Artillery ammunition unserviceable only by reason of dented cartridge cases will be evacuated to the nearest Class V Supply Point. Malfunctions of ammunition will be reported immediately to the Army Ordnance Officer through channels. Reports will include all available details.

(4) A monthly ammunition supply report will be submitted by all combat and service units, as of COOB the 20th day, to reach Army headquarters not later than 0800 of the 23rd day. Army units will submit reports direct to Army, headquarters; reports from units assigned or attached to Corps will be consolidated by Corps before forwarding to Army. This report will be consolidated by Corps before forwarding to Army. This report will include for each item (a) Balance on Hand (b) Expended in Combat (c) Expended for training (d) Loss due to enemy action.

5. Supply from Com. Z.

a. When Corps are operating separately, to be made in accordance with instructions issued by Ordnance Officer on staff of senior ground commander.

b. When Corps are operating under Army control, to be made available on demand of Army Ordnance Officer or Commanding Officers of Army supply or rear maintenance battalions. Delivery to be made as indicated on the supply request.

SECTION III - Maintenance

6. Responsibility.

a. Responsibility for maintenance of motor vehicles is clearly defined in AR 850-15. Maintenance of equipment in the hands of using troops is a direct responsibility of the commanding officers concerned.

b. Particular attention will be devoted to preventive maintenance. Commanding Officers will make frequent checks to assure that all operations classified under this heading are performed regularly.

c. Ordnance maintenance commanders (Group, Battalion, and Company) will aggressively push maintenance and Ordnance Service forward to the troops supported.

7. Exchange. Vehicle and weapon replacement or exchange, together with prompt evacuation, will be as dictated by the tactical situation.

8. Files. Ordnance maintenance companies will at all times maintain files of pertinent data for each of the organizations they support, showing types of major items with which the organization is equipped, existing shortages, status of action being taken to fill shortages, condition of materiel, and other important information. When the organization moves, this file will be forwarded through Ordnance channels to the maintenance company designated to support the organization in its new location.

9. Records:

a. The following records will be kept:

(1) Duty Roster - WD, AGO Form Number 6.
(2) Preventive Maintenance Service and Technical Inspection Work Sheet #1 - WD, AGO Form Number 461.
(3) Preventive Maintenance Service and Technical Inspection Work Sheet #1 - WD, AGO Form Number 462.
(4) Preventive Maintenance Service and Technical Inspection Work Sheet #1 - WD, AGO Form Number 463.

b. All vehicles will be properly dispatched and records maintained on daily dispatching Record of Motor Vehicles, WD, AGO Form 7361 (old WD, QMC Form Number 754).

c. Drivers of motor vehicles will have the following in their possession:

(1) Drivers' Trip Ticket and Preventive Maintenance Service Record, WD, AGO Form Number 48 (old WD, QMC Form Number 237).
(2) Army Motor Vehicle Operator's Permit, WD, QC Form Number 7460 (old WD, QMC Form Number 226).
(3) Drivers' Accident Report, Standard Form Number 26.

10. Artillery Tubes: Ordnance units supporting artillery will report when 75% of the life of a tube has been shot away. Appendix II (Chart, "Expected Life of Artillery Tubes" as shown on page 118 of Overlord Plan) will be referred to for the expected life of a tube. The report will be forwarded to the Army Ordnance Officer for action.

11. Signal Repair Teams: Signal repair teams will be attached to designated Ordnance companies for the purpose of repair and salvage of radio sets.

SECTION IV - Evacuation and Salvage

12. Evacuation.

a. The purpose of evacuation is to conserve critical equipment by recovering unserviceable Ordnance materiel for repair or salvage purposes in the shortest possible time. Evacuation is the responsibility of all commanders.

b. Tactical units are responsible for evacuation to designated collecting points, generally in the vicinity of an ordnance maintenance or supply organization. Collecting axis may be designated if the situation warrants, and will coincide with the maintenance axis. The evacuation service of the tactical units will be augmented by organic Ordnance units.

c. Evacuation from tactical unit collecting points to Army collecting points will be accomplished by Army Ordnance units. Army collecting points normally will be located near depot companies.

d. General Policy for Ordnance Units. Prompt evacuation of repairable equipment which is beyond the repair facilities, available spare parts, and available time of the organization, will be to the next rear maintenance unit. (This will include tires, tubes, engines, transmissions, axles, generators, starters, carburetors, fuel pumps, and similar items.) Material being evacuated will have attached a tag showing nature of repairs required, unit initiating the evacuation, and the signature of an ordnance officer.

e. Army Ordnance will promptly evacuate to the Base equipment beyond repair within the policy announciated in sub-paragraph a.

[redacted] Evacuation will be held to the absolute minimum dictated by military necessity.

13. Salvage. Ordnance salvage materiel will be evacuated through ordnance channels to the rear battalions.

a. The rear maintenance battalions will, as far as possible, repair and replace in stock repairable sub-assemblies and other usable parts. If beyond their capacity, materiel will be evacuated to the Base Ordnance Shops if repairable, and if not repairable, to the Base Ordnance Salvage Yards.

b. Competent personnel from the Rear Maintenance battalions will make daily visits to Quartermaster Salvage Yards within the Army area to recover usable or recoverable ordnance materiel which may have been delivered direct to the salvage yards.

c. Salvageable ammunition components will be collected and turned in to appropriate ASP's or depots.

(1) Small Arms, cartridge cases and packing materials (i.e. bandoleers, sling, cartons, metallic links, fabric belts, boxes and their tin liners). These will be packed by types in boxes or bags. Each box or bag must bear a certificate showing that the contents are "CERTIFIED FREE FROM EXPLOSIVES" and signed by an officer of the unit concerned.

(2) Artillery Ammunition: Cartridge cases and packing materiel (i.e., fiber containers, cloverleaf packs, wooden boxes and containers) will be packed by types and, where practicable, in the boxes or cartons from which the material is removed. Fired cartridge cases may be shipped loose if containers are not available. Other components will be sorted, packed and marked "Certified Free from Explosives" and signed by an officer of the unit concerned.

SECTION V - Bomb Disposal

14. Location. It is the responsibility of unit commanders to make reconnaissance, mark the location, establish safety precautions and report all unexploded bombs and "duds" wherever found to the Corps or Army Ordnance Officer by the fastest means available. Reports will specify exact location of the bomb or "dud" in terms of six (6) number coordinates of an easily recognized terrain feature. The location of the bomb or "dud" will be given as a definite distance on a given azimuth from the terrain feature given as a reference. The report will state whether or not the unexploded bomb or "dud" is hampering operations or endangering important facilities and give name of officer and organization originating the report.

15. Disposal. Disposal of unexploded bombs and "duds" (except land and AT mines) is an Ordnance responsibility. Bomb Disposal units (Ordnance) will be employed for this purpose. When necessary, the appropriate Ordnance Officer will request the cooperation and assistance of Engineers. Bomb Disposal units will be attached to Corps until the disposal problem indicates other attachments are desirable.

16. Bomb Cemeteries. All disposal will be carried out in place, except where personnel or property that it is desirable to preserve, will be endangered. Bombs and other unexploded missiles that cannot be disposed of in place will be taken to bomb cemeteries for disposal. Bomb cemeteries will be located in cooperation with G-4. Cemeteries will be located a minimum of 400 yards from main highways, railroads, habitable areas, and important installations.

17. Souvenirs. The inserting of anything of an explosive nature for souvenirs is strictly forbidden.

18. Priorities. Priorities for handling unexploded bombs will be established by the Army Bomb Disposal Officer.

SECTION VI - De-Waterproofing

19. De-Waterproofing. Unit commanders are responsible for de-waterproofing. De-Waterproofing of "Must" items will be accomplished as soon as the vehicle is landed over the beach.

a. "Must Items - De-Waterproofing".

[redacted] exhaust pipe, carburetor air intake, [redacted] unit if removed and refill with

UNCLASSIFIED

DECLASSIFIED

(3) Unseal distributor.
(4) Unseal battery vents.
(5) Unseal crankcase filler tube cap breather.
(6) Unseal crankcase ventilator outlet pipe.
(7) Unseal oil measuring well and insert oil measuring stick.
(8) Unseal vents on differentials, transfer, and transmission cases.
(9) Crankcase and all housings should be checked for water, if water is found, change lubricant immediately.

b. All waterproofing material such as asbestos grease, flexible tubing, soft steel tubing, etc., will be saved and turned in to the nearest Ordnance company. Ordnance companies will immediately turn in all waterproofing materials to the nearest SOS agency. This material is critical. Ordnance companies will aid in de-waterproofing by furnishing contact parties who will collect the waterproofing material. Every effort must be made to keep waterproofing material clean as dirt seriously reduces its effectiveness for re-use.

SECTION VII - Inspection

20. General. Inspection of Ordnance equipment is a continuous responsibility of all commanders. Equipment determined unserviceable, as a result of inspection, will be turned in for replacement. Upon request, Ordnance battalion commanders will furnish inspection teams to determine the serviceability of questionable equipment only. If a unit is ordered to be refitted by the Commanding General, the Army Ordnance Officer will furnish technical inspection and repair teams. Ordnance battalion commanders will be furnished sample inspection forms for all type equipment. These will be reproduced locally.

21. Command Inspections.

a. The Army Ordnance Inspection Service will command inspections of ordnance material in hands of using arms and services of all components of the Third Army.

b. Periodic inspections of units will be made to determine the following:

(1) Operation.

(a) Use of equipment as intended.

(b) Equipment properly designed for the use intended.

(c) Proper training of personnel in use of equipment.

(2) Maintenance.

(a) Performance of adequate and correct first and second echelon maintenance by using personnel.

(b) Availability and proper utilization of third echelon divisional and Army Ordnance maintenance.

(c) Availability and proper utilization of fourth echelon Ordnance maintenance.

(d) Execution of authorized modifications in accordance with current Field Service Modification Work Orders.

(e) Determination of any unauthorized modifications.

(3) Supply.

(a) Unit replacement and direct exchange principle functioning to the maximum degree (i.e., using troops obtaining serviceable equipment by direct exchange for like unserviceable equipment.)

(b) Availability of spare parts and prompt repair of unserviceable equipment.

(c) Critical shortages of Class II and IV supplies in forward ordnance maintenance echelons will be reported to Army Ordnance Officer.

(d) Responsibility for receipt of "X" Ordnance equipment in unserviceable condition as a result of production methods, faulty inspections, improper crating, rough handling, etc.

(e) Utilization by troops of normal ordnance channels of supply.

(f) Proper functioning of depot supply installations.

(4) Special Inspections.

(a) Make such special inspections as may be directed by the Commanding General or the Ordnance Officer.

c. To implement this service, the inspector will:

(1) Utilize personnel of the Army maintenance units as inspectors.

(2) Maintain records of inspections and a schedule of proposed inspections.

(3) Prepare necessary command letters directing inspections.

d. All reports of inspections will be made in duplicate to the Commanding General through the Army Ordnance Officer, a copy being furnished by the inspector director to the Commanding Officer of the unit inspected.

SECTION VIII - Captured Ordnance Material

22. Captured Enemy Ordnance Material. Corps and Division commanders are responsible that all captured enemy ordnance material, other than ammunition, is turned in to the nearest ordnance maintenance or depot company which will apply temporary preservative measures and will evacuate the material through ordnance channels to ordnance battalions. All commanders will exercise the closest supervision to prevent collecting of souvenirs at the expense of possible future use by ourselves or our allies. Care will be taken that captured material is not damaged in any manner or stripped of any parts or accessories, with special attention being paid to preserving complete all optical instruments, sighting and fire control equipment, etc.

23. Location. When captured enemy material cannot be moved to areas under ordnance supervision, the Army Ordnance Officer will be notified promptly of the location by coordinates and position relative to towns, roads, or other landmarks, together with a brief description of types and quantities of material at that point.

24. Ammunition. Captured enemy ammunition, except toxic chemicals, found in original containers showing no evidence of tampering, artillery projectiles, and powder, will be evacuated through ammunition companies to specified enemy ammunition dumps. All loose small arms ammunition, grenades, mines, etc., except toxic chemicals, will be destroyed in place under supervision of qualified ordnance personnel or engineer personnel. Toxic chemical ammunit on will not be handled by ordnance personnel, but will be turned over to CWS. Personnel not especially trained will not move, disturb, fire, or discharge loose and scattered enemy munitions.

25. Grenades. Under no circumstances will enemy grenades in any condition be moved.

26. Mines, Booby Traps and Sabotage Kits. Enemy mines, booby traps, and sabotage kits, whether loose or in original containers, will not be evacuated to ASP's or Depots, but will be disposed of or destroyed as directed by the appropriate engineer officer.

27. Reports. Designated battal ons will submit weekly reports as of 1800 hours each Saturday, covering the period since last report to reach the Army Ordnance Officer by 0900 each Monday, showing information called for on Form #3. (Reproduced on Page 109 of Overlord Plan.)

28. Technical Intelligence. When new or unusual items of enemy ordnance material are captured, report will be rendered by the most expeditious means to the Army Ordnance Officer who will cause the material to be inspected by Ordnance intelligence personnel.

29. Use. Where considered necessary by the unit commander, combat units may use any enemy materiel and ammunition. Report will be made to the Army Ordnance Officer of all enemy material used by our troops for combat purposes.

SECTION IX - Miscellaneous

30. Destruction of Materiel. The destruction of ordnance equipment is a command decision. Commanders are authorized to destroy ordnance equipment when capture is imminent. Each unit is authorized to requisition the necessary explosives and carry them on hand for this purpose. Priority will be given to the destruction of captured enemy materiel in case recapture is imminent.

8. PROVISIONAL WEAR CHARACTERISTICS OF GUNS: The following data is quoted from Headquarters European Theater of Operations, Ordnance Section:

"1. The table shown below was compiled by Colonel Leslie E. Simon based on extensive Proving Ground records and certain records which he has reviewed in the field. It should be understood that it is not the final word from the Chief of Ordnance, but it will serve as an index for use until more exact data becomes available:

PROVISIONAL WEAR CHARACTERISTICS OF GUNS

Weapon	Velocity Drop/ Units Given	Remarks	Advance of Forcing Cone	Initial M.V.
120mm Gun M1	17.5 f.s./1000 rds.	Direct Fire Wpn	0.1" @ 4000 rds.	2870
**57mm Gun M1	8.5 f.s./1000 rds.	Direct Fire Wpn	11" @ 1000 rds.	2975
75mm Gun M1 1897	7.3 f.s./1000 rds.		0.22" @ 7000 rds.	1950
**75mm Gun M1	7.5 f.s./100 rds.		No information	2600
**3" Gun M5	9.0 f.s./100 rds.		0.1" @ 800 rds.	2800
*90mm Gun M1	9.2 f.s./100 rds.		7.0" @ 2000 rds.	2700
105mm How M2A1	2.0 f.s./1000 rds.	Misc. charges fired	0.07" @ 4000 rds.	1550
*120mm M1 (4.7" Gun)	20 f.s./100 rds.		27" @ 1000 rds.	3125
*155mm Gun M1A1	7.5 f.s./100 rds.	Misc. charges fired	No information	2800
155mm How M1	3.3 f.s./1000 rds.	Misc. charges fired	No information	1650
8" How M1	No appreciable drop in 2000 rounds	Misc. charges fired	0.15" @ 1600 rds.	1950
8" Gun M1	33 f.s./100 rds		36" @ 150 rds.	2850
*240mm How M1	3.3 f.s./100 rds.	Misc. charges fired	No information	2300

* Guns which should be calibrated periodically.
** Direct fire weapons which should be calibrated if, and only if, used as field artillery.

Digitized by Google

"2. This table indicates AVERAGE rates of wear. A specific weapon may wear somewhat faster or slower, or may have started out with a velocity slightly higher or lower than the tabulated velocity. Nevertheless, the table is a good guide. The simple practice of merely counting rounds rather than some artificial "equivalent rounds" is recommended.

"3. If a gun is calibrated approximately twice during its life, the table should apply well during the interim, just as one mode one's watch occasionally, while tolerating a slight degree of inaccuracy during the interim.

"4. It should be observed, however, that no amount of calibration is as important as keeping ammunition lots straight, as careful, orderly practices, and as the avoidance of mixing some weights of shell without appropriate correction. The shooting of one, and only one, ammunition lot is of utmost importance in the 105mm How and smaller calibers. In calibers larger than 105mm, the use of the same powder lot is important, but projectile lots may be mixed without incurring unwarranted dispersion."

SECTION IV

Supply

10. PORTABLE ANTI-TANK MINE DETECTOR SETS: All Ordnance units will requisition through Signal Section TUSA, allowance of Mine Detector Set SCR-625 in quantities as indicated below:

SECTION VI

General

Marking of Captured New Enemy Equipment: The following information pertaining to marking of new enemy equipment is quoted from letter, Hq. ETO, dated 22 June 1944:

"1. Captured enemy equipment of new type and/or design will be collected by Enemy Equipment Intelligence Service Teams for technical examination and research study by the service concerned. All such captured enemy equipment will be uniformly and distinctively marked by such teams as indicated:

"a. Consistent with the size of the equipment, a 3" circle stencilled in Signal yellow will be prominently displayed. In addition, the serial number of the tag required by sub-paragraph g below, will be stencilled in black in the center of the Signal yellow circle.

"b. When the size of the equipment prevents its identification as required by sub-paragraph a above, a signal yellow cardboard tag, 3" in diameter, will be attached to it by the Intelligence team selecting it for evacuation.

"c. In addition to the markings required by sub-paragraphs a and b above, each piece of captured new type enemy equipment will have firmly attached thereto the First US Army Group (FUSAG) tags, or a similar type tag to be furnished by this headquarters. These tags will be completely addressed to expedite shipment to final destination.

"2. No captured enemy equipment, except that marked by the Enemy Equipment Intelligence Service Teams, will be marked as indicated above."

ANNEX NO. 13

HEADQUARTERS
70TH ORDNANCE GROUP
APO 605, U. S. ARMY

16 October 1944

Subject: Maintenance Assignments.

To : See Distribution.

1. Effective immediately, the following plan will govern maintenance assignments and procedure. All other directives previously issued by this headquarters which are at variance with instructions contained herein are rescinded.

2. Attached hereto is a map sketch showing area over which 70th Ordnance Group exercises maintenance jurisdiction. This area is subdivided into three zones which for purposes of easier definition, will be referred to as North Zone, Central Zone, and South Zone.

3. Each Zone is bounded as follows:

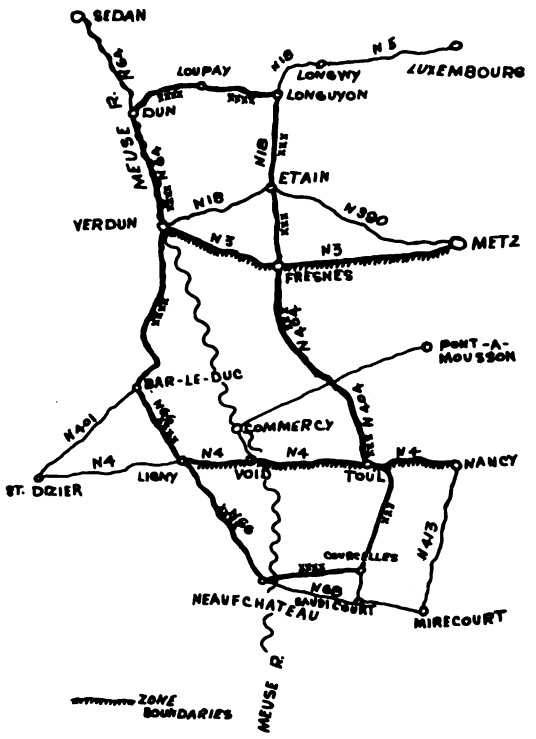
a. North Zone
Bounded on the North by Army left boundary (LOUPPY-LONGUYON)
Bounded on the East by XX Corps rear boundary (LONGUYON-SPINCOURT-ETAIN-FRESNES)
Bounded on the South by Highway N3 (VERDUN-METZ)
Bounded on the West by Army rear boundary (DUN-VERDUN) (MEUSE River)

b. Central Zone
Bounded on the North by Highway N3 (VERDUN-METZ)
Bounded on the East by Corps rear boundary (FRESNES-HEUDICOURT-SOUR-LES-COTES - FRESNES-FLIREY-TOUL)
Bounded on the South by Highways N56 and N4, (BAR-LE-DUC-LIGNY-VOID-TOUL-NANCY)
Bounded on the West by Army rear boundary (VERDUN-SOUILLY-CHAUDENEY-SUR-AIRE - REVIGNY-ST DIZIER-BAR-LE-DUC-LIGNY)

c. South Zone
Bounded on the North by Highway N4, (LIGNY-VOID-TOUL-NANCY)
Bounded on the East by XII Corps rear boundary (TOUL-DOMPAIRE-CONFLANS)
Bounded on the South by Army right boundary (NEUFCHATEAU-CONFLANS)
Bounded on the West by Army rear boundary (BAR-LE-DUC - GONDRECOURT-AUBE-NEUFCHATEAU)

4. The following battalions are assigned zones as follows:
North Zone - 89th Ordnance Battalion
Central Zone - 79th Ordnance Battalion
South Zone - 385th Ordnance Battalion

5. Upon receipt of this correspondence, each battalion assigned to zones per paragraph 4, above, will further subdivide the zone to which it has been assigned into sub-zones, assigning each maintenance company within the battalion to a sub-zone. A report of sub-zone divisions and assignments, accompanied by overlay showing boundaries of sub-zones will be forwarded to this headquarters without delay.



6. Upon assignment of a company to a sub-zone, the company will canvass the sub-zone, contacting all using units located therein, and informing them of the location of the maintenance company. Using units thus contacted will be "picked up" by the maintenance company for permanent maintenance assignment.

7. A list of using units within the sub-zone will be submitted by the company to the battalion, where the list will be consolidated and forwarded to this headquarters.

8. Using units which are stationed along zone boundaries (paragraph 3, above) and which might conceivably be considered to be in either of two zones, will be serviced by the nearest or most easily accessible company.

9. It is understood that the maintenance procedure outlined in this letter will, on occasion, cause questions to arise concerning the function of the control points. In this regard, organizations are reminded that the original purpose of the control point was to clear and distribute maintenance accumulated through channels from the front. It is felt that "using unit" maintenance as described in this letter will not conflict with control point maintenance to any appreciable extent. In order that control points will know at all times the capacity of shops, constant liaison between maintenance companies and control point must be maintained.

10. Companies assigned to sub-zones will be responsible for the patrol of roads within the sub-zone.

Office of the Ordnance Officer
APO 403

ORDNANCE BULLETIN)
) 6 November 1944.
NUMBER 9)

SECTION I

Administration

SECTION II

Operations

SECTION III

Maintenance

9. The following information from Ordnance Weekly Letter No. 39, Headquarters Communications Zone, European Theater of Operations, Office of the Chief Ordnance Officer, is published for your information:

"1. The suggestion of the Ordnance Officer, VIII Corps, for a heavier shield for anti-tank guns to prevent penetration by sniper bullets was referred to the Chief of Ordnance, who has replied as follows: 'Over the past year a carefully coordinated ballistic program has been fired at Aberdeen Proving Ground with the result that 5/8" armor has been indicated for such front line applications. The 3" anti-tank gun M5 shield mounted bracket (3" M1 with the new shield), was designed to take heavier armor. The structural design of the shield on this gun is such as to give as complete shielding as possible with maximum efficiency. Except under rare conditions, this oblique shield of 5/8" armor will defeat small arms fire up through .50 caliber. A similar obliquity shield has been developed for the 37mm M4A1 anti-tank gun.' It is not known how soon these modified carriages will be available in this theater.

"12. It has been determined experimentally by this office that the barrel of the M1919A4 machine gun can be used very successfully in the M1919A6 machine gun.

"13. A Standard Operating Procedure will be issued by the Chief Engineer covering the procurement of industrial gases in France, extracts from which are quoted below:

'The French authorities will assume all costs in connection with any gases obtained.

'Requisitions in the form of SPA ETO Form 105, or demand SPA ETO Form 101, or any other form of requisition which in effect will comply with Standard Operating Procedure No. 10F, "Field Procurement by U. S. Forces in France", will be presented to the manufacturer.

'Units within the Base Sections and Advance Sections should be instructed to place all requisitions for gases through the Base or Advance Section Engineer Supply Officer, who will approve them and direct the unit to whichever industrial gas plant (or Engineer Depot) is selected by him to supply the gas.

'The Base and Advance Section will be responsible for assisting the gas producers insofar as emergency supplies of raw material, transportation, and power concerned, in order to produce gases for U. S. Army use'."

HEADQUARTERS
THIRD UNITED STATES ARMY
OFFICE OF THE PROVOST MARSHAL
APO 403

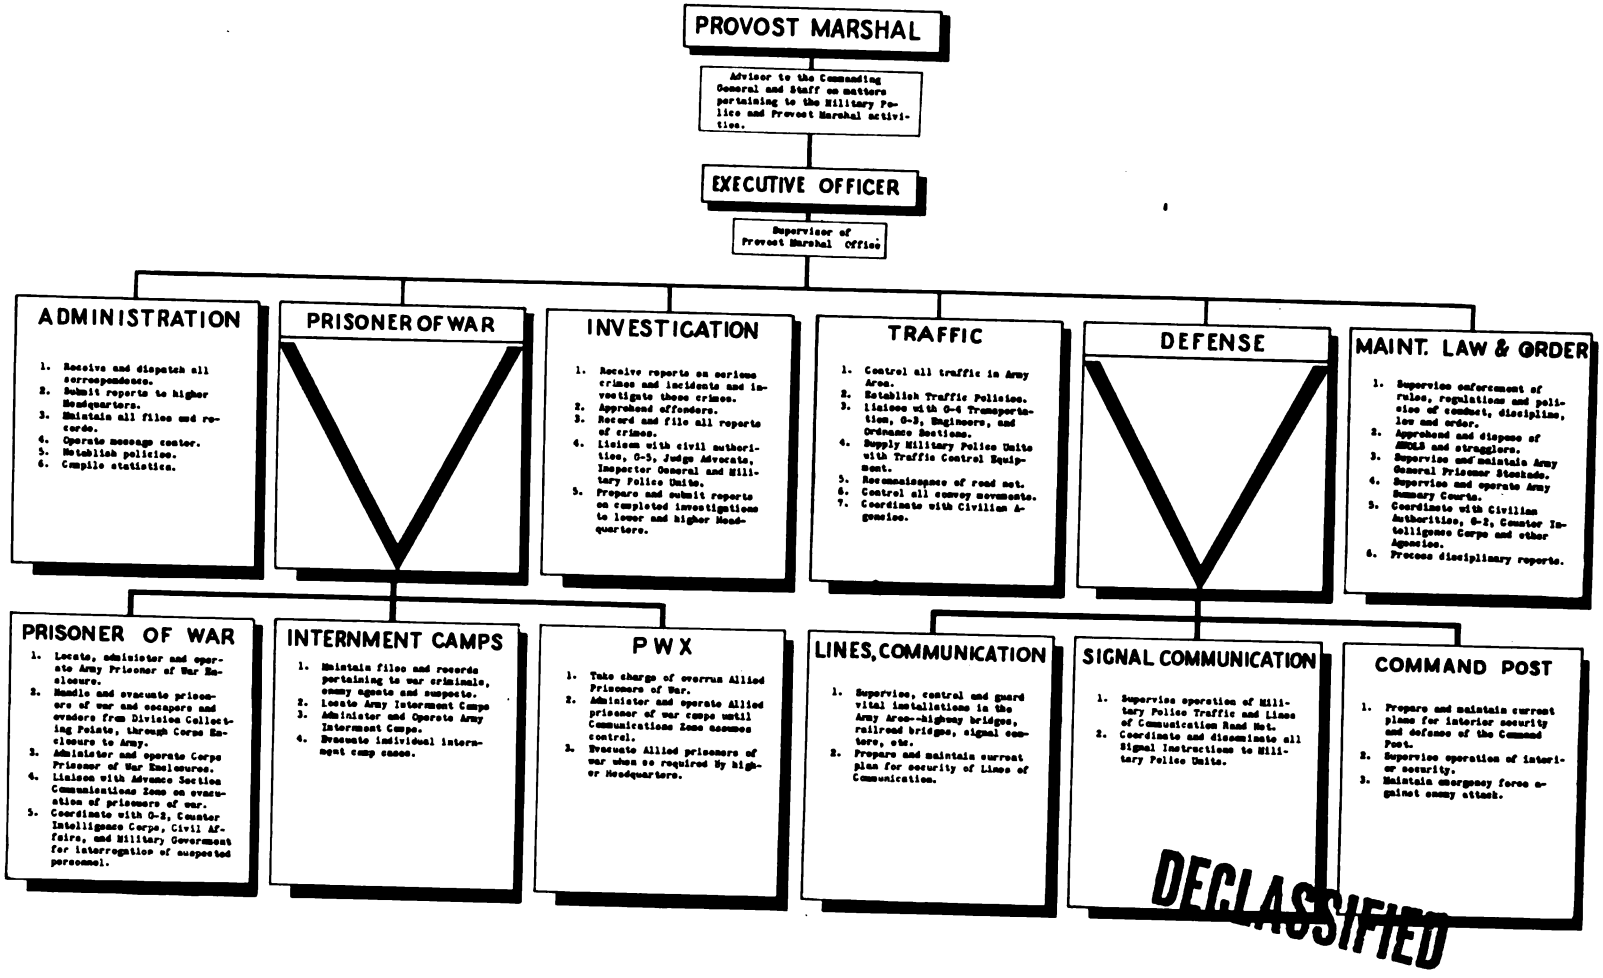
SUBJECT: After-Action Report.

TO : Commanding General, Third U.S. Army, APO 403, U.S. Army.

1. Submitted herewith is the After-Action Report of the Provost Marshal Section, Third U.S. Army Headquarters, beginning with the Pre-operational Period in the United Kingdom and continuing at the properly designated intervals by chapters.

2. The multiplicity of responsibilities of the Army Provost Marshal, together with the large number of troops, required the organization and operation of a large Provost Marshal Section. Active operations resulted in the Provost Marshal being responsible for the following:

a. Criminal Investigation.
b. Maintenance of Law and Order including:
(1) Army General Prisoner Stockade.
(2) Army and Battalion Zone AWOL Stockades.
(3) Army Summary Courts.
c. Traffic Control.
d. Prisoners of War.
e. Overrun Allied Prisoners of War.
f. German Interment Camps.
g. Aid to Civil Affairs in handling Refugees.
h. Security of all Lines of Communication in the Army area.
i. Command Post Defense, including Cordon Defense.
j. Maintenance of an Emergency Striking Force in close proximity to Command Post.



3. The Army Commander being kept currently posted of the problems of the Army Provost Marshal and being cognizant of the importance of the various functions made available sufficient troops at all times to make it possible for the Army Provost Marshal to effectively accomplish his mission.

CHAPTER 1
PLANNING IN UNITED KINGDOM

SECTION I - GENERAL

Plans for the organization of the Provost Marshal Section were formulated and it was announced that the 511th Military Police Battalion Headquarters and Headquarters Detachment would function as the Staff of the Provost Marshal Section. The companies of the 511th Military Police Battalion were assigned to Corps as follows:

Company "A" - VIII Corps
Company "B" - XX Corps
Company "C" - XIII Corps

Headquarters and Headquarters Detachment, 511th Military Police Battalion arrived 11 April at Third U. S. Army and reported for duty to the Provost Marshal. It was contemplated that the Provost Marshal Section be organized as follows:

Provost Marshal Section:
a. Provost Marshal
b. Executive Officer
c. Adjutant
d. Chief Clerk

Sub-Sections:
a. Maintenance of Law and Order
b. Traffic
c. Prisoner of War and Refugee
d. Criminal Investigation

The Provost Marshal Offices were established with the Forward Echelon at Camp PEOVER and the Rear Echelon at Camp TOFT.

Planning for the distribution of the Military Police Units assigned to Third U. S. Army resulted in the following:

511th Military Police Battalion - Provost Marshal Section, VIII, XX and XIII Corps.
503rd Military Police Battalion - Third U. S. Army.
512th Military Police Battalion - Third U. S. Army.
217th Military Police Company (Corps) - Assigned XV Corps.

Operational Plans were formulated which warranted a request for the following allotments of Military Police Units to Third U. S. Army:

6 Military Police Battalions
10 Escort Guard Companies
1 Processing Company
1 Criminal Investigating Detachment.

Visits were made by several members of the Provost Marshal Section to Headquarters, European Theater of Operations, Headquarters, First U. S. Army Group, Headquarters, First U. S. Army and other Headquarters for the purpose of conferring and discussing Provost Marshal affairs and functions.

The following strength and organization of the Provost Marshal Section, Third U. S. Army was authorized by Staff Memorandum Number 39, Headquarters, Third U. S. Army, dated 6 May 1944:

18 Officers
1 Warrant Officer
34 Enlisted Men

ORGANIZATION:

Provost Marshal Headquarters
Traffic Sub-Section
Maintenance of Law and Order Sub-Section
Prisoner of War and Refugee Sub-Section
Investigation Sub-Section

The Provost Marshal Plan, Annex Number 19 to Third U. S. Army Outline Plan, was prepared, approved by the Army Commander, and published. Operational Memorandums were published to implement Provost Marshal Plan Annex Number 19 and consisted of the following:

Circular Number 10, Headquarters, Third U. S. Army, Traffic Regulation and Control for Continental Operation, dated 4 May 1944. (See Annex 1).

Operations Memorandum Number 10, Headquarters, Third U. S. Army, Traffic Control Signs, dated 3 June 1944. (See Annex 2).

Prisoners of War.

Straggler.

Maintenance of Law and Order.

At this time a study of training exercises in Traffic Control showed clearly the drastic need for additional equipment, especially motorcycles, 1/4 ton trucks, radios, sirens, watches, compasses, individual stoves for dispersed traffic personnel, and additional traffic control equipment. To alleviate this situation action was taken in the form of a request to Headquarters, European Theater of Operations, U. S. Army, through command channels to secure all items of additional equipment necessary for Military Police Units. The latter was approved by all sections and the Army Commander, Third U. S. Army, and forwarded to Headquarters, European Theater of Operations, U. S. Army for consideration, where on 17 June it was approved. (See Annex 3).

An Executive Officer was assigned.

It was planned that the VIII Corps would take part with the First U. S. Army in the invasion of the Continent and a liaison officer from 503rd Military Police Battalion was detailed between this section and VIII Corps.

The Provost Marshal Section was formally announced as a Special Staff Section by General Orders Number 3C, Headquarters, Third U. S. Army, dated 8 June. (See Annex 4). The most important advantage of this General Order was direct communication between Provost Marshals of Corps and Divisions and the Provost Marshal, Third U. S. Army, was authorized on all Provost Marshal and Military Police matters.

A Provost Marshal Planning Conference was held on 13 June with representatives from all Corps, Divisions, Military Police Battalions and Military Police Companies of the Third U. S. Army present. (See Annex 5). The Army Commander addressed the meeting, discussing the importance of traffic control, handling of prisoners of war, appearance of Military Police, aggressiveness on the part of Military Police, and that they should be distinctly marked. He gave his assurance that Military Police in the execution of their duties would be given his full support.

Staff Memorandum Number 47, Headquarters, Third U. S. Army, dated 17 June, announced that the Headquarters of the Third U. S. Army would be divided into three groups:

Group "X" - Forward Operational Echelon
Group "Y" - Rear Operational Echelon
Group "Z" - Group remaining after departure of "X" and "Y" Echelons for the Continent.

"X" Echelon of Third U. S. Army Headquarters, with vehicles numbering over 600, departed from TOFT and PEOVER Camps for BRADBURE, England, on 19 June 1944. The entire movement consisted of four serials proceeding on two different routes controlled by the Provost Marshal. The first serial left at 0500, followed hourly by the other serials. (See Annex 6). "Y" Echelon consisting of two (2) officers and six (6) enlisted men remained at Camp TOFT to carry on such duties as might be required. Upon arrival at SALISBURY on the way to BRADBURE an advance detachment from the 503rd Military Police Battalion escorted the various sections to their areas. Headquarters for the Provost Marshal Section was at Whitebury House, WHITSBURY, England.

One officer and two enlisted men departed from WHITSBURY on 4 July to SOUTHAMPTON for movement to the Continent. Company A, 503rd Military Police Battalion also departed for movement to the Continent.

At 0700 July 5, Third U. S. Army Headquarters moved to SOUTHAMPTON by motor convoy for embarkation to the Continent.

This Headquarters departed from SOUTHAMPTON, England, at 0800 July 6, and arrived at UTAH BEACH, France, by LST, at 2300 of the same day.

Departed at 0400 July 7, for de-waterproofing area. Marched from transit area 22 miles and arrived at BLANDAMOUR (T1798) at 1300 hours of the same day. This section located its Headquarters on Road IC22 northeast of BLANDAMOUR (T1798).

SECTION II - TRAFFIC SUB-SECTION

The Traffic Sub-Section was organized on 15 April 1944 with the Headquarters at Rear Echelon at Camp TOFT.

The pamphlet "Maintenance and Operation of Motor Vehicles," Headquarters, European Theater of Operations, U. S. Army, dated 24 January, 1944, with changes, was the publication upon which all rules and regulations were eventually based.

Circular Number 10, Headquarters, Third U. S. Army, dated 4 May was published by this Headquarters for the operation of Motor Vehicles on the Continent.

British traffic control equipment was designated as the traffic control equipment to be used by all Allied Forces in the European Theater of Operations, and consisted of Franco plates and discs, directional. Franco plates, metal or wooden material, 15 inches by 17 inches or 17 inches by 30 inches, with white letters on black background would be used for unit, installation or route signs. Discs, directional would be used as follows:

a. Directional discs, white with black arrow pointed toward 12 o'clock indicating main routes forward to the front.

b. Directional discs, white with black arrow and bar perpendicular to the base of the shaft indicating lateral routes.

c. Directional discs, white with black arrow pointed toward six o'clock indicating main down routes to the rear areas.

d. Directional discs, red with white arrows indicating detours from main or lateral routes.

e. Directional discs or equivalent, white with red arrow indicating local routes.

Other traffic control equipment consisted of traffic lamps, reflectorized batons, lamps-flasher type, and sleeves, traffic.

The extreme need for training in British traffic control signs and equipment was evident, and such training was initiated in the 503rd and 511th Military Police Battalions. Observations were made of the progress of training and exercises were to be repeated on numerous occasions continually stressing signs, main road and lateral road; sign postings, traffic control points, policemen, detours, and the making and repairing of all types of signs.

Public address systems were procured from the Signal Section and installed on traffic control vehicles. This equipment proved invaluable in controlling both convoys and individual vehicles on the highways.

The 512th Military Police Battalion was directed to follow a special training program with the primary object of preparing the unit for traffic control duties on the Continent. Emphasis in training was placed on physical condition, traffic control, and special techniques which would be required on the Continent. This program was amplified by the assignment of companies to the Provost Marshal of XXVII District at LIVERPOOL, for duty at the LIVERPOOL Docks and City proper.

On 1 May orders were received from Headquarters, European Theater of Operations, U. S. Army, attaching the Battalion to Southern Base Section for duty. The unit was assigned sectors in Devon and Cornwall, with the battalion headquarters stationed at TRURO, Cornwall. For a period of eight weeks the organization worked day and night controlling traffic for troops moving into the marshalling areas, thence to points of embarkation, prior to movement to the Continent.

The experience in escort and traffic control better enabled the battalion to execute its primary mission (traffic control) on the Continent.

The 512th Military Police Battalion was relieved from assignment with Southern Base Section on 17 June. A detail of one officer and twenty-one enlisted men of the 511th Military Police Battalion was relieved from duty in LONDON and reported to Camp TOFT for duty after the 503rd Military Police Battalion had departed for BRAMCORE.

SECTION III - PRISONER OF WAR SUB-SECTION

Inasmuch as the material available concerning Prisoners of War was negligible, excellent use was made of Field Manual 27-10, Rules of Land Warfare, and reports from the African, Sicilian and Italian

Digitized by Google

DECLASSIFIED

campaigns.

Plans were made for the evacuation and processing of Prisoners of War and incorporated into the Provost Marshal Plan, Annex Number 19, dated 11 May.

Visits were made by Chief of Prisoner of War Sub-Section to conferences conducted by other Headquarters pertaining to Prisoners of War and valuable information was gained therefrom.

Requisitions for Prisoner of War tags and Prisoner of War effects bags were made to Headquarters, European Theater of Operations, U.S. Army. It was contemplated that this Army would receive 30,000 prisoners of war for the first month of actual operations.

SECTION IV - MAINTENANCE OF LAW AND ORDER SUB-SECTION

The Maintenance of Law and Order Sub-Section was established and preparations were made for the employment of Military Police for the maintenance of law and order on the Continent.

When this Headquarters was stationed at KNUTSFORD, the personnel of the 503rd Military Police Battalion worked in conjunction with the Service of Supply Military Police and Civil Police in the towns of KNUTSFORD, CREWE, MACCLESFIELD, MANCHESTER and ALTRINCHAM.

One company of the 503rd Military Police Battalion was utilized as the Command Post Guard. A restricted area was established in the forward Echelon at Camp PECKER, and divided into Restricted Area North and Restricted Area South. Five types of passes were issued, any one of which would admit the proper holder to the Restricted Areas. These were:

a. Third U. S. Army "Complete" Knowledge Pass (a blue letter "C" superimposed on a white card).

b. Third U. S. Army "Limited" Knowledge Pass (a red letter "L" superimposed on a blue card).

c. Third U. S. Army permanent Restricted Area Pass (a pink card).

d. Third U. S. Army temporary Restricted Area Pass (a buff card following the pattern of (c) above).

e. A Third U. S. Army visitor's Classification Pass (a green card on which is superimposed the letter "C" in blue or "L" in red).

All passes were issued and controlled by the Provost Marshal under regulations prescribed by him.

SECTION V - INVESTIGATION SUB-SECTION

The Investigation Sub-Section was established and the strength of this section consisted of one officer and six enlisted men. The primary duty of this section was the investigation of crimes reported.

The types of crimes investigated while stationed in England consisted of rape, attempted rape, theft, and motor vehicle accidents. Request was made to Headquarters, European Theater of Operations, U.S. Army, for one Criminal Investigation Section which was vitally needed in order to operate successfully on the Continent.

CHAPTER 2
PRE-OPERATIONAL ON CONTINENT

SECTION I - GENERAL

Preparation and planning were continuous. A plan for defense of Third U. S. Army Headquarters was inaugurated upon arrival in France.

"T" Echelon departed Camp TOFT by motor 0730 July 8. Arrived NINE YEWS, (BRANCHE Area) 1700 July 8. It departed NINE YEWS by motor 1900 July 15, for SOUTHAMPTON, embarked on a Liberty ship for the Continent and arrived on UTAH BEACH 0500 July 17. It disembarked 0900 July 18 and moved by motor to join "F" Echelon in vicinity of BLANDAMOUR, (T1799) France.

The Forward Echelon moved from BLANDAMOUR (T1799), France via ST. SAUVEUR LE VICOMTE (T1995), LA HAYE DU PUITS (T1484), LESSAY (T1674) to BEAUCHAMPS (T2732) on 21 July.

SECTION II - TRAFFIC SUB-SECTION

On 6 July the Traffic Sub-Section moved from the beach through the transit area thence to BLANDAMOUR (T1799). The 512th Military Police Battalion had not yet arrived from the United Kingdom and the 503rd Military Police Battalion was detailed for traffic control.

All traffic control at the time, in France, was under the First U.S. Army. Units at BLANDAMOUR (T1799) the Corps and Division units of Third U.S. Army arriving from the United Kingdom were escorted from points of debarkation at the UTAH and OMAHA BEACHES to Third U.S. Army Concentration Areas. The plan for circulation and movement of traffic was coordinated through Traffic Control Headquarters, First U.S. Army and the G-3 Section, Third U.S. Army.

An officer from the Traffic Sub-Section, working in cooperation with representatives of the G-3 and G-4 Sections, Third U.S. Army, was assigned to coordinate the movement of all Third U.S. Army units from the transit areas at the Beaches to their concentration areas on the Normandy Coast Peninsula. Teams of Military Police escorts were assigned to this work from the 503rd Military Police Battalion.

The process of receiving and escorting Third U.S. Army units to their respective concentration areas was continued until the Army became operational.

Approximately 800 units were escorted from the Beaches in the above manner.

The 512th Military Police Battalion arrived in France from the United Kingdom on 18 July. This battalion relieved the 503rd Military Police Battalion in traffic control.

Company "C" of the 503rd Military Police Battalion was attached to the First U.S. Army for a special mission in traffic control, on 20 July, for the attack at ST. LO (T4963)

The supply of British traffic control equipment was low. It was anticipated that when the Third U.S. Army became operational a large supply of this equipment would be necessary, and requests were made to European Theater of Operations, U.S. Army to supply it.

Because of the density of traffic moving over all roads in the COTENTIN Peninsula, little attempt was made to enforce 60-yards interval between vehicles. This resulted in traffic conflicts in villages, at crossroads and road junctions. Traffic control personnel performed their duties in an excellent manner, working long hours to keep the traffic moving despite the density of traffic, and the condition of roads.

The convoys coming from the Beaches to the Third U.S. Army Concentration Areas were passing through the First U.S. Army and Communications Zones Areas which necessitated coordination. The cooperation received was excellent.

SECTION III - PRISONER OF WAR SUB-SECTION

Upon arrival in France, efforts were made to secure the services of Military Police Escort Guard companies. None were available in the Theater, and it was recommended that a battalion unit of approximately 750 personnel be utilized for the mission of escorting, guarding, and processing prisoners of war. As a temporary measure Field Artillery Battalions with low priority were to be used. The 693rd Field Artillery Battalion was attached to the Provost Marshal Section for escort guard work. Training was conducted in all phases of prisoner of war work. The 693rd Field Artillery Battalion was assigned to its primary duty before the Army became operational, and the 344th Field Artillery Battalion replaced it in prisoner of war work. This new battalion was oriented and given instructions in all phases of prisoner of war duties.

Visits were made to the Advance Section Communications Zone and First U.S. Army prisoner of war Enclosures by the personnel of the Prisoner of War Sub-Section. Valuable information concerning the operation of a prisoner of war enclosure was gained from these visits. Personnel of this Sub-Section were also allowed to actually work at one of these enclosures, thereby gaining experience in this type of work.

One of the main planning functions accomplished by the Prisoner of War Sub-Section was the publication of Circular 37 on Prisoners of War, dated 26 July. (See Annex 7).

SECTION IV - MAINTENANCE OF LAW AND ORDER SUB-SECTION

Upon arrival on the Continent there were no available troops for defense of the Army Command Post other than the Headquarters Sections and the 503rd Military Police Battalion. During the first week each section was instructed to set up its own interior guard including a perimeter defense where exposed boundaries existed. Data regarding personnel and weapons of each section was compiled. Each section was instructed to appoint defense officers, one of whom would be available at all times. A warning system of a long siren blast was provided in event of enemy activity, and each section was instructed to send a liaison officer and two runners to the Provost Marshal Section in the event that an alarm was sounded. The Provost Marshal was designated Defense Commander. One platoon of the 503rd Military Police Battalion was designated as an "alert" platoon, armed and completely mobile, to be on call twenty-four hours a day. In addition to the alert platoon, the 503rd Military Police Battalion furnished two roving patrols encircling the Army Command Post, and traffic posts were doubled during the hours of darkness.

The defense of the Army Command Post was taken over by the 6th Cavalry Group and the 546th Anti-Aircraft Artillery Automatic Weapons Battalion, and their plans for defense were coordinated through the Provost Marshal Section.

All towns in France were initially placed off limits until cleared of mines by engineers, inspected by the surgeon for sanitation, and the civil affairs system in order. Many individual French houses were found to be selling liquor to soldiers and were in effect barrooms. These establishments were also placed off limits, enforcement being made by posting signs, and by having roving patrols circulating throughout the area.

Because the promiscuous firing of weapons was prevalent, notice was published in Circular No. 34, Headquarters, Third U.S. Army, dated 19 July, stating that "All personnel of all units assigned or attached to Third U.S. Army were forbidden to fire weapons except when actually engaged with the enemy, or on an authorized range, or in the performance of guard duty. Any officer or enlisted man who violated these instructions would be tried by Courts Martial."

Patrols were maintained in all towns surrounding the Command Post for the enforcement of all rules and regulations.

SECTION V - INVESTIGATION SUB-SECTION

During the month of July in France, there were relatively few crimes committed in the Third U.S. Army Area.

CHAPTER 3
AUGUST OPERATIONS

SECTION I - GENERAL

When the Third U.S. Army became operational, the following units were moved over the roadnets of the Army Area:

90th Infantry Division
5th Armored Division
83rd Infantry Division
200 Army Troop Units and Service Units.

The Forward Echelon Third U.S. Army Headquarters was further divided into Groups "A" and "B". Forward "B" departed BEAUCHAMPS (T2732) at 0700 hours 8 August, and arrived vicinity of POILLEY (Y3592) 0840 hours.

Forward "B" Echelon, Headquarters Third U.S. Army departed POILLEY (Y3592) 1130 hours 13 August, arrived vicinity of ST QUEN DES TOUTS (Y5054) 1300 hours. Forward "A" Echelon, Headquarters Third U.S. Army departed POILLEY (Y3592) 1300 hours, arrived vicinity ST QUEN DES TOUTS (Y5854) 1500 hours.

Forward "B" Echelon, Headquarters Third U.S. Army moved by infiltration from ST QUEN DES TOUTS (Y5854) on 14 August, departed 1115 hours and arrived at LA BAZOGE (X3452) 1500 hours.

Forward "A" Advance arrived LA BAZOGE (X3452) 0900 hours on 15 August.

Rear Echelon arrived at ST. SABINE (X3358) 1300 hours on 18 August.

The 13th Military Police Criminal Investigation Section reported for duty. The section consisted of one officer and ten enlisted men. The section was equipped with two 1/4-ton vehicles and two 1/4-ton trailers. The section was assigned to duty in the Rear Echelon with the Investigation Sub-Section.

Forward "A" departed LA BAZOGE (X3452) on 20 August, arrived [illegible] 1300 hours 20 August.

DECLASSIFIED

Digitized by Google

arrived vicinity of BROU (W1278) at 1600 hours.

Forward "B" departed BROU (W1278) 0800 hours on 25 August, arrived vicinity of COURCY (W9255) PITHIVIERS on GC 109 (W9367) at 1130 hours.

Forward "A" departed BROU (W1278) 1315 hours on 25 August, arrived vicinity of COURCY (W9255) PITHIVIERS (W9367) on GC 109 at 1645 hours.

Rear Echelon, Third U. S. Army, arrived vicinity of COURCY (W9255) PITHIVIERS (W9367) on GC 109, on 27 August.

Forward "B", Third U. S. Army, departed COURCY (W9255) 0830 hours on 30 August, arrived vicinity of COURGENAY (A8477) 1230 hours.

Forward "A", Third U. S. Army, departed COURCY (W9255) 1300 hours on 30 August, arrived vicinity of COURGENAY (A8477) 1630 hours.

SECTION II - TRAFFIC SUB-SECTION

Main Supply Routes were established on 1 August as follows:

(1) BAICQUEBEC (G1304) to LESSAY (T1876) N800, LESSAY (T1876) to COUTANCES (T2357) GC2, COUTANCES (T2357) to GRANVILLE (T1134) to AVRANCHES (T2817) N173.

(2) Army Rear Boundary to PERIERS (T2772) GC24, PERIERS (T2772) to COUTANCES (T2357) N171, COUTANCES (T2357) to AVRANCHES (T2817) GC7.

Traffic Headquarters operating under Transportation Section, G-4 established Traffic Control Posts as follows:

(1) ST. SAUVEUR LE VICOMTE (T1995)
(2) PONT L'ABBE (T2693)
(3) LA HAYE DU PUITS (T1884)
(4) PERIERS (T2772)
(5) COUTANCES (T2357)

Traffic Control, the primary function of the Provost Marshal Section, reached its peak load when Third U.S. Army became operational on 1 August and continued to be a most aggravated problem through 7 August. The 83rd Infantry Division, 90th Infantry Division and the 5th Armored Division were moved through the Army Area to meet new tactical dispositions. The traffic density was greatest initially in the COUTANCES (T2357) - AVRANCHES (T2817) areas because of road and bridge bottlenecks. Engineer crews working day and night completed by-passes and constructed bridges which with unremitting Military Police traffic control finally placed the problem in hand. It is doubtful if in the history of our Armies to date a greater traffic problem ever existed than that confronting the Third U.S. Army from LESSAY (T1876) through COUTANCES (T2357) to AVRANCHES (T2817) from 1 August to 7 August.

In the city of GRANVILLE (T1134) the streets had been blocked with concrete blocks at street intersections. This road-block necessitated the use of very crooked and narrow connecting streets to go south and east from the city. A by-pass was placed in effect which connected the north-south highway from the north of the city with highway N124 to the east and N173 to the south. All traffic was diverted over this highway and relieved the congestion in GRANVILLE (T1134).

At AVRANCHES (T2817), which had been heavily bombed and at which place great destruction occurred, highways N173, N811, GC 9 and N176 converged from the north. There was no road available to by-pass the city. This caused a high traffic density through the town on the only highway to the south was N176 to PONTAUBAULT (T2810). Many traffic conflicts occurred in this city, and for days a steady stream of traffic moved through to the south carrying troops, equipment and supplies.

A bridge at PONTS ST. SENIER, (T2918) northeast of AVRANCHES (T2817), had been blown by the enemy and replaced with a timber bridge by the engineers. This bridge was at the junction of highways GC7 and N176 and east-west highway N811. One member of the 512th Military Police Battalion on traffic control duty at the bridge was killed by the bombing at this point, and some vehicles were disabled by bombing in AVRANCHES (T2817) during this period.

Company "C" 503rd Military Police Battalion, was relieved from special duty with the First U.S. Army and reverted to Battalion control. This company was designated as the traffic control company of the Battalion.

The following Traffic Regulating Posts were established on 4 August:

(1) COUTANCES (T2357)
(2) BREHAL (T1841)
(3) GAVRAY (1 officer) (T3041)
(4) GRANVILLE (1 officer) (T1134)
(5) RJ N24 and GC27, vicinity of BEAUCHAMPS (T2732)
(6) BARLEY (1 officer) (T4380)
(7) PONTS ST. SENIER (RJ C227 and N811) (T2918)
(8) AVRANCHES (2 TRP's with 1 officer) (T2817)
(9) RJ GC68 to GC44, vicinity of TOURVILLE (T1656)

All traffic regulating posts north of GC44 - COUTANCES (T2357) - N172 were closed as of 041200 August.

Army Rear Boundary was established on 5 August as follows:

Road GC44 PASSUS (T1256) COUTANCES (T2357) road N172 from COUTANCES (T2357) to Army Boundaries.

The following units of the IX Corps were moved over the Army roadnet to the vicinity of VITRE (T3653) on 8 August:

35th Infantry Division
5th Infantry Division
2nd French Armored Division

The 80th Infantry Division also moved to its new area at 0600.

Traffic control equipment shortage became critical. France plates, discs - directional and other traffic equipment had not arrived from the United Kingdom.

In accordance with TWX, Headquarters, Twelfth U.S. Army Group Rear Boundary of Third U.S. Army was established as follows: (All to Communications Zone).

Highway N776 LE MONT ST. MICHEL (T1611) - PONTORSON (T1602); Highway N176 PONTORSON (T1602) - PONTAUBAULT (T2810); Highway N807 PONTAUBAULT (T2810) - ST. HILAIRE DU HARCOUET (T4703) - Road N179 ST. HILAIRE DU HARCOUET (T4703) to First U. S. Army Boundary.

The front was extending to the south, the southeast and to the west towards the BREST PENINSULA. This required extension of supply routes and traffic control personnel.

The city of LAVAL (Y6846) presented a complicated traffic problem. The enemy had blown out the bridges across the MAYENNE River in this city. A Class 40 bridge was placed, by the engineers, at the south edge of the city. The approach to this bridge from the west was very crooked and tank retrievers could not make the turn onto the bridge. A Class 70 bridge was constructed by engineers the following day and relieved the situation.

Great difficulty was encountered in that many vehicles became lost. The Military Police assisted many of the drivers of these vehicles in locating their units.

One thousand road signs, size 15 inches by 17 inches, painted black were ordered from the Engineer Section, in lieu of France plates, to be delivered in lots of three hundred commencing 20 August.

A traffic circulation plan for the city of FOUGERES (Y3978) was approved and provided for two separate north-south routes through the city with connecting routes for east-west traffic.

One bridge was left intact in the city of LE MANS (Z4037), and highways from the west, north and east converged at this city, causing traffic conflicts. To offset this condition a by-pass was put into effect for traffic going south and east of LE MANS (Z4037) by routing this traffic from N157 to GC37 to CHEVILLE (Z0831), thence east and south over roads to re-enter N157 via GC2 at ST. CALAIS (Y7849). This by-pass afforded some relief, but the city of LE MANS (Z4037) remained a traffic problem while in the Army Area, and required the constant attention of all traffic and Military Police personnel.

The 80th Infantry Division started movement on 15 August from the vicinity of JUBLAINS (Y8965) to an area in the vicinity of MONTMIRAIL (V8466). Route was assigned as follows: IP to N23, east of JC19 - JL4, northeast on N805 to RJ N155 - southeast on N155 to GC41, GL41 to destination. All sensitive points along this route were posted with Army or Corps Military Police for control of the movement in their respective areas.

Signs "One Lane Traffic, No Passing, by order of the Army Commander," were placed at critical points, entrances to towns and narrow points on the highways.

Bridges at CHATEAUDUN (W2361) and ST. DENIS (W2062) were blown on 20 August. The bridge at ST. DENIS (W2062) was replaced by engineers with a four ton timber bridge. At CHATEAUDUN (W2361) a ford was available and used until a Class 40 two way bridge was constructed.

The temporary Army boundary was established as follows on 21 August:

LE MANS (Z4037), to Third U. S. Army, open to First U. S. Army traffic. BONNETABLE (V5778), to First U. S. Army, NOGENT LE ROTROU (V6892), to First U. S. Army, open to Third U. S. Army traffic. COURVILLE SUR EURE (R2C03), to First U. S. Army, DREUX (R3235) road on west bank of EURE River to its junction with the SEINE River, all inclusive to Third U. S. Army. Third U. S. Army to have running rights on the NOGENT LE ROTROU (V6892) - DREUX (R3235) road until Third U. S. Army dumps in the vicinity were cleared.

On 23 August the 80th Infantry Division moved over road net to new assembly area without traffic conflicts.

Company "C", 503rd Military Police Battalion, took over traffic control in CHARTRES (R3602) from IX Corps Military Police, on 23 August. That afternoon General DeGaulle of the French Army was given a welcome in CHARTRES (R3602). The traffic problem created by the French civilians crowding the streets to welcome him was tremendous. All sorts of parades, vehicles and individuals interfered with the free flow of military vehicles through the city streets.

The Main Supply Routes were established on 23 August as follows:

(1) N23 LE MANS (Z4037) to NOGENT LE ROTROU (V6892), N822 to COMPERES (W0892), GC15 to CHAMPFORD (WC7GC), N23 to COURVILLE SUR EURE (R2C04), GC23 to THIMERAY (R2217), GC36 to LE PEAGE (R3618), N154 to DREUX (R3236), N12 to HOUDAN (R5060).

(2) N23 LE MANS (Z4037) to CONNERE (V6346), N827 to BROU (W1278), GC27 to BONNEVAL (W2873), GC17 to VOVES (W4683) to OUARVILLE (W5890) to ETAMPES (W8697).

(3) N157 LE MANS (Z4037) to ST. CALAIS (Y7849) to RJ N826 to MUREY (W1544) to OUZOUER (W3743) to ORMES (W5845), N155 to ORLEANS (F6623).

Improvement in the standardization of signing was made as well as in road discipline and traffic control. The continuous enforcement by all Military Police in stressing the following restrictions helped in no small way to improve the situation:

(1) Interval between vehicles on the highways, including halts - 60 yards.
(2) Double banking of convoys prohibited.
(3) One convoy would not overtake or pass another without authority from a Traffic Regulating Post or the Military Police.

Traffic Regulating Posts were established on 23 August as follows:

(1) BIELLE AIRPORT
(2) CHATEAUDUN (W2361)
(3) CHARTRES (R3602)
(4) DREUX (R3235)
(5) BROU (W1278)
(6) SANCHVILLE (W4374)
(7) ORLEANS (F6623)
(8) ARTENAY (W5459)
(9) ETAMPES (W8697)

On 24 August the bridge at CLOYES (W1555), on N10 was out, and traffic was diverted between CHATEAUDUN (W2361) and N826. It was replaced by a Class 40 Bailey bridge.

The Provost Marshal, Twelfth U. S. Army Group, visited this section on 24 August and discussed traffic problems and traffic control equipment.

The 90th Infantry Division was moved on 26 August from vicinity of LA FERTE BERNARD (V7479) via GC49, N827 to PITHIVIERS (W9367) where it was delivered to IX Corps.

The 80th Infantry Division was moved on 26 August via GC37, GC23, GC80, N823, N817, GC10, N155 to ORLEANS (F6623).

Digitized by Google

Main Supply Routes were established on 27 August as follows:

(1) East: Two way VIBRAYE (V7964) to OIGNY (V9363); one way IC 23 to DROUE (W0460), IC87 to COURTALAIN (W0964), HS27 to PITHIVIERS (W9367), OC26 to PUISEAUX (X0969), OC87 to NEMOURS (X2675); two way H375 to MONTEREAU (X4686).

(2) West: Two way MONTEREAU (X4688) H375 to NEMOURS (X2675) one way OC16 NEMOURS (X2675) to LA CHAPELLE (X1881), H51 to MALESHERBES (X0850), OC24 to BERMAISES (W9081), OC18 to MERVILLE (W8184), OC145 to ANGERVILLE (W7564), HS39 to OUARVILLE (W5890), OC17 to CHATILLON (W1367), IC111 to COURTALAIN (W0964), HS27 to OIGNY (V9363) to VIBRAYE (V7965).

(3) HS26 ST. CALAIS (V7849) to ORMES (W5845), H155 to ORLEANS (P6623), H158 to CHATEAUNEUF (P9118), H60 to SENS (X6965), all two way.

Traffic Regulating Posts were established as follows on 27 August:

(1) CHATEAUDUN (W2361)
(2) SAINVILLE (W3774)
(3) ORLEANS (P6623)
(4) ARTENAY (W6459)
(5) PITHIVIERS (W9367)
(6) ORLEANS (P6623) - BRICY AIRPORT (P6623)
(7) NEMOURS (X2675)
(8) MONTARGIS (X3845)

Rear boundaries were established as follows on 27 August:

(1) Corps:

(a) XII Corps: PITHIVIERS (W9367) along H721 to COURCY (W8956), thence along OC109 to CHILLEURS (W8357), thence along OC5 to NEUVILLE (W7557), to ARTENAY (W6459), to SOUGY (W5757) to PATAY (W5057), thence along HS35 to ST. PERAVY LA COLOMBE (W5054), thence along OC3 to ST. SIGISMOND (W4849), to GERMIGNY (W4907), to ROZIERES (W5045), to south lateral boundary, all inclusive to Corps.

(b) XX Corps: ETAMPES (W8896) along H721 to PITHIVIERS (W9367), all inclusive to Corps.

On 26 August the 106th Cavalry Group was moved through the Army Area.

"Vehicle Corrals" were established and announcement was made in Circular 48, Headquarters, Third U. S. Army, dated 29 August, (See Annex Number 8) that the following violations would result in detention in these corrals:

Speeding, double banking, light violations, reckless driving while under the influence of intoxicating liquors, failure to maintain the prescribed 60 yard distance between vehicles when moving or at a halt, disobedience of Military Police traffic directions, and any of the following vehicles passing any other moving vehicle or halted convoy, except by direction of Military Police:

Trucks, 3/4 ton weapons carriers.
Trucks, 1-1/2 ton cargo.
Trucks, 2-1/2 ton cargo.
All other wheeled or track vehicles over 3/4 ton capacity.

Large 4 foot by 4 foot signs to prevent double banking, and passing were constructed and placed conspicuously on the main supply routes.

XV Corps departed IP Route Junction H338 and OC21 on 30 August and moved via OC21, HS37, D27 and D15 to vicinity of LA FERTE GAUCHER (R7530).

A "Red Ball" express route (for priority gasoline, ammunition and other vital material) was established from Advance Section, Communications Zone via H370 to FONTAINEBLEAU (X8991), D10, H375, HS04, HS1, H33 to CHALONS (T9445).

It was necessary to establish one way traffic in many areas because of the poor condition of the roads.

The following restrictions were published in Administrative Orders as follows:

(1) Blackout marker (cat eye) lights would be used forward of Corps rear boundary. Blackout driving lights would be used in rear of Corps rear boundary.

(2) Convoys would not halt on Main Supply Routes for any purpose. When halts were necessary convoys would be moved to side road.

Bridges were reported out at CLESLES (V1800) on 31 August. A change in Main Supply Route was made at this point from MERY (V1697), west as follows:

North on H373 from MERY (V1697) to ETRELLES (V1303), west on OC58a to BAGNEUX (V1803), northwest on OC5 to AMOLURE (V1107). This change was made to by pass a 1/4 mile gravel road outside CLESLES (V1800) which could not withstand heavy traffic.

Over 600 traffic clearances were processed through this Headquarters during the month of August.

SECTION III - PRISONER OF WAR SUB-SECTION

The first prisoner of war enclosure was opened 1 August in the vicinity of ST. JORES (T2785). This enclosure was taken over from the 462nd Military Police Escort Guard Company, First U. S. Army, and contained thirty-four prisoners of war. The 244th Field Artillery Battalion operated this enclosure.

The prisoner of war enclosure in the vicinity of ST. JORES (T2785) was closed 2359 August 3, 6,352 prisoners of war having been evacuated through it.

A prisoner of war enclosure was established at HARCHY (T2517) 4 August, 1-1/2 miles northwest of AVRANCHES (T2817).

The 437th and 471nd Prisoner of War Escort Guard Companies reported to the enclosure at HARCHY (T2517) on 5 August for duty per paragraph 3, TA Number 4, Headquarters, Twelfth U. S. Army Group, dated 3 August. One platoon from each of the 447th and 442nd Quartermaster Truck Companies was utilized for transporting prisoners from the Division collecting points to the enclosure.

Weekly report of prisoners of war from 011200 August to 058359 August:

Captured	8806
Others	None
TOTAL	8806
Evacuated	8052
BALANCE ON HAND	754

During the night of 7 - 8 August, the enclosure at HARCHY (T2517) near AVRANCHES (T2817), was subjected by the enemy to a combined bombing and strafing attack. A perimeter guard was established as quickly as possible, and as a matter of safe-guarding prisoners of war from the devastating attack they were permitted to leave the enclosure and seek protection in the surrounding area. Twenty-one prisoners of war were killed and sixty-two wounded. Two enlisted men of the 244th Field Artillery Battalion (operating personnel of the enclosure) were killed and several were wounded.

Prisoner of War Enclosure Number 1, AVRANCHES (T2817), was closed on 8 August, 5,157 prisoners of war having been handled during the period 4 to 7 August inclusive.

Prisoner of War Enclosure Number 8, at SENS DE BRETAGNE (T1377), was opened on 8 August.

The 2nd Platoon of the 443rd Prisoner of War Processing Company reported for duty at Prisoner of War Enclosure Number 2 at SENS DE BRETAGNE (T1377) on 9 August.

Weekly report of prisoners of war from 060001 August to 122359 August:

On hand from previous week	754
Received	17535
TOTAL	18289
Evacuated	11451
BALANCE ON HAND	6838

Total from 1 August to 12 August . 26341

On 13 August a TWX was received from Twelfth U. S. Army Group informing all headquarters that prisoners of war in the hands of the French Forces of the Interior were to be released to the appropriate Army Commander for evacuation.

Prisoner of War Enclosure Number 4 was established at BRULON (KO936) on 14 August.

Prisoner of War Enclosure Number 3 was established at SENS DE BRETAGNE (XO569) on 16 August.

Plans liaison was established between this section and Prisoner of War Enclosure Number 2 at SENS DE BRETAGNE (T1377).

Prisoner of War Enclosure Number 2 at SENS DE BRETAGNE (T1377) was closed on 19 August, 27,407 prisoners of war being handled by this Enclosure during the period 8 August to 19 August.

Weekly report of prisoners of war from 130001 August to 192359 August:

On hand from previous week	6838
Received	38474
TOTAL	45118
Evacuated	43171
BALANCE ON HAND	1941

Total received to date 64815

The 761st Field Artillery Battalion reported to BRULON Enclosure (KO936) on 20 August and began orientation preparatory to assuming duties at the Enclosure.

Prisoner of War Enclosure Number 5 was established at COURTALAIN (WO964) on 21 August.

The 738th Field Artillery Battalion was relieved from duty at the BRULON Prisoner of War Enclosure (KO936) on 23 August and assigned to its primary mission.

The 734th Field Artillery Battalion reported to COURTALAIN (WO964) Enclosure on 22 August for prisoner of war escort duty.

A new system for evacuation of prisoners of war was established at this time as follows:

Responsibility for Evacuations:

(a) Corps and Divisions were responsible for evacuation of prisoners of war from Division Collecting Points to a Collecting Point located at the Class I Supply Point of the Corps. Army would supply operating personnel for the above Collecting Point and would be responsible for evacuation of prisoners of war from the Collecting Point located at the Class I Supply Point to the Army Prisoner of War Enclosure.

(b) Army Units - To the nearest Collecting Point located at a Class I Supply Point at a Corps.

(c) Locations - Corps G-1's and Provost Marshals would coordinate with Corps G-4's to locate Collecting Points mentioned above near traffic routes to the supply points.

The Prisoner of War Sub-Section Chief left for tour of inspection of BRITTANY PENINSULA on 22 August to make arrangements on disposition of prisoners of war captured by VIII Corps.

2nd Platoon, 441st Prisoner of War Processing Company, reported for duty at COURTALAIN (WO964) on 24 August.

Prisoner of War Enclosure Number 4, located vicinity of BRULON (KO936), two miles south of JOUE EN CHARNIE (KO936), was closed on 25 August, 8,771 prisoners of war being handled from 14 to 25 August.

Prisoner of War Enclosure Number 6 was established three miles east of NEMOURS (X2675) on 0325 on 26 August.

Weekly report of prisoners of war from 200001 August to 262359 August:

On hand from previous week	1941
Received	9198
TOTAL	11139
Evacuated	5904
BALANCE ON HAND	5235

Total received to date 54003

The 2nd Platoon, 441st Prisoner of War Processing Company was

Digitized by Google

relieved from duty at Prisoner of War Enclosure Number 5, COUTANCES (W9944) by Advance Section, Communications Zone, on 17 August.

Twenty-five .45 caliber Thompson submachine guns were obtained from Ordnance for use by the 734th Field Artillery Battalion, operating a prisoner of war enclosure at MEMCURS (X2675).

A total of 63,369 prisoners of war were received by Third U. S. Army prisoner of war enclosures during the month of August. (See Annex Number 9)

A total of 62,157 prisoners of war were evacuated during the month. 6,677 wounded prisoners of war were received through medical channels, as per report from the Army Medical Section. This figure was not included in the number of prisoners of war evacuated through Third U. S. Army enclosures.

Escapees and evaders evacuated through Third U. S. Army prisoner of war channels during the month of August were 487.

SECTION IV - MAINTENANCE OF LAW AND ORDER SUB-SECTION

All towns in vicinity of Army Command Post were initially posted with "Off Limits" signs and enforcement on 2 August provided by roving patrols of 503rd Military Police Battalion, covering principally BEAUCHAMPS (T2732), VILLEDIEU (T3934) and LA HAYE PESNEL (T2628). Command Boulevard was restricted to use by military personnel on business and all civilians were kept out until cleared by Counter Intelligence Corps, who set up personnel at both ends of the Army command Post for that purpose. This was set up as a Standing Operating Procedure in all future Command Post Areas.

On 8 August roving patrols from the 503rd Military Police Battalion were established in POILLEY (T3592) and nearby towns to enforce "Off Limits" regulations.

The Army Straggler Collecting Point was located in close vicinity to the Command Post of the 503rd Military Police Battalion. Stragglers apprehended were returned to their units or to the replacement depot.

An Army guardhouse was established also in close vicinity of the 503rd Military Police Battalion.

Twenty-six stragglers were apprehended from the period 1 to 5 August.

During the period 6 to 12 August, thirty-three stragglers were apprehended. Two of these were French and were turned over to a French Troop Replacement Center at FONTAINEBAULT (T2810). Of the remainder, sixteen went to 48th Replacement Battalion, four to 53rd Replacement Battalion, three to the 318th Replacement Company and eight to the 319th Replacement Company.

Delinquency reports for the period 6 to 12 August were as follows:

Drunken driving	6
Uniform violation	17
Drunk and disorderly	4
Promiscuously firing of weapons	2
Off Limits violations	9
Speeding	23
Unattended vehicles	4
Pass violations	7
Unauthorized use of vehicle	4
Theft of Government property	2
Larceny	2
TOTAL	78

Commencing 14 August, LABALOGE (Z3453) and LE MANS (Z4037) were patrolled for enforcement of "Off Limits". Advance Section, Communications Zone Headquarters and Service of Supply troops under their control moved into LE MANS (Z4037) during this period and many troops were billeted in town making enforcement of "Off Limits" virtually impossible with available Military Police personnel. The water depot in the heart of LE MANS (Z4037) was ordered closed. Arrangements were made with Advance Section, Communications Zone, to police LE MANS (Z4037). An Army straggler point was opened in LE MANS (Z4037).

Eight stragglers were apprehended during the period 13 to 19 August, of which four were sent to the 53rd Replacement Depot and four to their respective organizations. Delinquency reports for the same period were as follows:

Improper uniform	11
Speeding	48
Reckless driving	10
Pass violations	10
Off Limits	22
Promiscuous firing of weapons	3
AWOL	4
Unattended vehicles	4
Disorderly conduct	4
Driving while intoxicated	2
Intoxicated	5
Larceny	1
TOTAL	126

The Army straggler collecting points in LE MANS (Z4037) and FOUGERES (Y3878) were closed on 22 August as the Army rear boundary was moved forward. An Army straggler point was opened at ST. CALAIS (V7849) Town Square on 22 August. An Army straggler collecting point was established at CHARTRES (R3602) on 23 August.

During the period 20 to 26 August stragglers were collected and disposed of as follows:

Number	Disposition
6	Returned to units
13	35th Replacement Depot
13	48th Replacement Depot

Straggler collecting points at ST. CALAIS (V7849) and CHARTRES (R3602) were closed at 250900 August. Straggler collecting points were opened at MERREVILLE (W8284), CHATEAUDUN (Q2361) and VENDOME (P0411) at 250900 August.

The following delinquencies were reported for the week ending 26 August:

Double banking	21
Parking on highway	1
Unattended vehicle	23
Speeding	54
Unauthorized use of vehicle	13
Overloading	4
Improper blackout	3
Pass violations	17
Indiscriminate firing	8
Off Limits violations	20
Drunk and disorderly	20
Reckless driving	19
Alleged rape	3
Uniform violations	9
Insubordination	1
Others	3
TOTAL	218

The following cities and towns were placed "On Limits" to all troops:

PITHIVIERS (W9367)	JANVILLE (W8572)
BONNEVAL (W2873)	ORLEANS (P6623)
MERREVILLE (W8284)	CHARTRES (W5047)
CHATEAUDUN (Q2361)	VENDOME (P0411)

The Army Commander announced on 26 August that henceforth all cities and towns within Third U. S. Army Area would be "On Limits" to all troops.

All towns were being patrolled by 503rd Military Police Battalion with personnel of the 734st Field Artillery Battalion being used to assist them.

Straggler collecting points were opened and closed as follows:

VENDOME (P0411)	- closed 281200 August
CHATEAUDUN (Q2361)	- closed 291200 August
MERREVILLE (W8284)	- closed 301200 August
SENS (Z6965)	- opened 301800 August
FONTAINEBLEAU (X8991)	- opened 301900 August

The disposition of stragglers apprehended during the last week in August was as follows:

Straggler Collecting Point	Returned To Unit	To Replacement Depot	Trial
MERREVILLE (W8284)	17	3	28
CHATEAUDUN (Q2361)	3	0	3
ORLEANS (P6623)	9	0	9
SENS (Z6965)	2	0	2
FONTAINEBLEAU (X8991)	3	3	6
Provost Marshal Office	1	7	8
TOTALS:	35	13	56

General prisoners evacuated or released during the period were as follows:

To VIII Corps for trial	4
To Advance Section, Communications Zone, RENNES (T0154) for trial	11
To Units	4
TOTAL	19
On hand, Prisoner of War Enclosure Number 6, MEMCURS (X2675)	15
Third U. S. Army guardhouse	17
TOTAL	36

The 761st Field Artillery Battalion was assigned to Military Police duties with the 503rd and the 512th Military Police Battalions. This battalion was used for maintenance of law and order, and traffic control.

SECTION V - INVESTIGATION SUB-SECTION

In the area near BEAUCHAMPS (T2732) the rate of crimes greatly increased. During the week investigations were conducted on numerous reports of rape. Because of the lack of proper identification and description furnished by the complainants considerable difficulty was encountered in solving the crimes.

The following list of serious incidents or crimes were reported during the period from 1 to 5 August:

AWOL	3
Rape	3
Attempted rape	1
Murder	1
Breezing and entering	1
TOTAL	9

No Criminal Investigation Sections were as yet assigned to this Section. This placed a heavy burden on the Investigation Section of this Headquarters and that of the 503rd Military Police Battalion. Additional request was made to higher Headquarters for the assignment of Criminal Investigation Sections to this office.

Serious incidents or crimes reported for the period 6 to 12 August were as follows:

Rape and murder	1
Rape	4
Attempted rape	1
Larceny	2
TOTAL	8

The 13th Military Police Criminal Investigation Section, consisting of one officer and ten enlisted men reported for duty with this Section on the 18th of August. This Section had organically two vehicles which were considered inadequate. Arrangements were made for three additional vehicles, to be used by the Criminal Investigation Section.

The following cases were reported for investigation during the period 13 to 19 August:

Rape	4
Rape and attempted murder	1
Homicide	1
Assault and battery	1
Unlawful Discharge of firearms	2
Murder	1
TOTAL	10

Digitized by Google

The following cases were reported for investigation during the period 30 to 26 August:

Rape	1
AWOL	2
Murder	1
Larceny	1
TOTAL	5

During the last week of August, 1944, the following cases were reported for investigation:

Larceny of military property	1
Pillage	2
Assault	1
Rape	3
Mayhem	1
Justifiable homicide	1
Larceny	1
TOTAL	10

CHAPTER 4
SEPTEMBER OPERATIONS

SECTION I - GENERAL

A conference was held 1 September with representatives from the Traffic Sub-Section, Military Police Battalions and Field Artillery Battalions present for the purpose of discussing employment of radio communications in the functions of Traffic, Maintenance of Law and Order and Prisoner of War Sub-Sections under supervision of the Provost Marshal.

Forward Echelon "B" departed vicinity of COUROMAY (XB477) 040830 September. Arrived one mile north of HARSON on GC1a (T6541) 041300 September.

Forward Echelon "A" departed vicinity of COUROMAY (XB477) 041300 September. Arrived one mile north of HARSON on GC1a (T6541) 041630 September.

Rear Echelon departed COURCY (U9155) 040830 September. Arrived five miles south of L'EPINE, vicinity of HARSON (T6541).

Forward Echelon "B" departed vicinity of HARSON (T6541) 150830 September. Arrived vicinity of BRAQUIS (U4664) four miles south of ETAIN (U4770) on route N408, 151200 September.

Forward Echelon "A" departed vicinity of HARSON (T6541) 151300 September. Arrived vicinity of BRAQUIS (U4664), four miles south of ETAIN (U4770), on route N408, 151715 September.

Rear Echelon departed HARSON (T6541) 161145 September. Arrived seven miles northeast of ETAIN (U4770) at ROUVRES (U5171) 161600 September.

Forward Echelon departed BRAQUIS (U4664) and arrived in billets in town of ETAIN (U4770) 22 September.

A standing Escort of Honor was provided for General EISENHOWER during his visit on 29 September to Third U. S. Army Headquarters at ETAIN (U4770). This escort was provided from personnel of the 503rd Military Police Battalion, and consisted of two platoons of one officer and thirty enlisted men, each.

SECTION II - TRAFFIC SUB-SECTION

As the tactical situation became stabilized, the Army Zone became confined and the traffic logistics became that of density, rather than of distance.

Major troop movements were of two kinds, those coming forward into and through Army Area along or parallel to Main Supply Routes and those moving laterally or perpendicular to Main Supply Routes. Additional posts and strengthening of existing posts and patrols were necessary to expedite these moves. In addition to major troop moves, many units of battalion size or smaller were moving daily.

Traffic control on Main Supply Routes changed little during the month. Company C, 503rd Military Police Battalion, Company A, 512th Military Police Battalion and Company B, 512th Military Police Battalion covered Main Supply Routes 1, 2 and 3 respectively, with Company C, 512th Military Police Battalion covering lateral routes and towns not on Main Supply Routes. Supply traffic was heavy and concentrated on two routes; Main Supply Route Number 1 (MS) and Main Supply Route Number 2 (MS4-96). All Main Supply Routes were established on two way roads, greatly facilitating use of traffic control personnel and traffic control equipment. Traffic summary courts were set up at various localities along the Main Supply Routes and tried 415 cases involving traffic violations during the month. An appreciable restraint on speeding and reckless driving was noticeable on all roads after news of these courts was circulated.

Supply of traffic control equipment remained critical and requests to higher headquarters (Twelfth U. S. Army Group) were made to get action. The Engineers' supply channel for this equipment dwindled in Advance Section, Communications Zone where the Transportation Corps was the supply agency for the needed items. Captured sheet metal was utilized as a "stop-gap" measure with the Ordnance cutting and shaping discs, directional, and France plates, and the Engineers painting them. This substitute supply measure, the reclamation of signs on Main Supply Routes no longer used, and more judicial use of signs averted a breakdown of signing in the Army Area. The supply of beacons, reflectorized, was the only item of night traffic control equipment that remained adequate.

A reconnaissance element consisting of one officer from the Traffic Sub-Section, one officer from the Maintenance of Law and Order Sub-Section, one French liaison officer, one non-commissioned officer from the 512th Military Police Battalion, and two drivers with 1/4 ton vehicles and other equipment was formed and put into operation with mission of contacting Corps and Division Provost Marshals, civil authorities, Civil Affairs officers and others in the zones ahead of the Army Service area to discuss Military Police problems, secure necessary billets and office space in advance, secure first hand information of conditions affecting traffic and serve as general coordinators for liaison with related agencies. This unit greatly increased our scope of operations and efficiency.

Much additional road reconnaissance data was provided by advance details of the 512th Military Police Battalion, which made a thorough check of the Army road net. Daily conferences with the Army Engineers amplified and clarified the traffic and road net picture.

A systematic procedure for traffic control was established, and closer liaison and greater exchange of information with the 512th Military Police Battalion, the Engineer Section, the G-4 Transportation Section, and the G-3 Section (Troop Movements) began to secure results. The use of radio communication between Headquarters and outlying key localities increased the mobility of the traffic police and tightened control of the Army Area.

Bridges were reported out at BRAY (U4119), 1 September. All main roads leading to the town were signed indicating this condition.

A blown out bridge at CHALONS (T5445) was replaced on 2 September by a two way Class 40 bridge.

Main Supply Routes were established on 2 September as follows:

(1) EAST: GC 24 to MALESHERBES (XD579), MS1 to FONTAINEBLEAU (X2991), two way. D27 to CR N5, GC12 to MANGIS (S5107), GC56 to GASTINS (S5314), D15 to MONTMIRAIL (V8466), M33 to RJ GC11, GC11 to VINAY (T2354), one way. MS1 to REIMS (T3080), N380 to TOURCELLES-CHAUMONT (TY293), M46 to RJ M47, M47 to ARLON (P6122), two way.

WEST: GC24 to MALESHERBES (XD579), MS1 to FONTAINEBLEAU (X2991), two way. GC39 to RJ GC47 to LE CHATELET (S3502) D13 to LESCHERNES (S4001), D27 to NOZAY (S4920), N304, to CR B9 to CHAILLY (S4132), M34 to CR GC55, GC55 to RUBAIS (S7037), GL8 to VIELSMAISONS (S8242), M33 to CR GL20 to DORMANS (T0161), M3 to RJ GC22, GC22 to SERMIERS (T2969), GC26 to CR M51, one way. MS1 to REIMS (T3080), N380 to TOURCELLES-CHAUMONT (TY293), M46 to RJ M47, M47 to ARLON (P6122), two way.

(2) EAST: GC26 to PUISEAUX (XD969), GC7 to CR M395, M395 to MONTEREAU (A4688), GC18 to LE MERICY (XB399), IC40 to RJ MS1 to SEZANNE (T0522), one way. M34 to VITRY LE FRANCOIS (T6819), M4 to ST. AUBIN S-A (U3115), M58 to PONT A MOUSSON (U7935), two way.

WEST: M450 to BARVILLE (XD460), GC87 and D8 to BEAUMONT (XC942), GC43 to CHATEAU-LANDON (X2663), GC40 to NEMOURS (X2675), M395 to CR GC92 to RJ GC103, GC103 to MISY (X5684), GC75 to CR N51, N51 to ROMILLY (T0499), M440 to ANGLURE (T1107), GC5 to RJ GC98, to GC9 to FERE CHAMPENOISE (T8524), all one way. M34 to VITRY LE FRANCOIS (T6819), M4 to ST. AUBIN S-A (U3115), M58 to PONT A MOUSSON (U7935), two way.

(3) M60 to ORLEANS (P6823), to TOUL (U6401), M4 to NANCY (U8511), two way.

(4) THROUGH TRAFFIC ROUTE (RED BALL): USE OF THIS ROUTE WAS CLEARED THROUGH ARMY TRAFFIC HEADQUARTERS. M37 ETAMPES (V8497) to FONTAINEBLEAU (X2991), D10 to RJ M375 to MONTEREAUX (T8621), M304 to RJ M34, M34 to SEZANNE (T0522), N51 to CHAMPAUBERT (T1039), N33 to CHALONS (T5445), M3 to VERDUN (U2865) to METZ (U8557). Two way through route.

Additional and revised Traffic Regulations were incorporated in Circular Number 51, Headquarters, Third U. S. Army, dated 3 September. (See Annex 10).

Request was initiated to the Engineer Section for 500 discs, directional, on 5 September for traffic control use. XII Corps requested a supply of this equipment, and ninety-five discs, directional, and fifty flashers, electric, were withdrawn from the 503rd Military Police Battalion Supply and issued to the XII Corps.

The Express Main Supply Route was marked with "Red Ball Express" signs.

Movement of the 79th Infantry Division on 6 September was to be made to a new assembly area southeast of TROYES (Y2972), and elements of the Division moved on 7 September.

The 2nd French Armored Division commenced movement 8 September from the vicinity of COULOMMIERS (S5835) and ROZAY (S4930) to an assembly area southeast of TROYES (Y2972). The 35th Infantry Division and the 79th Infantry Division were also moving at this time and conflicts were reported between elements of these divisions at BRIENNE (Y6283) and east of TROYES (Y2972). This difficulty was corrected in a short period of time and the movement closed without further conflict.

The following restriction was placed in effect on 8 September:

Blackout marker (cat eye) lights would be used forward of Corps Rear Boundary. Blackout driving lights would be used in rear of Corps Rear Boundary.

A Radio Net was established 9 September with radio sets at 512th Military Police Battalion, CHALONS (T5445) and ST. MENEHOULD (T9359). The net was to be expanded as fast as equipment and operating personnel were made available.

The Provost Marshal of Advance Section, Communications Zone, took over traffic control in REIMS (T3080) 092400 September. An air reconnaissance was made for the purpose of observing traffic circulation and control in CHALONS (T5445), TROYES (Y2972), JOINVILLE (X0887), ST. DIZIER (T9509), VITRY LE FRANCOIS (T6819) and CHARMES (X9476).

A representative from the Provost Marshal's Office, Twelfth U. S. Army Group, visited this Sub-Section 10 September and reported that his Headquarters was taking steps to insure that a supply of traffic control equipment was made available to this Headquarters.

Radio communication was established between 512th Military Police Battalion, 503rd Military Police Battalion, ST. MENEHOULD (T9359), REVIGNY (T9829) and VITRY LE FRANCOIS (T9319). Communication between these stations proved satisfactory and afforded rapid transmission of pertinent traffic and maintenance of law and order data.

Advance Section, Communications Zone, took over traffic control in CHALONS (T5445) 11 September, relieving Army Military Police.

Road reconnaissance was made 12 September over highway N3 from CHALONS (T5445) to a point five miles east of VERDUN (U2865) and it was learned that additional traffic control personnel were needed to assure the rapid free flow of traffic.

The radio communication personnel from the 741st Field Artillery Battalion were relieved from duty 13 September and replaced by personnel from the 734th Field Artillery Battalion.

A higher frequency for [illegible] requested from the [illegible] increase the range

Digitized by Google

of the Radio Net.

The Ordnance Section dispatched one truck company carrying vital ammunition every two hours, 14 September over the Red Ball Route (H3) from CHALONS (T5445) to a point east of VERDUN (U2865). This movement continued for six days. Extra traffic control personnel were posted along this route to assure free movement of traffic. Tank retrievers were also used in this movement with a subsequent slowing down of traffic on the hills east of VERDUN (U2865).

The civilian traffic on the main highways was constantly increasing and interfered with the free flow of military traffic. This problem was taken up with Civil Affairs and Counter Intelligence Corps with the request that this traffic be controlled and routed over secondary routes.

A tank retriever broke down on a hill five miles east of VERDUN (U2865) on highway H3 on 17 September, blocking traffic. Military Police took charge of the situation and routed traffic over the road shoulders on each side, until a wrecker moved the vehicle into a field and cleared the road.

The large number of vehicles serving the Third U. S. Army railhead in VERDUN (U2865), in addition to those supply vehicles using highway H3, created a high traffic density in the city. The temporary bridge also slowed traffic to some extent. Constant vigilance and expert performance of duty by Military Police kept traffic moving, and no conflicts ensued.

Traffic Court Number 8 moved to ST. DIZIER (T9509), 19 September.

Because of the numerous Air Corps personnel in the vicinity contact was made with the commanding officers of the Air Corps units regarding traffic regulations. These Air Corps units assured this office that they would cooperate in curbing the violation of traffic regulations in that area.

Main Supply Routes were established 19 September as follows:

(1) H3 VERDUN (U2865) to METZ (U6557), GC11 to Y04 vicinity FRESTROFF (Q2477), Y04 to H418, H418 to SAARLAUTERN (Q2880).

(2) H58 ST. AUBIN (U3115) to PONT A MOUSSON (U7735), H410 to RJ H3, H410 vicinity ST. AVOLD (Q2556), H3 to SAARBRUCKEN (Q4570).

(3) H4 ST. AUBIN (U3115) to NANCY (U8511), H74 to SARREBOURG/MINES (Q5197).

(4) H40 TROYES (T9973) to BONNET (I3095), IC38 (4E) to GONDRECOURT (I3493), H64 through NEUFCHATEAU (I6975) to MIRECOURT (I8149), H413 to TANTONVILLE (I8287), H4 to BATON (I9588), D9 to LUNEVILLE (Q0801), H4 to SARREBOURG (Q5015).

Representatives from Traffic and Maintenance of Law and Order Sub-Sections with a French liaison officer as interpreter departed 19 September for road reconnaissance of the Army and Forward Areas.

A tour of inspection was made 20 September of VERDUN (U2865), BAR LE DOC (U1213), ST. DIZIER (T9509), JOINVILLE (I0887), VOID (U4412), COMMERCY (U4220) and ST. MIHIEL (U3935). The town of COMMERCY (U4220) with highways H58 and H64 crossing the center of town was a bottleneck. The approaches to the crossroad were through narrow and crooked streets and no bypass was available. Despite this bottleneck, traffic control personnel kept traffic moving in an orderly manner.

The highway from COMMERCY (U4220) to ST. MIHIEL (U3935), an important lateral route, H64, had a railroad overpass and a river bridge blown. The railroad overpass was bypassed by a temporary road and grade crossing 1/4 mile north of blown bridge. A two way timber bridge was placed in at the river. This bridge would eventually be replaced as the approaches were faulty and the bridge was not high enough above the water line.

The 83rd Infantry Division was turned over to the XX Corps at ST. MIHIEL (U3935) at 231300 September and moved smoothly through the Army Area.

The Engineer Section reported that traffic control equipment was being furnished by local concerns under Army contract.

Provost Marshal, Twelfth U. S. Army Group, reported that traffic control equipment was available in a depot near PARIS (SO140) and that information would be furnished at a later date as to where this equipment could be picked up.

On 23 September the 7th Armored Division moved through the Army Area and was delivered to the First U. S. Army.

The following instructions as announced in Circular Number 58, Headquarters, Third U. S. Army, dated 25 September, were put in effect:

Army Light Lims coincided with Corps Rear Boundaries. Vehicle lights would be used as follows:

(a) Full head lights in rear of Army Light Line.

(b) Blackout driving lamps (dimout lights), for vehicles so equipped, from Army Light Line to Division Rear Boundaries.

(c) For vehicles not equipped with blackout driving lamps (dimout lights), marker (cat eye) lights from Army Light Lines to Division Rear Boundaries.

(d) Marker (cat eye) lights for all vehicles in front of Division Rear Boundaries.

Vehicles would not be left unattended unless under immediate surveillance of guards or Military Police.

(a) United States Army vehicles would not be immobilized by the removal of rotors or other vital parts by military or civilian personnel.

Officers would drive vehicles only in an emergency, as defined below:

(a) During a trip if driver is taken sick, is injured, wounded, killed or dies.

(b) In case of fire.

(c) In case of attack (including such attacks as riots, etc.).

(d) In any case of life or death.

(e) In any special cases, when directed in writing by the Installation Commander (or Unit Commander for separated units) where the need is urgent, and is for the good of the Government. However, in no case would this be used as an excuse for an officer to drive for personal satisfaction.

Movement of the 7th Armored Division 26 September was controlled by Army Military Police from RJ H16 and IC69 to LONGUYON (U4596), where First U. S. Army assumes control.

The 83rd Infantry Division moved through the Army Area. An ammunition truck in an element of this Division exploded on highway H401 just northeast of ST. DIZIER (T9509) at CHANCENAY (T9311). Ammunition was scattered on the highway and adjacent fields.

Traffic conflict was reported at OLLEY (U5465) in the XX Corps zone resulting from armored vehicles which were disabled. Ordnance was informed and assisted in removing all disabled vehicles.

The Ninth U. S. Army convoys commenced to move 29 September through the Army Area to assembly area in the vicinity of LUXEMBOURG (P8414). Command Post was to be established at ARLON (P8122).

A road reconnaissance was made 30 September to LUXEMBOURG (P8414) Representatives from the Provost Marshal Office, Ninth U. S. Army, visited this office for observation of Provost Marshal activities.

SECTION III - PRISONER OF WAR SUB-SECTION

Prisoner of War Enclosure Number 5 at COURTALAIN (H0944) was closed 1 September, 3,784 prisoners of war having been evacuated through this enclosure during the period 22 August to 1 September.

Weekly report of prisoners of war from 270001 August to 082359 September, inclusive:

On hand from previous week. . . .	5225
Received.	14440
TOTAL	19665
Evacuated	13698
BALANCE ON HAND . .	1967

Total number prisoners of war from 1 August to 2 September. . 68443

Prisoner of War Enclosure Number 7, two miles west of MEVIGNY (Y9629) on /C14 opened 3 September. This enclosure was operated by the 734th Field Artillery Battalion.

Plans liaison with Prisoner of War Enclosure Number 6 at MENCURS (X2675) was scheduled for one trip daily commencing 4 September.

Prisoner of War Enclosure Number 3, located vicinity of HUR EN BRETAGNE (XC569), was closed 5 September, 1,578 prisoners of war having been evacuated through this enclosure during the period from 19 August to 5 September inclusive. Battery B, 344th Field Artillery Battalion, was withdrawn from this enclosure and rejoined the Battalion at Prisoner of War Enclosure Number 6, MENCURS (X2675).

Notification was received 6 September from Advance Section, Communications Zone, that all prisoners of war would be evacuated to CHARTRES (R3408).

A site for new Prisoner of War Enclosure Number 8 was selected 6 September in the vicinity of FRESNES EN ECVRE (U4657).

TWX received from Twelfth U. S. Army Group dated 8 September advising that Air Force Escapees and Evaders would be evacuated to Hotel Maurice, Rue de Rivoli, PARIS (SO140) Intelligence School, Western European Area.

Prisoner of War Enclosure Number 6 at MENCURS (X2675), closed 9 September, 11,136 prisoners of war having been evacuated from this enclosure during the period from 25 August to 9 September.

Weekly report of prisoners of war from 030001 September to 092359 September, inclusive:

On hand from previous week. . . .	1967
Received.	5771
TOTAL	7738
Evacuated	4791
BALANCE ON HAND . .	2947

Total number prisoners of war received from 1 August to 9 September 73014

Prisoner of War Enclosure Number 8, vicinity of FRESNES EN WOEVRE (U4657), twelve miles east of VERDUN (U2865) on H408, was half mile south of H3 (U4658), opened 10 September.

Prisoner of War Enclosures were instructed to make full use of all captured German equipment for clothing the prisoners during cold weather.

The problem of civilians other than TOPT workers evacuated through prisoner of war channels became acute.

The 344th Field Artillery Battalion, located at Prisoner of War Enclosure Number 6, at MENCURS (X2675), moved 11 September to Prisoner of War Enclosure Number 8, at FRESNES EN WOEVRE (U4657). The following units also moved to the new enclosure at FRESNES EN WOEVRE (U4657): 472nd Military Police Escort Guard Company; 467th Quartermaster Truck Company; 498th Medical Collecting Company, 305th Military Police Escort Guard Company; 2nd Platoon, 443rd Prisoner of War Processing Company and Counter Intelligence Corps, Escapees and Evaders, Interrogation of Prisoners of War and Publicity and Psychological Warfare Detachments.

Digitized by Google

The following policies were established 13 September with reference to displaced personnel:

(1) No women would be sent to Prisoner of War Enclosures.
(2) Female TODT workers and families of TODT workers would be sent to Civil Affairs (G-5).
(3) Members of Allied Forces with civilian status, such as Russians, French, Belgians, Poles or Czechs would be dealt with by the G-5 Section as displaced persons.
(4) Displaced persons would be sent to the G-5 Section.
(5) Members of French Resistance would be sent to the G-5 Section.
(6) Suspects and enemy agents would be sent to Army Interrogation Center.

Weekly report of prisoners of war from 100001 September to 162359 September, inclusive:

On hand from previous week	2747
Received	7484
TOTAL	9971
Evacuated.	6326
BALANCE ON HAND. . .	3645

Total number prisoners of war from
1 August to 16 September, inclusive:79236

Notice was received 17 September from Advance Section, Communications Zone (84th Regulating Station) that prisoners of war would be evacuated by train daily from VERDUN (U8865) and REVIGNY (T9829) to the rear areas.

Report was received from VIII Corps 18 September that 5141 prisoners of war were evacuated from Prisoner of War Enclosure Number 3, HUR DE BRETAGNE (K0569), directly to Advance Section, Communications Zone, during the period 23 August to 5 September, inclusive.

Received allocation of prisoner of war serial numbers from Provost Marshal, European Theater of Operations, U. S. Army (310 900001 - 310 950000). The problem of supplying prisoner of war labor on a permanent basis appeared solved, as the allocation of numbers enabled Third U. S. Army to process prisoners for work details at the hospitals.

All Indian escapers and evaders would be evacuated to Special Counter Intelligence unit in PARIS (SC140) in accordance with letter from Intelligence School Number 9, Western European Area, American Headquarters Command, Supreme Headquarters, Allied Expeditionary Force, dated 13 September.

Prisoner of War Enclosure Number 7 at REVIGNY (T9829) was closed 21 September, 12,298 prisoners of war having been handled in this enclosure during the period from 3 September to 21 September, inclusive. Prisoner of War Enclosure Number 9, two miles west of TOUL (U6401) on RC 11[2] opened with the 734th Field Artillery Battalion as the operating unit.

The 2nd Platoon, 643rd Prisoner of War Processing Company summoned to process prisoners of war 22 September at the hospitals.

The 498th Medical Collecting Company was relieved from duty at Prisoner of War Enclosure Number 8 and was replaced by the 437th Medical Collecting Company.

Weekly report prisoners of war from 170001 September to 232359 September, inclusive:

On hand from previous week	3645
Received	7560
TOTAL.	11235
Evacuated.	8249
BALANCE ON HAND. . .	2706

Total number prisoners of war from
1 August to 23 September inclusive: 86,826

The Army Surgeon was informed with reference to the employment of prisoners of war in hospitals that Convalescent Hospitals would be allowed a quota of eighty processed prisoners, and all other hospitals would be allowed a quota of forty prisoners.

The use of War Department Provost Marshal General Form Number 1, Prisoner of War Identification Tag, was discontinued 25 September.

Notice was received 27 September from Advance Section, Communications Zone, that all prisoners of war would be evacuated to SUIPPES (T8664).

Memorandum, Instructions on Treatment of Prisoners of War, was prepared 29 September by the Prisoner of War Sub-Section and distributed.

Prisoners of war were permitted to work in medical depots.

Weekly report of prisoners of war from 240001 September to 302359 September, inclusive:

On hand from previous week	2706
Received	3114
TOTAL	4818
Evacuated	4069
BALANCE ON HAND	749

Total number of prisoners of war from
1 August to 30 September, inclusive: 88,940

Prisoners of war handled during the month of September: 25,371. Not included in this total were 2,501 prisoners of war received through medical channels. (See Annex 11).

Total number of Evaders and Escapers for the month of September: 390.

SECTION IV - MAINTENANCE OF LAW AND ORDER

During the month of September the boundaries of the Third U. S. Army Service Area became static to a degree which permitted a basis for planning in regard to Maintenance of Law and Order. In order to more efficiently employ Military Police, the Army Service Area was divided into sub-areas which corresponded with extensions of Corps boundaries insofar as was practicable. An officer was assigned to each sub-area with direct responsibility for all maintenance of law and order problems within the area and was given personnel who were distributed throughout the area as particular situations required. Upon the assignment of XV Corps to the Seventh U. S. Army, the sub-areas were readjusted to correspond with extensions of XII and XX Corps areas.

Although the functions of Army Military Police were technically limited to the boundaries of the Army Service Area, police of outside areas has been undertaken in the following instances:

In towns at or near the Army Headquarters when the Army Headquarters was located within a Corps area.

In towns within a Corps area when Corps Military Police were inadequate and where a request or clearance was made by or through the Corps.

In towns within the Advance Section, Communications Zone, which were temporarily left without Military Police because of the advance of the Army boundary.

At 061030 September the 465th Anti-Aircraft Artillery Battalion advised this office through the G-2 Section, Third U. S. Army, that there were sixty-five armed SS Troops in woods south of REIMS (T3080). The 6th Cavalry Group Headquarters was apprised of this matter and took action.

The stockade for U. S. Army General Prisoners was established adjacent to the 503rd Military Police Battalion Bivouac Area 8 September.

During the month all towns and cities in the Army Area were placed and kept "On Limits" to troops. To maintain law and order Military Police personnel were augmented by the assignment of personnel from the 631st Tank Destroyer Battalion in sufficient number to provide adequate patrols in towns and cities frequented by troops. Nine officers and 183 enlisted men from the 631st Tank Destroyer Battalion were given three days special Military Police training prior to assignment to provisional Military Police Platoon organized by the 503rd Military Police Battalion.

During the month walking and/or road patrols were operating in the following towns:

BRAY (U4119)	MEMOURS (X2675)
BAR LE DUC (U1223)	NEUFCHATEAU (X4975)
BOURBONNE (J5534)	NANCY (U8511)
CHENCY (X4968)	ORLEANS (P6623)
CHAMPIGNY (T2881)	PROVINS (S7305)
CLERMONT (U0560)	POINT TORNE (X6473)
CHALONS (T5445)	PUISEAUX (X0949)
COMPLANS (U8465)	ROMILLY (T0499)
CHAUMONT (X0650)	REIMS (T3080)
COMMERCY (U4220)	RETHEL (S5506)
DONNEMARIE (X2644)	SERGNES (X6288)
EPERNAY (T2456)	SOUPPES (X2866)
ESTERNAY (S9284)	ST. MARTIN (T6219)
ETAIN (U4770)	SEZANNE (T0522)
EPINAL (T0554)	SENS (X4965)
FONTAINEBLEAU (X2891)	STE. MENEHOULD (T9359)
FERE CHEMPENOISE (T2584)	ST. DIZIER (T9509)
GAUCHER (S7421)	ST. MIHIEL (U3935)
LIGNY (U2113)	TOUL (U6401)
JOINVILLE (X0697)	THORIGNY (T7136)
LAILLY (X5849)	TROYES (T2972)
LA CHAPELLE (S8128)	VOUZIER (T6094)
LA FERTE GAUCHER (S7530)	VOID (U4411)
MONTEREAU (X4685)	VITTEL (X4657)
MARGIS (X3745)	VENDEUVRE (T3041)
MORET (X3788)	VERDUN (U2865)
MOURMELON (T5465)	VITRY LE FRANCOIS (T6819)
MAILLY LE CAMP (T3914)	WASSY (T9493)
MONTMIRAIL (S9239)	
MERY (T1697)	
MOREMY (J8540)	

During the month the following delinquency reports originated in the Sub-Section.

Unattended vehicles.	101
Uniform violations	119
Speeding	208
Double banking	76
Pass violations.	68
Carrying civilians	42
Reckless driving	32
Drunk and disorderly	29
Unauthorized use of weapon . . .	17
Drunken driving.	7
Officer driving.	6
Refusal to obey Military Police. .	5
Resisting arrest	4
Accidents.	3
Damage to civilian property. . . .	3
Selling rations.	3
Top up on vehicle.	3
AWOL	3
Stole Government property	2
Blackout violation	2
Robbery.	2
Overloading vehicle.	1
TOTAL	936

In addition to the delinquencies above listed, this Sub-Section forwarded ninety-nine delinquency reports by indorsement and received 356 information copies of delinquency reports originated by other Provost Marshals.

Summary Courts: Two roadside courts with Summary Court Martial jurisdiction commenced operation in the Army Area; Number 1 at TROYES (T2972), and Number 2 at CHALONS (T5445). The purpose of these courts was to bring swift justice and immediate punishment to traffic violators and other offenders. Offenses beyond the jurisdiction of the courts were investigated and charges were preferred, signed and forwarded to units concerned for investigation and trial.

The operation of the courts has effected marked improvement in the observance of traffic and other regulations. During the month the courts operated at the following locations: TROYES (T2972), VITRY LE FRANCOIS (T6819), CHALONS (T5445), STE. MENEHOULD (T9359), ST. DIZIER (T9509), COMMERCY (U4220) and VERDUN (U2865).

A summary of cases tried by the Summary Courts for the month was as follows:

	Court Number 1	Court Number 2	TOTAL
Speeding	41	124	165
Passing convoys.	0	27	27
Transporting civilians	6	21	27
Uniform violations	89	62	151
Unattended vehicles.	19	9	28

Digitized by Google

	Court Number 1	Court Number 2	TOTAL
Drunk and disorderly	13	4	17
Double banking	27	2	29
Blocking traffic	0	1	1
No pass	62	0	62
Overloading vehicle	3	4	7
Damage to civilian property	0	2	2
Curfew violation	0	6	6
Failure to salute	3	0	3
Discharge of weapon	6	1	7
Disobeying military police	1	0	1
Illegal parking	0	1	1
TOTALS	271	264	535

All Maintenance of Law and Order Headquarters and detachments have been operating as straggler collecting points. During the month these have included the following locations:

SENS (A5965)	STE. MENEHOULD (T9359)
FONTAINEBLEAU (A2991)	ST. DIZIER (T9509)
REIMS (T3080)	JOINVILLE (Z0887)
ROMILLY (Y0499)	TOUL (U6401)
VITRY LE FRANCOIS (T6819)	VITTEL (Z6657)
CHALONS (T5445)	VERDUN (U2665)
TROYES (T2972)	ETAIN (U4770)

Disposition of stragglers during the month was as follows:

To Units	49
To Replacement System	128
To Hospitals	2
TOTAL	179

General prisoners evacuated or released during the month were as follows:

To Units	11
Communication Zone	19
Brittany Base Section	3
81st Replacement Battalion	3
Advance Section, Communications Zone, REIMS (T3080)	3
COMPIEGNE (H4403) Prisoner of War Enclosure	1
Disciplinary Training Center Number 5, TONNERVILLE (00724)	2
XV Corps	1
291th Disciplinary Training Center, England	6
Seine Base Section	1
TOTAL	50

General prisoners on hand in Third U. S. Army stockade, 30 September: 71

Enlisted men, drivers of vehicles, were apprehended for leaving their vehicles unattended with arms in the vehicles. If the drivers of these vehicles were not located the vehicles were driven by the Military Police to a Vehicle Corral. Disciplinary action was taken against all drivers for these violations.

Captured clothing, (such as fur coats, jackets, and fur hats) when worn as outer garments would be in violation of current uniform regulations. In every case involving such an offense the Provost Marshal would confiscate such articles of wearing apparel and turn them in to Quartermaster Captured Stores or Prisoner of War Enclosures for use by German prisoners of war.

Civil Affairs reported on 18 September that a Military Police detail was needed in the town of VITTEL (Z6657), south of NEUFMAISAU (Z4973). VITTEL (Z6657) being in XV Corps Area, the Provost Marshal of XV Corps was notified of the situation.

Civil Affairs reported that two Cafe de Globe in ETAIN (U4770) was operated by alleged collaborationists who were catering to soldiers after curfew. Counter Intelligence Corps and Military Police were advised, and investigation conducted.

XV Corps requested that Army take over the police of the town of VITTEL (Z6657) on 21 September.

Circular Number 59, Headquarters, Third U. S. Army, dated 17 September, was published concerning curfew and uniform violations. (See Annex 12) Curfew in all towns was 2000 to 0600 hours. All military personnel would be off the streets and clear of town during curfew.

One platoon from the 631st Tank Destroyer Battalion was dispatched to VERDUN (U2665) on 18 September to aid the Military Police force already stationed there in combing the city for stragglers and AWOLs. The intensive search commenced on this date proved highly successful.

Circular Number 60, Headquarters, Third U. S. Army, dated 30 September (See Annex 13) announced the policy with respect to towns and cities in the Third U. S. Army Area as follows:

All towns and cities in Third U. S. Army Area, upon liberation, would initially be placed on limits to all military personnel. Thereafter, towns and cities might be placed "Off Limits" and so signed when deemed expedient by the Army or the Corps Commander concerned.

Curfew in all towns and cities, time to be announced periodically would include the hours of darkness, and would be strictly enforced for both military and civilian personnel.

Liaison With French Authorities.

Two officers of the French Army were attached to this Sub-Section. These officers were employed for the purpose of establishing and maintaining a liaison with French Police and Civil Authorities. Through such liaison, which functioned also through local Civil Affairs offices, close cooperation from Civil Authorities was obtained. Concerted action was taken in operation of joint French and American military police patrols. Increased observance of curfew regulations by civilians through enforcement by Civil Police materially assisted in the maintenance of law and order by closing bars, restaurants and other establishments whose operation after curfew hours seriously impairs the maintenance of law and order among military personnel. Civil Authorities gave valuable information concerning AWOLs and stragglers, and assisted in breaking up such practices as the bartering of food and supplies and the frequenting by military personnel of houses of prostitution operated by women known to have associated with the enemy.

SECTION V - INVESTIGATION SUB-SECTION

Following criminal cases were pending final investigation as of 1 September:

Rape	2
Assault	4
Article of War 85	1
Murder	1
Larceny	1
TOTAL	9

The 9th Criminal Investigation Section, one officer and ten enlisted men, reported for duty on 2 September.

Formal orders attaching the 9th Criminal Investigation Section to the Provost Marshal Section, Third U. S. Army, were received from Headquarters, Twelfth U. S. Army Group, i.e., letter dated 6 September 1944, subject: "Troops Assignment Number 63."

Six additional 1/4 ton 4x4 vehicles were assigned on 15 September to the 9th and 13th Criminal Investigation Sections, 3 vehicles per section.

Criminal cases reported and investigated during week ending 16 September were as follows:

Rape	2
Murder	1
Attempted murder	1
Fatal shooting	1
Assault	2
Larceny	3
TOTAL	10

Cases pending 16 September were as follows:

Rape	1
Murder	1
TOTAL	2

Two agents were dispatched to METZ (T0134) for the purpose of attending Courts Martial pertaining to a rape case.

Criminal cases investigated and completed during week ending 23 September were as follows:

Murder	1
Rape	3
Assault	3
Robbery	1
Larceny	2
Petty larceny	1
TOTAL	10

Cases pending as of 23 September were as follows:

Rape	1
Assault	1
Larceny	2
Petty larceny	1
TOTAL	5

Criminal cases investigated and completed during the week ending 30 September were as follows:

Larceny	1
Petty larceny	1
Assault and battery	1
Assault	1
TOTAL	4

Cases pending as of 30 September were as follows:

Rape	4
Murder	1
Assault	3
Fatal shooting	1
Drunk and disorderly (General Prisoner)	1
Larceny	1
TOTAL	12

In compliance with paragraph 19, Operational Instructions, Headquarters, Twelfth U. S. Army Group, dated 15 August, Semi-monthly Report covering period from 15 September to 30 September inclusive, and Monthly Report, covering period from 30 August to 30 September, were submitted to the Provost Marshal, Twelfth U. S. Army Group.

During the month of September forty cases were reported to this office for investigation, of which thirty-six were completed and reports compiled and forwarded. A total of nine cases were carried over from August making a total of forty-nine cases under investigation by this office during the month of September.

The following cases were pending:

Rape	4
Murder	2
Assault	3
Larceny	2
Article of War 85	1

CHAPTER 5
OCTOBER OPERATIONS

SECTION I - GENERAL

The Rear Echelon, Third U. S. Army moved on 5 October from ROUVRES EN WOEVRE (U8171) to NANCY (U8511).

The Forward Echelon, Third U. S. Army moved on 11 October from STAIN (U4770) to NANCY (U8511).

SECTION II - TRAFFIC SUB-SECTION

Circular Number 63, Headquarters Third U. S. Army, dated 6 October was published and distributed. (See annex 14). This circular contained all correct Traffic Regulations and superseded the provisions of Circular Number 10, Headquarters, Third U. S. Army, dated 4 May.

Third U. S. Army Military Police took over control of NANCY, (U8511) 6 October. Army traffic control personnel had been functioning in NANCY (U8511) for ten days prior to this date assisting the Provost Marshal of the XII Corps. Ghost points on all highways leading into town were established to prevent unnecessary traffic entering the town. Company "A", 512th Military Police Battalion, was stationed in NANCY (U8511) for traffic control duties.

Civilian traffic was heaviest along highway N4, a Main Supply Route. At TOUL (U6401) civilians were prohibited from using the main bridge and were directed to use a bypass bridge one mile south along the MOSELLE River. Civilian traffic between NANCY (U8511) and TOUL (U6401) was kept to a minimum by forbidding the use of N4 between GONDREVILLE (U8913) and TOUL (U6401). Civilian traffic was extremely dense in NANCY (U8511) proper.

Reconnaissance of CHALIGNY (U7804) was made and Military Police were stationed in PONT ST VINCENT (U7902) to patrol CHALIGNY (U7804) and MESNIL MAISONS (U7903).

Road patrols operated on 10 October between VIRMERULLES (U6144), FRESNES EN WOEVRE (U4697), DOMECOURT (U5963), TOUL (U6401), VOID (U6412), LIGNY (U2113) and BAR LE DUC (U1222).

A large volume of traffic for the Ninth U. S. Army was routed from VERDUN (U3865) through STAIN (U4770) to LONGUYON (U6496).

Four special patrols were dispatched to handle special convoys carrying explosives from UTAH BEACH to FOUG (U5612) for the 86th Engineer Battalion.

Supply Echelon, Third U. S. Army moved 12 October from STAIN (U4770) to NANCY (U8511).

Company "A", 510th Military Police Battalion arrived at STAIN (U4770) 26 October from Ninth U. S. Army for assignment to III Corps.

Major Troop Movements through the Army Area during the month were as follows:

5th Infantry Division from FLIREY (U6133) to SPINCOURT (U4984) via N404, N408, and N18.

26th Infantry Division (rear trains Artillery, etc.,) from BAR LE DUC (U1182) to ST NICHOLAS DE PIERREPONT (U9505), N64, N4 and N74.

44th Infantry Division from COMMERCY (U4220) and BAR LE DUC (U1182) to BAYON (U9588), (Seventh U. S. Army) via N64, N54, N60, N4 and N404.

95th Infantry Division from SPINCOURT (U4984) to FLIREY (U6133) via N18, N408 and N401.

9th Armored Division (to Ninth U. S. Army) from VERDUN (U3865) to LONGUYON (U4396) via N64, N405, C65, C64 and N18.

10th Armored Division from VERDUN (U3865) through Army Area to XII Corps.

During the month clearances for over 60 convoys involving over 6,000 vehicles were processed through this section.

Main Supply Routes were established 9 October as follows:

N3, VERDUN (U3865) to METZ, (U8689) C611 to RJ N18 to SAARLAUTERN (Q8680).

Highway Vole Secret, BAR LE DUC (U1182) to RJ N401 to ST MIHIEL, (U3935) N40V to RAMBUCOURT, (U5329) N56 to PONT A MOUSSON, (U7735) N410 to ST AVOLD, (Q8556) N3 to SAARBRUECKEN (Q4570).

N4, LIGNY (U2113) to NANCY, (U8511) N74 to SAARGUEMINES (Q8197).

N409 was closed to traffic between GIRONVILLE (U4823) and BOUCQ (U5418) for maintenance purposes.

The Third U. S. Army Engineer received from Communications Zone, traffic control equipment consisting of 800 batons, reflectorized and 400 lamps, electric flasher type.

Conference was held with Topographic and Operations Sections of the Army Engineer Office 22 October regarding printing of a new road map of Germany, scale: 1:250,000.

A letter was drafted on Vehicle Markings and Current Traffic Regulations, translated into French and made available for distribution to the French Troops stationed in the area.

Drivers of motor vehicles were required to have the following in their possession:

Driver's trip ticket and preventive maintenance service record WD, Form Number 48, (old WD, QMC Form 227).

Army Motor Vehicle Operator's Permit, WD, GO Form 7360, (old WD, QMC Form 228).

Driver's Accident Report, Standard Form Number 26 or 26A.

Rear Boundaries were established 21 October as follows:

XII Corps: From intersection of N57 with north lateral boundary on N57 to RICHARDMENIL (U8901), N15 to CHALIGNY (U7903), thence on N409 to VILLEY LE SEC (U7008), thence northeast on unnumbered road to GONDREVILLE (U8913), thence on VO road to VILLEY ST ETIENNE (U7004), thence on N110.4 to MANONCOURT (U8783), thence northeast on unnumbered road to HINCKVILLE (U8484), thence on N110.13 to NOVIANT AUX PRES, thence on N407 to BERNECOURT (U6129), thence north on N404 to its intersection with north lateral boundary, all to Army.

XI Corps: From intersection of N18 with north lateral boundary vicinity LONGUYON (U4496), south along N18 through SPINCOURT (U4984) to STAIN (U4770), thence along N3C0 to BOUCQ (U5418), thence along N408 to intersection of N408 with south lateral boundary vicinity GUENVILLE (U4328), all to Army.

[redacted] Ground Courier Service was inaugurated covering the following localities: NANCY (U8511), TOUL (U6401), VOID (U6412), LIGNY (U2113), COMMERCY (U4220), BAR LE DUC (U1182), ST MIHIEL (U3935), VERDUN (U3865), METTONCOURT (U5366), VIRMERULLES (U5144) and STAIN (U4770).

SECTION III - PRISONER OF WAR SUB-SECTION

Letter, subject, "Prisoner of War Labor," Headquarters European Theater of Operations, U. S. Army, dated 21 September was received and distributed to all Medical Units employing processed prisoners of war.

The Surgeon, Third U. S. Army was notified that all hospitals located within the twelve mile zone of the nearest organized enemy activity would return all processed prisoners of war to the prisoner of war Enclosure. The 103rd Evacuation Hospital returned thirty processed prisoners of war to the Prisoner of War Enclosure at TOUL (U6401) because the location of this hospital was within twelve miles of the nearest organized enemy activity.

In accordance with request of Provost Marshal, Twelfth Army Group a complete roster of all processed prisoners of war employed at Third U. S. Army hospitals was forwarded to the Provost Marshal, Advance Section Communications Zone.

Notification was made to the Provost Marshals of the XII and XX Corps advising them that prisoners of war would not be retained in the forward areas but would be evacuated to the rear at the first opportunity.

Four processed prisoners of war escaped 14 October from the 39th Evacuation Hospital. One of the escaped prisoners of war was apprehended on the streets of NANCY (U8511).

A German spy suspect, dressed in an American field jacket, crossed the MOSELLE River through our lines, was captured and evacuated by air to the United Kingdom, seriously wounded.

Two German prisoners of war escaped 18 October from Prisoner of War Enclosure Number 8, at FRESNES EN WOEVRE (U4698), were apprehended by XI Corps and returned to the Prisoner of War Enclosure.

[redacted]

Digitized by Google

The Second Platoon 643rd Prisoner of War Processing Company was relieved from duty with Third U.S. Army at Prisoner of War Enclosure Number 8, FRESNES EN WOEVRE (U4636), 2 October and returned to Provost Marshal, Advance Section Communications Zone at METZ (T2080). 618 prisoners of war were completely processed for Third U. S. Army by this Unit.

Prisoner of War Enclosure Number 8, FRESNES EN WOEVRE (U4636) closed 170000 October. All units stationed at this Enclosure were transferred to Prisoner of War Enclosure Number 9, at TOUL (U6300). The Enclosure at TOUL (U6300) continued to operate under the 734th Field Artillery Battalion. 4,551 prisoners of war were evacuated through Prisoner of War Enclosure Number 8 during the period from 10 September to 16 October.

Notification was received from Advance Section Communications Zone that prisoners of war would be evacuated to the Central Enclosure at COMPIEGNE (U6403) instead of to BELFORT (T0644).

Letter, subject, "Enemy Protected Personnel," Headquarters European Theater of Operations, United States Army, dated 6 October was forwarded to Prisoner of War Enclosure Number 9, at TOUL (U6300).

Directive for the Procedure and Censorship of Mail of enemy prisoners of war on the continent, Headquarters, European Theater of Operations, U. S. Army, Office of the Theater Censor, dated 24 September was received and distributed 23 October to all Medical units employing processed prisoners of war.

A Prisoner of War Exchange Officer from Supreme Headquarters Allied Expeditionary Forces was attached to this office for duty, 23 October.

A Guard Detail was furnished by the 344th Field Artillery Battalion for the Civil Affairs (G-5) Displaced Persons Center at VERDUN (U6065).

The Supreme Headquarters Allied Expeditionary Force, Escapers and Evaders Detachment attached to Prisoner of War Enclosure Number 9, at TOUL (U6300) was requested by G-1 to submit a report to the Adjutant General, Security Section, Third U. S. Army on all American Escapers and Evaders.

Total prisoners of war from 1 August to 28 October: 92,750.

Total number prisoners of war handled during October: 4,822.

Total number of prisoners of war from 1 August to 31 October inclusive: 102,340. (See annex 13).

Total number of escapers and evaders for October: 40.

SECTION IV - MAINTENANCE OF LAW AND ORDER SUB-SECTION

The city of NANCY (U8511) was placed "Off Limits" 6 October to all troops for the purpose of restoring discipline and apprehending and returning all stragglers to their units. In accordance with Circular Number 64, Headquarters, Third U. S. Army, dated 6 October, all individual detachments and organizations would enter NANCY (U8511) only on official orders from competent authority. Curfew 2000 hours to 0600 hours would be obeyed by all military personnel and civilians.

Under the direction of the Commanding Officer, 636st Tank Destroyer Battalion, Assistant Provost Marshal, Third U. S. Army the efforts of the Military Police, Civil Affairs, Counter Intelligence Corps and the local law enforcing agencies in NANCY (U8511) was placed "ON LIMITS" on a restricted basis. Military Police Detachments in TOUL (U6401), VERDUN (U8065), COMMERCY (U4230), and BAR LE DUC (U1122) were only assisted during the period by personnel detailed to temporary military police duty by units, both white and colored, stationed in and around those cities.

Circular Number 67, Headquarters, Third U. S. Army, dated 12 October announced the Pass Policy for NANCY (U8511), France, as follows:

1. Section II, Circular 64, this headquarters, dated 6 October 1944 is rescinded.

2. The following pass policy for military personnel visiting NANCY (U8511) is announced effective 12 October 1944.

a. The City of NANCY (U8511) is off limits to military personnel except as follows:

(1) Five (5) percent only of the Table of Organization strength of units mentioned below may visit NANCY (U8511) on any one day.

(a) XII Corps including all attached and supporting units.

(b) All troops stationed and/or billeted within the city limits of NANCY (U8511).

(c) Troops stationed in the area west of NANCY (U8511) bounded as follows: MOSELLE River from its junction with the MEURTHE River west to DOMMARTIN (U6912) (inclusive), south along unnumbered highway (inclusive) to PONT VILLEY LE SEC (V7008) on the MOSELLE River (inclusive) thence east southeast along the MOSELLE River to Third U. S. Army south boundary.

(2) Passes will not be made effective earlier than 1800 hours and will expire not later than 2000 hours.

(3) Individual passes will be issued. Attention is invited to the fact that identification cards showing that the holder is stationed or billeted in NANCY (U8511) are not passes.

(4) No twenty four (24) hour passes will be issued.

(5) Curfew 2000 hours to 0600 hours will be obeyed by military personnel below the grade of field officer including those stationed and/or billeted in NANCY (U8511).

The Pass Policy for NANCY (U8511) was amended by Circular Number 71, Headquarters, Third U. S. Army, dated 20 October, as follows:

Paragraph 2a (2), Section II, Circular 67, this headquarters, dated 12 October 1944, is amended to read as follows:

"2a (2) (a) Passes will not be made effective earlier than 1800 hours and will expire not later than 1800 hours for personnel not stationed and/or billeted within the city limits of NANCY (U8511).

(b) Passes will not be made effective earlier than 1200 hours and will expire not later than 2000 hours for personnel stationed and/or billeted within the city limits of NANCY (U8511)."

In compliance with Staff Memorandum Number 90, Headquarters, Third U. S. Army, dated 18 October 1944, officer patrols were inaugurated in the city of NANCY (U8511). These patrols were composed of four Staff Officers who were detailed to patrol the city from 1200 hours to 2000 hours daily, commencing 19 October, for the purpose of checking discipline, conduct and appearance of officers and enlisted men in the city.

At 282000A October an intensive drive was conducted in NANCY (U8511) in cooperation with the Counter Intelligence Corps to enforce strict observance of curfew regulations by both military and civilian population. Between 282000A and 290300A 108 soldiers and some 400 civilians were apprehended. The former were booked by the Military Police and the latter were screened by Counter Intelligence Corps.

Members of the French Gendarmerie were utilized in assisting Military Police at TOUL (U6401) to enforce blackout regulations.

A Refresher School for all Military Police was held 24 October in NANCY (U8511), LIGNY (U8213), and TOUL (U6401). Subjects presented were Provost Marshal Policies, technique of arrest, criminal investigation, maintenance of law and order, traffic technique and preparation of reports and general orientation.

Summary Courts: Although at the time of their inception the Roadside Summary Courts were established to deal primarily with traffic violations and other delinquencies of a less serious nature, the courts not only fulfilled this function but have also broadened their scope of activity.

On many occasions incidents involving assault with a dangerous weapon, attempted rape, robbery, and misappropriation of government property were referred to these courts. In some cases they made preliminary inquiries which laid the groundwork for a complete investigation by the Criminal Investigation Section. In other cases they secured evidence, statements from witnesses, and even prepared charges for the higher courts which must try the offenders.

Summary Court Number 2 was moved 6 October from COMMERCY (U4230) to TOUL (U6401).

During the month Summary Courts were in operation at COMMERCY (U4230), TOUL (U6401), and VERDUN (U8065).

A summary of cases tried by the Summary Courts for the month was as follows:

	Court No. 1	Court No. 2	TOTAL
No Pass	43	174	217
Speeding	38	138	176
Double banking	45	55	100
Uniform violations	24	45	69
Curfew violations	0	97	97
Unattended vehicle	11	44	55
Drunk and disorderly	36	14	50
Transporting civilians	5	28	33

Digitized by Google

Summary of cases tried by Summary Courts (continued).

	Court No.1	Court No.2	TOTAL
Overloading vehicle	6	10	25
Unauthorized firing	11	7	18
Reckless driving	1	15	16
Loitering and straggling	0	10	10
Failure to salute	0	6	6
Unauthorized parking	0	5	5
Passing convoys	0	4	4
Miscellaneous	4	12	16
TOTALS	225	630	855

During the month walking and/or road patrols were operative in the following towns:

BAR LE DUC	(U1128)	BOURMONT	(T5465)
CHALIGNY	(U7804)	NANCY	(U8511)
CHAVIGNY	(U8104)	NEUFMAISEAU	(E4955)
CHAUMONT	(E0450)	NEUVE MAISONS	(U7903)
COMMERCY	(U4280)	PONT ST VINCENT	(U7904)
DONCOURT	(U8863)	ST MIHIEL	(U3935)
ETAIN	(U4770)	TOUL	(U8401)
FRESNES EN WOEVRE	(U4459)	VERDUN	(U2865)
JOINVILLE	(E0884)	VIGNEULLES	(U5144)
LEROUVILLE	(U3984)	VITTEL	(E4657)
LIGNY EN BARROIS	(U2213)	VOID	(U4418)

Maintenance of law and order patrols were established in CHALIGNY (U7804), CHAVIGNY (U8104), NEUVE MAISONS (U7903), and PONT ST. VINCENT (U7904), at the request of the XII Corps Provost Marshal.

Cooperation with Corps Provost Marshals: Close cooperation with XII Corps Provost Marshal was maintained during the month particularly in NANCY (U8511) where arrangements were made whereby XII Corps Military Police were utilized in handling delinquencies brought into NANCY (U8511) police headquarters and all such cases pertaining to XII Corps troops were turned directly over to the Corps Military Police.

Delinquencies: During the month the following delinquency reports were processed by the Maintenance of Law and Order Sub-Section:

Pass violations	1498
Uniform violations	573
Unattended vehicles	292
Speeding	248
Unauthorized use of vehicle	185
Drunk and disorderly	127

CHAPTER 6
NOVEMBER OPERATIONS

SECTION II - TRAFFIC SUB-SECTION

During the month of November the free flow of traffic was impeded by heavy rainfall. Bigneulx crushed out bridges at ARMAVILLE,(U7547) VANDIERES, (U7541) PAGNY,(U8112) CHAMPIGNEULLES, (U8516) and TOUL (U8401) and endangered the south bridge at VERDUN (U8865). Bridges at PONT A MOUSSON (U7726) and ST NICHOLAS (U8905) were temporarily closed and the bridges at NANCY (U8511) were threatened but remained open to regulated traffic. All possible traffic was rerouted through NANCY (U8511) as bridges there were the only ones open on the SEMOUSE - MOSELLE River line. The bridges at PONT A MOUSSON (U7726) and ST NICHOLAS (U8905) were reestablished on 9 and 11 November respectively and by the 14th November additional bridges were in operation at PERNOT (U8230), ROSIERES (U7901), DIEULOUARD (U7609) and CHOYSEES (U8228).

All civilian traffic in the Army area was prohibited 8 November for tactical reasons. Signs were posted in all towns and on all roads. Every available traffic Military Policeman was posted on point and patrol duty to rigidly enforce the no civilian traffic rule. Results were exceptionally good and civilians cooperated excellently. Regulations on civilian traffic were relaxed 11 November to permit essential supply vehicles, doctors' vehicles, and civilian ambulances on designated roads in the Army area, insofar as they did not interfere with military traffic.

A conference with the Prefect, Chief of Police, City of NANCY (U8511) and Public Safety Officer, G-5, was held on XX November resulting in a modified plan for control of civilian traffic being adopted and placed in effect. The civilian population was notified of this plan through publication in all newspapers. Civilian vehicles authorized to travel on Main Supply Routes and secondary roads were issued identifying stickers with license number of vehicle typed thereon. All Military Police and French Police were notified of this plan. Violators of this plan were either fined by the French Police or placed in vehicle corrals, which were established for such purposes at various places along the Main Supply Routes.

Parades and services sponsored by civilians were held in NANCY (U8511), VERDUN (U2865), and LIGNY (U2113) on 11 November, necessitating additional traffic posts and patrols for control, and in VERDUN (U2865) the Main Supply Route was detoured for two hours.

Numerous reports were received of the German Army forcing refugees into our lines to clog up traffic. Civil Affairs placed road patrols with Military Police and cleared the refugees from the main roads.

Traffic Military Police moved into STENAY (P1903), LONGUYON (D4596) and MONTMEDY (P3805), (in First U.S. Army area) to control Third U.S. Army traffic.

Company "B", 518th Military Police Battalion moved forward in the Army area to NANCY (U8511). Army Military Police took over posts in advance Army area BOLBOO.

French Gendarmes of 10th Legion relieved Engineers guarding highway bridges at ST MIHIEL (U3935), VOID (U4418), TOUL (U8401) and PONT ST VINCENT (U7903).

Major troop movements during the month were as follows:

The 10th Armored Division moved from VERDUN (U2865) to XX Corps via XX on 1 November. Road and driver discipline was excellent. Route and destination of the unit were changed while the division was enroute. Military Police were stationed on both routes, and contacted the division in Advance Section, Communications Zone and directed them over the new route through Third U.S. Army Zone, closing at XX Corps 011800.

The 12th Armored Division moved over the road net from LIGNY (U2113) to RAMBUCOURT (U5549) on 29 November.

During the month clearances for over 128 convoys involving over 8,500 vehicles were processed through this section.

DECLASSIFIED

Digitized by Google

Two truckloads of traffic control equipment, including signs, directional, lamps, traffic, and frames plates arrived from PARIS (80140) 15 November. Batons, reflectorized, were changed slightly; new amber filters were inserted for use in NANCY (U8511) inasmuch as the old type lense was difficult to observe at a distance on rainy nights. 800 blank signs were received from the Engineers for road signing and were distributed to the 512th Military Police Battalion for marking roads in forward areas.

The Light Line was moved up with XII Corps rear boundary to MEUSE River, 18 November, allowing use of lights in NANCY (U8511). A new light line for XII Corps Zone was recommended at line along Highway N55, effective 191800.

Light Line was changed by Section I, Circular 83, Headquarters, Third U.S. Army, dated 26 November, as follows:

a. Army Light Line coincides with Division Rear Boundary.

b. Vehicle lights will be used as follows:

(1) Full headlights in rear of Army Light Line.

(2) Marker (cat eyes) lights for all vehicles in front of Army Light Line.

(3) Red Light "Flashers" on special vehicles are authorized in addition to the above.

c. All obstacles such as trophies, gas cans, camouflage nets, signs, etc., will be removed from the front and rear of vehicles where they obstruct the full benefits of the head and tail lights.

SECTION III - PRISONER OF WAR SUB-SECTION

The location of Prisoner of War Enclosure Number 10, was selected at FLORANGE (U8281) on 7 November and opened 11 November. Prisoner of War Enclosure Number 9 continued operation at TOUL (U8401).

The 344th Field Artillery Battalion received its primary mission on 5 November and was relieved from assignment with the Provost Marshal, Third U.S. Army. The police, guard, and postal details furnished by the 734th Field Artillery Battalion reverted to their organization so that all personnel would be available for duty in the event two Army Prisoner of War Enclosures would be operated by the 734th Field Artillery Battalion.

At Prisoner of War Enclosure Number 10, FLORANGE (U8281), 11 officers, and 175 enlisted men of the 734th Field Artillery Battalion, the 497th Military Police Escort Guard Company, the 301st Military Police Escort Guard Company, (Advance Section, Communications Zone) a section of the 497th Medical Collecting Company, one platoon of the 647th Quartermaster Truck Company, and Interrogation of Prisoner of War and Counter Intelligence Corps Teams, reported for duty on 11 November.

The 34th Regulating Station ascertained on 10 November that facilities for train evacuation from Third U. S. Army Prisoner of War Enclosure Number 10, would be available.

Because of the overcrowded conditions at the Continental Central Prisoner of War Enclosure at STENAY (P1303), the Advance Section, Communications Zone Provost Marshal on 30 November ordered prisoner of war evacuations routed to the Communications Zone Central Enclosure at COMPIEGNE (P6403). This was done until 26 November when this headquarters was advised to route evacuations back to Advance Section, Communications Zone Central Prisoner of War Enclosure at STENAY (P1303).

The responsibility of supplying food and water to the prisoners of war evacuated by train from Army Prisoner of War Enclosures was placed upon the 301st and 306th Military Police Escort Guard Companies, Advance Section, Communications Zone, by the Commanding General, Advance Section, Communications Zone. The 306th Military Police Escort Guard Company was able to draw sufficient five gallon water cans and rations to facilitate the train evacuation of prisoners of war.

Letter, Headquarters, Third U. S. Army, file AG 383.6 OMMCY, dated 14 November 1944, subject, "Retention of Prisoners of War by Forward Units," was published and given distribution "A" and "C". See annex 16).

Steps were initiated during this period for the withdrawal of all processed prisoner of war labor as soon as using medical units crossed the German border. Plans were also inaugurated for the illumination of future prisoners of war Enclosures located in Germany.

Letter, Supreme Headquarters, Allied Expeditionary Forces, AG 383.6 GAP-AGE, dated 30 November 1944, subject, "Treatment of Prisoners of War," was distributed to all Division and Corps Headquarters.

Letter, Headquarters, Third U.S. Army, file AG 383.6 OMMCY, dated 12 December 1944, subject, "Procedure at Prisoner of War Enclosures, with Respect to Enemy Soldiers Taken Captive in Civilian Clothing," was published.

It was observed on 13 November that divisions were sending through Prisoner of War Channels, civilians, who, after having been screened by Army Counter Intelligence Corps, were classified as Displaced Persons. With the cooperation of the Assistant Chief of Staff, G-5, these Displaced Persons were evacuated to the Civil Affairs Center at VERDUN (U2865).

Two female German Red Cross workers were evacuated 29 November to Advance Section, Communications Zone from Army Prisoner of War Enclosure Number 9. Under the Articles of the Geneva Convention they were treated as Protected Personnel.

On 23 November, General ANTON DOSTLER, Storm Trooper, Commander of the METZ (U8539) and SAAR (Q4070) area, and Colonel CONSTANTIN HEYER, Commandant of METZ (U8539), after having been interrogated by the Army Commander, were evacuated to Twelfth Army Group from Prisoner of War Enclosure Number 9.

This Headquarters approved a command letter to be distributed by the Army Surgeon which required Army Hospitals to comply with Third U. S. Army Outline Plan, Annex 19 (The Provost Marshal Plan) dated 11 May 1944, namely to submit daily a roster of enemy wounded, admitted and deceased. If necessary a negative report would be submitted.

On 30 November the Army Medical Section submitted to this office the figures of admissions of wounded prisoners of war to Army Hospitals, for the period 1 November to 29 November inclusive. As some Third U. S. Army Hospitals did not comply with Annex 19, paragraph 4, of 11 May 1944, the Surgeon's total exceeded by 801 the total of admissions reported by the individual hospitals to this section during the same period. This difference was incorporated in the accumulative total of prisoners of war received for the entire period of operations.

Prisoner of War statistics for the month of November:

On hand at Enclosures as of 31 October	142
Received during month at Prisoner of War Enclosures. . .	24133
TOTAL.	24275
Evacuated	13107
On hand at Prisoner of War Enclosures, 30 November . . .	3168
Received during month at Prisoner of War Enclosures. . .	24133
Admitted during month at Third U.S. Army Hospitals . . .	1772
Total prisoners of war handled during November	25918

Total number of Prisoners of War from 1 August to 30 November 1944 inclusive: 128,858. (See annex 17).

Total number of escapees and evadors during November: 32.

SECTION IV - MAINTENANCE OF LAW AND ORDER SUB-SECTION

Battery "A", 734th Field Artillery Battalion, arrived in NANCY (U8511) 2 November for training in preparation for duty on security check points around NANCY (U8511). An Orientation School was conducted for the 734th Field Artillery Battalion on 3 and 4 November, and the Battalion began duty on security screening posts as of 050800 November, and was relieved on the 10th November.

XII Corps Military Police assumed responsibility for Maintenance of Law and Order in ETAIN (U4770) 5 November.

Maintenance of Law and Order patrols were placed in PONT A MOUSSON (U9736) at the request of XII Corps Provost Marshal.

Military Police were posted at a bridge in VERDUN (U2865) on a security measure during hours of darkness at the request of the Twelfth U.S. Army Group Provost Marshal.

Circular 77, Headquarters, Third U. S. Army, dated 13 November 1944, announced that all unauthorized enclosures on 1/4 ton and 3/4 ton, 4 x 4, trucks were unauthorized and would be removed immediately.

Circular Number 78, Headquarters, Third U. S. Army, 16 November, concerning carrying civilians in Military Transportation was published as follows:

IV. CARRYING CIVILIANS IN MILITARY TRANSPORTATION.

1. Paragraph 2, Section VI, Circular 63, this Headquarters, 1944 series, is rescinded and the following substituted therefor in accordance with letter, Headquarters Twelfth Army Group, file 230 (FE), subject as above, dated 5 November 1944.

a. Civilians may be carried in United States Military vehicles on official business. Written authority will be provided by the responsible officer to the vehicle driver in all cases where carrying civilians in individual military vehicles is permitted in accordance with Section VI, European Theater of Operations, U.S. Army pamphlet, AG 451/3 PUB OC, 24 January 1944, "Maintenance and Operation of Motor Vehicles," or to the officer in charge in all cases where displaced persons or refugees are carried in convoy under Civil Affairs military government auspices. In addition to the written authority prescribed herein, convoys of refugees or displaced persons will carry on the lead vehicle a placard "Displaced Persons." The written authority will include date, names of passengers, nature of official business, destination, and organization of the authorizing officer.

b. Military Police will halt all individual vehicles carrying civilians and all convoys carrying displaced persons and check to insure the presence of the written authority as required in paragraph a above. In the case of displaced persons' convoys the letter of authority carried by the officer in charge will be deemed sufficient authentication for all vehicles of the convoy unless special doubt exists with reference to the passengers involved. In case no proper authorization exists the Military Police will conduct the person in charge of the vehicle or vehicles, as the case may be, to the nearest Summary Court for trial or preferment of charges as is appropriate. The civilians involved will be turned over to the nearest Civil Affairs detachment for check-up.

Circular Number 81, Headquarters, Third U. S. Army, 22 November, 1944, was published and Section III announced that any fraternizing with prisoners of war or selling or bartering of various articles of personal property would be severely dealt with.

Circular Number 88, Headquarters, Third U. S. Army, dated 23 November 1944, announced the policy in regard to individual purchases of food, industrial products, as follows:

I. INDIVIDUAL PURCHASES.

1. In order to prevent inflation and to avoid hardship to the civilian population, the purchase of all rationed or controlled goods and commodities by personnel of this command for their personal use is prohibited.

2. To accommodate troops on pass and by special arrangement with the Commissioner of the French Republic, Region of NANCY, restrictions as to purchase of meals in restaurants, cafes and hotels are relaxed in that portion of the Region of NANCY lying within the Third U.S. Army Zone. Restaurants meeting the sanitary regulations will be provided with a notice, "Authorized for U.S. Military Personnel," which will be posted in a conspicuous place near the entrance.

3. Water in NANCY and numerous cities in the area is grossly contaminated at the present time. Signs indicating "Water is not potable" will be posted in conspicuous places in restaurants where applicable, and such water will not be consumed by U.S. Military personnel.

4. The following products indicate the type of articles that may be purchased by U. S. Military personnel:

Alcoholic and non-alcoholic beverages; certain textile products, leather goods and footwear; all paper products; perfume; pipes; and trays; cigarette lighters; photographic equipment; musical instruments;

Digitized by Google

fare and antiques.

Two German prisoners who had escaped from an advance Section, Communications Zone Camp were apprehended in VERDUN (U3865) and sent to the Prisoner of War Enclosure at TOUL (U6401) 26 November.

Letter, Headquarters, Third U. S. Army, AG 250.1 GNEXY, dated 25 November 1944, subject, "Reporting of Crimes, Offenses and Serious Incidents," was published. (See annex 18).

French civilians from PARIS (B0140) were apprehended in NANCY (U8511) for violation of travel restrictions and were turned over to Counter Intelligence Corps, Communications Zone, for investigation.

Black Market Transactions and Illegal Sales, Possession, and Barter of United Nations Government Property:

During the month of November, Military Police, with the assistance of local police in many instances, conducted searches in FRESNES EN WOEVRE (U4637), VERDUN (U3865), MEUVES MAISONS (U7903), TOUL (U6401), and NANCY (U8511), which resulted in the recovery of a large quantity of U. S. Government property. Cases involving black market transactions by civilians were referred to Civil Affairs for appropriate action against civilian offenders through French Courts. Cases in which civilians were found in possession of U. S. Government property were also referred to Civil Affairs and offenders were prosecuted by the French Courts. Instances involving sale or barter of U. S. Government property by military personnel were referred to the Criminal Investigation Sub-Section for investigation to be used as a basis of preferring charges against offenders concerned.

During the month, 2,370 gallons of gasoline, 230 pounds of coffee, 180 pounds of lard, seventy pounds of sugar, fifty pounds of flour, 17,900 rounds of .30 caliber ammunition, four carbines, thirty blankets, thirty-one cases of soap, and a quantity of miscellaneous rations and clothing were recovered as a result of searches made.

Absent Without Leave: The large number of AWOLs on the Continent prompted action by this Sub-Section to intensify efforts of all Military Police for apprehension of such absentees.

It was previously the policy of this Sub-Section to return stragglers and AWOLs to their units through the Replacement System whenever it was impractical to transport them directly to their units. Many instances of stragglers and AWOLs being apprehended two and three times when handled in this manner evidenced a need of change in policy in order to effectively reduce the number of outstanding AWOLs.

Late in the month instructions were issued to all Military Police to detain under arrest all persons apprehended who were AWOL for a period of four days or more. Such persons were either at the nearest Military Police Headquarters or at the Third U. S. Army stockade pending arrival of guards from the unit concerned to return the AWOL under arrest. Men who had been absent from their organizations less than four days were sent to the nearest Replacement Installations as stragglers.

In NANCY (U8511), prisoner of war trucks were used to return AWOLs to XII Corps units, and further utilization of any such available transportation is contemplated.

As an additional measure to reduce the number of outstanding AWOLs, a special roving patrol was put into operation which had the primary mission of spot checking locations throughout the Third U. S. Army area for the apprehension of AWOLs.

During the last week of the month, twenty-two aggravated cases of AWOL ranging from 18 to 110 days were apprehended as a result of intensified efforts by Military Police.

Patrols: The following towns and cities were covered by Maintenance of Law and Order Military Police during the month:

BAR LE DUC	(U1128)	NANCY	(U8511)
CHALIGNY	(U7804)	NEUFCHATEAU	(B4973)
CHAVIGNY	(U8304)	MEUVES MAISONS	(U7903)
COMMERCY	(U4320)	PONT A MOUSSON	(U7735)
DOMECOURT	(U4963)	PONT ST VINCENT	(U7409)
ESCH	(F7301)	ST MAURICE	(U5643)
ETAIN	(U4770)	ST NIHIEL	(U3935)
FRESNES EN WOEVRE	(U4637)	TOUL	(U6401)
HANNONVILLE	(U4851)	VERDUN	(U3865)
LERAUVILLE	(U3485)	VIGNEULLES	(U5144)
LIGNY	(U2113	VOID	(U6412)

Summary Courts were in operation during the month at TOUL (U6401) and NANCY (U8511).

Details of cases tried by the Summary Courts for the month were as follows:

VIOLATIONS	COURT MARTIAL 1	COURT MARTIAL 2	TOTAL
No pass	256	90	346
Curfew	122	10	132
Speeding	9	82	91
Double banking	52	22	74
Reckless driving	1	48	49
Unguarded vehicle	23	18	41
Uniform violations	16	25	41
Drunk and disorderly	21	19	40
Unauthorized use of vehicle		13	13
Unauthorized use of weapon	4	3	7
Transporting civilians		7	7
Loitering and straggling		7	7
Unauthorized use of gasoline		7	7
Disobeying Military Police	2	3	5
Theft		2	2
Disrespect for officer	2	1	3
Negligence on duty	1		1
TOTALS	509	397	866

Delinquencies: During the month the following delinquency reports were processed by the Maintenance of Law and Order Sub-Section.

Pass violations	1421
Out of uniform	543
Leaving vehicle unattended	247
Speeding	207
Disorderly	126
Drunk	99
Carrying unauthorized passengers	92
Double banking	91
No trip ticket	88
Reckless driving	54
Improper use of Government vehicle	49
Tag up on vehicle	33
Failure to obey Military Police	22
Illegal carrying of civilians	14
Officer driving	11
Driving while drunk	9
Theft	4
Assault	1
TOTAL	3118

Stragglers: Straggler collecting points were in operation during the month at the following locations:

BAR LE DUC	(U1128)	NEUFCHATEAU	(B4973)
COMMERCY	(U4320)	MEUVES MAISONS	(U7903)
ESCH	(F7301)	PONT A MOUSSON	(U7735)
FRESNES EN WOEVRE	(U4637)	TOUL	(U6401)
LIGNY	(U2113)	VERDUN	(U3865)
NANCY	(U8511)		

Disposition of stragglers during the month was as follows:

To Units	29
To Seine Base Section	56
To Normandy Base Section	2
Broke confinement	1
TOTAL	88

General prisoners on hand at Third U.S. Army stockade as of 30 November: 20.

SECTION V - INVESTIGATION SUB-SECTION

Following criminal cases were completed and reports compiled and forwarded during the week ending 4 November:

Murder	1
Assault and battery	1
Larceny	2
Black market	2
Assault	1
TOTAL	7

Following criminal cases were completed and reports compiled and forwarded during the week ending 11 November:

Sale of salvage	1
Sale of U. S. military property	1
Assault	1
Robbery	1
Black market	1
Manslaughter	1
Shooting French civilian (accidental)	1
Suspected fraud	1
TOTAL	8

Following criminal cases were completed and reports compiled and forwarded during the week ending 18 November:

Misappropriation of U.S. military property	1
Murder	2
Wrongful disposal of U.S. military property	1
Justifiable shooting	1
Spy (German)	1
Black market	3
Rape	1
Larceny	1
Sale of U.S. military property	1
Assault and battery	1
TOTAL	13

Following criminal cases were completed and reports compiled and forwarded during the week ending 25 November:

Manslaughter	2
Assault	1
Murder	1
Black market	3
Alleged murder	2
Loss of medical supply	1
TOTAL	10

The following criminal cases were pending final investigation as of 30 November:

Rape	1
Assault and battery	1
Manslaughter	1
Fraud	1
Attempted murder	1
Fatal shooting	2
Alleged murder	2
Black market	2
TOTAL	11

During the month of November forty criminal cases were reported for investigation of which thirty-eight were completed, reports compiled and forwarded.

CHAPTER 7
DECEMBER OPERATIONS

SECTION I - GENERAL

On 6 December a plan was initiated and approved, dividing the Army Service Zone into two areas, assigning one Military Police Battalion to each Zone, with complete responsibility for all Provost Marshal activities in that Zone. This new method was effected before entering Germany in order that responsibility be definite and fixed for the security of the Army.

The Military Police Zone was shifted northward 27 December with the 503rd Military Police Battalion assuming responsibility of all area south of and including route N3 and METZ (U8597) with the 512th Military Police Battalion north thereof.

Two convicted German spies sentenced to be shot by musketry were executed at the TOUL (U6401) Prisoner of War Enclosure on 14 December. The sentence was carried out under the supervision of the Army Provost Marshal with the firing squad composed of twelve selected men from the 97End Military Police Escort Guard Company.

On 26 December the Third U. S. Army Forward Echelon Headquarters moved from NANCY (U8611) to LUXEMBOURG (P8414).

SECTION II - TRAFFIC SUB-SECTION

During the month of December the general condition of the roads was fair, but because of continued rains the shoulders were soft and muddy. Slippery spots were created wherever a vehicle pulled onto the surface from either the shoulders or from a side road. High waters covered roads and bridges in several locations. This necessitated detours and extra traffic control.

Recommendations were made for the lifting of restrictions on civilian traffic west of the MEURTHE-MOSELLE River on 2 December. However, travel restrictions remained in effect east of this line. Conference was held with civilian authorities relative to the restoring of the tramway system in NANCY (U8611), which relieved a large amount of civilian traffic on the main roads leading into the city and operation commenced on 4 December.

Because of an accident on the Main Supply Route in the west side of NANCY (U8511) on 7 December wherein a tank retriever went out of control on a steep hill and crashed into a cafe, demolishing the building, setting it afire, killing the crew and several others, the Main Supply Route was changed to afford a more gradual descent into town.

The fall of the remaining forts at METZ (U8597) on 13 December removed the last major obstacles to uninterrupted use of the road net in that area. N3 was not yet open west of METZ (U8597). Engineers cleared mines, removed road blocks, and repaired the road. The majority of bridge and road maintenance problems were in Corps and Division areas. Minor alterations were made on north and Main Supply Route bridges in NANCY (U8511) to lay gas and water lines across the river on these bridges. This caused no change in the traffic situation. An overpass at PONT A MOUSSON (U7735) was declared useable (Class 70) by the Engineers.

Plans were made for local regional French Police to take over traffic duties in NANCY (U8611) other than on the Main Supply Route. Civilians on roads continued to be a minor problem. Military Police road patrols picked them up and delivered them to Civil Affairs Displaced Persons Center.

On 17 December, after receipt of information of the German breakthrough in the First U. S. Army area, special officer couriers were dispatched to each Military Police Battalion with four troop movement routes. Routes A, B, C and D were initiated and posted. All Military Police personnel with the exception of a small battalion overhead were concentrated on traffic duty at this critical time. (See annex 19). The III Corps moved at once from METZ (U8597) to LONDEF (P5805) and became operational in that sector. The 4th Armored Division was alerted to move at once from its concentration area near FUNETRANGE (Q4720), and at 180200 Combat Command B was enroute using Route A, destination LONDEF (P5805). All these moves crossed at HARCHVILLE (Q1738) at 180330, the 4th Armored Division having priority. No traffic tie-up ensued. Military Police pointsmen and patrols had been stationed in HARCHVILLE (Q1738) and had been alerted as to this situation. Combat Command B and Combat Command A, 4th Armored Division followed Combat Command B on Route A. 80th Infantry Division moved from PUTTELANGE (U9499) to LONDEF (P5805) on Route C followed by the 26th Infantry Division. In addition, eighteen Field Artillery Battalions, eleven Engineer Battalions, two Corps Headquarters, and other special units were moved. Traffic to the north continued unabated. Several detours were necessitated for various reasons; landslips, a weakened bridge, bombing and strafing and several wrecks. On 22 December the 35th Infantry Division commenced movement to the north. An additional bridge (Bailey) was constructed across the canal at METZ (U8597) to alleviate the heavy traffic flow through that city. Two bridges at HARANGE (Q1899) were temporarily out during the night necessitating the detour of 35th Infantry Division movement. This detour was also changed because of bombing of SOULAY (Q0965) the same evening. The roads continued to be occupied by the 35th Infantry Division and Engineer units on 23 December. XII Corps Headquarters moved north with attached troops following. The remainder of the 42nd Infantry Division closed.

One officer and thirty-five enlisted men of the 512th Military Police Battalion were rushed to BASTOGNE (P5597) during the night of 26 December to handle the critical traffic situation in the 101st Airborne Division area.

During the month clearances for over 300 convoys involving over 28,000 vehicles were processed through the Traffic Sub-Section.

A recommendation was made that the Main Supply Route Number 2 be divided between COMPLANS (U8465), JARNY (U8564) and PONTIERRE (Q8040) to make the original route one way eastbound and make the other route, N52b, N406, D60, N52, Q645 and 13, one way, northbound. This change was recommended because of the width and conditions of road net at these places.

A group of enemy planes bombed and strafed a convoy of reinforcements and incidental traffic on highway N53, 10 miles south of LUXEMBOURG (P8414). No direct bomb hits were scored on the road, but the highway was blocked by burning trucks and debris. A bypass through HONSDORFF (P9408) was immediately placed in effect, and highway N53 was reopened to traffic in two hours.

Because of the expansion of the Army Service Area, and also the support of XX, III and VIII Corps in their service areas, signing of road intersections and junctions became extremely important. Hundreds of signs were posted, and extra signing crews were detailed to completely cover the Army area for route numbering and marking.

Electric flasher lamps that had been used in the Army area were collected and delivered to the Corps Provost Marshals for use on bridges and defiles in the Division areas. 3,000 blank route marking signs, and 5,000 numbered route marking signs were received on 8 December from Engineers and distributed to Corps Provost Marshals and Army Military Police Battalions.

Rear boundaries were established on 2 December as follows:

XII Corps: North along highway N414 from intersection south lateral boundary (Q0807) to MOYENVIC (Q1421); highway N55 through CHATEAU SALINS (Q1225) to intersection with north lateral boundary (U9443), all to Army.

XX Corps: North along MOSELLE River from intersection with south lateral boundary vicinity (U7734) to ARNAVILLE (U7647); highway N52b through CHAMBLEY (U8451); JARNY (U8564 to BRIEY (U6913); N406 through AUDUN (U6707) to AUMETZ (U7062); C644 to ESCH (P7301); N4 to intersection north lateral boundary vicinity (P7308), all to Army.

SECTION III - PRISONER OF WAR SUB-SECTION

Prisoner of War Enclosure Number 9, TOUL (U6401) closed 19 December, 21,191 prisoners of war were evacuated through this Enclosure during the period from 21 September to 17 December 1944.

Third U. S. Army Prisoner of War Enclosure Number 11, FOLSCHVILLER (Q8254) which opened on 10 December was closed 20 December. No prisoners of war were evacuated through this Enclosure as military expediency necessitated the early closing.

On 21 December reconnaissance was made for a suitable location of an Army Prisoner of War Enclosure in the area of FLORANGE (U4401), ETRAY (P1503).

Prisoner of War Enclosure Number 12, St. Jean Caserne, MARVILLE ST JEAN (U3596) opened 25 December. Operating personnel of this Enclosure was composed of eight officers and 123 enlisted men of the 734th Field Artillery Battalion, the 472nd Military Police Escort Guard Company, the 305th Military Police Escort Guard Company, a portion of the 437th Medical Collecting Company as well as Interrogation Prisoner of War and Counter Intelligence Corps teams. Evacuation of prisoners of war from Enclosure Number 12 to Advance Section, Communications Zone Central Enclosure at ETRAY (P1503) was made by truck as per arrangements made with 26th Regulating Station, Advance Section, Communications Zone Liaison organization.

Two additional Military Police Escort Guard Companies were attached to Provost Marshal, Third U. S. Army on 29 December; 483rd Military Police Escort Guard Company reported at Prisoner of War Enclosure Number 10, FLORANGE (U8281) and 430th Military Police Escort Guard Company at Prisoner of War Enclosure Number 12, MARVILLE ST JEAN (U3596).

VIII Corps Prisoner of War Collecting Point was manned by personnel of the 734th Field Artillery Battalion as this Corps was attached to Third U. S. Army.

Seven German Nationals held at Prisoner of War Enclosure Number 9, TOUL (U6401), were evacuated to the French Interment Camp at ECROUVES (U5911). Sixteen of the nineteen German Nationals held at Prisoner of War Enclosure Number 10, FLORANGE (U8281), were evacuated to the Displaced Person's Camp at ECROUVES (U5911), as they were German Nationals living in France; the remainder were German Nationals who resided in Germany and these people were interned on 17 December.

Several Divisions requested additional War Department Provost Marshal General Forms Number 1. The Theater Provost Marshal Officer was contacted, but it was learned that there were no more forms available in this theater.

On 18 December, letter, Headquarters, European Theater of Operations, U. S. Army, file 383.6 OpGA, subject, "Prisoner of War Labor," dated 27 November 1944 was distributed.

Circular 90, Headquarters, Third U. S. Army, published 17 December, rescinded the sections of Circulars 9 and 38, Headquarters, Third U. S. Army, governing the procedures in the disposition of the effects of enemy dead, and adopted the recommendations as set forth in the memorandum of this office to the Graves Registration Officer, namely that the effects be sent directly to the Effects Quartermaster, Communications Zone, instead of to the nearest Prisoner of War Enclosure.

Prisoner of war statistics for the month of December:

On hand at Enclosures as of 30 November.	2148
Received during month at Prisoner of War Enclosures. . .	17079
TOTAL.	19347
Evacuated	18747
On hand at Prisoner of War Enclosures, 31 December . . .	480
Received during month at Prisoner of War Enclosures. . .	17079
Admitted during month at Third U.S. Army Hospitals . . .	1341
Total prisoners of war handled during December	18420

Total number of prisoners of war from 1 August to 31 December 1944: 146,678. (See annex 20).

Total number of escapees and evaders during December: 3.

SECTION IV - MAINTENANCE OF LAW AND ORDER SUB-SECTION

In accordance with advice from the Theater Provost Marshal a new rigorous policy in returning AWOLs to Military Control was inaugurated 1 December. The program entailed the following four points:

1. A complete list of current Third U.S. Army AWOLs was obtained from the Machine Records Unit and distributed to all Military Police Detachments.

2. All men absent from their organizations without passes and not on duty status were taken to military Police Headquarters and checked against these lists.

3. AWOLs were then held for release in arrest to their organization or for delivery to the Reinforcement System if distance

Digitized by Google

rendered the sending of an armed guard impractical. However, men who admitted being absent for more than four days were returned to their units under guard in every case.

4. To supplement the normal Military Police activities, a special mobile patrol was established with the primary mission of apprehending AWOLs.

On 4 December arrangements were made for the conservation of transportation by having trucks which were evacuating prisoners of war from XII Corps Collecting Points to Army Enclosures stop on their return trip at NANCY (U8511) Military Police Headquarters and pick up stragglers. These trucks delivered the stragglers to Corps Provost Marshal.

During the period there was a noticeable decrease in reports of civilians dealing in and possession of U. S. Government gasoline, rations, and other miscellany.

Summary Court Number 2 was discontinued 9 December. Since its inception on 10 September 1944, the court handled 1099 cases involving offenders from 643 separate organizations, resulting in 1389 convictions. In 166 cases, charges against officers and senior non-commissioned officers not subject to the jurisdiction of the court were forwarded to the Office of the Provost Marshal for the proper disposal. Eighty-three men accused of serious crimes were released to their unit commanders pending completion of investigation and trial.

On 10 December, Circular Number 88, Headquarters, Third U. S. Army, dated 10 December 1944, pertaining to Unauthorized Enclosures on Vehicles and Restrictions as to Top of Vehicles was published as follows and given distribution "A" and "C".

I. UNAUTHORIZED ENCLOSURES ON 1/4 TON AND 3/4 TON 4 X 4 TRUCKS.

Section IV, Circular 77, this headquarters, dated 13 November 1944, relative to enclosing 1/4 ton and 3/4 ton trucks is amended as follows:

"Flaps attached to the windshields of 1/4 ton trucks for protection against wind and mud are permissible provided they do not extend back beyond the front seat, do not obstruct frontmost vision, and do not interfere with the quick exit of the occupants of the truck."

II. RESTRICTION AS TO TOPS OF VEHICLES.

Paragraph 1, Section VI, Circular 63, this headquarters, dated 4 October 1944, which reads as follows: "The tops on trucks, 1/4 ton, and trucks, 3/4 ton C and K, will be down at all times except during heavy rains" is rescinded.

Circular 89, Headquarters, Third U. S. Army announced on 14 December the amended pass policy and 2100 hours curfew in NANCY (U8511).

The rapidly changing tactical situation and the consequent threat to rear areas made the Military Police organization a primary force in the maintenance of security and the apprehension of suspicious individuals. To meet this need an emergency issue of 1,200 fragmentation hand grenades was made to the 512th Military Police Battalion.

Efforts were made to disseminate all pertinent information to Military Police units as quickly as possible so as to keep the man on post advised of the latest happenings in order that he might be more able to cope with situations as they arise.

Security patrols and the operation of check points and road blocks at key road junctions placed a heavy strain on personnel available for normal Law and Order functions. Town patrol forces were skeletonized to provide the additional security forces, in an effort to avoid drawing upon traffic personnel at a time when heavy and important traffic movements continued. Gaps in Law and Order enforcement were filled in many places by auxiliary police and greater vigilance on the part of unit commanders, who were contacted on the ground and asked to cooperate.

In accordance with the provisions of Circular 120, European Theater of Operations, U. S. Army, 13 December, 1944, a new system for the handling of AWOLs through Military Police channels was placed in effect during the previous week. Under the new system each Military Police Battalion maintained an AWOL Collecting Center through which AWOLs were returned under Military Police guard to Corps units. AWOLs from other Armies, Air Force and Communications Zone units were cleared through the Army AWOL Collecting Center, located near Rear Echelon, to the Communications Zone AWOL Center. AWOLs from Army troops were held for unit guards. This system placed a new burden on Military Police personnel and transportation, but it was expected to be more efficient than the former method of handling AWOLs through Reinforcement channels, which frequently permitted the AWOL to remain his absence without leave before he could be returned to his unit for disciplinary action.

Upon the displacement of the Forward Echelon the Maintenance of Law and Order Sub-Section became the Rear Echelon of the Provost Marshal Section. One officer and two men represented the Sub-Section in the Forward Echelon.

Details of cases tried by Summary Courts for the month were as follows:

VIOLATIONS	COURT NUMBER 1	COURT NUMBER 2	TOTAL
No pass	233	16	249
Curfew	35	14	49
Speeding	8	25	33
Double banking	16	1	17
Reckless driving		20	20
Unguarded vehicle	15	3	18
Uniform violation	4		4
Drunk and disorderly	9		9
Unauthorized vehicle	1		1
Unauthorized use of weapon	3		3
Transporting civilians	1	1	2
Disobeying Military Police	1		1
Brake arrest		1	1
TOTALS	326	81	407

Straggler Collecting Points operated during the month in ESCH (P7301), NANCY (U8511), PONT A MOUSSON (U7735), TOUL (U6401) and VERDUN (U2865).

Motor and/or walking patrols operated during the month in the following towns and cities:

AVRIL	(U7176)	JARNY	(U8564)
BAINVILLE	(Q0965)	JAVIL	(P7700)
BETTEMBOURG	(P8103)	LANDRES	(U6062)
BRIEY	(U6973)	LONGWY	(P5805)
CHALIGNY	(U7804)	MORHANGE	(Q2037)
CHAMBLEY	(U6651)	MOYENVIC	(Q1420)
CHATEAU SALINS	(Q1025)	METZ	(U8559)
CHAVIGNY	(U8304)	MARS LA TOUR	(U6558)
CLOUANGE	(U6175)	NANCY	(U8511)
COMMERCY	(U4220)	NEUVES MAISONS	(U7903)
CONFLANS	(U6465)	NEUFCHEF	(U7581)

Delinquency reports for the month were as follows:

Pass violations	1022
Unattended vehicle	222
Uniform violations	184
No trip ticket	107
Speeding	102
Double banking	72
Carrying unauthorized passengers	54
Drunk	46
Unlicensed vehicle	43
Selling rations	41
Disorderly	33
Unauthorized use of vehicle	24
Vehicle abuse	33
TOTAL	1971

Disposition of stragglers for the month was as follows:

To Units	83
To Reinforcement Depots	13
TOTAL	76

Absent Without Leave reports:

AWOLs apprehended	166
Total number of days AWOL	2194
Average number of days AWOL per man	13

Third U. S. Army personnel AWOL 31 December 1944 as per Machine Records Unit records: 628.

General prisoners evacuated or released during the month was as follows:

To Units	13
Evacuated to Seine Base Section	67
TOTAL	80

General prisoners on hand at Third U. S. Army stockade as of 31 December 1944: 33.

SECTION V - INVESTIGATION SUB-SECTION

The following criminal cases were completed and reports compiled and forwarded during week ending 2 December:

Black market	3
Murder	1
Attempted murder	1
Assault with intent to commit rape	1
Alleged larceny	1
Sale of U. S. Military property	1
Alleged shooting	1
Damage to civilian property	1
Misappropriation of U.S. military property	1
Fatal shooting	1
TOTAL	12

The following criminal cases were completed and reports compiled and forwarded during the week ending 9 December:

Black Market	2
Rape	2
TOTAL	4

The following criminal cases were completed and reports compiled and forwarded during the week ending 16 December:

Larceny	1
Drunk and disorderly	1
Shooting	1
Assault with intent to commit rape	1
Assault with intent to do bodily harm	1
Robbery	2
Misappropriation of U. S. property	1
Confidential investigation	1
Rape	1
Careless discharge of weapon	1
TOTAL	11

The following criminal cases were completed and reports compiled and forwarded during the week ending 23 December:

Fraud	1
Larceny of U. S. Army rations	1
Murder	2
Attempted murder	1
Alleged looting	1
Black market	2
Statutory rape	1
Fatal shooting	1
Narcotic case	1
Alleged housebreaking	1
TOTAL	12

DECLASSIFIED

The following criminal cases were completed and reports compiled and forwarded during the week ending 30 December:

Assault with intent to do bodily harm	1
Murder	2
Accidental shooting	1
Black market	2
Fatal shooting	1
Alleged housebreaking	1
TOTAL	8

The following criminal cases were pending final investigation as of 31 December:

Assault and battery	1
Black market	5
Murder	2
Manslaughter	1
Assault with intent to do bodily harm	1
TOTAL	10

SECTION VI - PRISONER OF WAR EXECUTIVE SUB-SECTION

Allied Prisoner of War Camps as follows were overrun by Third U.S. Army: Johannes Dannburg, vicinity of BOULAY (Q1264) on 1 December; CRUTZWALD (Q2468) on 3 December; SARREGUEMINES (Q5157) on 10 December.

On 11 December a detachment of one officer and fifteen enlisted men of the 734th Field Artillery Battalion was sent to handle the administrative matters at the overrun German Prisoner of War Camp at CRUTZWALD (Q2468) which contained approximately 800 Allied prisoners of war. The overrun Allied Prisoner of War Camp at SARREGUEMINES (Q5157) was evacuated by XII Corps to CRUTZWALD (Q2468). On 21 December approximately 500 Allied prisoners of war were evacuated from BOULAY (Q1264) to TOUL (D6401) and after conference with the Army Surgeon, 894 Allied prisoners of war remaining at BOULAY (Q1264) were evacuated to TOUL (D6401).

There were four Contact Officers, Majors, from Prisoner of War Executive Office, Supreme Headquarters, Allied Expeditionary Forces, now attached to Third U. S. Army. One was assigned to each of the Corps, and the latest arrival was stationed at Johannes Dannburg Camp near BOULAY (Q1264) under XII Corps attachment, and engaged in documenting Allied prisoners of war.

On 17 December the 287th Field Artillery Battalion was assigned to Provost Marshal, Third U. S. Army. The Battalion was ordered to move to Camp Johannes Dannburg, near BOULAY (Q1264), to take over the administration of the Allied Prisoner of War Camp.

On 30 December a report of the handling of the Allied prisoners of war was submitted by the Prisoner of War Executive Liaison Officer, Third U. S. Army, and forwarded to G-1, Twelfth Army Group, for transmission to Prisoner of War Executive, Supreme Headquarters, Allied Expeditionary Forces.

SECTION VII - INTERNMENT CAMP SUB-SECTION

On 19 December the Internment Camp Sub-Section of the Prisoner of War Sub-Section was initiated and necessary steps were taken to establish files, notes and Standing Operating Procedures to facilitate the functioning of internment camps when their operation would become necessary in Third U. S. Army Zone.

SECTION VIII - DEFENSE - LINE OF COMMUNICATIONS SUB-SECTION

During the month of December the following installations in the Army area were guarded in connection with security of Line of Communications:

7	Railway tunnels
27	Railway bridges
1	Highway overpass
16	Highway bridges

The following troops were used to guard the above installations:

4405th Quartermaster Service Company.
1st and 3rd Companies, 151st French Infantry Regiment
287th Field Artillery Battalion
51 Gendarmes from the 10th Legion Gendarmes
4th and 6th Squadrons, 4th Regiment, French Republican Guards.

CHAPTER 8
JANUARY OPERATIONS

SECTION I - GENERAL

Third U. S. Army Rear Echelon moved from NANCY (U6511), France, to ESCH (P7301), Luxembourg, on 5 January.

The ever increasing responsibilities of the Provost Marshal in the present operations made it necessary that the Provost Marshal Section be increased by adding Sub-Sections and personnel to properly supervise and administer the 190 officers and approximately 3550 enlisted men operating directly under his control. Following are listed the major items for which the Army Provost Marshal was held responsible:

1. Criminal Investigation.
2. Maintenance of Law and Order, including:
   a. Army General Prisoner Stockade.
   b. Army and Battalion Zone ARCE Stockades.
   c. Summary Courts.
3. Traffic Control.
4. Prisoners of War.
5. Overrun Allied Prisoners of War.
6. German Internment Camps.
7. Aid to Civil Affairs in handling Refugees.
8. Security of all lines of Communication in the Army area.
9. Command Post Defense, including Cordon Defense.
10. Maintenance of an Emergency Force.

At approximately 1650 January 14 a shell of unknown caliber and origin struck an Apartment House at 3-5-7-9 Avenue Pasteur, LUXEMBOURG (P6414), causing considerable damage to the building, killing one civilian, injuring six other civilians and two unknown American soldiers, who were walking along the street.

The Provost Marshal, Fifteenth U. S. Army visited this section 17 January to obtain details on organization and operation of the Provost Marshal Office.

SECTION II - TRAFFIC SUB-SECTION

A survey was made of LUXEMBOURG (P6414) on 4 January for possible installation of a tramway system, but because tracks were located on main and essential military highways it was deemed advisable not to start the tramway system at that time.

Advance elements of Third U. S. Army Rear Echelon moved from NANCY (U8511) to ESCH (P7301) on 5 January.

Troop Movements were as follows: 90th Infantry Division (three Combat Teams) from THIONVILLE (U8687) to SAEUL (P7427). 94th Infantry Division from REIMS (T3080) to UCKANGE (U8579).

Report was received from Executive Officer of Company "C", 518th Military Police Battalion on road reconnaissance of area north and west of ARLON (P6122), where snow conditions had blocked some roads and restricted traffic to one-way on others, signing of these roads was poor. Extensive and comprehensive corrective measures were taken. Roads were sanded and cindered by patrols, and signs posted by the Military Police.

Extensive road reconnaissance was made in conjunction with the Engineers, to inspect roads, bridges and traffic conditions - route - LUXEMBOURG (P6414), THIONVILLE (U8687), METZ (U8559), MONTEVRE (U9774), BRIEY (U6973), AUDUN (U6488), LONGWY (P5805), ARLON (P6122), and LUXEMBOURG (P6414). Conferred enroute with the Engineers, Provost Marshal XX Corps, Civilian Engineers at METZ (U8557), Commanding Officers of the 503rd and 518th Military Police Battalions, and 1303rd Engineer General Service Regiment. Excellent maintenance was observed on all roads vicinity of ARLON (P6122).

The balance of the 90th Infantry Division moves from THIONVILLE (U8687) to SAEUL (P7427), on 7 January. The 94th Infantry Division (one Combat Team) moved from REIMS (T3080) to UCKANGE (U8579). Company "A", 631st Tank Destroyer Battalion moved north for defense.

The Army Light Line was changed 14 January. Full lights were to be used in Division Rear Area, except in "no light" areas such as LUXEMBOURG (P6414), or for special tactical moves when the Corps Commanders desired the use of blackout.

A trip was made to VIII Corps to clarify administrative and operational boundaries between VIII Corps and Advance Section Communications Zone as a report has been received from the 713th Military Police Battalion that VIII Corps was administering their regulations in Advance Section Communications Zone.

Engineers were contacted 17 January to build a bridge on Rue de la Floredieux, which would enable vehicles to bypass LUXEMBOURG (P6414) with all traffic between routes number 7 and 11, and number 1.

A new prearranged messsage code was prepared and sent to the 503rd and 518th Military Police Battalions on 18 January.

A conference was held 19 January with G-4, G-3, and Engineers with reference to troop movements and road conditions. Troop movement routes were designated as such and efforts made to avoid crossing supply traffic with troop movements.

From the Seine Base Section 600 batons, reflectorized, 18 box signs, 64 lamps, electric flasher were received. Distribution of these items was made to the Corps and Military Police Battalions.

Road reconnaissance was made of the route from BASTOGNE (P5559) to WILTZ (P7154), HEIDERSCHEIDERGRUND (P7437), HIERDER (P7644), ETTELBRUCK (P8339) and DIEKIRCH (P8643), on 24 January.

A conference was held with Engineers as to road priority on maintenance of roads. First priority was given to troop movement roads and second priority to Main Supply Routes.

Administrative Order Number 16 established Rear Boundaries on 25 January as follows:

Army Rear Boundary: Beginning at intersection of road N52B with south lateral boundary, vicinity ARLAVILLE (U7446), along road N52B to CHAMBLEY (U6451) - MARS LA TOUR (U6559) - JARNY (U6363); road N390 to CONFLANS (U6465) - ETAIN (U4770); road N18 to LONGUYON (U4696); road N67 to MARVILLE (U3598) - MONTMEDY (P2905); road N381 to CARIGNAN (P1518) to junction with road IC 29, vicinity WX (P1619); road IC29 to junction with IC19, vicinity MESSINCOURT (P1423); road IC19 to MURD (P1529) to junction with road N44 (P1532); road N44 to junction with road N47 (P0834); road N47 to ROUILLON (P0836) - BIEVRE (P0553) - BEAURAING (P0172) to intersection with north lateral boundary (P0073), (all to Third U. S. Army).

Corps Rear Boundaries:

XX Corps: Beginning with intersection of N55 with south lateral boundary vicinity CHESNY (U9252), thence northwest on N55 to METZ (U8658), thence north along MOSELLE River to junction with lateral boundary to XX and XII Corps vicinity THIONVILLE (U8787), all to XX Corps except MOSELLE River to Army.

XII Corps: Beginning with intersection of lateral boundary between XII and XX Corps with N53 vicinity THIONVILLE (U8787), thence north on N53 and number 3 to LUXEMBOURG (P6414), thence east on number 6 and N4 to intersection with lateral boundary between XII and III Corps east of ARLON (P6122), all to Army except THIONVILLE to XX Corps.

III Corps: Beginning with intersection of N4 with lateral boundary between III and XII Corps east of ARLON (P6221), thence west on N4 to ARLON (P6122), N48 to intersection with lateral boundary between III and VIII Corps east of NEUFCHATEAU (P3540), all to Army except ARLON to III Corps.

VIII Corps: Beginning with intersection of N48 with lateral boundary between VIII and III Corps east of NEUFCHATEAU (P3546), thence northwest on N48 to CR N48 - N49 (P1860), thence north on N49 to intersection with north lateral boundary (P2169), all to Army except NEUFCHATEAU to Corps.

A meeting of Provost Marshal and Sub-Section Chiefs with Corps Provost Marshals to discuss policies was held on 31 January. The Light Line was fixed at Division Rear. In Command Post towns behind the Army Light Line through traffic was permitted full headlights.

During the month over 200 convoy clearances involving over 41,000 vehicles were processed through this office.

The 512th Military Police Battalion was employed to support VIII Corps Military Police in the movement of the 95th Infantry Division 29 January by patrolling N4 - ARLON (P6122) and BASTOGNE (P5559).

Major Troop Movements during the month were as follows:

The 8th and 9th Armored Divisions moved to PONT A MOUSSON (U9735) and THIONVILLE (U8687) respectively, on 12 January. Combat Command "B", 10th Armored Division and elements of the 90th Infantry Division moved 16 January. Elements of the 87th Infantry Division moved 15 January without difficulties. The 35th Infantry Division, (Combat Command B) 10th Armored Division, 101st Airborne Division, 76th Infantry Division and other units moved 19 January. The 35th Infantry Division and 101st Airborne Division moved through Army area in good order. 101st Airborne Division moved slowly through the Army area because of icy road conditions. Movement of the 101st Airborne Division was completed 16 January. 4th Armored Division moved 23 January through the city of LUXEMBOURG (P6414), using routes 3, 4 and 5. Movement of the 76th Infantry Division commenced and passed through the city of LUXEMBOURG (P6414) during the night of 24 January. 76th and 87th Infantry Divisions moved smoothly 26 January. G-4 Transportation clearance for the movement of the 75th Infantry Division was received. Movement of the 4th Infantry Division on 28 January in BASTOGNE (P5559) was very slow because of heavy traffic in that area.

SECTION III - PRISONER OF WAR SUB-SECTION

Letter, Twelfth Army Group, file 290 (G-2), dated 28 December 1944, subject, "Enemy Soldiers Apprehended in Civilian Clothing," was disseminated 4 January to all units under the control of this section.

This Office contacted the Quartermaster Field Service Officer, Third U. S. Army, in an attempt to replenish the stocks of captured enemy clothing on hand at the Enclosures.

A definite policy was established by Headquarters, Third U. S. Army on the handling of Allied Nationals who collaborated or served with the enemy, Circular 3, Headquarters, Third U. S. Army, 7 January 1945. "Combat Commanders are not authorized to accept the parole of French, Belgian, Netherlands, or Luxembourg Nationals who have served with the German Forces. All Allied Nationals who have collaborated or served with the enemy and who are captured as prisoners of war will be handled and processed as prisoners of war within this command. Disposition of exceptional cases will be made by the Army Provost Marshal in accordance with instructions received from Higher Headquarters."

One thousand prisoner of war personal effects bags, Provost Marshal Service of Supply Form number 4, were sent to the Provost Marshal of III Corps partly filling their requisition for 10,000 bags.

The investigation of the death of a German Prisoner of War at Third U. S. Army Prisoner of War Enclosure Number 12 on 5 January was completed. An autopsy was performed by the 7th Medical Laboratory. Results of the autopsy showed that the prisoner of war died of natural, but undetermined causes. A report of the completed investigation was forwarded to the Theater Provost Marshal, Prisoner of War Information Bureau, through Provost Marshal, Twelfth Army Group.

Two German soldiers, who escaped from the Prisoner of War Camp near VERDUN (U2865), were apprehended by Military Police and Counter Intelligence Corps and taken to Prisoner of War Enclosure Number 12 at MARVILLE (U3394) after capture at COSNE (N4464).

Because of the small number of Escapers and Evaders who had been returned to United States Military control during a period of several months, the Escapers and Evaders Detachment (Intelligence School Western European Area 9, Supreme Headquarters Allied Expeditionary Forces) discussed with the Provost Marshal, Third U. S. Army, the possibility of withdrawing the detachment to PARIS (S0140) from its location at Prisoner of War Enclosure Number 10, FLORANGE (U8381). Under the new plan not only Allied Air Force Escapers and Evaders, but also all Allied Ground Force Escapers and Evaders would be sent to PARIS (S0140).

An escaped prisoner of war, found to be a deserter from the German Army, was taken to Prisoner of War Enclosure Number 10 on 11 January after interrogation by Counter Intelligence Corps, at ESCH (P7301).

Digitized by Google

Since Army Military Police Escort Guard Company Detachments had taken charge of the operation of Corps Prisoner of War Enclosures, the medical coverage was furnished by the Corps Surgeons.

The Ordnance Officer, Third U. S. Army approved the change of basic weapon for the 483rd and 472nd Military Police Escort Guard Companies from shotgun, riot type, to sub-machine gun, M3.

This Section submitted a requisition 28 January for 30,000 prisoner of war tags to the Engineer Officer, Third U. S. Army to be printed as a substitute for War Department Provost Marshal General Form number 1.

A copy of the Standing Operating Procedure of Prisoner of War Enclosures, prepared and reviewed by this Section, was sent to the Provost Marshal, Fifteenth U. S. Army on 29 January for his information.

The Provost Marshal VIII Corps requested this office on 30 January to establish an additional Corps Prisoner of War Enclosure because of the two Main Supply Routes in the Corps. As there were not sufficient personnel available, Third U. S. Army Prisoner of War Enclosure Number 18 dispatched two trucks to the one Corps Supply Point where there was no Prisoner of War Enclosure to shuttle incoming prisoners of war to the Corps Enclosure.

This Section contacted the 24th Regulating Station, Advance Section Communications Zone 31 January regarding the means of transportation in the evacuation of prisoners of war from Third U. S. Army Prisoner of War Enclosure Number 13, Jesuit College, ARLON (P6122).

Prisoner of War statistics for the month of January were as follows: (See annex 24).

On hand as of 31 December 1944	480
Received during January at Prisoner of War Enclosures	15,008
TOTAL	15,488
Evacuated	14,930
On hand at Prisoner of War Enclosures	558
Received at Prisoner of War Enclosures during January	15,008
Admitted at Third U. S. Army Hospitals during January	1,617
TOTAL prisoners of war handled by Third U.S. Army for month	16,625
Accumulative total for entire period of operations, 1 August 1944 to 31 January 1945, inclusive	182,297

Escapee and Evader statistics for the month of January were as follows:

Escapees and Evaders on hand as of 31 December 1944	None
Received during January	1
TOTAL	1
Evacuated	1
On hand 31 January	None

SECTION IV - MAINTENANCE OF LAW AND ORDER SUB-SECTION

Circular Number 8, Headquarters, Third U. S. Army, dated 4 January 1945, "Military Control of the City of LUXEMBOURG (P6414) and Vicinity," was published. (See annex 21).

Battery "C", 734th Field Artillery Battalion moved to ESCH (P7301) and commenced training in Military Police work 14 January.

Seven civilians were picked up by Military Police patrols 18 January at HAYANGE (U7882) for curfew violations and fines by French Police.

Circular Number 6, Headquarters, Third U. S. Army, dated 26 January 1945, announced the curfew and pass policy in the Army areas. Curfew from 2100 to 0600 hours applied to both military and civilian personnel.

Summary Court Number 1 closed at HAMLY (U8511) on 25 January, and the court personnel were established in LUXEMBOURG (P6414) on 27 January.

During the month a close degree of cooperation was noted between the Military Police personnel and the personnel assigned to static details along the lines of communication. This cooperation was brought about and extended by the exchange of information and the loaning of aid by one group to the other. It was also noted that all organizations were paying a great deal of attention to the checking of personal identification credentials of all persons with whom they came in contact.

Check points were established by the 513th Military Police Battalion in its area for the purpose of screening all personnel, military and civilian, with the exception of convoys. The locations of the check points were changed frequently in order to secure a more complete coverage of the entire Army area.

Motor and/or walking patrols operated during the month in the following towns and cities:

1.	ATHUS	(P4308)	24.	METASCH	(P5426)
2.	AUBANGE	(P6008)	25.	MONTCOURT	(U7974)
3.	AUDUN	(U6688)	26.	JARNY	(U6564)
4.	AUMETZ	(U7093)	27.	LANDRES	(U6062)
5.	AVRIL	(U7176)	28.	LONGLAVILLE	(P5906)
6.	BETTEMBOURG	(P6103)	29.	LONWNY	(P5805)
7.	BRIEY	(U6973)	30.	LUXEMBOURG	(P6414)
8.	HADLAPAGE	(P6709)	31.	MARS LA TOUR	(U6558)
9.	BUTTLOR	(P6837)	32.	METZ	(U6557)
10.	DOMCOURT	(U6963)	33.	MORHANGE	(Q2037)
11.	ERVALIS	(Q0440)	34.	MUNSUYAK	(U7774)
12.	ETON HUY	(P6817)	35.	HAMLY	(U8511)
13.	GONDRANS	(U8465)	36.	NEUFMAITEAU	(P1541)
14.	GUDMLANGE	(U6068)	37.	PETANGE	(P6408)
15.	ESCH	(P7301)	38.	PONT A MOUSSON	(U7735)
16.	FLORENVILLE	(P2820)	39.	PONPEY	(U8120)
17.	FONTOY	(U7365)	40.	ROLLOMME	(P5126)
18.	FLUO	(U5612)	41.	ROUANGE	(P6732)
19.	GARNICH	(P6116)	42.	TINTIGHY	(P3827)
20.	HARAY	(P4028)	43.	TOUL	(U6401)
21.	HALANZY	(P5921)	44.	UCKANGE	(U6579)
22.	HAMIPR	(P3539)	45.	VIATON	(P3281)
23.	HAYANGE	(U7882)			

Details of cases tried by Summary Courts for the month were as follows:

VIOLATION	COURT NO. 1	COURT NO. 2	TOTAL
No pass	155		155
Curfew	16		16
Drunk and disorderly	4		4
Speeding	8		8
Theft	1		1
Unauthorized use of weapon	3		3
Unauthorized use of vehicle	1		1
Unguarded vehicle	23		23
Uniform violation	9		9
Double banking	4	2	6
Transporting civilians	1		1
TOTALS	225	2	227

Straggler Collecting Points operated during the month at the following locations:

1.	ESCH (P7301)	4.	HAMLY (U8511)
2.	LUXEMBOURG (P6414)	5.	PONT A MOUSSON (U7735)
3.	MONTSUYAK (U7974)	6.	TOUL (U6401)

Delinquencies for the month were as follows:

Pass violation	1042
Unattended vehicles	497
Parking on Main Supply Route	59
Trip ticket violation	87
Drunk	76
Uniform violations	110
Speeding	137
Double banking	37
Unauthorized use of vehicles	22
Unauthorized firing of weapons	19
Unauthorized carrying of civilians	21
Vehicle abuse	27
Stealing Government property	12
Selling Government rations	9
Disorderly	2
Reckless driving	2
Drunken driving	1
Stealing Government vehicles	2
Officer driving	1
TOTAL	2197

Disposition of stragglers for the month was as follows:

To Units	60
To Reinforcement Depots	106
TOTAL	166

Data regarding AWOLs for the month was as follows:

AWOLs apprehended	379
Total number of days AWOL	5125
Average number of days AWOL per man	13

Third U. S. Army personnel AWOL as of 31 January per Machine Records Unit records 609

SECTION V - INVESTIGATION SUB-SECTION

The following cases were completed and reports compiled and forwarded during the week ending 6 January:

Murder	2
Larceny	1
Assault with intent to do bodily harm	1
Black market	2
TOTAL	6

The following criminal cases were completed and reports compiled and forwarded during the week ending 13 January:

Murder	2
Robbery	1
Rape	1
Misappropriation of U. S. Government property	1
Conduct unbecoming an officer	1
Assault with a deadly weapon	1
TOTAL	7

This office received letter from Headquarters, Twelfth Army Group, subject, "Reorganization of Certain Military Police Criminal Investigation Detachments." This letter authorized the reorganization of both the 9th and 13th Military Police Criminal Investigation Detachments, attached to this section, to increase the total of agents to fourteen agents in each Detachment.

The following criminal cases were completed, reports compiled and forwarded during the week ending 20 January:

Assault with deadly weapon	1
Black market	4
Accidental shooting	1
Murder	1
Theft (mail)	1
Robbery	1
Misappropriation of U. S. Government property	1
TOTAL	10

The following criminal cases were completed, reports compiled and forwarded during the week ending 27 January:

Larceny	2
Assault	1
Looting	1
Misappropriation of U. S. Government property	1
TOTAL	5

DECLASSIFIED

The following cases were pending final investigation on 31 January:

Black market	4
Murder	1
Looting	1
Assault and battery	1
Misappropriation of U. S. Government property	3
Accidental shooting	1
Misapplication of U. S. Government property	1
Disorderly conduct	1
Larceny	2
TOTAL	15

SECTION VI - PRISONER OF WAR EXECUTIVE SUB-SECTION

A Prisoner of War Executive Officer was attached to this headquarters from Prisoner of War Executive Branch Division G-1, Supreme Headquarters Allied Expeditionary Forces.

SECTION VII - INTERNMENT CAMP SUB-SECTION

The Internment Camp Officer went to BASTOGNE (P5557) to follow up the assignment of a detail from the 734th Field Artillery Battalion, consisting of thirty-eight men on temporary duty with Civil Affairs Officer as Military Police to check civilian traffic flowing between BASTOGNE (P5557) and NEUFCHATEAU (P3541). The situation was found to be well under control.

After investigation of Grund and Limpertsberg Prisons, LUXEMBOURG (P8414) these camps were found to be crowded and inadequately guarded.

The Internment Camp Officer, on a trip to First and Ninth U. S. Armies, consulted with their Internment Camp Officers on methods employed with respect to Internment Camps.

SECTION VIII - SECURITY SUB-SECTION

Batteries "A" and "B", 734th Field Artillery Battalion were withdrawn from Prisoner of War work and were assigned duties under the Defense Sub-Section by the Provost Marshal, Third U. S. Army. Their prisoner of war work was taken over entirely by the 430th and 483rd Military Police Escort Guard Companies, which were attached to Third U. S. Army and assigned to Headquarters Communications Zone.

Plan for Defense of Command Post was published. (See annex 22).

A pass system for "Admittance to Lucky Forward Headquarters" was inaugurated, letter, this headquarters, dated 4 January 1945, subject, "Admittance to Lucky Forward Headquarters." (See annex 23).

Annex number 2 to "Plan for Defense of Command Post," dated 3 January 1945, subject, "Plan for Defense of Rear Echelon of Command Post," was published.

Standing Operating Procedure for Interior Security of Lucky Command Post was published 20 January.

Officers of the 267th Field Artillery Battalion completed a reconnaissance of all Railway Lines within the Army area and determined location of important bridges and tunnels that were unguarded or improperly guarded.

Company "A", 631st Tank Destroyer Battalion was made available to this section for defense of Lucky Forward Command Post.

One platoon, Company "A", 631st Tank Destroyer Battalion was detailed to provide security check points on the four Main Supply Routes leading into the city of LUXEMBOURG (P6414).

Officers from the 1st and 3rd Companies, 151st French Infantry Regiment reported to this office to discuss supply and transportation problems.

The following installations in the Army area were guarded in connection with security of Lines of Communication during the month:

36 Railway bridges
7 Railway tunnels
25 Highway bridges
1 Highway overpass
Twelfth Army Group Communication Center, LUXEMBOURG (P8414)
Third U. S. Army Radio Center, LUXEMBOURG (P8414).
Post Telegraph and Telephone Building, METZ (U8557).
Repeater Station, ARLON (P6110).
Post Telegraph and Telephone Building, LUXEMBOURG (P8414).
SHAEF Radio, north SANDWEILER (P8014).
SHAEF Radio, west LONDUF (P5505).

The following troops were used for guarding the above installations:

4405th Quartermaster Service Company.
1st and 3rd Companies, 151st Infantry Regiment (French).
267th Field Artillery Battalion (less Battery "C", being used for defense of Rear Command Post and stockade guard for general prisoners.
734th Field Artillery Battalion (less 13 men on Military Police traffic detail in ESCH (P7301), 25 men for Interior Security of Lucky Forward Command Post, and Headquarters and Service Batteries under control of Prisoner of War Sub-Section.

MILITARY POLICEMAN GIVING DIRECTIONS TO A SOLDIER IN NANCY, FRANCE

SECTION I - GENERAL

Third U. S. Army Rear Echelon moved from ESCH (P7301) to LUXEMBOURG (P8414), on 6 February.

The 10th and 11th Belgian Fusilier Battalions arrived in Third U. S. Army area on the 13th and 14th of February and were placed under the control of the Provost Marshal for use in guarding Lines of Communication.

Four Companies of the 10th Belgian Fusilier Battalion were attached to XII Corps for guarding Lines of Communication installations in the XII Corps area. The balance of the 10th Belgian Fusilier Battalion and the 11th Belgian Fusilier Battalion were given instructions in guard duty and assigned duties in the Third U. S. Army Service area.

The 785th Military Police Battalion (Zone of Interior) was assigned to Third U. S. Army for duty with the Provost Marshal on 18 February. An orientation program and school was conducted in Third U. S. Army policies, rules, and regulations, at the Battalion Headquarters in ESCH (P7301) prior to active operation by the Battalion in Third U. S. Army area.

The Army Area was divided into three Military Police Zones on 25 February, with the 503rd, 512th, and 785th Military Police Battalions servicing the areas directly to the rear of XX, VIII, and XII Corps respectively. Each Battalion was responsible for all Maintenance of Law and Order, Traffic, and Security problems within its assigned Zone.

SECTION II - TRAFFIC SUB-SECTION

The early thaw and excessive rains during the early part of the month washed out a considerable portion of the Army Road Net. Many miles of main roads and much of the secondary road net were blocked to all traffic, especially in the rear of the VIII Corps area. Railroad beds were used in two locations in this area as one-way roads. Emergency detours and one-way routes were set up to bypass blocked roads. Approximately one-half of the "washed out" mileage was put back in shape by the Engineers by the end of the month. Military Police Patrols reconnaissance reports combined with Engineer reports kept this headquarters abreast of the road situation, and additional policemen and signs were posted on detours. "Bottleneck" towns during this period were BASTOGNE (P5557), NEUFCHATEAU (P6172), ST VITH (P6880), and ARLON (P6122).

Troop movements were heavy during the first part of the period but decreased later during the period. With one exception, troop movement convoys had excellent march discipline. Supply convoys and incidental traffic accounted for the majority of traffic violations and accidents.

Major troop movements during the month were:

6th Armored Division from NAMUR (U8934) to METZ (U8257). 95th Infantry Division from NEUFCHATEAU (P6172) to CUNEYE (X5127). 9th Armored Division from METZ (U8557) to SPRIMONT (X5414). III Corps Headquarters from ARLON (P6122) to First U. S. Army area. Elements of the 4th Armored Division from PETTONANGE (P8103) to MERSCH (P8228). Elements of the 4th Armored Division from MOLHANGE (P8129) to MERSCH (P8228). 65th Infantry Division from LONDUF (P5505) to LUXEMBOURG (P8414). 79th Infantry Division moved through the Army area.

Because of road conditions tank transporters were denied the use of the Army Road Net for several days during the month. In order to properly control such traffic, clearances were secured from the Army G-4 Section.

A Standing Operating Procedure for signing was issued by this office to the Military Police Battalions. This resulted in a great improvement in the signing in the area. All patrols were constantly alert and made efforts to keep all signs clean and properly posted.

Digitized by Google

An inspection trip was made by Traffic personnel checking signing and road conditions and memoranda were sent to units concerned for correction of deficiencies.

Selection of a site for Practice Bombing and Rocket Range in the Army area made necessary extra precautions on traffic moves on D6 northeast of AVRIL (U7170) after 5 February.

Traffic and Maintenance of Law and Order personnel were moved forward because of change in Army Rear Boundary effective 062400 February.

The boundary between Military Police Battalions changed at 102400 hours. 503rd Military Police Battalion relieved the 512th Military Police Battalion in the following towns:

PETANGE (P6409)	ATHUS (P6309)
ALBANGE (P6609)	RODANGE (P6802)

New Rear Boundaries for the III and VIII Corps were established and Army Military Police were moved forward.

Air reconnaissance was made on 14 February by the Traffic Chief, of CLERVAUX (P7763), ST VITH (P6668), VEILSALM (P6989), HOUFFALIZE (P6171), BASTOGNE (P5557), and ARLON (P6122).

The supply officer of the 785th Military Police Battalion conferred with this section as to the supply of Traffic Control equipment and authorization of excess equipment so that they could fulfill their mission. A letter was prepared and sent through proper channels for authorization of equipment in excess of Table of Organization and Equipment needed by the 785th Military Police Battalion.

Route N53 was opened on 15 February. This road has been under water for several days and now the water had receded. Continued maintenance of road net was necessary.

The 503rd and 512th Military Police Battalions were informed on 17 February that strict enforcement was necessary on restriction of use of identification panels behind Corps Rear Boundary.

An extensive road reconnaissance was made by the Military Police Battalions and officers of this section on 19 February. The Military Police Battalions submitted their reports to this office and all suggestions and recommendations made by them were taken up with the Engineers and G-4 Transportation. Road reconnaissances were made by an officer of the Traffic Sub-Section of BASTOGNE (P5557), ST VITH (P6668), and HOUFFALIZE (P6171) on 20 February, and of roads and bridges in the area between VIANDEN (P8455) and BITBURG (L1353).

Three hundred plates, France, 17° x 30°, and 500 plates, France, 15° x 17°, were issued to VIII Corps on 21 February. 1,990 lamps, electric flasher, were received at the depot.

On 26 February Headquarters 512th Military Police Battalion moved to LUXEMBOURG (P6414).

During the month of February over 430 convoy clearances involving over 22,000 vehicles were processed through the Traffic Sub-Section.

SECTION III - PRISONER OF WAR SUB-SECTION

Reconnaissance for an Army prisoner of war Enclosure was made in order to relieve the transportation difficulties experienced in evacuating prisoners of war to Prisoner of War Enclosure Number 18, MARVILLE (U3394).

The Army Surgeon approved the use of Jesuit College, ARLON, (P6122) Belgium, as Prisoner of War Enclosure Number 13 as soon as the accommodations were vacated by the 101st Evacuation Hospital.

On 3 February the 430th Military Police Escort Guard Company was assigned duties at Third U. S. Army Prisoner of War Enclosure Number 18, MARVILLE (U3394), and the 437th Military Police Escort Guard Company was assigned duties at Prisoner of War Enclosure Number 16, FLORANGE (U8441). The 483rd Military Police Escort Guard Company, reinforced by two officers of the 734th Field Artillery Battalion, was assigned the operation of all Corps Prisoner of War Enclosures under Third U. S. Army.

The 471nd Military Police Escort Guard Company cleared the Army area and departed for the Ninth U. S. Army, where it had been assigned on 4 February.

Prisoner of War Enclosure Number 14, MARVILLE (U3394), was closed on 6 February after handling 16,454 prisoners of war.

Prisoner of War Enclosure Number 13, Jesuit College, ARLON (P6122), Belgium, was opened 9 February. All units attached were transferred from Prisoner of War Enclosure Number 12 to this new Enclosure.

Reconnaissance was made for a new Army Prisoner of War Enclosure on 11 February to be established in the northern half of the Army area. The towns of DILTZ (P7154) and DIEDENHOFEN (P8643) were considered possible locations.

The Commanding General, Advance Section, Communications Zone, authorized this headquarters to use the 305th Military Police Escort Guard Company as guards on the road rebuilding details on 11 February. Between 500 and 600 prisoners of war were supplied from Third U. S. Army Prisoner of War Enclosure Number 13, ARLON, (P6122) Belgium.

In order to facilitate the evacuation of prisoners of war from VIII Corps Enclosure to Army Prisoner of War Enclosure Number 13, ARLON (P6122), a new route of evacuation was established. Permission was secured by this office through G-4, Third U. S. Army to use a certain portion of a new route which was also the Main Supply Route of the 6th Armored Division.

The escape of four processed prisoners of war was reported to this headquarters by the using unit, the 17th Reinforcement Depot, on 19 February. One of these four prisoners was apprehended wearing a complete United States Army uniform except for German shoes.

The Provost Marshal, XX Corps, requested that a second Corps Prisoner of War Enclosure be established for the Corps. Personnel who were operating the III Corps Prisoner of War Enclosure were shifted to XX Corps for the operation of the second XX Corps Prisoner of War Enclosure on 21 February.

A conference was held 22 February regarding the replacement of Headquarters and Service Batteries, 734th Field Artillery Battalion at Army Prisoner of War Enclosures. Generally the plan called for the substitution of Headquarters Company, 631st Tank Destroyer Battalion for the Headquarters and Service Batteries, 734th Field Artillery Battalion. It would be necessary to augment the Headquarters Company, 631st Tank Destroyer Battalion with certain commissioned and enlisted personnel and equipment from the 267th Field Artillery Battalion and the Army Military Police Escort Guard Companies to compensate for the difference in strength, organization and equipment in the Headquarters Company of the 631st Tank Destroyer Battalion and that of the Headquarters and Service Batteries of the 734th Field Artillery Battalion.

One of the two XX Corps Prisoner of War Enclosures was closed in order to facilitate the rapid evacuation of Prisoners of War from this Corps, two trucks with necessary guards were attached to one of its divisions.

The XII Corps Prisoner of War Enclosure moved from the City of LUXEMBOURG (P6414) to MERSCH (P8228), on 27 February.

The XX Corps Prisoner of War Enclosure moved from the town of PETITE HETTANGE (U9691), France, to FREUDENBERG (I1305), Germany, on 28 February.

Prisoner of War statistics for the month of February were as follows: (See annex 27).

On hand as of 31 January 1945	550
Received during February at Prisoner of War Enclosures:	33,109
TOTAL	33,644
Evacuated	31,543
On hand at Prisoner of War Enclosures 28 February	2,119
Received at Prisoner of War Enclosures during February	23,106
Admitted at Third U. S. Army Hospitals during February	1,055
TOTAL prisoners of war handled by Third U.S.Army for month	24,161
Accumulative total for entire period of operations, 1 August 1944 to 28 February 1945, inclusive	187,458

Escapee and evadee statistics for the month of February were:

Escapees and Evadees on hand as of 31 January 1945	None
Received during February	35
TOTAL	35
Evacuated	35
On hand 28 February	None

SECTION IV - MAINTENANCE OF LAW AND ORDER SUB-SECTION

Emphasis was placed particularly on law and order and conduct of troops in the City of LUXEMBOURG (P6414) during the month. Military Police were instructed to make on-the-spot corrections wherever the delinquency was of such a nature that it could be completely corrected by the Military Policeman himself. These on-the-spot corrections included such delinquencies as jacket or overcoat unbuttoned, three persons riding in the cab of a vehicle and failure to wear steel helmet when the same was readily available. When the Military Policeman made an on the spot correction no delinquency report was made.

APOLs continued to be handled entirely through Provost Marshal and Military Police channels. Every ASCL apprehended or received by Third U. S. Army Military Police was placed under guard and evacuated to his unit under guard. APOLs from First and Ninth U. S. Armies who were apprehended in the Third U. S. Army area were delivered to the First U. S. Army Provost Marshal and APOLs from Seventh U. S. Army units were delivered to the Seventh U. S. Army Provost Marshal. APOLs from other armies, Air Force, and Communications Zone Units were evacuated to the ASCL Collecting Center, PARIS (30140).

During the month numerous civilians were apprehended between the hours of 2100 and 2400 for curfew violation in the Army area, and were fined by the civilian Police.

Gasoline, grease, oil, and other military supplies were confiscated in Black market raids in ATHUS (P6309), MARCINELLES (U6478), during the month. Other confiscations of lesser amount of Government property were also made during the month in many towns in the Army area. The civilian offenders, in most cases, were prosecuted by the civilian Police, and where U. S. soldiers were involved the cases were investigated by the Criminal Investigation Detachments.

Information was received that during the night of 3 February, nine enemy agents parachuted behind our lines apparently headed for LUNEVILLE (C0401), METZ (U8557), KEHLS (T3080), and NANCY (U8511). Available descriptions were dispatched to all Military Police for apprehension.

Traffic and Maintenance of Law and Order personnel were moved forward because of change in Army Rear Boundary, effective 0600 hours 6 February.

Staff Officer Patrols commenced daily in the City of LUXEMBOURG (P6414) on 7 February, for the purpose of improving conduct of troops and reporting conditions to the Chief of Staff through the Provost Marshal in accordance with Staff Memorandum Number 3, dated 7 February, this headquarters.

A three day drive was instituted on 8 February to improve the conduct of all troops in the City of LUXEMBOURG (P6414), and Military Police activity was supplemented by nightly officer patrols from various Sub-Sections of the Provost Marshal Section. The results were noted improvement in appearance of all personnel.

Curfew in the Third U. S. Army area was extended to 2100 to 0600 hours for civilian personnel and 2200 to 0600 hours for military personnel by Circular Number 11, dated 11 February, this headquarters.

A special pass policy for the City of LUXEMBOURG (P6414) went into effect in accordance with Circular Number 12, dated 13 February, this headquarters.

Section II, Circular Number 15, dated 16 February, this headquarters, announced that the following would be in effect with reference to guarding of U. S. vehicles:

"U. S. Military vehicles would not be left unattended in Third U. S. Army area unless under the immediate surveillance of guards or in authorized guarded Military parking lots."

Digitized by Google

Issue of weekly trip tickets was permissible only if vehicle was obviously on a weekly trip and on proper route and mission. This was announced on 17 February.

On 23 February the Alert Platoon of the 512th Military Police Battalion was dispatched to the City of LUXEMBOURG (P6414) to assist in Maintenance of Law and Order duties and was relieved at 2300 hours.

Company "A", 785th Military Police Battalion was assigned to operate the Third U. S. Army Stockade at ESCH (P7301).

Motor and/or walking patrols were operative during the month in the following towns and cities:

1.	ARLON	(P6122)	16.	MAYANCE	(U7848)
2.	ATHUS	(P6302)	17.	HOMBOURT	(U7974)
3.	AUBETTE	(U7094)	18.	HOUFFALIZE	(P6172)
4.	BASCHEMOURT	(U5277)	19.	JARNY	(U8564)
5.	BOUILLON	(P6837)	20.	LONGWY	(P5805)
6.	BOULIGNY	(U0191)	21.	LUXEMBOURG	(P6414)
7.	BRIEY	(U8973)	22.	METZ	(U8557)
8.	CONFLANS	(U8465)	23.	MONTMEDY	(U7774)
9.	DUDELANGE	(U8099)	24.	NEUFCHATEAU	(P3541)
10.	ESCH	(P7301)	25.	PIENNES	(U5681)
11.	ETALLE	(P4026)	26.	REDANGE	(P2126)
12.	FLORENVILLE	(P2620)	27.	ST. HUBERT	(P3462)
13.	FUNTUY	(U7365)	28.	TINTIGNY	(P3627)
14.	HABAY	(U4832)	29.	ULFANGE	(U8574)
15.	HAMIPRE	(P3639)	30.	VIRTON	(P3221)

Summary of delinquency reports processed by this section during the month was as follows:

Pass violations	1144
Trip ticket violations	992
Improper use of U. S. Government vehicle	677
Out of uniform	537
Speeding	441
Leaving vehicle unattended	381
Curfew violations	305
Passing violations	158
Illegal carrying of civilians	61
Drunk	38
Parking violations	36
Disorderly	30
Reckless driving	26
Careless discharge of firearms	24
TOTAL	4873

Details of cases tried by Third U. S. Army Summary Courts during the month were as follows:

VIOLATIONS	COURT NUMBER 1	COURT NUMBER 2	TOTAL
Pass	208		208
Uniform	69		69
Vehicle unguarded	45		45
Speeding	34	1	35
Curfew	19		19
Drunk and disorderly	15		15
Double banking	10	1	11
Unauthorized use of weapon	3		3
Resisting arrest	2		2
Transporting civilians	1		1
Breaking arrest	1		1
Unauthorized use of vehicle	1		1
Misinformation (alais)	1		1
Misappropriation of U.S.property	1		1
TOTAL	407	2	409

Straggler Collecting Points were in operation during the month at the following locations:

1.	ARLON (P6122)	5.	ESCH (P7301)
2.	BRIEY (U8973)	6.	LUXEMBOURG (P6414)
3.	CONFLANS (U8465)	7.	METTUYRE (U7774)
4.	DUDELANGE (U8099)	8.	VIRTON (P3221)

Disposition of stragglers for the month was as follows:

To Units	[illegible]
To Reinforcement Depots	42
TOTAL	117

Summary of AWOLs apprehended during the month was as follows:

Third U. S. Army Units	182
Other Units	91
TOTAL	273
Number of days AWOL	4269
Average number of days AWOL	16

Data regarding general prisoners evacuated or released during the month was as follows:

Released to Units	16
Evacuated to Disciplinary Training Center	133
Evacuated to Units for trial	9
TOTAL	158

General prisoners on hand at Third U. S. Army Stockade 282400 February: 56.

SECTION V - INVESTIGATION SUB-SECTION

The following criminal cases were completed and reports compiled and forwarded during the week ending 3 February:

Manslaughter	1
Black market	2
Murder	1
Assault with intent to do bodily harm	1
Robbery	1
Misappropriation of U. S. property	1
Larceny	1
Accidental shooting	2
TOTAL	10

The following criminal cases were completed and reports compiled and forwarded during the week ending 10 February:

Rape	1
Assault with intent to commit rape	1
Misappropriation of U. S. property	3
Larceny	2
Black market	4
Murder	1
Absent without leave	1
Assault	1
TOTAL	14

The following criminal investigation cases were completed and compiled and forwarded during the week ending 17 February:

Rape	1
Violation of police restrictions	1
Misapplication of U. S. property	2
Hit and run driver	1

Assault	2
Black market	1
Murder	1
TOTAL	8

The following criminal cases were pending final investigation 28 February:

Murder	3
Assault with intent to rape	2
Fatal shooting	1
Black market	3
Misappropriation of U. S. property	1
Escape of prisoner	1
Absent without leave	1
Larceny	1
Looting	1
Assault and battery	1
TOTAL	15

SECTION VI - PRISONER OF WAR EXECUTIVE SUB-SECTION

An operations directive for the operation of overrun Allied Prisoner of War Camps, prepared by the Prisoner of War Contact Officer, Supreme Headquarters, Allied Expeditionary Forces, attached this headquarters, was submitted to the Assistant Chief of Staff, G-1, on 22 February for comment and concurrence.

SECTION VII - INTERNMENT CAMP SUB-SECTION

Planning continued for the establishment and operation of Internment Camps. The Standing Operating Procedure for the operation of Internment Camps prepared by this office was submitted to Assistant Chiefs of Staff, G-1 and G-2, for comment and concurrence on 21 February.

SECTION VIII - LINE OF COMMUNICATION SUB-SECTION

On 9 February, Annex Number 1, corrected copy, "Plan for Defense of Command Post," dated 3 January 1945, was published. (See annex 25).

Annex Number 2 to Plan for Defense of Command Post, dated 3 January 1945, this headquarters, was published 11 February. (See annex 26).

Reconnaissance of railway line was completed on 12 February from LIFRAMONT (P3146) to BOURCY (P6264) for purpose of locating bridges and tunnels to be guarded.

The 11th Belgian Fusilier Battalion arrived in Army area at ESCH (P7301), 131630 February, for guarding Lines of Communication installations. The 10th Belgian Fusilier Battalion arrived in Army area 142100 February, for use by the Provost Maronel for guarding lines of Communication installations. The Headquarters and Headquarters Company and the 1st Company were located at SCHOENFELS (P6226) and the 2nd and 3rd Companies at SCHUTTRANGE (P9414). The 4th and 5th Companies of the 10th Belgian Fusilier Battalion were attached to the 11th Belgian Fusilier Battalion for administration and training.

The 631st Tank Destroyer Battalion assumes responsibility for operation of security check points on highways number 1, 7, and 11, in the vicinity of LUXEMBOURG (P6414) on 23 February.

The following installations in the Army area were guarded in connection with security of Lines of Communication during the month of February:

35 Railway bridges and tunnels
16 Highway bridges
Third U. S. Army Radio Center, LUXEMBOURG (P6414).
SHAEF Mission, LUXEMBOURG (P6414).
Radio Luxembourg, LUXEMBOURG (P6414).
Repeater Station, AUBANGE (P6009).
Twelfth Army Group Radio, ROMAIN (P5505).
Twelfth Army Group Radio, SANDWEILERHOF (P8914).
Post Telephone and Telegraphic Buildings located in the following towns and cities:

LUXEMBOURG (P6414)	BETTEMBOURG (P8103)
[illegible] (P6414)	DUDELANGE (U8099)
[illegible] (P6502)	ESCH (P7700)
[illegible] (P6504)	HASCHARAGE (P6709)

DECLASSIFIED

Digitized by Google

The following troops were used for guarding the above installations:

1st and 3rd Companies, 151st Infantry Regiment (French, 267th Field Artillery Battalion (less stockade guard for general prisoners - ten enlisted men from Battery "C").
734th Field Artillery Battalion (less twenty-eight enlisted men for interior security of Third U. S. Army Forward Command Post; Headquarters and Service Batteries under control of Prisoner of War Sub-Section).
631st Tank Destroyer Battalion (companies "B" and "C").
11th Belgian Fusilier Battalion plus two Companies (4th and 5th) 10th Belgian Fusilier Battalion attached for administration and training.

The 734th Field Artillery Battalion was relieved from tactical guarding of all installations in the Army area on 24 February. The 267th Field Artillery Battalion took over guarding of all installations in France since Belgian Battalions cannot be used in France. The 11th Belgian Fusilier Battalion was used for guarding installations in the Duchy of Luxembourg and Belgium exclusive of the City of LUXEMBOURG (P8414), which was guarded by two companies from 631st Tank Destroyer Battalion.

The following troops were used for defense of Command Posts:

Interior Security:

Company "A", 503rd Military Police Battalion.
Twenty-eight enlisted men from Battery "A", 734th Field Artillery Battalion

Reserve for Defense of Command Post:

Light Tank Platoon, Headquarters, 8th Armored Group.
Company "A", 631st Tank Destroyer Battalion.
Two Reconnaissance Platoons, 631st Tank Destroyer Battalion.

In the process of relieving the 734th Field Artillery Battalion from duty with the Provost Marshal, Third U. S. Army the Executive Officer of the 267th Field Artillery Battalion took over command of Third U. S. Army Prisoner of War Enclosure Number 13, ARLON (P5122). Assisting him were officers and enlisted men of the 267th Field Artillery Battalion and 631st Tank Destroyer battalion. The Officers of the 734th Field Artillery Battalion, in command of the VIII Corps and XX Corps Prisoner of War Enclosures, were relieved by officers of the 631st Tank Destroyer Battalion and 6th Armored Group respectively.

MILITARY POLICEMAN DIRECTING TRAFFIC IN ARLON, BELGIUM.

CHAPTER 10
MARCH OPERATIONS

SECTION I - GENERAL

During the month of March because of the rapid advance of the tactical units, the Army area expanded considerably, necessitating judicious use of all Military Police and other units that were on duty with the Provost Marshal.

The Forward Echelon departed vicinity of LUXEMBOURG (P8414), 270740A March, and arrived vicinity of IDAR-OBERSTEIN (L7124), Germany, 271200A March.

A Troops Liaison Sub-Section was organized 27 March for the purpose of maintaining liaison with Assistant Chief of Staff, G-4, and Assistant Chief of Staff G-5, for employment of troops assigned to the Provost Marshal. These troops would be used for safeguarding captured war material of G-4 and guarding Displaced Persons Camps for G-5.

The Rear Echelon departed vicinity of LUXEMBOURG (P8414), 290830A March, and arrived vicinity of TRIER (L2229), Germany, 291000A March.

Because of the multiplicity of the duties of the Prisoner of War Sub-Section which was handling prisoners of war, German military hospitals, Allied prisoners of war, and Internment Camps; an Allied Prisoner of War and Internment Camp Sub-Section was established to relieve the Prisoner of War Sub-Section of these duties.

The Defense Sub-Section became known as the Security Sub-Section, thereby clarifying its duties, - Security of Lines of Communication and Command Post.

An increase in the number of violations of traffic and uniform regulations was prevalent during the month. The critical condition of roads in the Army area, tire shortage and mechanical failure of vehicles made it imperative that speeding and other traffic violations were curbed as a measure of conservation and discipline. Recommendations were made and approved as follows:

1. An intensive signing program utilizing signs constructed by the Engineers in accordance with Provost Marshal designs were placed by Military Police at appropriate locations. These signs four feet by six feet were simply worded so as to be quickly read and contained traffic speed limits and other vehicle regulations. Maintenance of Law and Order signs stating curfew, uniform, and pass regulations were also posted. These signs eliminated any ignorance on the part of personnel for failure to comply with existing regulations.

2. Battalion Commanders performing Military Police duty were authorized to try as a Summary Court all offenders of existing regulations. These Summary Courts followed the procedure and policies carried out in the operation of the Army Summary Courts.

The Investigation Sub-Section was combined with the Maintenance of Law and Order Sub-Section and revised operational procedure was put into effect providing for a central criminal investigation office located in the Provost Marshal Section (Rear Echelon) and field offices at the Forward Echelon Headquarters, Third U. S. Army, Headquarters of the VIII, XII, and XX Corps, and at the Headquarters of the 503rd, 512th, and 705th Military Police Battalions. The establishment of field offices made it possible to quickly investigate a greater number of serious crimes.

SECTION II - TRAFFIC SUB-SECTION

The rapid expansion of the Army area required that three subareas be established as follows:

Area number 1 - From the 1939 German border to an arbitrary line drawn from north to south, approximately ten kilometers west of EUPEN (L9095) following highway 1300 to the Seventh U. S. Army lateral boundary. This territory was turned over to the 243rd Field Artillery Battalion that located in SIMMERN (L8555). This battalion controlled traffic only on the three Main Supply Routes.

Area number 2 - From the above mentioned arbitrary line to the western banks of the RHINE River. This territory was turned over to the 70th Infantry Division with Headquarters in BAD KREUZNACH (M1938). The division was given complete control of the entire road net, bridges across the RHINE River, and Maintenance of Law and Order in all towns.

Area number 3 - Entire Army area from the east bank of the RHINE River forward to Corps Rear Boundaries.

The road net in Germany appeared ample for support of operations up to and beyond the RHINE River, although many of the roads with the exception of the autobahns had steep grades and sharp curves. Small towns and numerous streams were traffic "bottlenecks" because of narrow streets and limited number of bridges.

The problem of road and town signing was a major one. A Standing Operating Procedure was published and distributed to the Military Police Battalions. The shortage of signs was critical, and all available means were utilized to produce the quantity of signs necessary in the Army area.

Letter, Headquarters, Third U. S. Army, file AG 415 GNMCT, subject, "Town and Route Markings in Germany," dated 9 March 1945, was published. (See annex 29).

Approximately seventy-five percent of vehicular traffic in the Army Service areas during the latter part of the month was on the autobahns, A8 and A4. Extensive road reconnaissances were conducted by this section and the Military Police Battalions. Much of this reconnaissance was made in the forward areas so that conditions might be remedied by the time the Army Service area took over.

During the month clearances for over 367 convoys involving over 42,075 vehicles were processed through the Traffic Sub-Section.

SECTION III - PRISONER OF WAR SUB-SECTION

During the month of March a record number of prisoners of war were evacuated through Third U. S. Army Enclosures. A total of 142,000 prisoners of war were captured during that time. On 24 March alone, a total of 16,818 prisoners of war were received at the Army Enclosures. On 31 March the daily average since the beginning of operations was 1,357. On 9 March the 200,000th prisoner of war was received at Third U. S. Army Prisoner of War Enclosure Number 13, ARLON (P5122), while on the 230th day of operations of Third U. S. Army, 16 March, the 230,000th prisoner of war was evacuated to Third U. S. Army Prisoner of War Enclosure Number 14, TRIER (L2229).

With the advance of Third U. S. Army deeper into Germany, numerous Allied Prisoner of War Camps were overrun. The Provost Marshal under the direct supervision of a Supreme Headquarters, Allied Expeditionary Forces, Prisoner of War Executive Officer established the first Allied Prisoner of War Camp at TRIER, (L2229), Germany. Allied prisoners of war who initially were evacuated through Displaced Persons channels were transferred to this Camp, where they were screened, nominal rolls prepared, and thus were started on the right direction to their homelands.

A temporary Internment Camp was opened as an annex to the Prisoner of War Enclosure at TRIER (L2229). The first Internment Camp cases such as Security Threats and War Criminals were received for internment.

The Standing Operating Procedure for Army and Corps Prisoner of War Enclosures prepared by the Provost Marshal, Third U. S. Army distributed on the 3rd of March to the Provost Marshals of Corps assigned Third U. S. Army, and Corps Prisoner of War Enclosure Commanders for their guidance and information.

The 734th Field Artillery Battalion was relieved from duty with the Provost Marshal, Third U. S. Army, and assigned to its primary mission. Since 26 August 1944 this battalion handled over 100,000 prisoners of war. The prisoner of war duties performed by this battalion were assumed by elements of the 631st Tank Destroyer Battalion and the 267th Field Artillery Battalion.

Digitized by Google

A German Lieutenant General, Graf Von Rothkirch (German Corps Commander), and Major General Vibig, were sent by special evacuation to Twelfth Army Group. The Signal Officer of the German Seventh Army was also taken by special evacuation to Advance Section, Communications Zone, Central Prisoner of War Enclosure at STENAY (P1503) for detailed interrogation.

Information was received from Twelfth Army Group that all German Medical personnel captured should be evacuated by prisoner of war channels as quickly as possible to the German Medical Center at CHERBOURG (Q1383).

A large influx of prisoners of war seriously taxed the evacuation system, but by taking full advantage of the empty supply trucks returning to the rear the problem was controlled.

Because of the distance to Advance Section Communications Zone Central Enclosure, a large "backlog" accumulated in the Army cages. The establishment by Advance Section Communications Zone, of a forward enclosure prevented the reoccurrence of similar incidents.

Army Prisoner of War Enclosures operated at ARLON (P6128), Belgium, number 13; TRIER (L2229), Germany, number 14; BAUMHOLDER (17113), Germany, number 15; and at HOMBURG (H1732), Germany, number 16.

Prisoner of War statistics for the month of March were as follows: (See annex 30).

On hand as of 28 February	2,119
Received during month of March at Prisoner of War Enclosures	136,926
TOTAL	139,045
Evacuated	134,024
On hand at Prisoner of War Enclosures 31 March	5,021
Received at Prisoner of War Enclosures	136,926
Admitted at Third U. S. Army Hospitals during month of March	1,691
TOTAL prisoners of war handled by Third U.S.Army during March	148,217
Accumulative total for entire period of operations, 1 August 1944 to 31 March 1945, inclusive	329,675

Escapees and Evadees statistics for the month of March were as follows:

On hand 28 February	None
Escapees and Evadees for March	2396
Evacuated	2396
On hand 31 March	None

SECTION IV - MAINTENANCE of LAW AND ORDER SUB-SECTION

The extension of the Army boundaries during the month resulted in dispersion of Military Police over a wide area. Maintenance of Law and Order patrols in France, Luxembourg and Belgium were reduced to a minimum in order to provide maximum personnel for all localities in Germany. Maintenance of Law and Order personnel became particularly concerned with the circulation and control of displaced persons and civilians. During the latter part of the month numerous disorders were handled by Military Police in the vicinity of the Displaced Persons Center in Germany. All displaced persons were corralled by Military Police and placed in Displaced Persons Camps. Civilian curfew was strictly enforced and all violators were turned over to military government for appropriate action.

Emphasis was placed on control of military personnel in Germany and current regulations providing for movement of military personnel outside of their billets or bivouac area only on official business was enforced. Unit commanders were contacted wherever possible, were informed of current regulations and were requested to exercise closer supervision over personnel of their command. Relatively few violations of the non-fraternization policy were encountered.

Instructions were given to all military police to return Third U. S. Army stragglers to their units by the most expeditious means. Stragglers from other armies and Communications Zone were returned to their unit through Reinforcement channels. AWOLs continued to be held in arrest by Military Police and delivered either to their units or to the AWOL Collection Center in PARIS (S0140).

Section I, Circular Number 23, Headquarters, Third U. S. Army, dated 9 March 1945, announced the following policy with reference to "Forcible Entry":

"It has been reported to this headquarters that U. S. Military Forces have forcibly entered civil law enforcement installations in France for the purpose of searching for questionable property. This practice is neither condoned nor will it be tolerated by this headquarters. In the future no such installations will be entered or searched unless approval of this or other appropriate headquarters is secured before such action."

Letter, Headquarters, Third U. S. Army, file AG 250.1 GNKCY, subject, "Reporting of Crimes, Offenses and Serious Incidents," was published, 17 March. (See annex 28).

Section II, Circular Number 31, Headquarters, Third U. S. Army, dated 24 March 1945, announced the following change in pass policy:

"II. PASS POLICY.

Paragraphs 4 and 5, Section II, Circular 6, this headquarters, dated 26 January 1945, are rescinded and the following substituted therefor:

4. When present stocks of TPM Form No. 3 (Revised March 44) are exhausted, ETO AG Form No. 27 is the only form of pass which will be used. All permanent (Class B) passes will be withdrawn from men to whom they have previously been issued.

5. The following rules will govern the issuance of passes to visit cities and towns in the Third U. S. Army area.

a. All passes will expire at or prior to curfew.

b. No overnight or twenty-four (24) hour passes will be issued.

6. Passes to visit cities and towns outside the Army area may be issued when authorized and in the numbers allocated by this headquarters, in which case unit commanders will acquaint themselves with any requirements in connection with the control or restriction of personnel in the area concerned."

Section III, Circular Number 38, Headquarters, Third U. S. Army, announced the following Pass and Curfew Policy:

"III. PASS AND CURFEW POLICY.

1. For troops in France, Belgium, and Luxembourg:

The provisions of Sections I and II, Circular No. 6, this headquarters, dated 26 January 1945, will remain in effect.

2. For troops in Germany:

a. Military personnel will circulate outside of billets or bivouac areas only on official business.

b. No passes will be issued to troops to visit any city, town or area in Germany."

Patrols were in operation during the month in the following locations:

1.	ALTRY (E5906)	14.	BOLLENDORF (L0041)
2.	ARLON (P6128)	15.	BOPPARD (K5619)
3.	ATHUS (P6309)	16.	BOUZONVILLE (Q1376)
4.	AUDUN (U6980)	17.	BRIEY (U6973)
5.	AUMETZ (U7596)	18.	BRODENBACH (K5216)

39.	LUXEMBOURG (P8414)	59.	VIANDEN (P8652)
40.	MAYEN (L6292)	60.	VILLERUPT (U6798)
41.	MERSCH (P8228)	61.	VIRTON (P3122)
42.	METZ (U8557)	62.	WALDWISSE (Q1382)
43.	MOYEUVRE (U7774)	63.	WASSERBILLIG (L1083)
44.	NEUFCHATEAU (P3236)	64.	WILTZ (P7454)
45.	OBERWESEL (K5319)	65.	WINNINGEN (K5614)
46.	PRUMSFELD (L0872)	66.	WORRSTADT (K5104)

A summary of the delinquency reports processed by this Sub-Section during the month was as follows:

Pass violations	842
Speeding	406
Uniform violations	328
Unattended vehicles	249
Passing violations	148
Trip ticket violations	136
Curfew violations	64
Carrying of civilians in government vehicles	55
Parking violations	47
Drunk	30
Looting	28
Unauthorized firing of weapons	24
Off limits violations	18
Improper use of Government vehicle	18
TOTAL	2363

Summary Courts: Details of cases tried by Summary Court Number 1 during the month were as follows:

Pass violations	70
Drunk	17
Speeding	16
Uniform violations	16
Unattended vehicle	9
Curfew violation	7
Three in front seat of cab	6
Double banking	5
Unauthorized firing of weapon	5
Trip ticket violations	4
No driver's permit	1
Parking violation	1
Overloading vehicle	1
TOTAL	158

Straggler Collecting Points operated during the month in the following locations:

1.	BAD KREUZNACH (M0938)	8.	ESCH (P7301)
2.	BICKENDORF (L1160	9.	KIRN (L8032)
3.	BIRKENFELD (L5313)	10.	KIRSELBACH (M6353)
4.	BITBURG (L1253)	11.	LUXEMBOURG (P8414)
5.	COCHEM (L5471)	12.	OBERWESEL (K5344)
6.	ECHTERNACH (L0535)	13.	SAARBURG (L1212)
7.	EDIGER (L5865)	14.	TRIER (L2229)

Disposition of stragglers for the month was as follows:

To Units	36
To Reinforcement Depots	12
TOTAL	48

Digitized by Google

A summary of AWOLs apprehended during the month was as follows:

Third U. S. Army units	191	
Other units	72	
Total apprehended	263	
Total number of days AWOL		4017
Average number of days AWOL		15

General prisoners: Data regarding general prisoners evacuated or released during the month was as follows:

Released to units	13
Evacuated to Disciplinary Training Center	95
Evacuated to units for trial	13
TOTAL	121

General prisoners on hand at Third U. S. Army stockade, 312400 March: 69.

During the latter part of the month there was a marked increase in the number of serious crimes reported and referred to criminal investigation detachments for investigation.

Investigations.

The following criminal cases were completed and reports compiled and forwarded during the period ending 3 March:

Assault	2
Wrongful disposal of U. S. property	1
Self maiming	1
Misapplication of U. S. property	1
Black market	3
Embezzlement	1
Larceny	1
Murder	2
Sale of cartons	1
Assault with intent to rape	1
TOTAL	14

The following criminal cases were completed and reports compiled and forwarded during the week ending 10 March:

Carnal knowledge	1
Complaint of stealing oil	1
Fatal shooting	1
Larceny	2
Conduct unbecoming an officer	1
Assault	1
Misbehavior before the enemy	1
Misappropriation of U. S. property	1
Absence without leave	1
Wrongful disposal of U. S. property	1
TOTAL	11

The following criminal cases were completed and reports compiled and forwarded during the week ending 17 March:

Black market	4
Assault and battery	1
Rape	1
Sale of poison liquor	1
Aliered burglary	1
Illegal possession of U. S. property	1
TOTAL	9

The following criminal cases were investigated and reports compiled and forwarded during the week ending 24 March:

Rape	1
Looting	1
Self maiming	1
Larceny	2
Assault	1
Assault with intent to commit a felony	1
Misappropriation of U. S. vehicle	1
Fatal shooting	1
Possession of excessive money	6
Fraternizing	1
Misappropriation of U. S. Government property	1
Attempted murder	1
Attempted rape	1
Assault and battery	1
TOTAL	16

On 30 March one officer and four non-commissioned officers of Interpreters Corps, Netherlands Forces, were assigned to the Criminal Investigation Section for use with Criminal Investigation Detachments.

The following criminal cases were pending final investigation as of 31 March:

Rape	7
Theft of U. S. supplies	1
Misappropriation of U. S. materiels	1
Shooting of a civilian	1
Fatal shooting	1
Murder	2
Suspected larceny	1
Assault with a dangerous weapon	1
Wrongful disposal of U. S. property	1
Fraternization	1
Battery	1
Larceny of U. S. property	1
Burglary	1
Assault with intent to rob	1
TOTAL	21

SECTION V - ALLIED PRISONERS OF WAR AND INTERNMENT CAMP SUB-SECTION

Allied prisoners of war: A report of Allied prisoners of war including French, Belgians, Bulgarians, Russians, Serbs, Czechoslovakians and Rumanians to include British, was investigated on 9 March. An estimated 2,000 to 5,000 Allied prisoners of war were released in the DAUN (L3578), MAYEN (L8292), CUBLENZ (L9495) area by the 4th Armored Division. No camp sites were overrun except stockades of local nursing commandos. Military Government Agencies handled these people as Displaced Persons.

On 15 March Allied Prisoner of War Camp Number 1, Camp Petrisberg TRIER (L2229), was opened. Overrun Allied prisoners of war at this camp were cared for initially and documented before evacuation to communications Zone.

Allied Prisoner of War Executive Officer was directed to establish Allied Prisoner of War Camp Number 1, Camp Petrisberg, TRIER (L2229), as a permanent installation. Assistant Chief of Staff, G-4, furnished all possible facilities.

A report was received 24 March that in the zone of advance of the Third U. S. Army, two German Prisoner of War Camps were overrun; one in the vicinity of HALBERGER (L7113) and the other in the vicinity of ST. WENDEL (G5997). Allied Prisoner of War Executive Officers made on the spot investigations and submitted detailed reports to higher headquarters.

Nominal rolls on recovered allied prisoners of war were prepared one sent to G-1, Twelfth Army Group, on 14 March, for forwarding to Supreme Headquarters, Allied Expeditionary Forces.

On 28 March a report reached this office through G-1 that the 26th Infantry Division of XII Corps had overrun a German Prisoner of War Camp containing approximately 400 French Russian prisoners of war. This message was immediately reported to Allied Prisoner of War Officer for action.

Internment Camps.

An Army temporary Internment Camp was installed as an annex to Army Prisoner of War Enclosure Number 14, TRIER (L2229), on 5 March.

Internment Camp categories were held separate from prisoners of war at prisoner of war Enclosures until such time as a sufficient number had accumulated to warrant the establishment of an Internment Camp.

A temporary Army Internment Camp was opened as an annex to Army Prisoner of War Enclosure Number 14, TRIER (L2229), on 8 March, to handle such cases as were evacuated by the Corps for temporary or permanent internment.

On 18 March the first Internment Camp cases, such as security threats and war criminals were received for internment at the Third U. S. Army, Temporary Internment Camp, TRIER (L2229).

SECTION VI - SECURITY SUB-SECTION

During the month of March the following installations in the Army area were guarded:

69 Railway bridges and tunnels.
45 Highway bridges.
8 Highway check points.
Twelfth Army Group Radio, KAPELLEN-BERG (P6914).
Twelfth Army Group Radio, RUMAIN (P5305).
Repeater Station, ALBANCH (P6409).
SHAEF Mission, LUXEMBOURG (P6414).
Third U. S. Army Radio Center, STRASSEN (P7815).
Radio Station, JUNGLINSTER (P9324).
Storage room for rare books, NURBURG (L4494).
Electric Power Plant, TRIER (L2229).
Radio Installation, LUXEMBOURG (P6414).
Post Telephone and Telegraphic buildings located in the following towns and cities:

BETTEMBOURG (P6103)	DIFFERDANGE (P6604)
DUDELANGE (U8099)	ESCHSURALZETTE (P6709)
KAYL (P7700)	ROMMELDANGE (P6406)
SELVALA (P6802)	ETTELBRUCK (P6507)
LUXEMBOURG (P6414)	

The following troops were used for guarding the above installations:

247th Field Artillery Battalion.
11th Belgian Fusilier Battalion plus two companies (1st and 4th) 10th Belgian Fusilier Battalion.
631st Tank Destroyer Battalion (less Company "B", relieved from duty with XII Corps as assigned mission of security of Prisoner of War Enclosure Number 14, TRIER (L2229)).

The following troops were used for defense of Command Posts:

Interior security:

Company "A", 503rd Military Police Battalion.

Reserve for defense of Command Posts:

Light Tank Platoon, Headquarters, 8th Armored Group.
Company "A", 631st Tank Destroyer Battalion.
Two Reconnaissance Platoons, 631st Tank Destroyer Battalion.

The 30th Battalion Chasseurs (French) were utilized for tactical guarding of installations in France and Luxembourg but were relieved from these duties upon entering into Germany.

On 30 March the 270th Field Artillery Battalion was attached to the Provost Marshal Office for duty with the Security Sub-Section.

SECTION VII - TROOP LIAISON SUB-SECTION

The Troops Liaison Sub-Section was organized 27 March for the purpose of maintaining liaison with G-4 and G-5 for use of troops assigned to the Provost Marshal.

Initially the 558th Field Artillery Battalion was attached to the Provost Marshal Section on 27 March for use by G-5 for the guarding of Displaced Persons Camps.

On 28 March the Chief of the Troops Liaison Sub-Section had a conference with Executive Officer, G-4 Section, and with G-4 officers concerned with the handling of captured war materiel. The following

Digitized by Google

decisions were reached:

a. That G-4 would keep this section advised as to the location of enemy material, the priority for its safeguarding, and an estimate of the number of personnel that would be required to guard it.

b. That this section would allocate troops assigned to guard captured supplies.

On 29 March a conference was held with G-5 with reference to the use of troops to guard Displaced Persons Camps. The following decisions were reached:

a. That G-5 would keep this section advised as to the location and size of Displaced Persons Centers.

b. That this section would allocate available troops to guard camps.

Headquarters and Headquarters Company, 4th Tank Destroyer Group was attached to the Provost Marshal Section.

On 31 March, Headquarters, and Headquarters Company, 4th Tank Destroyer Group was made available to G-4 for use in connection with the handling of captured enemy material.

During the week ending 31 March the 558th Field Artillery Battalion was employed as guards at Displaced Persons Camps as follows:

UNIT	LOCATION
Headquarters and Service Batteries	TRIER (L1229)
Battery "A", and two sections of Battery "B"	LEBACH (G4690)
Battery "B", minus two sections	SAARHOLZBR (L9113)
One half of Battery "C"	WITTLICH (L3913)
One half of Battery "C"	BITBURG (L1353)

Headquarters and Service Batteries were instructed to move to vicinity of WEISBADEN (M3564), on 3rd and 4th April 1945.

The 558th Field Artillery Battalion was instructed to move Battery "B" from SAARHOLZBR (L7113) to vicinity of WEISBADEN (M3564).

The Supreme Headquarters, Allied Expeditionary Forces estimate of displaced persons in zone of Allied Expeditionary Forces as of 1 January was 6,500,000 and in zone of Russian Army, 4,500,000. This enormous number of Displaced Persons was expected to require considerable preparation on the part of G-5 and was of vital interest to Provost Marshal operations.

CHAPTER II
APRIL OPERATIONS

SECTION I - GENERAL

Third U. S. Army Headquarters moved from IDAR-OBERSTEIN (L7124) to FRANKFURT (M4868) on 3 April.

The Army area continued to expand, necessitating the establishment of sub-areas. Area Number 1 extended from the German border of 1939 to an arbitrary line drawn from north to south, approximately ten kilometers west of KOBLENZ (L9095), then followed highway L300 to Seventh U. S. Army lateral boundary. This territory was turned over to the 943rd Field Artillery Battalion located in SIMMERN (L8555), under control of the 195th Field Artillery Group, and controlled traffic on the three Main Supply Routes only. Area Number 2 extended from the afore-mentioned arbitrary line to the western banks of the RHINE River. This territory was turned over to the 70th Infantry Division with headquarters in BAD KREUZNACH (M1938). The Division was placed in complete charge of the entire road net, bridges across the RHINE River, and maintenance of law and order in all towns.

Third U. S. Army Headquarters moved from FRANKFURT (M4868) to HERSFELD (H3954) on 11 April.

Third U. S. Army Headquarters moved from HERSFELD (H3954) to ERLANGEN (G2618) on 22 April.

SECTION II - TRAFFIC SUB-SECTION

As Corps rear boundaries continued to advance quite rapidly the deployment of the Military Police Battalions required constant attention in order to assure proper control of traffic on Main Supply Routes.

The situation was alleviated to some extent by making use of the autobahns. These super-highways, in good condition, were capable of handling two lane traffic both ways. Intersections were at a minimum and the usual small town "bottlenecks" were almost entirely eliminated.

A number of bridges over the autobahns, and in surrounding towns were blown, and the Engineers cleared away the debris and constructed new bridges. Constant attention was given to all secondary and "feeder" roads which proved to be necessary to the Army road net and the expediting of traffic.

Speeding on the autobahns was a major problem. The Military Police Battalions were alerted and concentrated their efforts on proper control. More than 150 arrests for traffic violations were made daily on these routes.

Constant road and bridge reconnaissance of the forward areas was made by personnel of this office. The information secured aided materially in prior planning and enabled this office to remain conversant with pending traffic problems.

Bridging was still a major problem for the Engineers who continued to do an excellent job.

A traffic count made in the Army area shows that approximately seventy-five percent of the Army traffic travelled via the autobahns.

The establishment of Quartermaster Petrol, Oil and Lubricant Dumps along A4 east and west of ALSFELD (H0900) reduced that route to two lane traffic for two stretches of approximately five miles each.

Traffic routes in HERSFELD (H3959) were changed twice during the period to block off certain areas in which were located vital installations.

All non-military vehicles were stopped, checked for authorization of possession and Army registration, and impounded if such authorization did not exist. Impounded vehicles were turned over to Ordnance.

In occupying the new Army area a condition of inadequately signed roads and bridges existed. In the larger cities, the traffic plans as then existed were bad. Jams up to eight and ten miles occurred out of WURZBURG (N5935) in several directions. A new traffic plan was prepared and placed in operation which resulted in a smooth flow of traffic through the city.

Military Police were extended over an area twice the size normally covered. Traffic was extremely heavy, with troop movements approximating the traffic during the week of December 17 - 25, 1944. This exceedingly heavy troop movement, coupled with necessary supply traffic, enmeshed with equally heavy Seventh U. S. Army road movements choked the main routes in the WURZBURG (N5935), BAMBERG (G2749), ERLANGEN (G2618), NURNBERG (T4299) area.

Check points for non-military vehicles were operated at HERSFELD (H3959), OSTHOFEN (H4165), WEINHOEN (H3821), HUNFELD (H4433), ALSFELD (H0900) and FRANKFURT (M4868).

These check points resulted in approximately 400 vehicles being taken from military personnel not possessing authorization or registration for such vehicles, and also from displaced persons.

Traffic violations for the week ending 21 April were:

Trip ticket violation	18
Improper use of U. S. Government vehicle	4
Speeding	289
Passing violation	111
Reckless driving	2
Unregistered captured enemy vehicle	1
TOTAL	425

Most of the main roads in the Army area during the latter part of the month were Class 8-12, with many defiles, one-way bridges, and bypasses. The road net was inadequate for handling the heavy traffic on army supplies and troop movements, and roads were badly overcrowded. Roads were signed well into Corps areas. Special efforts were made to sign NURNBERG (T4299) and to bypass traffic around the city on the autobahns, A3 and A61. Traffic plan for the city of NURNBERG (T4299) was approved by the Army Engineer and placed in effect, utilizing an inner traffic "ring" to keep traffic out of the center of the city.

Military Police Battalions zones of responsibility were changed three times and extended to enable them to furnish greater assistance to the Corps. The 70th Infantry Division assumed control and responsibility of a larger area (including WURZBURG (N5935)), relieving Army Military Police in that zone. Check points for impounding vehicles (civilian) operated at ERLANGEN (G2618), WURZBURG (N5935), NEUSTADT (W9337), BAMBERG (G2749), and BAYREUTH (G7457). Additional check points operated at SCHWABACH (T9397), NURNBERG (T4299), SULZBACH (G8908), AMBERG area (G9800), and ANSBACH (T0763). Civilians were ordered through the Burgomeisters to keep military routes clean and free of debris and trash. Traffic violations were:

Speeding	29
Double banking	57
Trip ticket violations	6
Unattended vehicles	3
Officer driving	3
Reckless driving	5
Carrying of civilians	1
Unregistered captured vehicles	2
TOTAL	104

Major troop movements during the month of April were:

1st Infantry Division	97th Infantry Division
5th Infantry Division	99th Infantry Division
28th Infantry Division	
65th Infantry Division	101st Airborne Division
70th Infantry Division	
76th Infantry Division	13th Armored Division
86th Infantry Division	16th Armored Division
94th Infantry Division	20th Armored Division

During the month traffic clearances for over 365 convoys involving over 50,964 vehicles were processed through the traffic sub-section.

Digitized by Google

SECTION III - PRISONER OF WAR SUB-SECTION

The 270th Field Artillery Battalion reported to the Provost Marshal, Third U. S. Army and was assigned duties under the Prisoner of War Sub-Section. One Detachment of this battalion was dispatched at once to the VIII Corps Prisoner of War Enclosure.

Prisoner of War Enclosure Number 17, OBER URSEL (M6079) was opened 2 April. With the advance of Third U. S. Army deeper into Germany, many German Military Hospitals were uncovered. A "stay put" policy was applied immediately and these hospitals were guarded under the supervision of the Provost Marshal, Third U. S. Army through the Army Surgeon. The patients found in these hospitals, if they belonged to the German Armed Forces, were classified as "prisoners of war", and the hospital, a Prisoner of War Camp. The Military Medical Staff of these hospitals were classified as "protected personnel" and were permitted to perform their services under the supervision of the Army Surgeon. A total of fifty-eight German Military Hospitals were reported to this office. These hospitals contained approximately 20,000 prisoner of war patients.

The 377th Field Artillery Battalion reported for duty to the Provost Marshal, Third U. S. Army and was assigned duties under the Prisoner of War Sub-Section. It was planned to utilize this Battalion as guard personnel for overrun German Military Hospitals.

The 308nd French Truck Company consisting of forty-eight trucks, was attached this section for the evacuation of prisoners of war on 13 April.

The Commanding Officer, 663rd Military Police Escort Guard Company, operating the Corps Prisoner of War Enclosures, was directed to make a tour of the Corps Prisoner of War Enclosures instructing them not to accept civilians or enemy prisoners of war in civilian clothes if they had no identity documents or Arrest Report establishing their military status.

In accordance with instructions published in Counter Intelligence Directive for Germany, Headquarters, Twelfth Army Group, dated 10 April 1945, TODT Workers were no longer classified as prisoners of war, but would be turned over to Military Government.

A new system for guarding German Military Hospitals was initiated 15 April.

Three teams consisting of a representative from the Provost Marshal Office, a Medical Administrative Officer from the 66th Medical Group and a representative from the Army G-2 Section were organized. These teams were given the responsibility of placing the security of German Military Hospitals in the hands of the town Burgmeister and the Commandant of the hospitals.

Instructions were received from Provost Marshal, Advance Section, Communications Zone to evacuate German Officers along regular prisoner of war channels. General Officers, if requested by Twelfth Army Group would be sent there, otherwise no distinction would be made.

Memorandum Number 3, Headquarters, Third U. S. Army, dated 18 April 1945, subject, "Captured German Military Hospitals" was published. (See annex 38).

Units of the Seventh U. S. Army guarding hospitals in Third U. S. Army area were relieved and the responsibility for the safeguarding of these prisoners of war was placed upon the local Burgmeister.

Two additional Advance Section, Communications Zone Military Police Escort Guard Companies, the 667th and 481st were placed on duty with this section 25 April for the evacuation of prisoners of war from Army cages in Advance Section, Communications Zone Transient Enclosures.

At a conference on 27 April representatives of the Army Provost Marshal Section and the Army Surgeon discussed the question of releasing low value prisoners of war after screening by G-2 personnel. This category of prisoners of war would include members of the Volkssturm, the extreme aged and youthful members of the army as well as disabled veterans and enemy deserters found behind front lines.

A communication net was established between all Prisoner of War cages in the Army area.

The 600,000th prisoner of war captured by troops of the Third U. S. Army, 28 April, was evacuated to Army Prisoner of War Enclosure Number 21, LANGERRINN (G8003).

During the month a total of 335 German Military Hospitals were reported to this office including 85,041 prisoner of war patients.

Six Prisoner of War Enclosures were operated by Third U. S. Army during April 1945, as follows:

Number 16, BLETZHEIM (M1732)
Number 17, OBER URSEL (M6079)
Number 18, HATTENBACH (M2950)
Number 19, LAKMA (M9761)
Number 20, KULMBACH (G8574)
Number 21, LANGERRINN (G8003)

A total of 236,734 prisoners of war were received during the month at Third U. S. Army Enclosures. This tremendous influx of prisoners of war in comparison with the months previous, the rapid advance of Third U. S. Army into Germany and the changes in direction of advance created a serious problem of evacuation. The opening of an Advance Section, Communications Zone Prisoner of War Transient Enclosure at BAD KREUZNACH (M1938) and another at MEISENHEIM (M25) vicinity HAINS (M35) alleviated the condition somewhat.

With the large number of prisoners of war in the army Enclosure and with the shortage of operational rations, the problem of securing sufficient rations became acute. Captured German rations were used to the greatest extent possible and plans were made to feed the prisoners of war by Bulk Rations.

Prisoner of war statistics for the month of April were:

On hand as of 31 March	5,021
Received during month of April at Prisoner of War Enclosures	336,734
TOTAL	341,755
Evacuated	186,476
On hand at Prisoner of War Enclosures as of 30 April	55,569
Received at Prisoner of War Enclosures during April	236,734
Admitted at Third U. S. Army Hospitals during April, including overrun German Military Hospitals.	96,180
TOTAL prisoners of war handled by Third U. S. Army during April	332,904

(See annex 31)

Accumulative total for entire period of operations, 1 August 1944 to 30 April 1945, inclusive: 662,579.

SECTION IV - MAINTENANCE OF LAW AND ORDER SUB-SECTION

A concentrated drive was made at TRIER (L1229) on 3 April to clear the town of abandoned jerricans and 93T jerricans were recovered.

The Third U. S. Army stockade was moved from TRIER (L1229) 5 April to FRANKFURT (M8868).

Rifles, shotguns and other weapons in a quantity sufficient to fill two one-fourth ton trailers were picked up in various towns from the Burgmeisters thereof and turned into 851st Ordnance Heavy Automotive Maintenance Company, ALSFELD (M04), by members of Company B, 516th Military Police Battalion.

At approximately 2005GCB April, three Military Policemen of Company C, 503rd Military Police Battalion, while proceeding east on A6, five miles west of ALSFELD (M0840), Germany, stopped to offer assistance to a 1/4 ton, 4 x 4 vehicle parked on the highway. They noticed German equipment and followed the vehicle whereupon the occupants fired on the Military Police. One SS trooper was killed and the rest escaped into the woods. Visibility was poor and the Military Police returned to the Command Post for a searching party.

An advance General Prisoner Stockade for the handling of general prisoners was established 23 April at ERLANGEN (G3616).

Patrols operated during the month in the following localities:

ALSFELD (M0840)	BRODENBACH (L7980)
ALZEY (K5904)	COBURG (G28)
ASCHAFFENBURG (M29)	DIEZ (M2096)
BAD KISSINGEN (M6780)	EHRANG (G1970)
BAD KREUZNACH (K5904)	EMGELHAUSEN (K5214)
BAD NAUHEIM (M1797)	ERLANGEN (G3616)
BAD NEUSTADT (M7694)	FASSELSHOF (G5975)
BAD ORB (M1580)	FORCHHEIM (G3930)
BAD SALZUNGEN (M7748)	FRANKFURT (M6770)
BAMBERG (G8749)	FRIEDBERG (M7394)
BAYREUTH (G75)	FRIEDRICHSRODA (M8755)
BEDRA (M4564)	GEMUNDEN (M46)
BERNKASTEL (K5806)	GLUECKENTHAL (J0658)
BINGERFELD (K1504)	GOERLITZ (M0404)
BINGEN (M1296)	GREIFFELD (M50)
BITBURG (L2153)	GROSS GERAU (L5304)
BLANKENHAIN (J5558)	HAIDACH (G53)
BOGEL (M0574)	HAMMELBURG (M5570)
BUEDINGEN (K5419)	HANAU (M8471)
BRETTENBACH (M2543)	HERSFELD (M4954)
HOCHST (M5767)	HEILBAUS (G6173)
HOMBURG (M1778)	HERZBACH (G8374)
HUNFELD (M4432)	HUEMMERG (G46)
ISOTEIN (M2563)	ICHSHOFEN (M2436)
JENA (J7065)	SAASEN (M2859)
KARLSTADT (M6643)	SCHLITZ (M2938)
KALTENBRUNN (G87)	SCHLUCHTERN (M29)
KALTELLAUN (K5411)	SCHWEINFURT (M7963)
KATZENGART (L7980)	SOMMERUG (J40)
KILLENBERG (L4891)	VACHA (M6150)
KIRN (K5906)	WEISSENAUEN (M2563)
KISSELBACH (K5416)	WERNECK (M65)
KULMBACH (G8674)	WINDECKEN (M8881)
LANGEN (M6754)	ZEITZMAIN (M0455)
LAUTERBACH (M1828)	LOHR (M3156)
MEINUNGEN (M0928)	

A summary of the delinquency reports processed by this office during the month was as follows:

Away from billet or bivouac area without authority.	167
Pass violations	110
Fraternization.	93
Uniform violations.	83
Looting	19
Drunk	16
Careless discharge of firearms	16
Curfew violations	10
Disorderly.	7
TOTAL	531

Details of cases tried by Summary Court Number 1 during the month were as follows:

Passing vehicles	101
Pass violations.	28
Speeding	20
Uniform violations	19
Fraternization	10
Vehicles not registered.	5
Drunk	3
Looting.	3
TOTAL	188

Straggler Collecting Points operated during the month in the following localities:

BAD KISSINGEN (M6780)	FRIEDRICHSRODA (M8755)
BAD NEUSTADT (M7694)	HANAU (M8471)
BAMBERG (G8749)	HUNFELD (M4432)
BEDRA (M4565)	KARLSTADT (M6643)
BINGENFELD (K1504)	KULMBACH (G8674)
BOGEL (M0474)	MEINLAUS (G6173)
DIEZ (M2096)	HERZBACH (G8374)
ERLANGEN (G3817)	GREIFSEEL (L8368)
FASSELSHOF (G5973)	WEISSBADEN (M3563)
FRANKFURT (M6770)	WURZBURG (M5935)

Digitized by Google

Disposition of stragglers for the month was as follows:

To Units	36
To Reinforcement Depots	2
TOTAL	38

A summary of AWOLs apprehended during the month was as follows:

Third U. S. Army units	20
Other Units	24
TOTAL	44

Total number days AWOL .450

Average number of days AWOL . 10

Data regarding general prisoners evacuated or released during the month was as follows:

Released to Unit	17
Evacuated to Disciplinary Training Center	45
TOTAL	62

General prisoners on hand at Third U. S. Army stockade as of 302400B April: 222.

Investigations

The following criminal cases were investigated and reports compiled and forwarded during week ending 7 April:

Rape	2
Murder	1
Alleged rape	2
Murder and assault with intent to murder	1
Murder and alleged rape	1
Shooting	1
Shooting German civilian	1
Alleged larceny	1
Assault with dangerous weapon	1
Wrongful disposal	1
Robbery	1
TOTAL	13

The following criminal cases were investigated and reports compiled and forwarded during week ending 14 April:

Rape	4
Assault with deadly weapon	1
Alleged rape	13
Fraternization	2
Fraternization and AWOL	2
Murder	1
Fraternization and rape	1
Attempted rape and fraternization	1
Neglect of duty	1
Murder and rape	1
Alleged rape and looting	1
Alleged rape and robbery	1
Alleged rape and assault with deadly weapon	1
Alleged murder	1
TOTAL	31

The following criminal cases were investigated and reports compiled and forwarded during week ending 21 April:

Theft of U. S. supplies	2
Rape	13
Sale of poison liquor	1
Murder	3
Rape and robbery	1
Assault with deadly weapon	1
TOTAL	21

The following criminal cases were completed and reports compiled and forwarded during week ending 28 April:

Homicide	1
Alleged rape	11
Robbery and AWOL	1
Rape	3
Murder	3
Attempted rape	1
Conduct unbecoming an officer	1
Housebreaking	1
Robbery	1
TOTAL	33

SECTION V - ALLIED PRISONERS OF WAR AND INTERNMENT CAMP SUB-SECTION

The Allied Prisoner of War Sub-Section was formed from personnel of the S-3 and S-4 Sections, 195th Field Artillery Group Headquarters, with duties of administration and supply of Allied Prisoner of War Camps and documentation, disinfestation and evacuation of Allied Prisoners of War. To accomplish this mission, the 558th Field Artillery Battalion was attached and reported for duty on 15 April, and the 304th French Truck Company was attached to augment our transportation. Later, as the magnitude of the job increased, the 176th, 770th, and 775th Field Artillery Battalions were likewise attached. In addition, nineteen officers from Supreme Headquarters, Allied Expeditionary Forces were attached to Third U. S. Army to assist as Allied Prisoner of War Contact Officers.

It was estimated by Supreme Headquarters, Allied Expeditionary Forces that between 300,000 and 500,000 Allied prisoners of war were in the zone of the Third U. S. Army advance. Until it became impracticable to continue the practice, the Germans moved their prisoners to their rear areas as the Third U. S. Army advanced, with the result that comparatively few Allied prisoners of war were recovered. On 22 April, the German government agreed to leave all Allied military prisoners in their camps, on condition that they were not employed against them in this theater. From 8 April to the present date, the weekly totals of released Allied military prisoners increased as follows: 8 - 14 April, 5,565 (in seven camps); 15 - 21 April, 11,652 (in twenty-nine camps); 21 - 28 April, 38,955 (in nineteen camps).

On 29 April, Stalag VII A at MOOSBURG (Z1095), the largest Allied Prisoner of War Camp yet overrun, was taken by the III Corps. First estimates placed the population of Stalag VII A at approximately 100,000. Reports immediately following the release of the camp listed a total of 28,913 Allied prisoners of war of all nationalities - American, British, French, Dutch, Russian, Yugoslavian, Italian, Serbian, Bulgarian, Brazilian, Greek, Rumanian and Norwegian. Of these 15,568 were Americans and 8,562 British. In addition to the Allied prisoners of war in the Stalag itself, an estimated 75,000 to 100,000 are in the immediate vicinity brought in by the Germans and left in the small towns.

Obviously, the overrunning of such a large concentration of Allied prisoners of war entailed problems of supply, administration, medical care and evacuation, but the camp did not present the difficulties anticipated. With full knowledge of the existence of the camp, the Third U. S. Army had anticipated the need for four ambulance companies, had air reconnaissance of an evacuation strip close to the camp, and had three battalions of artillery attached to the Allied Prisoner of War Sub-Section. The camp proved to be excellently organized internally, however, and no drastic emergency measures were necessary.

On a small scale, each Allied Prisoner of War Camp was handled in the same way as MOOSBURG (Z1095). Contact Officers with the Corps Headquarters were in constant touch with the situation at the front, prepared to go to Allied Prisoner of War Camps as soon as they were overrun and rendered a report on conditions and population and took charge till an Allied Prisoner of War Team arrived and assumed control. The Allied Prisoner of War Team documented and disinfected the Allied prisoners of war for evacuation by air, rail or truck, as the situation required.

During the period 7 April to 30 April, 15,132 Allied prisoners of war have been evacuated from Germany by air, rail, truck and ambulance. Thousands more have been moved to camps with better facilities for their care, until they can be evacuated to the Eastern European countries.

Internment Camp Sub-Section.

The Internment Camp Sub-Section, charged with the supervision and operation of internment camps for war criminals, security threats and other civilian persons whose freedom might endanger the success of the Army, was formed from the S-2 Section of the 195th Field Artillery Group Headquarters.

During the month of April, the Internment Camp Sub-Section operated four camps. The first of these at TRIER (L8229), was turned over to Fifteenth U. S. Army on 10 April, with a population of 674 male and 39 female internees. Camps at OBERSUHL (R6164), and HOLSDORF (J8760) were turned over to First U. S. Army on 24 April, with a combined population of 1,097 male and 39 female internees. At the close of this period, the camp currently under Third U. S. Army control at HERRSBRUCK, (G8707), had 365 male and 21 female internees. Of the 2,805 internees who have been under control of the Internment Camp Sub-Section, 65 were known war criminals awaiting trial.

The Internment Camps have been operated by detachments from Headquarters Battery, 195th Field Artillery Group and by elements of the 558th Field Artillery Battalion. Constant improvement of the camps, under supervision of the operating personnel, has been undertaken.

SECTION VI - SECURITY SUB-SECTION

During the period 1 April to 30 April the Security Sub-Section, Provost Marshal Section, Third U. S. Army was engaged in the Defence of the Army Command Post and in guarding installations along the Lines of Communication. The latter included 144 highway bridges, fifty railway bridges and/or tunnels, thirty-three signal installations, and the following special installations:

Storage room for rare books, NURNBURG (060).
Electric Power Plant, TRIER, (L8229)
Lens factory, BAD KREUZNACH (K5904)
SHAEF Mission, LUXEMBOURG, (P8414)
14th Liaison Air strip
Counter Intelligence Corps Team
Naval archives
Military Police Interpreters (ten enlisted men).

The following troops were used for defense of the Army Command Post:

Interior security:

Company A, 503rd Military Police Battalion.
631st Tank Destroyer Battalion.
474th Infantry Regiment.

Reserve for Defense of the Army Command Post:

Light Tank platoon, 8th Armored Group.
631st Tank Destroyer Battalion.
Two Reconnaissance platoons, 631st Tank Destroyer Battalion.
474th Infantry Regiment.

The troops used in the guarding of the Lines of Communication and Signal Installations consisted of:

10th Belgian Fusilier Battalion.
11th Belgian Fusilier Battalion.
867th Field Artillery Battalion.
631st Tank Destroyer Battalion
174th Field Artillery Battalion
770th Field Artillery Battalion
70th Infantry Division
13th Armored Division
195th Field Artillery Group.

During the period 1 April to 9 April the 195th Field Artillery Group operated under this section in connection with the administration and control of the 10th Belgian Fusilier Battalion. On 9 April the 195th Field Artillery Group assumed responsibility for operation of Allied Prisoner of War Sub-Sections. The 70th Infantry Division operated with this section beginning on 2 April; and as the Army area extended that Division assumed responsibility for security in rear areas. On 3 April the 13th Armored Division took over the guarding of installations designated by this section but were relieved two days later, having been assigned subject to being relieved from this section on forty-eight hours notice. The 10th Belgian Fusilier Battalion was relieved of assignment to the Third U. S. Army on 10 April and reassigned to XXIII Corps of the Fifteenth U. S. Army. The 867th Field Artillery Battalion was relieved from assignment to this section on 10 April and assigned to Fifteenth U. S. Army; but on 18 April it was reassigned to the Security Sub-Section for security of Lines of Communication. The 174th Field Artillery Battalion was assigned to this section on 20 April. The 11th Belgian Fusilier Battalion was relieved of assignment to the

Digitized by Google

Third U. S. Army on 30 April and reassigned to XXIII Corps of the Fifteenth U. S. Army.

Memorandum, dated 11 April 1945, subject, "Alert Plan for Defense of Headquarters Area," (Forward Echelon), was published. (See annex 33).

Memorandum, dated 14 April 1945, subject, "Alert Plan for Defense of Forward Echelon Headquarters Area," (Daylight Alert), was published. (See annex 34).

Memorandum, Headquarters, Third U. S. Army dated 24 April 1945, subject, "Alert Plan for Defense of Forward Echelon Headquarters Area," was published. (See annex 35).

SECTION VII - TROOP LIAISON SUB-SECTION

The city of FRANKFURT (M8668) was cleared of all unauthorized personnel. In two days a total of 9,000 DI placed persons, prisoners of war and Allied prisoners of war were cleared from the city.

Military routes were kept fairly clear of displaced persons by a system of collection posts, wherein all displaced persons were taken off the highways and sent to Displaced Persons Camps, utilizing empty supply trucks going toward the locations of these camps.

During the month Displaced Persons Camps were located at:

THIER (I3729)	LANGEN (L4690)
BAD HOMBURG (M7183)	WITTLICH (L3913)
BITBURG (I1353)	FRANKFURT (M8668)
WESSELN (M3474)	ALSFELD (N0940)
HERSFELD (L3954)	ERFURT (J3176)
BAD KISSINGEN (M8780)	SCHWEINFURT (M7864)
TRIER (I3290)	KOBLENZ (M2161)
KOBLENZ (L0516)	FULDA (N3819)
BAD KÖNIG (I2648)	WÜRZBURG (N7835)
ASCHAFFENBURG (M0154)	HEIDELBERG (M3177)
KITZINGEN (M7128).	

CHAPTER 12
MAY OPERATIONS

SECTION I - GENERAL

Third U. S. Army Headquarters, Forward Echelon "A" moved from LANGEN (L3617) to REGENSBURG (U1955) via routes 84, 643, 43, and 86, on 2 May.

Third U. S. Army Headquarters, Forward Echelon "B" moved from WOLFRATSHAUSEN (G3617) to REGENSBURG (U1955) on 3 May.

Upon notification of the cessation of hostilities in Europe the Allied Prisoner of War and Internment Camp Sub-Section reverted to direct control of the Assistant Chief of Staff, G-1. The handling of Displaced Persons and captured enemy material formerly under the supervision of the Troop Liaison Sub-Section of the Provost Marshal reverted to G-5 and G-4 Sections respectively.

SECTION II - TRAFFIC SUB-SECTION

During the period close support was given to the Corps; the rear 1/3 to 1/2 of Corps Service areas were policed by Army Battalions. It was necessary to establish six Zones of Responsibility. These Zones of Responsibility were assigned as follows: Rear areas were under the jurisdiction of the 70th Infantry Division, the 4th Infantry Division, and the 36th Anti-Aircraft Artillery Brigade. The Forward areas were controlled by the Army Military Police Battalions, namely: 503rd 512th and 795th Military Police Battalions.

As the 36th Anti-Aircraft Artillery Brigade and the 4th Infantry Division were assigned Areas of Responsibility and oriented in Military Police duties, the Army Military Police Battalions were able to rotate a portion of their personnel between rest camp and duty.

Lack of communication to the Military Police Battalions greatly hampered the Military Police operations. The only means of communication were messenger, (slow) and radio (unreliable). The contemplated use of voice radio would greatly increase the mobility and efficiency of Military Police.

The majority of the Main Supply Routes in the Army area were class B - 1½ at best, with many narrow spots and one way bridges. The road net was entirely inadequate to handle the heavy troop and supply movements although the roads were well signed and patrolled by the Military Police units.

Staff Officer Patrols were inaugurated detailing four Staff Officers daily to inspect Third U. S. Army area for any violation of traffic uniform, or civilian vehicle violation.

Liaison was established with V Corps Provost Marshal and reconnaissance was initiated preparatory to shifting the 503rd Military Police Battalion to assist the V Corps.

On 7 May, Military police patrols were dispatched to augment movement of 18,000 to 20,000 Allied prisoners of war from the MOOSBURG camp (T19) to airstrips located in INGOLSTADT (T7125), LANDSHUT (U2603) and STRAUBING (T9439).

Main convoy movements during the first eight days of May were: 97th Infantry Division; 44th Infantry Division; 5th Infantry Division; 14th Armored Division; 4th Armored Division; and III Corps (with attached units).

A Bailey bridge at REGENSBURG (U1955) was damaged by a tank retriever (crane TO load). The bridge closed for repairs and all northbound traffic was rerouted via 316 and N299 through NEUSTADT (M9337) to NEUMARKT (T7182) and NURNBERG (T4299).

SECTION III - PRISONER OF WAR SUB-SECTION

Prisoner of War Enclosure Number 22 at ERLMAUTH (U2255), three miles east of REGENSBURG (U1955) opened 2 May.

Attachment to the Third U. S. Army of the V Corps made it necessary to reopen Prisoner of War Enclosure Number 20, KULMBACH (O6574).

Letter, AG 383.6 GNMCY, Headquarters, Third U. S. Army dated 5 May 1945, subject, "Evacuation and Release of Special Classes of Prisoners of War," was published. (See annex 36).

The 243rd and 287th Field Artillery Battalions were attached for duty to the Prisoner of War Sub-Section.

Prisoner of war statistics for period 1 through 8 May were:

On hand as of 30 April	55,569
Received at Prisoner of War Enclosures	90,698
TOTAL	146,267
Evacuated	54,553
Balance on hand at Enclosures	91,714
Received at Prisoner of War Enclosures	90,698
Admitted at Third U. S. Army Hospitals	174
Taken at overrun German Military Hospitals	18,032
TOTAL handled by Third U. S. Army (See annex 40).	108,904

Accumulative total for entire period of operations, 1 August 1944 through 8 May 1945: 765,683.

For locations of Prisoner of War Installations during the period of operations see annexes 37, 38, and 39.

SECTION IV - MAINTENANCE OF LAW AND ORDER SUB-SECTION

Summary Court Number 2 was established at REGENSBURG (U1955).

Five patrol teams, each consisting of one officer and eleven enlisted men were assigned areas throughout REGENSBURG (U1955) to investigate any promiscuous firing of weapons and to arrest violators. These patrols operated from 2000 to 2400.

Delinquency reports from 1 through 8 May were:

Uniform violations	248
Away from billet or bivouac without authority	150
Fraternization	34
Drunk	13
Disorderly	11
Looting	9
Unauthorized firing of weapons	6
Pass violations	1
TOTAL	462

Summary Court cases for the period were:

	COURT NO. 1	COURT NO. 2
Double banking	25	
Pass violations	3	3
Uniform violations	2	1
Trip ticket violations	2	
Speeding	1	4
Drunk	1	
TOTAL	34	8

Nineteen stragglers were returned to their units during the period.

AWOLs apprehended during the period were:

Third U. S. Army units	7
Other units	10
TOTAL	17

Digitized by Google

For locations of Straggler Collecting Points during the period of operations see annexes 37, 38, and 39..

General prisoners were disposed of as follows:

Released to units	69
To Disciplinary Training Center	98
TOTAL	167

The following cases were completed and reports compiled and forwarded during the period 1 through 8 May:

Alleged rape	13
Rape	10
Alleged murder	2
Manslaughter	2
Murder	2
Looting	1
Alleged looting	1
Alleged rape - suicide	1
Assault with a dangerous weapon	1
Assault with intent to rape	1
Attempted rape	1
Larceny	1
Rape and sodomy	1
TOTAL	37

SECTION V - SECURITY SUB-SECTION

During the period 1 through 8 May, the Security Sub-Section, Provost Marshal Section, Third U. S. Army, was engaged in the security of the Army Command Post and in guarding Lines of Communication.

An alert squad was established by the 63lst Tank Destroyer Battalion to expedite investigation of incidents pertaining to exterior defense of the Forward Command Post. From 2000 to 2400 hours on 8 May five patrol teams each consisting of one officer and eleven enlisted men were assigned areas throughout REGENSBURG (U1935) to investigate any disturbances firing of weapons and to arrest the offenders.

Tactical guarding of thirty-one highway bridges, eight railway bridges, and eight signal installations was accomplished without incident. Guards were also furnished for the following special installations:

Airstrip, 14th Liaison Squadron.
Counter Intelligence Corps Interrogation Team, BAMBERG (C8748).
Naval Archives, TAMBACH (J04)

The following troops were used for security of the Army Command Post:

Interior security:

Company A, 503rd Military Police Battalion.
63lst Tank Destroyer Battalion.

Reserve for security of Army Command Post:

Light Tank platoon, 8th Armored Group
63lst Tank Destroyer Battalion.

The troops used in guarding Lines of Communications and signal installations were:

267th Field Artillery Battalion.
174th Field Artillery Battalion.
63lst Tank Destroyer Battalion.

On 7 May, the 267th Field Artillery Battalion was relieved from its guard responsibilities by the 38th Anti-Aircraft Artillery Brigade, and was assigned to the Prisoner of War Sub-Section. On 8 May, the 174th Field Artillery Battalion was relieved from its guard responsibilities, and assembled to await orders from the Prisoner of War Sub-Section to which they were assigned. The 8th Armored Group received orders to report to the 4th Armored Division to which they were assigned.

When Germany capitulated, the Security Lines of Communications was disbanded, and the security of the Army Command Post was assumed by the 63lst Tank Destroyer Battalion.

CHAPTER 13
LESSONS LEARNED & CONCLUSIONS

DECLASSIFIED

I. The allotment of Military Police units to the Army for operations was inadequate. It has been necessary to reinforce the Military Police units with Field Artillery Battalions and Tank Destroyer Battalions. The Prisoner of War work performed by Escort Guard Companies was continuously controlled by Field Artillery Battalions. Enough time must be devoted to the training of non-military police units on military police duty so that they may efficiently perform their duties.

II. For Military Police units to perform their missions efficiently the Table of Organization and Equipment was increased by certain excess items, namely: vehicles, 1/4 ton; radios; compasses; watches; stoves, gasoline, one burner; motorcycles; guns, sub-machine; trailers, 1/4 ton; pistols, automatic, caliber .45; telephones, field; and cars, scout.

III. For road reconnaissance, liaison type airplanes proved to be the best method for advance traffic reconnaissance and patrolling of congested areas.

IV. The enforcement of regulations is severely handicapped by the absence of uniformity in regulations promulgated by various commands within the Theater and by differences in the degree of enforcement within the Theater and by differences in the degree of enforcement within different major commands.

V. The Provost Marshal Staff Section, of Army, Corps, and Divisions should be large enough to properly supervise and control all activities for which the Provost Marshal is responsible.

VI. The closest coordination and cooperation with G-3 Troop Movements, G-4 Transportation, G-5, G-2 (Counter Intelligence) and Provost Marshals of higher and lower echelons is essential prior to and during operations.

VII. Military Police in the field require direct cooperation and support from local unit commanders and military and civil officials.

VIII. The solution of crimes, and the discovery, apprehension, and punishment of criminals requires prompt reporting of all crimes together with immediately available facts, circumstances, and the protection of evidence left at the scene of the crime. A directive to the Command pertaining to the discovery and reporting of crimes by the most expeditious means greatly assisted in the apprehension and punishment of criminals.

IX. The original system of evacuation of prisoners of war from Division Collecting Points to Army Prisoner of War Enclosures could not be maintained because of the large number of divisions, the limited number of vehicles available for evacuation, and the rapid advance of the Third U. S. Army. Corps Prisoner of War Enclosures were established at Class I Supply Point of Corps to which prisoners of war were evacuated on empty supply trucks and from which Army could evacuate.

X. Prisoner of War processing cannot efficiently be done at Army level. The rapid evacuation of prisoners of war to Communications Zone Enclosures should be the prime task.

XI. The use of a force of Mechanized Cavalry, Tank Destroyer, or similar unit is essential for the security of the Command Post.

XII. Transportation for evacuation of prisoners of war and for transporting rations and water was insufficient. Coordination and cooperation with G-4 Transportation, Ordnance, and Quartermaster Staff Sections are essential in arranging transportation for Prisoner of War evacuation.

XIII. Traffic control equipment should be at all times available at several engineer dumps. Surplus stocks of traffic control equipment should be on hand for any emergency that may arise. The issue of traffic control equipment should be controlled by Provost Marshal Section.

CIRCULAR)
: 4 May 1944
NUMBER 10)

TRAFFIC REGULATION AND CONTROL
FOR CONTINENTAL OPERATION

I. GENERAL.

1. PURPOSE:

a. To establish the responsibility for and the methods of control of road traffic on the Continent.

b. To familiarise U. S. Military personnel with the essential basic rules to be followed to meet operational traffic conditions.

c. This circular is designed to regulate movement of supplies and troops and will not be considered applicable to units in tactical formations engaged in combat operations.

2. DEFINITIONS:

a. Road Traffic: All aspects of the movement of vehicles or foot troops over roads. Its operation consists of road traffic regulations and road traffic control.

b. Road Traffic Regulations: The measures taken to assure the proper movement of road traffic as to priorities, routes, time and destination.

c. Road Traffic Control: The means taken to insure the proper movement of road traffic and to insure that it meets the operational requirements. It is effected by compliance with instructions issued, and by control agencies used by commands within their areas.

d. Main Route: A principal supply or tactical route running generally from the rear forward, designated by the senior commander ashore. It will be marked by a black arrow on white disc.

e. Lateral Route: A principal supply or tactical route, running generally parallel to the front, designated by the senior commander ashore. It will be marked by a black arrow with bar at base of shaft on a white disc.

f. Thru Route: A route normally running through two or more sub-areas of an area, designated by the commander of the latter for the purpose of placing under his own direct command the regulation and control of road traffic thereon. Such routes when designated by the senior commander ashore will be selected from Main or Lateral Routes.

3. BASIC PRINCIPALS:

a. Command Responsibilities: Each Corps and Division Commander will be responsible for the designation, marking, maintenance and control of roads within his area in conformity with the plan of the next higher commander.

b. Organization: To accomplish this traffic control, the headquarters of each division or larger tactical unit will institute, within current T/O, a Traffic Headquarters under supervision of G-4 or a comparable staff section. Its duties will be to prepare Road Traffic Control Plan, to regulate and control Traffic through a central agency, and will include:

(1) Receipt, correlation, and dissemination of road traffic information.

(2) Formulation and publication of road traffic rules.

(3) Supervision and control of Road Traffic Regulating and Road Traffic Control Installations.

(4) Coordination of movement originating in its area with the Traffic Headquarters of other area(s) into which such moves will continue.

II. ROAD TRAFFIC REGULATIONS.

1. ROUTES: Main, lateral, and Thru Routes will be designated by Traffic Headquarters, marked by Provost Marshals and maintained by Engineers within Army, Corps, and Division areas respectively.

2. PRIORITIES:

a. The following priorities will be accorded traffic in the Army Area unless otherwise directed:

(1) Messenger Cars.
(2) Troop movement.
(3) Ambulances.
(4) Staff Cars.
(5) Bire Construction crews.
(6) Supply convoys in this priority: V, III, I.
(7) All other traffic.

b. Area commanders may designate special vehicles to be exempt from the above priorities and such exceptions will be in conformity with higher Headquarters approval and will be specifically marked. For Signal Corps vehicles so exempted, the vehicle will be designated by rectangular markings painted or mounted on the right front and right rear. Such markings will be 9½" long by 6½" wide, painted horizontally blue and white, the upper half being white and the lower half blue. Also, such messenger personnel will wear 4" wide brassards above left elbow, the upper half being white, the lower half blue.

c. For exceptional tactical reasons, units may be moved with priority over all roads with written authority and adequate MP escort. All traffic control agencies to be immediately informed of such priority exception.

3. LIGHTS:

a. Army Light Line: Blackout Markers ("Cat Eye") lights will be used forward of a line designated by Army. In rear of this line, Blackout Driving Lamps ("Dim-out" lights) will be used except during air-raic alerts.

b. Corps and Divisions: Corps and Division Commanders will prescribe such additional restrictions within their respective areas as the tactical situation requires.

4. SPEEDS: The following speed limits will be observed except under those circumstances where operational traffic conditions or exceptional tactical situations dictate otherwise.

a. Daylight: The leading vehicle of a convoy will not exceed 25 MPH on highway outside of cities and 15 MPH in cities or towns. Single vehicles will not exceed 35 MPH on highways and 15 MPH through towns.

b. Night: The leading vehicle of a convoy will not exceed 15 MPH on open highway and 10 MPH through towns. Single vehicles will not exceed 20 MPH on highway and 12 MPH through towns. All night driving to conform to conditions of roads and lights and not to exceed their maximums.

5. DENSITY: The following vehicle density will be standard, except where modified by a commander to meet the requirements of a special tactical situation:

a. March unit will not exceed 30 vehicles.

b. Serial will not exceed 5 march units.

c. Serials and units will conform to road time allotted them and will maintain approximately 75 yards between vehicles and a time interval of 3 minutes between units and 6 minutes between serials.

d. All traffic on the Continent will drive on the right hand side.

e. Nothing in these instructions will be construed as relieving convoy commander of his responsibility for proper convoy discipline and unit control.

III. ROAD TRAFFIC CONTROL.

1. CLASSIFICATION AND MARKING:

a. The British road, bridge and vehicle classifications and marking system will be used. Under this system, a vehicle may cross only bridges bearing classification numbers which are the same or greater than the vehicle's classification.

b. The British type road traffic sign will be used in accordance with Circular 24, ETOUSA, 12 March 1944, in lieu of that prescribed in FM 29-5 and FM 101-15. Pertinent details are displayed on Instructional Chart for Control of Road Movement.

IV. CONVOY

1. CLEARANCE:

a. All convoys of 10 or more vehicles will request clearance through Traffic Headquarters of convoy origin as soon as the necessity for the move is determined.

b. Request for clearance will include the following information:

(1) Headquarters requiring clearance.
(2) Name of Convoy Commander.
(3) Unit to move.
(4) Authority to move.
(5) Total number of vehicles.
(6) Total number of March units.
(7) Total number of Serials.
(8) Heaviest type vehicle in column.
(9) Present location of Unit.
(10) Destination.
(11) Time and date movement desired.
(12) Route desired.

2. CONVOY COMMANDER:

a. The Convoy Commander will be responsible that:

(1) The movement number of the convoy is clearly marked on the front and rear of the lead vehicle of each March unit.

(2) The lead vehicle of the convoy (not to include Convoy Commander's vehicle), or of each column, if convoy is moving in more than one column, is marked with a blue flag and the tail vehicle with a green flag, or if at night, with blue and green lights.

(3) All drivers are informed of the convoy number, the destination, and the route to be followed.

(4) While at the halt that march interval is maintained, that vehicles are moved to the right of the road, using due precaution in mined areas, and that assistant drivers or drivers are stationed in such manner as to assist passing traffic by appropriate signals.

(5) Disabled vehicles are moved off the road and that an attendant is posted to guard the vehicle and assist all traffic past the vehicle. He will report to the nearest traffic control point or Military Police the location of the disabled vehicle and any other obstruction or road damage, which requires attention.

b. A representative of the convoy commander will precede the convoy by at least ten (10) minutes to coordinate with Traffic Control points enroute.

3. PASSING: A convoy will not normally pass a preceding convoy unless same is at the halt. at all times, passing will be accomplished only on proper clearance from the commander of the convoy being overtaken. Every assistance, by appropriate signals, will be given command and staff cars and single vehicles in passing.

4. MILITARY POLICE: The Provost Marshal, within the Army, Corps, and Division areas, will insure that adequate sign posting is made and maintained and will enforce traffic regulations for both civilian and military traffic by maintaining Traffic Control Points, road patrols, and providing convoy escorts when necessary.

APO 403

OPERATIONS MEMORANDUM: 3 June 1944

NUMBER 10:

TRAFFIC CONTROL SIGNS

1. TRAFFIC SIGNS.

a. Traffic Sign -- A device mounted on a fixed or portable support, whereby notice is given in the form of words or symbols for the purpose of regulating, warning or guiding traffic.

b. There are three main categories of traffic signs:

(1) Regulatory - Stop, Speed, Movement, Parking, etc.

(2) Warning - Slow, Caution, Railroads, etc.

(3) Guide - Routes, Destination, Location, Information.

c. All such signs can be made from the British Traffic Control equipment issued to each Military Police unit in the U. K. Regulatory and Warning signs may be painted on Franco tank signs. Guide signs for routes are furnished, the black arrow on white disc for main routes, the black arrow with bar on tail on white disc for lateral routes and white arrow on red disc for diversions (detours). For local routes other than main routes a sign may be improvised, a red arrow on a white square. The bottom of a four (4) gallon oil or gasoline tin may be used for this purpose.

2. POSTING SIGNS.

a. In posting roads with guide signs, locations and distances will be shown, viz: "Cannes - 5 miles" with an arrow pointing the directions. These signs can be painted on Franco signs. The entrance to towns, villages and cities will also be posted with Franco signs such as "Entering Cannes". Such signs will materially help convoy commanders and drivers in orienting their units and maintaining schedules.

3. TRAFFIC LAMPS.

a. The Traffic Lamp will be used at night to illuminate essential signs at road junctions, route turns and at other points where traffic may go astray.

4. TRAINING.

a. The proper posting of roads and installations is essential to good traffic control and Military Police units will be trained in this work. Problems for each unit down to and including Divisional Military Police platoons will be used by Provost Marshals to train the unit in the use of signs for posting roads. Tests will be given while in the U.K. to insure proper functioning of units when they arrive on the Continent.

PROVOST MARSHAL SECTION

1. The Provost Marshal Section is announced as a Special Staff Section, this Headquarters. This Section will coordinate with Provost Marshal Sections of Corps and Divisions in Military Police matters; traffic control, maintenance of law and order, control and disposition of military prisoners of war, displaced and liberated persons, refugees and civilians, collection and disposition of stragglers, coordination with Civil Affairs in matters pertaining to control of the civil population, and criminal investigation.

2. Each General and Special Staff Section will maintain the same relationship and will perform the same type of function with respect to the Provost Marshal Section as with any other staff section.

3. Direct communication between Provost Marshals of Corps and Divisions and the Provost Marshal, this headquarters, is authorized on the above matters.

SUBJECT: Provost Marshal Planning Conference.

TO : See Distribution.

1. A Provost Marshal Planning Conference will be held at this headquarters on 13 June 1944. This conference will be devoted to a full discussion of Provost Marshal and Military Police functions during the forthcoming operations.

2. Corps and Division Commanding Officers will issue necessary travel orders for attendance of the following officers of their commands at this conference.

a. Provost Marshal, each Corps
b. Provost Marshal, each Division.
c. Commanding Officer, each Military Police Company (Corps) and attached company.

3. The commanding officers of the Military Police Battalions (Army) will issue travel orders for their own attendance.

4. Subjects to be discussed at the conference will include the following:

Provost Marshal Functions
Traffic Control
Prisoners of War and Refugees
Military Police Relations with Civil Affairs.
Maintenance of Law and Order
Straggler lines--location and operation
Investigation.

5. Officers will report not later than 1200, on 12 June 1944 to Lt. Col. DILLON, Building 21, Toft Camp, in order that assignment to billets and other details may be completed prior to this conference.

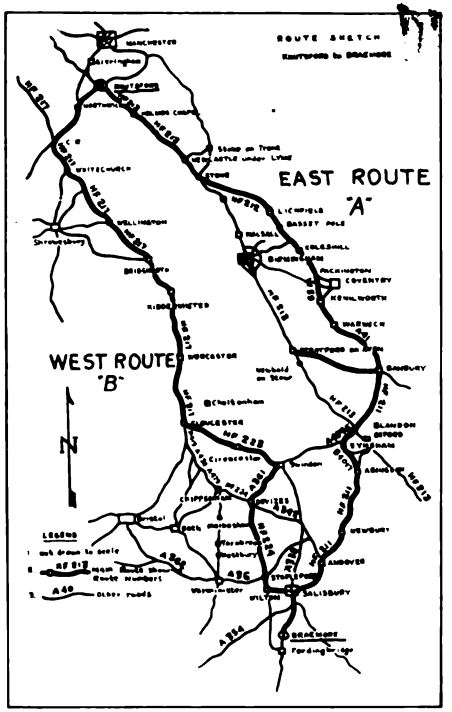
ANNEX NO. 7

HEADQUARTERS
THIRD UNITED STATES ARMY
APO 403



CIRCULAR) 26 July 1944
:
NUMBER 37)

PRISONERS OF WAR

1. The Provost Marshal sections in army, corps and division are responsible for the handling, processing and disposing of prisoners of war within their areas.

2. Three considerations for the treatment of Prisoners of War must be kept in mind constantly: (1) the valuable information that can be extracted, (2) the Geneva Convention, and (3) the possibility of mutiny or escape. Rank, property and other rights of prisoners will be respected. In exchange for courtesies to prisoners a strict performance

ANNEX NO. 6

of their own style of courtesies will be exacted. Sight-seers will be kept away. Familiarity (including trade) will be forbidden. All prisoners require a certain amount of guard, administration, segregation, inspection, passive defense, water, messing, shelter, clothing, transport, fire prevention, sanitation, medical care, roll-call and discipline.

3. In forward areas, (battalion, regiment, or division), the prisoners will be tagged, using WD PMG Form #1, revised. Only a head-count is required. It is during this phase of capture, however that prisoners are capable of producing the maximum of tactical intelligence. Of Particular importance is the necessity for immediate search and segregation of Officer, NCO's and other ranks prior to authorized interrogation. Until searched, prisoners must be prevented from organizing, lecturing each other, or mutilating documents.

4. In rear areas, (army or corps), searching and segregation of prisoners will be completed. Subsequent to the completion of searching, the prisoner's effects will be promptly impounded, confiscated or returned to the prisoner. (See Annex 1 "Sample Search In-[illegible] will be informed without delay of the capture of:

(1) [illegible]sers of the rank of Colonel or above.
(2) [illegible]mseographed plan of action, maps, overlays, orders or reports.
(3) Any other unusual source of intelligence.

Segregation will thereafter remain inviolate between:

(1) Officers.
(2) NCO's, including "Unterofficier".
(3) Other ranks, including "Gefreiter".
(4) Females.
(5) Special prisoners.
(6) Deserters.
(7) Others.

5. The handling of prisoners, including escorting them in movement and processing them at an enclosure, will probably require the use of personnel of combat units to be designated on short notice. Military Police, when available, will assist. All concerned will insure that disarmed prisoners are protected from acts of violence, and that property of prisoners is protected from petty larceny for "vengeance" or "souvenirs". Prisoners will not receive wages for administration, installation and maintenance of enclosures, tending wounded, or services of a similar nature. During the processing of prisoners a "nominal roll" will be prepared for each segregated group, (referred to in Par. 4), and for each rank of commissioned officers, each roll to be in alphabetical order, and sub-divided into groups of fifty (50) names. Each line of the roll will indicate from left to right:

(1) Name
(2) Rank.
(3) Nationality
(4) Serial number
(5) Date of capture
(6) Place of capture
(7) Notation showing whether or not an impounded bag or envelope is in the custody of the escorting guard.

6. Forms. WD-PMG Form No. 1 (white cloth tag), if available, will be attached to each prisoner. This tag is presently in use in Third U.S. Army Area by Corps and Divisions. Time permitting, the tag will show the following essential information:

(1) Name
(2) Rank
(3) Nationality.
(4) Serial number
(5) Notation showing whether or not an impounded bag or envelope is in the custody of the escorting guard.

WD-PMG Form No. 4, (pink "Card of Capture" in duplicate), will be used only when prisoners are detained for one week or longer for the purpose of labor or any other reason. By the time prisoners reach Army, or a higher echelon, the following two (2) basic records will have been completed:

(1) The nominal roll, (referred to in Par. 5).
(2) The record showing the grand total of prisoners of war to date arriving through all channels, including medical.

Report will be submitted to the Army Provost Marshal by each Division and Corps Provost Marshal as of 2359 B Hrs. each Saturday, and will include the following information covering the preceding week:

(1) Number of prisoners of war on hand as shown in preceding report.
(2) Number of prisoners of war captured during the preceding week.
(3) Number of prisoners of war gained, other than captured, indicating source.
(4) Number of prisoners of war lost, indicating cause.
(5) Balance of prisoners of war on hand.

Report will also specify:

(1) Number of military personnel
(2) Civilian Personnel
(3) Spies.
(4) [illegible] criminals

DECLASSIFIED

Digitized by Google

(5) Sick
(6) Wounded.

(See Annex 2 "Prisoners of War Report").

7. Special cases. On request of G-2, certain selected prisoners of war may be specially escorted to a higher echelon, by ground or air transportation, or detained. Sick and wounded prisoners of war in the hands of Medical Corps personnel will be reported to the most convenient S-2, report to be accompanied by captured documents, prisoners statements of military value, and an estimate of his availability for interrogation. German Air Force or Naval prisoners will be interrogated only by personnel authorized from U.S. and/or Royal Air Forces or U.S. or Royal Navy, respectively. Any enemy aircraft crashing in the area of or coming under control of Third U.S. Army will be guarded on a 24 hour basis, by the unit discovering the aircraft to prevent all personnel except authorized intelligence personnel of U.S. and/or Royal Air Force from touching the aircraft. Prisoners of War suspected of espionage will be promptly turned over to G-2 accompanied by any captured material. The capture, and all other facts incident thereto, of such prisoners will be classified SECRET. Allied escapees or evadors from enemy captivity will be turned over to the Provost Marshal for evacuation following interrogation locally by the "E & E" Section of G-2. Accused war criminals will be accompanied by a written statement of a U.S. Army Officer, specifying the details, upon commitment.

By command of Lieutenant General PATTON:

HUGH J. GAFFEY
Major General, U.S. Army
Chief of Staff

OFFICIAL:

R. E. CUMMINGS,

(Sample Searching Instructions)

INSTRUCTIONS FOR PERSONNEL IN CHARGE OF SEARCH TABLES

TABLE LETTER: _____

Articles to be examined and handed back to prisoner of war:

1. Gold and other valuables; watches, rings, cigarette cases, lucky trinkets, fountain pens, gold or silver pencils, and other personal articles of a similar nature having intrinsic or personal value.

2. Medals, decorations or certificates of name and identity discs.

3. Toilet requisites EXCEPT razors, manicure sets or scissors, etc.

4. Cigarettes, cigars or tobacco.

5. Gas masks.

6. Pay books.

Articles to be taken away from prisoner of war as "Of Military Value", by receipt given.

1. Firearms or weapons of any kind including files, saws, hammers, etc.

2. All mechanical spare parts of any kind.

3. All military equipment including belts, webbing, haversacks, water bottles and all aluminum.

4. Blankets, bedding, civilian clothes and suitcases.

5. Preserved foods of all kinds.

6. Matches or forms of spirit or alcohol.

7. All unused paper or writing paper and empty notebooks.

8. Inks of any kind.

9. Medical drugs and stores.

NOTE: Numbers 1, 2, 3, 5, 7, and 9 MUST be placed in separate receptacles in rear of search tables.

Articles to be placed in lensumied bag:

1. Maps or military documents. Printed or written.

2. All publications acquired before or after capture.

3. Visiting cards, odd names and addresses scribbled on scraps of paper.

4. All written or printed materials including letters or postcards, diaries, notebooks, photographs, etc.

5. Cameras, compasses, binoculars or any other form of precision instrument.

6. Cigarette lighters.

7. Knives, scissors, straight razors and manicure sets.

8. Currency of all kinds. (Receipt will be given).

SECTION I - Enlisted Passes.
SECTION II - Vehicle Corrals.

EXTRACT EXTRACT

I. ENLISTED PASSES.

Enlisted men of the Third Army will be apprehended and turned over to Straggler Collecting Points unless they occupy status as follows:

a. On duty.

b. In Bivouac Area.

c. On written pass. Passes will not be issued to enlisted men to visit towns or cities which are off limits.

II. VEHICLE CORRALS.

1. Vehicle Corrals will be established at once under the supervision of the Army Provost Marshal for the detention of violators of traffic rules and regulations. Vehicles and drivers impounded in "Vehicle Corrals" will be held from one (1) to twelve (12) hours for booking, and to remove from the highways those vehicles and drivers constituting a menace to the controlled flow of traffic.

2. The following violations will warrant detention in "Vehicle Corrals": Speeding, double-banking, light violations, reckless driving, driving while under the influence of intoxicating liquors, failure to maintain the prescribed 80 yard distance between vehicles when moving or at a halt, disobedience of Military Police traffic directions, and any of the following vehicles passing any other moving vehicle or halted convoy, except by direction of Military Police:

Trucks, 3/4-ton weapons carriers
Trucks, 1-1/2-ton cargo
Trucks, 2-1/2-ton cargo
All other wheeled or track vehicles over 3/4-ton capacity.

SECTION II - Traffic Regulations.

II. Traffic Regulations.

The following traffic regulations in addition to the provisions of Circular No. 10, this headquarters, dated 4 May 1944 are effective and will be strictly enforced in order to insure the uninterrupted flow and efficient control of road traffic on the continent.

1. a. The following speed limits will be obeyed during daylight hours:

(1) 25 MPH: All convoys.

(2) 30 MPH: All individual trucks (including 3/4 ton weapons carriers and over, wheeled or track).

(3) 40 MPH: Passenger cars, 1/4 ton trucks (jeeps) and trucks 3/4 ton C & R (jeeps), and motorcycles.

(4) In towns and cities all vehicles not to exceed 25 MPH.

b. The following speed limits will be obeyed during darkness

(1) 15 MPH: All wheeled and track vehicles including 3/4 ton weapons carriers and over and all convoys.

(2) 30 MPH: Passenger cars, trucks, 1/4 ton (jeeps), trucks 3/4 ton C & R (jeeps), and motorcycles.

2. Up to Corps rear boundaries blackout driving lamps, American or British type, will be used.

a. Vehicles equipped with only one approved blackout driving lamp will prepare the other headlight lens in the approved manner i.e.: lens to be painted black and a rectangular aperture two inches wide and three-eighths of an inch high, its base line will be two inches below and parallel to a horizontal line through the center of the lens.

b. Signs indicating end of Army Dimout Light Zone will be posted on all main routes by the Army Provost Marshal.

c. Forward of Corps rear boundaries "CAT EYES" lights only will be used by all vehicles.

d. Red light "Flashers" on special vehicles are authorized in addition to the above.

3. Rear vision mirrors will be so adjusted habitually as to be useable in watching for traffic approaching from the rear.

4. a. Directional discs, white with black arrow painted toward twelve o'clock indicate main routes forward to the front.

b. Directional discs, white with black arrow and bar perpendicular to the base of the shaft indicate lateral routes.

c. Directional discs, white with black arrow painted toward six o'clock indicate main down routes to the rear areas.

d. Directional discs, red with white arrows indicate detours from main or lateral routes.

e. Directional discs or equivalent, white with red arrow indicate local routes.

5. France plates, metal or wooden material, 15" x 17" or 17" x 30", with white letters on black background will be used for unit, installation or route signs, except Medical Corps signs which will be red on white background. No other size, type or colored signs will be used except as authorized by the Army Commander.

6. a. Trucks, 1/4 ton (jeeps) will not be overloaded. Not more than four persons will be carried except in operational emergencies at or near the front lines.

b. Drivers will not smoke while driving.

7. The tops on trucks, 1/4 ton (jeeps) and trucks, 3/4 ton C & R (jeeps) will be down at all times except during heavy rains.

8. Civilians will not be carried in U.S. Military vehicles except as indicated hereinafter; Counter Intelligence Corps personnel, Military Police, and Civil Affairs personnel are authorized to carry civilian personnel when necessary on official business.

9. On military highways voluntary halting, stopping or parking for any purpose is forbidden unless all wheels of the vehicle are clear of the normally travelled road surface.

10. Disabled vehicles will be towed or pushed off the road surface immediately.

11. Double banking of halted vehicles or moving vehicles on a highway by 3/4 ton weapons carriers and all other heavier wheeled or track vehicles is forbidden at any time.

12. Motorcycles, passenger cars, trucks, 1/4 ton (jeeps) and trucks, 3/4 ton C & R (jeeps) may pass other halted or moving vehicles on a highway provided there is a 40 yard gap into which the passing vehicle may rejoin the traffic column.

13. a. All vehicles in convoys will habitually maintain 40 yards distance from the vehicle ahead, both, while moving and at a halt. Vehicles authorized to overtake will do so only where there is a full 40 yard gap available ahead.

b. Convoy or individual vehicles will maintain the 40 yards distance between vehicles when entering towns or cities or approaching heavy traffic intersections.

14. All officers will assume the responsibility for apprehending violators of the above regulations and conducting them to the nearest military police post or "Vehicle Corral".

15. "Vehicle Corrals" will be established by Military Police at convenient points along traffic lanes for the detention and booking of traffic violators.

CIRCULAR)
: 4 October 1944
NUMBER 63)

TRAFFIC REGULATION AND CONTROL
FOR CONTINENTAL OPERATION

I. This circular supersedes the provisions of Circular 10, current series, this headquarters, dated 4 May 1944.

II. GENERAL

1. PURPOSE:

a. To establish the responsibility for and the method of control of road traffic in the Army Area.

b. To familiarize U.S. Military personnel with the essential basic rules to be followed to meet operational traffic conditions.

c. This circular is designed to regulate movement of supplies and troops and will not be considered applicable to units in tactical formations engaged in combat operations.

2. DEFINITIONS:

a. Road Traffic: All aspects of the movement of vehicles or foot troops over roads. Its operation consists of road traffic regulations and road traffic control.

b. Road Traffic Regulations: The measures taken to assure the proper movement of road traffic as to priorities, routes, time and destination.

c. Road Traffic Control: The means taken to insure the proper movement of road traffic and to insure that it meets the operational requirements. It is effected by compliance with instructions issued, and by control agencies used by commands within their areas.

d. Main Route: A principal supply or tactical route running generally from the rear forward, designated by the senior commander.

(1) Directional discs, white with black arrow pointed toward twelve o'clock will be used to indicate main routes forward to the front.

(2) Directional discs, white with black arrow pointed toward six o'clock will be used to indicate main down routes to the rear areas.

e. Lateral Route: A principal supply or tactical route running generally parallel to the front, designated by the senior commander. Directional discs, white with black arrow and bar perpendicular to the base of the shaft will be used to indicate lateral routes.

f. Detours: Directional discs, red with white arrow will be used to indicate detours from main or lateral routes.

g. Local Routes: Directional discs, or equivalent, white with red arrow will be used to indicate local routes.

h. Through Route: A route normally running through two or more sub-areas of an area, designated by the commander of the latter for the purpose of placing under his own direct command the regulation and control of road traffic thereon. Such routes when designated by the senior commander will be selected from Main or Lateral Routes.

3. BASIC PRINCIPLES:

a. Command Responsibilities: Each Corps and Division Commander will be responsible for the designation, marking, maintenance and control of roads within his area in conformity with the plan of the next higher commander.

b. Organization: To accomplish this traffic control, the headquarters of each division or larger tactical unit will institute, within current T/O, a traffic headquarters under supervision of G-4 or a comparable staff section. Its duties will be to prepare Road Traffic Control Plan, to regulate and control traffic through a central agency, and will include:

(1) Receipt, correlation, and dissemination of road traffic information.

(2) Formulation and publication of road traffic rules.

(3) Supervision and control of Road Traffic Regulating.

(4) Coordination of movements originating in its area with the Traffic Headquarters of other area(s) into which such movements will continue.

III. ROAD TRAFFIC REGULATIONS:

1. ROUTES: Main, Lateral, and Through Routes will be designated by Traffic Headquarters, signed by Provost Marshals and maintained by Engineers within Army, Corps, and Division Areas respectively.

2. PRIORITIES:

a. The following priorities will be accorded traffic in the Army Area unless otherwise directed:

(1) Priority cars so marked (General Officers' vehicles)
(2) Messenger Cars
(3) Troop Movement
(4) Ambulances
(5) Staff Cars
(6) Wire construction crews
(7) Supply convoys in this priority: V, III, I.
(8) All other traffic.

b. Area commanders may designate special vehicles to be exempt from the above priorities and such exceptions will be in conformity with higher headquarters approval and will be specifically marked. For Signal Corps vehicles so exempted, the vehicle will be designated by demountable rectangular markings mounted on the right front and right rear bumpers. Such markings will be 9½" long by 6½" wide, painted horizontally blue and white, the upper half being white and the lower half blue. Also, such messenger personnel will wear 4" wide brassards above left elbow, the upper half being white, the lower half blue.

c. For exceptional tactical reasons, units may be moved with priority over all roads with written authority and adequate MP escorts, all traffic control agencies to be immediately informed of such priority exception.

3. LIGHTS:

a. Army Light Line coincides with Corps rear boundary.

b. Vehicle lights will be used as follows:

(1) Full headlights in rear of Army Light Line.

(2) Blackout driving lamps (dimout) for vehicles so equipped from Army Light Line to Division rear boundary.

(3) For vehicles not equipped with blackout driving lamps (dimouts), marker ("CAT EYES") lights from Army Light Line to Division rear boundary.

(4) Marker ("CAT EYES") lights for all vehicles in front of Division rear boundary.

(5) Red Light "Flashers" on special vehicles are authorized in addition to the above.

c. All obstacles such as trophies, gun cons, camouflage nets, signs, etc., will be removed from the front and rear of vehicles where they obstruct the full benefits of the head and tail lights.

4. SPEEDS: The following speed limits will be observed except under those circumstances where operational traffic conditions or exceptional tactical situations dictate otherwise.

a. Daylight:

Digitized by Google

(1) 25 MPH: All convoys
(2) 30 MPH: All individual trucks (including 3/4 ton weapons carriers and over, wheeled or tracked).
(3) 40 MPH: Passenger cars, 1/4 ton trucks, and trucks 3/4 ton C & R, and motorcycles.
(4) In towns and cities no vehicle to exceed 25 MPH.

b. Night (blackout)
(1) 15 MPH: All wheeled and tracked vehicles including 3/4 ton weapons carriers and over, and all convoys.
(2) 30 MPH: Passenger cars, 1/4 ton trucks, and trucks 3/4 ton C & R, and motorcycles.
(3) At night, with standard headlights daylight speed limits will prevail behind Army light lines.

3. DENSITY: The following vehicle density will be standard except where notified by a commander to meet the requirements of a special tactical situation:

a. March unit will not exceed 30 vehicles.

b. Serial will not exceed 5 march units.

c. Serials and units will conform to road time alloted them and will maintain 50 yards between vehicles at all times, and a time interval of 3 minutes between march units and 6 minutes between serials.

d. All traffic on the Continent will drive on the right hand side.

e. Nothing in these instructions will be construed as relieving a convoy commander of his responsibility for proper convoy discipline and unit control.

IV. ROAD TRAFFIC CONTROL:

1. CLASSIFICATION AND MARKINGS:

a. The British road, bridge and vehicle classification and marking system will be used. Under this system, a vehicle may cross only bridges bearing classification numbers which are the same or greater than the vehicle's classification.

b. (1) Frame plates, metal or wooden material, 15" x 17" or 17" x 20", with white letters on black background will be used for unit, installation or route signs. No other size, type, or colored signs will be used except Medical Corps signs as prescribed in Letter, Headquarters Third United States Army, AG 615 GNMCH-4, dated 16 June 1944, subject: Signs for Medical Units, and as authorized by the Army Commander.

(2) For location of administrative and tactical Headquarters of Command Posts: Unit insignia for Army, Corps and Division; unit designations for other units. Telephone code names will not be used.

V. CONVOYS:

1. CLEARANCE:

a. Entry into Third Army Area - All units or detachments (American or Allied) will secure permission from Army Headquarters prior to entering Third Army Area.

b. All convoys of 10 or more vehicles will secure clearance through Traffic Headquarters of convoy origin as soon as the necessity for the move is determined.

c. Request for clearance will include the following information:

(1) Headquarters requiring clearance.
(2) Name of Convoy Commander.
(3) Unit to move.
(4) Authority to move.
(5) Total number of vehicles.
(6) Total number of march units.
(7) Total number of serials.
(8) Heaviest type vehicle in column.
(9) Present location of unit.
(10) Destination.
(11) Time and date movement desired.
(12) Route desired.

d. Unauthorized convoys will be halted by military [illegible] and will not be allowed to proceed until clearance is obtained.

2. CONVOY COMMANDER.

a. The convoy commander will be responsible that:

(1) The convoy commander will ride in that position in his convoy that will insure close supervision of his convoy at all times.

(2) The movement number of the convoy is clearly marked on the front and rear of the lead vehicle of each march unit.

(3) The lead vehicle of the convoy (not to include Convoy Commanders vehicles) or of each column, if convoy is moving in more than one column, is marked with a blue flag and the tail vehicle with a green flag, or if at night, with blue and green lights.

(4) All drivers are informed of the convoy number, destination, and the route to be followed. A strip map of the route will be furnished each driver when practicable, and, if in cases not practicable, the route numbers and principal towns along the designated route.

(5) While at the halt that march interval (60 yds) is maintained; that vehicles are moved to the right of (and off) the normally travelled surface of the road, using due precaution in mined areas, and that assistant drivers or drivers are stationed in such manner as to assist passing traffic by appropriate signals.

(6) Disabled vehicles are moved off the road and that an attendant is posted to guard the vehicle and assist all traffic past the vehicle. He will report to the nearest traffic control post or Military Police the location of the disabled vehicle and any other obstruction or road damage which requires attention.

b. A representative of the convoy commander will precede the convoy by at least ten minutes to coordinate with the Traffic Control points enroute.

3. PASSING: All vehicles in convoys will habitually maintain 50 yards distance from the vehicle ahead, both, while moving and at a halt. Vehicles authorized to overtake will do so only where there is a full 50 yard gap available ahead.

VI. RESTRICTIONS:

1. The tops on trucks, 1/4 ton, and trucks, 3/4 ton C & R, will be down at all times except during heavy rains.

2. Civilians will not be carried in U. S. military vehicles except as indicated hereinafter: Counter-Intelligence Corps personnel, Military Police, and Civil Affairs personnel are authorized to carry civilian personnel when necessary on official business.

3. Drivers will not smoke while driving.

4. Trucks, 1/4 ton, will not carry more than four persons except in operational emergencies at or near the front lines.

5. Not more than one person beside the driver will ride in the cabs or front seats of any vehicles.

6. Halting of vehicles:

a. On military highways voluntary halting, stopping, or parking for any purpose is forbidden unless all wheels of the vehicle are clear of the normally travelled road surface.

b. Disabled vehicles will be towed or pushed off the road surface immediately.

c. Double banking of halted vehicles or moving vehicles on highways by 3/4 ton weapons carriers and all other heavier wheeled or tracked vehicles is forbidden at any time.

d. The halting of vehicles on military highways in towns is forbidden.

7. Motorcycles, passenger cars, trucks 1/4 ton, and trucks 3/4 ton C & R, may pass other halted or moving vehicles on a highway provided there is a 50 yard gap into which the passing vehicle may rejoin the traffic column.

8. All individual vehicles, as well as convoys, will maintain the 50 yard distance between vehicles when entering towns or cities or approaching heavy traffic intersections.

9. Rear vision mirrors will be so adjusted as to be useable in watching for traffic approaching from the rear.

10. Officers will not drive military vehicles unless:

[illegible] driver is taken sick, is injured, wounded, killed or [illegible] (during trip).

b. In case of fire.

c. In case of attack (including riots, etc.).

d. In any case of life or death.

e. In any special case, when directed in writing by the Unit or Installation Commander where the need is urgent, and is for the good of the Government. This will in no case be used as an excuse for an officer to drive for personal satisfaction.

11. Vehicles will not be left unattended unless under immediate surveillance of guards or in authorized guarded parking lots.

12. U. S. Military vehicles will not be immobilized by the removal of rotors or other vital parts by military or civilian personnel.

13. All officers will assume the responsibility for apprehending violators of the above regulations and conducting them to the nearest military police post, "Vehicle Corral," or Summary Court.

14. Vehicle Corrals:

a. Vehicle Corrals will be established at once under the supervision of the Army Provost Marshal for the detention of violators of traffic rules and regulations. Vehicles and drivers impounded in "Vehicle Corrals" will be held from one (1) to twelve (12) hours for booking, and to remove from the highways those vehicles and drivers constituting a menace to the controlled flow of traffic.

b. The following violations will warrant detention in Vehicle Corrals: speeding, double-banking, light violations, reckless driving, driving while under the influence of intoxicating liquors, failure to maintain the prescribed 50 yard distance between vehicles when moving or at a halt, disobedience of Military Police traffic directions, and any of the following vehicles passing any other moving vehicle or halted convoy, except by direction of Military Police:

Trucks, 3/4 ton weapons carriers
Trucks, 1-1/2 ton cargo
Trucks, 2-1/2 ton cargo
All other wheeled or tracked vehicles over 3/4 ton capacity.

15. Summary Courts: Summary Courts will be established under the supervision of the Army Provost Marshal to bring swift justice and immediate punishment to traffic violators and other offenders. These courts will be moved to critical points as required, and will be set up and try offenders on the spot. Offenses beyond the jurisdiction of the courts will be investigated and referred to appropriate commander for necessary action.

By command of Lieutenant General PATTON:

HUGH J. GAFFEY

AG 383.6 GNRST 14 November 1944

SUBJECT: Detention of Prisoners of War by Forward Units.

TO : See Distribution.

1. It has been brought to the attention of this headquarters that forward elements are retaining captured enemy personnel for labor purposes within their units.

2. In many instances these prisoners of war are from key enemy units, and such valuable intelligence information is lost by their retention.

3. All prisoners of war, in accordance with existing policy, will be evacuated to the Corps Collecting Point immediately upon capture.

4. Attention is directed to the following publications prohibiting the working of prisoners of war anywhere within twelve miles of the nearest enemy frontline:

a. Letter, SHAEF, AG 383.6-3 GAP-AGM, dated 11 April 1944, subject: "Employment of Prisoners of War."

b. Letter, Headquarters ETOUSA, AG 383.6 OpOA, dated 21 September 1944, subject: "Prisoner of War Labor."

c. Annex Number 19 to TUSA Outline Plan, Operation Overlord, Provost Marshal Plan, dated 11 May 1944.

APO 403

AG 250.1 GNRST 25 November 1944

SUBJECT: Reporting of Crimes, Offenses and Serious Incidents.

TO : See Distribution.

1. Corps and Division Commanders will submit to the Army Provost Marshal, this headquarters, not later than the third day of each month, a summary showing the number of crimes, offenses and serious incidents, by classification, as listed below, occurring during the preceding month in their respective areas. Non-Division and non-Corps units under immediate control of this headquarters will submit report directly to the Army Provost Marshal.

a. Theft of U. S. Government property, including vehicles, subsistence stores, firearms, ammunition, drugs, etc.

b. Disorders or incidents of physical violence between U. S. troops, Allied and U. S. troops, and/or civilians.

c. U. S. Army motor vehicle accidents involving death or serious injury.

d. Any other serious incident involving U. S. military personnel with civilian or military personnel.

e. Escape from custody or confinement by U. S. military prisoners.

f. Murder.

g. Sodomy.

h. Rape.

i. Arson.

j. Burglary.

k. Housebreaking.

l. Forgery.

m. Larceny (where the value is more than $50.00).

n. Robbery.

o. Manslaughter.

p. Mayhem.

2. In addition to the above a brief description of the crime or incident charged or suspected will be reported and will include:

a. Name, rank, serial number and organization of offender.

b. Crime charged or suspected, or a brief description of the incident being reported.

c. Name(s) and description of the victim(s).

d. Time, date, and place of the offense or incident being reported.

e. Action taken.

APO 403

CIRCULAR)
NUMBER 2)

4 January 1945

MILITARY CONTROL OF THE CITY OF LUXEMBOURG AND VICINITY

1. By direction of the Commanding General, Twelfth Army Group, the Commanding General, Third U. S. Army, assumes military control of the City of LUXEMBOURG and vicinity.

2. Responsibility for cordon defense and the defense of command posts will remain as at present. Existing plans of the Twelfth Army Group and the Third U. S. Army will be carefully coordinated in order to insure prompt and decisive action, the effective operation of those plans as a whole, and the elimination of confusion and doubt in the minds of those charged with their execution. Third U. S. Army will be prepared to take over all defense responsibilities now borne by Twelfth Army Group when called upon to do so.

3. Curfew: Civilian curfew will be from 2000 to 0600 hours daily.

4. The following pass policy for military personnel visiting, stationed at, or billeted in the City of LUXEMBURG, Grand Duchy of Luxembourg, is announced effective 5 January 1945, except that passes for troops under command of or designated by Headquarters, Twelfth Army Group, and Headquarters, Ninth Air Force will be issued in accordance with their present instructions.

5. a. The City of LUXEMBURG is off limits to other military personnel except that five (5) percent only of the T/O strength of units mentioned below may visit LUXEMBURG on any one day.

(1) All Corps, including all attached and supporting units.

(2) All troops stationed and/or billeted within the city limits of LUXEMBURG.

(3) Army Troops, Third United States Army located within the boundaries of the Grand Duchy of Luxembourg.

b. No twenty-four (24) hour passes will be issued.

6. Existing regulations regarding the use of the prescribed "passcard" will be strictly adhered to and enforced by all concerned.

7. United States military vehicles will not be left unattended in the Third United States Army area unless under the immediate surveillance of guards or in authorized military parking lots (Circular 88, this Headquarters, 10 December 1944).

8. All buildings will be completely "blacked-out" in accordance with scheduled hours as published. It is the responsibility of persons occupying quarters or offices to see that they are "blacked-out."

9. Army Regulations 600-35, relative to the proper wearing of the uniform, will be strictly enforced.

10. Traffic Regulation and Control will be enforced as outlined in Circular 63, this Headquarters, 4 October 1944, with changes.

11. Third U. S. Army personnel will be governed by existing Third U. S. Army directives, not mentioned above.

By command of Lieutenant General PATTON:

OFFICIAL

HOBART R. GAY
Brigadier General, U. S. Army,
Chief of Staff.

R. T. CHAMBERS,
Colonel, Adjutant General's Department,
Adjutant General.

ANNEX NO. 22

HEADQUARTERS
THIRD UNITED STATES ARMY
APO 403

3 January 1945

PLAN FOR DEFENSE OF COMMAND POST

(Destroy all copies dated 18 December 1944, and annexes thereto).

1. GENERAL:

This plan establishes a procedure and designates forces for the defense of the Command Post Area against attack by enemy personnel or sympathizers.

2. PLAN:

a. Annex No. 1 (Detailed Plan for Defense of Lucky Forward Command Post).

b. Annex No. 2 (Detailed Plan for Defense of Lucky Rear Command Post).

3. FORCES AVAILABLE:

a. See annexes.

b. Anti-aircraft Artillery gun positions located on the outskirts of the Command Post Area have the primary mission of defense against air attack and secondary mission of warning and defense against ground attack.

c. Company A, 503rd Military Police Battalion provides an interior guard for the defense of the Command Post proper. This guard has a primary mission of restricting entrance to Command Post to authorized personnel and a secondary mission of investigating and reporting unusual occurrences and evidences of hostile activity in the immediate area of the Command Post.

d. Headquarters Company, Third U. S. Army, provides an additional force for the close-in protection of the Command Post proper. This force will normally operate under the Commanding Officer, Company A, 503rd Military Police Battalion and will require not more than one hour to be assembled from its several primary duties.

4. PROCEDURE:

a. Report of hostile activity will be made by fastest available means of communication to the Provost Marshal (LUCKY 27 or 20). Such reports will give the who, WHAT, WHEN, WHERE, HOW of the hostile activity reported.

b. Upon receipt of reports indicating possible activity against the Command Post Area, the Provost Marshal will order the officer in charge of command post security to execute the plan of defense.

c. The officer in charge of command post security will keep the Provost Marshal informed at all times as to the progress of the action.

d. Immediate reports of hostile activity will be made by the Provost Marshal to the following in the order indicated:

(1) Chief of Staff (Lucky 5 or 106).
(2) G-3 (Lucky 32).
(3) G-2 (Lucky 2).
(4) Headquarters Commandant (Lucky 115).
(5) Deputy Chief of Staff (Lucky 107 or 230).
(6) Anti-aircraft Officer (Lucky 48).
(7) Engineer Officer (Lucky 15).

e. Each General and Special Staff Section Chief will, upon notification from the Provost Marshal's Office that the plan for the Defense of the Command Post is in effect, assemble his respective staff officers, arrange for the safeguarding, transportation, or destruction of classified documents, and stand by for further orders from the Chief of Staff. If necessary, this force may be used in whole or in part in the defense of the Command Post.

By command of Lieutenant General PATTON:

R. W. HARTMAN
Lt. Col., A.G.D.,
Asst. Adj. Gen

ANNEX NO. 23

HEADQUARTERS
THIRD UNITED STATES ARMY
APO 403

AG 381 - SHMCY

4 January 1945

SUBJECT: Admission to Lucky Forward Headquarters.

TO : All General and Special Staff Sections, Forward Headquarters, Third U. S. Army.

1. This letter supersedes letter dated 29 December 1944, Headquarters, Third U. S. Army, subject, "Admission to Lucky Forward Headquarters." Instructions contained herein are effective this date.

2. To insure greater security, the following additional instructions to letter, Command Post Security, dated 23 December 1944, this headquarters, will be complied with. Certain portions of the area occupied by this headquarters or its installations will be designated as "Restricted Areas."

a. The interior and exterior of Headquarters buildings, billets, and messes are hereby designated as "Restricted Areas."

3. Offices and Quarters: All entrances to the building occupied by Lucky Forward Echelon except those under guard will be blocked.

4. Dismount Point: A dismount point for all personnel below the grade of General Officer is established at the main entrance gate:

a. Only the following vehicles, in addition to those of General Officers, will be allowed to enter the enclosure:

(1) One passenger vehicle per staff section. (Identified by new type windshield sticker).

(2) Signal, utilities, mail and supply service trucks.

5. Liaison officers and military personnel regularly on duty within a "Restricted Area," or whose official duties necessitate visiting such areas, will be issued a special pass provided by the Provost Marshal's Office. This pass will be presented to MPs at entrances to Headquarters, billets, and messes.

a. The pass will be a card printed in a characteristic color scheme with the signature of the holder. Each pass will have a number which will be on file in the office of the Provost Marshal and this number will not be changed. Each pass will bear initials of the Provost Marshal. Each Section Chief will be responsible for issuing passes to

Digitized by Google

PM
X

the personnel of his Section. The Provost Marshal will supply Chiefs of Sections with the necessary numbered blank passes. The Chiefs of Sections will furnish the Provost Marshal with a list showing the personnel to whom these passes have been issued, recorded by number. Each Staff Section will notify the Provost Marshal of any deletions or additions to its section roster.

b. The meaning and use of this pass will be treated as Secret information by all personnel. The pass will be carried on the person at all times and must be presented to Military Police for entrance to the "Restricted Area" only in conjunction with AGO Form 65-1 for officers, or with identification tags for enlisted men.

c. Loss or compromise of the pass will be immediately reported to the Provost Marshal with a statement of the circumstances.

d. At irregular intervals the Provost Marshal will issue new cards with a new characteristic color scheme and design, at which time the old cards will be recalled and will no longer be valid for admission to the "Restricted Areas."

4. Persons desiring admission to "Restricted Areas" who do not have the pass designated above will be considered visitors and will be admitted by the following procedure:

a. Each section will submit a complete roster of enlisted men and officer personnel working in the Command Post to Provost Marshal. Unless known by the MP on duty, all officer AGO cards and enlisted men "dog tags" will be checked against this list by the MP on duty at desk. In event an officer desiring entrance is not on the list, interested Section will be called by phone and an officer will come to the entrance desk and vouch for the visitor. A special colored identification pass card for visitors will be given such officer, who will surrender same on leaving the building.

b. Civilian personnel: Civilians will be admitted to a "Restricted Area" only on official business. The visitor will be escorted to reception desk where his credentials will be examined and he will be required to state the nature of his business. The officer he desires to visit will be contacted by telephone and with his approval only, the visitor will be escorted by an officer of section concerned to his office, after his name, address, nationality, time of arrival and name of the officer to be contacted have been entered in a register prepared and maintained by the Provost Marshal at the reception desk. At the completion of the visit it will be the responsibility of the officer contacted to insure that the visitor is escorted from the "Restricted Area", checking out at the reception desk as he leaves. The time of departure will be entered in the register. Military Police will intercept all civilians who are found unescorted within a "Restricted Area" or who attempt to leave one without properly checking out.

c. Incoming Articles and Packages: All packages, other than US mail, brought into buildings occupied by the Headquarters will be inspected for hidden explosives. In event of suspicion on the part of Military Police on duty, the package and bearer will be referred immediately to CIC or Engineer Technical Intelligence.

d. Any officer having a special pass accompanied by a visitor on official business may secure the visitor's admission to a "Restricted Area" by personally vouching for him; he will, however, be responsible that the visitor confines his activities to the official business on which he came and that he leaves promptly upon its completion. Civilians admitted under this procedure will be recorded in the register as described in Paragraph 4b above.

5. Admission to areas and installations of this Headquarters other than those designated as "Restricted Areas" will be in accordance with existing regulations.

By command of Lieutenant General PATTON:

R. W. HARTMAN
Lt. Col., A.G.D.
Asst. Adj. Gen.

AG 250.1 GSNCY 17 March 1945

SUBJECT: Reporting of Crimes, Offenses and Serious Incidents.

TO : See Distribution.

1. All crimes, offenses and incidents of a serious nature committed within the Army area and involving United States property or United States Army personnel and Camp Followers will be reported to the Criminal Investigation Section, Office of the Provost Marshal, this headquarters.

2. The crimes listed below will be reported immediately upon discovery by fastest available means and, upon request of the Corps or Division Provost Marshal, will be investigated by the Criminal Investigation Section, Office of the Provost Marshal, this headquarters, Rear Echelon.

Murder Manslaughter Rape Sodomy
Arson House Breaking Burglary Robbery
Forgery Larceny Racial Violence
Theft, Misappropriation and Misapplication of United States property.

3. When the crimes listed above in paragraph 2 are reported by civilians to Civil Affairs Detachments, Military Police, or other military units the report will be forwarded without delay by fastest available means to this headquarters.

4. When one of the subject crimes is reported to this headquarters all available information will be given, including the names of personnel involved, the place and time and any action already taken by the unit reporting the crime.

5. Necessary action will be taken to protect material evidence available at the scene of the crime until the arrival of agents of the Criminal Investigation Section. The unnecessary handling or disturbance of such evidence will be avoided. In appropriate cases guards will be posted to prevent destruction of evidence.

ANNEX NO. 29

HEADQUARTERS
THIRD UNITED STATES ARMY
APO 403

AG 415 GNECT 9 March 1945

SUBJECT: Town and Route Marking in Germany.

TO : See Distribution.

1. The following instructions (excerpted in part from paragraph 6, Change No. 1 to Administrative Instructions No. 2, Headquarters, Third United States Army, 4 December 1944) will govern road and town marking in Germany.

a. The Emergency Road Map 1:250,000, sheets K48 - K50 - K51 L48 - L50 - L51 will be used from German border through Germany. Road numbering on these maps is as directed by Twelfth Army Group.

b. The main highways marked on the map (and on the ground) by a number within a rectangle (example [159]) are highways marked and used by the Germans and will be similarly remarked by the Provost Marshal.

c. Highways marked on the map with a letter "L" and a number within a circle (example (L 150)) are unmarked highways (on the ground) in Germany. The markings as shown on the Emergency Road Map are the arbitrary highway markings which will be used by U. S. Armies. The marking of highways with these arbitrary numbers is the responsibility of the Provost Marshal.

d. Highways marked on the map with letters "A" and a number within a triangle (example ) are Autobahns (4 lane highways) and will also be marked with arbitrary numbers.

2. a. The Corps Provost Marshals will mark highways and towns with road marking and town designation signs in conformity with the Emergency Road Map. In order to eliminate confusion and expedite traffic, roads and towns will be marked at the earliest possible moment after passing to our control. Supplemental signing will be accomplished by the Army Provost Marshal.

b. Signing will be accomplished as follows:

(1) 8" x 17" black on white signs will be used for route markings.

(2) 8" x 30" black on white signs will be used for town markings.

3. At the present time, in addition to the Emergency Road Map, scale 1:250,000, the Germany Road Map, scale 1:300,000, is widely used. The only roads numbered on this map are the main highways (Reichs-strassen), which are marked on the ground, and are shown by this map symbol (41).

ANNEX NO. 32

HEADQUARTERS
THIRD UNITED STATES ARMY
APO 403

18 April 1945

MEMORANDUM:

TO..... 3:

CAPTURED GERMAN MILITARY HOSPITALS

1. In the Corps Zones.

a. The Corps Surgeon, in whose area the captured hospital is located, will immediately notify the Liaison Officer, 66th Medical Group, and the Army Surgeon, giving the name and location of the hospital together with an estimate of the number and classification of the German Military Staff and patients. In his report he will include the status of food and medical supplies.

b. The Army Surgeon will in turn transmit this information to the Commanding Officer, 66th Medical Group, and to the Provost Marshal, Third U.S. Army, for information only.

c. The Corps Commander will form the necessary number of teams to immediately proceed to the captured hospitals and institute measures as outlined below. Each team will consist of one representative from the Corps G-2 Section for screening purposes and one officer representing the Corps Provost Marshal. The Commanding Officer, 66th Medical Group, will coordinate with the Corps Commander to furnish one medical officer for each team. These teams will contact the Military Government Detachment nearest to the hospital to be taken over, and arrange for an officer of that detachment to accompany them.

d. The Commanding Officer, 66th Medical Group, will administer these hospitals, to include supervising medical care, screening the patients to be sent to prisoner of war enclosures, supplying the hospitals with food, medical supplies, etc. He will also be responsible for consolidating patients and captured German medical personnel of these hospitals into other captured German hospitals to the limit of facilities and time available.

e. The duties of the teams will be:

1. To proceed to the hospital overrun.

2. Prepare a roster of all German military personnel in the hospital, and deliver copies to the Army Surgeon, Commanding Officer, 66th Medical Group, Corps Provost Marshal, Town Burgomeister and the German Commanding Officer of the hospital.

3. Definitely place responsibility for the operation and guarding of the hospital and the detention of all German military personnel therein on the local Burgomeister and the hospital Commanding Officer. This responsibility will be jointly assumed.

4. Cause the local Burgomeister to furnish necessary guards.

5. Prepare necessary regulations for control of the hospital.

f. The primary duties of the various members of the team are:

1. The Military Government Representative will:

(a) Make the necessary contacts with the Town Burgomeister and any other German authorities concerned.

(b) Arrange for necessary guards through the Burgomeister.

(c) Make frequent inspections of the hospital and frequent checks on the Burgomeister.

2. The Medical Officer will:

(a) Determine which of the prisoner patients can be immediately evacuated into prisoner of war channels.

(b) Determine which must be retained as patients.

(c) Make a survey as to the adequacy of medical care and sanitation and take initial corrective action.

(d) Make a survey and report to the Commanding Officer, 66th Medical Group, as to the status of food, water, medical and other Class II and IV supplies.

(e) Initiate action on other medical questions.

3. The G-2 Representative will:

(a) Check and screen all patients.

(b) Identify, tag and list all "S.S." personnel.

(c) Render a report to the appropriate Assistant Chief of Staff, G-2, of: Identity of any members of the "S.S." of counter-intelligence interest, identity of such other personnel of present or future operational intelligence value, such as technicians, together with a brief summary of the interrogation.

(d) Arrange with the Medical Officer for the concentration of "S.S." personnel that cannot be evacuated due to physical condition.

4. The Provost Marshal Representative will:

(a) Arrange to receive into prisoner of war channels all patients to be evacuated immediately and others to be evacuated as they become convalescent.

(b) Insure that all "S.S." personnel are evacuated with proper tag, or, if not to be evacuated, concentrated in special groups.

(c) Make a thorough search of the buildings and premises for arms and other weapons, contraband articles and radio transmitters, paying particular attention to X-Ray rooms and installations of a suspicious nature.

(d) Seize and turn in all articles enumerated in paragraph (c) above.

(e) Search all patients in accordance with letter, Office of the Provost Marshal, Third U.S. Army, "Instructions for Personnel in Charge of Searching Prisoners of War". All items listed in column two of that directive will be confiscated and proper disposal made thereof.

(f) Determine the number of guards necessary and their locations.

(g) Institute a pass system for entry and exit.

g. The Corps Provost Marshal will be responsible that visiting patrols check the German military hospitals at frequent and irregular intervals. Health conditions, sanitation, meals and cooking facilities will be checked. A check will be made of supplies on hand and consumed. Bed checks will be made. Copies of inspections reports will be forwarded to the Commanding Officer, 66th Medical Group, and to the Provost Marshal, Third U.S. Army, for his information.

II. In the Army Area.

a. When Corps rear boundaries move up and the Army takes over German Military Hospitals in former Corps territory, the Army Provost Marshal will immediately assume responsibility for them in conjunction with the Army Surgeon and G-5. The Provost Marshal will act in accordance with Section I, paragraph g, above.

b. Should it become necessary to take over German Military Hospitals that have not been processed by Corps as directed in Section I above, the procedure will be the same as directed in Section I, only executed by Army personnel instead of Corps personnel.

c. The Army Surgeon and the Army Provost Marshal will keep a posted map showing location of all German Military Hospitals in: (1) Army Area; (2) Corps Areas.

By command of Lieutenant General PATTON:

HOBART R. GAY
Major General, U. S. Army,
Chief of Staff.

R. E. CUMMINGS,

ALERT PLAN FOR DEFENSE OF HEADQUARTERS AREA
(Forward Echelon)

1. The following plan will go into effect upon a warning signal sounded by a siren inside the Kaserne area, during the hours of darkness, or if the Kaserne is attacked.

2. All enlisted personnel will immediately assemble, with arms, pistol or rifle belts and ammunition in front of the building in which they are quartered under command of the following officers:

Building A - One of the G-2 Duty Officers.
Building B - One of the Artillery Duty Officers.
Building C - One of the Provost Marshal's Duty Officers.
Building D - A Headquarters Company Officer, assisted by an officer from the 302d QM Car Company.
Building F - An officer from the Headquarters Commandant's Section.

3. It is the responsibility of each of the sections mentioned in paragraph 2 to insure that officers on duty are familiar with this plan.

4. When the troops are formed, the troops commander will report immediately with a runner to the Provost Marshal's Section in Building C for instructions.

5. The Duty Officer in the Office of the Provost Marshal will immediately telephone the following officers, in the priority indicated, stating that the Headquarters has been alerted for a ground attack:

Officer	Day Phone	Night Phone
Provost Marshal	27	147
Chief of Staff	5	106
Deputy Chief of Staff	107	144
A C of S, G-3	3	226
Signal Officer	10	167

ALERT PLAN FOR DEFENSE OF FORWARD ECHELON HEADQUARTERS AREA
(Daylight Alert)

1. Unnumbered memorandum, this headquarters, subject, "Alert Plan of Defense of Headquarters Area (Forward Echelon)" dated 11 April 1945, will be effective between the hours of 1800 and 0800 daily.

2. This memorandum prescribes the defense plan which will be effective between the hours of 0800 and 1800 daily.

3. The daylight alert (0800 - 1800 hours) plan will go into effect upon the sounding of sirens, inside the Kasserne area, or if the Kasserne is attacked.

4. a. Each section of the headquarters proper will designate a skeleton force of officers and enlisted men to remain on duty in the offices to man telephones and protect records.

b. The remaining personnel will immediately assemble, with arms, pistol or rifle belts, and ball ammunition in front of the building in which they are quartered under the command of officers from the following sections.

Building A - A field grade officer from the G-3 Section.
Building B - A field grade officer from the Engr. Section.
Building C - A field grade officer from the PM Section.
Building D - A field grade officer from the Arty Section.
Building F - An officer from the Headquarters Commandant's Section.

5. It is the responsibility of each of the sections mentioned in paragraph 4 to assure that officers on duty are familiar with this plan.

6. When the troops are formed, the troop commander will report immediately with a runner to the Provost Marshal's Section in Building "C" for instructions.

7. The Provost Marshal's Office will immediately telephone the following officers, in the priority indicated, stating that the headquarters has been alerted for a ground attack:

HEADQUARTERS
THIRD UNITED STATES ARMY
APO 403

AG 383.6 GNMCY 6 May 1945

SUBJECT: Evacuation and Release of Special Classes of Prisoners of War.

TO : See Distribution.

1. Release of Certain Classes of Prisoners of War.

a. All prisoners of war of the following categories who, after screening by G-2 personnel, are found not to be security threats will be released.

(1) Members of the Volkssturm.

(2) Enemy deserters and discharged enemy soldiers, sailors, and airmen apprehended in rear of the front, out of uniform.

b. The following procedure will be employed in Army and Corps Prisoner of War Enclosures to effect the release:

(1) After screening, prisoners of war of the above classes will be segregated.

(2) Military Government passes without exemptions will be prepared for each prisoner of war showing on his address the town in which he is to be transported.

(3) These prisoners of war will then be transported to towns within the Army area in accordance with a priority to be determined by the Assistant Chief of Staff G-5, Third U. S. Army and turned over to the Burgermeister.

(4) Burgermeisters will be directed to provide useful employment for these persons, preference to farming.

c. All Military Government, Military Police, CIC and other agencies involved in the apprehension of prisoners of war will be informed of this procedure in order to minimize the rearrest of released prisoners of war.

2. German Military patients in captured German Hospitals who, if they were U. S. patients would be sent to duty, will be evacuated to the nearest Army Prisoner of War Enclosure.

HEADQUARTERS
THIRD UNITED STATES ARMY
Public Relations Section
APO 403

SUBJECT: After Action Report.

TO : The Commanding General, Third United States Army.

1. Submitted herewith is the After-Action Report of the Public Relations Section, Third United States Army Headquarters, beginning with 27 April 1944, and continuing at the properly designated intervals by chapters.

2. During the Third Army's sensational dash across France and its subsequent operations in Luxembourg, Belgium, and Germany, this Section furnished the world press daily accounts of the Army's feats. The thirty-five (35) to fifty (50) correspondents travelling with the Army were provided with transportation, mess, billets, and high speed communications with Paris, London, and New York. In addition, the Section coordinated the Public Relations activities of the Corps and Divisions assigned to the Army. These activities resulted in the Third Army and its units receiving more news and pictorial space in the world press than any other American Army.

3. This report is submitted as a record of the Section's activities, and with the hope that it may prove helpful in future operations.

CHAPTER I
PLANNING IN UNITED KINGDOM

Section I - General

The Public Relations Section, Third US Army, developed in the field in France and was molded by the conditions of operating in a campaign of extremely rapid movement.

Originating as a branch of Publicity and Psychological Warfare, Third US Army, pending organization of the section later to be known as G-5, the G-2 Section coordinated basic administration matters. Its roots were in the Publicity and Psychological Warfare Detachment of the First US Army Group which was charged by Supreme Headquarters Allied Expeditionary Force with the mission of conducting public relations and psychological warfare activities for the First and Third US Armies in the liberation of western Europe.

Third US Army was to fulfill its Publicity and Psychological Warfare mission through the operation of detachments of personnel from First US Army Group working under the direction of the Third US Army Headquarters staff.

These detachments were to be made up from the Publicity and Psychological Warfare Detachment, and the 72d Publicity Service Battalion, First US Army Group, and attached or assigned to the Third US Army as the situation required.

On 27 April, two officers reported to the Army Commander, Third US Army, for duty from First US Army Group. After discussing public relations and psychological warfare with him, the Chief of Staff, and Assistant Chief of Staff, the ranking officer was instructed to set up a Publicity and Psychological Warfare Section for the Third US Army.

During May and June, plans, including the T/O and T/E, (see Annex II) were drawn for the Public Relations Branch. During this organizational period, an officer arrived from the United States 26 May and was appointed Third US Army Public Relations Officer. He took charge of arrangements for public relations and for the creation of a press camp for war correspondents who were to be assigned to the Third US Army during combat operations in France.

During this time, psychological warfare and the 72d Publicity Service Battalion remained at Group level at CLEVEDON (T69), Somerset, England.

Organization and operations plans for the Public Relations Branch were completed by 7 June.

Generally, Public Relations was charged with the mission of fulfilling requirements of accredited War Correspondents in the Third US Army operations.

Basically, the task of providing facilities enabling the correspondents to work during operations on the Continent involved three fundamental provisions.

These were food and shelter; transportation to combat areas; communicating facilities and transmission facilities for news copy, and an information service by which the correspondents could be briefed on combat developments.

The Public Relations Officer was to be assisted in this mission by four subsections.

The function of the Press Section was to provide the world press with an accurate and timely information service of Third US Army activities.

The function of the Radio Section was to assist broadcasters in obtaining complete Third US Army radio coverage such as would not violate security or impede military operations.

The function of the Pictorial Section was to assist pictorial correspondents in obtaining the type of photographs to accomplish their missions and to transmit pictures in negative form to designated higher headquarters for processing and clearance.

The Information Section was to maintain adequate situation maps of the Third US Army Sector to enable accredited war correspondents to plan their activities in advance. The section was to keep the correspondents informed on hours of briefing by the Army Commander and staff officers and to supply the correspondents and drivers with maps of the combat zones.

In addition, the plan contemplated the assignment of conducting officers who were to guide the correspondents to the front.

In addition to the foregoing sections, an administrative section was set up to provide transportation, messing, billeting and other services.

With the appointment of a General Staff Corps officer as Chief of Section on 1 June, Publicity and Psychological Warfare in Third US Army became a General Staff Section, G-5. At that time, it was the only G-5 section in the Armies of the United States.

A pool of eight broadcasting officers was created, including the Press, Radio and Photo Officers plus five others. An Assistant Public Relations Officer was appointed.

During June, the procurement of personnel and the requisitioning of equipment (see annex 2) continued.

It was stressed by European Theatre Operations United States Army that the military public relations system be extended downward from Army level to insure adequate coverage. To realize this program, the Army Commander directed Corps and Divisions assigned to Third US Army to name public relations officers. The Public Relations function was to be carried on down to lower echelons with the appointment of public relations non-commissioned officers in battalions, companies and special detachments. To coordinate this program, Corps and Division Public Relations Officers were called into conference at Third US Army Headquarters.

The conference between the Public Relations Officer, Third US Army, and the Public Relations Officers of the XII, XV, and XX Corps; the 4th, 5th, 6th and 7th Armored Divisions and the 5th, 6th and 35th Infantry Divisions was held 10 and 11 June at TOFT CAMP (K29) for briefing, planning and discussion.

The Public Relations Officers assembled at 0900 10 June and were taken to PEOVER CAMP (K29) where the Army Commander personally outlined the objectives he hoped to attain through their efforts and the cooperation of the Corps and Division Commanders.

The Army Commander stressed the need of obtaining accurate and rapid home town news coverage of the activities of the "little men" of Third US Army from a morale standpoint. Liberal recognition should be given acts of bravery by the prompt award of appropriate citations and decorations. Corps, Division and Separate Unit commanders should recognize the importance of the public relations function and the desirability of adequate personnel and equipment to accomplish it.

Following this interview, the Public Relations Officers were acquainted with the functional plan of the G-5 Section and its objectives.

On 11 June, an open forum session was held at which all of the Public Relations Officers were requested to list their operations within their own commands. These reports indicated a lack of experienced personnel and equipment. The Public Relations Officers were also instructed to submit reports when public relations plans in their units developed.

On 12 June, the Public Relations Officer was notified by Supreme Headquarters Allied Expeditionary Force that a total of forty-four news, radio, magazine, Army and Allied correspondents were to be phased into the G-5 Section. Working on this basis, the Section hastened the completion of requisitioning equipment and personnel.

The initial task of Public Relations Branch in the operations of a military public relations program was the assembly of biographical and historical information from Third US Army Corps and Divisions.

The task of gathering this information was initiated and supervised by virtually all officers of the Section. Following the Public Relations Officers Conference, unit Public Relations Officers were instructed to submit the biographical material and photos as well as the unit histories.

Copies of this information were made as it was received and submitted to Public Relations Division, Supreme Headquarters Allied Expeditionary Force, and the First US Army Group.

With its equipment and its personnel assembled, the G-5 Section prepared for overseas movement to France. The administrative branch and the Public Relations Branch of the Section arrived at BRICKHAZEN MANOR (U53), the staging area, 28 June. There it was joined by the psychological Warfare Branch, the 72d Publicity Service Battalion's Second Service Team and forty-three war correspondents on 3 July.

Inherent in the organization of Publicity and Psychological Warfare at that time were dual functions which, from an operational standpoint, were not related. Publicity existed to inform the world of Third US Army activities via civilian and military reports. Psychological Warfare existed to influence the minds and undermine the will of the enemy, to boost the morale of subject civilian populations and to determine the attitude and trend of thought of the enemy and of subject civilians. Its objective was the preparation, distribution and control of propaganda, with the goal of convincing the enemy that his cause was lost and of instilling into the minds of friendly civilians confidence in the Allied cause.

Section II - Press

Personnel of the Press Sub-Section consisted of one officer and one enlisted man.

During the pre-operational period, the section devoted its activities almost exclusively to the compilation and filing of biographical and historical information received from Corps and Divisions. Copies of these data were made and forwarded to the Public Relations Division, Supreme Headquarters Allied Expeditionary Force, and First US Army Group.

The section also cleared and forwarded to Supreme Headquarters Allied Expeditionary Forces 130 news items and photographs received from units.

In addition to the biographical data filed, photos of key unit officers were filed as received.

To keep a daily record of news and photographic material received from the Corps and Division Public Relations Officers, a Copy Register and a Photographic Register were set up. These registers recorded the date, the news item or photo was received, the origin and the identifying slug.

It became standard order of procedure in the section to register and forward immediately all copy and photographs received.

Section III - Radio

Personnel of the radio section consisted of one officer and one enlisted man.

Radio correspondents were to handle straight news coverage and commentary in much the same manner as the press correspondents. This coverage involved live broadcasts, emanating from rear areas and under the direction of First US Army Group. In this instance, the main concern of the Radio Section was to be adequate transportation for the broadcasters between Headquarters, Third US Army, and the transmitter.

Primarily, however, the Radio Section was to be concerned with a second type of coverage which included outside broadcasts and interview programs.

Front line recordings were to be made by magnetic wire recorders. By close contact with the AC of S, G-2, and the AC of S, G-3, the Radio Section was to advise radio correspondents of actions suitable for such recordings and to suggest possible slants and methods of coverage.

Scripted live programs were to be developed for direct transmission from the field to the United Kingdom or the United States. The Section was to be ready to clear and facilitate requests for personnel to be used on these programs and to supply ideas and suggestions for programs of this nature dealing with Third US Army operations and personnel.

Small stations recordings were also to be made. These were to be designed for small United States radio stations without correspondent representation. They were to serve to give personal publicity in home districts to men of the Third US Army. A portable recording unit was to be taken into divisions to make as many interviews as possible with men

Digitized by Google

those homes are in a given locality. These recordings were to be released through the Publicity and Psychological Warfare Section. First US Army Group, and the Radio Department, Public Relations Section, European Theatre Operations United States Army.

In May, an agreement was reached between the Public Relations Officer, First US Army Group, and the British Broadcasting Corporation that British Broadcasting Company portable recording gear should be installed in a Third US Army vehicle and used on a pool basis by all broadcasters.

This equipment became available early in June. It was shock mounted in a quarter ton trailer which was converted into a miniature recording van. When it was tested at the time, it was found to be entirely satisfactory from an operating standpoint. At the same time, a British Broadcasting Company engineer was accredited to the Third US Army through Supreme Headquarters Allied Expeditionary Force to work with and service the recording gear.

It was eventually established that live broadcasts would emanate from Army level via the Signal Corps Radio 399.

This left the Radio Section only the British Broadcasting Company equipment with which to work. Since the network broadcasters must have priority on the use of this equipment, there seemed to be little likelihood at that time that the hometown recording program would be very extensive. Nevertheless, a limited number of discs were secured and set aside for eventual use for this purpose.

Section IV - Pictorial Section

Personnel of the Pictorial Section consisted of one officer, who reported late in June on temporary duty from First US Army Group. No enlisted men were assigned to this section which did not become operational during the planning phase of Third US Army. The Pictorial Officer worked with other officers to perfect the plans of the entire Public Relations Branch and assisted in the assembly of biographical, historical and photographic records for the Press Section.

Section V - Information Section

Personnel of the Information Section included one officer, attached to G-2 from First US Army Group, and one enlisted man attached from the 72d Publicity Service Battalion.

During the planning phase in the United Kingdom, the world's war fronts were plotted on small scale maps. After the invasion, progress of the Continental operation was plotted on overlays on large-scale maps and kept up to date. During this period, an officer supervised the information room operations.

Section VI - Censorship

Prior to the embarkation of the Third US Army for France, Press Censorship was centralized and operated in the Ministry of Information, LONDON, under First US Army Group.

Censorship teams were made up and assigned to the various Army Groups and Armies. But rather than have the teams physically moved to the locations of the respective units and so lose touch with the current picture, they continued to operate at Supreme Headquarters Allied Expeditionary Force until such time as their respective units embarked.

Section VII - Publicity Service

During the pre-operational period in the United Kingdom, the 72d Publicity Service Battalion remained with the First US Army Group in CLEVEDON (T09) with its service groups and communications.

Section VIII - Administrative Section

Personnel of the Administrative Section included one officer and six enlisted men.

During the planning period, the sub-section handled the requisitioning of equipment (see annex II).

CHAPTER 2
PRE-OPERATIONAL ON CONTINENT

Section I - General

On 3 July, the Second Service Team joined the G-2 Section at BROCKENHURST (U53). At the same time, forty-three war correspondents arrived.

The following day at 1800 hours, the Section proceeded in convoy to SOUTHAMPTON (U83) from which port it embarked for France the morning of 5 July.

The Section disembarked at UTAH BEACH (T19) on the afternoon of 7 July and proceeded immediately to the Third US Army bivouac area in the vicinity of ISIGNY, FRANCE (T19), where the press camp began operating the following day.

Since the Third US Army was not operational, facilities for censorship and transmission of war correspondents' copy were not available during the month. It was necessary, therefore, to dispatch correspondents' copy to First US Army by officer courier for censorship and transmission or via Air Delivery Letter Service to Supreme Headquarters Allied Expeditionary Force, Ministry of Information, LONDON.

Correspondents' copy was logged as it was received and marked for courier to First US Army censors or Air Delivery Letter Service, LONDON.

During this period, the physical set up of the camp was housed in squad and pyramidal tents in the half-acre apple orchard.

The war correspondents were housed in three squad tents. Public Relations operations were conducted in a fourth squad tent. In a fifth was the information room and briefings were held there twice daily.

Two pyramidal tents served as an orderly room for the 72d Publicity Service Battalion's Second Service Team and administration headquarters. In addition to two mess tents, one for the officers' and correspondents' mess and the second for the enlisted men, a correspondents' dining room was set up in a sixth squad tent.

Transportation was dispatched as requested and no priority was given to news services or agencies. Since there were only seventeen quarter ton vehicles available to cover all transportation requirements at the outset of operations, a ruling that jeeps would not proceed on news missions with less than three correspondents had to be formulated.

Later in July, three additional quarter ton vehicles were added. Meantime, the correspondents themselves assisted in easing the transportation shortage by bringing back to camp, more or less in usable condition, four German Volkswagens found abandoned at the front. These vehicles, however, were not generally available to the section until August since it was necessary for Ordnance to check and paint them.

It was from this camp that the correspondents covered the historic battles of the LA HAYE DU PUITS (T18), LESSAY (T17), PERIERS (T27), and ST. LO (T24) sectors.

During July, an approximate total of 345,055 words were logged and dispatched.

Following the break-through in Normandy, the Section prepared to move in order to bring the correspondents within driving distance of the front.

Correspondents who reported 3 July to the BROCKENHURST MANOR (U53) staging area were as follows:

DECLASSIFIED

Broderick, Edward, [illegible]
Carlisle, J.K., Detroit News
Clark, Maureen M., London News Chronicle
Cooper, F.J., BBC

Wallard, J.H., Chicago Times
Whitney, P., San Francisco Chronicle
Wingert, R.T., Stars and Stripes
Wolf, T.H., NBA
Wolfert, Ira, NANA

Additional correspondents joining the Press Camp during July were Ernest Hemingway of Collier's, D.H. Mackenzie of the New York Daily News, D.H. McNicoll of the Australian Consolidated Press arrived on 22 August and Larry Meier of the Mutual Broadcasting System arrived on 23 August.

Section II - Press

Operating as a clearance agency for copy received from Corps and Division Public Relations Officers, the Press Section cleared and forwarded for censorship and distribution 177 news items and eight photographs. Of this total, seventeen news and feature stories and two photos emanated from the Section itself.

Units which submitted news items and the type of items received are broken down as follows:

UNIT	PROMOTIONS	AWARDS	MOVEMENT	TOTAL	PHOTOS
XX Corps	1			1	2
445th AAA Bn	9			9	
PRO, TUSA	3	14		17	2
12th Evac Hosp	1	3	3	10	1
4th Armd Div	13		9	22	
6th Armd Div	25	25	65	111	3
106 Cav Rcn Sq	7			7	
Totals:	60	40	77	177	8

The non-operational status of Third US Army during this period accounted for the scarcity of copy.

Geographically, the news material received covered the activities of men from the Seaboard and Middle Atlantic states preponderantly. Midwestern items [illegible] regularly mail re-

DECLASSIFIED

Digitized by Google

How extensively this news material, which was forwarded to Public Relations Officer (Press Section) European Theatre Operations United States Army and Chief, Public Relations Division, Supreme Headquarters Allied Expeditionary Force, was used - or even whether it was released by censorship during the month - was never determined. It was presumed that the bulk of news material submitted would be held until Third US Army was announced as operating on the Continent.

In many instances, the lower echelons passed on news tips which personnel of the Press Section brought to the attention of the war correspondents.

During this pre-operational period on the Continent, it was desirable on numerous occasions to coordinate more closely the activities of the Unit Public Relations Officers and to give guidance to several Unit organizations whose personnel had little newspaper background.

Copy was logged by slug, correspondent's name and organization, approximate number of words, time received and time dispatched via courier as well as destination for transmission - First US Army or Supreme Headquarters Allied Expeditionary Force. The following table is designed to give a weekly picture of the copy log.

Date	ADLS	Army Comm (FUSA)	Prewix (FUSA)	Total Items	Total Wordage
8-14 July	120		83	203	106,995
15-21 July	54	8	84	146	68,225
22-31 July	77	42	130	249	127,835
Totals:	253	50	297	598	305,055

Of the 253 items logged ADLS, 65 were photos and sketches and 13 were recordings.

Section III - Radio

Upon arrival in France, when it was learned that the Third US Army would not become operational for some time, radio correspondents (see annex 5) therefore were included in the agreement that was reached with First US Army Public Relations Section for transmission of Third US Army copy. The correspondents made their broadcasts to LONDON and to NEW YORK via [illegible], the First US Army transmitter.

During this period, the portable recorder in the quarter-ton trailer was put to extensive use. Due to its size and extreme mobility, recordings were made closer to the front line than had ever before been possible. In several instances, the vehicle was moved to within 500 yards of the infantry line which was then south of LA HAYE DU PUITS.

As had been anticipated, there was little time left for its use in hometown recordings. Some hometown recordings were made and these were released through the Public Relations Officer, First US Army Group.

When it became known that the Third US Army would soon become operational and the radio silence accordingly lifted, the Radio Officer visited the Public Relations Officer, 21st Army Group (British), and arranged for the assignment of frequencies to be used for live broadcasts, the Signal Corps Radio 299 having arrived in the meantime. There remained only the necessary tests to determine whether it would be possible to reach LONDON. These would have to wait until the radio silence was lifted.

Section IV - Pictorial

Liaison was established between the Pictorial Section of Third US Army and the Public Relations Division Pictorial Section of Twelfth US Army Group on the Continent as soon as Army Group established headquarters, and policies and desires of Army Group for pictorial coverage were made known to various Third US Army Signal Photo units through close contact with the Signal Photo Section of Army Headquarters. A comprehensive outline of still and motion picture coverage desired by Supreme Headquarters was studied in detail and a number of assignments given by the Signal Photo Officer to units under his jurisdiction to fulfill these requirements. Three War Correspondent still photographers were with the Press Camp during this period, and operated daily among units at the front and behind the lines, their film being transmitted undeveloped by courier to the First US Army facilities, from where it was forwarded to LONDON for developing, censorship, and retransmission to destination. The Section compiled a photographic file of unit biographical pictures, and the Pictorial Officer, in addition to other duties, assisted the Public Relations Officer in various matters.

Section V - Information Room

The Information Officer set up his map boards in a squad tent and, assisted by an enlisted man, plotted the Normandy situation daily. The disposition of Allied and enemy troops, as reported daily by AC of S, G-2 and AC of S, G-3, was marked on overlays on which also was recorded the movement of battle.

The briefing periods were at 1030 hours and at 2030 hours. The briefing Officer, acting as liaison officer with AC of S, G-2 and AC of S, G-3, narrated developments for the correspondents and indicated changes in the situation on the mapboard.

Following the briefing, correspondents questioned the briefing officer and submitted to him requests for such other information as could be made available.

Toward the end of the month, it was found expedient to set up the briefing and information Room in a small tent, leaving the squad tent solely as a correspondents' work room.

A guard was maintained twenty-four hours daily at the Information Room and was doubled after dark.

Section VI - Administration

The Administration Section consisted of two officers, one acting as camp commandant and the other as administrative officer, and four enlisted men.

CHAPTER 3
AUGUST OPERATIONS

Section I - General

When the Third US Army became operational 1 August, the Press Camp moved to a bivouac area in the vicinity of SAVIAT (T5L), setting up operations there 3 August in three hedgerowed fields.

The Army Communications unit and Mackay Radio had joined the camp two days prior to departure from NORMANDY (T19). Due to the radio silence imposed before Army became operational, radio could not be operated there. The censorship returned from First US Army on 1 August.

It was not until 4 August at SAVIAT (T5L) that the Signal Corps CW transmitter, 399 Radio Voice transmitter, and the Mackay Radio went into operation. With the censors present, it then became possible for the first time to utilize all planned facilities and to flash the news of Third US Army operations in France to the press of the world.

The possibility that the enemy could use the radio signals as an aid in locating the Army Headquarters, and the advantages of operating within buildings, led the Public Relations Officer to obtain permission for the section to operate some distance away from the forward echelon of Headquarters and to house office operations indoors.

This was done for the first time 11 August when the Press Camp moved to ST. JAMES (T39) where operations were set up in a schoolhouse near VILLALAE (T39). Correspondents, officers and enlisted personnel and administrative functions were housed under canvas in an adjacent bivouac area.

On 12 August, the psychological warfare functions were returned to Army Group level. The Public Relations Officer took complete charge of all Public Relations functions and the section became known as the Public Relations Section, a special staff section.

This change marked the disbandment of Publicity and Psychological Warfare as a single function. It had been proved in field operations that functionally and operationally, Publicity and Psychological Warfare had little in common and each branch had operated separately since arriving in France.

From ST. JAMES (T39), the Section moved into a chateau in the vicinity of PORT BRILLET (T55) 15 August. Mess for correspondents was held in the building for the first time, but sleeping quarters and administrative functions were housed under canvas on the grounds. The Public Relations operation as well as the Information Room and Work Room occupied the basement of the chateau.

On 15 August, the Section moved to a chateau near LAQUINTE (Z24) in the vicinity of LEMANS (Z43).

To keep within a reasonable distance of the rapidly moving front, the Press Camp moved to a chateau at MONTERRAU (W18) 19 August and then to a chateau at PITHIVIERS (W96) 23 August.

On 24 August, on the eve of the liberation of PARIS, a small group of Third US Army Public Relations personnel was ordered into the city to assist US Army correspondents and Twelfth US Army Group. This force consisted of two officers, one enlisted man and two vehicles.

The force proceeded with correspondents to RAMBOUILLET (R62), about twenty miles from PARIS. There the force as well as correspondents and military personnel of First US Army and Twelfth US Army Group were forced to wait pending the cessation of hostilities in the capital.

A copy desk for the logging of correspondents' copy was set up in the main salon of the Hotel Le Grand Veneur, RAMBOUILLET (R62), which had been taken over by Group for news operations.

Nearly 400 pieces of copy and service messages describing the PARIS situation were logged that day and dispatched to Mackay at Third US Army and Press Wireless at First US Army for transmission.

During the afternoon of 24 August, correspondents waited restlessly for some indication as to when they could be able to proceed into the city. The Twelfth US Army Group Public Relations Officer advised them in a briefing that the Germans, after starting to evacuate the city under terms of a truce with the Free French Interior, were bringing armor back into the city to make a stand. The truce had been broken.

It was planned to set up press headquarters at the Hotel Scribe in PARIS as soon as it was possible to enter the city. All military personnel remained alerted throughout the night in readiness to move.

As the newspaper representatives of the press of the Allied nations - the United States, Great Britain, France, Russia, Canada and Australia -- massed the floors and grounds of the hotel, French tanks rumbled through the streets of RAMBOUILLET (R62) enroute to the capital.

On 25 August, it was decided to start for PARIS. On reaching the suburb of LONGJUMEAU (S02), this party halted while it was determined what the situation was within the city itself.

Meantime, jeeploads of correspondents passed and continued on into PARIS, but soon returned reporting that they could not cross the SEINE River because of the fighting on the right bank.

The correspondents were looking for a place in which to write copy. Since it was impossible to continue on as planned, a blacksmith's house was taken over as a temporary copy room. The Frenchman offered his entire house and shop for this purpose.

Digitized by Google

While the correspondents wrote the first stories of the liberation of PARIS in the sultry at LE NOROMBY (#62), correspondents returning from the embattled city were flagged down and steered into the improvised copy room.

When copy had been logged and was ready for dispatch, couriers were tailed, both British and American, and requested to take the copy to the airstrip at CHARTRES (#74) from which it would be flown to Ministry of Information, LOAC M, for censorship and transmission.

It is estimated that more than 15,000 words on the initial PARIS story were cleared by the Press Services and Agencies in this manner and it is also believed that the curbside operation saved from eight to twelve hours delay which otherwise would have occurred.

At 1900, the press party proceeded into the city to the Hotel Scribe where a copy desk was set up under the supervision of Group and maintained there during the hectic days that followed liberation.

On 27 August, a Third US Army Public Relations Officer made the first courier flight into PARIS in a Piper Cub. The plane was piloted by a 12th Liaison squadron officer and landed at the ISSY-LES-MOULINEAUX (#66) for transmission via Mackay. The courier service was continued for several days.

The Third US Army forces returned to LITHUANIA (#96) 30 August. The following day, the Press Camp moved to the CHATEAU DE VALDURANT.

Meantime, the production of copy from military sources was stimulated by the announcement of Third US Army as operational and during August, the first operational month of the Army, 861 news items were received by the Press Section and forwarded to European Theatre Operations US Army and Supreme Headquarters Allied Expeditionary Force for distribution....compared to 177 in July.

On 31 August, General Order Number 50 announced the disbandment of the Publicity and Psychological Warfare Section.

Stressing the importance and desirability of hometown news of the individual soldier, the Army Commander was sympathetic toward all reasonable requests of the section, and during his press conferences, repeatedly called attention to his personal desire that the personnel of Third US Army receive the recognition they so rightly deserved.

The following correspondents were assigned and operated from the Press Camp as of 1 August:

Ball, W.D., Associated Press
Belden, J., Life
Bookhurst, J.A., Newsreel Pool
Broderick, M.J., Still Pool
Carlisle, J.M., Detroit News
Clark, W.M., The London News Chronicle
Cooper, Fred, NBC
Crawford, K., Newsweek
Cronin, E.A., Chicago Tribune
Currivan, T.A., New York Times
Dodd, E.H., Jr., Associated Press
Driscoll, J.F., New York Herald-Tribune
Duff, Robin, BBC
Gossat, Pierre, AFI
Gottlieb, [illegible], Still Pool
Grant, Donald, Look Magazine
Grune, Phillip, London Evening Standard
Hemingway, E., Colliers
Hoge, J. (Pvt), Stars and Stripes
Huse, Fred, INS
Levitt, Saul, Yank
Littell, Robert, Reader's Digest
Loveland, Roelif, Cleveland Plain Dealer
Mackenzie, D.N., New York Daily News
Manning, Paul, McNaught Syndicate
Maynes, W.D., Reuters
McNicoll, D.H., Australian Consolidated Press
Moquaid, Paul, Chicago Daily News
Mecklin, John, Chicago Sun
Meier, Larry, Mutual
Miller, H.C., United Press
Morse, Ralph, Still Pool
Priestley, J., Newsreel Pool
Prince, W.D., London Times
Reauswig, W., Kinr Features
Ryan, C.D., London Daily Telegraph
Shaw, C.C., CBS
Shoop, Duke, Kansas City Star
Stokes, R.L., St. Louis Post-Dispatch
Treanor, T., Los Angeles Times
Wellard, J.M., Chicago Times
Whitney, P., San Francisco Chronicle
Zingert, H.T., Stars and Stripes
Wolf, T.N., NEA
Wolfert, Ira, NANA

The following correspondents joined the Press Camp in August:

Randy Dixon, PITTSBURGH Courier, 1 August
Rudolph Dunbar, Associated Negro Press, 1 August
Ollie Stewart, BALTIMORE Afro-American, 1 August
Edward Tolles, CHICAGO Defender, 1 August
H.V. Boyle, Associated Press, 11 August
Gordon Parkill, American Magazine, arrived 15 August by Supreme Headquarters Allied Expeditionary Force order.
R.W. Richards, United Press, 17 August
H.C. Taylor, Reuters, arrived 15 August and departed 21 August for Second British Army.
Marcel Wallenstein replaced Duke Shoop for the KANSAS CITY Star on 17 August.
Gordon Frazier, Blue Network, arrived 20 August to replace Tom Grandin.
D.C. Monick, AFI, arrived 17 August
J.R. Wilhelm, Reuters, arrived 20 August to replace Taylor.
William Randolph Hearst, Jr., arrived 21 August for INS.
Andrew Tully, BOSTON Traveler, replaced Gordon Gaskill 22 August.
W.A. Douglas arrived 25 August to replace John Mecklin for the CHICAGO Sun. Mecklin replaced Douglas 4 September.
Austin Lake, INS, arrived 31 August
Lawrence H. Youngman, OMAHA World Herald, arrived 22 August and was attached to the 35th Infantry Division.

With communications facilities operational at this time, wordage of the war correspondents increased from 305,055 in July to 518,505 in August. The following table is designed to show the volume of copy and method transmitted:

Date		Mackay	ADLS	Army Comm	Voice	Presi (FUSA)	Total Items	Words (Estimated)
1-7	Aug	193	52	46	18	58	361	129,140
8-14	Aug	186	90	64	8		352	105,423
15-21	Aug	231	171	103	8		513	159,755
22-31	Aug	388	124	11	2		526	124,185
TOTAL		998	437	224	36	52	1752	518,506

Of the 518,505 words transmitted, 9700 were broadcast by the Signal Corps Radio 399.

Of the 437 items sent ADLS, forty-three were packages of photo negatives and eighteen were recordings for radio broadcasts.

Items included both news copy and service messages.

Press Wireless (PRESWI) was used by Third US Army correspondents in filing copy from RAMBOUILLET (R62) and PARIS. Similarly, many correspondents assigned to First US Army dispatched copy via Mackay Radio, the transmitter at Third US Army.

Section II - Press

During August, the Press Section continued the registering and forwarding of copy received from Corps and Divisions.

Additional historical and biographical information was received and the Section supplemented its picture file of Third US Army personnel. Seven feature stories emanated from the Section itself which was primarily occupied with the registration and forwarding of unit material and suggesting news possibilities to lower echelons.

The following is a summary of news copy received, source and type of story:

Unit	Promotions	Awards	Interest	Total
Hq, TUSA PRO			9	9
6th Armd Div		29	47	76
4th Armd Div	11	140	14	166
5th Inf Div			76	76
106 Cav Rcn Sq		1	1	2
XII Corps	26	6	8	40
284 FA Bn	10			10
313 FA Bn			1	1
8th Inf Div	3	35	25	63
90th Inf Div	64	121	5	210
12th Evac Hosp	8			8
XV Corps			1	1
5th Armd Div			14	14
26 Inf Div		166	18	184
7th Armd Div			3	3
29th Inf Div		1		1
TOTAL	142	501	218	861

Section III - Radio

The Signal Corps Radio 399 went into operation 4 August and during that day, continued efforts were made to contact LONDON. The British Broadcasting Company monitors finally were reached at 1830, thirty minutes before the first scheduled broadcast.

In the days that followed, the readability of the 399 signal did not improve until the Press Camp reached the vicinity of LAVAL (Y64). It was estimated that at best there was a fifty per cent chance of the broadcast being received intelligibly in LONDON.

For the most part, radio commentators were forced to work either with recordings or with CW transmission of their stories. The Signal Corps Radio 399 had not proved satisfactory for long distance transmission.

As soon as Twelfth US Army Group had established its headquarters in France, the Radio Officer asked that the Group transmitter, a 3 KW, be made available to Third US Army as a relay. It finally was agreed that this could be done, but this transmitter was not in operation by the end of August.

The second week in August, Twelfth US Army Group requested that Third US Army furnish a combat report for the Army Hour broadcast.

The radio officer accordingly took wire recording equipment to ST. MALO (S81) and succeeded in getting two recordings, both from a forward observation post overlooking the CITADEL where a force of Germans continued to resist.

One of these recorded the voices of infantrymen who were participating in the assault on the fortress. The other was a straight narrative describing its actual surrender.

Upon returning to Army Group with these recordings, it was established that Third US Army would henceforward have its weekly spot on the Army Hour.

Two other trips were made during the month for this purpose. One involved three days of travel with the 7th Armored Division on its drive from DREUX (R33) to MELUN (S20).

The recording was made in this case from the IP and at H-hour of the attack on MELUN (S20).

The second recording was made from the American Memorial at BELLEAU WOOD (U76). Its theme was a comparison between the battle there in July, 1918, and the present drive.

During the month, the disc recording gear was not available to the Section for hometown recordings.

Digitized by Google

Section IV - Pictorial

Arrival of the 2d French Armored Division in France, marking the return of the first French troops to their soil, was thoroughly covered by means of still and motion picture photography at the beginning of the operational period. Photographers, both Signal Corps and War Correspondent, met the Division on its ships in the Channel, photographed personnel and equipment coming ashore, filmed units and individuals of the division passing through the Peninsula and going into first bivouac, and photographed it in combat action. During August it was discovered that War Correspondent photographers preferred to work in teams of two, one still and one motion picture man, working independently of writing correspondents. A transportation policy was laid down, as a result, which permitted two photographers so operating to use one jeep, with regularly assigned trailer for transportation of their special equipment. Desires of Twelfth US Army Group for public relations pictorial coverage by Signal Corps units were submitted to the Signal Photo Section. The Pictorial Officer was assigned temporarily to assist in pictorial coverage of the liberation of PARIS, working with Twelfth US Army Group.

Section V - Information Room

The Information Room and Work Room became the center of correspondents' activities. Twice daily briefings were continued by the Briefing Officer who maintained close liaison with AC of S, G-2 and AC of S, G-3.

The progress of the Third US Army through France was shown daily on the large scale maps as well as dispositions of Allied and enemy troops.

Section VI - Administration

Administrative and Public Relations functions were consolidated under the Chief Clerk. The Administrative Officer and the Camp Commandant coordinated their activities more closely to improve the efficiency of Press Camp servicing.

Section VII - Communications

The Signal Corps CH (Continuous Wave) transmitter and 300 (Radio Voice) became operational 4 August.

The communications platoon consisted of one officer and eighteen enlisted men.

It was originally planned to handle press copy, operational messages and correspondents' broadcasts, but experience with this type of transmission at First US Army during July indicated that CW operation was not rapid enough to handle war correspondents' copy without highspeed facilities and personnel to handle highspeed transmission which the unit lacked.

Since press copy had no priority and was subject to delay because of operational priority on the Signal Corps channel, and, since no separate channel was allocated for press copy, it was necessary to handle practically all press copy via Mackay. This included British correspondents' copy which reached LONDON via NEW YORK.

The 300 voice transmission was not satisfactory because it was necessary to broadcast a greater distance than the transmitter was designed to cover. A relay was needed and this, itself, had to be reasonably mobile, but during the month the relay point was not set up.

Since it was shown during the pre-operational period that Signal Corps transmission would not accomplish the mission, arrangements were made with the Mackay Radio Corporation for commercial facilities to transmit to LONDON and to NEW YORK the correspondents' press copy which constituted the major traffic of the Press Camp.

According to Mackay Radio Corporation records, a total of 380,586 words were transmitted during August operations.

Section VIII - Censors

On 1 August, when the Third US Army became operational, the censorship team returned. The first night, censoring was conducted under difficult conditions.

The team had arrived at a new bivouac area late at night and accommodations had not been completed, since the camp had just completed a move.

Copy and wordage censored by the censorship team is tabulated as follows:

Week	Total Submissions	Total Words
1-6 Aug	134	90,630
6-13 Aug	277	101,908
13-20 Aug	338	109,999
20-27 Aug	299	99,075
27 Aug - 3 Sept	254	50,948
TOTALS	1307	448,560

CHAPTER 4
SEPTEMBER OPERATIONS

Section I - General

Press Camp operations continued at SOMME-VESLE (T74) until 11 September when the camp moved to PUXE (U84) in French Lorraine, in the SPAIN (U49) - COMPIAGNE (U66) area.

During the month six new correspondents were assigned to the Press Camp and eighteen departed.

The camp continued operations at PUXE (U84) during the remainder of the month. Correspondents assigned as of 30 September were:

Ball, Edward D., Associated Press
Belden, J., Life
Bockhurst, John A., Newsreel Pool
Broderick, J.H., Still Pool
Carlisle, John M., Detroit News
Clark, Norman M., The London News Chronicle
Crawford, Kenneth, Newsweek
Cronie, Robert A., Chicago Tribune
Despouey, Arturo, NBC
Downton, Eric, Reuters
Driscoll, J.F., New York Herald-Tribune
Gallagher, Wes, Associated Press
Grad, Jules, Sgt., Stars and Stripes
Graham, Fred, New York Times
Grant, Donald, Look Magazine
Greene, Hamilton, American Legion Magazine
Grune, Philip, London Evening Standard
Hase, Pierre J., INS
Levitt, Saul, Yank Magazine
Loveland, R.A., Cleveland Plain Dealer
Lucas, Nemo C., Rio de Janiero "Anoite"
Mackenzie, D.K., New York Daily News
Mazo, Earl, Lt., Stars and Stripes
McNicoll, D.R., Consolidated Australian Press
McQuaid, B.J., Chicago Daily News
McVane, John, NBC
Morse, Ralph, Still Pool
Priestley, T.A., Newsreel Pool
Prince, W.F., London Times
Rensswig, W., King Features
Richards, Robert W., United Press
Rollins, B.H., Still Pool
Ryan, Cornelius, London Daily Telegraph
Small, Wilson, C., United Press
Tully, Andrew, Boston Traveler
Wallenstein, Marcel, Kansas City Star
Wellard, James H., Chicago Times
Wilhelm, John H., Reuters
Wolf, T.H., Newspaper Enterprise Alliance
Youngman, L.W., Omaha World-Telegram (35th Inf Div)

New arrivals for the month of September:

Beattie, Edward W., Jr., United Press. Arrived 9 September. (Captured by Germans on 12 September.)
Bryan, Wright, NBC, arrived 7 September. (Captured by Germans on 12 September.)
Despouey, Arturo, NBC, arrived 24 September on orders from PRO, Twelfth US Army Group, for seven days.
Gallagher, Wes, Associated Press, arrived 1 September to replace Boyle.
Grad, Jules, Sgt., Stars and Stripes, arrived 22 September.
Graham, Fred, New York Times, arrived 4 September to replace Curriven.
Greene, Hamilton, American Legion Magazine, arrived 29 September for assignment to 83d Division.
Lucas, Nemo C., Rio de Janiero "Anoite" arrived 26 September on seven-day basis.
Mazo, Earl, Lt., Stars and Stripes, arrived 1 September.
McVane, John, NBC, arrived 24 September on seven-day basis.
Small, Wilson C., United Press, arrived 22 September to replace Edward Beattie.

Departures for the month of September:

Beattie, Edward W., Jr., United Press, captured by Germans on 12 September.
Bryan, Wright, NBC, captured by Germans 12 September.
Curriven, K.A., New York Times, left on 4 September. He was replaced by Fred Graham.
Dixon, Randy, Pittsburgh Courier, reaccredited to Communications Zone, left on 21 September.
Dodd, Howell N., Jr., Associated Press artist, left on 6 September.
Douglas, William A., Chicago Sun, reaccredited to Communications Zone, left on 4 September.
Dunbar, Rudolph, Associated Negro Press, reaccredited to Communications Zone, left on 21 September.
Frazier, Gordon, Blue Network, dropped from rolls 28 September. Assigned to First US Army.
Gosset, Pierre, AFI, reaccredited to Communications Zone, left on 4 September.
Hearst, William Randolph, Jr., INS, dropped from rolls 28 September. His status became that of Distinguished Visitor.
Hoge, Thomas A., Pvt., Stars and Stripes, dropped from rolls 28 September.
Lake, Austin, Boston American, dropped from rolls 28 September.
Littell, Robert, Reader's Digest, departed 4 September
Mecklin, John M., Chicago Sun, left for England 23 September.
Miller, R.C., United Press, evacuated to England 4 September.
Malick, D.O., AFI, reaccredited to Communications Zone on 4 September.
Steward, Ollie, Baltimore Afro-American, reaccredited to Communications Zone on 21 September.
Tolos, Edward, Chicago Defender, reaccredited to Communications Zone on 21 September.
Whitney, P., San Francisco Chronicle, left 4 September.
Wolfert, Ira, NANA, reaccredited to First US Army, left 24 September.

Items logged at the Press Camp during September totalled 2218. Copy was dispatched via Mackay Radio, the Press Camp's transmitter, Army Communications, and Air Delivery Letter Service as follows:

Mackay	1889
ADLS	130
Army Communications	99
Total	2118

In addition, six items were routed to Twelfth US Army Group, bringing the total number of items to 2118. Estimated wordage was 445,808.

Section II - Press

A total of 7756 items, including fourteen photos and two construction blueprints were received from twenty-four Third US Army units during the month and forwarded to PRO, Press Section, Headquarters, Communications Zone (Forward), ETOUSA, for clearance and distribution. This total is broken down as follows:

Digitized by Google

Promotions	869
Awards and Citations	867
General Interest	4883
Photos	14
Films	8
Total	7788

Units submitting material were: 26 Infantry Division, 4th Armored Division, 9th Infantry Division, 7th Armored Division, 6th Infantry Division, XII Corps, 14th Liaison Squadron, XV Corps, XX Corps, 35th Infantry Division, 43d Cavalry Reconnaissance Squadron, 79th Infantry Division, 90th Reconnaissance Squadron, 80th Infantry Division, 83d Infantry Division, 94th Medical Gas Battalion, 84th Field Artillery Battalion, 249th Engineer Combat Battalion, 344th Ordnance Company, 359th Infantry Regiment, 411th Military Police Battalion, 13066th Engineer General Service Regiment, Army Nurse Corps (ETOUSA) and Public Relations Office, Third US Army.

The September total of 7788 items was an increase of 4894 over the August total of 861 items. The July total was 177. Total number of items cleared at this headquarters during the two months of Third US Army operations on the Continent was 8816. The grand total of all items cleared and forwarded during pre-operational and operational periods to date (30 September) was 8793.

In addition to forwarding news items and photos for general release, general and human interest stories were forwarded to the editor, Stars and Stripes, and to the editor, Yank Magazine. All material was made available to war correspondents.

At the request of the AC of S, G-2, an investigation was made of the origin of stories which appeared in the British Press and in the Army newspaper, Stars and Stripes, alleging that troops of the First US Army had burned WALLENDORF, a German village northwest of TRIER, in reprisal for sniping. A retraction published in Stars and Stripes 19 September charged that the story had emanated from a Third US Army correspondent. It quoted First US Army authorities as stating that the village had been set aflame by artillery fire to reduce it as an enemy stronghold and had not been put to the torch. The investigation showed that a flash sent by an Associated Press correspondent with the Third US Army Press Camp, which referred to previous copy describing artillery action in the vicinity of the village, had been ambiguously worded so that when read alone it gave the impression that the village had been put to the torch. The investigation showed also that at no time was the word "reprisal" used in connection with the reduction of the village. The conclusion that the idea "reprisal" had been inferred by cable desks in LONDON and by Stars and Stripes and injected into the story seemed reasonable.

Section III - Radio

During the first week of September Third US Army's spot for the Army Hour was recorded at CHATEAU THIERRY (886) and BELLEAU WOOD (876). Later a second Army Hour spot was made with the 43d Cavalry Reconnaissance Squadron, a Third US Army unit moving on Germany.

It was established that ETOUSA Radio was servicing hometown recordings made with the magnetic wire recorder. The recorder was then used for stories and interviews featuring Third US Army personnel.

A recorded description of the fortification system of METZ (U85) and a report of the stiffening German resistance along the entire line was made. Two home town recordings were made with personnel of forward units and sent to ETOUSA for processing.

At the month's end no radio correspondents were assigned to Third US Army.

Section IV - Pictorial

Two newsreel and three still photographers were assigned to PRC, Third US Army in September, and were assisted in their mission by the Pictorial Officer. Close liaison was maintained with Army Pictorial Service.

Section V - Information Section

The Information Section maintained maps showing the situation of Allied and enemy troops on all European war fronts. The Allied-German front from below SWITZERLAND to Northern HOLLAND was shown on a G3G6 map of 1:850,000 scale. Units of the Seventh, Third and First US Armies were shown down to and including regiments.

As the situation became somewhat static on the Third US Army front, a G3G5 map of 1:100,000 scale was posted and Third US Army units down to and including battalions were shown. For the first time since the American break-through on the Normandy front it became possible to show a cohesive front line.

Since the BRITTANY Peninsula was the scene of only one important action, the siege of BREST, a large-scale map of that area was not used. American and German forces engaged in the action were shown on a map of 1:100,000 scale. On a 1:4,000,000 map of Europe, the Russo-German, Italian and French battle lines were shown. G-2 Section reports made possible the maintenance of a very clear picture of the enemy situation and Germany's western front.

Section VI - Censorship

An estimated total of 450,005 words were cleared by censors during the month in 2161 submissions. Submissions and wordage by week follows:

Week Ending	Submissions	Wordage (Estimated)
9 September	458	111,267
16 September	618	134,870
23 September	718	123,188
30 September	367	90,680
TOTALS	2161	450,005

Section VII - Communications

The Mackay Radio Corporation transmitter, direct outlet to NEW YORK from the Third US Army front along the MOSELLE River for war correspondents, set what is believed to be a European Theater of Operations record in transmitting a message from a correspondent to a client in NEW YORK in seventeen minutes. Another message reached a NEW YORK client in twenty-one minutes.

According to Mackay records at the Press Camp a total of 491,617 words were transmitted during September.

Difficulties in finding spare parts for the transmitting equipment were solved temporarily by the discovery of a German transmitter which was dismantled for parts.

No major breakdowns in transmission occurred during the month, and the transmission was not blacked out by atmospheric conditions for longer than several hours at a time.

Operations of Signal Corps radio and teletype transmission had an output of ten to fifteen messages daily. Approximately fifteen messages were received daily.

Teletype had been in service only a short time and was used as a relief means of transmittal for radio.

A broadcast was made via JEVA (Third US Army Press Camp radio, to BBC of two minutes duration. Interference was so bad that the broadcast was not received. It was rebroadcast the following day and a recording was made in LONDON.

NBC International tried to make a recording but it could not be received properly in LONDON. It was tried again and finally got through, but the reading was only fair. One broadcast, of one-and-a-half minutes duration, was made to NBC.

CHAPTER 5
OCTOBER OPERATIONS

Section I - General

Routine Press Camp operations continued at PARIS (U56), in the MAIN-COMBLES area.

Press Camp moved to outskirts of city of NANCY (U81), 12 October. Several buildings were obtained for the use of the section and for the first time since arriving on the Continent all personnel as well as operations were housed indoors.

Press Camp functioned at NANCY (U81). During the month ten correspondents arrived at the camp and seventeen departed.

Correspondents assigned as of 31 October were:

Beckhurst, John, Newsreel Pool
Broderick, Hugh J., Still Pool
Clark, Norman E., News Chronicle
Crawford, Kenneth, Newsweek
Cronin, Robert A., Chicago Tribune
Currivan, E.A., New York Times
Downton, Eric, Reuters
Driscoll, J.F., New York Herald-Tribune
Gallagher, Wes, Associated Press
Grad, Jules (Sgt), Stars and Stripes
Grune, Phillip, Evening Standard
Hawkins, Lewis, Associated Press
Hess, F.J., INS
Levitt, Saul, Yank Magazine
Mauo, Earl (Lt), Stars and Stripes
McNicol, D.N., Consolidated Australian Press
Mecklin, John M., Chicago Sun
Morse, Ralph, Still Pool
Oldhan, Jack, Rotha Films (121 Evac Hosp)
Priestley, T.A., Newsreel Pool
Prince, W.J., London Times
Ray, Cyril, BBC
Rowsome, F., King Features
Richards, Robert E., United Press
Rollins, Byron M., Still Pool
Ryan, Cornelius, London Daily Telegraph
Sheahan, J.O., Chicago Tribune (artist)
Small, Wilson C., United Press
Stokes, Richard L., St. Louis Post Dispatch
Unwin, Stanley, BBC Engineer
Willard, James M., Chicago Times
Wilhelm, John R., Reuters
Youngman, L.E., Omaha World Telegram (asgd 35th Inf Div).

Arrivals for month of October were:

Currivan, E.A., New York Times, on 26 October.
Fowler, Nick, Dallas News, on 25 October for temporary duty with 90th Infantry Division.
Hawkins, Lewis, Associated Press, on 12 October.
Hearst, William Randolph, Jr., on 13 October.
Mecklin, John M., Chicago Sun, on 13 October.
Oldham, Jack, Rotha Films, on 24 October for temporary duty with 101st Evacuation Hospital.
Ray, Cyril, BBC, on 24 October.
Sheahan, J.O., Chicago Tribune artist, on 11 October.
Stokes, R.L., St. Louis Post Dispatch, on 11 October.
Unwin, Stanley, BBC engineer, on 28 October.

Departures for month of October were:

Hall, Edward D., Associated Press, for United Kingdom 16 October.
Beldin, J., Time and Life, for Twelfth Army Group 18 October.
Carlisle, John M., Detroit News, for USA on 2 October.
Despouy, Arturo, NBC, for Twelfth Army Group on 2 October.
Fowler, Nick, Dallas News, for Sixth Army Group 31 October.
Graham, Fred, New York Times, for Ninth Army 31 October.
Grant, Donald, Look Magazine, for USA on 2 October.
Greene, Nanc[illegible] Legion Magazine, for Twelfth US
Gro[illegible] Ninth Air Force on 16
[illegible]

DECLASSIFIED

Digitized by Google

Loveland, Roslif, Cleveland Plain Dealer, for USA on 23 October.
Lucas, Reme G., Rio de Janiero Ancita, for Twelfth Us Army Group 6 October.
Mackenzie, Donald E., New York Daily News, for Paris 30 October.
MacQuaid, B.J., Chicago Daily News, for Second British Army 18 October.
McMann, John, NBC, for Twelfth US Army Group 2 October.
Tully, Andrew, Boston Traveler, for Ninth US Army 21 October.
Vallenstein, Marcel, Kansas City Star, for Ninth US Army 18 October.
Wolf, F.N., Newspaper Enterprise Alliance, to Communications Zone 5 October.

Copy logged at the Press Camp during October totaled 1272 items, which were dispatched via Mackay Radio, Army Communications, Air Delivery Letter Service and Air Mail as follows:

Mackay	1055
Army Communications	126
ADLS	53
Air Mail	38
Total	1272

Estimated wordage was 192,274.

Section II - Press

A total of 6220 items, including thirty-one photos, were received from twenty-one organizations in Third US Army and forwarded to Press Section, PRO, Headquarters Communications Zone (Forward) for clearance and distribution during October. This total is broken down as follows:

Promotions	580
Awards and Citations	1923
General Interest	3686
Photos	31
Total	6220

Units submitting material included: 4th Armored Division, 5th Infantry Division, 6th Armored Division, XII Corps, XII Corps Engineer, 12th Evacuation Hospital, 14th Liaison Squadron, 17th Armored Group, XX Corps, 26th Infantry Division, 35th Infantry Division, 80th Infantry Division, 86th Chemical Battalion, 90th Infantry Division, 106th Cavalry Reconnaissance Squadron, 128th AAA Battalion, 248th Combat Engineer Battalion, 514th Quartermaster Group, 739th Field Artillery, Army Nurse Corps, and Public Relations Office, Third US Army.

The October total of 6220 items was a decrease of 1535 from the September total of 7755. The August total was 841, and the July total 177. Grand total of items forwarded after clearance at this headquarters during the three months of Third US Army operations on the Continent was 14,836, and for all items cleared and forwarded during pre-operational and operational periods 15,013.

In addition to forwarding news items and photos to PRO Communications Zone for release, duplicates of general and human interest stories were forwarded to Stars and Stripes and to York. All material was made available to war correspondents.

Section III - Radio

Mechanical failure of both the wire recorder and its portable power unit resulted in the procurement of a new recorder and a new power unit (PE 214). The new power unit was of a different type from any previously used in this section, being much more compact and considerably lighter in weight. In combination with the new wire recorder it proved most satisfactory.

Army Hour recordings were made from an observation post overlooking the fortifications of METZ (U85) from a division in reserve, and from a division preparing itself for winter fighting. "Hometown" recordings were made at an infantry regiment, a medical collecting station, a combat engineer battalion, a field artillery battery and an ordnance company.

The British Broadcasting Company's miniature recording "van" - equipment mounted in a quarter-ton trailer - was again prepared for use after being idle since late August.

Section IV - Pictorial

Two enemy and three still photographers were assigned to PRO, Third US Army in October, and were assisted in their mission by the Pictorial Officer. Close liaison was maintained with Army Pictorial Service.

Section V - Information Room

The Information Room maintained maps showing the situation of Allied and enemy troops on all European war fronts. As the situation was relatively static, it was possible to show a cohesive "front line." Maps of the Russian and Italian fronts were maintained on the basis of radio newscasts, the only available source of information and one which provided only a very general picture. G-2 Section reports made possible the maintenance of a very clear picture of the enemy situation on Germany's western front.

Using radio newscasts as the source of information, a map was prepared showing the progress of the American invasion on LEYTE, in the PHILLIPPINE ISLANDS.

Section VI - Censorship

For the month of October, total items submitted to Field Press Censorship at Army level were 1329, with a total wordage of 353,870. Photographs submitted totaled 511.

Section VII - Communications

Mackay Radio Corporation's transmitter handled 207,213 words during the month. There were no major breakdowns in transmission.

Radio and teletype operations by Army Communications group averaged approximately the same as in September, ranging from ten to fifteen messages (about 1000 groups) per day. Messages received averaged about fifteen daily.

Teletype service was facilitated by means of an excellent tie-up with Third US Army Headquarters Signal teletype board. During the latter half of the month more than the usual amount of British press copy was handled by teletype.

On the last three days of October voice tests to LONDON were made with the 399 transmitter. On the 30th of October a test was made to Twelfth US Army Group.

CHAPTER 6
NOVEMBER OPERATIONS

Section I - General

Routine Press Camp operations continued at NANCY (U81). During the month twenty-six correspondents arrived at the camp and twenty-eight departed. The twenty-nine correspondents assigned as of 30 November were:

Cannon, J.J., M/Sgt, Stars and Stripes
Cassidy, W., (Facility visit) Philadelphia Evening Bulletin
Clark, H.M., London News Chronicle
Cronin, R.A., Chicago Tribune
Currivan, E.A., New York Times
Downton, Eric, Reuters
Driscoll, J.F., New York Herald-Tribune
Edinger, J., France-Presse Agency
Grune, F., London Evening Standard
Haacker, G.T., Still Pool
Hawkins, L., Associated Press
Huss, F.J., INS
Levitt, Saul, Yank Magazine
Mackenzie, D.K., New York Daily News
Martin, R.G., Stars and Stripes (Divisional coverage)
Mazo, Earl, Lt., Stars and Stripes
McCardell, Lee, Baltimore Sun
Priestley, T.A., Newsreel Pool
Prince, W.J., London Times
Ray, Cyril, BBC
Reusswig, W., King Features
Richards, R.W., United Press
Rollins, Byron H., Still Pool
Ryan, C.J., London Daily Telegraph
Sheahan, J.O., Chicago Tribune (artist)
Small, W.C., United Press
Tully, Andrew, Boston Traveler
Unwin, S., BBC engineer
Wellard, James H., Chicago Times

The twenty-six arrivals for the month of November were:

Brogan, J.A., Jr., vice-president of INS, for facility visit on 16 November.
Cannon, J.J., Stars and Stripes, on 27 November.
Carpenter, Iris (Miss), London Daily Herald, for facility visit, on 19 November.
Cassidy, W., Philadelphia Evening Bulletin, for facility visit with Nineteenth Tactical Air Force, on 25 November.
Davis, F.M., Life, for facility visit, 17 November.
Diquelou, R., Parisien Humanite, for facility visit, 19 November.
Dixon, K., Associated Press, 9 November
Edinger, J., France-Presse Agency, 1 November.
Haacker, G.T., Still Pool, 10 November.
Levitt, Saul, Yank Magazine, 15 November.
Loxton, Barbara, South African "Newsek," for facility visit with Third US Army medical units, 26 November.
Mackenzie, D.K., New York Daily News, 17 November.
Mann, A., Mutual Broadcasting, for facility visit, 12 November.
Martin, R.G., S/Sgt, Stars and Stripes, for divisional coverage, 23 November.
McCardell, L., Baltimore Sun, 3 November.
Priestley, T.A., Newsreel Pool, 11 November.
Reusswig, W., King Features, 2 November.
Cronin, R., Chicago Tribune, 2 November
Richards, R.W., United Press, 10 November.
Robinson, H., New York Herald Tribune, for facility visit, 25 November.
Rollins, B.H., Still Pool, 14 November.
Stewart, O., Baltimore Afro-American, for facility visit with 761st Tank Destroyer Battalion, on 8 November.
Stirling, Monica (Miss), Atlantic Monthly, for facility visit with Third US Army medical units, 26 November.
Tully, A., Boston Traveler, 11 November.
Wellard, J.H., Chicago Times, 27 November.
Werner, O.A., Associated Press, for facility visit 26 November.

Departures for November, totalling twenty-eight, were:

Ball, E.D., Associated Press, for USA, 12 November.
Bockhurst, J.A., Newsreel Pool, for United States via Paris, 24 November.
Broderick, H.J., Still Pool, for USA via Paris, 29 November.
Brogan, J.A., Jr., vice-president INS, 19 November.
Carpenter, Iris (Miss), London Daily Herald, 20 November.
Cook, T.D., Newsweek, to Sixth US Army Group, 9 November.
Crawford, K., Newsweek, 10 November.
Davis, F.M., Life, 23 November.
Diquelou, R., Parisien Humanite, 23 November.
Dixon, K., Associated Press, for Ninth US Army, 29 November.
Gallagher, W., Associated Press, 5 November.
Grad, J., Stars and Stripes, 5 November.
Loxton, Barbara, South African "Newsek," 28 November.
Mackenzie, D.K., New York Daily News, 10 November.
Mann, A., Mutual Broadcasting, 18 November.
McNicool, D.R., Consolidated Australian Press, for USA via Paris, 24 November.
Mecklin, J.M., Chicago Sun, 12 November.
Morse, H., Still Pool, 21 November.
Oldham, J., Rotha Films, 7 November.
Robinson, H., New York Herald Tribune, 28 November.
Stewart, O., Baltimore Afro-American, 14 November.
Stirling, Monica (Miss), Atlantic Monthly, 28 November.
Stokes, R.L., St. Louis Post Dispatch, for USA via Paris, 1 November.
Tully, A., Boston Traveler, to Ninth US Army, 10 November.
Wellard, J.H., Chicago Times, 5 November.
Werner, O.A., Associated Press, 29 November.

Digitized by Google

Wilhelm, J.B., Reuters, 20 November.
Youngman, L.W., Omaha World Telegram, for USA via Paris, 1 November.

Copy logged at the Press Camp during November totaled 3426 items as against October's 1272. These were dispatched via MacKay Radio, Army Communications, Air Delivery Letter Service and Air Mail according to the following table:

MacKay	2891
Army Communications	422
ADLS	111
Air Mail	2
Total	3426

The estimated wordage of 556,390 for November is the largest monthly total thus far.

Section II - Press

A total of 3925 items, including eighty photos, was received from eighteen organizations in Third US Army and forwarded to Press Section, PRO, Headquarters, Communications Zone (Forward) NTOUSA, for clearance and distribution during November. This total is broken down as follows:

Promotions	385
Awards and Citations	1022
General Interest	438
Photos	80
Total	3925

Units submitting material included 4th Armored Division, 4th Special Service Company, 5th Infantry Division, 6th Armored Division, XII Corps, 12th Evacuation Hospital, XX Corps, 26th Infantry Division, 35th Infantry Division, 77th Finance Disbursing Section, 80th Infantry Division, 90th Infantry Division, 95th Infantry Division, 106th Cavalry Reconnaissance Squadron, 166th Signal Photo Company, 157th Signal Replacement Company and 514th Quartermaster Group.

The Public Relations Section, Third US Army, submitted sixty-three items, thirty of which were photos. These items originated with this headquarters.

The November total of 3925 items is a decrease of 2295 from the October total of 6220. The September total was 7755, August 861, and July 177. Total number of items forwarded after clearance at this headquarters during the four months of Third US Army operations on the Continent is 18,761. Grand total of all items cleared during the pre-operational and operational periods to date is 18,938.

In addition to forwarding news items and photos to PRO, Communications Zone (Forward), for release, duplicates of general and human interest stories were forwarded to Stars and Stripes and to Yank. All material was made available to war correspondents.

Section III - Radio

Radio correspondent Cyril Ray, BBC, and Stanley Unwin, BBC engineer, were at the Press Camp during the entire month. Arthur Mann, of Mutual Broadcasting System, spent several days at the Camp arranging a special series of recordings dealing with Third US Army's Psychological Warfare Section. "Red" Mueller, National Broadcasting Company, attached to PRO, Twelfth US Army Group, made several broadcasts from JEWA.

Standby Army Hour spots were made from the 26th Infantry Division and from a Quartermaster Truck Company. In accordance with instructions from the Public Relations Division of the War Department a special recorded interview was made with a colored Quartermaster jeep driver whom GENERAL PATTON had decorated for heroism at CHATHAINOIS. This recording was for Mutual's "Your Army Service Forces" program. Eighteen hometown recordings were made. Mechanical difficulties with the wire recorder prevented making more recordings.

The Radio section assisted in making arrangements for an enlisted man from the 9th Infantry Division to participate in a broadcast beamed to the United States from Paris.

Section IV - Pictorial

Two still and one newsreel photographers were assigned to Third US Army's Press Camp and were assisted in their work by the Pictorial Officer. Close liaison was maintained with Army Pictorial Service.

Section V - Information Section

The Information Room maintained maps showing the situation of Allied and enemy troops on all European fronts and one showing the progress of the American campaign on LEYTE, PHILIPPINE ISLANDS. Maps of the Russian, Italian and Philippine campaigns were maintained on the basis of newscasts, the only available source of information. G-2 Section reports made possible the maintenance of a very clear picture of the enemy situation on Germany's western front.

On 1:100,000 maps emphasizing terrain features, progress week by week since opening of the November drive was indicated by shading.

On 1:25,000 maps, the German defensive plan from LUXEMBOURG approximately to SAARBRUCKEN was shown.

Section VI - Censorship

For the month of November, total items submitted to field press censorship at Army level was 3624, with a total wordage of 372,412. Photographs submitted totaled 236.

Section VII - Communications

MacKay Radio handled 446,999 words during November, with no major breakdowns in transmission.

Transmission via Army Communications, by both radio and teletype, averaged thirty to forty messages per day (7000 to 8000 groups). Incoming messages averaged twenty-five daily (1500 to 2000 groups).

Although there was still some difficulty with relay service at Army Group level, teletype handled the bulk of the traffic. On the whole, the teletype service was much more satisfactory than was expected.

The radio was open twenty-four hours a day but because of a very crowded frequency after 1700 hours it did not prove to be a satisfactory means of clearing traffic should the teletype fail during a rush period.

Tests to LONDON using JELG at Twelfth US Army Group as a relay, proved satisfactory. Some recordings were broadcast to BBC and were received satisfactorily, although reception was impossible after 1700 hours.

Tests to PARIS direct proved very satisfactory. With the Army station in PARIS acting as a relay, one broadcast direct to NBC in NEW YORK was originated with very good results.

CHAPTER 7
DECEMBER OPERATIONS

Section I - General

The Press Camp conducted operations at NANCY (D81), FRANCE, until 26 December and then set up routine press operations at ESCH (P70), LUXEMBOURG. During the month twenty-five correspondents arrived and thirty departed. The twenty-eight correspondents assigned as of 31 December were:

Ball, R.D., Associated Press
Cannon, J.J., M/Sgt, Stars and Stripes
Cronin, Robert A., Chicago Tribune
Downton, Eric, Reuters
Driscoll, J.F., New York Herald Tribune
Haacker, C.T., Still Pool
Hawkins, Lewis, Associated Press
Johnston, Richard J., New York Times
Lang, Will, Time Magazine
Lee, Jack, INS
Levitt, Saul, Yank Magazine
McCardell, Lee, Baltimore Sun
McCarthy, J.W., M/Sgt, Yank Magazine
McNulty, Anthony J., Stars and Stripes Photographer
Picard, Marcel, Agence Francaise Presse
Priestley, T.A., Newsreel Pool
Ray, Cyril, BBC
Richards, R.W., United Press
Rollins, Byron H., Still Pool
Ryan, C.J., London Daily Telegraph
Schuck, Hugh J., New York Daily News
Sheahan, J.G., Chicago Tribune (artist)
Small, Wilson C., United Press
Unwin, Stanley, BBC engineer
Wallard, James H., Chicago Times
Weston, Joseph, Prt, Stars and Stripes
White, Samuel, Consolidated Australian Press
Wiant, Toby, Associated Press

The twenty-five arrivals for the month of December were:

Bain, Leslie B., McNaught Syndicate, arrived 15 December for facility visit.
Berson, Roger, French Photo Presse, arrived 9 December for facility visit.
Calmer, Ned, Columbia Broadcasting System, arrived 3 December for facility visit.
Capa, Robert, Life and Time Magazine Photographer, arrived 12 December.
Droit, Michel, Radio Diffusion Francaise, arrived 24 December for facility visit.
Folliard, Edward, Washington Post, arrived 23 December for facility visit.
Hauser, Ernest, Saturday Evening Post, arrived 21 December for facility visit.
Johnston, R.J., New York Times, arrived 30 December.
Krueger, Jose, Chicago Herald American, arrived 14 December for facility visit.
Lang, Will, Time Magazine, arrived 27 December.
Lee, Jack, INS, arrived 28 December.
Lower, Elmer, Life Magazine, arrived 3 December for facility visit.
Martin, M.C., Lt. General, British Army, Retired, Military Advisor, London Daily Telegraph, arrived 8 December for facility visit.
McDowall, James, Kemsley Newspapers, arrived 12 December for facility visit.
McCarthy, Joseph H., M/Sgt, Yank Magazine, arrived 29 December for facility visit.
Peterman, Ivan B., Philadelphia Inquirer, arrived 7 December for facility visit.
Pateuil, Andre, Radio Diffusion Francais, arrived 24 December for facility visit.
Picard, Marcel, Agence Francaise Presse, arrived 30 December.
Silverman, David, Life Magazine, arrived 3 December for facility visit.
Schuck, Hugh J., New York Daily News, arrived 15 December.
Stead, Ronald, Christian Science Monitor, arrived 15 December for facility visit.
Stokes, Richard L., St. Louis Post Dispatch, arrived 9 December for facility visit.
Van Lee, Leyn, Radio Diffusion Francaise, arrived 24 December for facility visit.
Werner, Oscar A., Associated Press, arrived 10 December for facility visit.
Weston, Joseph, Prt., Stars and Stripes, arrived 29 December for facility visit.
White, Samuel, Consolidated Australian Press, arrived 28 December.

The thirty departures for the month of December were:

Bain, Leslie B., McNaught Syndicate, 18 December.
Berson, Roger, French Photo Presse, 16 December.
Calmer, Ned, Columbia Broadcasting System, 5 December.

Digitized by Google

Capa, Robert, Life and Time Photographer, 22 December.
Cassidy, Morley, Philadelphia Evening Bulletin, 6 December.
Clark, Norman M., London News Chronicle, 16 December.
Currivan, Gene, New York Times, 29 December.
Droit, Michel, Radio Diffusion Francaise, 29 December.
Edinger, Jacques, Agence Francaise Presse, 29 December.
Folliard, Edward, Washington Post, 26 December.
Grune, Phillip, London Evening Standard, for United Kingdom on leave and business consultation with his office 18 December.
Hauser, Ernest, Saturday Evening Post, 26 December.
Huss, F.J., INS, for USA via Paris on 16 December.
Krueger, Jess, Chicago Herald American, 16 December.
Lower, Elmer, Life Magazine, 5 December.
Mackenzie, D.K., for USA via Paris, 16 December. New York Daily News.
Martin, H.G., Lt. General, British Army, Retired, Military Advisor, London Daily Telegraph, 11 December.
Martin, Ralph G., Stars and Stripes, returned to Twelfth US Army Group 8 December.
Mann, Karl, (Lt), Stars and Stripes, for Paris 22 December.
McDowell, James, Kemsley Newspapers, 17 December.
Peterman, Ivan H., Philadelphia Inquirer, 12 December.
Peteuil, Andre, Radio Diffusion Francais, 29 December.
Prince, W.J., London Times, for United Kingdom via Paris on leave and business consultation 20 December.
Pennewig, W., King Features, for USA via Paris 18 December.
Scherman, David, Life Magazine, 5 December.
Stead, Ronald, Christian Science Monitor, 18 December.
Stokes, Richard L., St. Louis Post Dispatch, 16 December.
Tully, Andrew, Boston Traveler, on leave to Paris to make Christmas Broadcasts to the United States on Massachusetts personalities, 19 December.
Van Lee, Loys, Radio Diffusion Francaise, 29 December.
Werner, Oscar A., Associated Press, 29 December.

Copy logged at the Press Camp during December totaled 2901 items as against November's 3426. These were dispatched via Mackay Radio, Army Communications and Air Dispatch Letter Service according to the following table:

Mackay	2310
Army Communications	422
ADLS	169
Total	2901

The estimated wordage for December totaled 453,795. The November total was 556,390.

Section II - Press

A total of 7780 items, including sixty-six photos, were received from twenty-nine organizations in Third US Army and forwarded to Press Section, PRC, headquarters Communications Zone (Forward) ETOUSA, for clearance and distribution during December. This total is broken down as follows:

Promotions	862
Awards and Citations	5683
General Interest	1169
Photos	66
Total	7780

Units submitting material included 4th Armored Division, 5th Infantry Division, 6th Armored Division, 9th Armored Division, 10th Armored Division, 12th Evacuation Hospital, XII Corps, XX Corps, 26th Infantry Division, 33rd Field Artillery Brigade, 35th Infantry Division, 80th Infantry Division, 87th Infantry Division, 90th Infantry Division, 93rd Signal Battalion, 94th Medical Gas Treatment Battalion, 95th Infantry Division, 145th Engineer Combat Battalion, 179th Field Artillery Battalion, 273rd Field Artillery Battalion, 375th Ordnance Maintenance Company, 404th Field Artillery Group, 696th Field Artillery Battalion, 738th Field Artillery Battalion, 739th Field Artillery Battalion, 775th Field Artillery Battalion, 1117th Engineer Combat Group, and Surgery, Third US Army.

The Public Relations Section, Third US Army, submitted forty-six items, eighteen of which were photos. These items originated this headquarters.

The December total of 7780 items is an increase of 3855 over the November total of 3925. The October total was 6220. The September total was 7755. The August total was 861 and the July total 177.

Total number of items forwarded after clearance at this headquarters during the five months of Third US Army operations on the Continent is 26,541. Grand total of all items cleared and forwarded during the pre-operational and operational periods to date is 26,718.

In addition to forwarding items, both news and photos, to PRC, headquarters Communications Zone (Forward) ETOUSA, for release, duplicates of general and human interest stories were forwarded to Stars and Stripes and to Yank. All material was made available to war correspondents.

Section III - Radio

There were nine combat diary reports during December. Seven Christmas recordings were made. There were two recordings for the Army Hour. Two recordings of "front line choir" at the 35th Infantry Division were made. There were 120 recordings released after censorship for hometown consumption. A War Department request for a broadcast from LUXEMBOURG was received.

Section IV - Pictorial

Two still and one newsreel photographer were assigned to Third US Army's Press Camp and were assisted in their work by the Pictorial Officer. Close liaison was maintained with Army Pictorial Service.

Section V - Information Room

During December the Information Section maintained a G-2, G-3 situation map, scale 1:250,000, of the western front showing dispositions of both Allied and enemy troops by division and higher units. A map of 1:100,000 scale of the Third US Army sector was maintained showing locations of Third US Army and sectors of the Third US Army and the Seventh US Army was maintained to show progress of the two armies' offensives. Units down to regiment, and sometimes down to battalion, were shown.

During the battles for METZ (U85), SAARLAUTERN (U28), and SAARGUEMINES (U45), maps of 1:250,000 were maintained which showed exact locations and types of fixed enemy defenses.

Progress week by week of the Third US Army's offensive which began 8 November, were shown on a 1:100,000 map shaded to emphasize terrain features.

With the beginning of the German Army's counter-offensive on the western front against the First US Army's VIII Corps, a 1:100,000 scale map of this area was posted and units down to regiment were shown in their proper positions.

Section VI - Censorship

For the month of December, total items submitted to field press censorship at Army level was 3801 with a total wordage of 700,652. Total releases and hometown mailers was 554. Photographs submitted totaled 485.

Section VIII - Communications

Mackay Radio handled 343,443 words during December, with no major breakdowns in transmission.

The operation of both the radio and teletype, with the latter representing the principal means of communications, had an average output of 6,940 to 7,000 groups representing the texts of approximately thirty messages daily. Messages received showed an increase over the month of November with an average of twenty-five messages handled having about 2,000 groups daily.

The voice broadcast circuit between this station and British Broadcasting Corporation, LISBON, was maintained during December with messages being handled daily. Broadcasts by correspondents, the Radio Officer's and one enlisted man's recordings, were received satisfactorily in LONDON.

Traffic was limited when the Press Camp moved to a new location, as the only means of communications at the time was the radio, SCR-399.

The combined station AXD-JEVA was open twenty-four hours a day and the required personnel on duty was over that span to maintain teletype, radio, code and messenger service.

CHAPTER 8
JANUARY OPERATIONS

Section I - General

Routine Press Camp operations continued at ZSCH (P70). During the month thirty correspondents arrived and twenty-five departed. The thirty-two correspondents present as of 31 January were:

Bohrod, Aaron, Time and Life
Bryson, John, Blue Network
Busch, Noel, Time and Life
Common, James J., M/Sgt, Stars and Stripes
Clark, Norman M., London News Chronicle
Coffey, Pat, Yank Photographer
Cronin, Robert A., Chicago Tribune
Currivan, Gene, New York Times
Downton, Eric, Reuters
Driscoll, Joseph F., New York Herald-Tribune
Edinger, Jacques, Agence Francaise Presse
Flores, John T., Time and Life Photographer
Griffin, Bulkley S., Worcester Telegram Gazette and Hartford Times.
Haseker, Charles T., Still Pool Photographer
Hawkins, Lewis, Associated Press
Levitt, Saul, Yank Magazine
McCardell, Lee, Baltimore Sun
McNulty, Anthony J., Stars and Stripes Photographer
Murray, Edward J., United Press
Newman, Larry, International News Service
Penn, David, Office of War Information
Priestley, T.A., Newsreel Pool Cameraman
Prince, W.J., London Times
Reid, Robert, British Broadcasting Company
Richards, Robert B., United Press
Rollins, Byron H., Still Pool Photographer
Ryan, Cornelius J., London Daily Telegraph
Sheean, James Vincent, North America Newspaper Alliance
Tully, Andrew, Boston Traveler
Unwin, Stanley, British Broadcasting Company Engineer
White, O.E., Melbourne Herald
Wiant, Thoburn, Associated Press

The thirty arrivals for the month of January were:

Bohrod, Aaron, Time and Life, arrived 25 January
Blanchard, Claude, France-Soir, arrived 1 January for facility visit.
Bryson, John, Blue Network, arrived 27 January
Busch, Noel, Time and Life, arrived 25 January
Clark, Norman M., London News Chronicle, returned from leave in London, 6 January
Coffey, Pat, Yank Photographer, arrived 6 January
Crevasse, Pierre, Radio Diffusion Francaise, arrived 23 January, for facility visit.
Currivan, Gene, New York Times, arrived 6 January
Dearing, Joseph, Colliers, arrived 1 January for facility visit
Edinger, Jacques, Agence Francaise Presse, arrived 6 January.
Farr, Walter, London Daily Mail, arrived 5 January.
Flores, John T., Time and Life, arrived 29 January
Griffin, Bulkley S., Worcester Telegram Gazette and Hartford Times, arrived 18 January.
Hutton, Geoffrey W., Melbourne Argus, arrived 23 January, for facility visit.
Mitchell, Patrick C., Stars and Stripes, arrived 1 January
Morrison, Allan M., Stars and Stripes, arrived 2 January, for facility visit.

Digitized by Google

Murray, Edward J., United Press, arrived 28 January.
Newman, Larry, International News Service, arrived 3 January.
Penn, David, Office of War Information, arrived 28 January.
Perronet, Paul, Radio Diffusion Francaise, arrived 1 January for facility visit.
Prince, W. J., London Times, arrived 6 January from leave in United Kingdom.
Reid, Robert, British Broadcasting Corporation, arrived 31 January.

Rolland, Jacques, Paris Ce Soir, arrived 2 January for facility visit.
Sartres, Andre, France-Soir, arrived 2 January, for facility visit.
Sheean, James Vincent, North American Newspaper Alliance, arrived 22 January.
Thompson, Reginald W., London Sunday Times, arrived 17 January, for facility visit.
Tully, Andrew, Boston Traveler, returned from Paris 3 January.
White, C. E., Melbourne Herald, arrived 23 January.
Wiant, Toby, Associated Press, arrived 2 January.
Zalewski, Maurice, Journal "Liber Soir", arrived 18 January, for facility visit.

The twenty-five departures for the month of January were:

Ball, Edward D., Associated Press, 3 January.
Blanchard, Claude, France-Soir, 8 January.
Cremesse, Pierre, Radio Diffusion Francaise, 27 January.
Dearing, Joseph, Colliers, 22 January.
Farr, Walter, London Daily Mail, 25 January, on leave to Paris.
Hutton, Geoffrey W., Melbourne Argus, 26 January.
Johnston, Richard J., New York Times, 6 January.
Long, Will, Time and Life, 24 January.
Lee, Jack, International News Service, 6 January.
McCarthy, Joseph W., Yank, 11 January.
Mitchell Patrick C., Stars and Stripes, 26 January, on leave to Paris.
Morrison, Allan M., Stars and Stripes, 6 January.
Perronet, Paul, Radio Diffusion Francaise, 18 January.
Picard, Marcel, Agence Francaise Presse, 8 January.
Ray, Cyril, British Broadcasting Corporation, 6 January, suspended for illegal broadcast.
Rolland, Jacques, Paris Ce Soir, 18 January.
Sartres, Andre, France-Soir, 8 January.
Schuck, Hugh J., New York Daily News, 22 January, on leave to England.
Sheahan, Joseph G., Chicago Tribune, 25 January, on leave to Paris.
Small, Wilson C., United Press, 15 January.
Thompson, Reginald W., London Sunday Times, 26 January.
Wellard, James H., Chicago Times, 16 January, on leave to United Kingdom.
Weston, Joseph, Stars and Stripes, 11 January.
White, Samuel, Consolidated Australian Press, 10 January, on leave to United Kingdom.
Zalewski, Maurice, Journal "Liber-Soir", 27 January.

Copy logged at the Press Camp during January totaled 3246 items as against December's 2901. These were dispatched via Mackay Radio, Army Communications and Air Dispatch Letter Service according to the following table:

Mackay	2409
Army Communications	657
ADLS	180
	3246

The estimated wordage for January totaled 501,840. The December total was 453,795.

Section II - Press

A total of 8388 items, including 110 photos, were received from thirty-eight organizations in Third Army and forwarded to Press Section, PRD, Hq Communications Zone (Forward) ETOUSA, for clearance and distribution during January. This total is broken down as follows:

Promotions	1615
Awards & Cit	5889
Gen Interest	1344
Photos	110
Total	8388

Units submitting material included 4th Armd Div, 6th Inf Div, 9th Inf Div, 5th FA Gp, 6th Armd Div, VIII Corps, 9th Armd Div, 9th TD Gp, 10th Armd Div, 11th Armd Div, 12th Svce Regt, XII Corps, 17th Airborne Div, XX Corps, 26th Inf Div, 28th Inf Div, 35th Inf Div, 42nd Cav Rcn Sq, 70th TK Bn, 80th Inf Div, 87th Inf Div, 90th Inf Div, 91st Chem Bn, 94th Med Gas Bn, 93rd Sig Bn, 94th Inf Div, 95th Inf Div, 101st Airborne Div, 466th AAA Bn, 469th FA Bn, 774th TD Bn, 1304th Engr GS Regt, 3180th Sig Serv Bn, 3280th Sig Serv Co. Hq AAA Units, AG Third U S Army and G-3 Third U S Army.

The Public Relations Section this Headquarters submitted sixteen items. These items originated this Headquarters.

The January total is an increase of 598 over the December total of 7790, having totaled 8388. The November total was 9988. The October total was 6280. The September total was 7785. The August total was 841 and the July total 177. Total number of items forwarded after clearance at this Headquarters during the six months of Third United States Army operations on the Continent was 34898. Grand total of all items cleared and forwarded during the pre-operational and operational periods to date was 350?8.

In addition to forwarding items, both news and photos, to PRD, Communications Zone (Forward) ETOUSA, for release, duplicates of general and human interest stories were forwarded to Editor, "Stars and Stripes," and Editor, "Yank." All material was made available to war correspondents.

Section III - Radio

There were seven combat diary reports during January. There were four Army Hour recordings and three Army Service Forces recordings. There were 107 recordings released after censorship for hometown consumption. The Section also assisted with five recordings for Radio Francais.

Section IV - Pictorial

Two still, one newsreel and a "Yank" photographer were assigned to Third U S Army's Press Camp and were assisted in their work by the Pictorial Officer. Close liaison was maintained with Army Pictorial Service.

Section V - Information News

During January, the Information Section provided two daily briefings for correspondents assigned to the Third U S Army and one daily briefing for the General and Special Staff Officers of Headquarters, Third U S Army.

A world map showing the Russian and western battle front was maintained from combined G-2, G-3 and radio news reports.

On a map of 1:250,000 scale, the western front picture was shown down to and including units of division size along the Allied front in western Europe. Both Allied and enemy units were shown.

Third and First U S Armies were shown on a map of 1:100,000 scale. Allied and enemy units down to and including Regiment were shown in their proper positions.

During the month of January, the Information Section maintained G-2 and G-3 situation maps of the entire western front. The situation on the western front was kept correct through use of a map of 1:100,000 scale.

Section VI - Censorship

For the month of January, total 8 mms submitted to field press censorship at army level was 3371 with a total o

censorship at army level was 3371 with a total wordage of 938,378. Total releases and hometown mailers was 1560. Photographs submitted totaled 1153.

Section VII - Communications

Mackay Radio handled 410,286 words during January with no major breakdown in transmission.

The operations of both the radio and teletype had an average output of 8,000 to 9,000 groups daily for the first two weeks and 8,000 to 6,000 for the last two weeks. These groups represented approximately twenty-five to thirty messages daily. Messages received were about the same as December and averaged about twenty-five with a fluctuating group count of 8,000 to 8,800 daily.

Teletype difficulties increased greatly and at times it was almost impossible to get a proper connection through to our relay station at Twelfth U S Army Group.

The voice cost circuit to LONDON, British Broadcasting Corporation, was maintained throughout the month.

CHAPTER 9
FEBRUARY OPERATIONS

SECTION I - General

Press Camp operations were conducted at LUXEMBOURG CITY (PRA), LUXEMBOURG, during the month. During February, sixteen correspondents arrived and fifteen departed. The thirty-two correspondents assigned as of 28 February were:

Ball, Edward D.	Associated Press
Bryson, John	Blue Network
Cannon, James J., M/Sgt	Stars and Stripes
Clark, Ryerson M.	London News Chronicle
Costello, William	British Broadcasting Corporation
Cronin, Robert A.	Chicago Tribune
Currivan, Gene	New York Times
Downton, Eric	Reuters
Driscoll, J.F.	New York Herald Tribune
Edinger, Jacques	Agence France Presse
Foucherand, Louis	Marseilles Press
Griffin, Walkley S.	Worcester Telegram & Hartford Times
Hoecker, Charles T.	Still Pool
McBrien, Robert J.	Yank
McCardell, Lee	Baltimore Sun
McNulty, Anthony J.	Stars and Stripes
Meyer, Robert	United Press
Mitchell, Patrick C.	Stars and Stripes
Newman, Larry	International News Service
Penn, David	Office of War Information
Priestley, T. A.	Newsreel Pool
Prince, W. J.	London Times
Reid, Robert	British Broadcasting Corporation
Richards, Robert W.	United Press
Rollins, Byron H.	Still Pool
Ryan, Cornelius J.	London Daily Telegraph
Shadel, W.F.	Columbia Broadcasting Corporation
Sheahan, Joseph Gary	Chicago Tribune (Artist)
Sheean, James Vincent	Redbook (HAHA)
Tully, Andrew	Boston Traveler
dear, J.R.	Fort Worth Star Telegram
Wiant, Toby	Associated Press

The sixteen arrivals for the month of February were:

Abramson, Robert J., Yank, arrived 8 February for facility visit.
Alexander, Arthur E., Yank, arrived 8 February for facility visit.
Ball, Edward, Associated Press, arrived 19 February.
Rost, Jacques, Paris Combat, arrived 15 February for facility visit.
Costello, William, British Broadcasting Corporation Engineer arrived 25 February.
Epstein, Clifford, Detroit News, arrived 9 February for facility visit.
Foucherand, Louis, Havre

Foucherand, Louis, Marseilles Press, arrived 18 February for facility visit.

Meyer, Robert, United Press, arrived 1 February.
Mitchell, Patrick C., Stars and Stripes, arrived from leave 1 February.
Schutz, Hugh J., New York Daily News, arrived from leave 1 February.
Shadel, W.F., Columbia Broadcasting System, arrived 12 February for facility visit.
Shanahan, Joseph G., Chicago Tribune, arrived from leave 26 February.
Spear, J.R., Fort Worth Star Telegram, arrived 9 February.
Sullard, James H., Chicago Times, arrived from leave 2 February.

The fifteen departures for the month of February were:

Abramson, Robert J., Yank, 12 February.
Alexander, Arthur H., Yank, 12 February.
Bohrod, Aaron, Time and Life, 24 February.
Boste
Bost, Jacques, Paris Combat, 24 February.
Busch, Noel, Time and Life, 5 February.
Coffey, Pat, Yank, 24 February on leave.
Epstein, Cliff.M, Detroit News, 14 February.
Hawkins, Lewis, Associated Press, 14 February.
Lachin, Maurice, Paris Combat, 17 February.
Levitt, Saul, Yank, 2 February.
Murrey, Edward J., United Press, 1 February.
Silcock, Hugh, New York Daily News, 16 February.
Uren, Stanley, British Broadcasting Corporation, 12 February.
Sullard, James H., Chicago Times, 23 February.
White, O.E., Melbourne Herald, 6 February.

There were 1841 items logged at the Press Camp during February as against 3446 for the month of January. These were dispatched via Mackay Radio, Army Communications and Air Dispatch Letter service in the following table:

Mackay	1298
Army Communications	371
ADLS	54
	1821

The estimated wordage for the month of February totaled 337,990. The January total was 501,540.

Section II - Press

A total of 4997 items, including 98 photos, were received from thirty nine organizations in Third United States Army and forwarded to Press Section, PRC, Headquarters, Communications Zone (Forward) European Theater Operations United States Army, for release and distribution after clearance, during February. This total is broken down as follows:

Promotions	772
Awards & Cit	3367
Gen Interest	763
Photos	98
Total	4997

Units submitting materiel included 3d Cav Gp, III Corps, 4th Inf Div, 4th Armd Div, 5th Inf Div, 6th Armd Div, 6th Cav Gp, VIII Corps, 9th TD Gp, 9th Armd Div, 10th Armd Div, 11th Armd Div, 12th Evac Hosp, XII Corps, 13th Chem Bn, XV Corps, 17th Airborne Inf, XX Corps, 26th Inf Div, 30th Inf Div, 43d Cav Sq, 45d Cav Sq, 76th Inf Div, 80th Inf Div, 87th Inf Div, 90th Inf Div, 91st Chem Bn, 94th Inf Div, 94th Med Gas Bn, 95th Inf Div, 1clst FA Bn, 204th Engr Com Bn, 246th Engr Com Bn, 275th Ord Maint Co, 276th Armd FA Bn, 803d TD Bn, 974th FA Bn, and 1137th Engr Com Gp.

The Public Relations Section, Third United States Army, submitted forty four items. These originated this Headquarters.

The February total was a decrease of 3361 over the January total of 8358. Total number of items forwarded after clearance at this Headquarters during the seven months of Third United States Army operations on the Continent was 38096. Grand total of all items cleared and forwarded during the pre-operational and operational periods to date was 40973.

In addition to forwarding items, both news and photos, to Public Relations Officer, Communications Zone (Forward), for release, duplicates of general interest as well as human interest stories, were forwarded to Editor, "Stars and Stripes," and Editor, "Yank." All materiel was made available to war correspondents.

Section III - Radio

Radio operations for the month of February included two live shows via 398 for combat diary, three wire recordings for combat diary, and a wire recording for the Army Hour via Twelfth U S Army Group. One wire recording was also sent to the United States for network release via Paris.

A total of 133 "hometown" recordings were sent via Paris. A total of 197 Third U S Army combat personnel were interviewed during the month. The estimated wordage of "hometown" radio releases cleared through censors and sent via Paris totaled 105,000 as an estimated figure.

During the month the section assisted the British Broadcasting Corporation correspondent in filing dispatches via Paris on the wire recorder. Blue Network correspondent broadcast to United States four times weekly via Twelfth U S Army Group transmitter and Mackay Radio transmitter.

New equipment obtained by the section this month now makes it possible to send complete recording units to three sectors of the Third U S Army front simultaneously. A complete recording unit, including the power unit, can be placed in a jeep with three correspondents and units are available to radio correspondents at all times.

Section IV - Pictorial

Two still and one newsreel photographer were assigned to Third U S Army's Press Camp and were assisted in their work by the Pictorial Officer. Close liaison was maintained with Army Pictorial Service.

Section V - Information Room

During February, the information Section maintained situation maps of the western front showing dispositions of both Allied and enemy troops by division and higher units. The offensive surge of the Russians also prompted an additional map of the eastern front.

A detailed 1:50,000 map was maintained of the entire Third U S Army front and late in the period a 1:25,000 scale map introduced, covering the main spots of activity on the western front. 1:250,000 and 1:100,000 scale maps were kept on Allied and enemy troops on different sectors of the western front.

Briefings for the correspondents were conducted twice daily with G-2, G-3 liaison, Corps and Division Public Relations Officers as the main source of information.

Section VI - Censorship

Total items submitted for the month of February to field press censorship at army level was 3183 with a total wordage of 916,080. Total releases and hometown mailers was 1439. There were 1243 photographs submitted.

Section VII - Communications

Mackay Radio handled 304,521 words during the month of February with no major breakdown in transmission.

The combined radio and teletype had an outgoing 6500 groups which represented approximately thirty to thirty-five messages daily. Teletype handled the bulk of the traffic. Radio acted as an emergency means of communications with Twelfth U S Army Group. Incoming traffic ranged from twenty to twenty-five messages with a group average of 8500 words daily.

A daily report was made on outgoing traffic and a weekly report submitted for more accurate checking on figures.

Radio handled several voicecasts. They were received satisfactorily during the day.

CHAPTER 10
MARCH OPERATIONS

SECTION I - General

Press Camp operations were conducted on German soil for the first time during the month at ZIAR-OBERSTEIN (LY8). Third United States Army again received the bulk of newspaper and radio coverage for their smashing SAAR-MOSELLE-RHINE Triangle operations. During the month Third United States Army troops crossed the Rhine in strength while armor swept east and north in spectacular gains. The spectacular movements of Third United States Army during the month were considered as one of the greatest operations in military history.

Thirty correspondents arrived and nineteen departed during March. The thirty four correspondents assigned as of 31 March were:

Ball, Edward D.	Associated Press
Bryson, John	Blue Network
Cannon, James J., M/Sgt	Stars and Stripes
Clark, Norman M	London News Chronicle
Coffey, Pat	Yank (Photographer)
Costello, Gillian	British Broadcasting Corporation
Cronin, Robert A.	Chicago Tribune
Currivan, E.A.	New York Times
Deroche, Louis	Agence France Presse
Driscoll, J.F.	New York Herald Tribune
Griffin, Balsley S.	Worcester Telegram & Hartford Times
Hewston, Charles T.	Still Pool
Kerr, McFee	Reuters
Lake, Austen	Boston American
Levitt, Saul	Yank
McCardell, Lee	Baltimore Sun
Meyer, Robert	United Press
Mitchell, Patrick C.	Stars and Stripes
Newman, Larry	International News Service
Packard, Reynolds	United Press
Priestley, T.A.	Newsreel Pool
Prime, W.J.	London Times
Reid, Robert	British Broadcasting Corporation
Richards, Robert W.	United Press
Rollins, Byron H.	Still Pool
Ryan, Cornelius J.	London Daily Telegraph
Scherman, David	Still Pool
Sheahan, Joseph Cary	Chicago Tribune (Artist)
Tully, Andrew	Boston Traveler
Wear, J.R.	Fort Worth Star Telegram
White, O.E.	Melbourne Herald
White, Samuel	Consolidated Australian Press
Zinet, Toby	Associated Press
Wilkinson, Lawrence	London Daily Express

The thirty arrivals for the month of March were:

Berson, Roger, arrived 20 March for facility visit.
Coffey, Pat, Yank, returned from Paris 25 March.
Deroche, Louis, arrived 31 March.
Ide, Maurice, arrived 21 March for facility visit.
Fleisher, Jack, arrived 27 March for facility visit.
Francotte, Robert, arrived 30 March for facility visit.
Hall, John, arrived 27 March for facility visit.
Huss, P.J., arrived 25 March for facility visit.
Jordan, Max, arrived 12 March for facility visit.
Kerr, McFee, arrived 7 March for facility visit.
Lake, Austen, arrived 7 March for facility visit.
Lee, Jack, arrived 16 March.
Levitt, Saul, arrived 25 March.
Lewis, Boyd, arrived 16 March for facility visit.
Mejat, Francois, arrived 5 March.
Morse, Ralph, arrived 7 March for facility visit.
O'Connell, John, arrived 10 March for facility visit.
Olsen, Sidney, arrived 20 March for facility visit.
Packard, Reynolds, arrived 28 March for facility visit.
Plambeck, Herbert, arrived 9 March for facility visit.
Scherman, David, arrived 26 March for facility visit.
Small, Wilson C., arrived 8 March for facility visit.
Warth, Douglas, arrived 6 March for facility visit.
Webb, Clifford, arrived 31 March for facility visit.
Werner, Oscar A., arrived 15 March for facility visit.
White, O.E., arrived 5 March.
White, Samuel, arrived 4 March.
Wilhelm, John H., arrived 21 March for facility visit.
Wilkinson, Lawrence, arrived 23 March.
Zalewski, Maurice, arrived 5 March for facility visit.

Digitized by Google

The nineteen departures for the month of March were:

Downton, Eric, 11 March.
Edinger, Jacques, wounded and dropped from rolls 25 March.
Fletcher, Jack, 31 March.
Fouchereau, Louis, 16 March.
Jerome, Max, 24 March.
Lee, Jack, 28 March.
Lewis, Boyd, 19 March.
McBrian, Robert, 28 March.
McNally, Anthony J., 9 March.
Mejat, Francoise, 31 March, in Paris on leave.
Morse, Ralph, 9 March.
O'Connell, John, 28 March.
Penn, David, 30 March.
Plambeck, Herbert, 26 March.
Sheean, James Vincent, 15 March.
Small, Wilson C., 16 March.
Stokes, Richard L., 27 March.
Werth, Douglas, 19 March.
Zalewski, Maurice, 20 March.

There were 5581 items logged at the Press Camp during March as against 1821 for the month of February. These were dispatched via Meskay Radio, Army Communications and Air Dispatch Letter Service to the following table:

Meskay	4725
Army Communications	654
ADLS	202
	5581

The estimated wordage for the month of March was 526,695 as against 337990 for the month of February.

Section II - Press

A total of 6,246 items, including 107 photos, were received from thirty five organizations in Third United States Army and forwarded to Press Section, PRC, Headquarters, Communications Zone (Forward) European Theater Operations United States Army, for release and distribution after clearance, during March. This total is broken down as follows:

Awards & Cit.	3805
Com Interest	719
Promotions	1515
Photos	107
Total	6246

Units submitting material included 3d Cav Gp, III Corps, 4th Armd Div, 4th Inf Div, 5th Inf Div, 6th Armd Div, VIII Corps, 10th Armd Div, 11th Armd Div, XII Corps, XX Corps, 26th Inf Div, 65th Inf Div, 76th Inf Div, 80thInf Div, 87th Inf Div, 89th Inf Div, 90th Inf Div, 91st Chem Bn, 824 Med Gas Bn, 94th Inf Div, 126th AAA Bn, 191st FA Bn, 275th Ord Maint Co, 286th FA Bn, 482d AAA Bn, 571st QM Co, 635th AAA Bn, 736th FA Bn, 748th Tk Bn, 785th MP Bn, 811th TD Bn, 96lst Engr Maint Co and the 13036 Engr Serv Regt.

The Public Relations Section this Headquarters submitted 88 items. These items originated this Headquarters.

The March total of 6246 items showed an increase of 1749 over the February total of 4497. Total number of items forwarded after clearance at this Headquarters during the eight months of Third United States Army operations on the Continent was 46162. Grand total of all items cleared and forwarded during the pre-operational and operational periods to date was 46319.

In addition to forwarding items, both news and photos, to Public Relations Officer, Communications Zone (Forward), for release, duplicates of general interest as well as human interest stories, were forwarded to Editor, "Stars and Stripes," and Editor, "Yank." All material was made available to war correspondents.

Section III - Radio

Radio operations for the month of March included fourteen recordings for combat diary, four recordings for the Army Hour, eight "hometown" recordings, three recordings for the National Broadcasting Corporation, one recording for the British Broadcasting Corporation, one recording for radio station WHO, DES MOINES, IOWA, and one recording for the Blue Network.

The radio section also assisted correspondents from the British Broadcasting Corporation, the National Broadcasting Corporation, the Blue Network and the radio station WHO, DES MOINES, IOWA.

During the month of March emphasis was placed on Third United States Army operations rather than on "hometown" releases. An estimated 35,000 words cleared through field censors.

Section IV - Pictorial

Two still and one newsreel photographer were assigned to Third United States Army's Press Camp and were assisted in their work by the Pictorial Officer. Close liaison was maintained with Army Pictorial Service.

Section V - Information Room

During March, the Information Section maintained situation maps of the western Front showing dispositions of both Allied and enemy troops by division and higher units. An additional map of the Russian campaign on the eastern Front was also maintained.

A detailed 1:50,000 map was maintained of the entire Third United States Army front as well as a 1:25,000 scale map, covering the main spots of activity on the western Front. 1:250,000 and 1:100,000 scale maps on Allied and enemy troops on different sectors of the front were also kept.

Briefings for the correspondents were conducted twice daily with G-2, G-3 and G-3 liaison. Corps and Division Public Relations Officers provided some source of information.

Section VI - Censorship

Total submissions for the month of March to field press censors at army level was 6363 for a total wordage of 1,474,569. There were 2013 photographs submitted.

Section VII - Communications

Meskay Radio handled 468,469 words during the month of March with no major breakdown in transmission.

The combined radio and teletype, with the latter handling the bulk of traffic and the former serving as the only means of communications at the end of March with Twelfth United States Army Group, had an outgoing average of 9,000 groups daily, representing approximately forty to fifty messages. The incoming traffic comprised about thirty messages with an average of 3,000 groups daily.

A daily report was made on outgoing traffic and a weekly report was submitted for more accurate checking on figures.

Radio handled several voicecasts which were received satisfactorily during the day.

CHAPTER II
APRIL OPERATIONS

SECTION I - General

During the month, Press Camp operations were set up at BAD HOMBURG (K68) on 3 April, at HERSFELD (H35) on 11 April and at ERLANGEN (031) on 25 April. Powerful moves of Third United States Army troops overran the BUCHENWALD (J47) and ORDRUF (J15) concentration camps and forced crossings of the LAAB and DANUBE Rivers. Enemy resistance appeared at the breaking point before the continued drive of Third United States Army forces.

Sixteen correspondents arrived and twenty six departed during the month. The thirty five correspondents assigned as of 30 April were:

Ball, Edward D.	Associated Press
Bryson, John	Blue Network
Clark, Norman M.	London News Chronicle
Costello, William	British Broadcasting Corporation
Carriven, Osma	New York Times
Davenport, Russell	American Mercury (facility visitor)
Driscoll, J. F.	New York Herald Tribune
Faust, Hal	Chicago Tribune
Griffin, Bulkley S.	Worcester Telegram & Hartford Times
Haasbee, Charles T.	Still Pool (Photographer)
Hamer, Ed L.	National Broadcasting Corporation
Katzander, Howard L.	Yank
Lasmeur, Larry	Columbia Broadcasting System
Haynes, S.J.	Reuters
McCarrell, Lee	Baltimore Sun
Mejat, Francois	Newsreel Pool (Cameraman)
Mitchell, Patrick C.	Stars and Stripes
Newman, Larry	International News Service
Packard, Reynolds	United Press
Priestley, T. A.	Newsreel Pool
Prince, W.J.	London Times
Reid, Robert	British Broadcasting Corporation
Richards, Robert W.	United Press
Rollins, Byron	Still Pool (Photographer)
Ryan, Cornelius J.	London Daily Telegraph
Scherman, David	Still Pool (Photographer)
Sheehan, Joseph Cary	Chicago Tribune (Artist)
Stokes, Richard L.	St. Louis Post Dispatch
Stoneman, William H.	Chicago Daily News
Terrell, John	Newsweek
Tully, Andrew	Boston Traveler
Wiant, Toby	Associated Press
Wilhelm, John H.	Reuters
Williamson, Laurence	London Daily Express

The sixteen arrivals for the month of April were:

Bodin, Paul, Combat, Paris, arrived 18 April for facility visit.
Corbici, Mare, Toulouse Press, arrived 18 April for facility visit.
Davenport, Russell, American Mercury, arrived 29 April for facility visit.
Faust, Hal, Chicago Tribune, arrived 18 April.
Fyfe, George, London Daily Telegraph, arrived 13 April.
Hamer, Ed L., National Broadcasting Corporation, arrived 18 April.
Jordan, Max, National Broadcasting Corporation, arrived 3 April for facility visit.
Katzander, Howard L., Yank, arrived 26 April.
Lasmeur, Larry, Columbia Broadcasting System, arrived 20 April.
Haynes, S.J., Reuters, arrived 6 April.
Mejat, Francois, Newsreel Pool, returned from Paris 8 April.
Penn, David, Office War Information, arrived 4 April.
Shadel, W.F., Columbia Broadcasting System, arrived 1 April.
Small, Wilson C., Saturday Evening Post, arrived 6 April for facility visit.
Stoneman, William H., Chicago Daily News, arrived 29 April.
Terrell, John, Newsweek, arrived 3 April.

The twenty six departures for the month of April were:

Berson, Roger, French Photo Press, 2 April.
Bodin, Paul, Combat, Paris, 30 April.
Corbici, Mare, Toulouse Press, 21 April.
Cannon, James T., Stars and Stripes, 20 April, on leave to Paris.
Deroche, Louis, Agence France Press, 28 April, on leave to Paris.
Ede, Maurice, Combat, 2 April.
Francotte, Robert, Belgian Radio, 2 April.
Fyfe, George, London Daily Telegraph, 21 April.
Hall, John, London Daily Mail, 20 April.
Haas, Pierre, International News Service, 30 April.
Jordan, Max, National Broadcasting Corporation, 18 April.
Kerr, McPee, Reuters, 9 April.
Lake, Austen, Boston American, 24 April.
Levitt, Saul, Yank, 30 April.
Meyer, Robert, United Press, 1 April.
Olson, Sidney, Life and Time, 3 April.
Phillipot, Jacques, Belgian Radio, 5 April.
Penn, David, Office of War Information, 26 April.
[illegible], Columbia Broadcasting System, 20 April.
[illegible] Post, 24 April.
[illegible] April.
[illegible], 21 April.
[illegible], 20 April.

DECLASSIFIED

DECLASSIFIED

Gerner, Oscar A., Associated Press, 15 April.
White, G.L., Melbourne Herald, 18 April.
White, Samuel, Consolidated Australian Press, 25 April.

There were 4830 items logged at the Press Camp during April as against 5581 for the month of March. Those were dispatched via Mackay Radio, Army Communications and Air Dispatch Letter Service to the following table:

Mackay	4457
Army Communications	149
ADLS	224
	4830

The estimated wordage for the month of April was 608,560 as against 526,695 for the month of March.

Section II - Press

A total of 4143 items, including 134 photos, were received from thirty seven organizations in Third United States Army and forwarded to Press Section, PRC, Headquarters, Communications Zone (Forward) European Theater Operations United States Army, for release and distribution after clearance, during April. This total is broken down as follows:

Awards & Cit	2666
Gen Interest	748
Promotions	396
Photos	134
Total	4143

Units submitting material included 2d Cav Gp, III Corps, 4th Armd Div, 5th Inf Div, 6th Armd Div, VIII Corps, 9th TC Gp, 11th Armd Div, 13th Armd Div, XII Corps, XX Corps, 26th Inf Div, 33d Med Depot Co, 65th Inf Div, 70th Inf Div, 71st Inf Div, 76th Inf Div, 80th Inf Div, 84th Inf Div, 87th Inf Div, 89th Inf Div, 90th Inf Div, 93d Sig Bn, 94th Inf Div, 94th Med Clr Bn, 97th Inf Div, 99th Inf Div, 115th AAA Bn, 133d Engr Bn, 183d Engr Bn, 233 FA Bn, 590th AAA Bn, 736th FA Bn, 811th TD Bn, 974th FA Bn, 1123d Engr Gp, 1303d Engr Serv Regt.

The Public Relations Section this Headquarters submitted 28 items which all originated from this Headquarters.

The April total of 4143 showed a decrease of 2103 over the March total of 6246. Total number of items forwarded after clearance at this Headquarters during the nine months of Third United States Army operations on the Continent was 50285. Grand total of all items cleared and forwarded during the pre-operational and operational periods to date was 50443.

In addition to forwarding items, both news and photos, to Public Relations Officer, Communications Zone (Forward) for release, duplicate items of general interest as well as human interest stories, were forwarded to Editor, "Stars and Stripes," and Editor, "Yank." All material was made available to war correspondents.

Section III - Radio

Radio operations for the month of April included four Army Hour recordings, fifteen Combat Diary recordings, and fifteen recordings for "hometown" releases. The Section assisted Third United States Army radio correspondents with sixteen recordings.

The Section also assisted Blue Network, PHILADELPHIA and DES MOINES radio correspondents with on the spot recordings by supplying required gear in the field.

Section IV - Pictorial

Two still and one newsreel photographer were assigned to Third United States Army's Press Camp and were assisted in their work by the Pictorial Officer. Close liaison was maintained with Army Pictorial Service.

Section V - Information Room

During April, the Information Section continued the regular schedule of two briefings daily for the war correspondents and maintained both the 1:100,000 and 1:250,000 scale maps.

The 1:100,000 scale was maintained as the operational map of the Third United States Army front while the 1:250,000 scale map represented the overall picture of the Western Front.

With the meeting of the Americans and Russians fast approaching, distances between the two units were kept at all times. In addition, general news from the other world battle fronts was given at the briefings for the war correspondents' information.

Section VI - Censorship

Total submissions for the month of April to field press censors at army level was 4591 for a total wordage of 1,119,395. There were 1636 photographs submitted.

Section VII - Communications

There were no major breakdowns in transmission during April during which time Mackay Radio handled 608,560 words.

The combined radio and teletype had an outgoing average of 3000 groups daily, representing approximately twenty to twenty five messages. Physical wire seems presented difficulties this past month. Urgent, operational priority and priority messages were given preference at all times.

Weekly reports were submitted for more accurate checking on outgoing traffic and several welcomests were handled satisfactorily.

CHAPTER 12
MAY OPERATIONS

SECTION I - General

Press Camp Operations moved to [redacted] (U15) on 2 May and was at that location when Victory in Europe day was announced. Although officially the war was brought to a successful conclusion on 8 May, action continued on the Third United States Army sector as isolated groups of the enemy continued to resist in [redacted]. The Third United States Army remained as the last army to see action on the Western Front. It was estimated that since operations began 1 August 1944, Third United States Army would account for a million prisoners in their sweep through [redacted] and [redacted] and smashing offensives across [redacted].

Up to and including 8 May, a total of three correspondents arrived and five departed. The thirty three correspondents assigned as of 8 May were:

Ball, Edward D.	Associated Press
Bost, Jacques	Paris Jour soir
Bryson, John	Blue Network
Clark, Norman H.	London News Chronicle
Costello, William	British Broadcasting Corporation
Cunliffe, Gene	New York Times
Deroche, Louis	Agence France Presse
Driscoll, J. F.	New York Herald Tribune
Fowle, Val	Chicago Tribune
Griffin, Bulkley S.	Worcester Telegram & Hartford Times
Hamaker, Charles T.	Still Pool Photographer
Hamer, Ed L.	National Broadcasting Corporation
Kaltenborn, Edward L.	Yank
Lasseur, Larry	Columbia Broadcasting System
Haynes, J.	Reuters
McDaniell, Lee	Baltimore Sun
Mitchell, Patrick C.	Stars and Stripes
Newman, Larry	International News Service
Packard, Reynolds	United Press
Penn, David	Office War Information
Priestley, Thomas A.	Newsreel Pool Cameraman
Prince, H. J.	The London Times
Relf, Robert	British Broadcasting Corporation
Richards, Robert W.	United Press
Robbins, Byron E.	Still Pool Photographer
Ryan, Cornelius	London Daily Telegraph
Scherman, David	Still Pool Photographer
Sheahan, Joseph D.	Chicago Tribune (Artist)
Stoneman, William H.	Chicago Daily News
Terrell, John	Newsweek
Want, Toby	Associated Press
Wilhelm, John	Chicago Sun
Wilkinson, Laurence	London Daily Express

The three arrivals including 8 May were:

Bost, Jacques, Paris Combat, 2 May for 21 day facility visit.
Deroche, Louis, Agence France Press, 2 May from Paris.
Penn, David, Office War Information, 2 May from Paris.

The five departures including 8 May were:

Coffey, Pat, Yank Photographer, 2 May for Paris.
Davenport, Russell, American Mercury, 7 May.
Vejat, Francois, Newsreel Pool, 2 May for Paris on leave.
Stokes, Richard L., St. Louis Post Dispatch, 2 May for Paris.
Tully, Andrew, Boston Traveler, 4 May for Paris

There were 1101 items logged at the Press Camp up to and including 8 May. These were dispatched via Mackay Radio, Army Communications and Air Dispatch Letter Service to the following table.

Mackay	1052
Army Communications	8
ADLS	41
	1101

The estimated wordage for the eight days of operation in May was 104,262.

An overall total of 27,909 items were logged at the Press Camp since Third United States Army operations began 1 August 1944 up to and including 8 May 1945 with the following log table showing the disposition.

Mackay	23184
Army Communications	3146
ADLS	1579
	27909

An estimated wordage for the entire Third United States Army campaign was 1,600,506.

Section II - Press

A total of 2212 items, including 107 photos, were received from twenty three organizations in Third United States Army and forwarded to Press Section, PRC, Headquarters, Communications Zone (Forward) European Theater Operations United States Army, for clearance and distribution up to and including 8 May. This total is broken down as follows:

Awards & Cit	1623
Promotions	207
Gen Interest	275
Photos	107
	2212

Units submitting material included III Corps, 2d Cav Gp, 4th Armd Div, V Corps, 5th Inf Div, 9th TC Gp, 10th Armd Div, 11th Armd Div, XII Corps, 13th Armd Div, 14th Armd Div, 16th Armd Div, XX Corps, 26th Inf Div, 66th Inf Div, 70th Inf Div, 80th Inf Div, 86th Inf Div, 95th Inf Div, 90th Inf Div, 97th Inf Div and 99th Inf Div.

The Public Relations Section this Headquarters submitted thirty five items which all originated this Headquarters.

The abbreviated May total of 2212 submissions boosted the total number of items for the ten month and 8 days of Third United States Army operations to 52,067. Grand total of all items cleared and forwarded during the pre-operational and operational periods to date was 52,674.

In addition to forwarding items, both news and photos, to Public Relations Officer, Communications Zone (Forward) for release, duplicate of general interest as well as human interest stories, were forwarded to Editor, "Stars and Stripes," and Editor, "Yank." All material was made available to war correspondents.

Digitized by Google

Section III - Radio

In addition to several recorded programs for the "Army Hour" and "Combat Diary" this Section made plans for facilitating radio coverage of Victory in Europe Day activity on the Third United States Army front.

Wire recording apparatus was installed at the Mackay Radio transmitter for relaying recorded programs to New York. For relaying recorded material to the British Broadcasting Corporation in London, special apparatus was installed in the Army communications transmitter (SCR). Special Victory in Europe Day recordings by both American network correspondents and the British Broadcasting Corporation correspondent, were received both in New York and in London in a matter of minutes after they were made in the field.

Two "Army Hour" recordings, seven "Combat Diary" recordings and a Victory in Europe Day message by General G. S. Patton, Jr., were all made with wire recorders.

Section IV - Pictorial

Two still and one newsreel photographer were assigned to Third United States Army's Press Camp and were assisted in their work by the Pictorial Officer. Close liaison was maintained with Army Pictorial Service.

Section V - Information Room

The Information Section continued the regular schedule of two briefings daily for the war correspondents and maintained both the 1:100,000 and 1:250,000 scale maps up to and including 8 May.

The 1:100,000 scale map was maintained as the operational map of the Third United States Army front while the 1:250,000 scale map represented the overall picture of the Western Front.

In addition, general news from the other world battle fronts was given at the briefings for the war correspondents' information.

Section VI - Censorship

Total submissions for the 8 days of operations in May was 1320, as handled by the field press censors at army level. The total wordage was 289,052 with 325 photographs submitted.

It was estimated that in the entire Third United States Army campaign since operations began 1 August 1944 until its termination 8 May 1945, press censors handled 30,325 submissions, 7129 photographs, and totaled an estimated 7,010,603 words.

Section VII - Communications

The combined radio and teletype had an outgoing average of approximately 1500 groups daily which represents 15 messages for the period 1st May to 8 May inclusive. Incoming traffic ranged from 20 to 25 messages with a varying groupage of approximately 2000 to 2500 daily for the same period.

The weekly report provided more accurate checking and included the number of voicecasts. Teletype facilities were limited.

Since Third United States Army operations began on 1 August 1944 until its elimination on 8 May 1945, it is estimated that the outgoing groups totaled 1,250,000 while the incoming groups totaled 500,000.

CHAPTER 13
LESSONS LEARNED & CONCLUSIONS

Ten months in the field have demonstrated that the Public Relations organization as set up in the Third United States Army is adequate for the handling of approximately forty (40) correspondents and can handle as many as fifty. This organization has proven sufficient to provide billets, transportation, mess, briefing, censorship and communications.

Field experience has demonstrated that the Press Camp must operate near the advance elements of the Army Headquarters, and therefore must be highly mobile. This is especially true of communications equipment which must be able to make moves up to 150 miles and be in operation the same day.

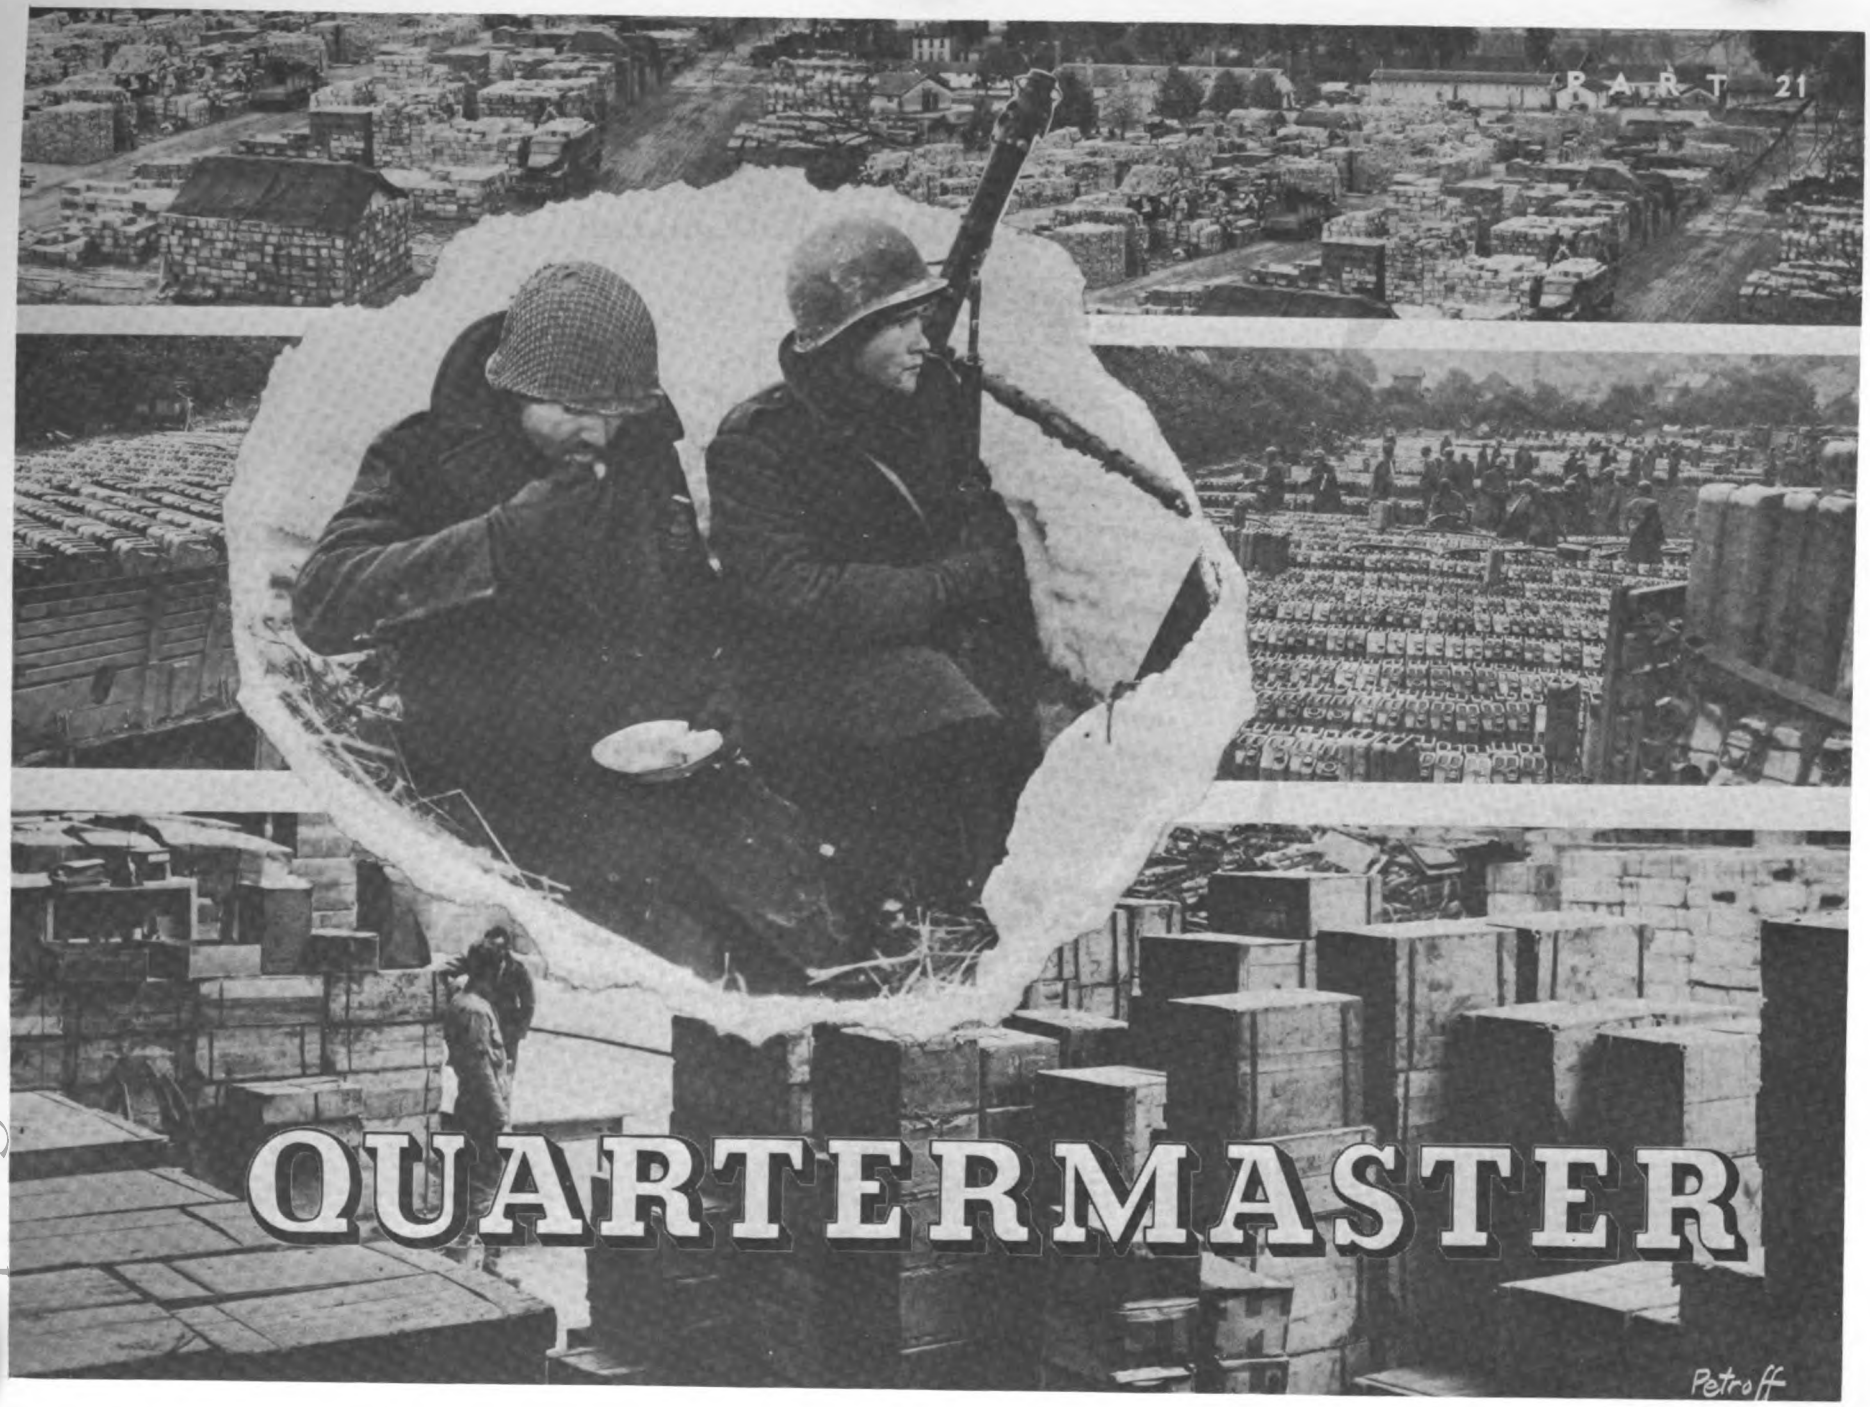
COMMUNICATIONS: The most effective means of communications has been the Mackay commercial transmitter operating directly from the Army to New York from which point news could be rapidly distributed. This transmitter also adequately handled voice transmission for the major American networks.

Teletype has been used with varying success. When it was in operation copy could be moved to both Paris and London in sufficient quantities for the Allied correspondents assigned here. The major difficulty encountered was in securing a circuit for the handling of press traffic only. When it was necessary to use tactical circuits it was found that operational traffic seriously delayed press copy so that much of it was received too late to be used by newspapers.

Except for a brief period in Northern France the SCR-399 has been adequate for voice or CW communications. The difficulties in voice transmission were due to the fact that no adequate frequency could be made available and the low power of the set proved inadequate as the distance lengthened. CW transmission, in general, got through but because no high speed transmitter could be procured it proved to be inadequate for the handling of press copy.

BRIEFINGS AND NEWS DISSEMINATION: The crux of the whole Public Relations operation has been the briefing given twice daily. Although correspondents secured their color and some operational stories at the front they were dependent upon the briefings for the overall operational picture of the Army. Although the briefings were always factual and periodically accurate, operations of the Army could be presented on that stress was placed upon the items of news interest which the Army was most anxious to convey to the public. Experience has demonstrated that the briefing officer must have complete access to all information available to G-2 and G-3, and he must secure this information promptly. The fact that this information was always available from these two sections made possible a complete and detailed presentation of Third United States Army's operations.

Briefing on forthcoming operations has always been a difficult problem. The policy in general has been to tell the correspondents of forthcoming operations at the latest possible moment, but sufficiently in advance of the operation to permit the correspondents to make their own arrangements for coverage. There has never been a security violation in the handling of any of this information. It is felt that apprising the correspondents of forthcoming operations obviates dangerous speculation on their part and at the same time makes it possible for intelligent coverage.



It is vitally important that the Public Relations Section be advised immediately of any piece of information which the Army desires to withhold from publication either temporarily or permanently. Without this specific advice the Public Relations Section may authorize the publication of what appears to be a routine item of news interest without realizing some larger implication with which the Section may not be familiar.

CENSORSHIP: The desirability of withholding information regarding operational units until the enemy was believed to have that knowledge is best determined at army level. The primary responsibility for censorship should be an army function and the field press censors should be under control of the Army Commander rather than higher headquarters.

CORPS AND DIVISION PUBLIC RELATIONS: It has been amply demonstrated that Corps and Division Headquarters have need for a Public Relations organization. Although there is no Table of Organization provision for such personnel, every such unit has had to provide a Public Relations Section by taking grades and ratings from other sources. Without the material supplied by Corps and Division Public Relations Officers the coverage which the Third United States Army was given in the world press could not have been accomplished. Within Corps and Divisions it was noticeable during operations that favorable publicity had good effect on the morale of the troops while unfavorable publicity had the reverse effect. It is strongly recommended that a revised Table of Organization for Corps Headquarters and Infantry and Armored Divisions should make provisions for a Public Relations Section.

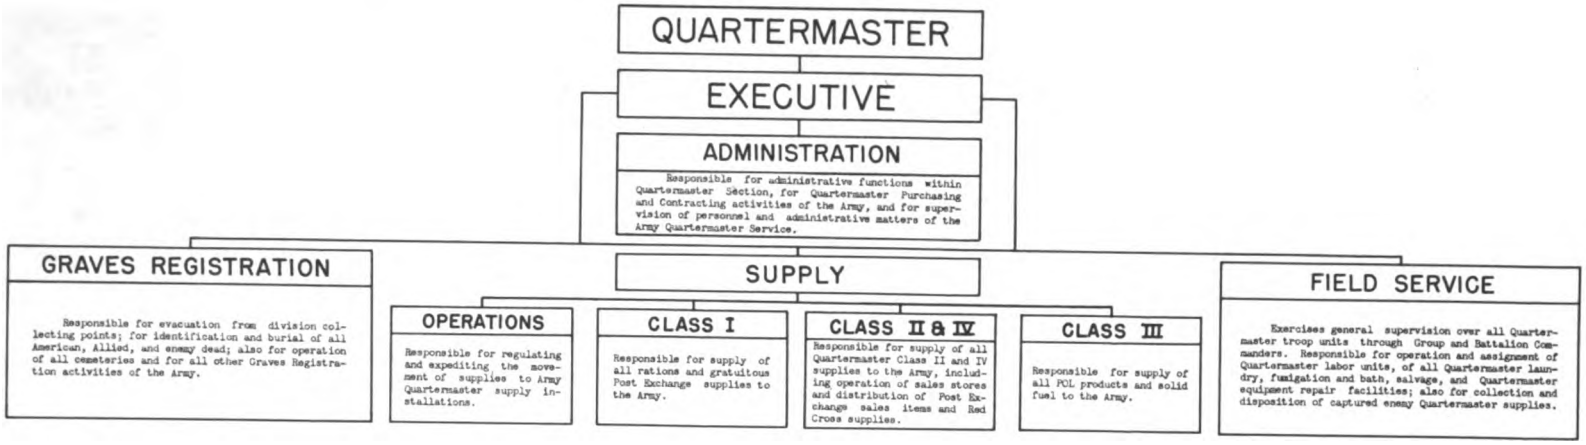
HEADQUARTERS THIRD UNITED STATES ARMY
Office of the Quartermaster
APO 403

QM 314.7 - GNMCQ-6

SUBJECT: Letter of Transmittal.

TO : Commanding General, Third U. S. Army, APO 403, U. S. Army.

1. Submitted herewith is the After-Action Report of the Quartermaster Section, Headquarters Third U. S. Army, beginning with the planning phase for the operation, covering the period from 23 March to 6 July, and continuing at designated intervals by chapters.



2. This report is general in character. The chapters were written periodically as the operation progressed, under the stress of campaign conditions. Each chapter was intended to be complete for the period covered. Repetition and to some extent contradictions were unavoidable. The campaign was characterized by rapid advances, long distances, and frequent and sudden changes. Space and the stress of circumstances did not permit a more detailed account of the methods and improvisations employed. The undersigned desires to express his appreciation of the generous support given by the Communications Zone; and by the officers, warrant officers, and enlisted men of his own section, without which the mission could not have been accomplished.

E. BUSCH,
Colonel, QMC,
Quartermaster.

CHAPTER 1
PLANNING IN UNITED KINGDOM

SECTION I - GENERAL

The Quartermaster Section began operating in the United Kingdom on 23 March. Initially, efforts were devoted to studying the conditions of supply in the United Kingdom in relation to the equipping of troops.

The Quartermaster supply system (except for Class III supplies) in the United Kingdom was controlled and operated by the Services of Supply, European Theater of Operations, U. S. Army, through Base Section Quartermasters. Gasoline was normally delivered in bulk to commercial tanks and pumps, which were secured from British sources and operated by using units. Other Class III products - namely, oil and lubricants - were distributed in packaged form. Quartermaster supply plans for units while they were still in the United Kingdom were set forth in Quartermaster Annexes to two administrative orders: Administrative Order Number 1, published on 15 April; and Administrative Order Number 2, which applied only to the 2d French Armored Division, published on 24 May. These plans served to coordinate the supply of units assigned and attached to the Third U. S. Army.

Concurrently, plans were being developed for preparing units for embarkation. Work was begun on 28 March on the Quartermaster Annex to "Administrative Instructions Preliminary to Mounting" (Alert Instructions). The draft was completed on 15 April and the annex was published under the date 26 April. This set of instructions furnished complete information to troop commanders concerning the special equipping of their units prior to embarking for the far shore. Separate instructions were prepared for the 2d French Armored Division. The Quartermaster Annex to "Administrative Instructions Preliminary to Mounting for the 2d French Armored Division" was published on 16 June.

The chief task of the Section was planning for the coming operation. From the beginning, considerable effort was devoted to the study of plans and directives of higher headquarters for the operation "Overlord". Data were assembled and tabulated for use as the bases for the planning work. Continual liaison and coordination with higher headquarters and other staff sections were required before the final plan evolved. The Quartermaster supply plan for Continental operations was begun on 16 April, completed on 10 May, and published on 15 May as Annex Number 15 to "Third U. S. Army Outline Plan, Operation 'Overlord'". The Quartermaster plan defined the responsibility of the Army Quartermaster and acquainted Quartermasters and supply officers of lower echelons with the special conditions pertaining to supply in the projected Continental operation.

The Office of the Army Quartermaster had the following divisions:

Army Quartermaster
Executive Officer
Administrative Division
Supply Division
Graves Registration Division
Field Service Division

For security control, because of the high classification of the plans, a small planning and liaison group was organized, consisting of one officer, one warrant officer, and three enlisted men. This group worked directly under the supervision of the Army Quartermaster and the Executive Officer.

Preparations for the movement of the Headquarters to the Continent were made during the latter part of June. The Section was divided into four groups for the movement:

	OFFICERS	WARRANT OFFICERS	ENLISTED MEN	ARRIVED ON CONTINENT
Advance Group	4	0	3	26 June
"X" Group	8	1	23	4 July
"Y" Group	3	0	16	18 July
"Z" Group	3	2	4	18/26 August

SECTION II - ADMINISTRATIVE DIVISION

The Administrative Division performed its normal tasks during this period.

SECTION III - SUPPLY DIVISION

The Supply Division performed three major functions during the period spent in the United Kingdom. First, it assisted in writing the plans for Continental operations. Secondly, it prepared pre-scheduled requisitions for supplies to be shipped to the Continent for the Third U. S. Army. These requisitions for supplies were broken down by days from D / 24 through D / 41 in accordance with tonnage allocations from higher headquarters. Contact was maintained with the Services of Supply to ascertain the status of shipments. And, finally, it performed the necessary work incident to equipping troop units prior to their departure for the Continent.

SECTION [illegible]

[illegible] the supply of troops in the [illegible] by the Services of Supply [illegible] activities were confined to drafting plans, preparing pre-scheduled requisitions, and standardizing procedures.

DECLASSIFIED

Digitized by Google

SECTION V - CLASS II AND IV SECTION

The equipping of troops then stationed in the United Kingdom was the major function performed by the Class II and IV Section.

During the period 1 to 27 June, a group of officers and men of the 350th Quartermaster Depot Company, Supply, operated with the section for the purpose of standardizing depot procedure. This proved to be a valuable preauditory measure.

SECTION VI - CLASS III SECTION

The Class III Section was not active in supplying troops in the United Kingdom. Its operations were confined to drafting plans, calculating Class III requirements, and preparing pre-scheduled requisitions.

The commanders of all gasoline supply companies then assigned to the Army were briefed and procedures were outlined to them.

SECTION VII - GRAVES REGISTRATION DIVISION

The Graves Registration Division was organized on 15 April. The decision to create a separate division to handle Graves registration matters resulted from a study of the reports from other theaters, particularly North Africa and Sicily.

The basic procedure governing all matters connected with burials, cemeteries, and registration of graves was written by the Division in cooperation with the G-1 Section. This directive was published on 25 May as Third U. S. Army Circular Number 9.

Two graves registration companies (the 603d and 824d), were assigned to the Army on 15 May. Not organizations lacked experience. The personnel was sent to the Cambridge Military Cemetery on a plan to gain practical experience until moved to the Marshalling Area. The companies were furnished with extra equipment, such as shovels, picks, grave markers, rubber gloves, and embossing machines, prior to departure from the United Kingdom.

SECTION VIII - QUARTERMASTER TROOP SECTION

The initial problem of the Quartermaster Troop Section consisted of compiling a list of Quartermaster service troops estimated as necessary to support the operation as it was planned at that time. Although the original list was finalized 31 March, a final settlement was not made until 24 June. All units then in the United Kingdom were, with few exceptions, processed by the Services of Supply and employed in the operation of depots and other services of supply establishments. Many units had arrived from the United States at the time the Army Headquarters embarked for the Continent. Such units as were assigned were inspected and every effort was made to prepare them for the coming operation. All units were placed under battalion and group supervision.

The following is a list of Quartermaster units with the estimated number required, the number assigned by 5 June, and the final number authorized:

	ESTIMATE REQUIREMENT	UNITS ASSIGNED AS OF 5 JUNE	FINAL NO. OF UNITS
Hq & Hq Det, QM Group	6	1	3
Hq & Hq Det, QM Battalion, Mobile	-	1	2
Hq & Hq Det, QM Battalion	14	4	4
QM Depot Company, Supply	-	3	2
QM Gasoline Supply Company	16	7	11
QM Graves Registration Company	5	2	4
QM Laundry Company	8	2	5
QM Railhead Company	8	4	7
QM Salvage Collecting Company	5	1	3
QM Service Company	36	19	19
QM Bakery Company, Special	6	2	7
QM Salvage Repair Company	4	1	3
QM Fumigation and Bath Company	5	0	2
QM Refrigeration Company, Mobile	2	0	1
QM Sales Company	2	0	0
QM Base Petroleum Supply Company	8	0	0
QM Petroleum Products Laboratory (Mobile Section)	1	1	1

SECTION IX - FIELD SERVICE SECTION

The Field Service Section was charged with all operations connected with salvage collecting, salvage repair, field range repair, laundering, and petroleum testing. It also had control of captured supplies and operated the Labor Pool. Its duties in the United Kingdom were confined to preparing the assigned technical units for the coming operation.

Field range repair was provided for by scheduling a small group of men selected from the Fifth Quartermaster Service Company. They were provided with tools, equipment, and spare parts prior to going to the Continent. The services performed by these men proved to be extremely satisfactory.

SECTION X - SALVAGE SECTION

The Salvage Section was not operational during the period covered by this chapter. Plans for salvage activities on the Continent were formulated.

CHAPTER 2
PRE OPERATIONAL ON CONTINENT

SECTION I - GENERAL

The Quartermaster Section arrived on the Continent in four groups: the Advance Group, on 2d June; the "A" Group, on 6 July; the "B" Group, on 18 July; and the "C" Group, on 1A and 2A August.

This chapter covers the period from 6 July, when the "A" Group arrived, to 011200 B August, when the Third U. S. Army became operational. The first few days were limited to becoming acquainted with the supply situation on the Continent. Thereafter operations were devoted to establishing Quartermaster service for Third U. S. Army troops being concentrated in the north-central part of the CHERBOURG Peninsula.

SECTION II - ADMINISTRATIVE DIVISION

The Administrative Division, in addition to performing its normal functions, made preparations for submitting the required operational reports to higher headquarters.

SECTION III - SUPPLY DIVISION

Supplies on the Continent were all under the control of the First U. S. Army. A rear boundary had not been established. Since a major port had not been opened, supplies requested on pre-scheduled requisitions had not been shipped to the Third U. S. Army, but sufficient Quartermaster supplies were available in the beach dumps. The advance Section Communications Zone was operational only during the last third of July. Initially, all supplies for the Third U. S. Army units on the Continent were drawn from First U. S. Army supply points and beach dumps. The Advance Section Communications Zone was given control over the supplies at "UTAH" Beach during the latter part of July, after which time this agency furnished supplies to the Third U. S. Army.

SECTION IV - CLASS I SECTION

Food supplies for Third U. S. Army units were furnished direct from First U. S. Army Supply Point Number 2, in the vicinity of ST JACQUES DE NEHOU (T12-988), until 16 July. This supply point was turned over to the Third U. S. Army for operation on 16 July and redesignated Class I Supply Point Number 1. Two additional points were opened, Number 2 on 23 July, also in the vicinity of ST JACQUES DE NEHOU (T14-953), and Number 3 on 27 July, in the vicinity of HAUTEVILLE. (T09-2100).

Bakery operations began at Supply Point Number 1 on 21 July. The first wheat of six loaves of bread was delivered by the Commanding Officer, 3007th Quartermaster Bakery Company, to the Army Commander.

During the period 1 to 31 July a reserve of 1,500,000 operational rations was accumulated in the supply points in preparation for the impending operations. The Army Commander inspected Supply Point Number 1, including the bakery, on 28 July and commended the operating units for their efficiency.

SECTION V - CLASS II AND IV SECTION

Class II and IV Depot Number 1 was opened for the supply of troops in the vicinity of ST JACQUES DE NEHOU (T14-948) at 171200 B July. This depot not only made issues to troop units, but operated a sales store for sales to officers, warrant officers, and nurses. Class II and IV reserves to the extent of approximately a fifteen-day supply were built up prior to 31 July.

SECTION VI - CLASS III SECTION

Class III supplies for Third U. S. Army units were furnished from a First U. S. Army supply point in the vicinity of ST JACQUES DE NEHOU (T12-988) through 14 July. This installation was taken over by the Third U. S. Army on 15 July and redesignated as Class III Supply Point Number 1.

A reserve stock of 1,500,000 gallons of gasoline, together with a suitable stock of diesel and balanced oils and greases, was transported from "UTAH" Beach and stored in Supply Point Number 1 and other points in the vicinity of ST JACQUES DE NEHOU (T19) and LA HAYE DU PUITS (T18).

The pipe line from CHERBOURG (O12) to LA HAYE DU PUITS (T18) was rushed to completion and began discharging at the latter place on 30 July. This was most fortunate and timely.

SECTION VII - GRAVES REGISTRATION DIVISION

The personnel of the Graves Registration Division gained valuable experience during this period from frequent visits to collecting points and cemeteries of the First U. S. Army. No cemeteries were in operation by the Third U. S. Army.

Two graves registration units had arrived on the Continent, the 824d Quartermaster Graves Registration Company (less one platoon) and the 603d Quartermaster Graves Registration Company. The former was attached to the VIII Corps and the latter to the XV Corps. Both units were placed at First U. S. Army cemeteries to gain experience.

SECTION VIII - QUARTERMASTER TROOP SECTION

A division area for arriving Quartermaster units was selected in the vicinity of ST JACQUES DE NEHOU (T14). A beach party of one officer and one enlisted man was established to receive incoming Quartermaster units at the beach. As the units arrived they were met at the beach, conducted to the bivouac area, and placed under group and battalion control.

The following Quartermaster units were available when the Third U. S. Army became operational at 011200 B August:

Hq & Hq Det, QM Group	1
Hq & Hq Det, QM Battalion, Mobile	2
Hq & Hq Det, QM Battalion	3
QM Service Company	10
QM Railhead Company	4
QM Gasoline Supply Company	7
QM Depot Company, Supply	1
QM Salvage Collecting Company	2
QM Salvage Repair Company (Loaned by ASCZ)	2
QM Bakery Company (Are Loaned by ASCZ)	3
QM Fumigation and Bath Company	1
QM Graves Registration Company	2 (Less one Platoon)
QM Laundry Company	2

SECTION IX - FIELD SERVICE SECTION

The specialized units, such as fumigation and bath, bakery, salvage

Digitized by Google

collecting, and salvage repair companies, were put to work upon arrival. Laundry units were attached to each Army hospital and to the medical depot. The graves registration companies were turned over to the Graves Registration Division; railhead companies, to the Class I Section; and gasoline supply companies, to the Class III Section.

SECTION X - SALVAGE SECTION

Salvage operations were initiated on 19 July in an area adjacent to Class II and IV Depot Number 1. The salvage point was operated by the following units: one salvage collecting company and one section each from a fumigation and bath company, a laundry company, and a salvage repair company. The last-named unit was loaned by the Advance Section Communications Zone. Unrepairable articles were evacuated to the salvage dump at "UTAH" Beach. Everything that could be saved was fumigated, laundered, and, if necessary, repaired, and placed in stock at the depot for release. This set-up was so effective that the decision was made to continue it during the coming operations.

Field range repairs were initiated at Class II and IV Depot Number 1 on 19 July. The repair section was comprised of a selected group from the 3434th Quartermaster Service Company. They had received special schooling before leaving the United Kingdom. Tools and spare parts had been shipped to the Continent with the organization. This small group repaired and returned to troop units approximately 500 separate pieces of equipment before 1 August.

AIRPLANE DELIVERING [illegible] SUPPLIES IN CONTAINERS

CHAPTER 3
AUGUST OPERATIONS

SECTION I - GENERAL

The Third U. S. Army became operational at ST JACQUES DE NEHOU, in Normandy (T19), at 011200 B August.

The Army Headquarters occupied the following successive locations during the month of August:

PLACE (Vicinity)	DATES	DISTANCE OF MOVE (Miles)
ST JACQUES DE NEHOU (T19)	(6 July) - 1 August	
BEAUCHAMPS (T23)	1 - 8 August	45
ST JAMES (T39)	8 - 12 August	40
LAVAL (T64)	12 - 14 August	35
LE MANS (T34)	14 - 20 August	64
BROU (W18)	20 - 25 August	60
PITHIVIERS (W95)	25 - 30 August	68
THORIGNY (X87)	30 August - 4 September	67
	TOTAL	379

The Quartermaster Section, initially, was split between the forward and rear echelons. This arrangement was discontinued 13 August. The problems incident to a fast-moving situation required the presence of the greater part of the Section with the forward echelon. Two officers of the Supply Division, augmented by officers from a battalion headquarters, remained in the rear areas to control the movement of supplies to the forward supply points. Other officers were secured to guide convoys to these frequently changed forward points.

The problem of getting essential combat supplies, in sufficient quantities and at the proper times, to the forward elements became increasingly complicated and difficult as the advance continued. After the fall of AVRANCHES (T21), the VIII Corps moved westward through the Brittany Peninsula. The remainder of the force, which before the end of August included the IV, XX, and XII Corps, moved southeast and east in the direction of CHARTRES (R30). This situation required that separate supply arrangements be made for the two forces which were moving in opposite directions.

It was clearly established, in the early days of the operation, that the conventional methods of supply prescribed by the field manuals had but little application to the immediate problem. There were very few expedients that were not employed. The problem was met through the combined efforts of the Advance Section Communications Zone, the Army, and the forward elements working together as a team.

SECTION II - ADMINISTRATIVE DIVISION

The Administrative Division performed its normal duties during this period.

SECTION III - SUPPLY DIVISION

The plan of supply required that daily telegrams be submitted for Class I and Class III supplies forty-eight hours in advance. Initially, the telegrams were sent by liaison officer direct to the Advance Section Communications Zone; later the 24th Regulating Station assumed this function.

The delivery of supplies was to be accomplished by the Advance Section Communications Zone direct to designated supply points within the Army area. This plan required modification from time to time, because of the constantly increasing distances and lack of adequate transportation facilities. A large portion of the supplies was delivered by the Advance Section Communications Zone to "base" supply points and advance depots, from which Army trucks made distribution to supply points in the rear of corps.

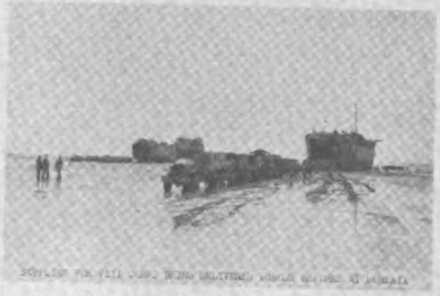
Army supply points were maintained generally on the basis of one Class I and one Class III point per corps, and one or more for Army troops in the rear part of the Army area. Corps and Army troops obtained their supplies from the nearest supply point. It was not possible, under the strained conditions, to keep supply points as close to the troops as is prescribed in the field manuals or in the numbers recommended by them. Annex Number 1 indicates the locations, designations, and times of opening and closing of supply points for the period 1 to 31 August.

The VIII Corps having moved westward through the Brittany Peninsula, a separate supply plan was required. During the initial stages, supplies were delivered direct to the Army supply points in the rear of the corps. It was arranged on 10 August that all supplies for the VIII Corps would be delivered by Advance Section Communications Zone to Army Supply Point Number 12, in the vicinity of DOL (W90). The Corps was to arrange for distribution from that point to the forward elements in the vicinity of LORIENT (G72), VANNES (H16), REDON (T05), and BREST (T99). This arrangement continued until the Brittany Base Section opened at REDON at 211200 B August. The Base Section then became the medium of supply for the VIII Corps. Responsibility for supply remained with Army. The Headquarters and Headquarters Detachment, 5434 Quartermaster Group, was sent to the BREST area to represent the Army Quartermaster. Separate daily telegrams were initiated by the Group Commander on 18 August. The supply problem was considerably alleviated when landing craft began unloading across the beaches in the vicinity of MERLATI (R41) about 20 August. Train service was established a few days later. The supply of this Corps was successfully accomplished.

The eastern force, consisting of the XV, XX, and XII Corps and the greater portion of Army troops, was supplied principally by truck train and, to a lesser degree, by railway and airplane. The following paragraphs give, in general, the successive steps in supplying the eastern force.

Westward of LAVAL (T64), Advance Section Communications Zone truck trains delivered Class I and Class III supplies direct to Army supply points. Army trucks supplemented these shipments by hauling supplies from the Army reserve stocks in the vicinity of ST JACQUES DE NEHOU (T19) and from the pipe-line terminus at LA HAYE DU PUITS (T18).

Advance Section Communications Zone opened Quartermaster Depot Number 15, near LAVAL (T64), on 13 August. The greater portion of Class I and Class III supplies was delivered to this depot. Army transportation delivered the supplies to forward points, approximately seventy miles eastward.



Advance Section Communications Zone opened Quartermaster Depot Number 120, in the vicinity of LE MANS (V46), on 20 August. No change was made in the method of distribution to forward supply points.

Advance Section Communications Zone opened Quartermaster Depot Number 120, in the vicinity of ARLIS (R60), on 24 August. The previous distribution arrangements were continued.

Airplane deliveries commenced on 18 August to LE MANS (V46) and continued for several days. Deliveries were restricted to gasoline.

Airplane deliveries were initiated to the MEUCY (W95) airstrip, ten miles north of ORLEANS (P62), on 27 August and continued for three days. Approximately 100,000 gallons of gasoline and 200 tons of rations were received at this location.

Railway deliveries began at LE MANS (V46) on 17 August, at MEUCY (W17) on 23 August, and at CHARTRES (R30) on 25 August. The service was irregular because of track conditions; however, a very considerable quantity of supplies was received.

SUPPLY FOR VIII CORPS, BEING DELIVERED ACROSS BEACHES AT MERLATI

Army reserve stocks, consisting of 1,500,000 rations and 1,500,000 gallons of gasoline, had been accumulated in the vicinity of ST JACQUES DE NEHOU (T19) and LA HAYE DU PUITS (T18) prior to 1 August. Because of short shipments from Advance Section Communications Zone, these reserves had to be drawn upon from the very beginning of the advance. The Class III reserves were depleted on 7 August; for the remainder of the month, supply was on an uncertain basis. Receipts were somewhat erratic and there were many anxious moments.

SECTION IV - CLASS I SECTION

Food and other Class I supplies were issued in sufficient quantities throughout the month of August. A critical period developed between 10 and 12 August, when shipments to the Army were short approximately 350,000 rations. The difference was made up by exhausting the reminder of the Army reserve and a portion of the unit reserves held by troops. During the remainder of the month the daily average deliveries to the Army were sufficient for maintenance and for reconstituting unit reserves. The Army reserve, however, remained in a precarious condition.

The following types and quantities of rations were issued:

"B" ration	None
10 in 1 ration	51.0%
"C" ration	23.5%
"K" ration	25.0%
5 in 1 ration	0.5%
	100.0%
"D" ration (Additional)	6.7%

Average daily issues for same period:

Army Troops (Average strength, 1,000,000 troops, less VIII Corps)	212,745
Actual daily issues	225,346
Difference	12,601

DECLASSIFIED

Digitized by Google

The over-issues can be explained by, straggling prisoners of war, casuals in the army area, and issues to replacement depots.

Gratuitous issues of emergency rations were issued on a weekly basis. Eight issues were available in some instances, because of transportation limitations.

Bakeries operated continuously during the month, with the exception of one or two days when the supply of flour was exhausted. Each Class I supply point was furnished a bakery company. This proved to be a highly successful arrangement. Fresh bread was supplied to all troops and did much to relieve the monotony of the operational-type ration, particularly the C-ration, which was issued regularly.

Refrigerated supplies were initiated on 4 August when the 148th Quartermaster Refrigeration Company, Mobile, began operating under the Class I section. This company performed an important service in an outstanding manner. Until its arrival, only white milk stores became available in the Class I depots. The source of supply was [illegible] dairies. Deliveries to troops were made at the Class I supply points.

Captured stores of frozen meats and vegetables, amounting to 150 tons, were reported on 31 August in the vicinity of St Malo (V15). The enemy had left [illegible] the refrigeration machinery. The Class I officer immediately dispatched a sufficient number of refrigerator vans to secure the supplies. They were evacuated and issued to front-line troops. Thirteen carloads of potatoes, consigned to points in Germany, were captured in the vicinity of St Malo (V15), on 31 August and issued to troops of the VIII Corps.

Fresh eggs and onions were issued to troops on several occasions. Priority was given to hospitals.

SECTION V - CLOTHING AND EQUIPAGE

A shortage of clothing and equipment developed during the month of August. The advance of the Army was so rapid that depots could not be kept within close supporting distance of the troops. Transportation was not available, because of the necessity for hauling rations and gasoline.

Maximum use was made of salvage material, a considerable quantity of which was renovated and reissued.

Army Quartermaster Depot Number [illegible], operated by the 298th Quartermaster Depot Company, initially was [illegible] in operation at [illegible] (V82), until 31 August. This depot issued approximately 90% of supplies from 1 August until it closed.

Army Quartermaster Depot Number [illegible] operated by the 298th Quartermaster Depot Company, Army, operated at [illegible] (V74), [illegible] northwest of [illegible], until it closed 8 August. A fire started by the explosion of [illegible] were issued, eighty per cent of which were reconditioned salvage materials.

Army Quartermaster Depot Number [illegible] operated by the 298th Quartermaster Depot Company, Army, opened [illegible] at the junction of highways [illegible] and remained open until 8 August. The issues from this depot included a considerable quantity of salvaged material, consisting of [illegible] at blankets, salvaged cots, water cans, toilet paper, and grit soap.

SECTION VI - [illegible]

It was learned, finally, that the [illegible] stations of gasoline in reserve would be used for emergency use. Requirements from the beach kept against heavy telegram requests were short of requirements. It was necessary, sometimes, to start drawing the reserve at [illegible] and this supply was exhausted on 31 August. Daily issues during this period were [illegible] than [illegible] anticipated. Supply of Class III, of both fuel and engine oils, was adequate to meet all requirements. The shortage was in the [illegible] of the Army's tactical units. The shortage was in the [illegible] of the Army's tactical units. The shortage was in the [illegible] of the Army's tactical units

CHAPTER 4
SEPTEMBER OPERATIONS

SECTION I - GENERAL

Headquarters Third U. S. Army, on 1 September, was located in the vicinity of THEMERY (Z87), approximately ten miles northeast of SENS (Z69). The Headquarters occupied the following successive locations during the month of September:

PLACE (Vicinity)	DATES	DISTANCE OF MOVE (Miles)
THEMERY (Z87)	(30 August) - 4 September	
CHALONS-SUR-MARNE (T54)	4 - 15 September	85
STAIN (U47)	15 - 30 September	63
	TOTAL	148

The Army, on 1 September, was far ahead of schedule. It had advanced so far from its base of supplies that any failure to satisfy the daily telegram requests, obviously, would have a serious effect. It had not been possible to accumulate Army reserves, nor had the Communications Zone been able to establish intermediate depots.

Critical periods in the supply situation affected the Army as a whole. First, the gasoline supply was so critical through 1 to 4 September that the Army, for all practical purposes, was immobilized. Secondly, ration receipts were short of daily telegram requests during 8 to 13 September, necessitating the reduction of unit reserves. Captured stocks were utilized to the extent available to make up deficiencies. Thirdly, gasoline again became short on 20 September and a system of rationing was inaugurated. Tonnage allocations, which were controlled by higher headquarters, were sufficient only for maintenance and operations on a reduced scale.

Winter clothing and equipment, including the replacement of battle losses, presented a major problem. It was not until the forward progress of the Army had slowed down that a solution was found. The Army received splendid cooperation from the Communications Zone and a considerable quantity of supplies began arriving by truck, railway, and airplane before the end of the month.

The Army included the following major elements on 1 September:

VIII Corps: 6th Armored Division, 3d Infantry Division, 8th Infantry Division, 29th Infantry Division, 83d Infantry Division, and Corps Troops.
XII Corps: 4th Armored Division, 35th Infantry Division, 80th Infantry Division, and Corps Troops.
XV Corps: Corps Troops only.
XX Corps: 7th Armored Division, 5th Infantry Division, 90th Infantry Division, and Corps Troops.

The following major changes occurred during the period 1 to 30 September:

The VIII Corps was assigned to the Ninth U. S. Army on 5 September.

The XV Corps was assigned to the Seventh U. S. Army on 29 September.

The 2d (French) Armored Division and 79th Infantry Division were assigned to the Third U. S. Army on 5 and 7 September, respectively. Both were assigned to the XV Corps and were transferred with the Corps to the Seventh U. S. Army.

Combat Command B, 6th Armored Division, was attached to the Third U. S. Army on 10 September. The Division was assigned on 16 September and became Army Reserve.

The 83d Infantry Division was assigned to the Third U. S. Army and to the XX Corps on 21 September.

The 7th Armored Division was assigned to the First U. S. Army on 26 September.

The following were the major elements on 30 September:

XII Corps : 4th Armored Division, 35th Infantry Division, 80th Infantry Division, and Corps Troops.
XX Corps : 5th Infantry Division, 83d Infantry Division, 90th Infantry Division, and Corps Troops.
Army Reserve: 6th Armored Division.

SECTION II - ADMINISTRATIVE DIVISION

The division performed its normal functions.

The number of reports required by various headquarters, including sections of the Army Headquarters, increased considerably. A study was made with a view to reducing this burden, but with the usual result.

SECTION III - SUPPLY DIVISION

The Quartermaster supply situation within the Army on 1 September was unsound, especially as to Class III supplies. The supply line was extremely long and transportation facilities had not kept pace with the increasing distance. Class I supplies on hand at the start of September were adequate for maintenance plus a small reserve. The Class III position had taken a bad turn around 25 August and became steadily worse. The situation as to gasoline remained extremely critical until 5 September, when it started to improve. The Class I situation was not good from 8 to 13 September, because of short receipts from the Communications Zone.

The most advanced Army supply points on 1 September were in the general vicinity of CHALONS (T54). The most advanced Communications Zone depot was Quartermaster Depot Number 120, at ARLIS (R60). The bulk of Quartermaster supplies for the Army was delivered by the Communications Zone to two points: Quartermaster Depot Number 120 and Army Supply Point Number 2B5, at FONTAINEBLEAU (L29). The approximate distances from these two points to Army supply points in the vicinity of CHALONS (T54) were 157 and 100 miles, respectively.

During the month telephone connections were installed for the first time to all supply points and railheads. The rapid advance and movement of supply points had never permitted this in the past. Communications are highly essential in the coordination of the supply of an Army.

Railway deliveries from the beach were initiated to the following points during the month by Advance Section Communications Zone trains:

SEZANNE (T62)	7 September	(Class III)
SOMMEDIEU (T42)	7 September	(Classes I, II and IV, III)
VERDUN (U26)	14 September	(Classes I, II and IV, III)
EPERNAY (T25)	6 September	(Class III)
LEMONVILLE (U32)	14 September	(Classes I, III)
TOUL (U61)	23 September	(Class II and IV)
JOINVLLE (U66)	23 September	(Class II and IV)

Airplane deliveries were initiated to the following places:

SENS (T97)	5 September	(Class III)
HENNEVILLE (Q42)	6 September	(Class III)
ST DIZIER (T90)	13 September	(Class III)
STAIN (U47)	10 September	(Classes II and IV, III)
TOUL (U61)	29 September	(Classes II and IV, III)

Advance Section Communications Zone depots were operated in the following locations:

QM Depot operated by		
58th QM Base Depot Company	ARLIS (R60)	Up to 7 September
QM Depot operated by		
62d QM Base Depot Company	SOMMEDIEU (T42)	Opened 8 September
QM Depot operated by		
62d QM Base Depot Company	LEMONVILLE (U32)	12 to 26 September
QM Depot operated by		
62d QM Base Depot Company	TOUL (U61)	Opened 26 September

These depots were, in effect, transfer points at Advance Section Communications Zone truckheads and railheads. (Except at the base depot at TOUL (U61) the accumulated stocks were negligible; the Army took over the supplies as fast as they were received and transported them, using Army trucks, direct to Army supply points.)

The following tonnage allocations (long tons) were imposed during the month:

DATE	QM ALLOCATION	OTHER SERVICES	TOTAL ALLOTMENT TO ARMY FOR ALL SERVICES
1 September	1,200	800	2,000
5 September	2,090*	1,410	3,500
25 September	2,070	1,430	3,500
27 September	1,833	1,267	3,100

*From 11 to 24 September, 500 tons of the Quartermaster allotment were given to Ordnance on alternate days; and from 17 to 25 September, twenty tons were given to Chemical Warfare Service.

The tonnage requirements for Quartermaster supplies varied somewhat because of the changes of major elements. The following represents a general estimate of the daily tonnage for Quartermaster supplies required for full operations for the Army during September:

Class I	900 long tons
Class II and IV	125 long tons
Class III	1,400 long tons
TOTAL	2,425 long tons

The problem of forwarding supplies to Army supply points was considerably reduced after the advance slowed down. The supply points were advanced close behind the troops, and the Class II and IV depots were moved forward to VERDUN (U26) and TOUL (U61), within easy hauling range of the troops.

Railway service improved greatly during the month. Advance Section Communications Zone truck convoys no longer came to the Army area, but transferred their loads to railway cars at SOMMEDIEU (T42). Two railheads, VERDUN (U26) on the north side and LEMONVILLE (U32) - later advanced to TOUL (U61) - on the south flank, served for the supply of the Army, except for supplies delivered by air.

Army supply points in operation during September are shown in Annex Number 2 to this report.

Digitized by Google

Digitized by Google

and STAIN (U47) exceeded 3,400 tons between 5 and 11 September. Railway deliveries to SOMMEDIEU (T42) and ETREAT (T25), for the period 8 to 12 September, accounted for 1,366 tons. The remainder was delivered by truck convoy.

Advance Section Communications Zone took over Army Supply Point Number 2BB, near FONTAINEBLEAU (L29), on 8 September as a decanting point for tank trucks operating between that point and the pipe-line terminal at CHANTENAY (K90) (advanced to DOURDAN (K70) on 22 September). Army transported the packaged gasoline from Supply Point Number 2BB on trains operated by the Third U. S. Army between ST GERMAIN (U40), SOMMEDIEU (T42), VERDUN (U26), and LERONVILLE (U52).

The railhead for the bulk of Quartermaster supplies was shifted from LERONVILLE (U52) to TOUL (U61) on 24 September. Bulk gasoline in tank cars began arriving at TOUL (U61) on 24 September, but this was discontinued after three days because all tank cars were required for aviation fuel. Thereafter, all gasoline received was in packages. The Class III railhead was shifted from TOUL (U61) to DOMGERMAIN (U50), three miles southwest of TOUL, on 27 September, in order to relieve the congestion at the latter place. At the end of the month all gasoline deliveries to the Army area were by railway to VERDUN (U26) and DAMVILLE-MAIN (U50), except for small deliveries by airplane to STAIN (U47) and TOUL (U61).

Gasoline again became short of requirements on 20 September, because of tonnage limitations. The following table shows the daily telegram requests and the receipts from 21 to 30 September:

DATE	DAILY TELEGRAM REQUEST (Gallons)	RECEIPTS (Gallons)
21 September	388,744	167,475
22 September	405,152	281,450
23 September	235,680	254,755
24 September	284,400	294,075
25 September	356,288	274,010
26 September	308,192	451,490
27 September	281,964	219,635
28 September	231,456	238,085
29 September	243,520	181,360
30 September	238,856	346,765

Rationing was again employed. Limitations were placed on allowances to divisions, as well as to corps and Army troops. Every gallon that could be saved was placed in reserve in specified Army supply points to provide against emergencies and to be prepared to take full advantage of tactical opportunities. The front was relatively static at this period.

Empty cans became critical at the Communications Zone refilling points. The mortality rate for cans had exceeded expectations. The Army made strong efforts to collect and evacuate as many empties as possible, and the slowing of the advance provided the opportunity to give this matter close supervision. During the latter part of the month, more cans were returned than were received.

SECTION VII - GRAVES REGISTRATION DIVISION

The personnel of the Graves Registration Division was divided between the forward and rear echelons of the Army Headquarters. One officer and nine enlisted men were located with the rear echelon to work in cooperation with the Adjutant General Casualty Section in processing burial records. The remainder of the division, consisting of one officer and one enlisted man, remained with the forward echelon to supervise the location and operation of cemeteries.

It was planned, originally, to operate one cemetery for each corps, under corps supervision. It was for this reason that a graves registration company and a service company were attached to each corps. It was discovered that this was not a workable plan. Cemeteries, from the start, had been under army supervision. Except for very brief periods, not more than one cemetery had been in operation at the same time. All corps had found it possible to evacuate to the one place. It is worthy of remark that the VIII Corps evacuated its American dead to the ST JAMES (T29) Cemetery during the entire campaign in the Brittany Peninsula.

The most difficult problems are those incident to identification and paper work. At the start, the dead were brought to corps collecting points in trailers. The loaded trailers were exchanged for empty trailers and the bodies were taken to the cemetery without unloading. This system proved unsatisfactory from the identification standpoint. The bodies later were unloaded at the corps collecting points and identifications were carefully checked. This materially added to the labor involved, but it reduced the number of unidentified to a low figure.

The officers and men of the Quartermaster graves registration companies are deserving of high praise for the manner in which they performed their difficult and depressing task. The following units operated with the Army during all or a part of September:

607th QM Graves Registration Company
608th QM Graves Registration Company
609th QM Graves Registration Company
624th QM Graves Registration Company

During the third week, supplies of mattress covers, personal effects bags, and crosses were very low. Only 985 mattress covers and 850 personal effects bags had been received on requisitions since 1 September and substituted captured stores were nearly exhausted. As none of these items were available through normal supply channels, trucks were dispatched to the beach, a distance of 300 miles, to secure the items. By the end of September the necessary supplies were available in sufficient quantity and through normal channels. The Quartermaster depots for Class II supplies were keeping a reserve stock specifically earmarked for cemetery use.

Prisoner of war labor was found to be the best suited for work at the cemeteries, but the graves registration companies with their limited transportation were unable to transport the prisoners to and from the cemeteries. Quartermaster service troops, although less efficient than prisoners, had to be relied upon. Civilian laborers worked hard only the first few days; when they were well fed and then paid they lost all interest in their work.

The total burials for September were 4,192. Of these, 2,668 were American, forty-six were Allied, and 1,478 were German.

The following cemeteries were in operation:

U. S. Military Cemetery Number 1, ST JAMES (T29), and the German Military Cemetery adjacent thereto, which had opened 071200 B August, were transferred to the Ninth U. S. Army at 051200 B September.

The German Military Cemetery, LESNEVEN (R11), near BREST (T99), which had opened 241200 B August, was also transferred to the Ninth U. S. Army at 051200 B September.

U. S. Military Cemetery Number 1, VILLENEUVE-SUR-AUVERS (R90), and the German Military Cemetery adjacent thereto, which had opened 251200 B August, were closed for burials to the Third U. S. Army at 061200 B September and turned over to Advance Section Communications Zone.

U. S. Military Cemetery Number 1, CHAMPIGNEUL (T44), and the German Military Cemetery adjacent thereto opened 011200 B September and were closed for Third U. S. Army burials at 301200 A September and turned over to Advance Section Communications Zone.

U. S. Military Cemetery Number 1, ANDILLY (U61), and the German Military Cemetery adjacent thereto opened 121200 B September. These cemeteries remained open beyond the period covered by this chapter.

SECTION VIII - QUARTERMASTER TROOP SECTION

The following Quartermaster troop units were assigned or attached to the Third U. S. Army as of 30 September:

Hq & Hq Det, QM Group	2
Hq & Hq Det, QM Battalion, Mobile	3
Hq & Hq Det, QM Battalion	4
QM Depot Company, Supply	2
QM Gasoline Supply Company	6
QM Graves Registration Company	3
QM Laundry Company	4
QM Railhead Company	6
QM Salvage Collecting Company	3
QM Service Company	17
QM Bakery Company, Special	5
QM Salvage Repair Company	3
QM Fumigation and Bath Company	2
QM Refrigeration Company, Mobile	1
QM Sales Platoon	1
QM Tank Truck Company	2
QM Petroleum Products Laboratory (Mobile Section)	1

The quality of service troops varied; however, the fact remains that they got the job done. The officers, almost without exception, gave their very best efforts.

SECTION IX - FIELD SERVICE SECTION

Laundry units were kept in close support of all Army hospitals. These units performed well. Laundry units not required for hospital service and bath units were located close behind the front-line troops. More bath units were required than were available. This is one of the best morale features of the Quartermaster Corps; but, unfortunately, the units were not to be had.

The Quartermaster Petroleum Products Laboratory (Mobile Section) ran 208 tests, sampling 182,750 gallons of gasoline. As a result of these tests, 10,000 gallons were found suitable for Army use. It should be noted that this was not the entire amount of captured gasoline used during the month.

A detail consisting of one warrant officer and fourteen enlisted men was organized on 20 September for the purpose of checking, guarding, and warehousing captured supplies.

The movement of laundry and salvage repair units was found to be difficult with the reduced number of tractors currently allowed. Six additional tractors were loaned to the Army Quartermaster by the Communications Zone on 26 September to supplement the organizational tractors.

SECTION X - SALVAGE SECTION

The salvage plan was reorganized after the tactical situation became more stable. A complete salvage point, consisting of repair, fumigation, salvage collecting, and laundry facilities, was established close in the rear of each corps. Direct support was given to combat units in repairing and renovating clothing and equipment. The volume of salvage in Army installations during the month was lower than expected. Front-line units salvaged and reissued everything possible, because of the scarcity of new supplies in the depots. Salvage handled during the month included:

Class B	204,701
Class C	45,190
Class X	137,262
TOTAL	387,153

All Class B and Class C items were processed and returned to depots for reissue.

The stove repair units, operating with the Class II and IV depots, made repairs to the following items:

Fire units	942
Lanterns, Coleman	601
Stoves, [illegible] and two-burner	385
Heaters, [illegible] type	
Pumps	

The lack of parts seriously hampered operations. These repair units worked with good spirit, and they improved greatly in technique and inventiveness.

U. S. Military Cemetery Number 1 at ANGILLY (UK1) and the German Military Cemetery adjacent thereto were in operation during October.

SECTION VIII - QUARTERMASTER TROOP SECTION

The following Quartermaster troop units were assigned or attached to the Third U. S. Army as of 31 October:

Hq & Hq Det, QM Group	2
Hq & Hq Det, QM Battalion, Mobile	3
Hq & Hq Det, QM Battalion	6
QM Bakery Company, Special	5
QM Depot Company, Supply	2
QM Fumigation and Bath Company	3
QM Gasoline Supply Company	7
QM Graves Registration Company	3
QM Laundry Company	5
QM Petroleum Products Laboratory (Mobile Section)	1
QM Railhead Company	5
QM Refrigeration Company, Mobile (Less One Section)	1
QM Sales Platoon	2
QM Salvage Collecting Company	3
QM Salvage Repair Company	3
QM Service Company	19
QM Tank Truck Company	2

SECTION IX - FIELD SERVICE SECTION

A warehouse was secured in NANCY (UK1) for the purpose of consolidating all captured enemy materiel. At this place all types of captured enemy supplies were received, inventoried, and issued. During October approximately 400 truckloads of captured materiel were transferred to this point.

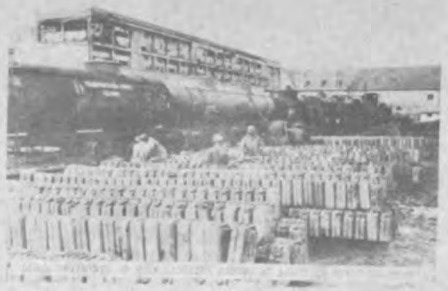
Bad weather during October made it desirable to place troop units and installations under cover. This was especially important in the case of the latter, which require hard standings for efficient operations. After much effort, suitable covered accomodations were secured for both men and installations.

Early in October, when an additional company became available, a complete fumigation and bath company was operated by Army for each corps. Three companies were in operation within the Army.

During the month 106,823 men were bathed in divisional areas. This number does not include men who were bathed by Engineer and locally operated units.

SECTION X - SALVAGE SECTION

With the improved Class II supply situation, many soldiers could turn in unserviceable garments for replacement and the salvage program was accelerated over the previous month.



The following items of salvage were handled during this period:

Class B	336,941
Class C	48,677
Class A	79,957
TOTAL	465,565

All Class B and Class C items of clothing were fumigated, laundered, and, when necessary, repaired and sent to the Class II and IV depot for reissue. Salvage repair companies repaired 52,635 items during the month.

Field range repair units and typewriter repair teams operated at base camps at the Class II and IV depots and at salvage repair points. During the month repairs were made to the following items:

Fire units	1,086
Heaters, immersion type	39
Lanterns, gasoline	869
Stoves, cooking, one and two-burner	1,087
Typewriters, portable	79
Typewriters, non-portable	79
Range, hard	114

CHAPTER 6
NOVEMBER OPERATIONS

SECTION I - GENERAL

Army Headquarters remained at NANCY (UK1) throughout the month of November.

Plans for the coming offensive were nearing completion at the beginning of the month. The principal efforts of the Office of the Army Quartermaster were directed toward meeting this situation. It was planned to place reserves of rations and gasoline in strategic locations east of the MOSELLE River. This proved to be a sound measure because the river was rising and at the start of the offensive had reached flood stage. Many of the temporary bridges were unusable for several days. Sites had been selected, but the stocking of the supply points was delayed until the last moment for reasons of secrecy. The Third U. S. Army offensive began on 8 November. Reserve supplies were adequate. A total of 2,344,541 rations was in the Army area at supply points, mobile reserve points, and storage points; 1,926,235 gallons of gasoline were likewise strategically located. The divisions averaged four days of Class I and five days of Class III supplies on hand, the accumulation of these reserves having begun in October. Army ration stocks had been built up to the prescribed level by the middle of October, but it was not until 7 November that a sufficient reserve of gasoline had been accumulated. By the twentieth of the month, gasoline on hand had been built up to five and one-half million gallons. Quartermaster activities proceeded according to plan.

The composition of the Army remained substantially the same during the month. The following were the major elements:

III Corps: Corps Troops only.

XII Corps: 4th Armored Division, 6th Armored Division, 26th Infantry Division, 35th Infantry Division, 80th Infantry Division, and Corps Troops.

XI Corps: 10th Armored Division, 5th Infantry Division, 90th Infantry Division, 95th Infantry Division, and Corps Troops.

The strength of assigned units was 249,889 on 30 November. The total number of troops supplied by the Army was 311,836, including Communications Zone, Ninth Air Force, French, and miscellaneous troops.

SECTION II - ADMINISTRATIVE DIVISION

Eight French railway wine tanks, each with a capacity of 5,000 gallons, were requisitioned for use as water reservoirs. These were filled with water and placed at Class III railheads for fire-fighting purposes.

A project of printing 40,000 ten-page booklets on "The Rules of Land Warfare" was undertaken and accomplished for the Judge Advocate Section. Captured enemy paper was used and the printing done by a French firm.

[illegible] handling of war materiel and services from civilian sources [illegible] in value. A highlight was the initial use of civilian dry-cleaning facilities. Five thousand salvaged overcoats and 3,000 salvaged blouses were processed through this arrangement.

On 5 November, the Office of the Army Quartermaster was reorganized by adding an Operations Section to the Supply Division. The Operations Section had been in actual operation since early in August. The principal functions of this section were to supervise and control all Quartermaster supply operations in the field, including the receipt, classification, and forwarding of supplies to Army supply points, and to anticipate and make arrangements for meeting the requirements of the changing tactical situation.

During November three officers and four enlisted men of the Quartermaster Section received the Bronze Star Medal for meritorious service, by General Orders published by Headquarters Third U. S. Army. In Quartermaster units one officer was awarded the Silver Star and one officer and four enlisted men were awarded the Bronze Star Medal, by General Orders, Headquarters Third U. S. Army.

SECTION III - SUPPLY DIVISION

An allocation of 2,950 long tons daily was available to the Army Quartermaster during November. The supply situation was greatly improved over previous months. Only Class II and IV gave cause for anxiety. Much progress was made toward completion of the winterization program however, serious shortages of several critical items existed.

Railways, both in the Communications Zone and in the Army area, were now operating in good volume and on reliable schedules. The celebrated Red Ball Express truck convoys in the rear area were discontinued. Practically all supplies were transported from the Communications Zone to the Army receiving points by railway. One emergency shipment of diesel was lifted by air direct from the United Kingdom to airfields at ST DIZIER (UK9) and VERDUN (UK8). Truck shipments from the Communications Zone were since except for a considerable quantity of gasoline delivered by tank trucks. Within the Army area, railway trains, under Army control, were used for distributing Class I and Class III supplies to all supply points that could be located on lines in operation. Supply points not accessible to railways were supplied by Army trucks or a combination of railway and truck. A railway bridge across the MOSELLE River immediately north of METZ (UK1) was completed on 20 November, enabling trains to proceed to [illegible] (UK5), METZ (UK1), MONTOY (UK2), and [illegible] (UK3). This was the only railway line in operation east of the MOSELLE during the month.

Class I and Class III supply points were maintained in close support of combat units. At least two supply points for both Class I and Class III supplies for each corps were in operation throughout the month, and additional supply points were maintained west of the MOSELLE River for Army troops. The first Class III supply point was opened for issues east of the MOSELLE River on 14 November; the first Class I point opened on 19 November.

Class I supplies for the period 1 to 24 November, inclusive, were delivered by the Communications Zone to the Army Class I depot at TOUL (UK2). The Army Quartermaster classified the supplies at this point and reshipped by railway and/or truck to the Army supply points. The Advance Section Communications Zone for some time had been building up a Class I intermediate depot at VERDUN (UK8). This depot, Q-178, opened on 25 November and took over the function of sending daily trains to designated Army supply points. The new procedure was a great improvement and, for the first time since the start of the campaign, established a system of Class I supply in close agreement with the field needs. The Army depot at TOUL (UK2) was retained as a reserve point for operational-type rations. Two daily trains from VERDUN (UK8) were dispatched to Army railheads located, for the most part, along the MOSELLE River at METZ (UK1), [illegible] (UK4), CHARLEY (UK5), AZOUN (UK6), CHATEAU SALINS (Q17), and MARSAL (Q12). The last two points were east of the MOSELLE River in the southern part of the Army zone. Army trucks transported supplies from the railheads to such supply points as were not located on operating railway lines.

Class II and IV supplies continued to be delivered to the Army Class II and IV depot at TOUL (UK2).

Class III supplies, in bulk, were delivered to the Army at the three principal receiving points - DUNKERQUE (UK9), NANCY (UK1), and MARCHIENNES (UK3). Packaged gasoline shipped from the Communications Zone was received at [illegible] (UK2), from which point the trains were dispatched to Army railhead supply points. Railway facilities enabled distribution to be made to [illegible] (UK4), CHARLEY (UK5), METZ (UK1), CHATEAU SALINS (Q17), [illegible] (UK9), [illegible] (Q13). The last two points were east of the MOSELLE River.

Depot Number 6, near TOUL (U61), remained the sole Army Class II and IV supply point. The base for supply remained at Depot Q-180, at REIMS (T37), operated by the Communications Zone

INTERIOR VIEW OF CLASS II AND IV DEPOT NUMBER 6, AT TOUL

SECTION VI - CLASS III SECTION

The gasoline situation was satisfactory on 1 November, and improved steadily throughout the month. There was a shortage of diesel, however, and it was necessary to arrange for an emergency shipment of 400 tons by air direct from the United Kingdom and a like amount by railway from CHERBOURG (O12). The air shipment, scheduled to be completed before 7 November, was accomplished in part when a total of 287 tons was received on 10 and 11 November. Rail shipments of diesel, however, began soon afterwards in quantities that permitted the accumulation of a reserve of approximately 32,000 gallons by 16 November. Almost 2,000,000 gallons of gasoline were on hand at the start of the offensive on 8 November, excluding unit loads. The month closed with 3,604,565 gallons in Army supply points and reserve points.

During previous months the policy of the Communications Zone had been to supply packaged gasoline to the Army as far as practicable. As the cans had been emptied, they had been shipped to the rear for refilling. The turn around, because of the long distances, had required so much time that a critical shortage of cans had resulted. It was decided, therefore, that the Army should be furnished 1,000 net tons of bulk gasoline daily, which would be decanted by the Army. This program was initiated on 2 November, when 258,650 gallons of bulk gasoline (796.4 net tons) arrived at DOMREMAIN (U90). Any additional amount required was to be furnished in packages, provided that the cans were available. Most of the decanting, as explained above, was carried out at three places. It was possible to decant 1,000 net tons (375,000 gallons) daily, but an amount in excess of this figure would have required more equipment. Receipts for the month were forty per cent bulk and sixty per cent packaged.

DECANTING GASOLINE FROM RAIL CARS

In preparation for the offensive, two reserve points were established on 6 and 7 November east of the MOSELLE River and stocked with 430,350 gallons of V-80 gasoline: one point was two miles east of NANCY (U81) and the other at ATTON (U73). On 10 November, an additional 219,750 gallons were loaded aboard cars and held as a mobile reserve at MONDEL (Q01). When the supply points became congested, 1,198,730 gallons of V-80 gasoline were turned over to the Advance Section Communications Zone to be held in the vicinity of VERDUN (U26).

Two bulk storage plants in NANCY (U81), with a capacity of 310,000 gallons, and another in LUNEVILLE (U86), with a capacity of 800,000 gallons, were taken over during November. These contained 600,000 gallons at the end of the month.

Receipts of gasoline totaled 12,137,026 gallons for the month. This was ten per cent in excess of the daily telegram requests. Daily issues averaged 303,921 gallons of V-80 gasoline and 10,288 gallons of diesel. Consumption was much lower than anticipated. The daily consumption of liquid fuel was approximately eight and twenty-three one-hundredths pounds (net) per man per day; for oils and greases the amount was two-tenths of one pound. In this connection it must be remembered that the troops advanced over relatively short distances and that supply distances were relatively short. Higher headquarters had prescribed that overall Class III requirements be calculated on the basis of fifteen and forty-seven one-hundredths pounds (gross) per man per day. In the light of experience, this is considered to represent the amount that is required in a fast-moving, long-distance operation such as prevailed during the month of August.

Two fires at decanting points resulted in a loss of 16,000 gallons of gasoline, 10,266 cans, and one 100-gallon-per-minute dispenser. The first fire, at DOMREMAIN (U90) on 7 November, was caused by hot coals from a switching engine; the second, at NANCY (U81) on 16 November, resulted from the backfire of a dispenser engine. The loss in cans was offset by 13,000 German cans recovered from a factory in BASSE YUTZ (U88), near THIONVILLE (U88).

The coal situation improved greatly. Between 19 and 21 November, 295 cars were received from the Communications Zone. Total receipts for the month were 8,678 tons. Sufficient coal was available to fill all requests.

The Theater Commander, accompanied by the Army Commander, visited Supply Point Number 50, at NANCY (U81), on 16 November.

SECTION VII - GRAVES REGISTRATION DIVISION

A marked increase in the number of isolated burials had become apparent by 1 November. This presented a serious problem with respect to establishing identity. There was instituted on the second of this month a comprehensive check list for the identification of bodies interred in isolated localities. Upon locating a body, graves registration personnel consulted the civil authorities of the nearest village and other local civilian and military personnel prior to disinterment. An overlay was then made, tieing in the location of the grave with permanent landmarks. All available circumstances were noted - for example, whether the body was buried by the enemy or by civilians, on what date the burial occurred, who handled the personal effects, and what records were available. It was found by following this system that absence of identification tags or other positive identification was no barrier to definite identification in ninety-five per cent of the cases.

Much progress was made in improving the technique incident to the identification of unknowns. By arrangement, Ordnance units retrieving tanks with bodies charred beyond immediate identification called in a representative of the Graves Registration Division before moving the tanks. This resulted in early identification of remains, since all pertinent data as to position of the bodies in the tanks, personal effects, and immediate surroundings often accomplished recognition of the bodies by members of their organizations. Six cases of potential unknowns were solved during the month through this new method.

The system of evacuating bodies from the divisions to the cemetery was modified on 4 November. A separate collecting point manned by Army graves registration personnel was established to operate with each division, and in cooperation with the division graves registration officer. In addition, twelve teams, each consisting of three men, a driver, and a weapons carrier, were placed in a central pool at the cemetery for emergency assistance where needed. Corps graves registration officers rendered valuable service in coordinating operations within the divisions. Under the earlier system, several collecting points were operated to serve each corps. The localizing of collecting points simplified identification procedure and proved to be much more efficient than the previous system.

On 27 November, an understanding was reached with the Ninth Air Force regarding the identification of Air Force personnel not previously reported to this Division but buried in the Army area. Prompt identification was made of ten out of the sixteen unknowns.

During the three days beginning on 21 November, it was found necessary to call on 550 prisoners of war to handle the large volume of work. Portable arc lights secured through the Engineer Section were used for the first time for night burial activity.

U. S. Military Cemetery Number 1 at ANDILLY (U61), which had opened at 121200 B September, closed for American burials at 050600 A November, but remained open for Allied burials. American burials here totaled 3,307; Allied, sixty-three. The adjacent German cemetery remained open. U. S. Military Cemetery Number 1 at LIMEY (U62) opened at 050600 A November.

Burials during the month totaled 5,676, of which 3,672 were American, eight were Allied, and 1,996 were enemy.

A commemorative service was held on Armistice Day at the LIMEY (U62) cemetery.

The Graves Registration Division remained with the rear echelon of the Army Headquarters throughout the month.

COVERED PROCESSING AREA AT A THIRD U. S. ARMY CEMETERY

SECTION VIII - QUARTERMASTER TROOP SECTION

The following Quartermaster troop units were assigned or attached to the Third U. S. Army as of 30 November:

Hq & Hq Det, QM Group	2
Hq & Hq Det, QM Battalion, Mobile	3
Hq & Hq Det, QM Battalion	6
QM Bakery Company, Special	5
QM Depot Company, Supply	2
QM Fumigation and Bath Company	3
QM Gasoline Supply Company	7
QM Graves Registration Company	3
QM Laundry Company	5
QM Railhead Company	5
QM Refrigeration Company, Mobile	1
QM Sales Platoon	2
QM Salvage Collecting Company	3
QM Salvage Repair Company	3
QM Service Company	24
QM Service Detachment (Petroleum Products Laboratory) (Mobile Detachment)	1

Higher authority directed that, with the entry of the Army into Germany, prisoners of war could not be utilized for labor details. To meet this situation, five additional service companies were assigned to the Army. Two companies were allocated to the Army Medical Section for use with evacuation hospitals, which had throughout the entire campaign used prisoner-of-war labor only.

The Army Commander commended the officers and men of the 485th Quartermaster Refrigeration Company, Mobile, published in Section III, General Orders Number 100, 30 November 1944, for outstanding performance of duty from 10 August to 25 September. Elements of this company entered HOMECOURT (U77) on 9 September on the heels of the combat troops and, before the town was reported clear of the enemy, secured and protected 2,600,000 pounds of beef, property of the German Wehrmacht.

CHAPTER 7
DECEMBER OPERATIONS

SECTION I - GENERAL

Army Headquarters remained at NANCY (Q81) until 26 December, when the forward echelon moved to the city of LUXEMBOURG (P81). The Quartermaster Section, which had been with the forward echelon since 13 August, remained after 26 December with the rear echelon in NANCY (Q81).

Initially during the month, efforts of the Army Quartermaster were directed toward the support of the continuing offensive to the east. Supply points and service installations were maintained in close support of the combat troops. The enemy counter-attack on 16 December, however, against the First U. S. Army in Belgium and Luxembourg was destined to have a far reaching effect on the Third U. S. Army tactical and consequent supply operations.

By 18 December the German counter-offensive on the First U. S. Army front had reached a critical stage. As a result the tactical plan of the Third U. S. Army was changed to counter this thrust. Instead of proceeding with the offensive to the east, in the direction of SAARBRUECKEN (Q47), the Army directed its power toward the north, through Luxembourg and eastern Belgium. The new tactical plan required the III and XII Corps to move quickly to the vicinity of ARLON (P62) and LUXEMBOURG (P81), respectively. The VIII Corps came under Third U. S. Army control in the area of BASTOGNE (P55). The XX Corps remained on its current front east and south of the MOSELLE River. The right (southern) boundary of the Army was changed and the zones of action of the III and XII Corps were taken over by the Seventh U. S. Army.

The supply plan of the Army was necessarily changed. Quartermaster supply points and reserves of rations and gasoline that had been placed east of the MOSELLE River were shifted to the north and west of the MOSELLE. Stocks of rations and gasoline were loaded aboard railway cars and held as mobile reserve, so that rapid movement could be effected as the military situation developed and clarified itself. The supply situation had in general been sound since the first of the month, with adequate reserves of rations and gasoline at supply points and reserve points. On 19 December 1,120,652 rations and 4,071,074 gallons of V-80 gasoline were on hand in the Army area; and an additional 660,000 operational-type rations were held in reserve for the Army at the Advance Section, Communications Zone depot at VERDUN (U26), Q-178. The divisions had an average of three and two-tenths days of Class I and four and eight-tenths days of Class III supplies on hand.

The composition of the Army changed frequently and radically during the month. On 16 December the 10th Armored Division was attached to the First U. S. Army. With the change in the tactical plan, the VIII Corps, including the 9th Armored Division, 10th Armored Division, 4th Infantry Division, 28th Infantry Division, and 101st Airborne Division, was transferred to the Third U. S. Army. The 87th Infantry Division was relieved from assignment to the Third U. S. Army and passed to the control of the Seventh U. S. Army on 21 December. Later in the month the 87th Infantry Division returned to the Third U. S. Army and the 11th Armored Division and 17th Airborne Division came under its control. From 16 December to the end of the month, the strength of the Army was increased abruptly from approximately 255,000 to approximately 350,000. The additional troops supplied by the Army increased also from a daily average of 50,000 to an average of 70,000.

The following were the major elements of the Army on 1 December:

III Corps: Corps Troops only.

XII Corps: 4th Armored Division, 6th Armored Division, 26th Infantry Division, 35th Infantry Division, 80th Infantry Division, and Corps Troops.

XX Corps: 10th Armored Division, 5th Infantry Division, 90th Infantry Division, 95th Infantry Division, and Corps Troops.

The strength of the Army was 249,089, and with the addition of Communications Zone, Air Force, French, and miscellaneous troops, the total for which the Army was responsible for supply amounted to 311,906.

The following were the major elements of the Army on 31 December:

III Corps: 6th Armored Division, 26th Infantry Division, 35th Infantry Division, and Corps Troops.

VIII Corps: 9th Armored Division, 11th Armored Division, 28th Infantry Division, 87th Infantry Division, 17th Airborne Division, 101st Airborne Division, and Corps Troops.

Digitized by Google

XII Corps: 4th Armored Division, 4th Infantry Division, 5th Infantry Division, 80th Infantry Division, and Corps Troops.

XX Corps: 10th Armored Division, 90th Infantry Division, 95th Infantry Division, and Corps Troops.

The strength of the Army on 31 December was 351,291. The Army also was supplying 27,114 Communications Zone, 38,015 Ninth Air Force, 2,749 French, and 2,063 miscellaneous troops, which brought the total number of troops supplied to 421,232.

SECTION II - ADMINISTRATIVE DIVISION

A new table of personnel allotments for Headquarters Third U. S. Army was published in Staff Memorandum Number 73, dated 16 December. The allotment for enlisted men of the Quartermaster Section was decreased by eight men. The Section's authorization was nineteen officers, three warrant officers, and forty enlisted men.

A plan for the training of infantry riflemen was announced on 7 December. Five per cent of the assigned strength of Army, corps, and division headquarters and of the assigned white service units were to be sent to an infantry training center established at METZ (U85). The Commanding Officer, 519th Quartermaster Group, was directed to effect the transfer of enlisted men from Quartermaster organizations concerned. Later in the month an additional five per cent were called. As a part of this program two enlisted men from the Quartermaster Section were transferred to the 87th Infantry Division and three were transferred to the 95th Infantry Division. One hundred and twenty-four enlisted men from ten Quartermaster units were transferred to the Infantry Training Center at METZ (U85).

During the month the Bronze Star Medal, for meritorious service, was awarded to eight officers and warrant officers and four enlisted men of Quartermaster units by General Orders published by Headquarters Third U. S. Army.

The Administrative Division continued to be active in making purchases and requisitioning local services and material. To meet an urgent operational necessity, 2,185 yards of white cloth were requisitioned from a French wholesale establishment on 24 December, to be used for making tunics for snow camouflage. Local printing facilities were extensively used for the printing of certain forms that were in short supply.

SECTION III - SUPPLY DIVISION

The overall Quartermaster supply situation in the Army continued to be favorable. The status of certain Class II items, however, was extremely critical. This situation was aggravated when, on 19 December, the supply of the VIII Corps became a Third U. S. Army responsibility. Battle losses of clothing and equipment included items that were already in short supply. Extended efforts were made to resupply all units having sustained battle losses. The Supply Division promptly reacted to the problems incident to the abrupt increase in the strength of the Army.

During the early part of the month the chief concern of the Supply Division was to supply the attacking forces to the east. Supply points were located well forward in support of the combat troops and reserves of rations and gasoline were strategically located east of the MOSELLE River. In addition to the Class II and IV Depot Number 7, established at METZ (U85) on 6 December for troops of the XX Corps and later also for III Corps troops, another depot was opened for the troops of the XII Corps. It was established at SARRALBE (Q44) as Depot Number 8 on 17 December.

The development of the enemy counter-offensive, however, on the First U. S. Army front resulted in a change of the direction of the Third U. S. Army's advance. The III and XII Corps moved quickly northward to ARLON (P62) and LUXEMBOURG (P81), respectively, and the VIII Corps came under Third U. S. Army control in the area of BASTOGNE (P55). Arrangements were made on the evening of 18 December to establish Class I and Class III supply points for units of the III and VIII Corps at LONGWY (P50) and LIBRAMONT (P34), which were to open on the following day. The Operations Officer of the Quartermaster Section arrived at LONGWY (P50) early on 19 December to complete arrangements for the opening of supply points in the new area and to coordinate all Quartermaster activities on the new front. LONGWY (P50), formerly at the rear of the northern flank of the Army area but now in the center of the direction of movement, was selected as a railhead and regulating point.

A special train loaded with rations, arrangements for which had been made the previous evening, was dispatched from the Advance Section Communications Zone Depot Q-178, at VERDUN (U26), to Class I Supply Points Number 64, at LONGWY (P50), and Number 67, at LIBRAMONT (P34). At 1000 A hours on 19 December 85,000 rations from VERDUN (U26) had arrived. A transfer of 100,000 gallons of gasoline and allied products, by truck transport, from Army Class III Supply Points Number 439, at MANGIENNULLES (U67), and Number 57, at ELZANGE (U96), had been completed. These shipments arrived and issues were initiated within twelve hours after preliminary arrangements had been made. Class I and Class III Supply Points Number 66 actually opened at 191000 A December.

A shift of Quartermaster supply points and reserve points was begun immediately. Four Class I and four Class III supply points, all of them east of the MOSELLE River, were closed. Only one Class I and one Class III supply point, then in support of the XX Corps, remained east of the river. A portion of the supplies in these points was loaded aboard railway cars and held as a mobile reserve and the remainder was transferred to new points opening to the north and west of the MOSELLE River. The shift of supply points is graphically illustrated in Annex Number 5B to this report.

In accordance with a previous agreement between the Quartermaster, Seventh U. S. Army, and the Army Quartermaster on the matter of supply responsibilities resulting from changes in Army areas, Class I Supply Point Number 58, at HAMONT (Q12), and Class III Supply Point Number 58, at HARCOURGES (Q13), were released to the Seventh U. S. Army at 241400 A December. A stock of 97,750 rations and additional miscellaneous items was turned over with the Class I supply point and 151,137 gallons of V-80 gasoline and additional allied products were transferred with the Class III supply point. Also, thirty-two cars of coke and 514 tons of coal were included in the supplies that were transferred.

As a result of a change in the Communications Zone supply procedure in support of the Army, the daily tonnage allocation of 2,950 long tons for Quartermaster supplies was no longer in effect. This daily allotment of tonnage imposed by higher headquarters had been in effect since 25 October. Distribution of all classes of supplies from the Communications Zone to the Army was, for the first time in the campaign, in conformity with procedures outlined in field manuals.

Under this system the Army Quartermaster submitted requests for Class I and Class III (POL) requirements by daily telegram through the 24th Regulating Station to Advance Section Communications Zone Depot Q-178, at VERDUN (U26). Supplies were shipped by the Advance Section Communications Zone to Army supply points and railheads designated in the daily telegram. This system was already in effect for Class I supplies, beginning on 24 November. It was not until 11 December, however, that Class III (POL) supplies were requested and distributed as outlined.

Army requirements for Class II and IV supplies were requisitioned for ten-day periods and were submitted direct to the Advance Section Communications Zone Depot Q-180, at REIMS (T37). Class II and IV supplies, with some exceptions, were forwarded to Army supply points by Communications Zone train or truck transport. The first such request was submitted for ten-day requirements beginning on 7 December.

Requests for Class III (Solid Fuels) based on thirty-day requirements covering the three succeeding months were submitted by the Army Quartermaster to the Quartermaster, Advance Section Communications Zone. Dependent on final allocation based on requirements of the Army and availability, solid fuel was shipped forward to the Army supply points direct from mines or from Advance Section Communications Zone depots in the forward areas.

The railroads continued to be the chief means of transporting supplies. With the exception of small quantities of supplies arriving by airplane and by truck, all supplies came into the Army area on Communications Zone trains. Only in an emergency were Army trucks dispatched to Communications Zone depots to bring forward supplies.

The Army Quartermaster Operations Officer continued to supervise the activities at the Army Class I and Class III railhead and control points, which were, in effect, Army regulating stations. Points in operation until 18 December included BRIEY (U77) on the northern flank and CHATEAU SALINS (Q12), east of the MOSELLE River, on the southern flank. The latter point was relocated on 10 December at LENING (Q33). On 19 December an additional regulating point was established at LONGWY (P50) to serve the new front and on 22 December LENING (Q33) was closed.

The Army supply points in operation during the month are shown in Annex 5A to this report.

SECTION IV - CLASS I SECTION

Class I supply continued to function with efficiency during December. Total receipts for the month were 29,085.1 long tons and total issues were 26,921.0 long tons, or 11,788,505 rations, an average daily issue of 380,274. Eighty-four and four-tenths per cent of the issues went to Army units and fifteen and six-tenths per cent to units not assigned or attached to the Army but operating in or adjacent to the Army area. Seventy-six per cent of the month's issues were "B" rations; ten and three-tenths per cent, "10-in-1"; five and seven-tenths per cent, "C"; and eight per cent, "K". Rations on hand in the Army area at the beginning of the month totaled 1,263,671; at the end of the month, 1,544,466. In addition 660,000 operational-type rations were held for the Third U. S. Army at Advance Section Communications Zone Depot Q-178, at VERDUN (U26).

It had become necessary to carefully conserve operational-type rations because of the short supply. To permit increased issues of "B"-type rations to units for emergencies, a portion of the operational-type ration reserves normally held at each Class I supply point was replaced by 25,000 "B"-type rations. Type-"K" rations, especially, were in short supply in the Army Class I reserve, and during the last week of the month stocks of this type of ration were exhausted at the Advance Section Communications Zone Depot Q-178, at VERDUN (U26). The demand from the combat troops for type-"K" rations increased sharply the last third of the month. The percentage increase amounted to approximately twenty-four per cent.

A special Christmas dinner was provided for all troops of the Army. The menu furnished about one and one-half pounds of turkey per man, and included cranberries, fresh apples, and raisin bread. In addition, a gratuitous issue of 350,000 cigars and 700,000 bars of candy was distributed to the troops. It was necessary to dispatch five ten-ton trucks to LE HAVRE (L42) to pick up these gratuitous items to insure their issue on Christmas Day. At the request of the VIII Corps, because of the fluid tactical situation, the issue of the Christmas menu to that corps was delayed until 29 December.

A new policy was inaugurated for the distribution of operational-type rations. The availability of "K" rations to front-line troops was increased to a maximum of fifty per cent of the total operational-type rations issued. The availability of "K" rations to service troops in rear areas was decreased to a maximum of ten per cent of the total number of operational-type rations requested. Special authorization from this headquarters was required for requests in excess of allowances prescribed above.

With the advent of cold weather, difficulty was encountered with vegetables and canned goods freezing. Such measures as were possible were taken to alleviate this condition. Dehydrated vegetables were not available in sufficiently large quantities to be used as a substitute for canned components, and supplies of powdered milk were insufficient to replace the canned product.

A highlight in bakery operations during the month was the production by five bakery companies of 1,056,428 pounds of bread in one week. This represented a production of fifty per cent above rated capacity. Bread continued to be issued daily with all rations. The supply of coffee remained critical, which necessitated an increase in the [illegible] fresh coffee roasting facilities operated by the Quartermaster Service [illegible] to provide roasted and ground coffee in quantities required. To supplement these facilities, the Advance Section Communications Zone Depot Q-178, at VERDUN (U26), shipped daily, beginning on 21 December, 15,000 pounds of fresh roasted coffee to the Third U. S. Army. At no time, however, did the troops suffer from a shortage of coffee.

OPEN STORAGE AND RAMP TO SECOND FLOOR AT CLASS II AND IV DEPOT NUMBER 7, AT METZ

Digitized by Google

Considerable efforts were made to increase the number of issues of fresh meats and other perishables which were substituted for canned components of the 10-in-1 ration. Issues during the month included the following items:

Item	Pounds per 100 Rations
Beef, Roasting and Frying	8
Beef, Ground	6
Beef, Boiling and Stewing	6
Pork Loins	4
Frankfurters	4
Cold Cuts	1
Chicken	3
Turkey	1
Bacon	1
Butter, Fresh	23

Weekly issues of Post Exchange items continued to be made gratuitously to the troops. Although cigarettes and certain toilet articles remained in short supply, the situation in regard to comfort items was satisfactory.

After the shift of supply points to the northern front had been effected, Class I supply Point Number 51, at SAINT DIZIER (D51), remained the only Army Class I point in the southern part of the front zone. To effect a saving in rail transportation, this point was supplied, beginning on 24 November, from the Atlanta Depot, at TOUL (D81), instead of the Advance Section Communications Zone Depot Q-178, at VERDUN (D26). The Atlanta Depot, a Class I depot operated by the Advance Section Communications Zone, ended 1,826 tons December one-half mile west of TOUL (D1) and served as a supply point for Advance Section Communications Zone troops and Army troops in the vicinity.

Class I daily trains from the Advance Section Communications Zone depot at VERDUN (D26), with few exceptions, arrived on satisfactory schedules at Army railheads and supply points. Railway cars were commodity-loaded, which facilitated the handling and issue of rations at Army points.

SECTION V - CLASS II AND IV SECTION

The clothing and equipment situation was in general satisfactory, but several shortages of a critical nature persisted. The abrupt increase in the troop strength, when the VIII Corps became a part of the Army, materially affected the Class II supply situation. In addition, the combat losses sustained by many units of that corps intensified the problem of supply of certain critical items. Class II and IV supplies totaling 4,080 long tons were received during December at all depots, an average of 144.5 long tons per day. On 31 December 2,800 long tons of supplies were on hand in the depots. Requisitions processed totaled 1,299, an average of 42 per day, four per cent more than in November.

The major problem in December was the replacement, during the latter part of the month, of combat losses sustained by certain units of the VIII Corps prior to the attachment of the Corps to the Third U.S. Army. Included in the estimated losses were 55,000 sets of wool trousers, shirts, and underwear, 55,000 wool overcoats, 55,000 field jackets, 12,000 combat jackets, 16,000 pairs of overshoes, 55,000 raincoats, 33,000 pairs of wool socks, 12,673 mess cans, 42,518 shelter halves, and 96,000 blankets. A special requisition was sent to the Communications Zone and all available supplies were dispatched to the Army besides through the Advance Section Communications Zone Depot Q-178, at VERDUN (D37). Requipment of these units had first priority and it was accomplished, except for items that were not available, within ten days.

Although certain items required for the winter comfort and welfare of the individual soldier had become available in varying quantities, the situation was not entirely alleviated. The immediate attack for the availability of special winter clothing for arm ed-service personnel and parka-type overcoats was not reassuring. Sufficient numbers of sweaters, however, had been received to complete an initial issue to all units. Mess cans, canteen cups, small and medium-size raincoats, sleeping bags, shelter halves, mufflers, overshoes, and field jackets were the items most urgently needed. Although the shortage of mess gear by the end of the month was alleviated, all demands for this item had not been met. Overshoes in considerable quantity, particularly in large sizes, were required to complete the initial issue to all troops. A large shipment of overshoes was received, but it was necessary to issue them to replace combat losses.

Experience gained as a result of depot personnel applying water-resistant material to shoes, indicated that the highest degree of water resistance could be obtained by first applying dubbing, thoroughly working it into the leather, and then applying impregnite. Both dubbing and impregnite were on hand at Class II and IV depots in sufficient quantities for issue to all troops.

Additional time and mileage in the combat area became an urgent necessity. Four hundred and fifty mobile units were released to the Army on 27 December at Communications Zone Depot Number Q-177, at LAON (D54), by the Twelfth Army Group. Arrangements completed for shipment to Army Depot Number 4, at MONTET (D39), for immediate issue to forward patrols. One thousand two hundred mobile units, an equal amount of dressed oil were received from the Communications Zone for servicing rockets, railroads, and aerials. Information received from the classification Zone was that the white cloth was immediately available on the continent. About 2,000 mattress covers, from which 1,000 suits could be made, were secured at Advance Section Communications Zone Depot Q-178, at VERDUN (D26). The 203th Quartermaster Salvage Repair Company began the manufacture of pants from these mattress covers.

SNOW CAMOUFLAGE UNIT WINDSHIELDS BY THE 203TH QUARTERMASTER SALVAGE REPAIR COMPANY

Depot Number 6, near TOUL (D81), remained in operation throughout the month and was in reality the base Quartermaster Class II and IV Army depot. From this depot shipments to the other depots were made both by truck and by rail. It served all troops at the beginning of the month; but after the opening of depots 7, 8, and 9, it served only Army troops in the general vicinity. The officers' sales store at this depot closed on 9 December and reopened at the METZ (U85) Depot on 11 December.

Depot Number 7, at METZ (U85), opened at 1400 A December and remained open throughout the remainder of the month. It served XII and XX Corps troops and Army troops in the vicinity. Supplies for this depot had been, until 19 December, transported entirely by trucks, as there was no operating rail line into METZ (U85). Subsequent to this date, shipments for this depot were made by rail to MARS LA TOUR (U65), where they were transferred by depot personnel to trucks and hauled to the depot.

Depot Number 8, at ARNAVILLE (U44), which opened 171200 A December and closed 1130A A December, served XII Corps troops and Army troops in the vicinity. It was closed in anticipation of the opening of another depot on the new front to the north.

In order to better serve units of the VIII Corps refitting in the vicinity, Depot Number 9, at LUNEVILLE (T54), was opened 231200 A December. It received open A rounds at the remainder of the month and served III and VIII Corps troops and Army troops in the vicinity.

The base for Class II and IV supply continued to be Depot Q-140, at VERDUN (T37), operated by the Advance Section Communications Zone. To coordinate delivery of Quartermaster supplies, the Army Quartermaster was represented by a Liaison officer who was stationed at the depot.

Because of a shortage of stocks, it was decided to establish American Red Cross, War Department, and Army headquarters and corps and Army troops. They were placed on sale at the officers' sales stores in METZ (U85) and NANCY (T81) and the mobile sales stores serving the corps and divisions.

SECTION VI - CLASS III SECTION

The gasoline situation remained satisfactory throughout the month. The shortage of allied Class III products, which was critical at the beginning of the month, was completely corrected by 17 December. Gasoline receipts totaled 36,559.4 long tons, or 10,577,491 gallons, fifty-five per cent over requests. In the Army area on 1 December were 3,558,056 gallons of 7-80 gasoline and on 31 December were 2,789,993 gallons.

On 11 December a change in the method of Class III supply to the Army was inaugurated. The Advance Section Communications Zone Depot Q-178, at VERDUN (U26), became the base for Class III supplies for the Third U. S. Army. Before this date the Army had submitted the daily telegram through the 24th Regulating Station to the Advance Section Communications Zone for full requirements, including bulk. Beginning on this date, bulk shipments of 1,000 tons were to be shipped automatically to the Army direct from the Communications Zone. No telegram or other request was necessary. Requests for packaged gasoline and allied products required in addition to the bulk allocation were to be placed, beginning on this date, on a daily telegram and submitted directly to Advance Section Communications Zone Depot Q-178, at VERDUN (U26).

Three decanting points were in operation during the greater part of December. Two, at NANCY (U81) and MANGIENNLLES (U67), operated continuously throughout the month. A third point, at DOMGERMAIN (U50), which closed on 7 December, was reopened on 23 December. Another was established at Supply Point 58, at HARDIANGE (Q13), on 17 December and operated until 24 December, when the Seventh U. S. Army took over this point. After the change in the tactical situation, the daily receipt and decanting of 1,000 tons of bulk gasoline became too great a responsibility for the Army. As the result of a conference between the Army G-4, Army Quartermaster, and G-4, Advance Section Communications Zone, on 20 December, bulk gasoline shipped to the Army was reduced to 500 net tons daily. Shipments of bulk gasoline, however, continued to arrive spasmodically, which did not allow full utilization of the Army decanting facilities.

From 22 November until 7 December the Advance Section Communications Zone had held 228 cars of packaged gasoline on sidings at LANDRES (U68) in support of the Army. On 7 and 8 December these cars were unloaded at Army supply and reserve points. There was then no mobile reserve until 21 December, when loaded cars were placed at DOMGERMAIN (U50). To eliminate concentration of the mobile Class III reserve held aboard rail cars, it was decided on 23 December to distribute cars to several points. Seven railheads for the storage of this mobile reserve were selected - VALLEROY (U66), PONTOY (U78), OGNEVCOURT (U57), MARON (U70), FOUG (U51), DOMGERMAIN (U50), and SORCY (U41) - and the maximum amount to be stored at each point, except DOMGERMAIN (U50), was set at 200,000 gallons. DOMGERMAIN (U50) was chosen as an additional holding point on 30 December.

A loss of Class III supplies by fire resulting from enemy action occurred when Supply Point Number 438, at MANGIENNLLES (U67), was attacked by enemy aircraft on the night of 22 December. Part of the installation was damaged and decanting operations suspended, but repairs were made and decanting resumed within three days. Losses included 100,000 gallons of gasoline, a quantity of allied products, and 30,000 gasoline cans.

December was the first full month during which coal was issued to all troops. In October and November coal had been issued only to hospitals, to Army, corps, and division headquarters, and to miscellaneous users such as coffee-roasting units, shower installations, and rest centers. It was not until 28 November that coal was available for issue to

Digitized by Google

all troops. The Army secured coal from three sources - local French mines, captured enemy stocks, and the Communications Zone. Coal issued during December totaled 8,297 tons, an increase of 241 per cent over the preceding month. A total of 6,141 tons was received from the Advance Section Communications Zone, a decrease of twenty-nine per cent from the preceding month. This indicated an increase in the use of captured and indigenous coal. Increased consumption of coal, however, beginning about 23 December, reduced the coal stocks in the Army area to approximately 4,000 tons by 31 December. The sharp increase in consumption of coal reflected the change in the direction of the Third U. S. Army advance to the north where climatic conditions were colder, and also the sudden increase of the troop strength of the Army.

SECTION VII - GRAVES REGISTRATION DIVISION

Arrangements were made with the Signal Section, Headquarters Third U. S. Army, to photograph unknown American soldiers whose remains were in such condition as to make photographs useful in establishing identity. On 10 December, for the first time in the campaign, photography was used to help identify unknown soldiers.

The Army railhead and decanting point at MANCIEULLES (U67), which had opened on 11 November, was in operation throughout December. The Advance Section Communications Zone constructed at this point a gasoline bulk storage and decanting tank, with a capacity of 210,000 gallons, the project being completed on 4 December. Gasoline was pumped from tank cars into this tank and then decanted by gravity into cans on the rail siding. From here the packaged gasoline was transported by rail to Army supply points.

Toward the end of the month the processing of American bodies at the cemeteries was hindered because German bodies clothed in American uniforms and having American identification tags were being received. Photography was very helpful in this situation, for photographs of suspected bodies could be sent to the units to which the soldiers were supposedly assigned, making positive identification much easier. Fingerprinting was also valuable in establishing the identity of these bodies.

U. S. Military Cemetery Number 1 at ANDILLY (U61) was turned over to the Advance Section Communications Zone at 090800 A December. This cemetery had closed for American burials on 5 November, but remained open for Allied burials.

Cold weather and snow delayed graves registration operations. The heavy snowfall especially hindered the recovery of bodies, as it was difficult to search the battle area. More labor was needed at the cemeteries as a result of the longer time required to dig graves in the frozen earth.

The status of all graves registration supplies, except for embossing plates, was satisfactory. A thirty-day supply, based on 5,000 burials per month, for the Army Graves Registration Service was stocked at Army Class II and IV depots.

Because of the changes in the tactical situation, cemeteries had to be opened in the new zone of operations. The following openings and closings of cemeteries reflected the shift to a new front:

The German Military Cemetery at ANDILLY (U61) closed at 200800 A December and was turned over to the Advance Section Communications Zone at 220800 A December. A total of 4,838 enemy burials had been made at this cemetery since its opening on 12 September.

German Military Cemetery Number 1 at DORVILLER (Q15) opened at 200800 A December, closed at 230800 A December, and was turned over to the Seventh U. S. Army at 240800 A December. Twenty-two enemy burials were made in this cemetery.

U. S. Military Cemetery Number 2 at LINEY (U62) closed at 300800 A December and was turned over to the Advance Section Communications Zone at 310800 A December. A total of 5,611 American burials had been made at this cemetery since its opening on 5 November.

U. S. Military Cemetery Number 1 at GRAND FAILLY (U39) and an adjacent German cemetery opened at 230800 A December.

U. S. Military Cemetery Number 1 at HAMM, Luxembourg (V81), and an adjacent German cemetery opened at 290800 A December.

During December 4,924 burials were made, of which 3,021 were American, one was Allied, and 1,902 were enemy. Of the American dead, twenty-five were unknown, eight-tenths of one per cent.

SECTION VIII - QUARTERMASTER TROOP SECTION

The following types and numbers of Quartermaster troop units were assigned or attached to the Third U. S. Army as of 31 December:

Hq & Hq Det, QM Group	2
Hq & Hq Det, QM Battalion, Mobile	4
Hq & Hq Det, QM Battalion	7
QM Bakery Company, Special	7
QM Depot Company, Supply	2
QM Fumigation and Bath Company	4
QM Gasoline Supply Company	9
QM Graves Registration Company	4
QM Laundry Company	6[illegible]
QM Railhead Company	7
QM Refrigeration Company, Mobile	1
QM Sales Platoon	2
QM Salvage Collecting Company	3
QM Salvage Repair Company	3
QM Service Company	26
QM Service Detachment (Petroleum Products Laboratory) (Mobile Detachment)	1

After the VIII Corps came under the control of the Third U. S. Army, the following units, formerly with the First U. S. Army, were assigned or attached to the Third U. S. Army:

Hq & Hq Det, 588th QM Battalion, Mobile
571st QM Railhead Company
300th QM Gasoline Supply Company
3916th QM Gasoline Supply Company
3042d QM Graves Registration Company
3062d QM Bakery Company, Special
598th QM Laundry Company, Semimobile
972d QM Service Company
3218th QM Service Company

The number of laundry and fumigation and bath companies in support of the Army throughout the campaign had been short of requirements. In order to fulfill adequately all requirements for the Army at its current strength, ten laundry companies and six fumigation and bath companies could have been utilized.

In addition to mobile officers' sales stores operating in divisional areas, stationary stores for officers' and nurses' clothing were maintained at Class II and IV depots and in various strategically located cities. During December officers' stores were located at Depot Number 6, at TOUL (U61), until 9 December, at Depot Number 7, at METZ (U85), beginning on 11 December, and in NANCY (U81) throughout the month; and a nurses' store was located at Depot Number 6.

Digitized by Google

The Meritorious Service Unit Plaque was awarded to the 295th Quartermaster Depot Company, Supply, for meritorious service between 17 July 1944 and 31 October 1944. The award was published in General Orders Number 102, Headquarters Third U. S. Army, dated 3 December 1944. This unit established the first Third U. S. Army Quartermaster Class II and IV depot on the Continent.

The following quartermaster units which supported the Third U. S. Army early in the campaign were commended by the Army Commander for outstanding performance of duty and high efficiency during the periods indicated:

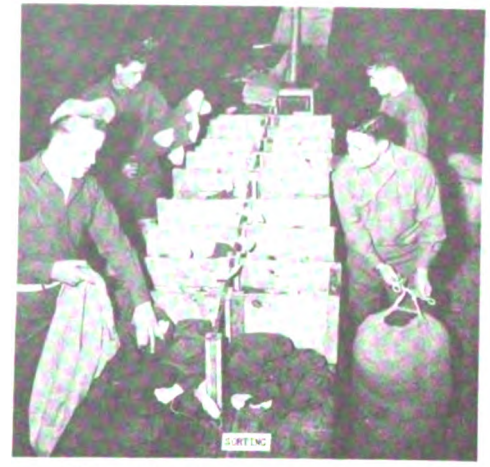
561st QM Tank Truck Company (750 Gallon)
1 August 1944 to 12 September 1944

400th QM Tank Truck Company (750 Gallon)
2 August 1944 to 12 September 1944

Operating day and night without regular rest or regular meals, the men of these units delivered more than 2,000,000 gallons of gasoline during the period named and traveled approximately 775,000 vehicular miles. The commendation was published in General Orders Number 110, Headquarters Third U. S. Army, dated 16 December 1944.

SECTION IX - FIELD SERVICE SECTION

The Captured Enemy Materiel Detachment had operated in METZ (U85) since 22 November. Among the huge quantities of captured German supplies which it located and collected in METZ (U85) was a large amount of bridge equipment and other Engineer supplies found at a German warehouse at ARS SUR MOSELLE (U75). These supplies were released to Army Engineer Section representatives.



The petroleum products laboratory began to make more frequent tests of incoming shipments of gasoline and allied products at all Army supply points. Recent tests had determined that in some instances water and other foreign elements were present in petroleum containers.

Despite the cold weather and the fact that the change of the Third U. S. Army front required the movement of all bath installations, during the month 118,857 men were bathed. Divisional troops had first priority on bath service. Fortunately, it was possible, in almost every case, to locate bath installations in the forward area under cover in buildings which could be readily heated. The exchange of underclothing continued at all points.

The normal procedure at bath points was to issue clean clothing to bathers after bathing. Soiled clothing would be laundered, fumigated, sized, and subsequently reissued. Sufficient stocks of insecticide powder, delousing, had become available to permit its use at all bath points. By the direct application of the powder to bathers and to their clothing, considerably less time and effort were required. As a result, fumigation chambers at bathing points were no longer required. All fumigation chambers, except two per company, which were used at the salvage points, were returned to the Communications Zone.

Early in the month a standardization of tentage was made, and extra equipment was provided for all fumigation and bath companies. Each platoon was issued six squad tents in lieu of storage tents, two booster pumps, and an additional 200 feet of hose. Tent stoves for heating the dressing tents had been issued previously.

A SERIES OF PICTURES SHOWING LAUNDRY OPERATIONS

Maintenance of shower bath units became a problem. This was especially true of two fumigation and bath companies equipped with obsolete and non-standard units. Parts for these particular units were not available and considerable improvisation was necessary to keep them in operation. Spare parts for bath units were, generally, in critical supply.

Frequent requests were received from troop units for additional laundry service. Only six and one-quarter companies (fifty sections) were available and were employed as follows:

Fifteen sections to Medical installations.
Twenty-four sections to troops.
Eleven sections to Quartermaster salvage installations.

The majority of laundry units had operated throughout the campaign without serious maintenance difficulties; however, the short supply of spare parts and operating supplies, though improved, had been a handicap to operations and proper maintenance of laundries. During December, generators from five power plants were repaired by local civilian concerns. Nevertheless, laundries, operating at almost full capacity, processed 3,646,214 pounds during the month.

SECTION X - SALVAGE SECTION

The policy of maintaining a complete salvage repair set-up in close support of each corps was continued. Each of these installations included one salvage repair company, one salvage collecting company, three sections of a laundry company, and fumigation facilities consisting of two fumigation chambers. Considerable difficulty was encountered in finding locations with suitable cover and hard standing for such installations and yet in close proximity to a source of water necessary for the laundry operations.

Salvage collecting points operated by small detachments from the salvage collecting companies were maintained at each Class I supply point. Salvage brought to these points was separated and sorted into general classifications by these teams. Salvage was evacuated further by returning empty ration trucks or by salvage collecting vehicles to the salvage repair installations, where classification was completed by the remainder of the salvage collection personnel. All repairable articles, within the capability of the repair companies, were fumigated or laundered, then repaired and returned to Army Class II depots for reissue. The salvage collecting personnel, in addition to classification of salvage, assisted in painting helmets and intrenching tools, repairing mess gear, and cleaning overshoes and other equipment.

Throughout the campaign, up to this time, only those items that could not be repaired by Army Quartermaster repair units had been evacuated to the Communications Zone. These had included scrap items classified as Class "X". During this month, however, because of the shift of the Third U. S. Army front and the unprecedented amount of salvage collected, it was necessary to ship a considerable quantity to the rear. Almost twenty-eight per cent of the total salvaged items collected, or 316,091 unclassified items, were shipped to the Advance Section Communications Zone Depot G-180, at METZ (T37). Of the total of 1,141,049 items collected during the month, 824,958 items were classified. This was an increase of twenty-three per cent over the preceding month. The items were classified as follows:

Class B	524,469
Class C	74,455
Class X	226,034

Items of clothing and equipment amounting to 113,219 were repaired during the month, representing a fifty-five per cent increase over the preceding month. These were delivered either to Class II depots or to bath installations for reissue.

The fumigation of all clothing at salvage repair points was discontinued. The Chief Surgeon, European Theater of Operations, advised that laundering was sufficient to render clothing and equipment clean and sanitary. Fumigation was continued, however, for all items which were not laundered.

Field range repair units and typewriter repair teams made repairs to the following items:

Fire units	3,185
Heaters, immersion type	55
Lanterns, gasoline	2,988
Stoves, cooking, one and two burner	1,769
Typewriters, portable	193
Typewriters, non-portable	171
Pumps, hand	141
Machines, mimeograph	2
Machines, miscellaneous	9

The supply of spare parts for field ranges, one and two-burner stoves, gasoline lanterns, and immersion-type water heaters, which had been unsatisfactory for some time, was considerably improved by the end of the month. Typewriter parts and special tools for repair of noiseless typewriters were particularly critical.

The 2,185 yards of white cloth which had been requisitioned by the Quartermaster Purchasing and Contracting Officer on 24 December from local French civilian sources, were delivered to the 300th Quartermaster Salvage Repair Company. This unit completed approximately 700 improvised snow tunics in less than twenty-four hours, and made immediate delivery to Army Class II and IV Depot Number 7, at METZ (U85). The suits were allocated to the XII and XX Corps for issue to patrols.

CHAPTER 8
JANUARY OPERATIONS

SECTION I - GENERAL

The Quartermaster Section was with the rear echelon of Army Headquarters throughout the month, at HARCT (U81) until 7 January and at HECH (P70), in Luxembourg, beginning on that date.

The Army continued its attack to the north against the German salient through Luxembourg and eastern Belgium. Contact was made with the First U. S. Army on 15 January in the vicinity of HOUFFALIZE (P57), Belgium. The direction of the major attack was then shifted to the northeast, north of the MOSELLE River, toward the Siegfried Line defenses. Since the tactical situation did not move rapidly, the physical problems confronting the Army Quartermaster were not so great as those which had prevailed during the preceding two months. The more static situation permitted the maintenance of supply points and Quartermaster service installations in close support of the troops. In the area of the current operations the limited road net imposed continued transportation problems, particularly during the latter part of the month, when the advance neared the German border.

Composition of the Army and status of its major units changed frequently during the month. The 17th Airborne Division was attached to the Third U. S. Army on 1 January, remaining assigned to the XVIII Corps (Airborne). The 94th Infantry Division was assigned to the Army on 6 January. The 9th Armored Division and 28th Infantry Division were relieved from assignment to the Third U. S. Army and assigned to the Fifteenth U. S. Army on 8 January. The 8th and 9th Armored Divisions were attached to the Third U. S. Army for supply and administration on 11 January, but remained assigned to the Fifteenth U. S. Army. The 10th Armored Division passed to the control of the Commanding General, Sixth U. S. Army Group, on 17 January. The 76th Infantry Division was relieved from assignment to the Fifteenth U. S. Army and assigned to the Third U. S. Army on 18 January. The 101st Airborne Division was relieved of attachment to the Third U. S. Army and the Twelfth U. S. Army Group and attached to the Sixth U. S. Army Group, remaining assigned to the XVIII Corps (Airborne), on 20 January. The 75th Infantry Division (less the 134th Regimental Combat Team) passed to the control of the Sixth U. S. Army Group on 22 January.

The following were the major elements of the Army on 31 January:

III Corps:	4th Armored Division, 35th Infantry Division (134th Regimental Combat Team only), 17th Airborne Division, and Corps Troops.
VIII Corps:	11th Armored Division, 4th Infantry Division, 87th Infantry Division, 90th Infantry Division, 95th Infantry Division, and Corps Troops.
XII Corps:	6th Armored Division, 5th Infantry Division, 76th Infantry Division, 80th Infantry Division, and Corps Troops.
XX Corps:	26th Infantry Division, 94th Infantry Division, and Corps Troops.
Army Reserve:	8th Armored Division and 9th Armored Division.

The following table shows the total number of troops the Army had the responsibility of supplying at the beginning and the end of the month:

	1 JANUARY	31 JANUARY
Assigned Strength of the Army	353,655	362,937
Advance Section Communications Zone Units	25,336	27,305
Ninth Air Force Units	37,033	23,755
French Units	2,271	3,179
Miscellaneous Troops	2,344	1,325
TOTAL	420,639	418,501

In addition there were considerable and varying numbers of prisoners of war, civilian laborers, and civilian mine technicians who were supplied with rations.

SECTION II - ADMINISTRATIVE DIVISION

Approximately 9,000 square yards of felt material were requisitioned by the Quartermaster Purchasing and Contracting Officer from a local French civilian source. This material was used for making insoles for shoe pacs. To replace broken pick handles at the Army cemeteries, 1,200 were requisitioned from a local source.

During January the Bronze Star Medal, for meritorious service, was awarded to seven officers and eighteen enlisted men of Quartermaster units by General Orders published by Headquarters Third U. S. Army.

SECTION III - SUPPLY DIVISION

The Quartermaster supply situation in the Army remained generally satisfactory. Several Class II and IV items were still critically short, but others that had been on the critical list were received in sufficient quantity during the month. Shortages that had occurred in general were not such that they hampered operations. The solid-fuel shortage was serious, but had improved considerably by the end of the month.

As a result of the change in the tactical situation and the consequent change in Army boundaries, shifts in supply installations were made. Class I Supply Point Number 51, at CHAMPIGNEULLES (U81), and Class III Supply Point Number 50, at HARCT (U81), were turned over to the Seventh U. S. Army on 23 and 27 January, respectively. The Third U. S. Army, however, continued to supply these points through daily telegram requests for stockage of the Class I supply point including 31 January and the Class III supply point through 2 February. Class II and IV Depot Number 6, at TOUL (U61), was closed, although it remained as a reconsignment point until its supplies could be moved to depots to the north. Gasoline decanting was discontinued at HARCT (U81) and at DOMGERMAIN (U50). After the change of the Army's southern boundary all the above installations were in the Seventh U. S. Army area.

Because of the tactical situation on the front of the XX Corps early in the month, Class I and Class III Supply Points Number 65, at FREISTROFF (Q07) and at FIRLANGE (Q07), were somewhat critically located. Stocks at those points were held down to a one-day supply. Stock levels at Class II and IV Depot Number 7, at METZ (U85), also were reduced. Before the end of the month, however, the improved tactical situation permitted unrestricted operation at these installations.

All classes of Quartermaster supplies were requested by and delivered to the Army under the same system that had been in effect during December. The great majority of the supplies were transported to Army supply points by railway direct from the Communications Zone. No Quartermaster supplies were received in the Army area by airplane, and only approximately one-third of the Class II and IV supplies arrived by truck transport.

With the completion of a railroad bridge over the MOSELLE River at THIONVILLE (U88) on 3 January, rail facilities were available to all Class I and Class III supply points. The Class II and IV Depot at METZ (U85), Number 7, could not be reached by train; consequently, supply trains for that point were dispatched to MARS LA TOUR (U65) and MAGONDANGE (U87), from which Army trucks transported the supplies to the depot. Every effort was made to insure maximum use of existing operating railroad facilities to serve Quartermaster supply installations. During the latter part of the month, however, it became necessary to use more truck transport to supply newly established supply points in northern Luxembourg and eastern Belgium.

In continuance of the policy of maintaining a mobile reserve of rations and gasoline to support the attack against the German salient established in December, a considerable quantity was held aboard railway cars. Mobile reserve holding points were established along the MEUSE River to the north of VERDUN (U26), including the following points: DUN (U19), MOUZON (P01), SAULMORY (U19), CARIGNAN (P11), MARGUT (P01), and STENAY (P10). Other holding points west of the MOSELLE River and north of METZ (U85) were established at PONTOY (U78), ROULANGE (U78), ROMETZ (U79), and VALLEROY (U66).

Later in the month a rail-car shortage developed in the Communications Zone, as the result of which the greater part of the reserves were unloaded.

The Army Quartermaster Operations Division continued to function at the Class I and Class III railhead and regulating points. Points in operation during the month included BRIEY (U77) and LONGWY (P50). The Operations Officer was located at LONGWY (P50), through which point practically all Quartermaster Class I and Class III supplies were routed. BASTOGNE (P55) became a rail forwarding point on 30 January.

The Army Quartermaster supply points in operation during the month are shown in Annex Number 6 to this report.

SECTION IV - CLASS I SECTION

Class I supply was very satisfactory during January. Total receipts for the month were 36,138.5 long tons and total issues were 34,800.4 long tons, or 15,399,811 rations, an average daily issue of 496,769. Army units received eighty-four and six-tenths per cent of the

[redacted] and units attached for rations received fifteen and four-tenths per cent. Eighty-four and [illegible] per cent of the month's issues were "A"-type (or "B"-type [illegible]) and five-tenths per cent were "10-in-1"-type; three and [illegible] per cent were "C"-type; and five and two-tenths per cent were "K"-type. Rations on hand in the Army area at the beginning of the month totaled 1,134,964, and at the end of the month, 1,393,090. An additional 660,000 operational-type rations were held in reserve for the Army at Advance Section Communications Zone Depot Number Q-178, at VERDUN (U26).

A shortage of "K"-type rations had developed during the last week of December. Since 11 December the issue of this ration to combat troops had been restricted to fifty per cent of the operational-type rations requested, but on 22 January an increase in receipts permitted the lifting of this restriction. Issues, however, were still limited to combat troops.

Following instructions from the Chief Quartermaster, European Theater of Operations, a change in the designation of "B"-type rations went into effect. The ration containing fresh meats and vegetables which was currently being issued daily was designated as the "A"-type ration instead of the "B"-type. Perishable components were being issued regularly as substitutes for canned components of the "B"-type ration. The designation of the "B"-type ration held as reserve, having canned-meat components, was not changed.

Condiment issues heretofore had been made semi-monthly, on the first and fifteenth. This basis having proved inadequate, it was arranged to make three issues per month, on the seventh, seventeenth, and twenty-seventh.

Gratuitous issues of toilet articles, candy, and cigarettes were generally satisfactory. Razors and razor blades, however, were in short supply. Effective with the issue on 28 January, the allotment of cigarettes was seven packages per man per week instead of five packages.

During the first part of the month fresh meat and butter were in short supply, because of delays in the arrival of reefer vessels from the United States. This situation was relieved during the latter part of the month; but weekly issues on the basis of ten meals per week, authorized by the Communications Zone, were not possible.

Fresh oranges, shelled eggs, and fresh vegetables were issued on several occasions during January. Losses due to freezing were not considerable, because of the extra precautions taken.

SECTION V - CLASS II AND IV SECTION

The Class II and IV supply situation was generally favorable; however, the abrupt increase in troop strength that had occurred during the preceding month and the larger number of battle losses needing replacement still affected this class of supply. Clothing and equipment received during January totaled 5,973.75 long tons, an average of 192.7 long tons per day. On 31 January 4,707.5 long tons of supplies were on hand in the depots, an increase of sixty-eight per cent over 31 December. Requisitions processed totaled 12,975, an average of 419 per day, twenty-six per cent more than in December.

Several items that had long been seriously short were removed from the critical list. Sufficient gasoline lanterns, canteen cups, and field jackets were received to meet most demands. With the issue of shoe pacs the overall footgear situation in all units was considered very satisfactory. Overshoes had been short in supply in sizes eleven and above prior to this time. Cleaning and preserving materials remained critically short. Among the principal items in short supply at the end of the month were ordinary issue soap, tufted brushes, scrubbing brushes, corrugated cans, one-burner stoves, office supplies and equipment, and barber kits.

Seven hundred tons of special winter clothing for the Army were delivered by Communications Zone trucks and trains to Army Depot Number 9, at LONGWY (P50). The shipment consisted of shoe pacs, insoles, arctic and ski socks, ponchos, trigger-finger shell mittens, trigger-finger insert mittens, wool mufflers, cotton field caps, cotton trousers, and trouser suspenders. The items were allocated to combat units and no [illegible] stocks were retained in Army depots. Infantry divisions [illegible] and armored divisions, 4,000 [illegible] with two pairs of insoles and two pairs of socks, [illegible]. In anticipation of calls for replacement of insoles, a large quantity of felt was purchased in the local markets.

Digitized by Google

A schedule was arranged for units to draw supplies at Army Class II and IV depots and published in Administrative Order Number 27, this headquarters, dated 5 January. Units were to be served only at designated depots and on days assigned. Requisitions were to be submitted on an assigned day for the troops concerned, and issues were to be made on the next assigned day.

A difficult supply problem was the equipping of reinforcements and casuals coming into the Army area. This task necessitated almost a complete initial issue of individual equipment. Since stock levels in the depots were based on maintenance factors only, a heavy burden was placed on the Army Class II and IV supply. At a conference at the office of the Chief Quartermaster on 26 January, a new procedure for the issue of II and IV supply of the 12th Reinforcement Depot was developed. Under this system the 12th Reinforcement Depot would submit to the Army Quartermaster twenty-day requisitions for full requirements of all quartermaster Class II and IV items, and the Army Quartermaster, after indicating the destination desired for the supplies, would forward the requisitions to the Commodities Firms. Reinforcement requisitions were not to be consolidated with the Army periodic maintenance requisition. This plan would go into effect after the current requisition period.

Depot Number 6, near TOUL (Dull), which had opened on 20 September, closed for issues at 1200A 1 January, but continued to operate as a storage and reconsignment point until its supplies could be moved.

Depot Number 7, at METZ (Ud5), remained in operation throughout the month and served the troops of III and IX Corps and Army troops in the vicinity.

Depot Number 7A, near CHATEAU (Ud4), opened on 12 January as a storage depot and remained in operation throughout the remainder of the month. Clothing and equipment over immediate requirements for issue to the troops being served at Depot Number 7 were shipped there because of the prevailing tactical situation.

Depot Number 9, at LONGWY (Fy5), remained in operation throughout the month. It served the troops of III and VIII Corps and Army troops in the vicinity. Owing to the lack of suitable buildings, this depot operated in the open, exposed to severe winter conditions. Although handicapped by weather and transportation difficulties, this depot functioned with high efficiency. It was through Depot Number 9 that the battle losses of the VIII Corps, which resulted from the German breakthrough, were replaced and maintenance furnished to a large percentage of the troops engaged in the BASTOGNE area.

OPEN STORAGE AT DEPOT NUMBER 9, LONGWY, FRANCE

SECTION VI - CLASS III SECTION

The gasoline supply situation was favorable during January. Gasoline received totaled [illegible] gallons, seventy-six per cent over requests. Issues of [illegible] gallons, an average daily issue of [illegible] gallons per day, the highest of the campaign up to that time. In the Army area on 1 January were [illegible] gallons of 74-octane gasoline and on 31 January were 2,[illegible]74 gallons.

The gasoline dispensing point at MANCHESTER (Ud7) operated continuously throughout the month. The point at METZ (Ud5) closed [illegible] and reopened at [illegible] on 1 January, remaining open until 31 January. The point at [illegible] opened on 25 January. During the month [illegible] gallons were distributed to the [illegible] troops. A daily report of issues was rendered to the Army, but shipments did not arrive accurately.

Because of the cold weather, 74-80 gasoline, which has the lowest vaporization test in artillery fuels, [illegible] a mixture of 74-80 and aviation [illegible] was obtained from [illegible] for that purpose. Stocks of the 74-octane gasoline were in existence at the [illegible]. While gasoline was tested by the [illegible] Laboratory, it was found unsatisfactory for use in the engines of [illegible] vehicles. Efforts were made from the [illegible] to obtain a satisfactory fuel. At the time the [illegible] gasoline were at [illegible] 74-80 [illegible] and later [illegible] operation was [illegible] to [illegible] Twenty-first Army Group. In the future [illegible] gasoline [illegible] supplies to the element by air [illegible] element was the [illegible] [illegible] Army Group. Additional [illegible] the [illegible] [illegible] have been made, more had been received by the end of the month.

The coal supply situation at the beginning of the month was critical. As the result of the [illegible] of the Army Group [illegible] increased shortages of the Army as [illegible] weather and [illegible] the Army area of operations [illegible] Requirements [illegible] were being made directly to the receiving [illegible] were initiated to reduce the [illegible] ration from [illegible] per day. [illegible] headquarters were [illegible] supplies by fifty per cent. The supply for hospitals, however, remained unchanged.

Several measures were employed to meet the coal situation. The [illegible] of all [illegible] was [illegible]. They [illegible] the [illegible] III Corps [illegible] the [illegible] A [illegible] the [illegible] was [illegible] the [illegible] [illegible] [illegible] and [illegible] [illegible] [illegible]

An enemy shell of an unidentified type landed in the area of the semi-mobile laundry operated by the 1st Section, 4th Platoon, of the 452d Quartermaster Laundry Company, located with the 104th Evacuation Hospital in the City of LUXEMBOURG (PH1), at 121910 4 January. The shell did considerable damage to two mobile laundry vans, which were replaced, and one tractor, which was repaired. Seven men were injured, three seriously.

The supply of spare parts for Quartermaster general and special purpose equipment, although improved, was not entirely satisfactory. Replacement parts, particularly for bath units, continued to be critical. Nearly all equipment had received long, hard usage and maintenance was becoming an increasing problem.

Because of a change in Army boundaries, the Captured Enemy Materiel Depot at NANCY (U81) was closed and the supplies moved to the Captured Enemy Materiel Depot at METZ (U85).

SECTION I - SALVAGE SECTION

Again this month, as in December, it was found impossible to classify all of the huge amount of salvage collected. Of the 1,473,269 items collected during the month, however, 1,432,269 were classified, an increase of seventy-four per cent over the preceding month, and only 41,000 were shipped without classification directly to the Communications Zone. The items were classified as follows:

Class B	707,221
Class C	111,797
Class I	613,251

Salvage repair companies repaired 69,804 items of clothing and equipment during the month. These were delivered either to Army Class II and IV depots or to bath installations for reissue.

Field range repair units and typewriter repair teams continued operations at base shops located at the Class II and IV depots, and at salvage repair points. During the month repairs were made to the following special purpose items:

Fire units	2,811
Heaters, water, immersion type	100
Lanterns, gasoline	2,187
Stoves, cooking, one and two burner	2,133
Typewriters, portable	210
Typewriters, non-portable	249
Pumps, hand	117
Machines, mimeograph	6
Machines, miscellaneous	7

INTERIOR OF MOBILE TYPEWRITER REPAIR VAN

The following supplies, formerly handled by the Quartermaster Class II and IV depots, were turned over to field-range-repair units for stocking and issuing:

Parts for gasoline lanterns
Parts for one and two-burner stoves
Parts for fire units for field ranges, M-1937
Parts for immersion-type water heaters

Salvage repair units were responsible for stocking and issuing tent-patching cement and material.

In addition to the normal repair operations, all Quartermaster salvage repair units assisted in the manufacture of special items, including 3,198 snow-camouflage suits and a large number of felt insoles for shoe pacs, and the modification of 15,000 identification panels for the Army Signal Officer.

CHAPTER 9
FEBRUARY OPERATIONS

SECTION I - GENERAL

The Quartermaster Section was with the rear echelon of Army Headquarters throughout the month, at ESCH-ALZETTE (FT0), in Luxembourg, until 6 February and at LUXEMBOURG CITY (PH1) beginning on that date.

The major offensive continued in the sector north of the MOSELLE River to the east through the Siegfried Line defenses. PRUM (LO7), Germany, fell to troops of the VIII Corps on 12 February; and BITBURG (L15), Germany, was captured later in the month by troops of the XII Corps. A secondary drive in the XX Corps sector between the MOSELLE and SAUER Rivers toward TRIER (L22) had gained considerable headway by the end of the month. The tactical operations throughout the month were such that Quartermaster activities were normal and no difficulties, except for problems of transportation, were experienced. Warmer weather, causing the snow and ice to melt, and the heavy military traffic on the existing limited road net resulted in extremely bad road conditions, which adversely affected truck transport, particularly in the VIII Corps zone. Despite impaired transportation facilities, however, it was possible to maintain adequately at all times supply points in the forward areas.

Frequent changes occurred in the composition of the Army during the month. Reassignment to other commands resulted in a decrease of one corps headquarters, three divisions, and one regimental combat team. The 134th Regimental Combat Team of the 35th Infantry Division was relieved from attachment to the III Corps and the entire division was assigned to the Ninth U. S. Army. The 84th Armored Division was relieved from attachment to the Third U. S. Army. (It was relieved from assignment to the Fifteenth U. S. Army and assigned to the Ninth U. S. Army.) The 95th Infantry Division was relieved from assignment to the Third U. S. Army and assigned to the Ninth U. S. Army. The 17th Airborne Division was relieved from attachment to the Third U. S. Army and the Twelfth U. S. Army Group and attached to the First Allied Airborne Army (U. S. Increment), remaining assigned to the XVIII Corps (Airborne). Headquarters III Corps was relieved from assignment to the Third U. S. Army on 11 February and assigned to the First U. S. Army. The 10th Armored Division was relieved of attachment to the Sixth U. S. Army Group, remaining assigned to the Third U. S. Army; and the 9th Armored Division was relieved of attachment to the Third U. S. Army, relieved of assignment to the Fifteenth U. S. Army, and assigned to the First U. S. Army.

The following were the major units of the Army on 28 February:

VIII Corps: 6th Armored Division, 11th Armored Division, 4th Infantry Division, 87th Infantry Division, 90th Infantry Division, and Corps Troops.

XII Corps: 4th Armored Division, 5th Infantry Division, 76th Infantry Division, 80th Infantry Division, and Corps Troops.

XX Corps: 10th Armored Division, 26th Infantry Division, 94th Infantry Division, and Corps Troops.

The following table shows the total number of troops the Army had the responsibility of supplying at the beginning and the end of the month:

	1 FEBRUARY	28 FEBRUARY
Assigned Strength of the Army	353,635	304,348
Advance Section Communications Zone Units	25,864	24,058
Ninth Air Force Units	27,290	27,158
French Units	1,794	2,514
Miscellaneous Troops	2,871	1,920
TOTAL	411,454	359,998

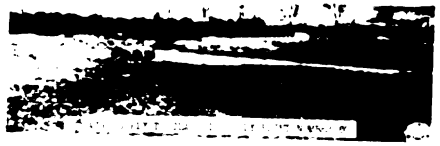
SECTION II - ADMINISTRATIVE DIVISION

During February the Legion of Merit, for exceptionally meritorious conduct in the performance of outstanding services, was awarded to one officer of the Quartermaster Section through General Orders published by Headquarters European Theater of Operations; and the Bronze Star Medal, for meritorious service, was awarded to seven officers and six enlisted men of Quartermaster units through General Orders published by Headquarters Third U. S. Army.

SECTION III - SUPPLY DIVISION

The general supply status remained sound during the month. The shortages of both solid fuel and 73-octane gasoline were relieved. The supply of clothing and equipment improved steadily and the critical list of Class II and IV items was further reduced.

A new supply procedure for the Continent went into effect during February. This plan was set forth in Standing Operating Procedure Number 7, Headquarters European Theater of Operations, dated 2 February. Armies were to be supplied from advance depots through daily telegrams and requisitions submitted to regulating stations. For Class I and Class III supplies daily telegrams would be submitted by each army to the appropriate regulating station, which would forward them to the designated issuing depot. For Class II and IV supplies twenty-day requisitions would be sent to the regulating station and forwarded from there to the issuing depot. The depot was to be responsible for shipping requirements through the appropriate regulating station to the army. The regulating stations were to expedite and maintain, by close coordination with the issue depots and the armies, the flow of supplies to the railheads and supply points designated by the armies within their areas. Essentially the new procedure placed more responsibility on the regulating stations.



The above procedure had previously been in effect for Class I and Class III supply in the Third U. S. Army, but it was a change from the former Class II and IV procedure of submitting requisitions directly to a designated depot. The first requisition under the new system was for the period from 21 February to 10 March.

The method of supply to the Army from the rear continued to approach more nearly the procedure as outlined in field manuals. Practically all supplies came into the Army area by rail, although a considerable quantity of Class II and IV items arrived by truck and a very small portion of all classes came by air lift. The base for Class I and Class III supplies was the Advance Section Communications Zone Depot Number Q-178, at VERDUN (U26); for Class II and IV, the Communications Zone Depot Number Q-180, at REIMS (T37). The Army service area remained relatively constant in size throughout the period, being roughly from ten to fifteen miles deep and eighty-five miles wide. Generally two or three Class I and Class III supply points in this area served Army troops. From the corps rear boundary to the front lines the distance was approximately twenty-five miles.

CLASS I SUPPLY POINT NUMBER [illegible] OPERATING FIRST IN GERMANY

The XIX Corps Area, on the north [illegible] twenty-five miles in width. [illegible] First Army on 1 February the three divisions were placed under the control of the [illegible] Corps. In this area the terrain was the limited road and rail net [illegible] active area. A movement of a few [illegible] As a result of the thawing weather, [illegible] after the tenth of the month and by the [illegible] because of dirty weather, [illegible] used to the greatest extent possible, [illegible] of mud-stabilizing [illegible] [illegible] were established, where supplies were [illegible] portation to forward supply points [illegible] Point Kamer A [illegible] at Nimfo. [illegible] larly difficult [illegible] passage of the [illegible] III Joint Army [illegible] made to the [illegible] was necessary [illegible] were [illegible] points averaged five [illegible] eight to thirty miles [illegible] corps were served by rail transportation.

REMOVING "K"-TYPE RATIONS FROM PACK ASSEMBLY

The zone of operations of the XIX Corps, [illegible] of the XIII Corps, was [illegible] latter [illegible] for the period February [illegible] were [illegible] III Joint Army [illegible] made to the [illegible] was necessary [illegible] were [illegible] points averaged five [illegible] eight to thirty miles [illegible] corps were served by rail transportation.

The XV Corps front [illegible] the [illegible] River line from [illegible] its army's southern boundary. Its area was the narrowest, varying from [illegible] twenty-five miles in width. Fifteen [illegible] points or rail [illegible] Class I and two for Class III supplies were established [illegible] fifteen to twenty miles to the rear of the front-line troops.

Quartermaster supply points in operation during the month are graphically illustrated in [illegible] this report.

SECTION II - CLASS I SUPPLY

Class I supply [illegible] operations during February. Ration receipts for the [illegible] an average of [illegible] per day. [illegible] per cent of the issues were [illegible] and the [illegible] per cent by [illegible] B rations and 10 per cent [illegible] were [illegible] [illegible] per cent of the [illegible] were [illegible] [illegible] were [illegible] [illegible] [illegible]

The solid-fuel situation in the Army improved during the month, not only because of increased shipments from the Communications Zone, but also because of decreased consumption due to warmer weather. Although the shortage of coal and coke, which had existed for several weeks, was relieved, more frequent and regular shipments were needed for complete maintenance and for the building of an Army reserve. By 11 February approximately three days of supply of coal and coke were on hand in the Army. Receipts of coal totaled 10,605 tons, of which 8,487 were from the Communications Zone and 2,118 were from indigenous sources; and issues totaled 9,264 tons. On 28 February 2,059 tons of coal were on hand.

SECTION VII - GRAVES REGISTRATION DIVISION

Approximately twenty per cent of the deceased personnel delivered to cemeteries were without identification tags, making the process of identification difficult and uncertain. Instructions on the wearing of identification tags were published in Circular Number 20, Headquarters Third U. S. Army, dated 25 February 1945. It directed that organization commanders insure full compliance with the Army Regulations governing the wearing of identification tags and that lost tags be immediately replaced with a substitute until new tags could be secured.

The melting of the snow revealed many bodies in the BASTOGNE (P55) area that had remained after the retreat of the Germans. Throughout the month graves registration collecting teams continued to search this area. Also, many unburied bodies were still being recovered by collecting teams in the area of METZ (U85) and SAARLAUTERN (J72).

U. S. Military Cemetery Number 1 at HAMM, Luxembourg (P81), and the adjacent German Military Cemetery remained in operation throughout the month. U. S. Military Cemetery Number 1 at FOY, Belgium (T56), and an adjacent German cemetery opened on 4 February. The American and German cemeteries at GRAND FAILLY (U19), which had opened on 23 December, closed on 3 February and were turned over to the Advance Section Communications Zone. Total burials made in the GRAND FAILLY (U19) cemeteries were 2,741 American, eighteen Allied, and 1,443 enemy.

During February 8,265 burials were made, of which 3,699 were American, seventeen were Allied, and 4,549 were enemy. Of the American dead, thirty-seven (one per cent) were unknown. This was the first month since the beginning of operations in which the number of German burials had exceeded the number of American.

SECTION VIII - QUARTERMASTER TROOP SECTION

The following types and numbers of Quartermaster troop units were assigned or attached to the Third U. S. Army as of 28 February:

Hq & Hq Det, QM Group	2
Hq & Hq Det, QM Battalion, Mobile	3
Hq & Hq Det, QM Battalion	8
QM Bakery Company, Special	7
QM Depot Company, Supply	2
QM Fumigation and Bath Company	5
QM Gasoline Supply Company	7
QM Graves Registration Company	4
QM Laundry Company	6½
QM Railhead Company	6
QM Refrigeration Company, Mobile	1
QM Sales Platoon	2
QM Salvage Collecting Company	3
QM Salvage Repair Company	3
QM Service Company	23
QM Service Detachment (Petroleum Products Laboratory) (Mobile Detachment)	1

The following Quartermaster units were released by the Third U. S. Army to other armies:

200th QM Gasoline Supply Company
3877th QM Gasoline Supply Company
574th QM Railhead Company
456th QM Laundry Company (Detachments "C" and "D")
3218th QM Service Company
4404th QM Service Company
4405th QM Service Company

The 3d Platoon, 680th Quartermaster Laundry Company, was loaned to the Army by the Advance Section Communications Zone.

The Meritorious Service Unit Plaque was awarded to the following units by General Orders, Headquarters Third U. S. Army, for service between the dates indicated:

UNIT	DATE
258th QM Railhead Company	16 October 1944 to 22 December 1944
352d QM Railhead Company	24 July 1944 to 22 December 1944
3007th QM Bakery Company, Mobile	3 November 1944 to 3 January 1945
3034th QM Bakery Company, Mobile	6 October 1944 to 26 December 1944

SECTION IX - FIELD SERVICE SECTION

The Captured Enemy Materiel Detachment was active in the exploitation of enemy stores. A valuable acquisition in SAARLAUTERN (J72) was a large quantity of office supplies which were critically needed. Usable items of enemy materiel were also removed from FORT GRIANT and FORT JEANNE D'ARC, near METZ (U85). Supplies for which the Army had no need were released to the Advance Section Communications Zone Depot Number C-176, at VERDUN (U26), which included 916,000 pounds of dunnage, twelve cooking stoves, 207 cans of printers' ink, 100,000 cardboard cartons, and 6,000 pounds of uncut paper.

CAPTURED HEATING AND VENTILATING EQUIPMENT IN ENEMY MATERIEL WAREHOUSE AT METZ

Bath units continued operations in divisional areas. Men bathed during the month totaled 206,401, an increase of thirteen per cent over January and the greatest monthly total since the beginning of the campaign. The exchange of clean underwear and socks for soiled items was continued as a regular procedure.

Laundry units operating in forward areas and at hospitals also achieved a record production figure. Laundry processed during the month totaled 4,929,993 pounds, which was an increase of eleven per cent over the preceding month.

Laundry tests were conducted on samples of new types of winter clothing. As a result of the tests, it was concluded that the sweater, high neck, wool, olive drab; trousers, wool, olive drab, twenty-ounce; and jacket, wool, olive drab, ETO, were unsuitable for laundering and should be dry cleaned. The jacket, field, M1943; trousers, field, cotton; and jacket, field, pile, could be successfully laundered. Results of this study were to be incorporated in the recommendations for the type of winter uniform considered desirable in this theater.

SECTION X - SALVAGE SECTION

Of the 1,594,678 items of salvage collected during February, it was possible to classify 1,296,097 items, eighty-one per cent of the total; and the remaining 298,581 unclassified items were shipped directly to the Communications Zone Depot Number C-180, at REIMS (T37). Class "E" and unrepairable scrap items were also evacuated to the rear. The items were classified as follows:

Class B	769,542
Class C	151,116
Class X	375,439

DECLASSIFIED

CLOTHING REPAIR SECTION

During the month 72,638 items of clothing and equipment were repaired by salvage repair companies and returned to Army supply channels for reissue to troops.

Field range repair units and typewriter repair teams, operating at base shops and salvage repair points, repaired the following items:

Fire units	3,206
Heaters, immersion type	113
Lanterns, gasoline	2,259
Stoves, cooking, one and two burner	2,200
Typewriters, portable	307
Typewriters, non-portable	267
Pumps, hand	114
Machines, mimeograph	2
Machines, adding	5
Machines, miscellaneous office	11
TOTAL	8,484

All Quartermaster salvage repair companies were engaged in the manufacture of special items. They had completed a large number of suits for snow camouflage before the manufacture of that item was discontinued about the middle of the month. These units also made felt insoles for shoe pacs, money bags, and other miscellaneous items. One company modified a total of 23,253 identification panels for the Army Signal Officer.

CHAPTER 10
MARCH OPERATIONS

SECTION I - GENERAL

The Quartermaster Section was with the rear echelon of Army Headquarters at [illegible] (F81), until 29 March and at TRIER (L22), Germany, after that date.

During the month the tactical operations of the Third U. S. Army progressed with increasing speed. At first the major effort was north of the [illegible] River. A bridgehead was established across the [illegible] River by troops of the XII Corps early on 1 March and another drive by the XX Corps effected the capture of TRIER (L22) on 2 March. From the [illegible] River line the advance continued successively to the XII Corps and VIII Corps breakthrough resulted in a drive to the RHINE River. The XII Corps then swung south and established a bridgehead across the lower MOSELLE River on 13 March. The advance of this corps continued rapidly; WORMS (M41) was taken on 20 March and LUDWIGSHAFEN (M51), was captured on 22 March. COBLENZ (L89) was cleared on 19 March by troops of the VIII Corps.

Meanwhile the XX Corps, attacking from the SAAR River bridgeheads, drove through and met forces of the XII Corps on 26 March, this juncture resulting in the encirclement of large enemy forces south of the MOSELLE.

A bridgehead across the RHINE River was established on the night of 22-23 March. The development to the north and east of this and other crossings had by the end of the month effected further spectacular gains by the Third U. S. Army. By 31 March armored spearheads had crossed the FULDA River and were nearing KASSEL (C24).

As in the month of February, the chief problem of the Army Quartermaster was one of transportation. The relatively warm and dry weather resulted in rapid improvement of road conditions, which had been very bad during the previous month. Good roads, and always network of well-paved roads in the large evening area, part of nearly each of the MOSELLE and east of the RHINE, favored tactical operations. However, inclined to the fast-moving situation, the long distances imposed transportation problems of no small magnitude. By cooperation and teamwork between the Army and the Advance Section Communications Zone, the essential Quartermaster supplies were transported the long distances from the Army railheads, which were established generally along a north-south line through TRIER (L22), and west of the RHINE and MAIN Rivers, to forward Army supply points.

The composition of the Army changed often during March. By the end of the month the Army had lost the 17th Armored Division, 4th Infantry Division, and 94th Infantry Division and gained the 65th Infantry Division, 71st Infantry Division, and 95th Infantry Division. The following were the major units of the Army on 31 March.

VIII Corps. 76th Infantry Division, 87th Infantry Division, 89th Infantry Division, and Corps Troops.

XII Corps. 4th Armored Division, 11th Armored Division, 26th Infantry Division, 71st Infantry Division, 90th Infantry Division, and Corps Troops.

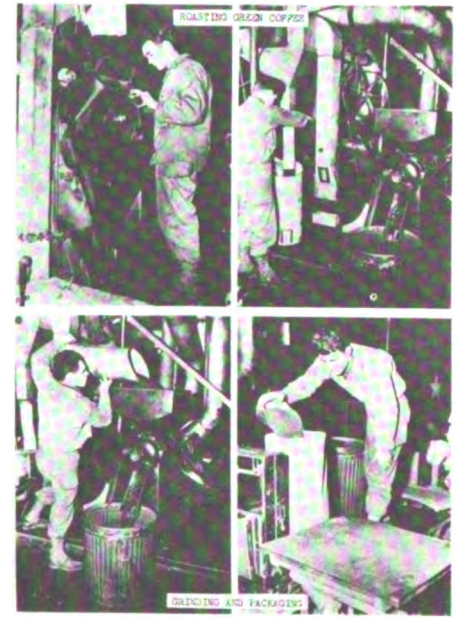
XX Corps. 6th Armored Division, 5th Infantry Division, 65th Infantry Division, 80th Infantry Division, and Corps Troops.

The Army had the responsibility of supplying the following troops at the beginning and the end of the month:

	1 MARCH	31 MARCH
Assigned Strength of the Army	304,695	312,304
Communications Zone Units	20,695	17,714
Ninth Air Force Units	24,125	7,793
French Units	1,910	0
Miscellaneous Troops	3,216	421
TOTAL	354,131	339,148

SECTION II - ADMINISTRATIVE DIVISION

During March efforts of the Quartermaster Purchasing and Contracting Officer were particularly devoted to purchasing office supplies and requisitioning facilities for the printing of certain blank forms.



The Legion of Merit, for exceptionally meritorious conduct in the performance of outstanding services, was awarded to one officer of the Quartermaster Section through General Orders published by Headquarters European Theater of Operations; and the Bronze Star Medal, for meritorious service, was awarded to one officer of the Quartermaster Section and two enlisted men of Quartermaster units through General Orders published by Headquarters Third U. S. Army during the month.

SECTION III - SUPPLY DIVISION

The Quartermaster supply situation remained in the generally satisfactory state that had existed during the preceding two months. Adequate stocks of all classes of supplies were on hand in the Army area.

Because of rapid advances, only a few supply points remained situated at Operating Railway Ends. Most points were stocked by truck transport hauling from railheads, which were located at [illegible] (F83), [illegible] (F84), BITBURG (F98), WITTLICH (G12), TRIER (L22), and [illegible] (L91). Early in the month the Advance Section Communications Zone began operating railheads in the Army area, taking over the Army railheads at [illegible] (F83) and ZWEIBRUCKEN (I84) on 9 March and later, on 19 March, moving to [illegible] (L91), north of TRIER (L22), after the rail line to that point had been placed in operation. Movement of Class I and Class III supplies from the railheads by truck transport to forward supply points was under the supervision of the Quartermaster Operations Officer. The dispatching of the necessary supply trains required overall coordination and assured the most use of the available truck transportation, both that provided by the Advance Section Communications Zone and Army transport not required for tactical operations.

The chief difficulty in regard to transportation was the rapidly extended supply lines. From TRIER (L22) to the RHINE River the distance was approximately sixty airline miles; and Class III supply point Number 109, at KASSEL (C24), was approximately forty-five airline miles farther to the east.

Priority was given to the rehabilitation of the railroads from the MOSELLE (L29) and TRIER (L22) area to MAINZ (M35) and railway service was scheduled to be in operation early in April. With the inauguration of rail service considerable truck transport could be relieved for use forward and east of the RHINE River, hauling from proposed railheads in the vicinity of MAINZ (M35).

An air lift was arranged and deliveries of considerable quantities of gasoline were made to forward airfields beginning on 30 March. To supervise the receipt of the airlift and to coordinate the distribution of supplies east of the river, the Army Quartermaster Operations Officer moved to the RHINE River crossing area. In view of limited bridge facilities at the RHINE River crossing and the extended supply lines, the air deliveries of gasoline were timely and materially assisted in stocking forward supply points.

The fast-moving tactical situation was reflected in the shift of supply points to the east. On 1 March only two Class I and one Class III points were located in Germany, and on 26 March all Class I and Class III points were in Germany. On 28 March the first supply points opened to the east of the RHINE River, Class I and Class III Number 108, at [illegible] (M54) and in the vicinity of DARMSTADT (M54), respectively. On 31 March two more points, one for each class of supply, opened across the river.

Annex Number F shows the Quartermaster supply points in operation during March.

SECTION IV - CLASS I SECTION

Class I supply again functioned efficiently during March. The following table gives pertinent statistics on Class I activity:

Receipts for Month	14,929,459	Rations
Issues for Month	14,199,755	Rations
Average Daily Issue	458,060	Rations
Issues to Army Units	89.7	Per Cent
Issues to Unassigned Units	10.3	Per Cent
Issues of "A"-Type Rations	69.7	Per Cent
Issues of Operational-Type Rations	30.3	Per Cent
On Hand at End of Month	1,995,360	

Because of the speed of the advance, it was not feasible to issue "A"-type rations to combat troops. Effective with the arrival of shipments on 28 March, no "A"-type rations were delivered to supply points other than Number 94, at TRIER (L22). Operational-type rations issued were supplemented with fresh bread, coffee, milk, and sugar; and by authorization of the European Theater of Operations, one-half of one fresh meat meal daily was issued as a supplement with "C" and "K" rations. The record-breaking capture of prisoners was reflected in heavy issues of "B"-type rations.

The demand by combat troops for "B"-type rations became very heavy during March. In order to conserve this type of ration, it was directed that issues be limited to the following maximum per cents of the total operational-type rations issued:

UNITS	PER CENT
Non-Combat Units	25
Hospitals	50
Combat Units	100

During March issues of fresh meat and butter were made frequently. The following issues were made from Army supply points:

ITEM	NUMBER OF ISSUES	RATION PER 100 MEN
Beef, Roasting and Frying	6	45 pounds
Beef, Boiling and Stewing	8	35 pounds
Beef, Ground	7	30 pounds
Pork, Boneless	5	42 pounds
Ham, Smoked	1	45 pounds
Chicken	6	60 pounds
Cold Cuts (Salami and Bologna)	2	14 pounds
Frankfurter	6	30 pounds
TOTAL	41	
Butter	31	7 pounds

All condiment items had been extremely critical at various times throughout the entire campaign. For about two months, during December and January, no shipments had been received; and reduced shipments had arrived since that time. Local contracts for procurement in Europe had not been successful. Issues during the latter part of March were complete, however, and it was anticipated that future requirements would be met.

Digitized by Google

DECLASSIFIED

SECTION V - CLASS II AND IV SECTION

The supply of Quartermaster Class II and IV items continued to be generally satisfactory. Total receipts of clothing and equipment during March were 2,862.9 long tons, less than half the receipts in February. This decrease was due to the large stocks on hand in the Army depots and also reduced requirements for winter clothing and equipment. Requisitions processed totaled 11,764. At the end of the month 4,874 long tons of supplies were on hand in the depots.

The list of critical shortages was further reduced. At the end of the month items short in supply included barber kits, twenty-four and thirty-two gallon corrugated nesting cans, one-burner stoves, wire-staple machines, tufted brushes, and duplicating machines.

A major problem of the month was moving Class II and IV supply facilities forward to serve front-line troops. Originally it was planned to open a depot at TRIER (L22); but because of the rapid advances of the Army, it was decided to establish a depot farther forward. In the meantime Class II and IV supplies that had been consigned to TRIER (L22) were unloaded and held temporarily at that point. A site for Supply Point Number 11 was chosen in the vicinity of BAD KREUZNACH (W03), but the opening of the depot was delayed because of the unavailability of truck transportation for the transfer of supplies from the TRIER (L22) off-loading point. Pending the opening of the depot, this new installation served as an advance supply point for forward combat troops, where requisitions were processed and delivery made by Army trucks from the railhead at TRIER (L22) or from Depot Number 10, at LUXEMBOURG (P81). The establishing of advance points for processing requisitions and making delivery of supplies was found to be a workable method of supplying forward troops with clothing and equipment. The following advance supply points, all at Class I points, also were in operation during various periods:

NUMBER	LOCATION	OPENED	CLOSED
77	DEIFELDT (P77)	050800 A February	071200 A March
80	BITBURG (P98)	070800 A March	101200 A March
89	PERL (Q09)	010800 A March	181800 A March
96	MULLENBORN (L18)	100800 A March	121800 A March
98	KELBURG (L48)	120800 A March	251800 A March

Depot Number 7, at METZ (U85), which had opened on 8 December, closed on 18 March; and Depot Number 10, at LUXEMBOURG (P81), was open throughout the month.

A test of three types of winter combat clothing had been conducted in the 4th Armored Division and 26th Infantry Division from 10 February to 25 February. A report based on observations in these divisions was made to the Twelfth U. S. Army Group, recommending a uniform including a jacket, combat, winter (modified); jacket, field, wool, olive drab (Class A uniform); trousers, field, wool, twenty-four to twenty-six ounce; trousers, combat, winter (modified); and helmet, combat, winter (modified). It was further recommended that the trend be toward simplification of the combat uniform, a reduction in the number of composite items, less weight, and more warmth, durability, water repellency, and wind resistance.

CLOTHING SECTION, DEPOT 10

OVERSHOES AND SHOES STORED UNDER TARPAULINS, DEPOT NUMBER 10, LUXEMBOURG

The Army Quartermaster and the Class II and IV Officer attended a conference held at the Office of the Chief Quartermaster, European Theater of Operations, from 17 to 19 March, on the subject of winter-clothing requirements for 1945-1946. In attendance were representatives of the Office of the Quartermaster General, Washington, D. C., and of all U. S. army groups and armies on the Continent. At this, the second such meeting, various items of winter clothing and equipment were discussed, the results of certain tests reviewed, and final recommendations made to the War Department. The following items were recommended for the winter combat uniform:

Jacket, field, M1943
Jacket, field, pile, olive drab, or jacket, field, wool (ETO type)
(Availability to determine which of these to be issued)
Shoe pacs (for part of Army strength)
Overshoes (for part of Army strength not issued shoe pacs)
Cap, cotton, field
Trousers, cotton, winter
Trousers, wool, olive drab, twenty-two ounce

CLEANING AND PRESERVING MATERIALS SECTION, DEPOT 10

OPEN STORAGE AREA, DEPOT NUMBER 10, LUXEMBOURG

SECTION VI - CLASS III SECTION

Gasoline and allied products were furnished the troops in adequate quantities to support fully the military operations. Receipts and issues of V-80 gasoline and allied products were higher than in any other month since the beginning of the campaign. The following table presents statistics on V-80 gasoline (in gallons):

Receipts for Month	17,080,580
Issues for Month	16,820,994
Average Daily Issue	542,613
Largest Day's Issue	733,375
On Hand at Beginning of Month	2,223,100
On Hand at End of Month	2,894,041

As the advance developed and supply lines beyond operating railroads became extended, the problem of gasoline supply became increasingly difficult. In order to utilize fully truck transport in the Army for use forward of the railheads, bulk shipments were requested. Most decanting operations in the Army area were carried on under the supervision of the 53d Quartermaster Base Depot, an Advance Section Communications Zone unit, at points at KERDORF (L05), WITTLICH (L35), ARENTHAL (L55), and WEINSHEIM (M03). When the lines of supply increased in length and transportation became critical, however, the Advance Section Communications Zone began shipments of bulk gasoline by tank truck to forward Army supply points not on operating railway lines, making necessary the resumption of decanting by the Army. Throughout the month continued efforts were made to secure the maximum use of equipment and facilities at hand. A spirit of cooperation existed between the Communications Zone and the Army in endeavoring to provide this vital fuel for the advancing troops.

The delivery of gasoline by airplane, beginning on 30 March, was opportune and effectively contributed to the support of combat units. The following table shows receipts of V-80 gasoline in gallons at airfields on 30 and 31 March:

AIRFIELD	LOCATION	30 MARCH	31 MARCH
Y-54	CHER CLM (M34)	162,500	50,000
Y-72	BUTTGENBACH (L94)	5,500	54,000
Y-74	[illegible]		96,000
Y-81	[illegible] (L01)	3,000	
Y-83	LIMOGES (L27)	45,000	235,000
	TOTAL	216,000	435,000

U. S. MILITARY CEMETERY, HAMM, LUXEMBOURG

[illegible] QUARTERMASTER GRAVES REGISTRATION DIVISION

A letter from the Office of the Chief Quartermaster, European Theater of Operations, U.S. Army, dated [illegible] directed the establishment of a policy in regard to temporary military interments, to be applied effectively:

1. Individual graves were not to be disturbed unless removal was [illegible] necessary by military operations.

2. Military dead were to be buried by local civilian authorities only [illegible] permission in either case [illegible] American cemeteries, [illegible] or German public cemeteries [illegible] by the U.S. Army. The method was to depend on local conditions.

3. Permanent records [illegible] to [illegible] personnel returned to England to [illegible] identification [illegible] graves. By 7 March the [illegible] of 10 cemeteries had been established, and by the end of the month [illegible] of these had been [illegible].

It must be [illegible] the work of evacuation [illegible] by hostilities, [illegible] the [illegible] of the [illegible] of the [illegible] evacuation [illegible] the [illegible] of the [illegible] evacuation [illegible] the [illegible] of the [illegible] of the [illegible] of

CHAPTER II
APRIL OPERATIONS

SECTION I - GENERAL

The Quartermaster Section remained throughout April with the rear echelon of Army Headquarters at the following locations:

EISA (L22), Germany	(29 March) to 6 April
FRANKFURT AM MAIN (M67), Germany	6 April to 26 April
[illegible] (G31), Germany	26 April to _____

During April the Army advanced rapidly across Germany from a short distance east of the RHINE River to points inside Czechoslovakia and Austria. Early in the month the Army continued its advance north from the FRANKFURT (M67) area, seized KASSEL (G20) on 4 April, and then moved east toward MEININGEN (G04) and SUHL (G29), and neared the Czechoslovakian border. On 22 April a new tactical plan went into effect. The III and XX Corps, which had taken over a portion of the Seventh U. S. Army area, in the vicinity of AUMUENZ (H84), GARMISCH (G24), and MUNICH (G47), altered southeast toward GERA (N73), PLAUEN (N82), and ZWICKAU (N84) along the CZECHO River. The III Corps continued its advance to the Czechoslovakian border and then swung southward along the border on the Army left flank.

The shift of the Army front presented a logistical problem of distances comparable to that of the month of August 1944, during the Third U. S. Army's dash across France. The distance from the VAIHINGEN (M36) area to the most forward supply point in the direction of the northeastern front was approximately 184 miles and after the shift had been made, the distance to the most forward supply point toward the southeast at the end of the month was approximately 249 miles. Also, the transfer of Quartermaster supply and service installations was handicapped because it was dependent entirely on the already strained truck transport and communications. In spite of these difficulties, essential Quartermaster service was provided for the Army.

The order of battle changed radically during the month. The VIII Corps was transferred to the First U. S. Army, continuing to operate in its current area; and the III Corps was acquired, moving to the right flank of the new Army front. Only eight divisions that had been with the Army on 31 March remained on 30 April. The following were the major units on the latter date:

III Corps: 14th Armored Division, 99th Infantry Division, 106th Infantry Division, and Corps Troops.

XX Corps: [illegible] Division, 35th Infantry Division, 80th Infantry Division, 90th Infantry Division, and Corps Troops.

Army Reserve: 10th Armored Division and 63rd Infantry Division.

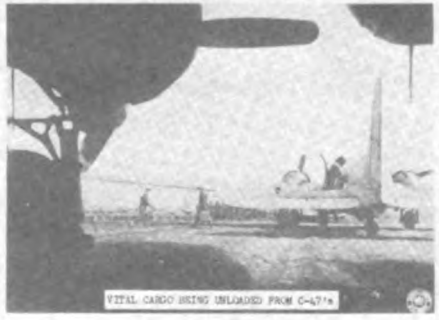
The Army had the responsibility of supplying the following troops at the beginning and at the end of the month:

	1 APRIL	30 APRIL
Assigned Strength of the Army	315,934	44,934
Communications Zone Units	15,394	11,492
Ninth Air Force Units	9,492	16,528
Miscellaneous Troops	1,814	2,584
TOTAL	341,654	377,543

SECTION II - ADMINISTRATIVE DIVISION

The Soldier's Medal, for heroism, was awarded to one enlisted man of a Quartermaster unit, and the Bronze Star Medal, for meritorious service, was awarded to two officers of Quartermaster units, both through General Orders published by Headquarters Third U. S. Army during the month.

SECTION III - SUPPLY DIVISION



The situation regarding Quartermaster supply was generally satisfactory until near the end of the month, when lengthened supply lines and consequent inadequate transportation facilities resulted in all classes of supplies becoming critical within the Army area.

AIR DELIVERY OF GASOLINE TO FIELDS IN VICINITY OF FRANKFURT, GERMANY

The supply of the Army from the rear was by successive stages, an arrangement which essentially included delivery by Advance Section Communications Zone truck transport from railheads to designated Army transfer or base points, from where Army transportation made delivery to supply points. The Quartermaster Operations Officer continued to supervise and coordinate the movement of Class I and Class III supplies by truck transport from the transfer points to forward Army supply points. Two Army railheads, at HEIDENHEIM (M25) for Class I and at KIRCH ISCHELHEIM (M25) for Class III supplies, opened, the first train arriving with rations at HEIDENHEIM on 4 April. The Advance Section took over the operation of these railheads on 8 April, while on the same date the Army established a forward transfer point at ALSFELD (M04); and the Advance Section forwarded by truck Army Class I and Class III requirements to ALSFELD, a ninety-mile haul. Because of the continuing rapid advances by the troops, the Army transfer point was moved fifty miles farther to the east, to SIEGMACH (M86), on 13 April.

Frequently Army supply points were forty to eighty miles beyond transfer points and the front lines often were equally as far from the supply points. Although supply points were not so close to the troops as desired, the primary consideration was the maximum use of all transportation, of that available to divisions, corps, the Army, and the Communications Zone. The turn-around time imposed by the increasing distances for all links in the supply chain became very long. The Advance Section was able, however, to make deliveries to certain rear Army supply points. In the forward areas transportation was conserved by locating Class III supply points in the vicinity of airfields and by having units, when it was convenient, draw supplies directly from the fields.

VITAL CARGO BEING UNLOADED FROM C-47's

The delivery by C47 planes of considerable quantities of rations and V-80 gasoline at airfields, particularly in the forward areas, enabled the Army to move on despite strained surface transport. Approximately ten and three-tenths per cent of the total rations and twenty-two and two-tenths per cent of the total V-80 gasoline received during the month were delivered by air transport.

With the change in the tactical plan, the axis of supply during the last one-third of the month had shifted abruptly from the northeast to the southeast, the base remaining in the area of HAINZ (M36) and FRANKFURT (M67). Despite strained transportation and communications facilities, the shift of supply points to the new front was effected quickly and efficiently. Within an hour after receiving the official directive concerning the new tactical plan, the Quartermaster Operations Officer began diverting Advance Section Communications Zone trucks from EISENACH (M86) to the new transfer points at BAMBERG (G24) and NUERNBERG (N53), and soon moved to BAMBERG himself. In order to support the military operation, the Army Quartermaster moved more than 1,000,000 rations and 1,000,000 gallons of gasoline to the base points before the roads became overly congested with troop movements.

The rehabilitation of railway lines did not keep pace with the rapidly advancing Army. A railway bridge across the RHINE River at MAINZ (M35) was completed on 14 April, and shortly thereafter a railhead for Class III supplies was established at KARL (M96). On 25 April, when rail facilities had opened as far as NUERNBERG (N53), the Army transfer point was moved to NUERNBERG (O51).

Twenty-three supply points for Class I and the same number for Class III opened in April. Supply points in operation during the month are shown in Annex Number 9.

SECTION IV - CLASS I SECTION

Receipts of rations were spasmodic but adequate during the month, and issues were heavier than in any preceding month of the campaign. The following are statistics on Class I supply:

Total Receipts for the Month	14,809,721	Rations
Receipts by Air for the Month	1,531,600	Rations
Issues for the Month	13,725,531	Rations
Average Daily Issue	457,518	Rations
Issues of "A"-Type Rations	19.4	Per Cent
Issues of Operational-Type Rations	80.6	Per Cent
On Hand at End of the Month	2,381,110	Rations

Because of the extremely long supply lines and congested transport, the problem of distributing balanced "A"-type rations to the troops was very difficult. Greater use of operational-type rations was necessary; in fact, in per cent of total rations issued, the increase over the preceding month was from thirty and three-tenths per cent to eighty and six-tenths per cent. Operational-type rations were supplemented with fresh bread, coffee, and small quantities of fresh meat. The Army, however, made every effort to utilize "A"-type rations to the maximum extent practicable.

As a result of the critical supply of rations late in the month, higher headquarters directed that German food supplies be used for Allied prisoners of war, Allied displaced persons, German prisoners of war, and German civilians, and that the Army conserve United States ration stocks and restrict the use of such rations to Allied Forces, United States and British prisoners of war, and United States and British civilian internees. In the event that it was necessary to issue operational-type rations to prisoners of war, the European Theater of Operations authorized the following scale:

Type "10-in-1"	1/2 Ration per Man per Day
Type "C"	2/3 Ration per Man per Day
Type "K"	2/3 Ration per Man per Day

Whenever possible, excess items of the "A"-type ration were to be issued for prisoners instead of the operational-type.

Forty-three issues of fresh meat and twenty-four issues of fresh butter, all hauled to supply points by Army refrigeration vans, were made during the month. In addition, such items as bacon, shelled eggs, cheese, and oranges were received from the Advance Section Communications Zone and issued to all troops subsisting on the "A"-type ration.

Refrigeration plants in good condition were taken over by the Army in FRANKFURT AM MAIN (M67) and NUERNBERG (O40) and were later turned over to the Advance Section Communications Zone to be stocked and operated. Mobile refrigeration units received perishable supplies from the FRANKFURT plant for all Army supply points, and the unit was moved to NUERNBERG when the plant there had been stocked.

SECTION V - CLASS II AND IV SECTION

The Class II and IV supply situation was critical at the end of April. [illegible] affect to keep the rapidly moving [illegible] supplied with vital materiel and, in line by the transportation shortage, [illegible] of Class II and IV supplies from the [illegible] were exhausted until April, transportation allotted for shuttle and [illegible] supplies was strongly invoked to the movement of [illegible] and [illegible] was sufficient [illegible] April, no more had been received at the forwarding point at [illegible] by the end of the month. The following tables [illegible] a comparison of Class II and IV supply activity [illegible] April with that of the preceding month:

	MARCH	APRIL	INCREASE
[illegible]	[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]

[illegible] in March, however, had been [illegible] the first part of April [illegible] of the large stocks of [illegible] the early [illegible] [illegible] [illegible]

DECLASSIFIED

SECTION VII - GRAVES REGISTRATION DIVISION

The Graves Registration Division continued to work in close cooperation with the Adjutant General Casualty Section and the Army Machine Records Unit and moved with them from SCHIFFLINGEN (F70), Luxembourg, to BAD KREUZNACH (M93), Germany, on 2 April, to FRANKFURT AM MAIN (M67), Germany, on 8 April, and to DARMSTADT (G91), Germany, on 27 April.

Instructions received from Headquarters European Theater of Operations regarding the burial of military personnel directed that the establishment of military cemeteries for the interment of American and Allied deceased in Germany be held to a minimum and that, when practicable, the evacuation of such deceased be made to cemeteries in liberated countries. Because of the great amount of German territory occupied during April and long evacuation distances, however, it was found necessary to open three cemeteries for American, Allied, and enemy dead in Germany. The following table gives statistics on cemeteries in operation during the month:

CEMETERY	LOCATION	OPENED	CLOSED	TOTAL BURIALS SINCE OPENING
U. S.	HAMM (F81), Luxembourg	29 December	1 April	6,915 U. S.
German	HAMM (F81), Luxembourg	29 December	1 April	5,466
U. S.	STOCKSTADT (M05), Germany	26 March	11 April	893 U. S. 7 Allied
German	STOCKSTADT (M05), Germany	26 March	11 April	508
U. S.	BUTZBACH (G60), Germany	4 April	22 April	662 U. S. 38 Allied
German	BUTZBACH (G60), Germany	4 April	22 April	448
U. S.	EISENACH (M86), Germany	11 April	22 April	365 U. S. 8 Allied
German	EISENACH (M86), Germany	11 April	22 April	216
U. S.	NURNBERG (G40), Germany	19 April		*308 U. S. * 9 Allied
German	NURNBERG (G40), Germany	19 April		*147

*Total burials as of 302400 B April.

The Army Graves Registration Service supervised the establishment of a cemetery on a prominent hill overlooking the town of OHRDRUF (J15) for the 150 dead inmates found at the OHRDRUF concentration camp. A thorough investigation revealed that no United States personnel were among the deceased. The labor was performed by German civilians of OHRDRUF, and the burgomaster of the town was made responsible for the maintenance of the cemetery.

Burials for the month, which, because of the speed of the advance and lessening resistance, were fewer than in the past five months of Third U. S. Army operations, included 1,690 American, of which forty-one were unidentified, 130 Allied, and 964 enemy, making a total of 2,784.

SECTION VIII - QUARTERMASTER TROOP SECTION

Under the control of the Army Quartermaster were two group headquarters. One of them, the Headquarters and Headquarters Detachment, 553d Quartermaster Group, was currently performing military government duties under supervision of the G-5 Section, this headquarters. All remaining Quartermaster units were attached to the Headquarters and Headquarters Detachment, 519th Quartermaster Group. The battalion headquarters - with the exception of the 496th, which continued to operate directly under the supervision of the Quartermaster Operations Officer - all had administrative control of varying numbers of service units. The aggregate personnel strength of these units, as authorized by Tables of Organization, was 360 officers, twenty-two warrant officers, and 12,644 enlisted men. The following chart shows the number, type, and attachment of Quartermaster units:

CAPTURED CANNED MEAT STORED AT WAREHOUSE, FURTH, GERMANY

TYPE OF UNIT	NUMBER	ATTACHMENT	TOTAL (Type of Unit)
Hq & Hq Det, QM Battalion, Mobile	2	519th QM Group	2
Hq & Hq Det, QM Battalion	9	519th QM Group	9
QM Bakery Company, Special	7	553d QM Battalion	7
QM Depot Company, Supply	2	519th QM Group	2
QM Fumigation and Bath Company	5	271st QM Battalion	5
QM Gasoline Supply Company	7	5th QM Battalion, Mobile	7
QM Graves Registration Company	4	537th QM Battalion	4
QM Laundry Company	7	304th QM Battalion	7
QM Railhead Company	6	307th QM Battalion	6
QM Refrigeration Company, Mobile	1	307th QM Battalion	1
QM Salvage Collecting Company	3	273d QM Battalion	3
QM Salvage Repair Company	3	273d QM Battalion	3
QM Sales Platoon	2	519th QM Group	2
QM Service Detachment (Petroleum Products Laboratory) (Mobile Detachment)	1	5th QM Battalion, Mobile	1
QM Service Company	2	5th QM Battalion, Mobile	
	5	568th QM Battalion, Mobile	
	3	95th QM Battalion	
	8	224th QM Battalion	
	2	271st QM Battalion	
	3	273d QM Battalion	
	3	537th QM Battalion	26

All Quartermaster units previously attached to the Third U. S. Army but assigned to the Communications Zone, except the two sales platoons and the detachment of the petroleum products laboratory, were relieved from assignment to the Communications Zone and assigned by Twelfth U. S. Army Group orders, on 27 April, to the Third U. S. Army. Efforts had been made since the beginning of the campaign to secure the assignment of all units to the command, in the interest of facilitating administration and control, and improving morale. The desire to wear the Third U. S. Army shoulder insignia was universal.

The following Quartermaster units were released by the Third U. S. Army to other commands:

571st QM Railhead Company
3936th QM Gasoline Supply Company
680th QM Laundry Company (3d Platoon)

The following Quartermaster units were assigned to the Third U. S. Army:

566th QM Railhead Company
3913th QM Gasoline Supply Company
3070th QM Laundry Company

SECTION IX - FIELD SERVICE SECTION

The activities of the Captured Enemy Materiel Detachment increased as more German territory was occupied. Depots were opened in FRANKFURT AM MAIN (M67), EISCHBERG (H68), KULMBACH (G67), FURTH (G40), and WURZBURG (H53).

The highest priority was given to the uncovering of food, blankets, and clothing for liberated Allied prisoners of war (except United States and British, who were furnished United States supplies), Allied displaced persons, and German prisoners of war. In order to exploit fully the captured enemy food stores, the Quartermaster Field Service Division was allotted a battalion headquarters and an additional service company. A large task was the collection of supplies of captured foods of assorted components in central warehouses so that a balanced ration could be prepared and distribution simplified. The depot at FURTH (G40) was used primarily for assembling and warehousing captured foodstuff.

MISCELLANEOUS CAPTURED FOODSTUFFS ASSEMBLED FOR DISTRIBUTION

During April 152,557 men were bathed by Quartermaster fumigation and bath units, and 3,807,468 pounds of laundry were processed by Quartermaster laundry companies. Owing to the extremely mobile situation, production figures of both the bath and the laundry units were lower than for the past several months.

SECTION X - SALVAGE SECTION

The following are the salvage figures for April:

	NUMBER OF ITEMS
Salvage Collected during Month	1,640,897
Salvage Classified - Total	1,249,765
Class B	855,767
Class C	95,708
Class X	298,290
Unclassified Salvage Shipped to Communications Zone	391,132

Salvage repair units repaired 64,619 items of clothing and equipment for reissue to troops, and also 5,401 special-purpose items, including fire units, immersion-type heaters, gasoline lanterns, oil and two-burner stoves, and typewriters. The figures are smaller than those for several previous months largely because of the highly mobile tactical situation.

DECLASSIFIED

Because of a lack of [illegible] it was impossible to evacuate salvage from all collecting points in forward Army areas. The Advance Section Communications Zone was requested to take over approximately 700 tons of salvage at a salvage point at EISENACH (M86) and fifty tons at Class I Supply Point Number 121, at NUREMBERG (G75), and relieve Army guard details at these points.

SECTION IV - CLASS I SUPPLY

The Class I situation was complicated in early July by the great number of enemy prisoners of war and of Allied displaced persons the Army had the responsibility of supplying. Although sizable stocks of captured food continued to be recovered, sufficient food for all of these persons for any great length of time was not immediately available. Civilian facilities were exploited. Surveys were initiated in the Army area for bakery plants and flour mills that might be pressed into operation to relieve the strained Army food situation. A civilian bakery in AMIENS (T60) was taken over by the Army and put into operation with a German prisoner-of-war staff, using canned ingredients, to produce bread for German prisoners. Before hostilities had ceased, this installation produced 105,264 pounds of bread.

At 0900 8 May 1,507,000 rations were on hand at supply points and reserve points in the Army area.

Adequate quantities of rations were issued to the troops at the cessation of hostilities by conversion of special rations for [illegible] at various times. In view of operations during the months preceding August and April, when the tactical situation was fluid and the supply lines became greatly extended, the 10 in 1 ration was replaced by "A"-type rations supplemented by the 10 in 1 ration. Also introduced were "B"-type hospital supplements for medical treating stations and "A"-type rations supplemented by the 10 in 1 ration that proved generally satisfactory throughout the [illegible]. The following graph shows issues of rations by per cent of total rations issued during the period 1 August to 8 May, inclusive.

PER CENT ISSUES BY TYPE OF RATION
BY MONTHS

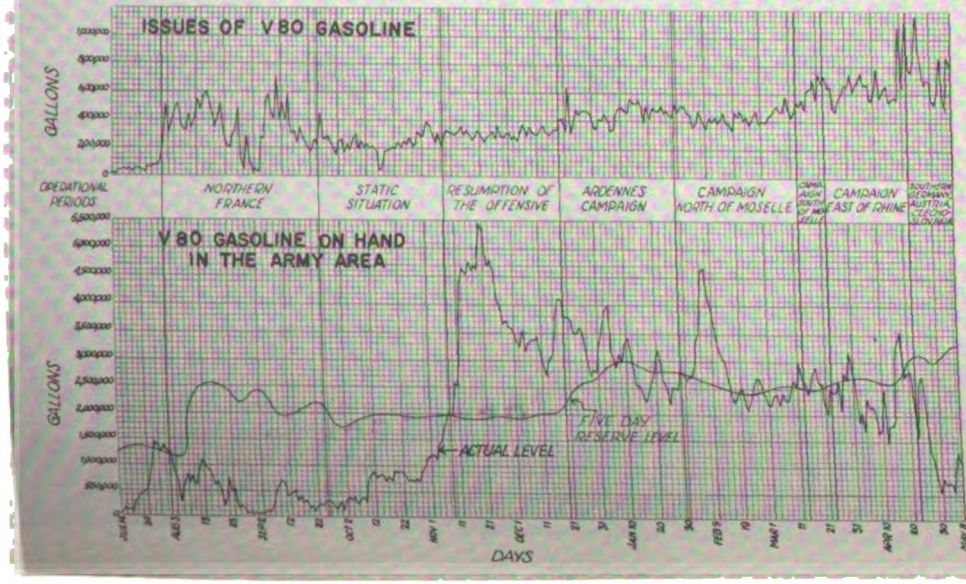
(NOT TO SCALE) IN WAITING LINE (ABOVE) AND IN ISSUE LINE (BELOW), CLASS I SUPPLY POINT NUMBER 128, NURNBERG, GERMANY

Digitized by Google

SECTION VI - CLASS III SECTION

The Class III supply position, critical at first, improved during the period. Receipts of V-80 gasoline for the first eight days of May averaged 860,487 gallons daily and issues averaged 769,160 gallons. On hand at supply and reserve points at 082400 B May were 967,956 gallons of V-80 gasoline.

Gasoline rationing was inaugurated on 5 May and discontinued on 8 May. During these three days all Third U. S. Army units except those of the V and XII Corps were limited to fifty per cent of their average daily requirements based on the period from 26 April to 4 May.



The demands for gasoline fluctuate sharply with any major movements of an army, and since it is often difficult to maintain a steady flow from the rear, the maintenance of reserves of gasoline in the army area is of paramount importance. The following graph shows the actual daily levels of gasoline in the Third U. S. Army area from 1 August to 8 May as compared with the authorized five-day level, using a factor of one and fifty-six-hundredths gallons per man per day:

SECTION VII - GRAVES REGISTRATION DIVISION

The cemetery for American and Allied dead and the adjacent cemetery for enemy dead at NUERNBERG (040) were the only ones open to Third U. S. Army burials from 1 to 8 May.

Army graves registration personnel made rapid strides in improving the technique of identifying unknown bodies. It was expected that continued research would result in identifying all the remaining American unknowns at some of the cemeteries. The following table presents statistics on burials of American unknowns for the period 1 August 1944 to 8 May 1945, inclusive:

	NUMBER OF BURIALS	NUMBER OF UNKNOWNS	PER CENT OF UNKNOWNS
Army Ground Force Personnel	26,700	122	0.46
Army Air Force Personnel	347	35	10.00
TOTAL BURIALS	27,047	157	0.58

Normally during the campaign the Army kept only one cemetery open for all troops and opened a new cemetery, road conditions permitting, when the distance of evacuation exceeded 100 miles. The following chart lists the burials made in Third U. S. Army cemeteries during the period of hostilities:

U. S. AND GERMAN MILITARY CEMETERIES, NURNBERG, GERMANY	617	1	0	618	2	0	2	223	39	262	882
TOTALS * Total Air Force personnel, known and unknown, included in this figure - 347	26,890	122	35	* 27,047	200	59	259	15,681	4,094	18,775	46,081

It should be noted that in cases of discrepancy between figures in the above table and those presented in monthly chapters, the differences are the result of adjustments made after continued investigation and research in connection with the identification of unknowns.

SECTION VIII - QUARTERMASTER TROOP SECTION

The following types and numbers of Quartermaster units were assigned or attached to the Third U. S. Army as of 2400 8 May.

Hq & Hq Det, QM Group	2
Hq & Hq Det, QM Battalion, Mobile	2
Hq & Hq Det, QM Battalion	10
QM Bakery Company, Special	8
QM Depot Company, Supply	2
QM Fumigation and Bath Company	6
QM Gasoline Supply Company	8
QM Graves Registration Company	5
QM Laundry Company	8
QM Railhead Company	7
QM Refrigeration Company, Mobile	1
QM Sales Platoon	2
QM Salvage Collecting Company	3
QM Salvage Repair Company	3
QM Service Company	28
QM Service Detachment (Petroleum Products Laboratory) (Mobile Detachment)	1

SECTION II - FIELD SERVICE SECTION

The collecting, warehousing, and issuing of captured enemy material assumed increasing magnitude and importance as the campaign advanced. The following table shows the captured supplies handled under the supervision of the Field Service Division from 1 August to 8 May:

Class I (Tons)	21,765
Class II (Items)	
Clothing	1,580,397
Individual Equipment	1,049,850
Footwear	896,555
Organizational Equipment	3,552,680
Expendable Items	632,699
Class III	
Petrol (Gallons)	434,050*
Diesel (Gallons)	95,555
Engine Oil (Gallons)	37,620
Gearlube (Pounds)	4,900
Grease (Pounds)	6,683
Class IV	
Post Exchange Items	400,000

* In addition approximately 500,000 gallons of captured gasoline were used by units in late August and early September.

It should be stated that large quantities of clothing and equipment, items for which the Class II and IV depots had no need, were released directly to the G-5 Section for use of Civil Affairs or Military Government authorities. All usable items not required by the Army were turned over to the Advance Section Communications Zone. Captured salvage and scrap materials, not included in the above figures, were immediately released to the Advance Section.

Although priority for bath service was always given to divisional units, the demand for this service was never fully met. Bath units were almost entirely allocated to corps for movement and control of service schedules for divisions.

FIELD SET-UP
SALVAGE POINT
NUMBER 25
REGENSBURG,
GERMANY

Digitized by Google

The following table shows the employment of Quartermaster laundry units and pounds of laundry processed by months during the operational period of the Army:

EMPLOYMENT OF QUARTERMASTER LAUNDRY COMPANIES

	TOTAL COMPANIES		MEDICAL CORPS (Sections)	TROOP UNITS (Sections)	SALVAGE POINTS (Sections)	LAUNDRY PROCESSED (Pounds)
August	5 (-1)*	40 Sections	18	8	6	556,563
September	4	32 Sections	16	8	8	2,630,541
October	5	40 Sections	20	16	4	3,549,186
November	5	40 Sections	15	14	11	3,203,260
December	6½	50 Sections	15	24	11	3,646,214
January	6½	50 Sections	14	26	10	4,429,100
February	6½	50 Sections	14	26	10	4,929,993
March	6½	50 Sections	15	26	9	5,827,952
April	7	56 Sections	15	32	9	3,807,468
May (To 082400)	8	64 Sections	15	40	9	1,080,535
TOTAL						35,660,812

* One company (eight sections) en route to join.

Quartermaster service companies had varied employment. The following chart illustrates the variety of duties of this type of unit:

EMPLOYMENT OF QUARTERMASTER SERVICE COMPANIES

From 1 August 1944 to 8 May 1945

DECLASSIFIED

SECTION X - SALVAGE SECTION

The salvage activities during the operation are presented in the following tables:

SALVAGE PROCESSED (By Items)

	CLASS B	CLASS C	CLASS X	TOTAL	UNCLASSIFIED
August	132,294	43,667	53,200	272,713*	0
September	204,701	45,190	137,262	387,153	0
October	336,911	48,697	79,957	465,565	0
November	416,473	80,780	193,383	690,636	0
December	524,469	74,455	226,034	824,958	316,091
January	707,221	111,797	613,251	1,432,269	41,000
February	769,542	151,116	375,439	1,296,097	298,581
March	1,156,580	154,474	491,880	1,802,934	19,900
April	855,767	95,708	298,290	1,249,765	391,132
May (To 082400)	449,307	32,638	145,357	627,302	379,400
TOTAL	5,553,265	838,522	2,614,053	9,049,392	1,446,104

* Included in the total are miscellaneous items amounting to 63,552.

Reclaimed clothing and equipment returned to the Class II and IV depots amounted to 3,151 long tons. All Class X and unclassified items were evacuated to the rear to Communications Zone depots.

Items repaired by month by Quartermaster repair companies are shown below:

	*NUMBER OF COMPANIES	REGULAR SUPPLIES	SPECIAL PURPOSE ITEMS	TOTAL
August	3½	20,175	450	20,625
September	3½	33,010	2,041	35,051
October	3½	52,635	4,109	56,744
November	3½	72,539	11,057	83,596
December	3½	113,219	8,513	121,732
January	3½	69,804	8,022	77,826
February	3½	72,638	8,484	81,122
March	3½	128,456	8,971	137,427
April	3½	64,619	5,401	70,020
May (To 082400)	3½	22,502	1,015	23,517
TOTAL		649,597	58,063	707,660

* One-half company shown was the one platoon of a service company trained as a field range repair unit.

Regular supplies consist of clothing, individual equipment, and footwear; while special purpose items include office machines and equipment, fire units, immersion heaters, and lanterns. It is noteworthy that during the operational period 3,373 typewriters, 22,608 fire units, and 16,921 gasoline lanterns were repaired. Lack of parts often hindered work; nevertheless, these units performed an indispensable service to troops.

* * * *

The chapters of this report were written at the end of each month as the campaign progressed, in most instances under the stress of difficult, hurried, and trying conditions. The indulgence of the reader is earnestly requested concerning the errors, omissions, and repetitions that have entered into these pages as the result of circumstances.

CHAPTER 13
LESSONS LEARNED & CONCLUSIONS

LESSONS LEARNED

GENERAL

1. When a landing is made on a hostile shore, an operations group of Quartermaster officers of the Advance Section, Communications Zone, should be attached to the staff of the Commander of tactical troops. This group, operating under the tactical commander until a rear boundary is designated, should begin operations immediately upon landing. It should organize the beach dumps and be charged with the distribution of supplies from the very beginning. As the beachhead is expanded, this group should remain in charge of the beach dumps and thus gradually develop the beginning of a communications zone. The Army Quartermaster should perform only his primary functions in regard to tactical troops. This would insure a well-organized, smoothly operating supply system before the first army rear boundary is designated and before the situation becomes mobile.

2. The regulating station is organized to operate in connection with a well-developed railway system. It is not well adapted to a fast-moving situation with the major dependence on truck transport. It should operate in close proximity to the source depots rather than in the army service area.

3. Divisions, both armored and infantry, have inadequate Quartermaster facilities.

SUPPLY

4. The impetus of supply should be from the rear; however, during rapidly changing situations, the supply agencies in rear of the Army do not always possess a sufficiently complete picture to insure quick readjustment. The movement of these elements and installations should be closely synchronized with the army they are supporting.

5. Quartermasters of all echelons are not equipped to carry out their supply missions unless they have sufficient transportation under their own control or under an organization of subordinate status.

6. Supply points for Class I and Class III supplies, under mobile conditions, normally were maintained on the basis of one for each corps and from one to three for Army troops. The distances from supply points to using units varied from a few miles to as much as fifty or more miles.

7. Issues of supplies direct to the transportation of using units are not practicable under mobile conditions. Divisions universally prefer to draw in bulk and make their own breakdowns. Units smaller than a division can be given their choice of method. In a rapidly changing situation, supply points are moved so often that it is not practicable to keep the smaller units informed of the changes.

8. Elaborate standing operating procedures are not well adapted to changing situations and are not necessary. The things that can be included in such compilations either have been covered in basic training or can be imparted through fragmentary operating instructions and/or supervising officers. It is a good plan to consolidate instructions from time to time in order to keep them current.

9. Reserves of Class I and Class III maintained in the army area depend to a great degree upon the rapidity of movement, the efficiency of the railway system, and the amount of truck transportation available. In static situations, five days of Class I and Class III and fifteen days of Class II and IV are adequate; in mobile situations the stocks must be reduced and, at the same time, the agencies supporting the army from the rear must be speeded up.

10. The daily telegram system of requisitioning supplies is not suitable for a fast-moving operation when far removed from the source of supplies. It is only in fairly static situations that this method of requisitioning has proved reliable.

11. Supply discipline of the American soldier, if improved, would be highly beneficial.

12. The operational-type ration is indispensable to a mobile operation. The type "A" ration is suitable for ninety-five per cent of all troops in a static situation, eighty per cent in a moderately mobile situation, and forty per cent when highly mobile. The principal limiting factor in the use of the "A" ration is transportation.

13. Operational-type rations, when used for more than three days, require a supplemental issue of bread and coffee. An occasional issue of meat, butter, and fresh fruit is highly necessary.

14. Bakeries are best operated under the Class I officer and organized under a single battalion headquarters. The British-type equipment is excellent and can keep up even during fast movements. Critical bakery supplies are best handled by pooling them under control of the battalion commander.

15. The most practical method of issue is to permit units to draw from the nearest supply point, submitting ration requests direct to the supply point commander. The supply point commander submits his record of issues and his daily inventory report direct to the army Class I officer as of a specified hour, usually 1L00. The Class I officer maintains a status card for each unit on which is recorded its Table of Organization strength, actual strength, and a record of daily ration issues and weekly Post Exchange issues. The system has demonstrated its value under the conditions peculiar to this campaign. The Machine Records Unit cannot be depended upon to furnish the correct ration strength; usually from 50,000 to 60,000 additional troops are inside the army area.

16. The gratuitous issue of Post Exchange items when sales facilities are not available is essential to health and morale. Units must register at the supply point three days in advance of drawing. The available stock is then prorated among all units.

17. The railhead company should be redesignated as a "ration supply company." This should be its only function. Present strength is adequate and enables it to "leap-frog." This unit should be organized to enable it to function under mobile conditions and in locations not on operating railway lines. Except in a purely static situation it seldom operates a "railhead." The unit should have sufficient organic transportation to enable it to assist in maintaining its stock and to increase its mobility.

18. The supply of Class II and IV in a highly mobile situation over great distances is extremely difficult. These classes receive lowest priority in allotting available transportation.

19. Present-type winter combat clothing is not entirely satisfactory. It is not sufficiently warm, wind resistant, water repellent, or shrink proof. The wide range of sizes makes it difficult to maintain balanced stocks in depots. Two depot companies are required for an army and each should have sufficient organic transportation to perform its function.

20. The duffle bag is a source of waste in a war of movement. The bags usually must be stored in an inaccessible place far to the rear. The soldier must be given issues of new items direct from the depots.

21. An uninterrupted flow of POL supplies is the most important and most difficult of all Quartermaster supply functions in a mobile situation. A temporary failure can have more disastrous and far-reaching effects than the failure of any other class of supplies. The situation becomes extremely critical when Army reserves have been exhausted and the flow from the Communications Zone is even temporarily suspended. The gasoline supply company is too small and should have additional organic vehicles to assist in maintaining its operation.

FIELD SERVICE

22. Quartermaster troop units are best handled by assigning them to battalions on a functional rather than a geographical basis: e. g., railhead companies under one battalion and gasoline supply companies under another. Although all battalions were attached to a single group headquarters, two might have been better.

23. The basic training of Quartermaster troops and troop officers has highly important effects over results. The best units are those that have been trained realistically.

24. The allocation of laundry units to field armies is inadequate. The present-type company is too large. Small, self-sustaining units with two or four trailers would be more suitable. Each medical depot and hospital and each division should have a laundry section of appropriate capacity as a part of its organic equipment. Tractors are required on the basis of one per trailer.

25. The fumigation and bath companies are inadequate in number and equipment. These units do much for morale. The exchange of clothing has proved highly beneficial. Divisions should have their own bath units.

26. Captured enemy materiel is of great importance. It can be handled properly only under a special organization for which no provision is made under the present Tables of Organization. This organization must function close behind the assault troops. Unless this is done, much valuable property is lost or needlessly destroyed.

27. Quartermaster officers should be selected as far as possible from those who have had experience with combat troops and whose efficiency ratings are excellent or higher. It is extremely important that the officer possess the correct point of view. The training of officer candidates should instill a high sense of discipline and personal responsibility and should include effective instruction in company administration.

28. Group and battalion headquarters enlisted personnel should be selected from the types whose background fits them for this specialized work. There are too many headquarters in which the officers must of necessity perform practically all the clerical work.

GRAVES REGISTRATION

29. The graves registration company cannot perform its required functions as now organized and equipped. This has been the subject of separate reports.

30. Cemeteries are best operated under an army rather than corps or division. One cemetery for an army is adequate in most situations. Evacuation up to 100 miles is entirely practicable under suitable road conditions and when casualties are low.

31. Graves registration is best handled by a separate section in the Office of the Army Quartermaster. The section obtains best results when it works intimately with the Adjutant General's Casualty Section and the Army Machine Records Unit.

32. Collecting teams under Army control composed of five graves registration men and two three-quarter ton trucks with one-ton trailers are required for divisions. The division and smaller units evacuate the dead to the division and/or corps collecting points. Identification must be carefully checked and established at the collecting point.

Digitized by Google

CONCLUSIONS

1. The Advance Section, Communications Zone, should be represented on the staff of the Army Commander when a landing is made on hostile shores. This operating group should play a major role in establishing and operating the beach dumps.

2. The regulating station should be organized, trained, and practiced to enable it to adapt its operations to fast-moving and improvised conditions.

3. The Quartermaster organization for armored and infantry divisions should be made the subject of special study. Each division should have a laundry platoon, a bath unit for each regimental combat team, a shoe and textile repair section, and a battalion headquarters. The armored division needs more transportation.

4. The supply agencies of the Advance Section, Communications Zone, in support of a field army in a mobile operation should be under the control of the Army Commander.

5. The Quartermasters of all echelons should have sufficient transportation under their own control to accomplish their missions. As a general rule, there are fewer trucks available for Quartermaster supply in a mobile situation than in static periods, whereas the reverse should be the case.

6. Supply discipline should receive careful consideration during basic training. It is recommended that the vital importance of conserving supplies be given the prominence it deserves. All ranks should be included.

7. Operational-type rations are excellently adapted to mobile warfare. Provision should be made for supplementary issues of coffee, bread, meat, butter, and fruit when the operational ration is used for more than a few days.

8. The British-type bakery equipment with coffee roaster added is excellent for mobile and/or static situations.

9. It is recommended that the railhead company be redesignated as a "ration supply company." Its organic equipment should include forty-eight two and one-half ton trucks.

10. The duffle bag should be eliminated as a part of field equipment. It is the source of much waste. Units should have the means for carrying reserves of essential clothing and equipment. An exchange system should be prescribed within the unit. The division could, if given the equipment, launder the soiled clothing and repair the shoes.

11. The gasoline supply company should have fifty additional laborers, better fire-fighting equipment, and forty-eight two and one-half ton trucks as organic equipment.

12. The winter combat uniform should receive careful consideration as to greater simplicity, added warmth, and more wind and water resistance.

13. The depot company, supply, should have forty-eight two and one-half ton trucks as organic equipment.

14. The means for insuring adequate and uninterrupted POL supplies from the communications zone to the army area warrants continued and expert study.

15. In the training of Quartermaster units and officers more emphasis should be given to field training, actual functional work, sense of personal responsibility, and company administration. An outstanding weakness has been the failure to develop junior officers and non-commissioned officers.

16. Laundry companies should be reorganized into small, self-supporting units. Laundry units should be included in the organic equipment of the following: divisions, medical depots, evacuation and convalescent hospitals, and salvage repair companies.

[illegible] not need the fumigation units. The latter should be with the salvage units. The present troop basis for bath units is grossly inadequate. Divisions should have bath units as a part of their organic equipment.

18. A "Captured Material Section" is recommended for each field army. It is suggested that such a section be organized to include all classes of supply of all the supply services.

19. The graves registration company is recommended for special study with a view toward changing its organization and equipment.

HEADQUARTERS THIRD U.S. ARMY
Office of the Signal Officer
APO 403

SUBJECT: After-Action Report.

TO : Commanding General, Third U.S. Army, APO 403, U.S. Army.

1. Submitted herewith is the After-Action Report of the Signal Section, Third U.S. Army Headquarters beginning with 25 March 1944 and continuing with the properly designated intervals by chapters.

2. It is believed that this report again illustrates the importance and complexity of modern military signal communications. The availability of such communications is greatly dependent upon the proper type and quantity. These two factors will inevitably determine the success or failure of any signal communication system.

3. The initial signal plans called for a greater number of Signal Corps troops than were ever available during operations on the Continent. There never was a period when additional signal personnel could not have been used to great advantage. This disadvantage was overcome, however, by the ingenuity, loyalty, and persistence of the Signal Corps soldier who remains imbued with our traditional slogan; "Get the message through".

SIGNAL SECTION

Organizational and Functional Chart

HEADQUARTERS

1. Supervision and coordination of activities of Signal Section Staff, Army signal troops and signal section staffs and troops of subordinate echelons.

ADMINISTRATION AND PERSONNEL SUB-SECTION

1. Maintenance of Signal Section files. 2. Procurement and assignment of signal reinforcements and, procurement, assignment and transfer of Signal Corps Officers. 3. Reproduction and distribution of SCI items and other signal documents. 4. Supervision of all rear echelon communications.

COMMUNICATIONS SUB-SECTION

1. Planning, direction and supervision of the tactical employment of Signal Operation and Signal Construction Battalions of the Army Signal Service. 2. Obtaining information concerning signal systems of corps and lower units and commercial and other signal facilities in Third U.S. Army area. 3. Preparation and provisions for extending Army signal system to relieve corps and divisions of operating and maintaining rear installations, thus permitting these units to push their systems forward. This includes preparation and continuous revision of Line Route Map, Circuit Diagram, Radio Net Diagram and VHF Radio Relay Diagram. 4. Studying traffic handling in all Army units, and, on this basis recommending changes in construction, operation and maintenance procedures and equipment to expedite or improve such handling. 5. Coordination of action with training sub-section for changes in established SOP and with Supply sub-section for procurement of suitable equipment. 6. Preparation of items of SCI dealing with frequency and call sign allocations, row register index, air warning broadcast, air-ground visual code, identification panel code, pyrotechnic code and telephone code names. 7. Preparation of signal circulars covering operation of Army communication system.

PLANS AND OPERATIONS SUB-SECTION

1. Coordination of activities of operational signal units and of Army Signal sub-sections with policies and directives laid down by Signal Officer, Third U.S. Army and higher headquarters. 2. Maintenance of tactical situation map, location of operational units and station troop lists. 3. Supervision of section and unit histories, investigations, location and inspection of billeting spaces and bivouac areas and reception of visitors.

PHOTO SUB-SECTION

1. Keeping Signal Officer informed on all photographic matters. 2. Coordination of activities of Photo Assignment Officer and Commanding Officer of Signal Photo Company in order to provide necessary and adequate coverage for news, tactical and historical purposes. 3. Control and approval of all orders for photographic prints needed for tactical and historical purposes. 4. Responsibility for supervision and expediting transmittal of War Department film to Army Pictorial Service laboratories.

SIGNAL INTELLIGENCE SERVICE SUB-SECTION

1. Maintenance of liaison with Army G-2 on all signal intelligence matters. 2. Supervision of all operational activities of Army and corps radio intelligence companies. 3. Radio counter measures. 4. Signal counter intelligence. 5. Solution of special codes and ciphers. 6. Examination and reproduction of captured signal intelligence and communication documents and dissemination to units and sections concerned. 7. Interrogation of special PW's and dissemination of information thus gained. 8. Maintenance of cryptographic, transmission and physical security in the Army. 9. Distribution of codes and ciphers. 10. Preparation of Army code and cipher SOI items. 11. Supervision of Army SIAM Company, Army Signal Pigeon Company and the Army Weather Detachment. 12. Supervision of all Army messenger and message center activities. 13. Supervision of wire, radio and messenger facilities for signal intelligence purposes.

ENEMY EQUIPMENT INTELLIGENCE SERVICE

1. Collection, evaluation and disposition of captured enemy signal equipment. 2. Providing high authorities with detailed technical reports and suitable specimens of "new enemy equipment" in order that the maximum exploitation of this type of intelligence may be achieved. 3. Assisting Army Signal Service in determining availability and capability of enemy equipment for utilization.

SUPPLY SUB-SECTION

1. Procurement, storage and issue of signal equipment and maintenance of records pertaining thereto. 2. Supervision of operation of Army Signal Depot and Army Signal Repair. 3. Procurement of non-standard items from captured enemy signal equipment for utilization. 4. Maintenance of records pertaining to allowances of [illegible] 54 Collection, reclamation and [illegible] disposal of signal equipment.

CHAPTER 1
PLANNING IN UNITED KINGDOM

Section I - General

The time prior to 26 March was occupied primarily with the following matters:

a. Clarification of administrative principles to be observed.

b. Policies and methods to be followed on inspection trips.

c. Outline for communications orientation talks.

d. Maintaining by sections of a log of daily activities.

During this same period Signal Supply channels were established and brief courses in Signal Supply procedures were initiated for officers of battalion level and higher, in order to smooth out combat operation procedure.

Approximately on 25 March all personnel of the Signal Section had reported for duty. A conference was held on Signal Corps procedure and the status of Signal units. The exact locations of assigned and attached Signal Corps units were determined and arrangements were made to bring the 160th Signal Photo Company to England from its station in North Ireland and to include the 55d Signal Construction Battalion in the scheduled messenger route.

During this same period, the Army Signal Service was streamlined with a view to complete operational efficiency and liaison was established with higher headquarters. The status of the 4th Armored Signal Battalion was reviewed and it was agreed with the [illegible] Section that the best policy would be to retain control of this unit for the possible reinforcement of one of the corps. Shortly thereafter arrangements were completed with the Western Base Section's 1,20 Signal Construction and Maintenance Team for the inspection and repair of the damaged equipment of this battalion. The 1st, 51, and 4th Signal Liaison Teams were relieved from Third U.S. Army while the 7th Signal Liaison Team remained for possible use with the 20 French Armored Division. A request was made that the 111th Signal Radio Intelligence Company be assigned to Third U.S. Army. Finally, an officer representative of the Signal Section was dispatched to the First U.S. Army Group to assist in planning the forthcoming operations.

At the same time over-all policy changes were being assimilated into Third U.S. Army procedure. The Theater Signal Officer advised that Top Secret messages could be encoded in normal cryptographic systems on the condition that the words TOP SECRET were buried in the text. Message centers down to and including corps, were directed to use a rubber stamp, giving instructions for paraphrasing on all registered classified messages. The Air Department furnished information that 15 December 1943 replacement factors were to be used in forthcoming operations and it was directed that figures based on actual consumption of field wire and similar signal supplies to show the average replacement rate per day, per unit, of each major type would be included in the final report to the War Department.

By 15 April, operational plans had reached a tangible state. The First U.S. Army Group's Signal Outline Plan, which could not be published until the Group became operational, was received with a request for comments and return. It was also requested that Third U.S. Army Signal planning follow this outline as closely as possible in order that differences could be kept to a minimum.

Frequent conferences were held with the Signal and Communications Officers of the lower echelons to acquaint them with the functions of the Signal Section, outline changes in procedure and policy, and to discuss the forthcoming operations from a Signal aspect. Instances were encountered where it was considered unnecessary for unit Signal Officers to possess complete knowledge of the operation, although usually the very nature of their responsibilities required such knowledge if they were to serve their commanders effectively.

At one of these meetings the proposed operation "J" or JIAM was discussed. This Service (Signal Information and Monitoring) monitors friendly radio nets at division level, deciphers the message and immediately transmits information of value directly to army by radio. This speeds the transmission of vital information direct to army headquarters. "J" Service is the British counterpart of this system. The Signal Officer was notified that "J" Service personnel would have to be drawn from the troops at our disposal. It was decided that until more permanent arrangements could be made, the 6th Cavalry Group would act as the Army Information Service.

Signal Officers were also instructed that Signal troops would have to be prepared to clear their own path through minefields during the construction of wire lines. In view of this, it was stressed that it would be necessary to familiarize all personnel concerned with the operation of the SCR-625 and that a sufficient quantity of these mine detectors would have to be made available to do the job.

One of the most far-reaching Signal changes at the time, was the adoption of a new type radio call-up procedure. Representatives of the Signal Section, First U.S. Army Group, visited the Third U.S. Army for the purpose of acquainting responsible officers with Link Sign Procedure. Differences between this method and the old double call sign system were outlined. Particular emphasis was placed on the fact that, to a large degree, transmission security depended upon the understanding staff and Signal Officers had of correct radio procedure.

In addition to the installation and coordination of the wire system required within and without the headquarters, Signal troops received further training experience by assisting the General Post Office with several telephone construction projects. Clearance from higher headquarters, required before a unit could be assigned a mission of this type, was received and the 55d Signal Construction Battalion completed its assigned projects in commendatory fashion.

At about this time a communication link was proposed between European Theater of Operations U.S. Army and Allied Forces Headquarters ALLIED. The following information was furnished concerning estimated requirements of the Third U.S. Army.

a. Amount of traffic for Allied Forces Headquarters through European Theater of Operations U.S. Army, if any. 1000 groups per day.

b. Precedence of messages. 45% Operational Priority, 45% Priority, 10% Routine.

c. Average groups per message: 50.

d. Number of messages per twenty-four hour period: 20.

e. Security: 10% Top Secret, 90% Secret.

Subordinate units, in the meantime, were aligning their Signal policies to conform to those outlined by the Signal Section. In some cases, requests for changes in policy or permission to vary from standard procedures were forwarded by these units. After discussion and consideration, certain of these requests were granted, others were not. The 1st Tank Destroyer Brigade, for example, proposed that Third U.S. Army Signal policy allow all Tank Destroyer Private Line Commanders W-8 telephones and test clips. This was to permit the respective Commanding Officers to call in on any line available in the combat area in case of emergency. The request was disapproved and strict orders were issued against any tapping of wire lines. It was felt that any benefits gained by wire tapping were more than offset by the possible interruption of priority calls.

Planning had now reached the point where it was particularly necessary to guard against breaches of security and to insure proper security precautions at all times. Messages were frequently being sent regarding the forthcoming operations and maps, plans, diagrams, and appendices to the master plan were in the process of preparation. It was of great importance to insure the integrity of all intelligence contained in documents of Top Secret and Strict classifications. At a conference held by the Chief of Staff, Third U.S. Army, the following points were brought out:

a. Each Section Chief would make a complete inventory of Top Secret matter in his possession and make sure that all was registered.

b. Necessary orders be given to prevent unauthorized personnel from entering restricted parts of the message center.

c. A check be made to insure that storage facilities in all message centers provided adequate security. Top Secret material would always be kept locked in the safe when not in use.

By the first week of June attention had been directed to the Signal problems which would arise when the Third U.S. Army commenced its movement towards and on to the Continent. It was estimated that minimum needs in the event of a displacement in the United Kingdom, were 20 trunks and 150 locals. The 150 locals could be field phones, and we could use our own switchboards. Further, in a conference with the Chief of Staff, Third U.S. Army, it was directed that a study be made of communications between forward and rear echelons when on different sides of the channel, with details to be shown in diagrammatic form. (See Annex 1.)

The Signal Officer was requested to prepare a simple code indicating types of units, for short messages to be used between Commanding Generals of forward and rear echelons.

To provide full Signal operating strength for Army Headquarters, European Theater of Operations U.S. Army was requested to furnish additional personnel to operate facilities in the rear echelon. The request was approved by the Signal Officer, European Theater of Operations U.S. Army and the personnel made available until D plus forty-five. The Signal Officer, XX Corps, was informed that in compliance with instructions for preparation for Overseas Movement, all Army detachments attached to corps become corps responsibilities.

A conference was held by the Commanding General, Third U.S. Army, and the following Signal matters were taken up directly with the Commanding General, Communications Zone:

a. The necessity for one additional Signal Operation Battalion and one additional Signal Construction Battalion was emphasized. These additional units had been approved, but were not yet available in the Theater. It was requested that, even though they could not immediately be made available, they be activated and furloughed as soon as possible. The point was brought out that the lack of these battalions might hold up the advance of the Third U.S. Army.

b. The matter of the return of Signal Corps equipment projects to Third U.S. Army through routine channels was discussed. Certain of these projects were returned for revision downward, although they were similar to those of the First U.S. Army which had been approved. It was requested that in future cases of this sort, proper representatives from this headquarters be asked to visit London or elsewhere to make necessary adjustments.

By 15 June, two cross-Channel air dispatch services had been arranged for. The first was a straight air dispatch letter service already put in operation by the Ninth U.S. Air Force. The second was a special service by the 10th Photo Group to provide a connecting link between advance and rear echelons of the Army center serving the Third U.S. Army and the XIX Tactical Air Command.

On 20 June, displacement was made to the Marshalling Area at NINE YANKS (7.45) and traffic began, preliminary to embarkation for the Continent. The communications network at the new command post site was temporary, utilizing two general post office switchboard at Braemore House and a field switchboard at NINE YANKS (7.45). Communication was available by direct line to the rear echelon at Toft Carr and to Southern Base Section. Ten trunks were operating between Braemore House and NINE YANKS (7.45).

The Chief of Staff, Third U.S. Army, directed forward echelon "A" loaded on vehicles on a ten-hour alert basis from 1400, 2 July, and the 501st Signal Operation Battalion, 511 Signal Construction Battalion, and 160th Signal Photo Company were phased for movement immediately thereafter.

The Deputy Chief of Staff stated that on his visit to the target area, all supplies, except ammunition and Signal, seemed adequate. The surface and Signal supplies had not yet landed, operations due to capture of many commercial installations and because the distances involved within the beachhead area were not great.

The advance party of the Signal Section departed for the Continent at 0145, July. The Signal Officer, XX Corps, arrived and was orientated on the status of administrative and personnel matters to be handled for Third U.S. Army in his capacity as Signal Officer, rear echelon, Third U.S. Army. The Signal Section, leaded 4 July, departed for the embarkation area, and embarked on military transport, John D. Whittier. The vessel cleared her moorings at 0015 and dropped anchor at Tarbert at 2400, July. Unloading was completed at 0811.30 and the LST beached at 0830, July.

Digitized by Google

Section II - Administration and Personnel

The period spent in the United Kingdom was one of adjustment, necessary changes and improvements to bring an Army Signal Service to operational efficiency being effected in this subsection and the following actions taken:

Authority was requested from First U.S. Army Group to requisition 15% overstrength of company grade officers, warrant officers and enlisted men for all Signal Corps units assigned, or to be assigned.

The Signal Officer, First U.S. Army Group, approved a request for Assistant Signal Officers in Infantry divisions in the grade of major.

Reorganization of Signal Radio Intelligence Companies was made to include Type 18 Traffic Analysis Unit. Information was received from the European Theater of Operations U.S. Army, that reorganization under new T/O & E's would not be required. In this connection the 40th Signal Battalion was directed to return to the old T/O & E 11-15, dated 1 April 1942, and any reorganization that had been effected was cancelled.

Under the proposed replacement system, replacement requisitions of Signal personnel were directed to be forwarded directly from units to this headquarters by any available means of communication. Such information would be acted upon as soon as received. The informal reports must then be confirmed as soon as possible by formal requisition.

On the 19th of April negotiations were started for the Air Transport Command to assist in getting supplies to Signal units located in North Ireland. This plan later materialized and the action was of the utmost importance to Signal Supply.

Corps submitted lists of current Signal Officer shortages existing in their units.

It was necessary to shift personnel between various Signal Units to fill urgently needed requirements. Replacements of high-speed radio operators were expected about 15 May.

Signal Units assigned or attached to the Third U.S. Army and located in North Ireland were moved to England to facilitate control, operation and preparation for the operational period.

The Air Force District Personnel Officer was asked to make available any excess Air Corps personnel with Signal Corps training. European Theater of Operations promised to support the proposed trade of basics for this personnel. Several replacements were acquired in this manner.

Great numbers of routine personnel assignments for training and many reports were handled.

Section II - Signal Intelligence Service

The major responsibilities of Signal Intelligence Service during the period in the United Kingdom were:

a. Supervising the training of radio intelligence companies.

b. Supplying cryptographic devices, documents and instructions.

c. Maintaining signal security through inspection, monitoring and instruction.

d. Supervising counter-signal intelligence plans in Third U.S. Army in conformity with the overall plans of European Theater of Operations U.S. Army.

e. Planning for signal intelligence, cryptographic and signal security activities during operations.

Four Signal Service Companies (SI) were activated, equipped and given intensive training, including operational experience in southeastern England after D-Day, for their functions as radio intelligence companies for Third U.S. Army's corps. Their training, like that of the Army Signal Radio Intelligence Company, was coordinated closely with Signal Intelligence Service, European Theater of Operations U.S. Army, to insure uniform radio intelligence training throughout the Theater of Operations.

The largest distribution of a cryptographic item was that of Slidex, a new type of cryptographic device for traffic of low grade security. A total of 17,000 Slidexes was issued in the United Kingdom. Two schools were conducted to train officers of Third U.S. Army Staff and of subordinate units in the use of this device.

A monitoring team at Army Headquarters made periodic checks to insure maintenance of telephone security. Radio monitoring was accomplished by European Theater of Operations U.S. Army during this period, but it was anticipated that this function would be carried out later by a SIAM Company scheduled to be assigned to Third U.S. Army for operations. When word was received from European Theater of Operations U.S. Army, however, that the SIAM Company could not be trained in time for initial combat, plans were made to make security monitoring a function of radio intelligence companies. Complete signal operation instructions of Army units were furnished the Army Signal Radio Intelligence Company for this purpose.

Although teletype lines in the United Kingdom were classified as secure for secret messages in the clear, Third U.S. Army still required all secret messages to be encryptographed. This gave valuable pre-operational training to code room personnel, accustomed the staff to writing messages for encryptographing, and brought to light many difficulties in paraphrasing, stereotyped phraseology and other factors inherent in encryptographing messages. They were corrected as they arose. From the adoption of this policy between 12 April and 30 June, the Third U.S. Army Code Room handled 721,000 code groups.

Throughout the United Kingdom the volume of all radio traffic was regulated from week to week in such a manner as to thwart enemy signal intelligence agencies. Regulation of training traffic in Third U.S. Army for this purpose was controlled through Signal Intelligence Service in accordance with the plans of higher headquarters. Assistance also was given by Signal Intelligence Service to certain specialized counter-signal intelligence units operating under higher headquarters' direction in the Third U.S. Army zone.

When Signal Intelligence Service was made responsible for Detachment ZY, 21st Weather Squadron, arrangements were made for twice daily weather forecasts for the staff, plus special weather data for Artillery and anti-aircraft Artillery firing.

To establish proper security control over reproduction of secret and top secret war maps and highly classified signal intelligence documents, a small photographic detachment was added to Signal Intelligence Service on 15 May.

Section II - Communications

During the planning period in the United Kingdom, the Communication Subsection supervised the operation of communication facilities then in use, and worked on plans for the operational period after D-Day. Wire trunk facilities were all obtained from the British General Post Office and consisted of General Postoffice circuits made available through the various base sections. Wire plants and possible routes were studied and used as a basis for personnel, equipment, and material requirements. The number of circuits necessary, to various installations within and beyond our headquarters, were established. A study was made of British Multi-Airline open wire construction and the necessary information disseminated to the construction companies of Army and Corps. The same procedure was followed with French open wire and cable.

Close liaison with higher Signal echelons was maintained and every effort was made to bring the Army Signal Units and those of lower echelons into complete agreement on operational procedure. Signal Operation Instructions, and procedure in the form of Signal Circulars, were compiled and issued as part of the Third U.S. Army Plan. Signal Operation Instructions were exchanged with the 21st Tactical Air Command for mutual benefit. To meet the demand for speedy transmission of messages by other than electrical means between headquarters Third U.S. Army, subordinate unit headquarters and supply installations, it became necessary to establish an air messenger service. This operated to all parts of England and to units in Northern Ireland.

Corps and Army troops using radio were instructed to submit monthly reports of detected violations of radio transmission security. These reports were compiled and forwarded to Signal Intelligence Service for study and corrective action.

The procurement of special equipment allotted to us was a constant problem, especially as regards radio link, carrier, and field scramblers. A procedure for using CF 1 and 2 equipment in conjunction with the SCR-399 for teletype was developed by this section and put in operation by the 301st Signal Operation Battalion. The speech channels plus four teletype channels worked very well.

To insure a minimum of interference in Frequency Modulation radio operation a system of channel allocation was designed and put in operation. This replaced the old method of turning loose all FM channels to organizations authorized this equipment. The Third U.S. Army received twenty-nine radio frequencies for Army circuits and Army troops. The SCR-245, 536, 511 and the 500, 600 and 600 series were allowed to operate on all channels and Third U.S. Army allotted them under the above plan.

It was found that the code block assignment made to Third U.S. Army was not applicable to the French language. A request was made to European Theater of Operations U.S. Army for a block assignment to meet this specific problem in order to provide for the needs of the 2d French Armored Division.

To provide necessary information on mine fields to our construction battalions, it was arranged with the S-2 Section that the Signal Section receive distribution of S-2 mine field maps. Three copies were furnished, one for each Construction Battalion and one for the Communication Subsection which was made available to the Signal Operation Battalion.

Section II - Plans & Operations

In many respects, the Plans and Operations Subsection continued the work originally started by them in the States. This consisted of arranging for training facilities, checking the training programs in use, and arranging for the testing of the various Signal Units. The new equipment involved made it necessary for special schools to be set up and a rigid control exercised on the facilities available.

Classes were conducted for representatives of each staff section in the use of Slidex, radio telephone procedure, Signal Operation Instructions and message writing, and in the correct use of the message center.

A radio test team was formed and conducted tests in radio procedure and security prior to releasing Third U.S. Army units from the radio silence imposed by European Theater of Operations U.S. Army.

Section II - Supply

The Signal Supply Subsection was assembled by 26 March and work on the planning phase for coming operations was started the next day. Arrangements and plans to equip Third U.S. Army units with Table of Basic Allowances equipment and supplies were made immediately.

Equipping of units was the responsibility of the Services of Supply in the United Kingdom. Due to the number of organizations, the frequency of arrivals, the difficulty of movements within England, coupled with the current overloads on the English transport system, it became necessary for the Army Signal Supply Section to arrange for its own truck and air transport from all Service of Supply Depots to Third U.S. Army units. Truck transport was organized from Third U.S. Army units to handle group loads from depots within travel spheres established after consideration of the geographical location of the organizations to be supplied. Air transport was provided by the Transport Command for all Signal equipment and supplies to those organizations based in Northern Ireland. Sea transport was also requested, but was not available.

After a study of the plans for the coming operations, the necessity for reviewing equipment and supplies of the units of Third U.S. Army became apparent. These studies by all elements of the Signal Service of the Army, from separate company to battalion, were made from an operational viewpoint. The resulting summary was submitted to Headquarters European Theater of Operations, for approval as an operational requirement for all Army units. The resulting project was verbally approved by Headquarters European Theater of Operations on 1 June.

The supply in the Army area was set at a seven-day level by the Theater. Summaries of all equipment in the hands of Third U.S. Army organizations, based on the latest Troop List, were made. Stocks required for the depot operation were determined by applying the War Department Maintenance Factors to the equipment in the hands of the Army. A thirty-day level of expendable items was obtained in the same manner.

Digitized by Google

Requisitions were prepared for depot stocks to be delivered on the Continent. The period of D ∠ 30 through D ∠ 41 was covered by requisitions and phased into allotted delivery tonnages. The supply of Class II items was made the responsibility of the Communication Zone for the period of D ∠ 42 and on. Requisitions for Class IV requirements and special continental construction projects were made and phased into the operation for the period D ∠ 42 through D ∠ 90.

Spare part requirements for all Signal equipment were based on the Spare Parts Lists of the European Theater of Operations in effect at this time. Requisitions for spare parts were prepared, submitted and phased for all Signal Corps equipment of Third U.S. Army units.

The tonnages estimated to be required for the supply of Third U.S. Army for the period D ∠ 21 through D ∠ 41 are shown on the Tonnage Chart. Requisitions covering equipment and supplies within the tonnage allocation per day were prepared and submitted on 21 April.

CHAPTER 2
PRE-OPERATIONAL ON CONTINENT

Section I - General

After debarkation on the Continent, the Signal Section proceeded to the command post at HEBOU (T 19), north of ST SAUVEUR LE VICOMTE (T 19), on the CHERBOURG PENINSULA. Instructions received indicated the Third U.S. Army would not become operational until the fall of AVRANCHES (T 21). The installation of communication facilities and officially contacting any operational units, was prohibited until we became operational.

The Signal Officers, First U.S. Army and Third U.S. Army, arranged the following matters:

a. The Third U.S. Army would check the CHERBOURG (O 12), ST MALO (S 71), and other German built lines, and inform VIII Corps and First U.S. Army of their location.

b. First U.S. Army to loan one complete radio link to the Third U.S. Army.

c. The retuning of our teletype machines to operate at British speed was considered and rejected.

d. The Signal Officer of First U.S. Army requested and received the use of one Storage and Issue Section of the 579th Signal Depot Company and one Platoon of the 187th Signal Repair Company to operate the Signal Dump at Utah Beach, also Photographic General Assignment Units from the 166th Signal Photo Company.

e. Pole line between ST SAUVEUR LE VICOMTE (T 19) and VALOGNES (O 20) was rebuilt by Third U.S. Army Signal Construction Troops to form a ten-pin open wire lead with standard construction and transpositions.

It was directed that our axis of Signal Communication follow that of the VIII Corps as closely as possible during the latter's advance down the coast.

The following Signal arrangements were made with Advance Section Communications Zone:

a. Third U.S. Army to continue the ten-pair open wire build south of ST SAUVEUR LE VICOMTE (T 19). Supplies would be furnished by Advance Section Communications Zone.

b. Two additional physical circuits were allocated the Third U.S. Army from Lucky Command Post north to XX Corps, thus giving Third U.S. Army one full ten-pin crossarm of pole line.

c. Spacing of arms on open wire leads would be twenty-four inches.

Agreement was reached on the responsibilities of Advance Section Communications Zone and the allocation of circuits to the Army area. Third U.S. Army had full jurisdiction of all circuits to Army rear boundary. Circuits within Army area were to be allotted to Advance Section Communications Zone as requested and as the tactical situation permitted, Advance Section Communications Zone agreed to bring supply lines (common user circuits) to Army rear boundary or to the nearest switching central. This agreement in no way affected previous arrangements made for three commercial news circuits to CHERBOURG (O 12). From information received, it was learned that Press Wireless and McKay Radio Organization had secured licenses for operation of fifteen kilowatt radio transmitters on the Continent to handle commercial dispatches direct to the United States.

The Chief of Staff directed that a continuous check be maintained of message traffic to prevent delays through the transmission of inconsequential messages by electrical means.

One hundred and sixty-four Third U.S. Army trucks were kept on the road hauling and placing Signal supplies. About fifteen percent of our needed supplies had been received, but we were unable to get spare radios either for stock or replacements. An acute shortage of batteries BA 38, used principally in the mine detector SCR-625 and in radio SCR-536, was encountered.

* L/T Long Ton, 2200 Pounds

\# M/T Measured Ton, 2000 Pounds

NOTE: Organizational Equipment Tonnages that cannot be carried in basic load will be taken from Maintenance Tonnages column. Adequate allowances have been made for this.

The Section was advised that the Twelfth U.S. Army Group and Third U.S. Army would become operational at 1200, Tuesday, 1 August. It was predicted that radios, and motor and air messengers, would be the principal agencies of Signal communication during the forthcoming operations. (See Circuit Diagrams and Line Route Map, Annexes 2 and 3)

Section II - Administration and Personnel

Enemy Equipment Intelligence Service (EEIS) Detachment #8, composed of four officers and six enlisted men, arrived on the Continent. The Detachment was attached to the Third U.S. Army.

Four French and four German linguists arrived from the United Kingdom. One each was immediately assigned to each Construction and Operation Battalion and one each to the Signal Section.

Digitized by Google

Section II - Signal Intelligence Service

The following steps were taken to increase the effectiveness of Signal Intelligence:

a. A daily conference, for the exchange of intelligence, was held at the G-2 Section with representatives of the Signal Intelligence Service and 116th Signal Radio Intelligence Company.

b. To provide office space and communication facilities for Signal Intelligence Operations and Army Information Service a six-ton van was outfitted and located in the G-2, G-3 area.

c. Arrangements were made with prisoner of war and document examination teams to forward items of interest to Signal Intelligence Service.

d. Radio Intelligence and Radio Security Monitoring Directives were drafted for distribution.

e. Detailed plans were made for coordinating signal intelligence with higher, lower and lateral headquarters.

f. Although Third U.S. Army was not operational, interception of enemy traffic was begun, and the intelligence derived therefrom was reported to G-2.

A change to Signal Circular 122-1 was distributed permitting the majority of messages of secret or lower classification to be sent in the clear by teletype over Army wire lines.

A change of Signal Circular 44-1 was distributed making the Army Signal Office the office of record for all medium cryptographic material. Formerly, Corps had been sub-offices of record for such material. Under the change they were relieved of this responsibility and became only distribution agencies for such material. Signal Intelligence Service transferred records from Corps Signal Offices to its own files.

The Signal Intelligence Service was reorganized into the following subsections for operational purposes:

a. Signal Intelligence Operations (to coordinate the activities of Signal Intelligence agencies).

b. Documents and Research (to assist the Army Radio Intelligence Company and Corps Signal Service Companies (RI) by obtaining, condensing and disseminating technical data from captured documents and by conducting long-term research).

c. Security and Administration (to handle code and cipher distribution, signal security and administrative duties).

Section II - Communications

Prior to becoming operational as open wire axis, running generally north and south, was pushed south nearly to LESSAY (T 17). A former German naval wire installation was used after the cross arms and wire had been removed. U.S. type arms, wire and transposition were employed. The BRICQUEBEC (O 10) - CHERBOURG (O 12) section was constructed by the Advance Section, Communication Zone. This build provided ten circuits south from CHERBOURG (O 12), and insured communications between the Army Command Post, CHERBOURG (O 12) and cross-channel to the United Kingdom via submarine cable or radio link.

One spiral-four cable installed by the First U.S. Army to VIII Corps was extended by the Third U.S. Army as the Corps displaced. Material was furnished by the First U.S. Army and a supply dump was operated by the 334 Signal Construction Battalion.

During a heavy rain, trouble developed on several telephone circuits and investigation revealed the following points:

a. Spiral-four connectors were lying in water.

b. Test points were unprotected from the elements.

c. Improper clearance had been allowed for vehicular traffic.

These points, and the fact that trouble became stopped working on the circuits at dark, resulted in circuits being out of service for too long a period. Instructions were immediately issued to correct these conditions.

Open wire facilities available, western section of CHERBOURG PENINSULA allocated as follows:

	Maintained	Total Circuits	Allocation
CARENTAN (T 58)-(LA HAYE DU PUITS (T 18)	ADSEC	10	Pole group First U.S. Army 2 Groups, IX AF to XIX TAC 2 Groups - Advance Section Communications Zone
VALOGNES (O 20)-(ST SAUVEUR LE VICOMTE (T 19)	TUSA	5	1 Group First U.S. Army Master Rear-Lucky; Lucky-Marathon Switch. 1 Group First U.S. Army Master Rear-Marathon Switch. Pole Pair Log Ckt terminate at Wire Chief Master Rear; Marathon Switch; Lucky.
MENOU (T 19) TEST-LA HAYE DU PUITS (T 18)	TUSA	10	Pins 1-4; 1 Group Lucky-Monreah Pins 7-10 1 Group Lucky-Comst (also for Forward Displacement Lucky CP) Pins 11-14 1 Group IX AF-XIX TAC Pins 17-20 1 Group XIX TAC-IX TAC Pins 5-6 1 pair Anaconda-Lucky; Lucky-Actor Pins 15-16 1 pair Anaconda-Actor
MENOU (T 19) TEST-MONTEBOURG (O 16)	TUSA	10	To be allocated between Advance Section Communications Zone and Third U.S. Army as required - no conflict in requirements at present or foreseen.

Section II - Supply

On 31 July the following equipment and supplies comprised the total stock in the hands of the Signal Supply Officer, Third U.S. Army.

Wire W-110	6000 miles
Rad Set SCR-300	1
Rad Set SCR-508	1
Rad Set SCR-510	1
Rad Set SCR-511	8
Standard Pole Line	10 miles
SWAL	80 miles
Spiral-four Cable	80 miles
31 Misc items in very small quantities.	

The Commanding General, Advance Section Communications Zone, was informed of the following Signal supply difficulties encountered by Third U.S. Army.

a. Long hauls for all of our supplies (pole line material, SWAL, etc).

b. Labor had to be sent with the trucks to load the supplies.

c. Signal Depots closed after 1800, without officers or top non-commissioned officers.

d. Delays in paper work occurred at the depots. Our personnel often had waited hours for the depots to open for business.

e. Errors in depot paper work once had resulted in sixty trucks out of 164, being returned empty in one day.

All of the above resulted in an excessive delay to Third U.S. Army. Corrective measures were taken immediately.

The following releases were obtained:

Reel Unit RL-26	15
Reel Unit RL-17	64
Converters M-209	50
Telephone EE-8	1000
Wire W-110	All available in depot
Wire W-130	All available in depot
Power Unit PE-175	12
Teletype EE-97	3
Radio Link, Complete 100-mile	1

Any supplies, appearing on our phased requisition, which could be released were released. Advance Section Communications Zone was now handling all supplies to us, furnishing all labor, and making every effort to assist us. Our problems eased somewhat due to the effective and aggressive actions of the Commanding General, and of the Signal Officer, Advance Section Communications Zone.

CHAPTER 3
AUGUST OPERATIONS

Section I - General

The Signal Officer assembled officers of the Communication Subsection and discussed the impending Third U.S. Army drive to the east, with three corps abreast, and the probable Corps axes, with the XII Corps on the right, the XX Corps in the center, and the XV Corps on the left. It was predicted that the Third U.S. Army axis would probably follow that of the XX Corps in the center, since an elaborate under-ground cable system followed this route towards PARIS (S 04). The shortage of Signal equipment and Signal Construction troops precluded the simultaneous build in divergent directions of Third U.S. Army wire axis behind each of the three Corps. The under-ground cable was planned to be opened at points along the Army axis, and rehabilitated open wire, spiral-four, or rapid pole line construction installed to successive Command Post locations of the XII and XV Corps.

The Third U.S. Army moved rapidly eastward soon after becoming operational. The selection and establishment of command posts was a continuous process. The distances involved, and the rapidity of command post displacements of divisions, corps and the army, at times made radio our primary means of communication. Practically ever night the Signal troops, by necessity, became veterans. Close liaison with corps was maintained. This enabled the Third U.S. Army Signal Service to keep abreast of contemplated command post displacements and of the associated wire line changes.

Existing open wire facilities were exploited to the maximum, but frequently it was found more expeditious to lay new circuits.

The axis of Signal communication in effect on 6 August was as follows:

a. THIRD ARMY: LE REPAS (T 23) - POILLEY (T 30) - CHATEAU GONTIER (J 71) - DISSAY SOUS COURCILLON (F 59) - CHATEAUDUN (M 26) - COURTALAIN (R 70).

b. VIII CORPS: VILLEDIEU (T 20) - DOL (S 90) -

c. XII CORPS: LARTILLY (T 22) -

d. XV CORPS: LES CHERIS (T 31) - ST PIERRE LA COUR (T 45) (at 5251, halfway between VITRE (T 35) and LAVAL (T 64) - LAVAL (T 64) - LE MANS (V 46).

e. XX CORPS: ST MARTIN DE LANDELLE (T 40) - VITRE (T 35) - SEGRE (J 50) - CHATEAUNEUF SUR SARTHE (J 80) - BAUGE (P 18).

Information of importance to the Enemy Equipment Intelligence Service (EEIS) that divisions uncovered was acted upon as soon as received. In the early stages of the advance the best sources of enemy equipment were block houses, dugouts, fortifications and command posts. When these fixed defense posts were passed, small scattered supply points and immobilized railroad trains were the most important collection points. One train located at VILLENEUVE SUR YONNE (X 65) yielded five cars of Signal equipment, including radio pack sets, carrier equipment, teletype, spare parts, etc. Items having an intelligence value were studied and reports submitted. Specimens were shipped to G-2, Supreme Headquarters Allied Expeditionary Forces for further study and distribution. All other items were either utilized by the Third U.S. Army if needed or released to the Communications Zone.

The two Signal Battalions (Operation and Construction) previously requested by Third U.S. Army and approved by the Higher Headquarters, were not available at this time. In order to assist us, the Twelfth

DECLASS

Digitized by Google

U.S. Army Group attached one-half of the 256th Signal Operation Company to the Third U.S. Army.

The Signal Troops of the XIX Tactical Air Command (TAC) were unable to provide operational circuits fast enough to keep pace with the Command Post displacements of the Third U.S. Army. Instructions were given that circuits between forward and rear echelons of the Third U.S. Army would be allocated as follows:

1st and third circuits	-	common user.
2d and fourth circuits	-	XIX Tactical Air Command.
All circuits in excess of four	-	common user.

To graphically illustrate the communication problem, photographs have been inserted to show the status of communication agencies prior to each displacement of the Command Post. (See Annexes 4 through 18)

It was emphasized that link radio equipment would be vital to the maintenance of Signal communication between Third U.S. Army and its three Corps in a rapidly moving situation. XV Corps was directed to retain its present link equipment. The next link equipment received was allocated to the XII and XX Corps in that order.

The following policy was announced by the Chief of Staff, Third U.S. Army: Wire will always be installed. When physically possible, telephone will be considered as the most important wire means of communication. The Chief of Staff emphasized that this did not mean that he was against teletype, but that his personal contacts over the phone to the Corps Commanders could not be adequately replaced by any other form of communication.

Another constructing company was requested for the temporary use of Third U.S. Army. The 267th Signal Construction Company was attached.

Signal Officers of the XV and XX Corps were informed of the following matters:

a. "A" Company of the 33d Signal Construction Battalion and the 267th Signal Construction Company would support the XX and XV Corps respectively.

b. The principal mission of these companies was to insure rapid establishment of communications with Army Headquarters, and that when this was accomplished they could be used by the Corps Signal Officer as he desired.

c. The company supporting XV Corps was responsible for maintaining a pool of 100 miles of spiral-four. The company supporting XX Corps had the same responsibility for 150 miles of spiral-four.

The predicted Command Post locations on our present axis, extended, were announced as follows:

JAWVILLE (W 67)
PITHIVIERS (W 96)
SENS (X 66)

The approved procedure for opening toll cables was outlined by Twelfth U.S. Army Group as follows:

a. Requests for necessary work would be made to the Twelfth U.S. Army Group liaison officers.

b. Opening of cables to be done by their crews.

Twelfth U.S. Army Group advised that we could shortly receive a 100-mile radio link system, with operating personnel and trucks. This would include two terminal and three relay stations. The remaining systems requested would be delivered as soon as possible.

On 31 August, wire communication was not established promptly after a command post displacement of the XX Corps. Upon investigation it developed that the reasons for slow installation were as follows:

a. The long move of the Corps Command Post from MONTEREAU (S 98) to LOUVOIS (T 36) was made with insufficient prior warning to the Corps Signal Officer.

b. XX Corps Headquarters vehicles were delayed in crossing the SEINE RIVER because of the destruction of many bridges.

c. Non-receipt of warning orders sent by XX Corps to the Executive Officer of Army Signal Service, who was forward with the advance echelon at the time. The measured distance from Third U.S. Army Command Post to the XX Corps Command Post over the shortest practicable route was 81.2 miles. The Signal Officer, XX Corps, telephoned soon after the Executive Officer returned to Third U.S. Army Headquarters and announced that the XX Corps Command Post would immediately displace again directly east to a point some fifty miles beyond its planned location.

A method was worked out to install a radio link station to span the gap of 120 miles between Command Posts of the Third U.S. Army and XX Corps.

Section II - Administration and Personnel

Moves of Rear Echelon for the month of August were as follows:

1. MENOU (T 15)-BEAUCHAMPS (T 25) 3 Aug 1944 59 miles
   BEAUCHAMPS (T 25)-PITHIVIERS (T 90) 10-11 Aug 1944 32 miles
   PITHIVIERS (T 90)-LA BARONCE (T 51) 17-18 Aug 1944 102 miles
   LA BARONCE (T 51)-COMPOST AUX LOGES (W 85)25 Aug 1944 139 miles

2. Average number of telephones installed per displacement: 70

3. Average cable and wire installed per displacement:

   Field Wire - 11 miles
   5-Pair Cable - 42,000 feet
   10-Pair Cable - 18,000 feet

Section II - Signal Intelligence Service

The Security and Administrative Subsection of Signal Intelligence Service was moved from the rear to the forward echelon when it was found codes and ciphers could not be distributed effectively from the rear echelon.

Due to the expansion of the Army Information Service detachment at Third U.S. Army Headquarters, the detachment moved from the Signal Intelligence Operations van and set up a separate installation at G-3.

On 25 August, Signal Intelligence Service assumed responsibility for direction of the message center. Until that date its only responsibility in connection with the message center was through the code rooms. Third U.S. Army Code Rooms handled an average of 10,000 code groups per day during August.

The following Signal Intelligence communications network was established:

a. Direct teletype circuits from the Army Radio Intelligence Company to each Corps Signal Service Company (R).

b. A parallel radio net for use when teletype circuits were inoperative.

c. A direct teletype and direct telephone line from the Army Radio Intelligence Company to Signal Intelligence Operations.

Signal Intelligence initially was passed by teletype along from the Army Radio Intelligence Company to Signal Intelligence Operations for delivery to G-2. Late in August, however, increased realization of the importance of signal intelligence led to extension of the direct telephone line to the G-2 situation section. The Radio Intelligence Company reported spot intelligence on this wire simultaneously to Signal Intelligence Service and G-2. Telephone reports were followed by teletype reports in greater detail.

(Note: Due to security restrictions prescribed by higher headquarters, results of Signal Intelligence may not be included in this report).

Section II - Communications

The drive of the Third U.S. Army developed so rapidly that it was impossible to establish the wire communication system outlined during the planning phase. Time usually prohibited laying more than one spiral-four to each Corps.

The open wire build completed to LE SAULT (T 17) was extended by spiral-four circuits to the new command post location in the vicinity of LE BIHOREAU (T 26). A switching central was established at this junction point. Construction of the open wire build was discontinued by Third U.S. Army at COUTANCES (T 25). The construction personnel was used to continue the Army axis with spiral-four cable, and to establish wire communications with the corps.

Spiral-four was only available in limited quantities for training. Problems in handling this cable correctly, became evident. Construction teams were instructed in the characteristics of this particular cable. It was emphasized that care must be taken to prevent breaking the inner insulation; connectors must be clean and dry; and each quarter mile section must be tested as layed.

Two SE-8y Repeaters worked satisfactorily over a fifty-five mile length of spiral-four. It was found that on a combination open wire spiral-four installation, this type of repeater would not give satisfactory results.

The Third U.S. Army received its first radio link equipment five days after becoming operational. During the month of August a total of four 100-mile systems were received. Due to the tactical situation radio link provided the most dependable means of communication between Army echelons and from Army to the Corps. Twenty-eight separate radio link circuits were installed and operated over distances totaling 1,175 miles.

Maximum use was made of all the equipment and it frequently was operated point to point without a relay over distances up to seventy-eight miles. Telephone carrier terminals were used in conjunction with radio link. Channels two and four were connected to the switchboard and two teletype circuits were placed on channel three. Channel one was used by the radio operators for engineering purposes. The radio stations were connected to the carrier terminals with spiral-four cable.

During August the Third U.S. Army received twenty-four trained radio link personnel from the Advance Section Communications Zone. Forty additional men from various Army Signal units were trained and used for the operation of radio link.

The Communication Subsection of the Army Signal Service was directly responsible for the installation and operation of this equipment. This action was necessary because the T/O of the Signal Operations Battalion fails to provide for radio link operators, or for frequency modulation repairmen. Using this method the Radio Officer of the Communication Subsection exercised direct supervision and was charged with full responsibility.

During the month of August the Army Command Post displaced eight times. The displacement distances involved were from twenty-three to eighty miles each. The average mileage was forty-eight miles.

On 1 August, CW (Continuous Wave) radio nets were opened to higher headquarters, all major subordinate units, and to the First U.S. Army.

A shortage of radio equipment and operating personnel made it necessary to put more stations into nets than was desirable. At times as many as five stations were netted which resulted in the following problems:

a. Units frequently became widely separated putting them beyond effective ground wave reception, yet too close for twenty-four hour sky wave operation.

b. It was also difficult for an NCS (Net Control Station) to use special antennas in all of the directions required by some nets. However, half wave doublets were used to an advantage.

Initially, several point to point radio nets were used. However, with the frequent moves of the Command Post, and with the time element keeping wire communication to a minimum, it became necessary to use a complete set of radio equipment and operating personnel for each Command Post displacement to insure continuous communication with other units.

Message centers routed a number of 1300 group messages via radio in the early stages of the operation. Most of these messages could have arrived at their destination sooner if they had been sent by motor messenger.

On 15 August the LAVAL (T 64) Wirehead was opened and operated by personnel of the 34th Signal Construction Battalion, a photograph of which is shown on page 7.

Digitized by Google

Section II - Supply

Four truck companies arrived from the United Kingdom loaded with Signal equipment including considerable quantities of spare parts packed in SO-5 chests. Approximately 300 miles of German spiral-four was found in a cave near CHARTRES (S 30). Two-thirds of the wire was brought to our Depot immediately and the balance secured within thirty-six hours.

The 379th Signal Depot Company operated the Third U.S. Army Signal Depot. One depot was established in the vicinity of MONTGARVILLE EN BEAUMONT (T 09) and subsequent locations were at ST JORES (T 28), PONTAUBAULT (T 31), DOMFRONT DU CHEMIN (T 46), LE MANS (V 46), DARGEAU (W 27) and MENDRS (X 27). Using transportation furnished by the G-4 Section, the Signal storage and issue sections made the moves by leap-frogging.

Supplies were furnished from beach dumps and hauled to Third U.S. Army Signal Depots in transportation provided by Advance Section Communications Zone and Third U.S. Army. Requisitions were forwarded by telephone, teletype and messenger direct to the Signal Officer of the Advance Section Communications Zone. Close liaison maintained during this period between Signal Supply Sections of the Third U.S. Army and Advance Section Communications Zone, proved particularly effective in bringing forward the urgently needed items. Initial table of basic allowance shortages and combat replacements could only be partially filled. No spare parts for either radio or wire repair were received.

Signal Supply, excluding wire and spiral-four, was built up from one-half ton to approximately 3000 tons during the month. Fifty percent of this increase was made by Third U.S. Army Signal Supply shipping equipment and supplies direct from base depots in England through our own supply channels, using Third U.S. Army Truck Companies. The balance was furnished by Communications Zone depots on the Continent. The 187th Signal Repair Company was retained at the Signal Depot during the first half of the month because of the lack of parts and supplies necessary for the performance of their mission. During this time, captured enemy equipment was cannibalized. Sufficient spare parts were obtained from this and from cannibalization of our own Signal equipment to provide a minimum quantity for the operation of the Repair Company. The 168th Signal Repair Company was attached, from Advance Section Communications Zone, and with the 187th Signal Repair Company was attached throughout the Third U.S. Army as follows:

a. Thirteen radio repair sections were assigned to Ordnance Maintenance Battalions.

b. Two radio and one wire section were attached to VIII Corps for operation in the Brittany Peninsula.

c. One radio section was attached to the 6th Cavalry Squadron for ZIAN Service.

d. One radio and two wire sections were used to operate and maintain radio link telephone systems within Third U.S. Army.

e. Two radio and three wire sections were stationed at the Signal Depot to repair, rehabilitate, cannibalize, and salvage American and German Signal equipment.

During the first thirty days of operation, the following repair jobs were handled:

187 minor repair and adjustments
459 major repair jobs
10 cannibalization of equipment (American)
198 cannibalization of equipment (German)
11 salvage of equipment (American)
85 installations in armored vehicles

During August, approximately 2000 pieces of captured Signal equipment were processed. Disposition made of this equipment was cannibalization, salvage, or shipment to Communications Zone Depots. All this work was handled by the Repair Company.

Transportation was very critical. Difficulties encountered in maintaining depot installations within the rapidly advancing Army area were further increased by the necessity of providing transportation for hauling supplies from the Communications Zone Depots. Approximately 30% of all supplies received from the Communications Zone was handled by Third U.S. Army transport.

CHAPTER 4
SEPTEMBER OPERATIONS

Section I - General

Gasoline was again a critical item in September. Army Signal requirements, not including that used by Quartermaster truck companies for displacement of signal facilities, were as follows:

ORGANIZATION	GASOLINE IN GALLONS PER DAY
501st Sig Opn Bn	1500
534 Sig Const Bn	650
34th Sig Const Bn	1125
1186th Sig Mad Int Co	525
325th Sig Serv Co	175
Weather Detachment (2)	60
166th Sig Photo Co	165
ZIAIS	50
267th Sig Const Co	500
Army Signal Section	100
TOTAL	4850 Gallons per day

The rapid displacement of command posts, distances involved and terrain features encountered, resulted in the dispersion of trained personnel for Radio Link operation. (See Annexes 19 through 23) Teams that were normally composed of six technicians were forced to operate with two. The Twelfth U.S. Army Group was informed of our urgent need for more personnel.

A directive was issued by the Signal Officer, Third U.S. Army to the Signal Officer, XX Corps that four circuits be built or rehabilitated forward along their axis. Two circuits were to be used for the Army axis and two for successive displacements of Corps Rear Echelon. Army and Corps Signal Construction troops were utilized for this purpose. When four circuits could not be made available, due to the rapid displacement of command posts, arrangements were made for corps to have switching connections to their rear echelon over Army circuits.

The G-3 Section directed that Corps Headquarters would not displace to new locations until at least one talking circuit, either wire or radio link, had been installed and was working to Army.

There were two Army command post displacements, involving long distances, during the month of September and one additional move by the forward echelon from the field to winter quarters in ETAIN (U 47). The first move was to the vicinity of CHALONS-SUR-MARNE (T 54), a distance of ninety miles. The second was to the vicinity of ETAIN (U 47, a distance of fifty-five miles. (See Annexes 24 through 26)

The proposed axis of the Third U.S. Army was: ETAIN (U 47) - NANCY (U 81) - SAARBRUCKEN (Q 57) - FRANKFURT (M 77).

The Army Signal Officer directed that open wire would be used as far as the supply situation permitted. With the advance slowing down it was possible to install a more permanent communication system.

Enemy Equipment Intelligence Service had considerable difficulty securing captured enemy equipment, particularly at depots, and trains. Either guards were not placed by the capturing units, or if placed, were not instructed as to what constituted proper authority for the removal of equipment. During the month of September sixty-nine cars of enemy Signal equipment and several large dumps and depots were located. Twenty-two items were shipped to G-2 for Supreme Headquarters Allied Expeditionary Force disposition and five items shipped to Office of the Chief Signal Officer, Military Intelligence Branch. One hundred and thirty-five items were sent to the Air Technical Intelligence. Sixty-one items, 4,415 radio tubes, 1000 telephone poles, 1200 screwarms and several thousand miles of various types of wire were classified for utilization by the Third U.S. Army. Twelve hundred and fifty-nine additional items of equipment were classified for utilization and released to Communications Zone.

The SCR-160 has been put in production. This artillery set replaces the SCR-600 and SCR-610. The basic difference, between this new set and those it replaces, was that wet cells have been used and it was designed to use a new battery charger. The packaged weight of the SCR-160 is approximately forty-three pounds.

In order to speed the delivery of official war photographs to the rear, advantage was taken of the ADLS, Air Delivery Letter Service. Two flights to PARIS (S 04) at 1015A and 1545A assured fast service. The 1015A plane made connections with the LONDON plane in PARIS (S 04).

The Signal Officer, XX Corps, suggested the use of a coded map, similar to that used by the Commanding General, to enable Corps and Army Signal Officers to talk more freely over the phone. It was felt that the SC-58, facsimile equipment, might be used for this purpose over a simplex circuit.

Section II - Administration and Personnel

At CHALONS-SUR-MARNE (T 54) the rear echelon was located about seven miles from the forward.

Due to the volume of encoded traffic, fourteen additional SIGABA (Converter M-134) Code Clerks for the 501st Signal Operation Battalion were requested from Twelfth U.S. Army Group. This request was based on twelve-hour shift for the men. The Twelfth U.S. Army Group informed us that the additional personnel were not available. It was recommended that a command channel letter be initiated requesting a Table of Organization increase to handle this need. This would be based on statistics of this campaign to date and Twelfth U.S. Army Group would favorably indorse such a letter.

A clarification was made regarding responsibility for the relay of teletype traffic. Several instances were reported where relay traffic was not accepted by Twelfth U.S. Army Group for the Communications Zone, even though our direct line was not operative. The responsibility of Twelfth U.S. Army Group to relay this traffic was accepted.

Digitized by Google

Section II - Signal Intelligence Service

Increased attention was paid to radio security. Twenty-six friendly radio nets were monitored for periods of twelve hours to three days. Signal Intelligence Service analyzed the monitoring work, made reports of violations to the units concerned and kept the Chief of the status of radio security and of corrective action taken.

During September the message center cleared [illegible] incoming and [illegible] outgoing messages, exclusive of official mail. The precedence of the messages was as follows:

	Incoming	Outgoing
Urgent	752	[illegible]
Operational Priority	75	[illegible]
Priority	[illegible]	[illegible]
Routine	[illegible]	[illegible]
Deferred	0	0

It was found that the code room at forward echelon could not be operated at maximum efficiency in an [illegible] due to lack of working space. Consequently, the forward echelon code room was moved to a six-by van. Two additional [illegible] were obtained from Twelfth Army Group on 30 September and installed in the forward echelon code room. This gave four CIPHERS to forward echelon and two to rear echelon. The code room cleared a total of [illegible] groups during the month.

The 777th Signal Pigeon Company arrived on [illegible] to provide pigeon communication to Third U.S. Army. The Signal Intelligence Service was made responsible for its activities. Advance lofts were established near the Command Posts of [illegible] and XX Corps, but birds had not been settled sufficiently by the end of the month to begin tactical communication.

Arrangements were made with Seventh U.S. Army for exchange of Signal Intelligence by radio between it and Third U.S. Army. Daily exchange by liaison officers of technical intelligence data and such Periodic Reports also were arranged.

Signal Intelligence derived in September was particularly fruitful. Details of results obtained may not be reported at this time due to security restrictions.

Section II - Communications

On 4 September the command post of the Third U.S. Army moved from the FORET-DE-HANCY to a woods about eight miles east of CHALONS-SUR-MARNE (T 54). Wire communications between the old and new command posts consisted of two combination systems. The first was composed of rehabilitated French open wire, and spiral-four through TROYES (T 57), then underground cable from that point to CHALONS-SUR-MARNE (T 54) and spiral-four to the command post. The second was rehabilitated French open wire direct from the FORET-DE-HANCY to CHALONS-SUR-MARNE (T 54). A switching central was established at what remained of the commercial repeater station at CHALONS-SUR-MARNE (T 54), after demolition had been carried out by the enemy. Alternate routes were employed in routing the spiral-four cables from DUCKY CHARLIE switching central at CHALONS-SUR-MARNE (T 54) to the command post.

Plans were made to displace to the vicinity of VERDUN (U 26) as soon as wire circuits could be established. Spiral-four cable was laid to VERDUN (T 26) via VALMY (T 05) - CLERMONT (U 05) and French open wire was rehabilitated along the same route. A repeater station at VALMY (T 05) provided terminals for underground cable from VERDUN (U 26) and from REIMS (T 57). Open wire was rehabilitated between CHALONS-SUR-MARNE (T 54) via VALMY (T 05) and REIMS (T 57). On 15 September the new command post of the Third U.S. Army opened in a woods south of ETAIN (T 47) about twelve miles east of VERDUN (U 26). The command post of the rear echelon moved to a location about five miles north of ETAIN (T 47). Communications between the two echelons was maintained by two spiral-four cables with carrier on one of the cables. When the forward echelon moved to a quarters in the town of ETAIN (T 47) two spiral-four cables provided eight voice and one teletype circuit to Rear Echelon. This was accomplished in the following manner.

a. FIRST CABLE:

Circuits one and two phantomed--two circuits.
Teletype simplexed on the phantom--teletype.
Phantom connected to German carrier equipment
TFB-1 and TFB-2--two carrier and one phantom circuit.

b. SECOND CABLE: Circuits one and two phantomed--three circuits.

Rehabilitated French open wire lines were extended south through SOMMESOUS [illegible] to a new switchboard central in [illegible] and serviced our Northern Corps, the XX and XV. The XX Corps, in the vicinity of [illegible] was reached by eight rehabilitated French open wire circuits and two spiral-four cables.

REHABILITATING FRENCH OPEN WIRE

With the concentration of Army Service Units in the vicinity of COMMERCY (U 42), FOUG (U 51) and TOUL (U 61), additional circuits became necessary. Six rehabilitated open wire circuits from VERDUN (U 26) were terminated at FOUG (U 51) and a spiral-four cable was laid from ETAIN (U 47) to the same point. Long range field wire, W-143, was also tried over this route (ETAIN (U 47)-FOUG (U 51) but poor results were experienced due to grounds caused by poor insulation and also to attenuation. Numerous methods were employed in working this circuit, but none of them proved completely satisfactory. Some of the methods were as follows:

a. Line loaded using C-114 loading coils every five-eighths of a mile. Transmission weak due to attenuation of the line (sixty miles).

b. EE-89 repeater placed at the midpoint of the line. A slight improvement was noted.

c. EE-99 repeaters tried at both terminals in conjunction with CF-7 hybrid coils. No appreciable gain in the speech circuit.

d. EE-89 repeaters were installed at the one-quarter and three-quarter points. No improvement over the single EE-89 repeater at the midpoint.

The W-143 circuit was finally abandoned due to the high maintenance factor involved.

On the VERDUN-FOUG (U 26-U 51) open wire line constant maintenance was necessary. Other Signal units, working on the same pole line, were constantly interfering with working circuits. Close coordination with the Advance Section Communications Zone and the Twelfth U.S. Army Group finally eliminated this trouble.

Early in September a CW radio circuit was established with the Seventh U.S. Army which was coming up on our south flank. Complete plans were made to establish a radio link circuit between the two armies and thus provide telephone and teletype communication. Shortly after the initial patrol contact had been made, radio link and carrier terminal equipment was transported to the Headquarters, Seventh U.S. Army and the circuits established. This was the first telephone or teletype communication between any of the units of the two armies. It also provided lateral communication between the Sixth and Twelfth U.S. Army Groups.

A CW radio circuit was also established between the Third U.S. Army and Headquarters Eighth Airforce in LONDON. A total of 64,208 code groups were transmitted and received by CW Radio during the month and fifteen radio link relay circuits were installed and operated over 4402 miles.

Section II - Supply

Third U.S. Army Signal Depot Number 3, at SOMPUIS (T 46), was in operation at the start of the month. Subsequent depots were opened and operated at LE MANS (V 46), SROU (W 17), NEMOURS (A 27), and STE. MENEHOULD (T 95).

Total tonnage received from Communications Zone Depots during the month was as follows:

Requisitioned		1557 Tons
Received - By Com Z Truck	422 Tons	
By Third U.S. Army Truck	380 Tons	
Total Tonnage:	802 Tons	

Continued difficulties of transport and no stock in the Communications Zone Depots of the fast moving items, created serious shortages in the units in the line. Delays in transport often built up the requirements of the organizations to a point where waiting units immediately took all of the incoming load off trucks. Confusion throughout all supply channels was evident and increased by the rapid consumption of wire, batteries, radio losses, and the assumption of supply functions by the Communications Zone from the Advance Section Communications Zone.

On 8 September, Communications Zone cancelled or suspended all current and pending requisitions of the Armies in the field. The loss created by this suspension was never recovered during the month. Shortages became serious and only through the continued assistance and forced operation of the Advance Section Communications Zone Supply Agencies were the Armies supplied.

Repairs to all Signal equipment were continued by the 187th Signal Repair Company. Radio Teams of this unit were attached to Divisions and Ordnance Maintenance Units. Cannibalization and salvage of equipment was continued in order to maintain the equipment in service. No spare parts were received during the month. During the month, the following repair jobs were completed:

389 ea	Minor Repairs and Adjustments
459 ea	Major Repair Jobs
38 ea	Cannibalization of Equipment (American)
5 ea	Salvage
57 ea	Installation in Combat Vehicles
1532 ea	Captured Equipment Processed
1357 ea	Captured Equipment Evacuated to Communications Zone
37 ea	Captured Equipment Cannibalized for Parts
100 ea	Captured Equipment held for Utilization or Parts
457 miles	Spiral-Four Cable Repaired
721 miles	Field Wire, W-110 Serviced

The entire operation during the month was conducted in constant rain and mud. The Depot and Repair Company areas were usually a sea of mud, yet the production of both organizations increased and kept up with the tempo of the Third U.S. Army.

CHAPTER 5
OCTOBER OPERATIONS

Section I - General

With the displacement of the Third U.S. Army command post from ETAIN (U 47) (See Annex 29) to NANCY (U 81) existing commercial telephone facilities were utilized to supplement the normal Army communication network. The Postes Telephones Telegraphes system at NANCY (U 81) was composed of a Strowger dial office and a complete underground cable network.

During this month extensive work was carried out on proposed T/O and E changes based on battle experience. All types of Signal units were canvassed for comments and recommendations. It was felt that only a complete expression of opinion by the actual using organizations would give a true indication as to the adequacy of our T/O's and E's and the changes necessary for operational improvement. Most of the comments of similar organizations were basically in agreement and recommended changes are currently being consolidated for the information and action of higher headquarters.

It was decided that telephone circuits of the VHF Radio Link channels would continue to be plugged out of service except for emergency use when wire circuits were not available. However, the circuits would be tested periodically and shown on our logs as being in service. This would prevent a possible communication channel from being overlooked in an emergency.

The Third U.S. Army Signal Service instituted a weekly information letter. This letter was confined to signal communication and supply items of an administrative nature, and was distributed directly to Corps and Division Signal Officers and Commanders of Third U.S. Army Signal troops.

The Signal Officer of the Communications Zone advised this headquarters that a Film and Equipment Exchange Detachment would be made available to Third U.S. Army. This detachment was composed of one officer and six enlisted men. Their primary mission would be to operate a class "B" film library, and a repair and issue service for 16mm and 35mm projectors. The need for a service of this type had become increasingly apparent. The stable situation of our lines has increased the demand for training films and projectors. Our only source of films had been the Communications Zone Film Library in PARIS (S 04) and the time, distance, and transportation elements involved had materially reduced its value.

During the period 1 October to 31 October the Enemy Equipment Intelligence Service obtained very little captured enemy equipment as no important enemy communication centers were taken by our troops. However, the following items were located and turned over to the Third U.S. Army for utilisation:

1000 ea.	Reels of field wire (single strand, black).
180 ea.	Rolls of open wire #10 or #12 (iron), approximately 1000 ft. per roll.
50 ea.	Reels of cable (lead covered) 12 conductor, approximately #18 wire.
1000 ea.	Reels for field wire peak units (empty spools).
6500 ea.	Telephone poles located at ST. FLORENTIN (T 04), France.
4 ea.	Carloads of #6 steel messenger wire.

Section II - Signal Intelligence Service

By 1 October the birds of the 277th Signal Pigeon Company were settled at the lofts of platoons in III and XX Corps areas. Pigeon communication was handled initially as follows:

a. Birds were supplied to using units through message center.

b. When messages were received at the loft they were telephoned to message center, where they were deciphered and delivered.

c. The original copy of the message was forwarded to message center by scheduled messenger.

The message center handled 8982 messages by electrical means. These were broken down as follows:

Means	Outgoing	Incoming	Total
Radio	679	163	842
Teletype	4388	3752	8140
Total:	5067	3915	8982
Precedence			
Urgent	428	506	934
Operational Priority	3357	1072	4429
Priority	1059	996	2055
Routine	523	1261	1784
Deferred	0	0	0
Total:	5067	3915	8982

The code room handled 109# messages. On an average it required one hour per message in the code room. A total of 420,783 groups cleared the code room. These were divided into 183,142 incoming groups and 223,641 outgoing groups.

Radio nets of Army Information Service were monitored extensively, since the 3-5 information passed on the Army Information Service nets would provide a concentrated source of information to enemy signal intelligence. When some weaknesses were noted, the Commanding Officer of the 6th Cavalry Group (which operated Army Information Service) was approached directly and the following program was worked out:

a. Army Information Service set up its own monitoring stations to maintain a constant check on security.

b. Signal Intelligence Service loaned one traffic analyst to 6th Cavalry Group to assist in setting up its monitoring system and to explain need for security to operators.

c. Signal Intelligence Service decryptographed a week's M-209 traffic of Army Information Service and pointed out cryptographic violations found.

d. Army Information Service instituted intensive training of personnel on security.

Almost immediate improvement in security was noticed; and by the end of October the Army Information Service nets were rated as very secure.

In all, Signal Intelligence Service analyzed logs obtained from the monitoring of fifty-four radio nets in Third U.S. Army zone. Violations were reported to the responsible organizations for corrective action and nets with frequent violations were re-monitored to insure that proper corrective action was being taken.

Due to the more static type of operations the detachment "A" of Signal Intelligence Service at the Army Radio Intelligence Company was consolidated with the remainder of Signal Intelligence Service when Third U.S. Army moved to NANCY (U 81). This arrangement permitted better coordination of activities of Signal Intelligence Service under the tactical conditions that prevailed.

Signal Intelligence Division, Communications Zone, made two SIGCUM cryptographic machines (for automatic and direct encipherment and decipherment of teletype traffic to Paris headquarters) available. A six-ton van was obtained for the 304st Signal Operation Battalion and the machines were installed in this. The SIGCUM's were expected to speed up secret text traffic and remove some of the heavy load of traffic from the code room.

Due to tactical conditions, more signal intelligence was derived during the first half of October than during the second half. Details of the month's signal intelligence will be given in a subsequent chapter, after security restrictions have been relaxed.

Section II - Communications

The command post of the Third U.S. Army displaced to NANCY (U 81) on 11 October. Prior to that time two construction centers were installed in NANCY (U 81) and were known as the EAST and WEST wireheads. These wireheads were also used as dispatch points for maintenance teams.

Arrangements had been made to use the facilities of the Postes, Telephones Telegraphes. The commercial telephone system in NANCY (U 81) consisted of a "Strowger, Step by Step" 7000-line dial office. The Germans had isolated a 1000-line group for the exclusive use during the occupation of NANCY (U 81). This group was thoroughly checked to insure complete disconnection from the rest of the system and then put into service for the military installations. The local telephone system had a complete underground cable distribution system that was in fairly good condition with the exception of two sections across the CANAL DE LA MARNE AU RHIN and LA MEURTHE RIVIERE which had been blown out. These cables were repaired and an additional 5000' of 22#-pair cable was laid from the command post to a nearby commercial underground cable run. The 22#-pair commercial cable, which ran from the Postes Telephones Telegraphes office to the west wirehead at LAXOU (U 81), was intercepted and split between Lucky and Lucky Rear command posts. This provided 112-pair in each direction to each command post. All the material needed for this project and also the dial subsets needed were furnished by the Postes Telephones Telegraphes.

Third U.S. Army Signal personnel handled the work in connection with the installation and maintenance of all dial lines used for military purposes including those used by the XIX Tactical Air Command, XII Corps and miscellaneous Army and Corps troops. A Postes Telephones Telegraphes employee was assigned to each installation team during the initial phase of this work to assist in locating cable terminals and cross-connect boxes and to familiarize the army personnel with the French cable systems. These teams completed 202 work orders during the period 1 October to 8 November. The maintenance of the dial central office equipment serving the military 1000-line group was taken over by Third U.S. Army Signal personnel in mid-October. Army maintenance personnel, dispatchers and an interpreter were kept on duty at all times in the equipment room of the Postes Telephones Telegraphes building.

In this particular office, individual line message registers were the only method available for recording calls handled by the dial equipment. Since these registers only record the completed outgoing calls on each line the totals given below cannot be directly compared with peg counts which also consider "Busy Lines" and "Don't answer".

TOTAL COMPLETED CALLS

ALL MILITARY LINES 1 October to 6 November 52,260

TOTAL OUTGOING COMPLETED CALLS

On LUCKY TRUNKS 1 October to 6 November 10,104

On LUCKY REAR TRUNKS 1 October to 6 November 5,140

In addition to the automatic exchange the headquarters of the Third U.S. Army was served by a four-position TC-10 switchboard which handled local calls and a three-position TC-10 switching central called LUCKY TOLL for switching trunk calls.

During the months of September and October 1,375 miles of W-110B and 742 miles of spiral-four were laid by Headquarters Third U.S. Army Signal troops.

Few changes were made in VHF Radio Link circuits during the month due to the stable situation. (See Annexes 30 and 31) Five new circuits were installed and operated over 204 miles.

CW radios at Army transmitted and received a total of 140,191 code groups during the month. All stations at Army Headquarters were remoted from a central point and up to five transmitters were operated by one power unit. The practice was developed of running a PE-75 for four hours and then switching to another power unit. This has not only extended the life of the unit, but also made sets available for emergency use. Another result attained by central point remoting was the closer grouping of transmitters with no interference from key clicks.

Section II - Plans and Operations

A definite shortage became evident in communication personnel replacements for all branches, and of those received many were not fully qualified in their particular specialty. A conference was held with officers of the Personnel Division, Signal Section, Communications Zone to determine their policy and the existing facilities available for technical training [illegible] that the only radio operators

DECLASSIFIED

Digitized by Google

school on the Continent was a small one operated by the Ground Force Replacement System. As far as known there were no school in operation for training linemen.

A command channel letter was initiated by this headquarters to European Theater of Operations U.S. Army requesting a quota at this school for untrained men already assigned to the Third U.S. Army. It was further requested that provisions be made for training linemen and radio operators to fill our estimated monthly shortages.

Section II - Supply

Third U.S. Army Signal Depot Number 6, at STE. MENEHOULD (T 96), was in operation at the start of the month. Subsequent depot locations were at JEANDELIZE (U 56) and TOUL (U 61).

Tonnages received from Communications Zone Depots during the month as follows:

Requisitioned		2100 Tons
Received - By Com Z Transportation	2189	
By Third U.S. Army Trucks	498	
Total Tonnage:	2687	

The above tonnage figures include pole line hardware and bulk shipments of wire, D.I., and copper, for line work. Operational supplies for troop units, such as radio tubes, batteries, spare parts, mast sections, etc., were seventy-five percent back ordered. The emphasis placed on the tonnage delivered to the army, completely distorted the Signal Supply picture in the Communications Zone, inasmuch as one ton of radio spare parts were on occasion, worth XXXX tons of pole line hardware. The use of tonnage figures for Signal Supply Statements of Delivery and Status of Stocks constituted an erroneous picture of the Army status of Signal Supply.

Inadequate stocks of fast moving items and the supply of these items on a day-to-day basis proved entirely inadequate. On four occasions during the month, we held but a one-day level on items of this nature and at no time did we reach a ten-day level.

Transportation difficulties continued to harass the supply operation. Tonnages allocated for the delivery of Signal supplies confused the picture and rail transport became uncertain.

Repairs to all Signal equipment were continued in the field by the Signal Repair Company. At the end of the first week we lost the services of the 156th Signal Repair Company when it was assigned to the Ninth U.S. Army. Radio Repair Teams of the 187th Signal Repair Company were attached to Divisions and Ordnance Maintenance Units in the field and stationed at the Signal Depot. No spare parts were received during the month. Salvage and cannibalization continued to produce the necessary items for repair work. The repair activity for the month is as follows:

401 ea Minor Repairs and Adjustments
284 ea Major Repair Jobs
45 ea Cannibalization of Equipment (American)
31 ea Salvage
21 ea Installation in Combat Vehicles.

CHAPTER 6
NOVEMBER OPERATIONS

Section I - General

The offensive drive of the Third U.S. Army which started 8 November, was supported by the best wire communication network available since the opening of the campaign in August. During the month of October the Section had utilized all time available in strengthening communication, planning, and in training Signal troops. During this time open wire leads had been constructed and carrier circuits were in operation to each corps. As the troops advanced during the month of November 442 miles of field wire and 226 miles of spiral-four cable were laid by Third U.S. Army Signal troops. Nine hundred sixty-six wire miles of open wire were placed. It may be said that during the month of November communications facilities were working at their highest peak of efficiency since the opening of the campaign in August.

The Signal Supply situation continued to be a major problem. Of 3100 tons of essential equipment requisitioned, 2382 tons were received. Nearly one-half of the tonnage released to us from the Communications Zone Depots was transported in Third U.S. Army vehicles. Items of radio equipment were in critical supply, but the shortages of these items were partially, and in some instances, completely overcome by modification of other items on hand, and by manufacturing done by our Signal Repair Company. These manufacturers, together with spare parts received from the Spare Parts Depot which had been established in PARIS (S 04), considerably eased the supply problem.

Enemy Equipment Intelligence Service reported that it had been found generally throughout the territory liberated during the November offensive that no equipment of value, either for utilization or intelligence, had been left behind. The enemy, while engaged largely in defensive operations to provide time for withdrawal of troops into Germany, had removed all Signal Equipment that might possibly have been of value to us.

The 166th Signal Photo Company was mentioned in a message from Supreme Headquarters Allied Expeditionary Force, Public Relations Division, and was congratulated for its excellent still picture and newsreel coverage of the launching of the November drive.

Section II - Signal Intelligence Service

On 11 November the following requirements were established for teletype lines over which secret messages could be sent in the clear:

a. Printer circuits must be worked over CF-2, which, in turn, would be working on channels 2, 3 or 4 of the CF-1.

b. Lines must be patrolled frequently at irregular intervals and checked thoroughly for evidences of tapping.

c. Terminal points must be operated by Allied military personnel.

d. Main frames, repeater stations and other such points must be kept under constant military supervision.

Early in November the Signal Intelligence Officer inspected the 3325th Staff Information and Monitoring Company (SIAM), which had just arrived in the United Kingdom for training before taking over the functions of Army Information Service in Third U.S. Army. It was found that there were virtually no radio operators in the Company, and that it would require at least three months of training before the unit could be put into the field. Following is a resume of events leading up to the presence of the 3325th SIAM Company in the United Kingdom:

SIAM Service was first used in the Seventh Army in Sicily. Although it was improvised, it was very successful. For the past twelve months efforts had been made in the European Theater of Operations to develop an authorized SIAM Service for each field army. After much discussion regarding an appropriate T/O and T/A the War Department on 25 May 44, approved a T/O and T/E which was similar to the Fifth Army SIAM Company, though somewhat modified. At this time the European Theater of Operations was advised that personnel for these companies could be available only if certain other troop listings of an equal number of troops were removed from the troop list. Twelfth U.S. Army Group chose to strike off certain Cavalry units. The four SIAM Companies for use in this theater were activated from two Cavalry Groups. Inasmuch as First U.S. Army and Third U.S. Army desired their companies as soon as possible, request was made by the Theater to the War Department to send two of these companies over to the United Kingdom immediately. This was done and the personnel of the SIAM companies in the United Kingdom consisted for the most part of tank drivers, and gunners. A very small percentage of radio operators existed against a total requirement based upon a company consisting of four corps platoons, eight division platoons, and four armored division platoons. Four hundred radio operators and forty code clerks were required.

As Third U.S. Army approached Germany and also began to use French commercial telephone facilities, telephone security became of greater importance. Signal Intelligence Service began recording telephone conversations in the headquarters and made reports of security violations to the Chief of Staff and G-2.

Sixty-eight radio nets were monitored, but due to the tactical situation only twelve were active enough for complete checks of their security. Violation reports were made on six of these.

The code room required an approximate time of forty-five minutes per message to handle 1701 messages, which include 458,355 code groups. There were 144 outgoing messages, which required 114,240 code groups, 1337 incoming messages which required 345,766 code groups.

Due to general radio silence during early November radio intelligence was not active with the exception of one special mission, but toward the end of the month a more active tactical situation brought about intelligence of importance.

Detachment "G" of the 21st Weather Squadron began making monthly climatical studies to be published in the G-2 Periodic report. The purpose of this study was to furnish commanders with data on weather conditions for long range planning.

The 477th Signal Pigeon Company made its first displacements of lofts since beginning operations. Lofts were moved on 18 November from TOUL (U 61) to MAIRANCE (Q 24), and on 25 November from a point west of NANCY (U 81) to CHATENOIS (U 98). After these moves it was ascertained that lofts could be displaced and birds settled, ready for use, in approximately one week.

During the month of November, Third U.S. Army Message Center handled a total of 8250 messages by electrical means. The precedence of these was as follows:

Precedence	Outgoing	Incoming	Total
Urgent	307	482	789
Operational Priority	2681	1035	3729
Priority	1056	960	2016
Routine	547	1149	1696
Deferred	0	0	0
Total:	4604	3626	8250

Of these, 3655 incoming and 4925 outgoing were handled by teletype. Radio was used for 371 incoming and seventy-nine outgoing messages.

Section III - Communications

Headquarters Third U.S. Army remained in NANCY (U 81) during November. Advance Section Communications Zone was building an open wire lead from NANCY (U 81) north to DOMPAIRE (U 06) through FLAVIGNY (U 80), ABAINCOURT (P 69), ANCERVILLE (P 52), then to LIEGE (K 42), Belgium. The 834 Signal Construction Battalion, part of Third U.S. Army Signal troops, assisted in the building of this lead by placing the second arm from NANCY (U 81) to DOMPAIRE (U 06) to FLAVIGNY (U 80). This terminal lead was shared by Advance Section Communications Zone, XIX Tactical Air Force, Twelfth Army Group and Third U.S. Army. Third U.S. Army used the six positions seventeen to twenty as far as MARS LA TOUR (P 66). Between MARS LA TOUR (P 66) and FLAVIGNY (U 80) the entire second arm was available for Third U.S. Army use. On these two circuits (seventeen to twenty), two carrier systems were operated with the use of two CF-7 hybrid coils at the terminal in NANCY (U 81) and two CF-7 hybrid coils at a new switch established at DOMPAIRE (U 06) called LUCKY STRIKE. LUCKY STRIKE switch was established in order that a good system of wire communication could be had from NANCY (U 81) to the III Corps located in LIGNY (U 47), and the XX Corps which, although located in DOMPAIRE (U 06) at the time, was to move northeast

Digitized by Google

to envelop LUCKY (U 85). This switch also served some Army units located in the vicinity of CONFLANS (U 66). Spiral-four cable that was previously laid between METZ (U 47) and NANCY (U 81), was intercepted and another carrier system was installed using this cable between LUCKY CHARLEY and LUCKY at NANCY (U 81). This resulted in three carrier systems working between NANCY (U 81) and LUCKY CHARLEY plus twelve physical circuits without repeaters or carrier routed as follows: Six on the underground cable between NANCY (U 81) and LUCKY CHARLEY and six on the underground cable between NANCY (U 81) and ABREVILLE (U 76) and then over French rehabilitated open wire to CONFLANS (U 66).

Army Corps axes were extended by building new open wire leads. A one-arm open wire build started at PLAPPEVILLE (U 84); intercepted the second arm of the Advance Section Communications Zone lead at this point, and was built east to LANTEFONTAINE (U 67) then northeast through PONTOY (U 78), ABREVILLERS (U 78), and then southeast to THIONVILLE (U 66) and was serviced by carrier circuits over this open wire lead between LUCKY CHARLEY and COMET.

As the XII Corps moved northeast from NANCY (U 81) a two-arm open wire build was constructed northeast from NANCY (U 81) to CHATEAU SALINS (U 14). XII Corps Headquarters was located in this town and carrier circuits were operating to this Corps over the open wire lead. This lead was extended northeast along the main highway and by the end of November reached FAULQUEMONT (U 14), which was beyond the most proposed move of the XII Corps Headquarters Command Post, located in MORHANGE (U 14) at this time. This second arm of the two-circuit open wire lead served the various Army units in that vicinity in addition to serving the XII Corps Headquarters.

The north axis serving the XX Corps was also extended east towards MOULINVILLE (U 17), which was the anticipated next location of the XX Corps Command Post.

About the 21st or 22nd of November the city of METZ (U 47) was taken and plans were immediately initiated to set up a switchboard in this city to serve any Army units which might move in this vicinity. Although many German forts were still active west of the city, spiral-four circuits were under construction into METZ (U 47), approximately the city from the east. A reconnaissance of the Postes Telephones Telegraphes building in METZ (U 47) disclosed that although the building has been damaged considerably, the Signal installation was worth test and cable could be used after major repairs have been completed to the cable itself.

During the month of November there one hundred forty-six miles of field wire and two hundred twenty-six miles of spiral-four cable were laid by Third U.S. Army Signal troops. For the same period four hundred forty-five miles of field wire and one hundred ninety-four miles of spiral-four cable was recovered by Third U.S. Army Signal troops. Nine hundred sixty-six wire miles of open wire were placed. This consisted of forty-five miles of pole line of which thirty miles were two-arm and fifteen miles were one-arm builds. Two-hundred miles of one-arm build were placed on existing poles. Wire diagrams for the month of November are contained in Annexes 3A and 3B.

Section II - Supply

Third U.S. Army Signal Depot Number 7, at [illegible] (U 84), was in operation at the start of the month. Subsequent depots were opened at METZ (U 61), VAUCOULEURS (U 40), and FLORANGE (U 50).

Tonnage received from the Communications Zone depots during the month were as follows:

Requisitioned	SIGC Tons
Received - By Com. - Trans.	1137
By Third U.S. Army Trans.	11%
By Com Z Air	6%
Total Tons:	2456

During the first four days of the month, one hundred twenty trucks from Third U.S. Army were sent to the Communications Zone and picked up seven hundred thirty-eight tons of selected items, such as dire Assay, batteries, [illegible], and 3 Patch tanks, etc., which enabled all units to fulfill their requirements. Although this shipment was small, created a little reserve for [illegible] during the following fifteen days, all Communication zone depots [illegible] and the reserve accumulated was exhausted. Shortages of most critical items, tubes, batteries, Radio SCR-536 and [illegible] were serious. Wire W-110 and W-130 was being received in [illegible] hundred miles at a time and [illegible]

Communications Zone was issuing wire to Third U.S. Army on the basis of four hundred miles of W-110 and one hundred miles of W-130 per day. Consumption in the field forces exceeded this allocation and averaged four hundred seventy-five miles per day for W-110 and one hundred fifty miles per day for W-130 when both were available for issue.

Transportation continued to be the major problem. Supplies were sporadic and spotty in delivery, and on a day-to-day basis. Third U.S. Army stocks were below a ten-day level on the fast moving items. Shortages of radio tubes for the SCR-284, Radio, mast sections for the SCR-284, 500, 508, 536, and 193 Radios, Adapters, M-399, for the 600 series radios, Batteries, Radio, for the rocket Launcher, Battery, BA-227, for the Flame thrower and miscellaneous items were partially, and in some instances completely overcome by modification of other items and manufacturing processes of the 157th Signal Repair Company. Fifty-two Radios, SCR-284, were stripped of radio tubes, mast sections, power packs, and fuses. One hundred Transmitters, BC-604, were stripped of tubes and fuses. Three hundred Control Boxes, BC-605, were stripped of plugs. All material obtained was issued to troop units for maintenance of their radio equipment.

DEPOT NO 10 AT FLORANGE

Third U.S. Army obtained the supporting services of the 157th Signal Repair Company during the month. This organization and the 157th Signal Repair Company performed all of the repair and maintenance work on radio and wire equipment of the army. Radio Repair Teams were attached to Divisions and Ordnance Maintenance Units. During the month, the following repair jobs were completed.

691	Minor Repairs and Adjustments
174	Major Repair Jobs
212	Cannibalizations of Equipment
75	Installation in Combat Vehicles
1	Salvage

Spare parts were received for the first time since this campaign started. The installation of a Spare Parts Depot in PARIS (U 04), which was ably operated by Communications Zone, enabled the Repair Company to obtain the parts needed for immediate repair and replacements on most of the equipment of the organizations. This supply, however, was not adequate to meet all of the needs of the units and rehabilitation increased to [illegible] equipment.

The operation and ably directed employment of the repair Company [illegible] to the full extent of the technical ability and ingenuity of the personnel, has enabled Third U.S. Army Signal Service to maintain a satisfactory radio and Wire, Point [illegible] Relay, Carrier and Open Wire, on a basis of ninety percent service ability. This has been accomplished only by constant attention to the needs of the service by all members of the Repair Company. Lack of spare parts were partially overcome by cannibalization. The ability to get material and [illegible] to the repairs required always a major problem.

CHAPTER 7
DECEMBER OPERATIONS

Section I - General

The Signal Supply situation was, in general, growing worse during the month of December. A satisfactory solution of the problem seemed to hinge on the use of the port of ANTWERP (U 17). In view of the large capacity of this port and the fact that great quantities of equipment were in shipments, the supply strain was expected to be eased in the near future.

[illegible] were extensive use of facsimile transmissions (Wi-LEN) was started as an [illegible] means of communication.

[illegible] December XII Corps became operational and displaced its command post from ETAIN (U 47) to METZ (U 61) on the following day.

There were various postponements and changes in projected displacements of Army command posts due to difficulties encountered in locating suitable command post and building sites. By mid-December [illegible] installations had practically been completed at 8th [illegible] Army. [illegible] the proposed command post site for this headquarters. However, the German counter-offensive, which got under way on 16 December, caused a radical change in Third Army's tactical situation. The advance party of headquarters, Third Army was instantly recalled from [illegible] and the Third Army Forward Echelon subsequently displaced to [illegible] on 19 December. At the same time, as a result of the tactical situation, XII Corps reverted to Third U.S. Army. With the aid of existing [illegible] lines, [illegible] additional, and local network in [illegible] Metz area, communications were quickly established with [illegible] headquarters, lateral and subordinate units.

Section II - Administration and Personnel

Twenty-four wire recovery teams were requisitioned from Communications Zone. Three of these teams were expected to arrive shortly.

A plan was evolved to recover Third U.S. Army Headquarters personnel for reindoctrinement of Third U.S. Army infantry units. The Signal Section furnished three enlisted men for this purpose.

Section III - Signal Intelligence Service

Early in December a detachment of the 310th Signal Service Battalion consisting of one officer and twenty-eight enlisted men was [illegible] to Third U.S. Army by Twelfth U.S. Army Group for extensive security monitor duty of Third U.S. Army facilities. The detachment maintained amplitude modulated nets from a site near a corps headquarters and monitored frequency modulated nets from a mobile team located near forward positions. Lists of violations were given daily to signal officers concerned and duplicate logs were forwarded to Signal Intelligence Service for analysis. As a result of this monitoring:

a. Three thousand eight hundred and eighty-one transmissions and seventy-two messages were analyzed.

b. Analysis of a total three thousand three hundred and sixty security violations of all types (since even transmission might contain several violations, a direct comparison of the number of violations with the number of transmissions would present a false picture).

c. The most common violations were found to be excessive and unnecessary transmissions.

d. Reports of the analysis of logs were forwarded through technical channels for the information and corrective action of signal officers concerned.

[illegible] traffic [illegible] by [illegible] a total of 18 messages was deciphered in

DECLASSIF[illegible]

Digitized by Google

which 276 cryptographic violations were found. These consisted chiefly of stereotyped beginnings and endings. Units were notified of the violations and directed to train cryptographic technicians more thoroughly in writing messages.

Capture of prisoners of war who had served in the German Signal Intelligence organization gave interrogators from Signal Intelligence Service an opportunity to learn of the organization which opposed it. The "Regimental Chart", it was learned, had an extensive organization for intercepting, analyzing and evaluating allied traffic. A full report on this organization was made to higher headquarters.

Two officers of the Signal Intelligence Service, and one officer and one enlisted man of the 115th Signal Radio Intelligence Company were awarded the Bronze Star on 3 December for work on one outstanding signal intelligence mission. The 110th Signal Radio Intelligence Company was awarded the Meritorious Service Plaque on 3 December for its consistently excellent performance in producing signal intelligence.

The German counter-offensive late in December caused a period of rapid planning. A request was made for the attachment of one extra pigeon platoon to the 277th Signal Pigeon Company; 3000 additional birds were requested for expected heavy demands on pigeon communication. Requests were also made for the following: A high priority for bringing the 3259th Signal Service Company to France for III Corps; the addition of another messenger team for the message center, and stepped-up training of the Signal SIAM Company in England to replace the Army Information Service, which was disbanded when Sixth Cavalry Group was employed tactically.

Due to increased tactical traffic as Third U.S. Army met the German counter-offensive, and the reduction in classification of wire lines due to enemy agents operating behind our lines, the code room on 25 December handled its heaviest load since Third U.S. Army became operational. On that day the code room handled 174 messages. Code groups totaled 45,615. The average time a message was in the code room was sixty-one minutes.

The code room record for the month was as follows:

	Incoming	Outgoing	Total
Number of messages	2278	547	2825
Number of Code Groups	570290	103755	674045

The message center record for the month was as follows:

Means	Outgoing	Incoming	Total
Radio	46	516	562
Teletype	5581	6473	12054
*Messenger	62	18	80
Total:	5689	7007	12696
Precedence	**Outgoing**	**Incoming**	**Total**
Urgent	324	859	1183
Operational Priority	3317	2218	5535
Priority	1361	2124	3485
Routine	685	1795	2478
Deferred	2	3	5
Total:	5689	7007	12696

* Represents only messages prepared for possible electrical transmission, but delivered by messenger for various reasons. Does not include packages and official mail.

Section II - Communications

On 1 December the LUCKY LOG switching central was placed in operation in METZ (U 85). This switching central was taken over by the III Corps and renamed CLUTCH on 7 December, at which time the III Corps command post opened in METZ (U 85) and closed in ETAIN (U 47).

During this period the Headquarters Third U.S. Army was located at NANCY (U 81). A special "Red Line" wire telephone system was set up by the Twelfth U.S. Army Group which functioned as a command network. The purpose of this network was to establish quick telephone communication between the Commanders of the Twelfth U.S. Army Group and the Commanders of the subordinate armies, and between Army Commanders. Calls to and from this network received "clear the line" precedence.

The two-arm open wire pole line projected northeast from NANCY (U 81) was extended to ST. AVOLD (Q 25) and was to extend further forward along the army axis consistent with the tactical situation. The installation of communications for a Third U.S. Army advance command post in ST. AVOLD (Q 25) was begun on 16 December. Twelfth U.S. Army Group was also extending a two-arm open wire pole line from VERDUN (U 26) to ST. AVOLD (Q 25). This lead was to connect with the East-West open wire pole line that existed between VERDUN (U 26) and a point west of METZ (U 85). The final juncture of these two leads could not be effected because the area just west of METZ (U 85) was not cleared of German resistance. Some German fortifications were still occupied in this area in the early part of December. Wire communication to the advance Third U.S. Army command post at ST. AVOLD (Q 25) was constructed rapidly. By mid-December there existed the NANCY (U 81) - ST. AVOLD (Q 25) two-arm open wire lead, the NANCY (U 81) - MERLEBACH (Q 56) open wire lead, the METZ (U 85) - ST. AVOLD (Q 25) two-arm open wire Eagle lead (approximately 50% complete), a CONFLANS (U 66) - THIONVILLE (U 88) - BOUZONVILLE (Q 17) one-arm open wire pole line and sixteen underground cable pairs, METZ (U 85) - ST. AVOLD (Q 25). The internal telephone system of the proposed command post at ST. AVOLD (Q 25) had been practically completed. Wire communications had been established between the advance command post and all corps; the XII Corps Headquarters located at SARALBEN (Q 44), the XX Corps Headquarters located at THIONVILLE (U 88), and the III Corps Headquarters located at METZ (U 85).

A major German counter-offensive was launched on the First U.S. Army front which extended eventually to include the following salient:

HALMEDY (K 80) - STAVELOT (K 60) - LAROCHE (P 47) - MARCHE (P 28) - ROCHEFORT (P 27) - BEAURAING (P 07) - ST. HUBERT (P 36) - BASTOGNE (P 55) - ECHTERNACH (L 03).

On 19 December the advance party and communication troops operating at the advance command post in ST. AVOLD (Q 25) were recalled. On 20 December a small command group, which included a limited number of Signal Staff and operating personnel, left NANCY (U 81) to establish a LUCKY TAC command post in the city of LUXEMBOURG (P 81). Initial circuits to this new command post were quickly established by the use of existing facilities furnished by Twelfth U.S. Army Group. Underground cable circuits were extensively used to connect LUCKY TAC Headquarters with LUCKY CHARLEY switch at CONFLANS (U 66) and extended from there to NANCY (U 81) via carrier. Other circuits were rerouted through XX Corps at THIONVILLE (U 88), then to LUXEMBOURG CITY (P 81) via underground cable. Two additional open wire circuits were obtained from Advance Section Communications Zone for use from NANCY (U 81) to AUBANGE (P 61) to include a complete CF-1 carrier system. This made available three additional talking circuits from NANCY (U 81) to AUBANGE (P 61) and then to LUXEMBOURG CITY (P 81) via underground cables. The other channel was used for CF-2 teletype carrier terminals which were located at NANCY (U 81) and LUXEMBOURG CITY (P 81) respectively. Twelfth U.S. Army Group Tactical Headquarters, located in LUXEMBOURG CITY (P 81), established a switching central called Bastille Switch in the Postes Telephones Telegraphes building in LUXEMBOURG CITY (P 81) in order to handle the overflow of circuits which were rapidly being routed to this city. It was apparent that the communication system was growing rapidly and that the small force of Signal personnel operating at LUCKY TAC would be unable to efficiently handle this new situation. Therefore, on 21 December the remainder of the Communication Section moved to LUXEMBOURG CITY (P 81) leaving an officer and one enlisted man in NANCY (U 81) to coordinate the work at this point. The communication installation at ST. AVOLD (Q 25) was not used. The personnel and equipment were moved to LUXEMBOURG CITY (P 81).

LUCKY TAC was located in a school building on the north side of the city of LUXEMBOURG (P 81). Preparations were immediately effected for the establishment of a Third U.S. Army Command Post in larger quarters. The underground cable within the city was used extensively for local, long local, and trunk circuits. One hundred fifty pairs of an underground cable leading from a point close to the command post to the Postes Telephones Telegraphes building were used. From the Postes Telephones Telegraphes building underground circuits radiated in all directions and in many cases to the outskirts of the city where they were connected to rehabilitated open wire or field wire circuits serving various units. The wirehead was located in the basement of the building from which point many spiral-four cables and other field wire circuits were constructed on suspension wire supported by poles to a test point called "Round Point Test" located on the northwest corner of the command post site. From there these cables radiated in three major directions to the outskirts of the city and were also suspended on messenger wire. Local telephone service to establishments within the city were serviced by underground cable pairs terminating in the Postes Telephones Telegraphes building and thence connected to pairs of the one hundred fifty pair cable terminating in the wirehead. LUCKY TAC closed on 28 December and the main command post of LUCKY

closed at NANCY (U 81) and opened on the same date in the new headquarters building in LUXEMBOURG CITY (P 81). Corps Headquarters was serviced by spiral-four cable, using carrier. Third U.S. Army's drive was to the north with the VIII Corps at the extreme west, the III Corps in the center, the XII Corps in the northeast and the XX Corps on the southeast protecting the southeast flank. The VIII Corps was assigned to Third U.S. Army. Its headquarters was located at FLORENVILLE (P 22). III Corps Headquarters was located at ARLON (P 50), the XII Corps Headquarters was located in LUXEMBOURG CITY (P 81), and the XX Corps Headquarters remained in THIONVILLE (U 88). A signal construction platoon of the 33d Signal Construction Battalion was attached to each corps for the purpose of establishing and maintaining the respective Army-Corps axes, as the tactical situation permitted. The new tactical problem was studied and plans were made for the extension of the possible army axis.

During the month of December two hundred seventy-four miles of field wire and six hundred thirty-six miles of spiral-four cable were laid by Third U.S. Army Signal troops. For the same period four hundred fifty-five miles of field wire and sixty-two miles of spiral-four cable were recovered by Third U.S. Army troops. Three hundred and six wire miles of open wire were placed.

Thirty-four radio relay circuits were installed, covering a total distance of 1045 miles. VIII Corps had eight VHF terminals in operation to divisions, XII Corps four, and XX Corps two. VHF communications were maintained through the month with III, XII and XX Corps. On 22 December, contact was established and maintained with VIII Corps for the remainder of the month. (See Annexes 34 through 36)

Continuous wave radio communication was maintained throughout the month with XII and XX Corps, Twelfth U.S. Army Group, Twelfth U.S. Army Group TAC, Eighth Air Force, First French Army, First, Ninth, Seventh U.S. Armies and Advance Section Communications Zone. Contact was further established and maintained from 28 December on, with III and VIII Corps and Third U.S. Army Rear Echelon. Total code groups handled for the month was 97,767.

Section II - Supply

Third U.S. Army Signal Depots Number 8, at TOUL (U 61), Number 9, at VAUCOULEURS (U 40), Number 10, at FLORANGE (U 88), Number 11, at MERZARGE (Q 24) were in operation during the month. All four depots were in operation at one time, an unusual disposition for only one depot company, and a distribution of supplies was made through all depots to the troops in that area.

The extensive front of Third U.S. Army required supply coverage. This was met by spreading these depots over the area and using Depot Number 9, at VAUCOULEURS (U 40), as a receiving and storage point to serve the installations forward. This procedure proved its value in the operations under way and no forward depot was left with unbalanced stocks of any supplies that were available.

Teletype communication was inaugurated during the month in the Signal Supply system. Teletype channels were established between the Army Signal Supply Office, Depot Number 8, Depot Number 10 and Depot Number 11. This system was used to distribute and balance stocks as the tactical picture changed. Rail transportation was available to all depots. Through the medium of rail and teletype communication it was possible to shift critical items of supply and equipment to the areas needed on short notice.

Receipt of supplies from the Communications Zone during the month totaled 3329 tons against 3800 tons requisitioned. The shortages of fast moving expendable items became acute as transportation delays became frequent. Truck transportation was held to a minimum due to a tire shortage and only the emergency requirements available at Communications Zone Depots were handled by Third U.S. Army truck transport.

There were many items in critical supply during the month. Manufacturing undertaken by the 187th Signal Repair Company and the arrangement of contracts with local French industries enabled us to overcome serious deficiencies in most sections, certain type radio tubes, slip ring brushes for radar sets, adapters for 500 and 600 series radios, batteries for flame throwers and rocket launchers and many small items that were not available from other supply sources. The following were produced through the efforts and abilities of the personnel of the 187th Signal Repair Company:

Digitized by Google

Radio Tube, VT-246	800
Radio Tube, VT-247	600
Radio Tube, VT-223	600
Adapters, M-534	500
Rocket Launcher Batteries	8000
Flame Thrower Batteries	100
Radar Slip Ring Brushes	1400
Radar Brush Holders	50
Mast Sections	1500

During the month, the general level of Class II items was estimated at two days. Class IV items were estimated at five days. Receipts of substantial shipments from Communications Zone Depots during the last half of the month stabilized our position and increased our levels by one to two days. However, shortages of operational items increased and in order that equal distribution be made to all the Armies from the limited quantities on the Continent, Twelfth U.S. Army Group assumed the responsibility of allocating thirty-eight of these critical items between the Armies. At the end of the month, this plan was in operation and materially aided in balancing certain stocks.

A new spare parts service was started. The Communications Zone established a Spare Parts Depot S-891, at PARIS (S 34), an officer from the Maintenance Branch, Office of the Chief Signal Officer, was named as the Liaison Officer for this work. Requisitions were delivered to this office weekly and the items available were delivered to the Army the following week. The procedure operated well. Third U.S. Army received approximately sixty percent of all items requisitioned.

A separate Radar Supply Section was organized. All radar parts were divorced from other supply items. An officer was placed in charge of this unit and given full responsibility to operate the section. Five enlisted men, all radar technicians, were assigned from the personnel of the Depot Company. Contacts were made direct with the Anti-Aircraft Artillery Battalion and requisitions were made direct upon the Spare Parts Depot in PARIS (S 34). All radar spare parts were handled by personnel properly trained in recognizing and handling these items. The radar spare parts situation improved rapidly.

Radar repair work increased during the month. The 179th Signal Repair Company was attached to Third U.S. Army and further attached to the 187th Signal Repair Company. Sixteen radio repair units worked directly with Infantry and Armored divisions and Ordnance Motor Maintenance units in the forward areas. The remaining units were stationed at the Signal Depot. The following work was completed:

691	Minor Repairs and Adjustments
1549	Major Repair Jobs
85	Cannibalization of Equipment (American)
221	Installations in Combat Vehicles
21	Salvage of Equipment
1450	Wire Miles Serviced for Stock

Transportation of supplies from the Communications Zone to the Armies remained a problem. Continued use of Third U.S. Army truck transportation was necessary for all critical items.

CHAPTER 8
JANUARY OPERATIONS

Section I - General

During the month of January Third U.S. Army maintained its headquarters in the city of LUXEMBOURG (F 81). Throughout this period communications were established to follow roughly a north-south axis which would eventually link up with the first U.S. Army in the north (ST. VITH - F 48) and with the Advance Section Communications Zone communication lines in the south (CONFLANS - U 00). The northern arm of this axis was built first from LUXEMBOURG CITY (F 31) to ETTELBRUCK (F 03) and thence to BASTOGNE (F 55) while the BASTOGNE-ARDENNES bulge was being reduced. When the tactical situation permitted, steps were taken to extend the axis north through CLERVAUX (F 76) to ST. VITH (F 58); however, construction of this project could not be completed as fighting was still in progress in this area. For the southern arm of the north-south axis, wire circuits were established between LUXEMBOURG CITY (F 81), through ESCH (F 74) to ANGEVILLERS (U 78). (See Annex #2)

The Rear Echelon of Third U.S. Army moved from NANCY (U 81) to ESCH (F 74) during the early part of the month. Communications between forward and rear echelons were established.

It was impossible to project a firm axis of Signal communications by the end of the month. There was a tendency, however, to favor a curving axis towards KOBLENZ (L 89), as follows:

LUXEMBOURG (F 81) - ETTELBRUCK (F 03) - WILTZ (F 75) - CLERVAUX (F 76) - PRUM (L 07) - KREBERG (L 48) - MAYEN (L 69) - KOBLENZ (L 89).

During the BASTOGNE (F 55) Battle Signal Intelligence activities were at their peak. Much valuable information was gained during this period. Due to unfavorable weather conditions, however, pigeon communication was reduced to a minimum.

In spite of intensification of the wire recovery program the results obtained during the month were not up to expectations. Wire recovery was handicapped by heavy snowfall and snow drifts. Thawing, rain, and freezing caused central portions of long spans to be weighted down to the ground where the wire soon became buried under heavy layers of ice and snow. In many instances the same conditions applied to existing wire circuits. The additional weight of snow and ice and swaying of the wires caused large numbers of shorts where the insulation had broken down. Snow plows further aggravated the situation by cutting the wires.

The supply situation in general was improving during the month of January. This was largely due to increased tonnages of Signal equipment being unloaded at the port of ANTWERP (J 79).

Signal supply depots and repair companies were confronted with unusually heavy demands for replacement, maintenance, repair and replenishment of Signal equipment lost as a result of the German breakthrough in LUXEMBOURG and BELGIUM. Approximately 85% of all battle losses sustained by elements of the First and Third U.S. Armies, which were estimated at 90% of the total Signal equipment carried by these units, were replaced by 15 January.

Section II - Signal Intelligence Service

A pigeon platoon of the 265th Signal Pigeon Company arrived on 3 January in response to the Army Signal Officer's request in December for additional pigeon personnel and equipment. This platoon was attached to the 277th Signal Pigeon Company, giving the company a combat platoon for each of Third U.S. Army's four corps. In order to provide pigeon communication for all echelons, a platoon was placed at the disposal of each Corps Signal Officer for use by the corps and its divisions. One section of each platoon, however, was left at the Company Headquarters at Army to provide Army communication and birds for breeding.

DECLASSIFIED

Since LUXEMBOURG (F 81) was a center of pigeon breeding by [illegible] was considered the possibility of the use of pigeons for espionage activities in the Duchy. Consequently, Signal Intelligence Service and G-2 worked out a program for systematic inspection of all civilian pigeon lots by the 277th Signal Pigeon Company. The company inspected 341 lofts during the month, and either requisitioned the birds or clipped the wings of all homing pigeons found. Suspicious lofts were reported to the Counter Intelligence Corps for further investigation.

Due to extremely unfavorable weather conditions and a tactical situation where other means of communication were adequate, the tactical use of pigeons was reduced to a minimum. Birds trained while snow was on the ground had to be retrained as if for a new loft when the snow melted. Similarly, birds which were trained before snow fell had to be retrained after the earth was covered with snow.

Radio intelligence was at a higher level during the battle around BASTOGNE (F 55) than at any period in France. To increase the tactical effectiveness of radio intelligence, the 3256th Signal Service Company was temporarily attached to III Corps, but it reverted to XX Corps after the intense activity in the III Corps zone had abated. Details of the intelligence gained during this period will be reported at a subsequent date.

Representatives of the 3325th SIAM Company visited Third U.S. Army for orientation that was believed would enable them to adapt the final phases of the company's training program to actual combat needs. Tentative plans for the employment of the company were discussed further during the visit. It was estimated that at least another month would elapse before the company would be ready for action.

Radio security showed improvement during the month, despite the heavy tactical use of radio under conditions of great pressure.

Monitoring logs analyzed by Signal Intelligence Service showed that obvious violations had been eliminated in all but low echelon nets. During the month the Third U.S. Army Monitoring Team covered the AM nets of approximately two and one-half corps and the FM detachment of the team covered the nets of almost six divisions. Towards the close of the month, a security analyst of Signal Intelligence Service spent twenty-four hours at the Net Control Station of one net, correcting violations as they occurred and showing operators how such violations would help enemy signal intelligence.

Three photographers attached to Signal Intelligence Service for reproducing captured signal documents and photographing G-2 and G-3 war maps were awarded the Bronze Star Medal on 12 January for superior performance and for developing new photographic techniques in the performance of their duties.

On 27 January the responsibility of supervising the Army message center was transferred from Signal Intelligence Service to the Communication Sub-section. Signal Intelligence Service continued to be responsible for operation of the code room.

The code room record for the month was as follows:

	Incoming	Outgoing	Total
Number of messages	2564	613	3177
Number of Code Groups	561911	126423	691334

The message center record for the month was as follows:

Means	Outgoing	Incoming	Total
Radio	39	875	914
Teletype	6669	6404	12853
Total	6708	7279	13767
Precedence			
Urgent	341	847	1188
Operational Priority	4076	1983	6059
Priority	2269	4564	3833
Routine	600	2077	2677
Deferred	2	8	10
	6708	7279	13767

DECLASSIFIED

Section II - Communications

Headquarters Third U.S. Army Forward Echelon was located in the city of LUXEMBOURG (F 81) throughout the month of January.

On 1 January the 292th Signal Construction Battalion, loaned to Third U.S. Army by Advance Section Communications Zone, started construction of a two-arm, ten circuit, open wire lead from the city of LUXEMBOURG (F 81) to [illegible] (F 91). The tactical situation was fluid and although the axis of Signal Communication at that time was [illegible] this line was subject to change. However, it was felt that the building of an open wire lead as far north as possible, would provide the most satisfactory axis along which to construct a spur leading east at any point, whenever tactical developments would so justify.

The construction platoons of the 3rd Signal Construction Battalion, that were attached to the Corps, extended the Army-Corps axes as the corps advanced. In general, two spiral-four cables were laid between Third U.S. Army and each Corps. One spiral-four cable was used for direct communication while the other had carrier equipment superimposed upon it. Teletypewriter service was furnished each corps by CP-2 carrier.

Third U.S. Army Rear Echelon Headquarters moved from [illegible]CY (U 81) to ESCH (F 74) during the early part of the month. Two spiral-four cables were laid between the forward echelon and the rear echelon. In addition, eight underground cable trunks were placed in operation between the two echelons. The rear Echelon Headquarters was also furnished direct channels of communication with other major headquarters and installations by means of underground and spiral-four cables, this included two circuits to the Advance Section Communications Zone Headquarters and four circuits to Twelfth Army Group Headquarters. The policy was adopted of providing the Rear Echelon switchboard with direct trunks to such installations as are essentially associated with the rear echelon headquarters. This improved the service considerably, as the necessity for switching through the switchboard of the forward Echelon was eliminated.

Third U.S. Army had a one-arm open wire lead between CONFLANS (U 66) and [illegible] (U 46) and a radio section Communications Zone had an open wire [illegible] south from [illegible]. Therefore it was desirable to provide an open wire lead between [illegible] (F 81) and the build. Construction of a two-arm open wire lead was undertaken from [illegible] (F 74), to a point where the east-west lead between [illegible] was intersected, the point of interception being [illegible]. There the east-west lead was cut in, connected with the one arm of the north-south build leading towards [illegible] and with the other arm leading in the direction of [illegible].

On 20 January the open wire build to [illegible] was completed, at which time Advance Section Communications Zone relieved the 292th Signal Construction Battalion. It then became necessary to extend this wire lead north through [illegible] to [illegible]. The 292th Signal Construction Battalion was directed to proceed with this work. At the same time First U.S. Army was building an open wire lead south to join the Third U.S. Army lead at [illegible].

Two spiral-four cables were laid from [illegible] to [illegible] as an alternate route paralleling the open wire lead. Four spiral-four cables were constructed between [illegible] and [illegible] in anticipation of Corps headquarters moving to the east. All spiral-four cables were constructed as messenger strand. The cables between [illegible] and [illegible] were under construction while there was still considerable artillery fire in the vicinity. As a result [illegible] had to be replaced. Each trouble occurred at these cables phenomenally, due to shell fragments that penetrated the rubber but could not be seen.

At the end of the month the rear Echelon of Third U.S. Army planned to move to [illegible]. Plans were under way to open the rear echelon switchboard at [illegible] communication network that was at that time in existence at [illegible].

For the month of January a total of [illegible] miles of field wire, [illegible] miles of spiral-four cable, and [illegible] miles of open wire was laid by Third U.S. Army Signal troops. For the same period [illegible] miles of field wire and fifty-eight miles of spiral-four cable were recovered by Third U.S. Army Signal troops.

On 30 January, a new air messenger run was started by Twelfth Army Group. Stops were made daily at the LUXEMBOURG (F 81) airfield.

Fifty-eight radio relay circuits were installed during the month covering a total of 1144 miles. III Corps had four terminals in operation to divisions, VIII Corps ten, XII Corps six, and AA Corps ten. Radio contact was maintained between Third U.S. Army and Corps throughout the month. (See Annex 36)

Continuous wave Radio communication was maintained throughout the month of January with all stations in the following radio nets:

FA-1 NET	FA-14 NET
First U.S. Army	First French Army
Ninth U.S. Army	Seventh U.S. Army
COMZ Advance Section	
FA-33 NET	**FA-16 NET**
Twelfth Army Group	Twelfth Army Group ZAC
EIGHTH AF NET	**FA-15 NET**
Eighth Air Force	Third U.S. Army Rear
FA-12 NET	**FA-17 NET**
III Corps	III Corps Artillery
VIII Corps	VIII Corps Artillery
XII Corps	XII Corps Artillery
AA Corps	Third U.S. Army Photo Center

Total code groups handled for the month of January was 139,768.

Section II - Supply

Following the German breakthrough in Luxembourg and Belgium during the latter part of December, three of the four Third U.S. Army Signal Depots were closed, Depot number 6 at [illegible] (U 61), Number 7 at [illegible] (F 40), and Number 11 at [illegible] (U 62). All Third U.S. Army Signal Supply operations were centralized in Third U.S. Army Signal Depot Number 13 at [illegible] (F 62) and at Advance Section Communications Zone Signal Depot S- 67, located at [illegible] (F 81), Luxembourg. In accordance with agreement reached with the Signal Officer, Advance Section Communications Zone, the latter depot was operated as Third U.S. Army Signal Depot Number 12, under joint management by Third U.S. Army and Advance Section Communications Zone. Signal Depot Number 10 at [illegible] (U 66) (see Illustration Page 11) carried approximately sixty-five percent of Third U.S. Army Signal stores and was located in a most advantageous position to support the new front of Third U.S. Army. Stocks were moved from the three closed depots to Signal Depot Number 10, an operation which required only eight days.

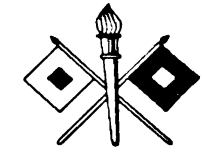
Heavy demands were made on Signal Supplies as the German counter-offensive caused severe losses to units then operating in the invaded area. It is estimated that as much as 40% of their Signal equipment was turned in by these units for salvage, repair and replacement. Due to the haste with which troops of Division HQs and other units moved into the area, it was not possible for these units to recover wire, replenish equipment, etc., from their former locations. Many units picked up the necessary Signal Supplies as they passed the Signal Depot on the LUXEMBOURG (F 81) road.

All battle losses sustained by the elements from First U.S. Army, including the VIII Corps, consisting of three Divisions, fifteen artillery battalions, seven engineer battalions and miscellaneous units, were replaced to approximately eighty-five percent of their total requirements before 15 January. During this same period two additional armored divisions, two airborne divisions and two additional infantry divisions were assigned to Third U.S. Army for operations and supply. In all, a total of seventeen Div slots were supplied through Signal Depots Number ten and Number 11 and a replacement of eighty-five percent of all battle losses was made during the period.

Receipt of supplies from Communications Zone during the month improved as the tempo of unloading at the new port of ANTWERP (U 74) increased. Shortages of fast moving expendable items remained critical most of the time. The hauling of Signal supplies for Third U.S. Army continued to be a major problem. Transportation was unreliable and shipments were frequently delayed.

The situation as regards spare parts, both radar and radio, was much improved. The operation of the Communications Zone Spare Parts Depot and the special expediting service of the Maintenance Branch, Communications Zone, proved highly successful for Third U.S. Army Signal operations.

An extensive campaign to recover and service all field wire had been under way. Approximately 5100 miles of field wire were returned to the Signal Depots for servicing and salvage, of which approximately 3,000 miles were reclaimed during the month.



Radio repair work increased during the month. The burden was somewhat relieved by the attachment of elements of the 179th Signal Repair Company and one radio team of the 180th Signal Repair Company. Eighteen radio repair units worked directly with Infantry and Armored divisions and Reinforce AA units in the forward area. The remaining units were stationed at Signal Depot Number 10. The following work was completed:

1000	Minor Repairs and Adjustments
2179	Major repair Jobs
35	Rehabilitation of Equipment (Amerisam)
103	Installations in Combat Vehicles
12	Salvage of Equipment
3000	Wire Miles Serviced for Stock

The month was characterized by extensive replacement of equipment for units involved in the German counter-attack, as well as by the repair, maintenance and replenishment of Signal equipment for eighteen divisions and the large number of field artillery battalions, tank destroyer battalions, engineer battalions, anti-aircraft battalions, etc., employed by Third U.S. Army.

Allocations of thirty-eight operational critical items were made by Twelfth Army Group. The issue of sixteen items in short supply was controlled through the Signal depots. Field wire consumption for the month amounted to 16,400 miles.

To meet pressing requirements for vehicular mine detectors, 125 detectors AN MKJ-1 were requisitioned from Communications Zone through Twelfth Army Group. The release of these items in this Theater was expected in the near future.

CHAPTER 9
FEBRUARY OPERATIONS

Section I - General

Long range planning for army communications necessarily concerned itself with future RHINE RIVER crossings. Information was obtained regarding specifications for special submarine telephone cable which First U.S. Army was planning to use for the crossing of the RHINE RIVER. There were under manufacture in Belgium at the Atelier De Construction, CHARLEROI (P 71), three six-meter lengths of fifteen-pair armored cable for which First U.S. Army furnished approximately 50,000 pounds of copper, 50,000 pounds of lead and 400 tons of coal. The copper and lead were obtained from the Eupen Cable Works in EUPEN (P 53), Belgium. It was further learned that a similar cable was to be manufactured for Ninth U.S. Army upon the completion of the First U.S. Army cable. As the availability of copper and lead in sufficient quantities was doubtful, Twelfth Army Group was investigating the possibility of securing standard seven-quad armored cable from Communication Zone for use by Third U.S. Army. In the meantime Twelfth Army Group suggested that Third U.S. Army consider the advisability of recovering certain sections of Postes Telephones Telegraphes underground cable existing between LUXEMBOURG CITY (P 81) and [illegible] (P 54). As a communication link between LUXEMBOURG CITY (P 81) and [illegible] (P 54) this cable was no longer suitable because long lengths of it had been severely damaged or were missing altogether.

During the month technical experts representing commercial firms visited Third U.S. Army for observation and advice on Signal Corps matters. These visits from technical observers were beneficial in that much assistance and information was obtained specifically with regard to facsimile equipment and its operation.

A request was made by certain divisions for a four-line teletype switchboard suitable for field use. Members of the Enemy Equipment Intelligence Service designed and built such a switchboard which received highly favorable comments from users.

Section II - Signal Intelligence Service

An event unique in the cryptographic history of Third U.S. Army took place on 7 February when all high grade cryptographic systems were simultaneously compromised, due to the loss of an entire code room of a unit in another army. This compromise virtually halted the encryptographing of messages from division level through corps, army and higher headquarters. Classified teletype items and messengers had to be utilized exclusively for communication, with the exception of messages which could be encipphered in a system that had just been distributed through the chain of command as far down as corps and which was put into effect on an emergency basis in advance of its effective date. Reserve cipher systems were immediately obtained from Twelfth Army Group and these were quickly distributed throughout Third U.S. Army by special messenger. Cryptographic operations had returned to almost normal within twenty-four hours after the compromise was reported.

Toward the end of February pigeon communication came into greater tactical use as weather and tactical difficulties made the use of pigeons feasible and advisable. A total of twenty-three tactical messages was delivered by pigeon during the month, most of these being delivered during the last two weeks of February. A "trap loft" was set up on an experimental basis near LUXEMBOURG CITY (P 81) to ascertain if birds used by enemy agents could be lured into it by the attraction of birds settled in such a loft. Several U.S. Army pigeons and one pigeon, possibly German, carrying no message were "trapped". A report was made to Twelfth Army Group that a "trap loft" would be feasible in areas where use of pigeons by the enemy was anticipated. It was pointed out that an Army pigeon company does not have enough men and birds to maintain "trap lofts" and communications simultaneously, and recommendation was made that an Army Group pigeon company be detailed for this activity. At the end of February the "trap loft" was closed to release more birds for communication.

Analysis of monitoring logs by Signal Intelligence Service during February revealed better radio transmission security, and a sharp decline in excessive transmissions. FM nets were monitored extensively due to the infrequent use of FM nets in the static tactical situation. The chief security threat on FM nets was the passage of messages in the clear by Artillery Fire Control nets. During the last seven days of February Army MP nets were monitored on a 24-hour basis at the request of Twelfth Army Group. Only minor security violations were found.

The Executive Officer and two other officers of the 514th Company visited Third U.S. Army on an orientation tour of the front preparatory to the movement of the company to France for its operational role with Third U.S. Army.

Motion picture films of radio intelligence activities were taken to LONDON for development under proper supervision in accordance with their security restrictions. Motion pictures of pigeon activities were developed at the same time.

Radio intelligence activity was intensive at the beginning of February, but declined toward the end of the month.

Monitoring of headquarters telephone conversations by Signal Intelligence Service was suspended temporarily 21 February 1945, since telephone security had improved to such an extent that continuous monitoring was no longer necessary. Monitoring equipment was left in place, however, for subsequent spot checks of telephone security.

During the month the Third U.S. Army code room record was as follows:

	Incoming	Outgoing	Total
Number of Messages	2816	972	3788
Number of Groups	569779	224938	794717

In addition to the encryptographed traffic handled in the code room systems, 284 messages comprising 23,156 groups were handled by SIGCUM equipment.

The message center record for the month was as follows:

Precedence	Outgoing	Incoming	Total
Urgent	459	568	1027
Operational Priority	3478	1662	5140
Priority	2840	1699	4275
Routine	1352	1923	3275
Deferred	7	1	8
Total	8202	5813	14015

Number of messages and groups handled by electrical means:

Messages	Outgoing	Incoming	Total
Radio	121	798	919
Teletype	7362	7541	14903
Total messages handled:	7486	8336	15822
Groups			
Radio	16305	129516	145821
Teletype	1348455	1118814	2517269
Total groups handled:	1414760	1248330	2663090

Messenger service:

Pouches transmitted by motor messenger	3229
Pieces transmitted by motor messenger	14,107
Total number motor messenger miles travelled	45720
Total number of pouches by air messenger	30

Section II - Communications

The forward echelon of Headquarters Third U.S. Army maintained its command post in the city of LUXEMBOURG (P 81) during the month. On 7 February the rear echelon moved from its location in ESCH (P 74) to LUXEMBOURG CITY (P 81). Their switchboard included circuits to supply installations and trunks to major installations, including Headquarters Advance Section Communications Zone, 12th Army Group. Advantage was taken of the availability of civilian underground cable facilities of the Postes Telephones Telegraphes to furnish communication service to military installations within the city of LUXEMBOURG (P 81). The switching central at ESCH (P 74) was maintained and operated by Third U.S. Army troops.

On about 12 February III Corps was relieved from the command of Third U.S. Army and was attached to First U.S. Army. At the time of this transfer, III Corps maintained its headquarters at MARTELANGE (P 53). As the switchboard operated by III Corps serviced many other Third U.S. Army units, this change in status necessitated the installation of another secondary switchboard north of MARTELANGE (P 53), at BASTOGNE (P 55), which was connected with Headquarters Third U.S. Army by means of spiral-four cable to LUXEMBOURG CITY (P 81), and by a radio link circuit. During the month Third U.S. Army maintained and operated the following switching centrals: "Lucky Fox" at BASTOGNE (P 55), "Lucky Easy" at ESCH (P 74), "Lucky Dog" at ARLON (P 52). The switching central in COURTRAI (U 66), named "Lucky Charlie" was taken over by Advance Section Communications Zone on 7 February and renamed "Courtrai Switch". However, Third U.S. Army maintained a carrier terminal and wirehead personnel at this point.

The tactical situation throughout the month did not offer any definite clues as to where the breakthrough of the Siegfried Line would materialize. Wherever penetrations into the enemy lines resulted in consolidated gains of territory, communication axes were extended as quickly as possible to such points. It remained therefore essentially a matter of conjecture where the main army communication axis was to be projected. It was realized that violent action would soon erupt at one or several points on the otherwise stagnant front which might quickly result in deep thrusts into Germany followed by enveloping flanking maneuvers, quite possibly involving a wide area. With this possibility in mind, the tactical situation was under continuous study and analysis.

During the month every effort was made to plan, project, and construct tentative axes and to prepare a hypothetical network of communications whose tentacles might one day carry the basic flow of command communications necessary to successfully conduct operations in an easterly direction. As the emphasis was thus placed on the West-East trend toward the RHINE River, six communication axes leading east were projected during the month. They were either extended from previously built leads, or newly constructed, with some still in the stage of development until the tactical situation would justify their completion. These six axes were linked up with the firmly established North-South axis and coordinated with communication demands imposed by Twelfth Army Group supply installations (Advance Section Communications Zone) and flanking armies. From Third U.S. Army point of view, the center of this network was in LUXEMBOURG CITY (P 81) with its converging underground cable network of the Postes Telephones Telegraphes.

The North-South axis was developed as follows:

Prior to the month of February there existed leads and underground cables, from NANCY (U 81) in the south (former Third U.S. Army Command Post), through METZ (U 65), THIONVILLE (U 86) (Where XX Corps was located) to LUXEMBOURG CITY (P 81). North of LUXEMBOURG CITY (P 81) the existing two-arm ten-circuit open wire lead to ETTELBRUCK (P 85) was extended further to HOSCHEID (P 75), during the month. This construction was undertaken by the 34th Signal Construction Battalion. A further extension north from HOSCHEID (P 75) was made to a point where the West-East highway passing through CLERVAUX (P 76) was reached. In accordance with the general plan to have a continuous two-arm open wire lead from LUXEMBOURG CITY (P 81) to ST. VITH (P 88), Twelfth Army Group assigned to one of their Signal units, the 36th Signal Construction Battalion, the construction of the portion beginning with the point on the CLERVAUX (P 76) West-East highway to ST. VITH (P 88). Difficulties were encountered in the construction of this lead from HOSCHEID (P 75) on north and temporary delays caused due to the bad condition of the road and artillery fire, the area in question being at that time in a division zone. The road itself was particularly exposed to enemy observation, earning the name of "sky-line drive" due to its high location. While the portion LUXEMBOURG CITY (P 81) to HOSCHEID (P 75) was completed on 17 February, the remainder of the lead was not ready at the end of the month. During the month Headquarters VIII Corps displaced to TROIS VIERGES (P 77). Communication between this Corps and Third U.S. Army Headquarters was established by taking advantage of the above mentioned open wire lead to HOSCHEID (P 75), from which point two spiral-four cables were laid north and west to TROIS VIERGES (P 77).

The six eastern [illegible] in the above were [illegible]

DECLASSIFIED

Digitized by Google

[illegible] the north of Third U.S. Army territory, a telephone wire line was [illegible] Third U.S. Army Signal Depots Number 10, at Kitzbühel (U.S.), and Number 11 at St. Johann (U.S.). Equipment were [illegible] during the month. Three of these [illegible] Advance Section Communications Zone, with the exception of one, were received by Signal Depot Number 10. All shipments from Advance Section Communications Zone 3-405 were received at Depot Number 10. The volume of operations was handled by Depot Number 10.

The Signal supply situation during the month improved greatly and Third U.S. Army was able to replace nearly all battle losses encountered during the month, and in addition, could save all remaining shortages of battle losses suffered during the December-January German breakthrough. The critical items of Third U.S. Army were in the decline all during the month and although it was still necessary to retain many items, the situation was generally relieved. At the end of the month there remained only approximately forty items on the critical item list.

Field Wire, W-110-B, continued to be the greatest source of difficulty for Signal Supply. A total of [illegible] miles was issued during the month and this figure was only kept to such a low level by strict rationing. This rationing did not, however, impair the communication efficiency of any combat unit, as it was intended rather to insure to those units actually engaged in combat a preference of issue over those units not so engaged. During the month of February there were nine

EXPERIMENTAL VEHICULAR VHF INSTALLATION

Section II - Supply

Total mile [illegible] handled for month of February was [illegible].

FA-1 MRT	FA-2 MRT
Twelfth Army Group	Twelfth Army Group, Tac
FA-2 MRT	FA-3 MRT
[illegible]	Third U.S. Army rear
[illegible]	FA-17 MRT
FA-3 MRT	[illegible] Corps Arty
Twelfth Army Group Main	[illegible] Corps Arty
	[illegible] Arty
	XX Corps Arty
	Third U.S. Army Photo Center

Infantry Divisions, five armored divisions and the usual number of supporting troops serviced by Third U.S. Army Signal Depots. Although [illegible] were actually engaged during the month, this period was also [illegible] an excellent opportunity was afforded to rest units to completely refit themselves.

The tank-infantry communication situation of the separate tank battalions was partially solved during this month by the installation of the telephone headset on the shirt of the tank and by the installation of the [illegible] SCR-508 in the tank. This was accomplished during the month in all separate tank battalions. Another new feature of interest in armored forces communication was that steps had been taken to place a transmitter in each tank. Two separate tank battalions were converted with other separate battalions and armored divisions to future suit in the immediate future. No new item of equipment was [illegible] or received during the month. However, additional radio line and carrier equipment was received to further strengthen Army and Corps communications, new items appearing on the recent T/E began to arrive, initial distribution of which was expected to be made in the early part of March. They were mostly new Test Sets and Test Units, TS-47 TSM, TS-48 TSM, and I-176. Modification of fluorescent panels for air-ground identification was completed and a complete changeover of all Third U.S. Army units was made during the month.

Receipt of supplies from Communications Zone during the month improved and a total of [illegible] was received. Toward the end of the month a new standard operating procedure for supplies from Communications Zone was initiated, known as SOP 5. It represented a fundamental departure from the old procedure in so far as requisitions from Third U.S. Army were to go directly to an issuing depot rather than to Advance Section Communications Zone or Communications Zone headquarters for forwarding, prior to their entrance to an issuing depot. As the new procedure had not been in operation long enough to evaluate its effective results, it was felt that during the initial phases of this operation difficulties would be experienced in the receipt of supplies. This anticipation was mainly based on the fact that there was no balance of stock in any Advance Section or Communications Zone Depot, whereas the plan specifically called for balance of stocks. Both Advance Sections and Communications Zone were fully aware of this fact and were making every effort to balance their stocks in the depots which operate in immediate support, or base support of the Army.

The spare parts situation continued to be satisfactory during the month. [illegible] miles of radar, radio and telephone parts were also maintained in satisfactory quantities, but during the month an extreme critical shortage of major generator parts occurred. However, this was overcome by turning to an exchange of unit basis with the Communications Zone Base Maintenance Depots. This practice is still in full operation and will be continued until adequate spare parts of motor generators are received.

The campaign on the recovery of all field wire and spiral-four cable continued, approximately [illegible] miles of wire being picked up during the month. The good results of last month decreased somewhat because of greater combat commitments of our divisions.

Repair and maintenance work increased during the month. Two radio repair teams of the 17th Repair Company were lent to Ninth U.S. Army. The following work was completed:

1,[illegible]	Minor Repairs and Adjustments
2,[illegible]	Major Repair Jobs
[illegible]	Demobilization of Equipment (Americas)
123	Installations in Combat Vehicles
3	Salvage of Equipment
806	Wire Miles Serviced for Stock

Allocation of thirty-eight critical items was continued by Twelfth Army Group. This allocation system has proven to be the most satisfactory from our standpoint, because it affords an equitable distribution of those items that are short in supply.

CHAPTER 10
MARCH OPERATIONS

Section I - General

Third U.S. Army Headquarters moved from LUXEMBOURG CITY (P 81) to OBERSTEIN (L 72) on 27 March to follow as closely as possible the rapidly advancing divisions and corps. By the end of the month the increasing rate of advance and the swift crossing of the RHINE secured a possible breakthrough into Germany to rival the historic dash through France last summer.

The three corps displaced directly eastward during the first week of March. The two-arm standard open wire lead from LUXEMBOURG CITY (P 81) through ECHTERNACH (L 03) to BITBURG (L 15) was used to maintain communication with XII and XX Corps, while the two-arm two-wire open lead from LUXEMBOURG CITY (P 81) to ST. VITH (P 88) served the VIII Corps. A four-wire one-arm open wire lead was extended from LUXEMBOURG CITY (P 81) east to SAARBURG (L 11) to further serve the XX Corps. In each case the open wire leads extended by spiral-four cable and repeator stations.

The proposed displacement of the Third U.S. Army Command Post to TRIER (L 22), Germany, required that LUXEMBOURG CITY (P 81) and TRIER (L 22) be connected by carrier over spiral-four cable. The rapid advance, however, made this move unfeasible and the Forward Echelon displaced directly to OBERSTEIN (L 72), while the rear echelon moved to TRIER (L 22) on 21 March. (See Annex 50) The entire communication network left behind in LUXEMBOURG CITY (P 81) was taken over by Twelfth Army Group TAC.

The supply situation was more favorable than at any other time in the campaign. Seventy-five percent of all requisitions were available at Advance Section Communications Zone Depots. To make these supplies accessible to advancing units, forward dumps were set up along the entire line, supplemented by a Mobile Signal Depot mounted in seven K-36 trailers.

The rapid movement increased the tactical use of radio. To permit complete coverage by monitoring personnel it was necessary to procure one additional radio monitoring team from Twelfth Army Group. By the end of the month radio nets of all corps and divisions had been monitored, showing a decrease in transmission security. Violations were brought to the attention of all concerned.

Among the thousands of German prisoners enveloped in the Saar triangle were a large number of PW's from the 9534 Short Range Intercept Company. Interrogation of these prisoners lead to a confirmation of the suspicion that radio-telephone transmissions employing Sliders were furnishing the enemy with much tactical information.

Section II - Signal Intelligence Service

Rapid advance into Germany and wide-flung disposition of Third U.S. Army troops resulted in increased tactical use of radio communication. Additional radio monitoring personnel and equipment to augment the radio monitoring team already in use was necessary if transmission security was to be maintained. Upon request, Twelfth Army Group provided an additional radio monitoring team which arrived on 17 March. With the additional personnel and equipment, nets of all corps and divisions of Third U.S. Army were monitored during the month. Analysis of monitored radio traffic by Signal Intelligence Service revealed a decided decrease in the level of transmission security over the previous month due primarily to the fast moving situation and the need for speed.

The need for pigeon replacements was critical during the first week of March and request was made to Communications Zone for birds to be shipped either from lofts in the United Kingdom or other lofts on the Continent. Communications Zone advised that pigeon replacements from the United Kingdom were being held up due to the four-week quarantine placed on young birds after pox vaccination. To relieve the shortage, 1200 birds were obtained from Twelfth Army Group lofts, and on 25 March 500 young pigeons were received via air shipment from the United Kingdom. The total strength of the Army Pigeon Company on 31 March was 3466, 1332 birds below T/E strength. A total of seventeen tactical messages was flown by pigeons of the 277th Signal Pigeon Company during the month, all of which were to divisional lofts.

Interrogation of German prisoners of war proved especially fruitful during March due to the capture of a large number of German PW's from the 9534 Short Range Intercept Company (Radio Intelligence). Statements of four PW's from this company considered to be reasonably reliable, confirmed the belief that the use of SLIDEX for encoding radio-telephone transmissions was furnishing the enemy with much intelligence. Also, the policy of maintaining the same frequencies throughout long periods was allowing the enemy to maintain complete continuity on all Third U.S. Army units.

Processing of captured German film reached an all time level when over 600 reels were processed during the month. All reels were screened for immediate tactical intelligence and then evacuated to European Theater of Operations, U.S. Army for further study.

On 30 March the advance detachment of the 3325th SIAN Company, consisting of eight officers, arrived at Headquarters Third U.S. Army. This detachment began planning for the immediate operational use of the company upon its arrival on or about 15 April.

The movement throughout March of all Third U.S. Army units into Germany, and finally that of Headquarters itself, to OBERSTEIN (L 72), brought ever-increasing demands on our code room personnel. In accordance with a Twelfth Army Group directive, all teletype circuits crossing or terminating in Germany were classified and all traffic passing over such circuits was cryptographed unless specifically authorized to be sent in the clear. Due to this fact, a total of 1,079,286 groups was handled by the code room, an increase of 35% over the preceding month. Detailed code room records for March follow:

	Incoming	Outgoing	Total
Number of Messages	4,215	754	4,969
Number of Groups	853,533	190,761	1,044,294

In addition to the encryptographed traffic handled in the code room systems, 257 messages comprising 34,992 groups were handled by SIGCUM equipment.

Section II - Communications

Although front line troops were making substantial gains through the Siegfried Line and the forward displacement of the three corps headquarters resulted in extremely long communication lines, Third U.S. Army Headquarters remained in LUXEMBOURG CITY (P 81) since no suitable location could be found between LUXEMBOURG CITY (P 81) and TRIER (L 22) Germany. (See Annexes 43 through 46)

On 1 March the TRIER (L 22) - SAARBURG (L 11) underground lead cable was located by the 10th Armored Division as it sliced forward. The cable was believed to be in use by the enemy at this time and was severed by the 10th Armored Division at NIEDER ZERF (L 21). Headquarters VIII Corps moved from TROIS VIERGES (P 77) to BLEIALF (P 98) 5 March. Headquarters XX Corps moved from THIONVILLE (U 88) to SAARBURG (L 11) 7 March. Headquarters XII Corps moved from LUXEMBOURG CITY (P 81) to ECHTERNACH (L 03) 4 March. The two-arm standard open wire lead from LUXEMBOURG CITY (P 81) through ECHTERNACH (L 03) to BITBURG (L 15) was being constructed as rapidly as possible. Wire communication to the XII and VIII Corps was obtained by this lead with extensions of spiral-four cable. As an alternate route to these two corps spiral-four was laid from the corps to the closest point of intersection of the LUXEMBOURG CITY (P 81)-ST. VITH (P 88) open wire lead. A one-arm rapid pole line lead was under construction from LUXEMBOURG CITY (P 81) through SAARBURG (L 11) to TRIER (L 22). The communication to the XX Corps was obtained by means of this rapid pole line lead to SAARBURG (L 11). One company of the 448th Signal Construction Battalion built the section of the rapid pole line between SAARBURG (L 11) and TRIER (L 22). However, due to the rapid moving situation, this lead was not used for main line communications, but was later used for connecting units between LUXEMBOURG CITY (P 81) and TRIER (L 22).

DECLASSIFIED

On 2 March Headquarters XII Corps moved to BITBURG (L 15). On 3 March Headquarters VIII Corps moved to SCHONECKEN (L 07). Each corps was connected to Army by at least two spiral-four cables. Carrier repeater stations established at PRUM (L 07) which served the carrier circuits to the VIII and XII Corps. On 10 March Headquarters VIII Corps moved to ADENAU (+ 49). On 12 March Headquarters XII Corps moved to MAYEN (L 69). As the Corps moved forward the wire lines were extended for great distances. On 13 March it was proposed that Headquarters Third U.S. Army move to TRIER (L 22) and immediately plans for an advance command post installation were under way. Twelfth Army Group completed their two-arm open wire lead plus four spiral-four cables between LUXEMBOURG CITY (P 81) and TRIER (L 22). Eight carrier systems were placed on the open wire lead by the use of hybrids CF-7 and four carrier systems were placed on the spiral-four cables. This resulted in a total of twelve carrier systems between LUXEMBOURG CITY (P 81) and TRIER (L 22). Existing underground cable was plentiful in, and radiating from, LUXEMBOURG CITY (P 81). The first cable company, provisional, was already rehabilitating underground cable radiating east from TRIER (L 22). However, no underground cable existed between LUXEMBOURG CITY (P 81) and TRIER (L 22) and therefore the twelve carrier systems spanned this gap of non-existent facilities.

A switching central designated as Lucky George was established in the basement of the telephone exchange building in TRIER (L 22). This switchboard served all units in the immediate vicinity. The switch at ARLON (P 52), known as Lucky Dog, was discontinued on 19 March.

Headquarters XII Corps moved to SIMMERN (L 85) 19 March. CF-3 Carrier Repeaters were operating at OBER STADTFELD (L 37) and MAYEN (L 69). Headquarters XX Corps moved from SAARBURG (L 11) to ST WENDEL (Q 59) 20 March, and on the following day moved to KAISERSLAUTERN (R 09). On 22 March this Corps moved to WELLERNAF (M 21). On 22 March Headquarters VIII Corps moved to SIMMERN (L 85) and Headquarters XII Corps moved to BAD KREUZNACH (M 03). On the wire circuits to XII Corps, repeaters were operating at PRUM (L 07) and MAYEN (L 69). On the XII Corps wire circuits repeaters were in operation at OBER STADTFELD (L 37), MAYEN (L 69) and SIMMERN (L 85). On the XX Corps wire circuit repeaters were operating at SAARBURG (L 11), ST WENDEL (Q 59) and KAISERSLAUTERN (R 09). These wire circuits to the corps were the longest wire lines Third U.S. Army has operated to date. The circuit to the XII Corps was approximately 130 miles long. Thirty-four miles of this was open wire and the remainder was spiral-four cable. All spiral-four cable was suspended on #9 iron wire and the quality of the talking circuits was excellent.

Third U.S. Army Headquarters did not move to TRIER (L 22) but on 27 March opened at OBERSTEIN (L 72). The rear echelon command post moved to TRIER (L 22) 31 March. The same day Lucky Easy, the switch at ESCH (P 74), was closed. Five spiral-four cables were constructed between LUXEMBOURG CITY (P 81) and OBERSTEIN (L 72), two for the use of XIX Tactical Air Command, and carrier systems were applied to the three remaining cables which operated between Lucky Rear and Lucky. Twelfth Army Group did not initially furnish communication of their own by wire to OBERSTEIN (L 72). Two talking channels and one teletype channel were furnished Twelfth Army Group Headquarters by Third U.S. Army. Three teletype channels were also furnished Twelfth Army Group Main. These channels were part of the carrier systems and operated on the three spiral-four cables between TRIER (L 22) and OBERSTEIN (L 72). Twelfth Army Group was, however, rehabilitating underground cable between TRIER (L 22) and OBERSTEIN (L 72) via WITTLICH (L 35). (See Annex 50) Two circuits in this underground cable were later established between Headquarters Third U.S. Army and Headquarters Twelfth Army Group Main. The entire installation left behind in LUXEMBOURG CITY (P 81) was taken over by Twelfth Army Group TAC.

During the operations of March, Third U.S. Army Signal troops laid 314 miles of W-110 field wire, 2086 miles of spiral-four cable and 720 miles of open wire. These troops also recovered eighty-one miles of W-110 field wire, and 154 miles of spiral-four cable.

The record number of at least 125 Radio Relay Circuits, covering a total of 3325 miles, was installed during the month. Each of the three corps, VIII, XII and XX, had ten terminals to division level. Communication was maintained between each of the corps and First U.S. Army over Third U.S. Army Radio Link. Two terminals of radio relay and carrier equipment, plus necessary operating personnel, were furnished the 4th Armored Division, for the purpose of maintaining communication to its Combat Command on the breakthrough to the RHINE. (See Annex 40 and 41)

Continuous wave radio communication was maintained throughout the month with all stations in the following nets:

Section II - Supply

The entire overall supply picture was better during the month of March than at any other time in Third U.S. Army's Signal history. Despite the rapid extension of the Army line as its troops raced beyond the RHINE River, accompanied by increased supply requirements, gratifying improvement was noted in the availability of all signal equipment and supplies in Advance Section Communications Zone Depots. Approximately 79% of the requisitions were made available. Shipment of items to Third U.S. Army Signal Depots through the 24th Regulating Station was accelerated and delivery time was reduced to an average of ten to twelve days.

Third U.S. Army Signal Depot Number 10, at FLORANGE (U 88), and Number 12, at STEINFURT (P 61), were in operation throughout the month. Signal Dumps 13 and 14, at RAIMERSBACH (L 58) and KIRCHBERG (L 74), respectively, were opened to support the XII Corps drive along the RHINE River, from the Moselle to KOBLENZ (L 89).

As the drive gained momentum, Depot Number 10, at FLORANGE (U 88), became a pivot point for all signal supply, as it had been during the December and January periods of the Ardennes offensive and subsequent German break-through. After Third U.S. Army boxed an oblong trap around the enemy by advancing east to the RHINE from ECHTERNACH (L 03), south from the Moselle to KOBLENZ (L 89) and east to the RHINE from SAARBRUCKEN (Q 47), the entire line was supplied by the tactical establishment of Forward Signal Dumps. To augment this source of supply, a Mobile Signal Dump was inaugurated. Seven trailers, K-36, were equipped with small parts and supplies and employed in the area. Wire and batteries were maintained at the dump on a daily basis, each day's issues being replaced the following day by Signal Depot Number 10. A constant daily level was maintained and successfully served the units in its area.

The radio and radar spare parts stock continued to be good as a result of deliveries from the Communications Zone Depots. The exchange of unrepairable equipment by the Signal Repair Company with the Spare Parts Depot in PARIS (S 04) has proven fruitful. Approximately sixty percent of the exchanges requested were made. Serious delays in restoring equipment to troops were averted by the exchange of power units during this period.

Manufacturing and conversion work by the Repair Company has been reduced to a minimum. Supplies of spare parts being made available from Communications Zone Depots have reduced shortages and eliminated the necessity of this type work.

Allocation of thirty-eight items in short supply is still being made by Twelfth Army Group. This allocation has proven most valuable and is, in a very large measure, responsible for the balancing of stocks of these items in Third U.S. Army Signal Depots.

Repair and rehabilitation work increased during the month. The necessity of recovering spiral-four cable became a priority assignment. Six wire pick-up teams from Twelfth Army Group assisted in recovery of the cable. These teams were attached to the Signal Supply Office for operations and the responsibility of recovery of all field wire and spiral-four cable in the Army areas was also assigned. The following units were engaged in servicing Third U.S. Army and its units during the month:

579th Signal Depot Company
187th Signal Repair Company
17yth Signal Repair Company (less two platoons)
189th Signal Repair Company Platoon
3172d Signal Service Battalion Detachment (six officers and sixty-five enlisted men)
577th Signal Depot Company Detachment (Radar Section)

Repair and maintenance work completed as follows:

EQUIPMENT:

549	Minor Repairs and Adjustments
2718	Major Repair Jobs
23	Cannibalization of Equipment (American)
187	Installations in Combat Vehicles
4	Salvage of Equipment (American)
259	Technical Inspections

WIRE:

2180	Miles Field Wire turned in by units
5617	Miles serviced during period
1380	Miles returned to Depot stock
4237	Miles returned to Communications Zone for salvage

SPIRAL-FOUR CABLE:

1020	Miles Spiral-Four turned in by units
1264	Miles serviced and returned to stock
695	Balance on hand to be serviced

Approximately 22,500 miles of Field Wire, W-110, and 2900 miles of spiral-four cable were issued during the month. Recovery was small due to the rapid advance of the Army.

CHAPTER 11
APRIL OPERATIONS

Section I - General

The crumbling German Army, unable to maintain a main line of resistance to withstand the deep and penetrating armored thrusts into the heart of Germany, rapidly fell apart as Third U.S. Army troops surged forward for the final blow. Maintenance of communications during this period of rapid tactical maneuver provided problems greater than at any time in the campaign. The month of April was featured by three command post displacements and a change of Army boundaries which required a rapid change in Signal plans. In this period, it was also necessary to provide communications across the RHINE River. If ever the fortitude, resiliency, and ability of the Signal troops was proven in the field, it was during this month.

Third U.S. Army Headquarters moved from OBERSTEIN (L 72) to FRANKFURT (N 07) on 1 April, and displaced further east to BRENFELS (N 35) on 11 April. When the Army axis was changed, installations at the contemplated command post site at WETZLAR (P 97) were halted and communications were hastily installed at BIEBERICH (O 51), where the command post opened 22 April. The displacement to FRANKFURT (N 07) from IDAR-OBERSTEIN (L 72) required communications across the RHINE River. (See Annexes 51 through 53)

Early in the month, preparations were made for the expected meeting with the Russian Forces opposite the Third U.S. Army front. Largely, these preparations consisted of providing photographic personnel with all armored spearheads in order to insure immediate and complete coverage.

The rapidity of the advance through an area heavily populated by large industrial concerns, provided the Signal Section with some of its richest supply targets of the campaign. Among these were the Zeiss Optical works at JENA (Y 66) and the Schmelder plant in BAD KREUZNACH (M 09). During the same period Third U.S. Army captured Dr. Holman, the German radar specialist, in the vicinity of OBERWITT (J 15), where two of his laboratories remained intact. Dr. Engles, also captured by Third U.S. Army during this rapid sweep, was the General Manager of the Telefunken Division for all Germany. These men were interrogated specifically in regards to possible targets within the Third U.S. Army area. They could provide no information concerning cooperation between the Germans and the Japanese in electronics or affiliated fields, and all indications pointed to individual research and development.

When the Army Axis was changed, Prisoners of War active in signal work in the German Army were questioned for possible information concerning signal installations in the National Redoubt Area and the supposed or intended locations of Staff Headquarters. Diagrams were made and furnished to interested offices. The Executive Officer of the Signal Section questioned the Inspector of Communications Troops of the German War Ministry regarding the possible use of German signal personnel for rehabilitation purposes. The information gained was considered both reliable and useful.

Section II - Signal Intelligence Service

On 10 April the 3325th SIAM (Staff Information & Monitoring) Company arrived in Third U.S. Army area. The advanced detachment of the company had, under the supervision of Signal Intelligence Service, arranged the administrative and operational details necessary to enable its immediate operational use, and by 15 April SIAM reports from Corps and Division levels were being furnished the Army G-2 regularly. In addition to furnishing Army G-2 with tactical information from monitored friendly traffic, violations of security noted in this traffic were reported on the spot to the units concerned.

Numerous and rapid displacements of Division and Corps Command Posts during the month of April prevented considerably the settling, training and offering for operational use the Army pigeons of the 277th Signal Pigeon Company. However, German civilian and Wehrmacht birds were confiscated, trained and made available to all units for communication purposes. A total of eleven tactical messages and two hundred and eight non-tactical messages were flown during the month of April.

Digitized by Google

a large majority of which were to divisional lofts.

In spite of the large area of German territory occupied and the great number of PW's captured, very few signal documents of intelligence value were processed through signal intelligence channels during the month of April, evidencing the almost total disorganization of the German Army. However, a large number of captured German cipher machines and devices were evacuated through signal intelligence channels.

With the change in the Army Mission on 16 April, a need was realized for additional radio intelligence troops and equipment to cover the exposed left flank of the Army, and, upon request, the 226th Signal Service Company was attached to Third U.S. Army for operational use. Details of signal intelligence reported during the month of April will be published at a later date when security regulations may be lifted.

During the month of April the number of code groups handled in the Third Army code rooms reached the peak total of 1,421,177 code groups. Detailed code room records for April follow:

	Incoming	Outgoing	Total
Number of Messages	4,943	1,045	5,988
Number of Groups	1,145,197	270,065	1,415,262

In addition to the encryptographed traffic handled in the code room systems, 68 messages comprising 8,915 groups were handled by SIGCUM equipment. This indicated a decided decrease in the use of SIGCUM equipment.

An almost complete monitoring coverage of radio nets in Third U.S. Army for security purposes was accomplished during the first two weeks of April, but it was necessary to employ a large number of the personnel and equipment for monitoring the SIAN nets when this company became operational, thereby leading to a decrease in this activity during the latter part of April. As in March analysis of monitored radio traffic by Signal Intelligence Service revealed a decrease in the level of transmission security over previous months due to a great extent to the fast moving situation and the need for speed.

Section II - Communications

Headquarters Third U.S. Army was still located at IDAR-OBERSTEIN (L 72) on 1 April. The next command post location was to be FRANKFURT (M 67), Germany, which required a crossing of the RHINE River. As far back as five months previous to the actual crossing of the RHINE, plans were under way to construct wire circuits across the RHINE River. Data was obtained regarding the width of the river, the speed of flow of the water, the depth, etc., at various possible points of crossing that might be used by Third U.S. Army. One plan for the crossing required cooperation of the Engineers with the Signal Corps. This plan called for building a standard two-arm open wire lead across the river with poles spaced at the normal 150' spans and mounted on structures consisting of forty-foot pilings driven below the river bed. These structures, consisting of four pilings, were to furnish the foundations upon which standard poles could be attached in a manner that would afford a wire clearance of twenty-one feet above the mean water level of the river. The Engineers prepared drawings for these structures. Another plan was to span the river with submarine armored lead cable. The laying of this cable was studied thoroughly because it was believed that the swift currents in the river would present problems which would create great strain on the cable while it was being laid. The actual river crossing was made at MAINZ (M 35) and the difficulties that were expected were not encountered. Eight spiral-four cables were laid across the river, four of which were laid across a partially destroyed bridge which offered sufficient support for these cables. The remaining four cables were laid directly on the river bottom with no particular difficulties. The four spiral-four cables supported by the partially destroyed bridge were the ones used for the carrier circuits between IDAR-OBERSTEIN (L 72) and FRANKFURT (M 67). The four cables laid on the river bottom were to be used as spare cables in case of failure of the other four. These were tested regularly and were found to be in good condition. In addition to the spiral-four cables, ten-quad lead covered armored cable was also laid on the river bottom without any special difficulties. This armored cable was a portion of an aerial self-suspended civilian cable lead that was partially destroyed and which existed between LUXEMBOURG CITY (P 81) and TRIER (L 22), Germany. Six thousand feet in three two-thousand foot lengths were recovered in anticipation of the RHINE crossing during the month of February. However, after this cable was laid across the RHINE River it was used for long local circuits which, of necessity, had to cross the RHINE.

The Third U.S. Army Command Post opened at FRANKFURT (M 67) on 3 April and at that time the tactical situation was one of rapid movement. The corps displaced frequently and in many cases displaced each day or every other day, while communication to these corps was maintained by the extension of one spiral-four cable along the Army-Corps axes. As the cables increased in length, carrier repeater stations were established at intervals of from thirty to forty-five miles. It was not uncommon to have three repeater stations in these circuits. Some trouble was encountered with saboteurs cutting corps lines and army wire circuits. Line trouble was, however, rapidly cleared since a construction maintenance team was stationed at each repeater to maintain the circuits operating through the respective repeaters. (See Annexes 54 through 56)

On 6 April the command post of Lucky Bear moved from TRIER (L 22) to FRANKFURT (M 67). At that time all circuits that remained on the Lucky Bear switchboard at TRIER (L 22) were cut over to Lucky George Switch in TRIER (L 22). On 9 April Lucky Bee Switch, which was operating at MAINZ (M 35), was taken over by Advance Section Communications Zone and renamed MAINZ SWITCH.

The Third U.S. Army command post opened at HERSFELD (H 35) on 11 April and closed FRANKFURT (M 67) at the same time. Wire communication between FRANKFURT (M 67) and HERSFELD (H 35) was obtained by spiral-four carrier circuits. Four spiral-four cables were constructed between these points on number 9 iron messenger wire. Two of these cables were for Third U.S. Army's use and two for XIX Tactical Air Command. This construction was in accordance with a policy established between XIX Tactical Air Command and Third U.S. Army of a joint build. The Army-Corps lines were extended until each time as a forward Army wire axis was established or the Army command post moved forward. At this time the corps were tied into the Advance Army Hirehead or into the new Army command post.

The next move of Headquarters Third U.S. Army was to be to WEIMAR (J 57). This move was contemplated to be made about the 17th of April. However, a change in the Third U.S. Army Zone of Operations shifted the communication axis starting from FRANKFURT (M 67) and proceeding southeast through WURZBURG (N 53) - NURNBERG (O 40) - REGENSBURG (U 15) and STRAUBING (U 54). On 16 April work was discontinued on the installation of Signal requirements at WEIMAR (J 57), although four spiral-four cables had already been constructed on messenger wire to that point. (See Annex 52) All efforts were immediately transferred to obtaining circuits as quickly as possible between FRANKFURT (M 67) and ERLANGEN (O 31). (See Annex 53) Twenty quads in an underground lead cable between FRANKFURT (M 67) and IPHOFEN (N 82) were rehabilitated. From IPHOFEN (N 82) to ERLANGEN (O 31) four spiral-four circuits were constructed on messenger wire. Although the underground cable extended through IPHOFEN (N 82) to NURNBERG (O 40), it was thought that the rehabilitation of this section would require more time than was allowed to obtain working circuits. Therefore, the underground cable and four spiral-four cables were used jointly by Third U.S. Army and XIX Tactical Air Command. Four wire repeaters were placed on sixteen quads at FRANKFURT (M 67) by Third U.S. Army. XIX Tactical Air Command placed sixteen repeaters at IPHOFEN (N 82). CF-1 Carrier Equipment was placed in operation on the four spiral-four cables between IPHOFEN (N 82) and ERLANGEN (O 31). Eight of the underground repeatered circuits were cross connected to eight carrier channels at IPHOFEN (N 82) to furnish communication between Lucky Rear at FRANKFURT (M 67) and Lucky at ERLANGEN (O 31). The remaining eight circuits were used by XIX Tactical Air Command.

On 22 April, Headquarters Third U.S. Army opened at ERLANGEN (O 31) and closed at HERSFELD (H 35).

Lucky Rear closed at FRANKFURT (M 67) and moved to ERLANGEN (O 31) on 25 April. Circuits to FRANKFURT (M 67) were still needed to serve Army troops in that area. Advance Section Communications Zone took over the switch in FRANKFURT (M 67) and named it FRANKFURT SWITCH.

Underground cable was made good between NURNBERG (O 40) and BAMBERG (O 24). This was a 98-pair cable and circuits were assigned to units requiring service. A switch was established at BAMBERG (O 24) named Lucky King which served units in that vicinity. From NURNBERG (O 40) to ERLANGEN (O 31) a local cable consisting of one hundred pairs was also made good. This cable served units in the vicinity of NURNBERG (O 40), directly from the Lucky switchboard and also provided cross-connected circuits at NURNBERG (O 40) to BAMBERG (O 24). In the meantime Twelfth Army Group was in the process of rehabilitating underground cable from FRANKFURT (M 67) through FULDA (H 31) through IPHOFEN (N 82) to BAMBERG (O 24). Some of these circuits were cross-connected at BAMBERG (O 24) to Lucky via the underground cable passing through NURNBERG (O 40). (See Annex 57)

During the month of April Army Signal troops placed 459 miles of W-110 field wire, 2,394 miles of spiral-four cable, and 295 miles of open wire. One hundred and twenty-one miles of W-110 field wire and eighty miles of spiral-four cable was recovered by these Army troops.

DECLASSIFIED

The number of [illegible] Third U.S. Army during the month of April was 75, [illegible] of 5,476 miles. Each of the corps in Third U.S. Army had ten terminals to division level. Communication was maintained between each of the corps and the First U.S. Army over Third U.S. Army radio link. (See Annexes 47 through 49)

CW Radio Communication was maintained throughout the month of April with all the stations in the following nets:

Total number of motor messenger miles travelled	97436

Section II - Supply

The month of March saw our combat forces advance from the ETLL River line to the RHINE, thence south along the RHINE for a junction with Seventh U.S. Army. On 25 March, our forces crossed the RHINE River, thus throwing another fast advance on an already strained supply system. The advances of March and early April forced into operation all trucks that could be [illegible] depots and dumps within reach of the [illegible] to completion to the RHINE [illegible] set up to move all classes of [illegible] as possible. The bulk of rail transportation was [illegible] to the movement of Class I, III, and V, [illegible] II and IV with only a small rail movement. Truck transportation was therefore the only means for the fast movement of

DECLASSIFIED

Digitized by Google

Signal supplies in the early part of the month. During the month however, bulk shipments were made by rail. It was also necessary during the month to call for air shipment on wire, spiral-four, and some batteries.

Third U.S. Army Signal Depots Number 10, 14, 15, 16, 17, 18, 19, and 20 were in operation during the month. At the beginning of the month, Depots Number 10, at FLORANGE (U 88), France and Number 14 at KIRCHBERG (L 74), Germany were in operation. Depot Number 10 was the main depot and it became imperative to move it forward immediately. Depot Number 15 was therefore established at MAINZ (M 35) for a main depot and shipments were started immediately. Initially only one truck company was available for this move, but as the rail became continuous, shipments were made by rail. We were also supported on this move with a bulk lift of 300 tons per day for a six-day period to be shipped by ten-ton trucks. Thus, we accomplished this movement of main depots in little more than two weeks. With the rapid advance made after the crossing of the RHINE River, it was again necessary to establish advance depots in the rear of the advancing forces. Depot Number 16 was then established at KIRCHHEIM (S 20) and later Number 17 south of ERFURT (J 36). In the establishment and re-supply of these depots, the RHINE River, with its few bridges, proved to be an extreme bottleneck. Reconnaissance showed that at OFFENBACH (M 76) a depot could be established which afforded excellent rail off-load and truck loading facilities. Depot Number 18 was then established at this point and all cars enroute to Number 15 were reconsigned, thus alleviating duplicate handling of supplies. Number 18, although opened as a General Depot, did not do the volume business as is generally done at the main depots. In the middle of the month, the mission of Third U.S. Army was changed from an easterly drive toward DRESDEN (P 29) to a southeasterly drive along the Czech border. After the troops had assembled and moved into their new positions, another Advance Depot, Number 19, was established in their immediate rear, at HAINSDORF (U 52), Germany to eliminate the NURNBERG (U 40) traffic bottleneck and to afford more space for the establishment of a main depot. During the month, Depots Number 10, 14, 15, 16, and 17 were closed when forward depots were set up to replace them.

Signal supplies, although available within the army area in good quantity, were not available to the troops because of transportation back-logs. However, the fast advances made battle losses on equipment small and the troops suffered little. Wire and spiral-four became so critical at one time that 4,000 miles of wire and 400 miles of spiral-four were flown to an advance air strip for immediate issue.

The Mobile Advance Depot set-up was continued in use and improvements were made through experience. There is conclusive evidence to show that during a rapid advance it is much more efficient to use these mobile depots rather than to attempt to maintain main depots far forward. There is little call for items other than wire, cable, and expendables and these items can be moved up much more rapidly when there is no movement of bulk equipment.

Repair and rehabilitation work continued on a scale comparable with March. Spiral-four cable pick-up remained at the top of the priority list and outstanding work was performed by the pick-up and service teams. Of the 20,000 reels used during the month, one-half was cable which had been picked up and serviced. The same units were engaged in servicing Third U.S. Army and the following repair data is their accomplishment:

EQUIPMENT.

975	Minor Repairs and Adjustments
2608	Major Repair Jobs
4	Cannibalization of Equipment
358	Installations in Combat Vehicles
0	Salvage of Equipment (American)
218	Technical Inspections

SPIRAL-FOUR CABLE.

872	Miles Spiral-Four Turned in by Units
1357	Miles Serviced and Returned to Stock
0	Balance on Hand to be Serviced

Allocation of the thirty-eight most critical items of supply was continued by Twelfth U.S. Army Group.

A total of 19,560 miles of Wire, W-110-B was issued during the month for a daily average of 652 miles. Spiral-four cable issues were 5,290 miles.

CHAPTER 12
MAY OPERATIONS

Section I - General

Third U.S. Army forward troops pushed further into the National Redoubt Area in the first few days of May, and Third U.S. Army Headquarters displaced rapidly forward behind them. Enemy opposition continued to be light and sporadic and with the capture of SALZBURG (Z 90), BERCHTESGADEN (Z 50) and LINZ (V 88), Austria, the mission of the Third U.S. Army appeared to be completed. However, a further mission of liquidating the last remaining pockets of resistance in Czechoslovakia was announced and Third U.S. Army troops continued operations until the unconditional surrender was announced on 8 May.

On 2 May the Command Post moved from ERLANGEN (U 31) to REGENSBURG (U 15). (See Annex 60) This displacement was made with two days notice, a factor which, of necessity, limited the signal facilities of the headquarters. Wire trunks were in operation to XX Corps, and Radio Relay was used for communications with Lucky Rear, Lucky Baker, III Corps and XX Corps Advance. Ninety-seven locals were installed within the command post at the time of opening. Within the next twenty-four hours, however, other trunks and locals were installed and within forty-eight hours after the opening of the Command Post, normal communications had been installed. This confirmed previous estimates that a total of four days was required for the installation of communications for a new command post under covered accommodations.

Headquarters Third U.S. Army remained at REGENSBURG (U 15) until the cessation of hostilities.

V Corps was transferred from the First U.S. Army to Third U.S. Army on 4 May and communication was established to its headquarters at GRAFENWOEHR (P 03) by means of a spiral-four cable between ERLANGEN (U 31) and GRAFENWOEHR (P 03), abandoned earlier by III Corps. When the V Corps displaced to PILSEN (L 04), Czechoslovakia, communications were established by means of spiral-four cable between REGENSBURG (U 15) and that city.

The Army Communications Axis was being extended in the direction of PILSEN (L 04), which was to be the next command post of Third U.S. Army. Four spiral-four cables were under construction to the proposed site and had reached as far as CHAM (U 58), when the announcement was made that the war was over.

Section II - Signal Intelligence Service

During the period 1 May to 9 May, the 277th Signal Pigeon Company continued to furnish pigeons to all units within Third U.S. Army desiring them for communication purposes from confiscated German civilian and Wehrmacht lofts. This method proved to be most successful during a fast armored operation when there was not sufficient time for settling and training Army pigeons.

The Army SIAN Company had succeeded to a great extent in working out a majority of the difficulties common to initial operations, and were beginning to prove their value as an informational service to the Army Commander and Army G-2 when the war ended on 8 May 1945.

Code room records for the period follow:

	Incoming	Outgoing	Total
Number of Messages	1,601	350	1,951
Number of Groups	385,815	91,603	415,518

No message, were encrypto-graphed by SIGCUM equipment during this period.

Analysis of radio traffic of Third U.S. Army nets monitored during the first eight days of May continued to indicate a decided decrease in the level of transmission security over that of previous traffic monitored during more static periods. SIAN traffic monitored during this period revealed a high level of transmission security within the organization.

Details of radio intelligence activities during the last eight days of the war in Europe will be reported at a later date when security regulations have been relaxed.

Section II - Communications

On 1 May Headquarters Third U.S. Army was still at ERLANGEN (U 31). The wire axis consisting of four spiral-four cables was extended from ERLANGEN (U 31) to REGENSBURG (U 15), two of which were to be used by Third U.S. Army and two by XIX Tactical Air Command. Simultaneously twenty quads of the underground cable between NURNBERG (U 40) and REGENSBERG (U 15) were also rehabilitated. Lucky moved to REGENSBURG (U 15) on 2 May. The corps were served by repeatered spiral-four carrier circuits from REGENSBURG (U 15) (one spiral-four cable per corps). At this time Army consisted of the III, XII, and XX Corps. The V Corps was transferred from First U.S. Army to Third U.S. Army on 4 May. Initially this Corps was located at GRAFENWOEHR (P 03). Wire communication was established to V Corps by the use of an abandoned XII Corps spiral-four cable which existed between ERLANGEN (U 31) and GRAFENWOEHR (P 03). Service was established to Lucky Rear. (See Annex 60)

On 5 May Company "A" of the 66th Signal Battalion was assigned to Third U.S. Army. One platoon of this company was immediately attached to the V Corps to provide Army-Corps communication.

The next move of this Corps was to PILSEN (L 04), Czechoslovakia at which place the Corps was served by a spiral-four cable constructed between REGENSBURG (U 15) and PILSEN (L 04) and operating from the Lucky Switchboard (Carrier). The wire axis consisting of four spiral-four cables was extended from REGENSBURG (U 15) to STRAUBING (U 54). It was completed to STRAUBING (U 54) on 4 May.

The Army axis was again changed, this time to the northeast. Four spiral-four cables were under construction through CHAM (U 58) to PILSEN (L 04), which was to be the next command post of Third U.S. Army. These cables were completed to CHAM (U 58) when word was received of a possible German surrender.

On 7 May unconfirmed radio reports were that Germany had surrendered unconditionally and this surrender would be effective 0-0001B May 1945.

In the period 1 May to 8 May, Army Signal troops placed 301 miles of W-110 Field Wire, 249 miles of spiral-four cable, and forty-nine miles of open wire. Eleven miles of spiral-four cable was recovered for this same period.

The number of VHF Radio Relay circuits installed within Third U.S. Army during the early part of May was thirty-eight, covering a total of 1310 miles. During this period each of the corps in the Army had ten terminals to division level. Communication was maintained to each of the corps and the First U.S. Army by Third U.S. Army Radio Link circuits. (See Annexes 58 & 61)

Continuous wave radio communication was maintained during the period in the following nets (See Annex 59):

FO-33	FO-1
Twelfth Army Group Main	Advance Spe Com Z 2d,7th Regulating Station

The breakdown of traffic handled for the first eight days of May follows:

Precedence	Outgoing	Incoming	Total
Urgent	351	265	616
Operational Priority	1148	657	1805
Priority	1001	1328	2329
Routine	4871	2504	7375
Deferred	1	0	1
Total:	7372	4754	12726

Number of messages and groups handled by electrical means:

Message	Outgoing	Incoming	Total
Radio	251	387	638
Teletype	2597	2531	5128
Total messages handled:	2848	2918	5766
Groups			
Radio	40504	52203	92707
Teletype	550810	511689	1062499
Total groups handled:	591314	563892	1155206
Messenger service:			
Total number of pouches by air messenger			66
Total number of motor messenger miles travelled			27182

Section II - Supply

At the beginning of May Third U.S. Army Signal Depot Number 18 was located at OFFENBACH (N 70), Germany and Number 20 at FISCHBACH (N 31) The combat forces had driven southeast along the Czech border to LINZ (V 88), Austria and beyond. The mission of Third U.S. Army fimally appeared to be over. It was then that a permanent depot for occupation operation was planned. This was to be placed in the NURNBERG (O 40) area and a suitable location was found at SCHWABACH (T 38), Germany which was to be established as Number 22. However, before shipment could be made to this occupation depot, Third U.S. Army was given the additional mission of driving into Czechoslovakia into the last remaining German force. It was then found necessary to establish an advance depot on the Czech-German border at POSCHERLSREID (U 95), Germany. This was to be Depot Number 21. This depot was established and before it could be resupplied the unconditional surrender was announced.

The War in Europe was now over and the supplies and equipment on hand were to be collected into the occupation depots. All advance depots and rear depots were immediately closed out and shipped into the two depots in the NURNBERG (O 40) area, Numbers 20 and 22. There was still a sizeable backlog of some 200 rail cars outstanding and had the war not ended when it did, additional air shipments of wire and spiral-four would have been necessary.

During the first eight days of May the Signal Repair Companies were in the process of setting up for operation in SCHWABACH (T 38). The wire pick-up teams were engaged in cleaning up the northern army and Corps axis and a sizeable quantity of spiral-four cable was picked up and serviced.

Captured war material dumps were being guarded and inspected as they were found. No inventory was taken because the primary mission was the supply of our troops and no personnel could be spared for such inventories. However, plans were being made for an inventory and collection of all German war material in the days following the cessation of hostilities.

During this eight-day period, a total of 3038 miles of wire, W-110-B was consumed for a daily average of 380 miles. Spiral-four issues totalled 879 miles.

CHAPTER 13
LESSONS LEARNED & CONCLUSIONS

1. Throughout the operation eighteen officers were on duty in the Signal Section with from one to three officers attached during short periods. These numbers were inadequate as evidenced by the long working hours necessary for the proper completion of assigned tasks. This was especially true in the administrative, Communication, Signal Intelligence, and Supply Subsections. During a fast-moving operation, the Signal Section must operate on a twenty-four hour basis.

2. Signal communication planning and maintenance of records provide only a portion of the duties of officers of the Army Signal Section. All Signal Staff Officers must make frequent visits to various subordinate units and installations to check upon the execution of assigned tasks. These visits cannot be delegated to officers of assigned Signal Corps units.

3. All enlisted members of the Army Signal Section must possess knowledge and techniques far in excess of normal clerical and administrative requirements. They must often function as junior officers and must be familiar with all operational details of the Signal Corps troops operating under the Army Signal Officer.

4. Under fast-moving combat conditions which result in a shortage of rail and motor transport, field wire and cable is often in short supply in forward areas, due to low transportation priorities. As a result, wire and cable recovery and rehabilitation must be stressed. This recovery is often impossible when wire teams are being worked to full capacity to extend wire axes in rear of advancing troops. Additional wire recovery and wire servicing teams are required under such conditions.

5. The guarding of VHF radio relay terminals and repeater sites, wire repeater stations, CW radio center locations, and overrun enemy signal installations provided a major problem throughout the campaign. Necessary guards were usually difficult, if not impossible to obtain since the Military Police and other security units were committed in many places over an extensive area.

6. During periods of long and frequent Signal Depot displacements, a minimum of one Quartermaster Truck Company was always needed by the Signal Supply Officer. The Signal Depot frequently moved to points in advance of railroad rehabilitation and motor trucks provided the only means for movement of signal supplies and equipment. In addition trucks were needed for the establishment of advance signal distribution points and for the collection of captured signal supplies and equipment.

7. In the establishment of initial command post installations, some confusion resulted, due to lack of clearly-defined functions and jurisdiction of the operation and construction troops. This confusion was eliminated by the issuance of a signal circular which outlined the functions and duties of the Chief Switchboard Operator, the Wire Chief, the Wiremad Chief, and Maintenance Team Chiefs. All of this personnel was placed under a Wire Operation Officer in the Signal Center for coordination and supervision.

8. One signal operation battalion and two signal construction battalions, indicated in T/O & E 200-1 as normal organic troops, are inadequate to meet the demands of the Army Signal Service during a rapid advance. In order to maintain a minimum level of wire communication facilities, these troops must be employed far beyond normal working hours.

9. The principles set forth in FM 24-5 are sound and must be applied forcefully during the training period. This applies even to a greater degree to reinforcements who join Signal Corps units during combat. During the later phases of combat, there were numerous instances where troops failed to apply such fundamental techniques in making field wire splices, servicing messages for transmission, tuning radio transmitters, giving first echelon maintenance to power units, etc.

10. As the Army advanced, the wire system constructed by Third Army troops was taken over in whole or in part, by the Army Group or the Advance Section Communications Zone. This, to a large extent, was similar to the method by which the Army took over the Corps communications systems as the Corps moved forward. However, Army assisted in the construction of [illegible] Corps elements, while only in a few instances was aid received from [illegible] or Communications Zone for the construction of Army systems.

11. The associated Tactical Air Command did not possess signal troops of the proper quantity and type to maintain a wire axis of its own behind a rapidly advancing Army. Therefore the Army had to usually provide wire channels to supporting air units from the limited number available.

12. A pool of trained CW radio, VHF radio relay, switchboard operation, cable splicing, and wire construction teams, as organized and equipped by T/O & E 11-500 must be available and under the direct command of the Army Signal Officer. When the need for such teams develops, there is insufficient time to assemble the required personnel, equipment, and vehicles from other sources.

13. Signal Corps troops do not possess as organic equipment weapons of the proper type for anti-aircraft defense and close-in defense of bivouacs and installations. As a result it was necessary to acquire machine guns and mounts on a project or loan basis after entry into combat.

14. During initial combat operations, wire communication service was often disrupted by sudden displacements of Corps Command Posts to points where no wire circuits had been installed. Displacements were also made to areas before VHF radio relay equipment had been moved and placed in operation.

15. Training received by signal troops in the United States was largely concerned with communication networks for use at division level. Personnel were not familiar with the installation, rehabilitation, maintenance, and operation of large fixed installations and commercial equipment. Army signal troops require a high degree of technical skill and commercial communications experience in special fields.

16. In general, T/BA and/or T/E equipment of the operation and construction battalions is inadequate for their mission as Army troops. It is necessary to supplement such equipment with project material and also. The project equipment is rarely available at the outset of the campaign in which it is to be used. This imposes undue hardships on the Signal troops, and materially curtails communications.

17. In order to plan and construct communications forward along the Army axis, and to be prepared for CP displacements, it is imperative that all officers of the Communication Subsection be kept fully informed regarding proposed tactical operations and probable locations of CP's.

18. Full exploitation of existing facilities was impossible because wire reconnaissance personnel were not available in the Communication Section. A minimum of two wire reconnaissance officers is necessary in order to properly plan the re-use of such military or commercial lines as are available.

19. All wire lines must be installed so as to require the least possible maintenance. All wire should be kept off the ground and substantially supported. Spiral-four cable cannot be treated like field wire. It must be carefully handled and should never be laid on the ground. Spiral-four should be suspended on messenger wire. Each section should be tested for continuity and electrical characteristics as it is placed. Couplings should be supported so as to be readily accessible for test. Cable should be supported in such a manner as to eliminate the possibility of abrasion against trees and buildings. It is important that cable connectors be kept clean and dry. The proper construction of spiral-four circuits requires time. They cannot be hastily installed and expected to stay in service. Trouble-free circuits are attained only through careful installation. Initial readings of capacitance and resistance should be made when the circuit is completed. These will prove valuable for future maintenance of the circuits.

20. At least one wire team should be stationed at repeater stations on air or cable routes to maintain the circuits passing through the stations. Repeater stations should also be provided with an EE-8 test set to locate troubles. A standard operating procedure is necessary for the installation, operation and maintenance of carrier and repeatered circuits.

21. The attachment of Army Construction troops to each Corps to extend the Army-Corps axis results in more rapid establishment and more effective maintenance of such circuits. In past operations a construction platoon was attached to each Corps. This proved inadequate in fast moving tactical situations.

22. All Signal and Communication [illegible] trained and equipped [illegible]

DECLASSIFIED

Digitized by Google

81-CSI-4858

24. Army Signal Construction troops must be responsible for the construction and maintenance of trunk lines. This requires that personnel of the construction battalions be trained to operate construction centers and test equipment. Local testing is handled by the Operation Battalion Wire Chief. Toll testing is handled by the personnel at the Construction Center, often called the Wirehead.

25. The TC-10 Switchboard is an inadequate substitute for a rugged, van-mounted multiple switchboard of commercial design. A switchboard similar to the Western Electric Company's Number 10W, arranged for 300 local-trunk circuits on a four-panel multiple basis and capable of expansion to six, eight or ten positions would greatly improve Army communications.

26. Liaison Officers from the Army Signal Service to each corps are a vitally important link in the communication system. Platoon leaders or Company Commanders of Army construction troops attached to each corps performed this function in an outstanding manner. It is felt, however, that the officer assigned to such duty should be of field grade. He could supervise the activities of all Army Signal troops working with corps, such as radio relay teams, carrier teams and construction personnel.

27. Construction Liaison Officers from Army Group and Communication Zone should be furnished to Army, together with Army Group or Communication Zone Construction personnel, in order to extend Army Group - Army circuits.

28. The Air Liaison Squadron should normally be assigned to the Army Signal Officer as a part of his operating personnel. Air Messenger Service is an essential part of the Army communication system and should not be divorced from it. It is necessary, however, to have an Air Operation Officer assigned to the Communication Subsection in order to supervise the allocation of planes.

29. A Radio CW Net is not capable of handling large amounts of traffic. All CW Radio Circuits between Army and Corps Headquarters should be point to point.

30. The available CW Radio frequencies are so few that shifts of frequencies within units are almost impossible. Under such conditions the employment of daily changing code signs is of little or no security value. The employment of such daily changing code signs with their attendant limited distribution of callsign sequence charts, code sign books and row registers make it impossible for message center routing clerks and radio operators to rely, traffic without deciphering it in order to determine the proper addressee.

31. At least six vehicular radio sets and operators should be kept available at all times for dispatch on special missions.

32. All CW Radio operators should be trained in the selection of desirable transmitting and receiving sites and must understand the theory and construction of antennae.

33. The selection and allocation of radio and radar sites within the Army area must be controlled by the Army Signal Officer.

34. The use of an Army SOI item to assign frequencies is entirely too slow. Assignments and changes should be made by the use of messages dispatched by teletype or messenger, with confirmation by the usual SOI item.

35. There are too many different types and sizes of radio sets, which materially complicates supply, repair and frequency allocation. It is felt that standardization of VHF and AM radio sets into three or four groups would materially reduce supply and maintenance problems.

36. The present number of messenger personnel in the Signal Operation Battalion is inadequate. Personnel equivalent to a motor messenger company is necessary in order to perform the gruelling twenty-four hour a day, seven day a week stint required by the modern field army in a rapid advance.

37. The provision of direct tape relay full duplex teletypewriter circuits between Army and each corps, in addition to circuits on the teletype switchboard, facilitates the handling of traffic. This is true particularly in multiple address and book messages. Standard Ocean Tape Relay Procedure is employed.

38. The most stable teletypewriter circuits were found to be those operating on carrier channels.

39. The CF-1 carrier system was proven to be rugged and adaptable for corps and army use, providing excellent speech circuits on toll spiral-four cable and VF equipment. Ample provision should be made in projects so that carrier terminals may be provided down to and including divisions.

39. The rear echelon has signal communication problems just as pressing and sometimes even more complex than those of the forward echelon. It is imperative that additional communication officers and men be provided from the Communication Subsection to adequately meet the communications requirements of the rear echelon. The Communication Subsection in general is undermanned to perform the important task of directing the Army communication system. All of the officers of the section have generally operated on a seven-day week and sixteen-hour day throughout this operation. The Table of Organization should provide for additional personnel to supervise communication on a twenty-four hour basis.

40. Radio Intelligence agencies should be centralized under one headquarters, preferrably at Army Group, and units detached to Army and Corps for operational use.

41. G-2 personnel should receive training in signal intelligence or an officer from Signal Intelligence Service should be in the G-2 Section.

42. Direction Finding equipment should be more sensitive and accurate than that now in use. All direction finding personnel should be trained for radio control of direction finding.

43. Call signs and frequency changes should take place simultaneously. Changing one without changing the other decreases signal security.

44. A central agency should be created in the War Department charged with the responsibilities and equipped to execute the functions enumerated below:

a. Standardization, unification, and thorough dissemination of security and procedure regulations which are adequate for employment by both high echelon and combat unit radio nets, to include investigation and employment of the opinions of radio operators who have operated in combat units.

b. Monitoring of one-fourth of the radio nets of the units in its command simultaneously, including analysis of logs and submission of detailed reports of both transmission security and net operating efficiency to the units concerned.

c. Thorough investigation of all infractions of regulations.

d. Thoroughly acquainting operators with the capabilities and limitations of signal intelligence agencies, to include cryptanalysis, traffic analysis, and direction finding.

e. Establishment of unit self-monitoring, to include checking of the units' reports and the effectiveness of corrective action taken by the unit to prevent recurrence of violations.

f. Liaison with unit S-3's and S-3's to coordinate operations and security for future plans and operations.

g. Direct contact with local radio counter-measure organizations for mutual exchange of information and close coordination of operations.

45. Without a central, authoritative agency to direct and maintain security, transmission security will be so inconsistent as to be more a hindrance than an asset to operations.

46. Captured signal documents must be handled with utmost speed at all echelons in order to obtain maximum results. A channel must be set up for their expedient handling, preferably special messenger service furnished by signal intelligence agencies at Corps, Army and Army Group levels.

47. Interrogation of PW's can be very helpful with regard to counter-signal intelligence, in obtaining intelligence of value regarding enemy codes and ciphers, and in helping to identify otherwise meaningless captured documents.

48. Army Headquarters requires a minimum of eight SIGABA's.

49. Operators require intensive training in SIGABA operation within training areas in the States or operational theater before entering combat, with emphasis placed on the breaking of garbles.

50. The SIGABA should be redesigned to permit the cutting of tape simultaneously with the printing operation.

51. Each signal organization charged with the operation of SIGABA's must have at least one qualified SIGABA maintenance man as a member of the organization before entering combat.

52. Mobile SIGABA repair teams should be readily available to Corps and Divisions, and should work from Army level, rather than from Army Group level.

53. Armored Divisions should be supplied with a suitable conveyance for the transportation of the SIGABA to avoid rough handling during displacements.

54. There is an excessive number of special purpose SIGABA systems and stand-by and emergency systems, including strips. The majority of these systems should be withdrawn, as they only increase accountability records, and take up much-needed space in code rooms.

55. The principles for preserving physical security of cryptographic systems are sound and should be continued in effect.

56. Signal Corps personnel have been adequately trained in the provisions of cryptographic security.

57. There is definite need for further training in basic cryptography and security principles for code clerks in Artillery, Engineer, and Anti-Aircraft units, as well as in units within divisions.

58. Suitable and practical map coordinate and low grade codes should be made available to lower echelon units, and should be uniform throughout the Theater command.

59. The pertinent security principles and operating procedures for the M-209 Converter should appear in one single publication, which should be made available to all units holding this device. This publication should not be changed unless current regulations are proven insecure.

60. The responsibility for avoiding stereotypes should be vested in the cryptographic personnel rather than in the originator of the message. These should be avoided by bisection, rather than by changing the message.

61. The Army Operations Battalion should include teams equipped to instruct units in combat in cryptographic and transmission security.

62. Signal units of this Army suffered continuously from a shortage of personnel with the following SSNs:

039 - Cable Splicer, Telephone and Telegraph
097 - Installer-Repairman, Telephone and Telegraph
187 - Repairerman, Telephone
237 - Teletypewriter Operator
238 - Lineman, Telephone and Telegraph
641 - Field Lineman
650 - Switchboard Operator, Local Battery
706 - Radio Operator, High Speed
770 - Radio Operator, Low Speed

Of these, the Lineman, Telephone and Telegraph; Field Lineman; Radio Operator, High Speed; and Radio Operator, Low Speed, were the most critical specialties. It was seldom that the Army and Corps signal units of this Army had their authorized number of these personnel, which hindered these units in the performance of their missions.

63. Even though many non-battle casualties were returned to their parent organizations, many were deferred to other units thereby causing training and readjustment problems. This practice resulted in an additional loss of time which could have been prevented if personnel had been returned to the organizations from which they were evacuated.

64. All signal units in this Army have received many reinforcements whose records showed them to be Lineman, Telephone and Telegraph; Radio Operators, High Speed; Radio Operators, Low Speed, etc., but who were not qualified in these specialties. This condition resulted in the unit having to conduct a training program while engaged in operations. If this training program had been conducted in the Communication Zone, time could have been saved.

65. Many qualified radio operators, high and low speed, were received by the signal units of this Army. However, a number of these men were trained in the infantry and could not operate the radio sets SCR-193 and SCR-193. These operators were qualified in code speed only. Personnel who are earmarked as radio operator reinforcements must be trained to operate more than one type of radio.

66. The level of signal personnel in depots supporting the Third U.S. Army during the post operation was not sufficient to meet emergencies. This was especially apparent during the campaign of the Third U.S. Army in Germany. Few reinforcements were available during this period and many units were under-strength. This shortage of personnel seriously hampered the installation and maintenance of communication systems.

Digitized by Google

67. An Enemy Equipment Intelligence Service (EEIS) Detachment should be assigned or attached to the Army Headquarters during the organization and planning stage to insure that EEIS activities are properly understood and provided for prior to the start of operations, and to enable the Detachment to establish proper contact with the Army Staff and units expected to serve under the Army. (EEIS Detachment No. 6 joined Third U.S. Army in Normandy just prior to the Army's becoming operational, 25 July 1944, and while contacts were made as promptly as possible, valuable time and equipment was lost in the early stages)

68. a. EEIS Detachments should include general service personnel especially a stenographer, and a platoon for guards and drivers.

b. Also, a source of additional personnel should exist at higher headquarters to be called upon during times of increased activity.

c. In general, at least one forward team consisting of an officer and enlisted man should be on duty with each corps.

69. a. Throughout most of the campaign on the Continent, no additional personnel was available to the EEIS Detachment and it was necessary for technicians to serve as clerical personnel and drivers. Further, the only available guards for equipment was from combat personnel, which was extremely difficult to obtain.

70. The value of captured enemy equipment to the Service should be brought home to all troops during the training period. All personnel should be taught to report immediately the existence of such equipment when found. (Much valuable equipment was lost to the Service either because it was not promptly reported to the EEIS or because it was destroyed prior to our arrival).

71. A suitable channel for prompt evacuation of enemy equipment having intelligence value should be well established by higher headquarters prior to operations. (During the early part of operations on the Continent, definite channels for the evacuation of enemy equipment having intelligence value were not fully understood. The EEIS Detachment actually made contact with Advance Section Communications Zone and Army depots, outlining the mission of EEIS and explained to them their mission concerning the evacuation of equipment. In many cases, such shipments were either delayed or lost in transit. In March 1945 a system was set up by SHAEF, directing evacuation by express train to Paris. This system of evacuation has proven very satisfactory).

72. The EEIS Detachment should not be expected to handle large quantities of captured equipment classified for utilization, but should locate and report such equipment to Signal Supply. (In the early stages of the campaign the EEIS evacuated all captured signal equipment, but as time progressed it became apparent that the task was too large for the Detachment, and interfered with the primary mission of locating and reporting on new types of equipment).

73. Each Army needs two Signal Repair Companies.

74. Signal Depot Companies need an additional Storage and Issue Section.

75. A Signal Depot Company must have practical training before entering into operations.

76. Commanding officers and officer personnel must have thorough training in supply operations in the field; not simply training in ASF fixed installation operations. Recommend training in Post, Camp, or Station Signal Supply Offices where the activity is great.

77. Equipment allocations made by higher headquarters of items that are critical in supply must be made throughout the entire operation. This issue must be equitable, with full consideration of the tactical situation.

78. A requisition made on a ten-day basis is satisfactory only when time delay in delivery of supplies to Army is ten days or less.

79. Erroneous or incomplete information must not be furnished Armies on supply matters.

80. The line of supply from the port to the army passes through too many hands. It is necessary that deliveries be made as directly as possible. Every effort must be made to reduce the number of intermediate handlings.

81. The Army Signal Supply Section should set up a simple set of records showing; losses of equipment of all troops, reports of items in the depot by daily inventories, items on requisition, and information showing when items requested are delivered.

82. Army advance signal depots should be kept as far forward as possible, but should not be loaded down with non-essential items. Wire, batteries, tubes, spiral-four, wire tags, cable stubs, and some other items are all that have proven necessary in forward dumps.

83. VHF and CF carrier equipment, if in adequate supply, should be issued down to and including corps, with a basic setup being made for Army and Corps. Corps changing armies should keep this basic allowance. Additions to this basic allowance should be made by Army when necessary and allowances should be made in Army pool to have enough for these issues. However, these additional issues should be withdrawn when no longer needed or when a Corps leaves Army.

84. Requests for excess communication equipment for tactical units, i.e., divisions, tank battalions, FA battalions, etc., are not adequately screened. All requests, whether necessary or desired items ultimately end in the Signal Supply Office for action and determination of the issue. Analysis of the basic sets, employment and proposed use, limitations of the equipment, and adaptability of other equipment are nearly always made by the Signal Supply Officer. This campaign has seen the Signal Supply Officer acting as assistant engineer and research agent on all communication problems of divisions and lower units which are accompanied with requests for additional and excess equipment.

85. Transportation, as much as the availability of equipment, has been the bottleneck of signal supply. At least one Quartermaster Truck Company should be assigned for the exclusive use of the Signal Supply Office.

86. The Signal Depot Company should have three each Crane, Whitaker, (Engineer Equipment) on T/O and E.

87. Ten each Trailers, 2-2 (Ordnance) 12½-ton capacity, with five each tractors, 4 x 5, are needed for the Signal Depot Companies.

88. Recommend the elimination of the radio and radar repair sections of the Signal Depot Company and the reinforcement of the Signal Repair Company by the same personnel.

89. Radar supply and spare parts must be removed from the responsibility of the Signal Depot Company. It has been found necessary to establish a separate section for these under the supervision and operation of trained personnel of the Signal Repair Company.

90. Army signal depots should not be required to carry pole line material, but arrangements should be made to have an adequate amount to meet any Army needs in Communications Zone depots, near the Army rear, to be made available on call of Army.

91. Army should be set up with at least one construction company for the sole purpose of picking up spiral-four cable and field wire in the Army rear areas. This organization should have massing facilities for at least three groups.

92. The Army Signal Supply Section does not have sufficient officer personnel to efficiently handle the personal attention to Corps and Divisions on requirements. Signal Supply Section should be augmented by two officers.

93. The Signal Depot Company should be provided with fifteen each K-35 trailers or semi-vans for transporting small items used in setting up advanced mobile depots.

94. Excess authorization should be made and approved by the theater, and issued to all units prior to their assignment to the Army. Any additional excess for specific operations should be made when necessary by the army, but should be withdrawn when no longer needed or when the unit leaves that particular Army.

95. The Army Signal Section, as organized in the latest edition of T/O & E 200-1, provides sufficient officer personnel for normal operations. Special types of operations will require augmentation as recommended by the Signal Officer.

96. The present T/O, dated 26 October 1944, of the Army Signal Section provides only forty-six enlisted men. This number is insufficient. It is recommended that six additional enlisted men be included in the Army Signal Section.

97. One wire recovery battalion, consisting of one wire servicing company and two wire recovery companies should be included among the signal troops organically assigned to an Army.

98. One guard company should be assigned to the signal troops of an Army to guard VHF radio relay terminals, radio and wire repeater stations, and overrun enemy signal installations.

99. Signal troops should be organically assigned to [illegible] for the purpose of administration, discipline, housing, and supply. In addition, one or more separate Signal Battalion Headquarters should be assigned to an Army to handle similar matters for the numerous separate companies.

100. One Quartermaster Truck Company should be assigned to duty with the Army Signal Section at all times.

101. Two Signal Operation Battalions and three Signal Construction Battalions should be assigned to the Army as normal organic troops. This will insure the availability of required troops without the constant danger of having these troops removed from the Army on short notice by higher echelons.

102. Signal Corps enlisted reinforcements who join signal units during combat must have completed a minimum of twenty-six weeks of individual and specialist training. The completion of this training could be accomplished in the theater provided a proper administrative and training organization were set up for this purpose.

103. Both the Army Group and Communications Zone should be represented at Army Headquarters by competent signal liaison officers of wide experience and technical background.

104. A minimum of Signal Construction Company should be maintained in the vicinity of Army Forward Echelon at all times by the Army Group in order to extend the Army Group wire axis forward behind successive displacements of the Army Forward Echelon Command Post.

105. One Composite Signal Battalion, containing cellular teams as listed in T/O & E 11-500, should be assigned to the Army as an organic unit. This battalion should contain CF radio, VHF radio relay, switchboard operating, cable splicing, and wire construction teams.

106. All Army signal troops should possess as organical equipment a suitable number of machine guns and associated mounts to permit proper AA defense and close in defense of bivouacs and other installations.

107. Boards of officers consisting of experienced officers of signal operation and construction battalions, should be convened in each theater with the mission of preparing fully adequate T/O & E's for their respective units. The recommendations for each theater should then be studied and consolidated by the War Department in order to prepare T/O & E's which are fully adequate to meet normal operating conditions.

108. A chapter covering the approved methods of installing spiral-four cable circuits should be included in the next revision of FM-25, "Signal Communication".

109. A technical manual covering the operation of construction centers and associated test equipment should be prepared and issued by the War Department.

110. A rugged multiple switchboard of commercial design, similar to Western Electric Company No. 12-B, and arranged for 300 local-trunk circuits on a four-panel multiple basis, and capable of operation to 6, 8, or 10 positions should be designed and adopted as standard equipment for the Signal Operation Battalion.

111. One Air Liaison Squadron should be assigned under the jurisdiction of the Army Signal Officer as a part of the Army signal communication troops.

112. The procedure for changing radio call signs and shifting radio frequencies for security purposes should be revised in order to insure simplicity in its design.

113. The number and types of radio sets allotted to ground force units should be reduced and sets should be so designed as to permit their use by several different arms of the service.

HEADQUARTERS
THIRD UNITED STATES ARMY
Special Service Section

SUBJECT: Letter of Transmittal.

TO : Commanding General,
Third U. S. Army.

1. Submitted herewith is the After-Action Report of the Special Service Section, Third U. S. Army Headquarters, beginning with March, 1944 and continuing at the properly designated intervals by chapters.

2. This report outlines the efforts made by this section and subordinate units to maintain a high state of morale in the command and to increase the military effectiveness of officers and enlisted men through planned programs of athletics, recreation and welfare activities prior to and throughout actual operations.

SPECIAL SERVICES SECTION

Organizational and Functional Chart

DECLASSIFIED

CHAPTER 1
PLANNING IN UNITED KINGDOM

Owing to the nature of its purpose and function, the Special Service Section, Third U. S. Army found itself in both the planning and operational stages in the UNITED KINGDOM. To meet this situation two programs were issued: One an improvised program of athletics and recreation, using no standard equipment furnished in the "A" (Athletic equipment and games of all types) and "B" (Containing radio, phonograph, records and books) Kits. As officially published the program was as follows:

IMPROVISED

Touch football - use canteen for football.
Softball - stuffed sock and pick handle.
Speedball - sandbag.
Miniature terrain games - use of #10 can.
Irish pool - pole, wire and ration can.
Tests of strength - pick handle, rope, etc.
Track and field - rock for shot put, home made javelin.
Cross country relays.
Swimming - life saving courses, beginners courses.
Small group games - pencils, knives, etc.
Large group games - body contact.
Theatricals - group singing, amateur skits.

The memorandum read: "Emphasis will be on combining physical fitness with athletics. Squad and platoon type athletics will be stressed. Unit and organization Special Service Officers will be responsible for motivation and instruction of the program down to and including the smallest group. Active leadership in the program is absolutely necessary."

The second phase of the program - in which standard equipment was to be used - was outlined as follows:

STANDARD

Large group athletics - touch football, volleyball, soccer, softball, basketball, speedball. Small group athletics - badminton, horseshoes, boxing, wrestling, track and field events. Recreation "B" Kit, containing radio, phonograph, 100 library books, records. Small games, cards, checkers, darts, dominoes, and so forth. 16mm movies, soldier skits, live shows with local talent, band and orchestra concerts.

In addition, unit Special Service Officers were instructed to coordinate with the Medical Department (venereal control) and Chaplains Section and to provide the following information for their troops: location of American Red Cross Clubs, Special Service and American Red Cross movies, local points of interest, churches and hours of service, bathing beaches, gymnasiums, baths and showers, post exchanges, "Stars and St[illegible] American Red Cross Welfare Officers, Expeditionary Fo[illegible]

CHAPTER 5
OCTOBER OPERATIONS

The billeting of the majority of Army units in October caused a greater demand for entertainment and recreational supplies than at any other period in the campaign. Every facility was used to the utmost to meet this demand successfully.

Typical of the installations set up for entertainment was the "Garrison Theatre", seating capacity 1,200, in the Rear Echelon area of Army Headquarters. Both movies and live entertainment were shown here.

To meet increased requirements, two allocations of athletic and recreational supplies were hauled from METZ and LONGWEVILLE to Army Headquarters. This equipment, including such items as playing cards, counsil books, "A" and "B" Kits, bulk athletic goods, records and phonographs, was broken down to Corps and distributed to troops.

An additional 540 Special Service radios were picked up in Paris and given the usual distribution.

On 17 October, Marlene Dietrich arrived for a nine week tour among Army troops. Miss Dietrich was sent immediately to front-line Divisions.

From 24 October to 1 November 45, six movie teams from 3rd Special Service Company, complete with supplies of athletic equipment, books and games, were sent to the 79th Infantry Division, pulled back for a rest period.

On 25 October a Red Cross "Rest Dugout" was opened in NANCY (U 61) through the combined cooperation of the Third U.S. Army Special Service Officer, XII Corps Special Service Officer, Clubmobile "F" and Clubmobile "L". The recreational equipment for this club was furnished by the Special Service Sections of XII Corps and Third U. S. Army.

CHAPTER 6
NOVEMBER OPERATIONS

Distributing supplies, running USO Camp Shows and insuring a steady supply of entertainment films were the chief activities of the section during November.

Radios, games, athletic equipment and books and magazines were distributed to Army troops through both the section and the 3rd Special Service Company supply room.

The following USO Camp Shows were obtained and released to the units indicated during the month: Ruth Ateraus, world champion ping-pong player (XII Corps); "Bronx Family" (XII Corps); "Five Pips and A Drip" (Third U. S. Army). Shows presented at the Garrison Theatre throughout the month were Marlene Dietrich, "Bronx Family", and "Heroes of the Century".

In addition to the regular supply of films, three prints of the picture "Conflict", starring Humphrey Bogart, were obtained to be shown as world premieres. These prints were loaned to the 5th Infantry Division, 6th Armored Division and 35th Infantry Division Special Service Sections who showed them to enthusiastic audiences a short distance behind the front lines. Film supply was satisfactory during the month.

On 24 November, the 328Jrd Signal Service Detachment set up with this Headquarters for the purpose of servicing, repairing and exchanging motion picture projectors. A library of training films was also carried by this unit. This new arrangement lessened the load placed on the repair shop operated by this section which, during the previous month, had repaired almost fifty projectors, most of them from infantry regiments. These repairs had been effected by only three men.

CHAPTER 7
DECEMBER OPERATIONS

The outstanding event of December's operations was the establishment of the NANCY Rest Center at NANCY (U 61), FRANCE, for the rest and relaxation of front-line troops of units in XII Corps. Original plans for setting up similar installations in each Corps of the Army were temporarily suspended by the change in the tactical situation later in the month.

The Center was opened on 5 December with the assistance and supervision of the Special Service Section, Third U. S. Army. During the month 1064, enlisted men and 89 officers enjoyed the advantages of the Center. Men were brought directly from combat for a four day period, given showers and a complete change of clothing and a pass to town daily. There was no work or training for any of these soldiers. The NANCY Thermal Baths and Swimming Pool, adjoining the Rest Center building were given over to the returning troops.

Entertainment conducted directly by this section included the operation of the Empire Theater (next door to NANCY Red Cross Club), daily movies at the Garrison Theatre and presentation of the following USO Camp Shows at the Garrison Theatre: "Five Pips and A Drip" (1 Dec), and big league baseball players Mel Ott, "Dutch" Leonard, Frank Frisch, and "Rusky" Walters (24 Dec). Both shows were later sent to XX Corps. The Grace Drysdale show was sent to XII Corps on 15 December. All shows which played at Headquarters were also presented at the NANCY Red Cross Club.

A new entertainment feature, "Jeep Shows" consisting of three man soldier teams was received and three teams were sent to each Corps. The units were attached for a period of a month. They were made up of the most talented soldiers available in the United States and were designed to get entertainment to small units that were not large enough to warrant the scheduling of USO Shows.

The teams were equipped with a jeep and trailer and for the most part had singers and musicians for entertainers. General reaction to the shows was excellent.

Film supply during the month was satisfactory and one world premiere, "Saratoga Trunk", starring Gary Cooper was presented to the 4th Armored and 90th Infantry Divisions.

Two surveys were initiated by the section to determine the number of motion picture films and projectors in the Third U. S. Army and to ascertain the availability of 35mm theatres in the months to come.

The 3rd Special Service Company sent out 14 movie teams to Army divisions in the week 11-18 December to supplement service already being given by Corps. The teams went to the 26th Infantry Division and the 4th and 6th Armored Divisions, showing to approximately 60,000 troops.

To meet an emergency caused by the change in the tactical situation in the middle of the month, fifteen tons of supplies were requisitioned and shipped to Third U.S. Army Divisions operating in the "Bostogne Bulge" area. The supplies were to make up battle losses and to meet the extra demands on Special Service caused by the situation.

On 27 December, the 3rd Special Service Company, attached to Third U. S. Army Headquarters was reattached to III Corps.

A system of service by geographical locations was set up, permitting any unit to go to the nearest Corps Special Service Company to arrange movies and shows.

Throughout the month personnel of this section arranged numerous shows and other forms of entertainment at the NANCY Red Cross Club. One of the outstanding events was the recording of a program, in cooperation with the Signal Corps and Third U. S. Army Public Relations Section, which was sent back to the United States for radio broadcast. Features included were Christmas messages to home from front-line soldiers, selections by the 61st AGF Band and solos by soldier artists. On Christmas day, Joe McKinnon's "Keep 'Em Rollin'" USO Camp Show played to 2,000 troops at the Club.

CHAPTER 8
JANUARY OPERATIONS

DECLASSIFIED

The outstanding [illegible] Special Service activity in Third U.S. Army during January was the successful operation of a plan to service units on a geographical basis. Under this system troops went to the nearest Corps Special Service Section to schedule movies, "U. S. Shows" or USO entertainment. This arrangement was made to obtain maximum use of the four Special Service Companies attached to Corps. Army troops continued to draw their supplies at Army Headquarters.

A total of approximately 1,900,000 troops saw movies during the month. One third of this number saw pictures shown by teams from the Special Service Companies. The balance were shown movies through the use of unit-owned projectors and films borrowed from libraries operated by Corps and Army Headquarters.

On 11 January front-line troops of the 4th and 35th Infantry Divisions saw the fourth world premiere received by Third U. S. Army: "Rhapsody In Blue". In both units, showings were held far enough forward to be within range of enemy artillery. Early in the month theatres operated by the Army Special Service Section at TOUL (U 61), NANCY (U 61) and PONT-A-MOUSSON (U 77) were closed, and the Kleinee Theatre METZ (P 70), LUXEMBOURG opened for all troops in the area.

Two allocations of recreational supplies were received in January, including such items as public address systems, battery-type radios, magazines, small musical instruments, phonographs and records. The supplies were distributed to Corps with instructions to give top priority to infantry divisions, particularly on the battery radios.

On 27 January approximately 20,000 maps of the Pacific and European battle areas were received from the Information and Education Branch of Special and Information Services, European Theater of Operations. Distribution of these maps was begun immediately. These colored maps were waterproof making them well suited to field conditions that had made previous issues impracticable.

Coordinating with G-3, the Special Service Section began distribution of the film "Subject: Germany" dealing with the Army's non-fraternization policies. Prints of the film were loaned out through Corps and Army libraries starting 28 January. By the end of the month the schedule was well under way.

One of the most popular entertainment features ever presented through Special Service, the "Jeep Shows", left Third U. S. Army on 17 January for duty with the First U. S. Army. These two and three man units of soldier entertainers played to approximately 100,000 troops in isolated areas in the period 31 December to 17 January. They went to relief camps, gun positions and reserve positions with attendance at the performances varying from 100 to 700 and in all cases received an enthusiastic reception. With few exceptions, the shows were given forward of regimental command posts and in a few instances in terms not completely taken by our troops. The success of these shows prompted a recommendation from the Army Special Service Officer to Special and Information Services, European Theater of Operations that four of the teams be attached to each Special Service Company.

The rest center operated by 90th Infantry Division outside of THIONVILLE (U 88) was turned over to the 94th Infantry Division with the approval of the Army Special Service Officer. XX Corps Special Service Section opened a Corps Artillery rest center in METZ (U 85), with a capacity of 400 on 24 January.

A report from the [illegible] Section, XII Corps, showed [illegible] officers [illegible] 18 different combat units [illegible] XII Corps [illegible] (U 61) during the month.

DECLASSIFIED

Digitized by Google

CHAPTER 9
FEBRUARY OPERATIONS

The opening of several facilities for the entertainment and recreation of troops in the Luxembourg area was among the outstanding activities of the Special Service Section, Third U.S. Army.

On 9 February a large American Red Cross Club was installed in the former "Casino" in LUXEMBOURG CITY (P-81). Capable of handling 4,000 troops daily, the club was fully equipped by this section with radios, phonographs, books, magazines and small games. A movie team was installed and showed twice daily.

Three weeks later an Officers' Red Cross Club was opened in the city and was similarly equipped with the exception of the movie team. Both clubs gained immediate popularity with visiting troops.

On 11 February a program of movies and USO entertainment was set up in the Municipal Theater, LUXEMBOURG CITY (P-81) for all troops in or visiting the city. All arrangements were made jointly by the Special Service Sections of Third U. S. Army and XII Corps. The movie teams operating in the theater were supplied alternately by the 3rd and 4th Special Service Companies.

During the week 21-28 February, this section opened the Bains Municipals in LUXEMBOURG CITY (P-81). This installation had forty eight shower baths and a 75-foot heated swimming pool and proved an outstanding success. Civilian employees operated the pool and sanitary conditions were checked by two soldiers supplied by the Medical Section. The pool and showers were open six days a week and serviced hundreds of soldiers daily.

Following the movement of III Corps to First U.S. Army in the middle of the month, the 3rd Special Service Company, formerly attached to that unit, was attached to VIII Corps. This attachment was for administrative purposes only. The company was used to service Army troops. The following week, however, the company was attached to First U.S. Army.

On 10 February the XII Corps Rest Center was moved from NANCY (R-61) to NEUFCHATEAU (P-70), after having served 504 enlisted men and 47 officers in the first nine days of the month. The center went into operation again on 15 February and ended the month with a total of 1,883 enlisted men and 136 officers having been served. The purpose of the Rest Center as stated by a XII Corps letter embodied the principles of all such installations conducted by units of Third U.S. Army: "The . . . . . Rest Center is intended to provide rehabilitation, rest and recreation to specially selected personnel of combat units. Preference will be given to men and officers who have been actively engaged in actual combat, to those most physically exhausted, and to those whose mental conditions indicate need for release from battle tension. The Center is not intended to serve as a recreation center for service troops or troops in rear areas. It is not to serve as a substitute for medical evacuation although it is felt that timely selection of borderline personnel may prevent later evacuation".

The operation of swimming pools wherever available was an important function of Third U. S. Army Special Service throughout the campaign. Vernon Grant, famous illustrator on tour for USO Camp Shows gives his impression of a soldier preparing for a plunge.

The training film "Subject: Germany" continued to be scheduled by this office throughout the month. Headquarters, European Theater of Operations lifted the deadline on the film from 26 February to "indefinitely". This section retained 11 of the 22 prints of the film originally allocated to it.

The Adjutant General, Third U. S. Army, forwarded to Commanding General, European Theater of Operations the plan for showing the War Department film "One Down And Two To Go" previously submitted by the Special Service Officer. The Ninth Air Force submitted to this Headquarters a list of their units for whom service was requested in showing of this film when released.

The Special Service Officer conferred during the month with two representatives of the War Department: Colonel Frederick Warburg and Dr. Daniel A. Poling, prominent Protestant churchman. These conferences covered the status of morale within this command.

The chief item of supply received during the month was public address systems, nine of which were distributed to Corps.

On 26 February, enlisted athletic technicians from the 4th, 30th and 35th Special Service Companies were sent to the Army Athletic Staff School in PARIS for one month's training in anticipation of the post-war athletic program.

Reports submitted by Special Service Companies and by the film library of this section showed that an average of about 2,000,000 men a month saw movies in Third U. S. Army. Typical reports, those for the week ending 3 February showed that in four Corps movies were shown to approximately 146,500 troops. Approximately 179,000 saw films borrowed from Special Service Companies' libraries. Between 150,000 and 175,000 saw pictures borrowed from the library of this section. The grand total for the week approached the 500,000 mark.

A "candid" shot taken during a performance by the Bing Crosby troupe in September 1944. The Crosby Show played exclusively to Third U. S. Army troops while on the continent.

CHAPTER 10
MARCH OPERATIONS

In March, the Special Service Section continued to increase and develop existing recreational facilities for the many hundreds of troops passing through LUXEMBOURG CITY (P-81) on pass. Assisted by Special Service and Army Exchange, a mobile exchange unit of Advance Section, Communications Zone established a "G.I. Beer Garden" in the city. Soldiers stationed outside the city were provided with free food and entertainment and beer and soft drinks at a nominal price. This section furnished magazines, playing cards, phonographs, "Stars and Stripes" and other items, as well as transportation to haul the beer.

To meet the needs of over 500 combat troops using the LUXEMBOURG railroad station on pass to PARIS, the section installed a movie projector and a public address system in the station. Also supplied were magazines, books and newspapers. Other facilities continuing successfully were the Municipal Showers and Swimming Pool and the American Red Cross Club.

Troop Assignment No. 57, Headquarters Twelfth Army Group, 7 March, attached the 2nd Platoon, 3rd Special Service Company to this Headquarters. This addition made possible a full program of Special Service in the city and provided more movie service for Army units not possessing projectors.

The fifth moving picture world premiere shown to Third U. S. Army troops, "My Reputation" starring Barbara Stanwyck, was presented to the 6th Armored, 80th and 90th Infantry Divisions. As in previous instances, the premieres were shown to front-line troops, as far forward as military conditions permitted.

As requested by Headquarters European Theater of Operations, the Special Service Officer reported that Third U.S. Army troops had on hand one hundred (100) 16 millimeter movie projectors. Based on the Army strength at that time (4 March) sixty four (64) machines were required and a request was made for an issue of that number.

In anticipation of the great program of athletics to be begun after cessation of hostilities in Europe, the Special Service Officer of XX Corps was chosen to represent Third U.S. Army at the first class of the Army Athletic Staff School in Paris.

An inspecting officer, WAC, reported from Headquarters, European Theater of Operations on 6 March for an inspection tour of Third U. S. Army rest and recreation centers. Among the units visited were the XII and XX Corps Rest Centers, the 9th Infantry and 4th Armored Divisions.

On 9 March, a large supply of recreational equipment was hauled from PARIS and distributed to Corps and Divisions. Among the outstanding items were musical instruments, playing cards, phonograph records, small games and radios.

The USO Show, "Capers of 1945" reported on 10 March and was sent to XX Corps. The "Keep 'Em Rolling" Show was returned from XX Corps for a short schedule with Army troops before returning to the United States. The Roscoe Ates Show finished its tour with Third U. S. Army and left for Italy.

Reports from Army and Corps Special Service units showed that in the last three weeks of March, approximately 1,253,000 troops saw movies. This was accomplished in 6,049 showings.

The American soldier wants his sports anytime and anywhere. Vernon Grant, USO illustrator catches the spirit "of do or die for old Siwash" in one of the numerous sketches for which he is famous.

CHAPTER 11
APRIL OPERATIONS

On instructions from Headquarters, European Theater of Operations, the Special Service Officer submitted his requisitions for athletic and recreational supplies for the months of May, June, July and August.

Approximately 5,000 captured enemy radios were turned over to the Special Service Section by the Ordnance Section. The radios, confiscated by the enemy from Dutch civilians, were generally old and all in need of repair. Units were permitted to draw several machines and attempt to construct serviceable ones from the tubes and spare parts. The radio repair section of Headquarters was not in a position to do any repair work on these radios.

Upon request of the 4th Armored Division, the Army Special Service Officer took immediate steps on 3 April to obtain 100 Russian language guides for the use of the Division. The books were eventually flown from England and delivered to 4th Armored Division on 21 April.

A large warehouse full of enemy special service and post exchange supplies was captured at MEDIAR (2103) early in April and turned over to Army by XII Corps. Among the items found were musical instruments, writing paper, souvenirs, phonographs, needles, ping-pong equipment, toilet articles and glassware. Large amounts of the supplies were given to the Army Exchange Service and American Red Cross and the balance distributed to lower units through Third U. S. Army Special Service Section.

USO Camp Show activity showed an increase during the month of April. Marlene Dietrich reported to the Army on 15 April and began a series of personal appearances in Army Hospitals. Vernon Grant, famous artist, also began a tour of hospitals on 20 April. The "Hocus Focus" revue reported on 28 April and was sent to XII Corps. Notification of assignment of the "Covert and Reed" show was received on 25 April. On an emergency call from the 4th Armored Division, 11 April, the show "Capers of 1944" was borrowed from XX Corps and sent immediately to the Division. On 30 April, the Special Service Officer wrote, Headquarters European Theater of Operations requesting five (5) additional USO variety shows for Third U.S. Army..

On 18 April, the Special Service Section was notified by Advance Section, Communication Zone that the May requisition for athletic and recreational supplies had been approved and would be forwarded by rail.

On 27 April the Commanding Officer of the XII Corps Rest Center received a commendation from the Corps Commander for the operation and results of the Center.

The Army Athletic Staff School at PARIS (SOL) notified the Third U.S. Army Special Service Officer that 23 officers from this command had successfully completed the course during the month.

Reports from Army and Corps cinema sections showed that 1,387,500 troops saw movies during the month. This was accomplished in 4,876 showings.

CHAPTER 12
MAY OPERATIONS

In the final week of the war, Third U.S. Army Special Service consisted chiefly of the regular movie, USO and soldier-show entertainment. The rapid movement of all troops prevented the undertaking of any other entertainment or recreational programs. Requisitioned athletic equipment for the month of May was still enroute from Paris by rail.

In this period movies were shown to approximately 600,000 troops. This was accomplished in 6[illegible] showings by movie teams of Corps Special Service Companies and by films loaned to units having their own projectors.

Three (3) new USO Camp Shows reported to the Army between 1 May and 8 May. A total of fifteen (15) shows were given to approximately 6500 troops.

Soldier-show teams from Corps Special Service Companies played to approximately 111,000 troops in 40 shows.

CHAPTER 13
LESSONS LEARNED & CONCLUSIONS

The following are the lessons learned and the conclusions therefrom by the Special Service Section:

Movies and Projectors

1. Initial film supply of seventeen (17) features for Special Service Companies did not take into consideration films in transit. The company libraries should be increased to thirty four (34) films to get the maximum number of shows daily.

2. Projector repair kits and spare sets of projector and exciter lamps should be issued with every projector.

3. All Army and Corps Special Service Sections should be equipped with their own projector repair teams. The present arrangement, with one repair teams for the entire Army is not sufficient.

4. As far as practicable, combat divisions should be equipped with the same make projectors to simplify repair and parts supply.

5. All projectionists in all units should be licensed after a technical test in operation, care and maintenance of machines. Unskilled operation resulted in too much damage to projectors and films.

Special Service Companies

1. Transportation for Special Service Companies proved inadequate. T/E should give a company two (2) additional 2½ ton trucks for kitchen and ration requirements.

2. Skilled personnel of companies were often kept from best use of their abilities by guard and fatigue details. T/O of a Special Service Company should be increased by twenty four (24) men to handle these details.

3. "Jeep Shows", groups of three or four soldier-entertainers, proved to be the most successful type of entertainment because of mobility and ease with which they were handled. These shows should be attached to companies for operation.

Supply

1. During combat the quickest and most efficient way of distributing supplies to Divisions and Corps troops was through Special Service Companies.

2. Athletic equipment should be issued according to seasonal conditions to avoid wastage.

3. Supplying units with reading material by mail was not satisfactory owing to difficulties with mail during combat. It should be distributed through regular supply channels.

4. Communications Zone base of supply was at too great a distance as the Armies moved forward. It should be as near to Army boundaries as possible. One liaison officer from the base of supply should be with each Army during combat.

5. Bulk Special Service supplies were not handled through Quartermaster Class II and IV Depots until after combat. They should have been handled through these depots from the start of operations.

General

1. Great difficulty was encountered in trying to service isolated units. Mobile Special Service Sections should be established by parent organizations to bring these isolated troops movies, athletics supplies and libraries.

2. Use of Special Service Companies as housekeeping troops for rest centers negates their purpose. Unskilled troops should be used for this detail.

3. Corps and Division Special Service Sections functioned best when they operated from their forward echelons. Division Special Service Section should be located with the Division Control Point or Quartermaster Service dump which they share daily, [illegible] with all their units.

4. Many emergencies arose during lulls in combat for divisions. T/O of Division Special Service Section should be increased to include four (4) movie teams to meet these emergencies.

5. Hospitals constituted a large and important problem for Special Service. A Special Service Section exclusively for the 30 to 35 hospitals should be set up in each Army to include film libraries, radio repair, magazines and books, and crafts hobbies.

6. Reinforcement Depots had difficulty in keeping contact with their supply bases. They should come under Army Special Service for supplies, live shows and similar items. Army allotments should be increased accordingly.

7. Aiding the prevention of battle fatigue among the infantry during combat, particularly in the winter months was the most important function of the Special Service Section. Provision should be made to include in the Army Special Service Section a sub-section suitable for the expansion of rest centers under all conditions.

8. To obtain maximum efficiency, all AGF and Division orchestras should be placed under Special Service for supply of instruments and orchestrations. Emotional anthems of all allied nations should be issued on V-Discs.

9. Live shows and "big-name" stars should not be brought in unless the same allotment of time is given to all major commands.

10. For an exact and widespread knowledge of the Special Service program, all TM's and guides should be distributed down to companies.

11. Reductions in T/O of Special Service Sections (e.g. 360-10, Oct. 44) during combat hinder the proper operation of the Special Service program.

12. The Army Special Service Section should be operational as well as administrative.

13. T/O of Division Special Service Sections should include one skilled technician for the preparation of soldier shows.

TANK DESTROYER SECTION
THIRD UNITED STATES ARMY

SUBJECT: After-Action Report.

TO : Commanding General, Third US Army.

1. Submitted herewith is the After-Action Report of the Tank Destroyer Section, Third US Army Headquarters, beginning with May, 1944, and continuing at the properly designated intervals by chapters.

2. On the 22d May 1944, the 1st Tank Destroyer Brigade Headquarters and Headquarters Company was designated as the Tank Destroyer Section, Third US Army. Prior to Third US Army's entry into combat, the Tank Destroyer Brigade Headquarters supervised the training and equipping of all tank destroyer units assigned to the Third US Army. After Third US Army become operational, Tank Destroyer Brigade Headquarters, as a special staff section, advised the Army Commander on tank destroyer employment and attachments; made frequent staff visits to all Third US Army tank destroyer units; assisted these units in obtaining and maintaining equipment and in securing personnel.

TANK DESTROYER SECTION

Organizational and Functional Chart

CHAPTER 1
PLANNING IN UNITED KINGDOM

Introduction: When Third United States Army began forming in England, no Tank Destroyer Special Staff Section was included in the staff organization. Realizing the great potential combat value of tank destroyers and the obstacles which this comparatively new organization would have to surmount, the Army Commander decided to attach the 1st Tank Destroyer Brigade Headquarters and Headquarters Company to Third Army Headquarters. Shortly after the Brigade joined Army Headquarters, Operations Memorandum Number 6, 22 May 1944, directed that the Brigade, in addition to other duties, be designated as the Army Tank Destroyer Section. The Commanding General was given the dual role of Army staff officer and Commander of tank destroyer units assigned to Third United States Army and not otherwise attached.

Troops: During the period of planning and organization the following tank destroyer units were assigned to the Army and arrived in the United Kingdom:

Groups		Battalions		
4th	603	630	705	802
5th	607	644	771	813
6th	610	654	773	814
7th	628	704	774	818
9th		825		

Advance detachments from the 8th Group, 602, 614, 631, 691 and 807 battalions also reported to the Army during this period.

Training: Many of the battalions had been in England for many months and were undergoing extensive training under Brigade supervision before being assigned to Third Army, particularly in the tactics and technique of indirect fire in preparation for carrying out their secondary mission of reinforcing artillery fires. Due to limitations of time no effort was made to provide a comprehensive training schedule for the units which arrived in the latter part of this period, however range facilities were provided for use of battalions in doing "refresher" direct fire in order to maintain the high standard of gunnery which is all important to tank destroyers. The Army tank destroyer training directive established the following objectives:

Draw and prepare equipment for battle.
Maintain proficiency in primary mission.
Stress development of tank destroyer units for secondary mission as reinforcing artillery.
Combined training with infantry--artillery--tanks.

The Tank Destroyer Section participated actively in this training; securing training areas, ranges for both direct and indirect firing, training aides, field artillery instructors for tank destroyer units and coordinating the training of all battalions attached to the Army as well as lower units.

Equipping: Depots were widely scattered and the enormous amount of material and special equipment which tank destroyer battalions had to accumulate introduced difficult problems for the supply officers, many of which the Brigade S - 4 solved to the mutual benefit of the supply services and the units.

Staff Functions: Some activities of a purely staff nature were:

Coordinating billeting of tank destroyer troops.
Recommending attachments of units.
Recommending phasing of units for movement to Continent.
Investigating new equipment and recommended changes in Tables of Organization and Equipment.
Recommending and developing the tank destroyer doctrines for the Army.
Staff inspections of Army units, and visits to units attached to lower echelons, to determine training, equipment and personnel status.

CHAPTER 2
PRE-OPERATIONAL ON CONTINENT

The Commanding General, 1st Tank Destroyer Brigade, with a small officer and enlisted detachment accompanied the Forward Echelon of Third Army Headquarters to the Continent 6 July and established a Command Post with the other special staff sections at the Army Command Post near Blandamour, France. The remainder of the Brigade Headquarters crossed the Channel 10 July and joined the advance detachment.

The period prior to 1 August when the Army became operational was principally taken up with receiving and bivouacking tank destroyer units arriving at Utah and Omaha beaches. Suitable areas were selected within the Army area for incoming units and a liaison officer from the Tank Destroyer Section was maintained at the beach to orient these units. It was during this period that a general regrouping of arriving troops took place and many units originally assigned to Third Army passed to control of other headquarters.

The Commanding General and a few members of his staff were enabled to visit tank destroyer units which had already been in combat for several weeks and obtain first hand information as to the problems of tactics, supply, equipment and most important the technique of close support which was being employed. The lessons learned were quickly passed on to the new units not yet tested under fire.

The Brigade, being a tactical unit in addition to its status as the Army Tank Destroyer Section, was engaged in readying itself for possible combat missions, preparing tentative plans for possible tactical use and completing multitudinous details which appear prior to combat.

On 30 July the Army Commander approved, in general, a plan prepared by the S - 3 under direction of the Commanding General for operation of an armored Task Force in Brittany Peninsula, in which the Brigade as Headquarters, Task Force "A", subsequently participated.

As a result of this operation the Brigade was absent from Army Command Post during months of August and September and Tank Destroyer Staff functions were handled by the Artillery Section, a tank destroyer [illegible] being placed on temporary duty with that Section.

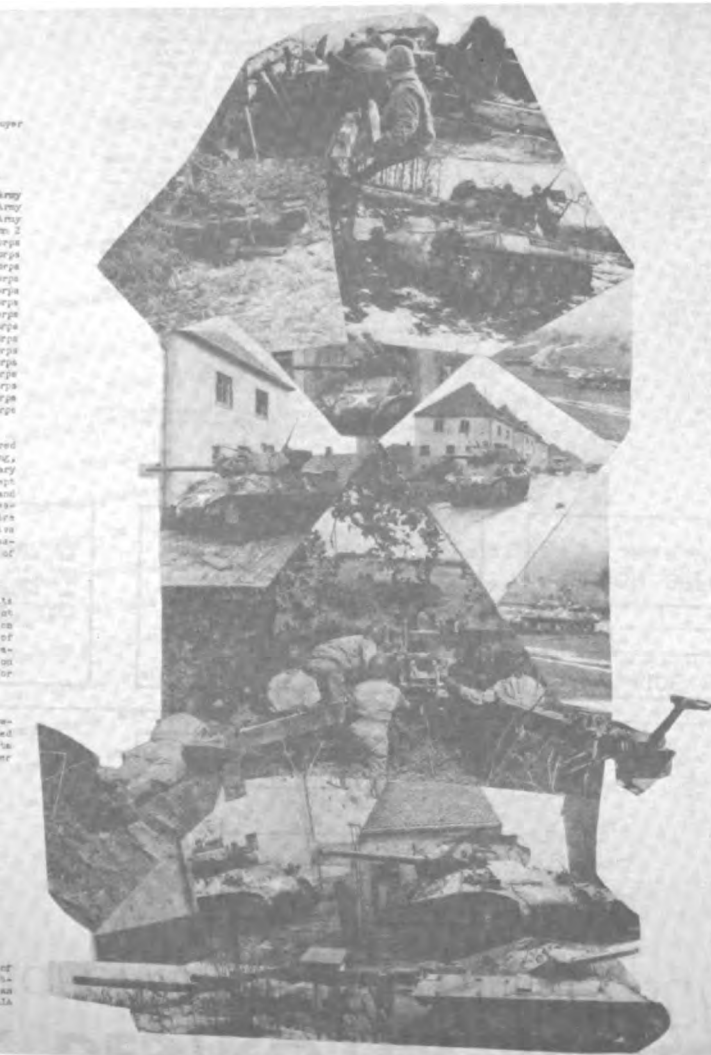
CHAPTER 5
OCTOBER OPERATIONS

As of 1 October, the organization for combat of the tank destroyer units of Third US Army is shown in the following table:

UNIT	TYPE	DIVISION OR GROUP	CORPS
1st TD Brig			Third US Army
8th TD Gp			Third US Army
651 TD Bn	Towed	MP Duty	Third US Army
637 TD Bn	Towed	Com Z Duty	Ad Gen Com Z
94th TD Gp			XII Corps
610 TD Bn	SP (M-18)	94th TD Gp	XII Corps
602 TD Bn	SP (M-18)	4th Armd Div	XII Corps
610 TD Bn	SP (M-18)	94th TD Gp	XII Corps
634 TD Bn	SP (M-10)	26th Inf Div	XII Corps
691 TD Bn	Towed	4th Armd Div	XII Corps
704 TD Bn	SP (M-18)	4th Armd Div	XII Corps
808 TD Bn	Towed	80th Inf Div	XII Corps
4th TD Gp			XX Corps
607 TD Bn	Towed	90th Inf Div	XX Corps
809 TD Bn	SP (M-18)	4th TD Gp	XX Corps
774 TD Bn	Towed	5th Inf Div	XX Corps
602 TD Bn	Towed	95th Inf Div	XX Corps
607 TD Bn	Towed	83rd Inf Div	XX Corps
818 TD Bn	SP (M-10)	5th Inf Div	XX Corps

Throughout the month of October, the absence of a serious armored threat in the Army zone, complex with the acute ammunition rationing, resulted in the tank destroyers being employed on their secondary mission of reinforcing field artillery fires almost exclusively, except for a small amount of direct fire against pillboxes, gun positions, and in support of limited objective attacks. During the month, tank destroyer units of Third US Army expended 67,404 rounds on indirect fire and 3,104 rounds on direct fire missions. Because of the relative absence of enemy armor, only 7 tanks and 1 self-propelled gun were destroyed. However, numerous pillboxes, machine gun nests, and targets of opportunity were either neutralized or destroyed.



Representatives of the Tank Destroyer Section visited all units weekly. And, at the close of the period, all units were in excellent condition as to personnel and material. The employment of the units on their secondary mission permitted a continuous program for rotation of platoons within companies, companies within battalions, and also battalions, in some cases, in both Corps zones. This resulted in completion of an excellent maintenance program and some rest and recreation for personnel.

The Tank Destroyer Section prepared plans for converting five towed battalions and one self-propelled (M-10) battalion to self-propelled (M-36, 90mm gun) battalions as rapidly as Third US Army's pro-rata share of this equipment became available. The status of tank destroyer units at the close of the month is shown by the following table:

ATTACHMENT	SELF-PROPELLED M-10	M-18	M-36	TOWED	TOTAL
Third Army	0	0	0	1 *	1 *
XII Corps	1	2	1	3	7
XX Corps	2	1	0	4	6
TOTAL	3	3	1	7	16

* MP duty Army Headquarters

At the close of the period the enemy was considered capable of tanking 180 tanks and assault guns against Third US Army within a 48-hour period. In addition, the enemy was engaged in constituting an armored reserve of approximately 450 tanks in Province of WESTPHALIA which would be capable of commitment against Third US Army.

CHAPTER 6
NOVEMBER OPERATIONS

As of 1 November, the tank destroyer units assigned to Third US Army were organized for combat as indicated in the following table:

UNIT	TYPE	DIVISION OR GROUP	CORPS
1st TD Brig			Third US Army
651 TD Bn	Towed	MP Duty	Third US Army
8th TD Gp			XII Corps
94th TD Gp			XII Corps
610 TD Bn	SP (M-36)	94th TD Gp	XII Corps
602 TD Bn	SP (M-18)	4th Armd Div	XII Corps
634 TD Bn	SP (M-10)	26th Inf Div	XII Corps
691 TD Bn	Towed	26th Inf Div	XII Corps
602 TD Bn	SP (M-18)	26th Inf Div	XII Corps
704 TD Bn	SP (M-18)	4th Armd Div	XII Corps
808 TD Bn	Towed	80th Inf Div	XII Corps
4th TD Gp			XX Corps
774 TD Bn	Towed	4th TD Gp	XX Corps
807 TD Bn	Towed	4th TD Gp	XX Corps
809 TD Bn	SP (M-18)	4th TD Gp	XX Corps
773 TD Bn	SP (M-10)	95th Inf Div	XX Corps
702 TD Bn	SP (M-10)	2nd Cav Gp	XX Corps
818 TD Bn	SP (M-10)	5th Inf Div	XX Corps
607 TD Bn	Towed	90th Inf Div	XX Corps
614 TD Bn	Towed *	99th Inf Div	XX Corps

* Enroute from Communications Zone.

During the first week of November, the lack of offensive activity in the Army zone was reflected on tank destroyer operations. Tank destroyers of both Corps continued to fire large numbers of indirect fire missions of all types. This fact is substantiated by the following record of rounds fired:

	Indirect	Direct
XII Corps	8,319	274
XX Corps	6,279	28

Expenditures of three-inch ammunition were restricted at the direction of the Army due to shortages at the ammunition supply points. The general employment of tank destroyers on their secondary mission of reinforcing the fires of the field artillery was justified by the fact that there were 540 tank destroyer guns of three-inch or larger caliber in the Army. This constituted a considerably larger number than all enemy tanks and assault guns which Third US Army might expect to be committed against it. During the latter part of the week, tank destroyer units of XX Corps were regrouped in preparations for coming offensive operations.

From 8 November to the end of the month, tank destroyer missions were indicative of the current offensive operations at that time. Indirect fire missions during this period consumed less than half the ammunition used for indirect fire in October, whereas more than two and one-half times as many rounds were used for direct fire than in October.

	Indirect	Direct
XII Corps	10,406	8,450
XX Corps	24,741	3,422

The absence of a serious armored threat in the Army zone permitted the employment of tank destroyer battalions in small units in close support of attacking infantry and armored forces. Engagements with enemy tanks were local and on a small scale. Tank destroyers were frequently used as assault guns against forts, pillboxes, buildings, machine guns and anti-tank guns. In XII Corps zone tank destroyers supported the crossing of the SEILLE River, the breaching of the MAGINOT Line and the crossing of the GARDE River in the south portion of the Corps zone. In XX Corps zone tank destroyers supported the crossing of the MOSELLE River, the attack of the METZ forts, and the breaching of the SIEGFRIED Line. The enemy materiel and installations credited to Third US Army tank destroyer units during the month of November is shown in the following table:

CHAPTER 8
JANUARY OPERATIONS

As of 1 January 1945, tank destroyer units assigned to Third US Army were organized for combat as follows:

Unit	Type	Attached to Unit	Type
1st [illegible]			Third US Army
[illegible]	Towed		
[illegible]	[illegible]	[illegible]	[illegible]
[illegible]	SP M36	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]
[illegible]	SP M36	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]
[illegible]	[illegible]

CHAPTER 9
FEBRUARY OPERATIONS

As of 1 February 1945, tank destroyer units assigned to Third US Army were organized for combat as follows:

UNIT	TYPE	DIVISION OR GROUP	CORPS
1st TD Brig			Third US Army
631 TD Bn	Towed		Third US Army
6th TD Gp			III Corps
603 TD Bn	SP (M18)	6 Armd Div	III Corps
7th TD Gp			VIII Corps
602 TD Bn	SP (M18)	87 Inf Div	VIII Corps
607 TD Bn	SP (M36)	95 Inf Div	VIII Corps
610 TD Bn	SP (M10)	4 Inf Div	VIII Corps
706 TD Bn	SP (M18)	7 TD Gp	VIII Corps
773 TD Bn	SP (M10)	90 Inf Div	VIII Corps
811 TD Bn	SP (M18)	11 Armd Div	VIII Corps
9th TD Gp		78 Inf Div	XII Corps
691 TD Bn	Towed	78 Inf Div	XII Corps
692 TD Bn	Towed	80 Inf Div	XII Corps
807 TD Bn	SP (M10)	5 Inf Div	XII Corps
808 TD Bn	Towed	2 Cav Gp	XII Corps
4th TD Gp			XX Corps
704 TD Bn	SP (M18)	94 Inf Div	XX Corps
774 TD Bn	Towed	94 Inf Div	XX Corps
818 TD Bn	SP (M10)	26 Inf Div	XX Corps

During the period 1 February to 28 February 1945, tank destroyers were very active while giving support to the Third US Army attacks that crossed the OUR, SAUER, PRUM and KYLL Rivers, breached the SIEGFRIED LINE, cleared the SAAR-MOSELLE triangle, and took the towns of PRUM (L 0679), BITBURG (L 1052), and TRIER (L 2129).

During February, III, VIII, and XII Corps had similar missions and fought on similar terrain, so that tank destroyers with these three Corps were all employed in generally the same manner. Throughout the month these tank destroyers gave direct fire support to attacking units, destroying large numbers of pillboxes, machine gun nests, anti-tank guns, nebelwerfers, field fortifications and houses containing enemy personnel. In short, tank destroyers placed direct, high velocity fire on all enemy installations and equipment that impeded the progress of our infantry and armored forces. Early in the month there were heavy engagements with enemy tanks, but as the German moved his armor to counter both the Russian offensive and build-up in the north, tank destroyer contacts with hostile armor became almost non-existant. In only one of the three Corps was any quantity of indirect fire missions executed; on the east flank of XII Corps tank destroyers executed considerable numbers of indirect fire missions, reinforcing artillery fires.

For the first three weeks of February, XX Corps tank destroyers had their only action in executing indirect harassing fires in the SAARLAUTERN (Q 2880) area. The latter part of the month tank destroyers supported the attack which cleared the SAAR-MOSELLE triangle and crossed the SAAR River. The attack was opened with an artillery barrage which was reinforced by indirect tank destroyer fire. As the attack progressed, it was supported by direct tank destroyer fire on pillboxes, machine gun nests and anti-tank guns.

During February, Third US Army tank destroyers expended 8,796 rounds direct fire and 28,467 rounds indirect fire. Enemy materiel and installations destroyed by tank destroyer units in Third US Army during the month were:

Tanks	23
Self-Propelled Guns	22
Anti-tank Guns	20
Artillery Pieces	3
Machine Guns	15
Pillboxes	198
Miscellaneous Vehicles	33

Representatives of the Tank Destroyer Section visited all units frequently and maintained close check on personnel, materiel and equipment. At the first of the month Third US Army tank destroyer units were still under-strength a total of 750 men as a result of losses suffered in the ARDENNES break-through and subsequent action to reduce the "bulge". During the month, 150 tank destroyer reinforcements were received through normal channels. In addition, Army G-1 made available to tank destroyer units 450 men from a special armored force reinforcement allocation. At the close of February, Third US Army tank destroyer personnel shortages had been reduced to 350. From an equipment standpoint the February highlight was the conversion of three battalions to M-36 (90mm self-propelled) units. The units converted and their equipment prior to conversion were:

803rd Tank Destroyer Battalion - M-10 (3" self-propelled)
818th Tank Destroyer Battalion - M-10 (3" self-propelled)
806th Tank Destroyer Battalion - M-8 (3" towed)

The period closed with the status of tank destroyer battalions assigned to Third US Army as follows:

	M-10	M-18	M-36	Towed	Total
Third US Army				1	1
VIII Corps	1	3	2		6
XII Corps		1	2	1	4
XX Corps		2	1	1	4
TOTAL	1	6	5	3	15

During the latter part of January and throughout the month of February the enemy shifted the major portion of his armored strength from the Third US Army zone to the Eastern Front and to other sectors of the Western Front. The 116 and 130 Panzer and 15 Panzer Grenadier Divisions moved north to the First Canadian Army zone. The 9 Panzer and elements of 11 Panzer Divisions were contacted on the Ninth US Army front, and the 3 Panzer Grenadier Division was in contact on the First US Army front. The 1 SS, 2 SS, 9 SS, 10 SS, 12 SS, and 21 Panzer Divisions, and 25 Panzer Grenadier Division were reliably reported to have moved to the Eastern Front. The 17 SS Panzer Grenadier Division remained in contact on the Seventh US Army front.

At the close of the month the 2 Panzer Division and elements of 11 Panzer Division were the only major armored units in contact on the Third US Army front. The 11 Panzer Division was reported to have moved north, but the identifications of elements of the division in the TRIER (L2129) area indicated the movement was not completed. The total enemy tank strength in the Third US Army zone was estimated to be 60 tanks.

CHAPTER 10
MARCH OPERATIONS

As of 1 March 1945, tank destroyer units assigned to Third US Army were organized for combat as follows:

UNIT	TYPE	DIVISION OR GROUP	CORPS
1st TD Brig			Third US Army
631 TD Bn	Towed		Third US Army
7th TD Gp			VIII Corps
603 TD Bn	M-18 (SP)	7 TD Gp	VIII Corps
602 TD Bn	M-18 (SP)	6 Armd Div	VIII Corps
607 TD Bn	M-36 (SP)	87 Inf Div	VIII Corps
610 TD Bn	M-36 (SP)	4 Inf Div	VIII Corps
706 TD Bn	M-18 (SP)	11 Armd Div	VIII Corps
773 TD Bn	M-10 (SP)	90 Inf Div	VIII Corps
9th TD Gp		2 Cav Gp	XII Corps
691 TD Bn	Towed	2 Cav Gp	XII Corps
803 TD Bn	M-36 (SP)	5 Inf Div	XII Corps
800 TD Bn	M-36 (SP)	78 Inf Div	XII Corps
811 TD Bn	M-18 (SP)	80 Inf Div	XII Corps
4th TD Gp			XX Corps
609 TD Bn	M-18 (SP)	10 Armd Div	XX Corps
704 TD Bn	M-18 (SP)	94 Inf Div	XX Corps
774 TD Bn	Towed	94 Inf Div	XX Corps
818 TD Bn	M-36 (SP)	26 Inf Div	XX Corps

During the period 1 March to 31 March 1945 Third US Army broke through the last of the SIEGFRIED LINE defenses and drove to the RHINE north of the MOSELLE, turned south, crossed the MOSELLE and dashed to the RHINE in the vicinity of MAINZ (M 3456), forced a crossing of the RHINE and MAIN Rivers and moved on some 100 miles farther to the northeast to the FULDA (C 2470) area. Tank destroyers supported the entire operation, working closely with infantry and armored units.

Early in March, VIII Corps tank destroyers delivered assault fire on pillboxes, towns and field fortifications in the Corps zone of operations from PRUM (L 0679) to the RHINE. There were scattered contacts with tanks and self-propelled guns. In the middle of the month there was little activity in VIII Corps and the Corps tank destroyer strength dropped from six to two battalions. Late in the month an additional battalion was given the Corps and the three tank destroyer units supported the Corps crossing of the RHINE with direct fire. 607th Tank Destroyer Battalion Headquarters commanded a task force of combined arms which spearheaded the 87th Infantry Division attack east of the RHINE.

XII Corps played the most spectacular part of the Army's March operations and tank destroyers were very active in supporting the Corps' sweeping advances. XII Corps began the month by dashing to the RHINE north of the MOSELLE. Tank destroyer activity in this phase consisted of frequent engagements with hostile tanks and self-propelled guns and of placing direct fire on pillboxes, field fortifications and road blocks that impeded the advance of infantry and armored units.

The middle of the month saw XII Corps cross the MOSELLE, sweep to the southeast and on to the RHINE in the MAINZ (M 3656) - WORMS (M 4010) area. For this operation the Corps tank destroyer strength was increased by two battalions. XII Corps advance was so rapid and the enemy so disorganized that tank destroyer employment was light. However, all tank destroyer battalions took quantities of enemy equipment and captured large numbers of prisoners. 774th Tank Destroyer Battalion Headquarters was in command of a task force of combined arms that spearheaded the 90th Infantry Division drive to the RHINE.

During the last week of March, XII Corps crossed the RHINE and the MAIN Rivers and drove to HERSFELD (M 3864). There was only one tank engagement, but tank destroyers were kept busy placing direct fire on the self-propelled guns, anti-tank guns and machine guns with which the enemy attempted to slow our drive. All tank destroyers units took large numbers of prisoners.

For the first three weeks of March XX Corps was fighting through the SIEGFRIED LINE from TRIER (L 2128) to SAARLAUTERN (Q 8028). Tank destroyers placed direct fire on pillboxes and field fortifications of the SIEGFRIED LINE to neutralize them for infantry and cavalry assault. Tank destroyers also executed indirect fire missions to harass enemy rear areas.

During the last ten days of the month, XX Corps broke out of the SIEGFRIED LINE, drove to the RHINE, crossed the river and advanced rapidly to the KASSEL (C 2203) area. XX Corps tank destroyer battalions supported infantry and armored units, placing direct fire on self-propelled guns, anti-tank and anti-aircraft guns and machine guns which sought to oppose our forces.

During March, Third US Army tank destroyers expended 14,775 rounds direct fire and 6,994 rounds indirect fire. Enemy materiel and installations destroyed by tank destroyer units in Third US Army during the month were:

Tanks	68
Self-Propelled Guns	21
Anti-Tank Guns	89
Artillery Pieces	44
Machine Guns	85
Pillboxes	129
Miscellaneous Vehicles	280

Representatives of the Tank Destroyer Section visited all units frequently and maintained close check on personnel, materiel and equipment. From the equipment point of view, the March highlight was the conversion of the 774th Tank Destroyer Battalion from a 3-inch towed unit to a 90mm self-propelled unit.

The period closed with the status of tank destroyer battalions assigned to Third US Army as follows:

	M-10	M-18	M-36	Towed	TOTAL
Third US Army				1	1
VIII Corps		1	2		3
XII Corps	1	2	1	1	5
XX Corps		2	1	1	4
TOTAL	1	5	4	3	13

During the month of March all Panzer Divisions on the Western Front were seriously mauled in a futile attempt to halt the Allied advances. The remnants of all the Panzer Divisions that were salvaged from the west side of the RHINE River were committed against the Allied bridgeheads on the east bank. At the close of the month the 15th Panzer Grenadier Division was committed against the Second British Army front; [illegible] against the Ninth US Army front; the 9th, [illegible] against the First US Army front; the 2d and elements of the 11th Panzer Division against the Third US Army front; and the 17th SS in the Seventh US Army zone. The total enemy tank strength in the Third US Army zone as of 31 March was estimated to be 70 tanks and/or assault guns.

CHAPTER 11
APRIL OPERATIONS

As of 1 April 1945, tank destroyer units assigned to Third US Army were organized for combat as follows:

UNIT	TYPE	DIVISION OR GROUP	CORPS
1st TD Brig			Third US Army
4th TD Gp			Third US Army
631 TD Bn	Towed		Third US Army
7th TD Gp			VIII Corps
602 TD Bn	M-18 (SP)	89 Inf Div	VIII Corps
607 TD Bn	M-36 (SP)	87 Inf Div	VIII Corps
808 TD Bn	M-36 (SP)	78 Inf Div	VIII Corps
9th TD Gp		G - 6	XII Corps
635 TD Bn	Towed	71 Inf Div	XII Corps
704 TD Bn	M-18 (SP)	4 Armd Div	XII Corps
705 TD Bn	M-18 (SP)	11 Armd Div	XII Corps
773 TD Bn	M-10 (SP)	90 Inf Div	XII Corps
818 TD Bn	M-36 (SP)	26 Inf Div	XII Corps
603 TD Bn	M-18 (SP)	6 Armd Div	XX Corps
691 TD Bn	Towed	65 Inf Div	XX Corps
803 TD Bn	M-36 (SP)	5 Inf Div	XX Corps
811 TD Bn	M-18 (SP)	80 Inf Div	XX Corps

During the period 1 April to 30 April 1945 Third US Army drove east to the CZECHOSLOVAKIA border, turned south, crossed the DANUBE and ISAR RIVERS and entered AUSTRIA. Tank destroyers supported the Army's advance by delivering direct fire on enemy installations and by destroying enemy tanks and self-propelled guns that were committed against our forces. Indirect fire missions were almost non-existent.

III Corps came under Third US Army control the latter part of the month and brought with it the 9th Tank Destroyer Group, 629th, 643th and 807th Tank Destroyer Battalions. These units implemented the Corps drive across the DANUBE and ISAR RIVERS by knocking out road blocks, strong points, and machine guns with direct fire. Tank destroyer units took numbers of prisoners.

Early in April in the VIII Corps zone there was a heavy fight at STEYR (S 7994) and eight enemy assault guns were destroyed in a single engagement by the 808th Tank Destroyer Battalion. As the Corps then drove east to ZWICKAU (X 3040) resistance was light and the only tank destroyer activity was had in delivering assault fire on strong points and enemy installations in villages. The latter part of the month VIII Corps passed to First US Army control and with it went the 7th Tank Destroyer Group, 602d, 603d, 607th, 691st and 704th Tank Destroyer Battalions.

XII Corps drove rapidly to the CZECH border and then pushed southeast into AUSTRIA. Tank destroyers supported these operations by destroying tanks and self-propelled guns that counterattacked our infantry and armored forces. Tank destroyers also eliminated anti-tank guns, machine guns and strong points that sought to slow the Corps advance and placed fire on houses containing enemy personnel. Large numbers of Allied prisoners were liberated and Germans were taken prisoner by the hundreds. There was considerable enemy harassing activity in the Corps rear areas and tank destroyer reconnaissance companies were employed to wipe out enemy pockets and convoy division supply trains. In the middle of the month the 818th Tank Destroyer Battalion was assigned to XII Corps; the battalion passed to First US Army control at the end of the month. At the end of the period the 803d Tank Destroyer Battalion was assigned to XII Corps.

In the first week of the month XX Corps took KASSEL (L 5020) and the tank destroyers had daily engagements with the largest numbers of tanks and self-propelled guns encountered east of the SIEGFRIED LINE. Ten tanks and thirty-seven self-propelled guns were destroyed. The Corps next advanced to CHEMNITZ (B 8040), turned south and drove across the DANUBE and ISAR RIVERS. Tank destroyers in the Corps supported these advances with direct fire on centers of resistance in small towns and the destruction of anti-tank guns, machine guns, and small numbers of hostile tanks.

During April, Third US Army tank destroyers expended 8819 rounds direct fire and 28 rounds indirect fire. Enemy material and installations destroyed by tank destroyer units in Third US Army during the month were:

Tanks	29
Self-Propelled Guns	59
Anti-Tank Guns	35
Artillery Pieces	2
Machine Guns	41
Pillboxes	10
Miscellaneous Vehicles	226

Representatives of the Tank Destroyer Section visited all units frequently and maintained close check on personnel, material and equipment. From the equipment standpoint, the April highlight was the conversion of the 691st Tank Destroyer Battalion from a 3-inch towed unit to a 90mm self-propelled unit.

The period closed with the status of tank destroyer battalions assigned to Third US Army as follows:

	M-10	M-18	M-36	Towed	TOTAL
Third US Army		2		1	3
III Corps		1	1	1	3
XII Corps	1	1	2		4
XX Corps	_	2	1	1	4
TOTAL	1	6	4	3	14

During the month of April, the enemy was unable to cope with our deep armored penetrations which subsequently developed into battles of pockets. Enemy armor suffered heavily in these pockets, particularly in the RUHR. In this pocket alone, the 9th, 116th, 15?th Panzer Divisions, the 3d Panzer Grenadier Division, and the 106th Panzer Brigade were destroyed. All the other Panzer Divisions committed on the Western Front also suffered heavy losses.

The history-making juncture during the latter part of the month of the Russian and American forces north of DRESDEN (F 2090) created two tremendous pockets. This juncture made the characteristic north-south shuttling of enemy armor impossible. However, as the distance between Eastern and Western Fronts grew ever smaller, the enemy's capability of shuttling armor from his Eastern Front gained currency. This became increasingly evident by the identification during the latter part of the month of elements of the 2d SS Panzer Division, formerly committed as part of the Sixth Panzer Army in the VIENNA (X 6095) area, on the southeast portion of the Third US Army zone.

The enemy's lack of available armored reserves for the Western Front was demonstrated by the curtailment during the month of an important "loaned" Panzer Division and miscellaneous armored units, most of which were virtually destroyed upon commitment.

The Panzer Order of Battle at the end of the month was as follows:

21ST ARMY GROUP: Remnants 18 Panzer Grenadier Division

12TH ARMY GROUP:
Ninth US Army: Panzer Division CLAUSEWITZ
First US Army: No major armored unit
Third US Army: 11 Panzer Division
Remnants 2 Panzer Division
Elements 2 SS Panzer Division
17 SS Panzer Grenadier Division

6TH ARMY GROUP: No major armored unit

The total enemy tank strength in the West at the close of the period was estimated to be 200 tanks and/or assault guns, 100 of which were believed to be in Third US Army zone of advance.

CHAPTER 12
MAY OPERATIONS

As of 1 May 1945, tank destroyer units assigned to Third US Army were organized for combat as follows:

UNIT	TYPE	DIVISION OR GROUP	CORPS
1st TD Brig			TUSA
4th TD Gp			TUSA
631 TD Bn	Towed		TUSA
603 TD Bn	M-18 (SP)	16 Armd Div	TUSA
8th TD Gp			III Corps
629 TD Bn	M-36 (SP)	99 Inf Div	III Corps
643 TD Bn	Towed	8 TD Gp	III Corps
807 TD Bn	M-18 (SP)	86 Inf Div	III Corps
9th TD Gp		G - 6	XII Corps
704 TD Bn	M-18 (SP)	4 Armd Div	XII Corps
705 TD Bn	M-18 (SP)	11 Armd Div	XII Corps
773 TD Bn	M-10 (SP)	90 Inf Div	XII Corps
802 TD Bn	M-36 (SP)	5 Inf Div	XII Corps
818 TD Bn	M-36 (SP)	26 Inf Div	XII Corps
635 TD Bn	Towed	71 Inf Div	XX Corps
801 TD Bn	M-18 (SP)	13 Armd Div	XX Corps
808 TD Bn	M-36 (SP)	65 Inf Div	XX Corps
811 TD Bn	M-18 (SP)	80 Inf Div	XX Corps

During the period 1 May to 8 May 1945 Third US Army drove to LINZ (V 8548), AUSTRIA and to PILSEN (L 3642), CZECHOSLOVAKIA, striking the final blow at the last remnants of the German Army.

Early in the period III Corps drove south from the ISAR RIVER and tank destroyers supported the action by knocking out machine gun nests and strong points that impeded our forces, large numbers of prisoners were taken. The latter part of the week the Corps was "pinched out" and there was no tank destroyer action. The 86th Infantry Division, with the 807th Tank Destroyer Battalion attached, was relieved of assignment to III Corps and passed to Seventh US Army control; the 4th Infantry Division, with the 610th Tank Destroyer Battalion attached, was assigned to III Corps.

In the middle of the period the V Corps was assigned to Third US Army and with it came the 3d Tank Destroyer Group, the 612th, 634th, 656th and 813th Tank Destroyer Battalions. The 16th Armored Division, with the 603d Tank Destroyer Battalion attached, was then assigned to V Corps. At the end of the period the Corps was advancing rapidly into CZECHOSLOVAKIA against little opposition. Tank destroyers in the Corps had their only activity in taking large numbers of prisoners.

XII Corps drove south to LINZ (V 8568) and east into CZECHOSLOVAKIA. Tank destroyers were very active, delivering assault fire in support of infantry and armored units. Numbers of machine guns, strong points and general purpose vehicles were knocked out; there were two tank engagements; and prisoners were taken in large quantities.

XX Corps crossed the INN RIVER and pushed on to the south. Considerable resistance was met and tank destroyers were kept busy destroying machine gun nests and anti-tank guns. There were two engagements with tanks. Prisoners surrendered by the hundreds.

During the period Third US Army tank destroyers expended 985 rounds direct fire. Enemy material and installations destroyed by tank destroyer units in Third US Army were:

Tanks	6
Anti-Tank Guns	7
Artillery Pieces	3
Machine Guns	8
Miscellaneous Vehicles	15

The period closed with the status of tank destroyer battalions assigned to Third US Army as follows:

	M-10	M-18	M-36	Towed	TOTAL
TUSA				1	1
III Corps			2	1	3
V Corps	1	3	1		5
XII Corps	1	2	2		5
XX Corps	_	2	1	1	4
TOTAL	2	7	6	3	18

Prior to the dramatic close of the period on 8 May, enemy tank activity in the Third US Army zone was limited to minor, but brisk, defensive action by groups of two to three tanks. Throughout the period the over-running gap between the Russian and Allied forces caused a mass migration of enemy units, including armor, toward Third US Army lines. This resulted in the identification, along Third US Army front during the closing days of the period, of the Panzer Division "GROSSREICH", the 2 SS, 3 SS, 7 SS, 10 SS, 2, and 11 Panzer Divisions. Except for movements of units into assembly areas, all enemy tank activity ceased upon the declaration of the unconditional surrender of all the German forces.

CHAPTER 13
LESSONS LEARNED & CONCLUSIONS

TANK DESTROYER EMPLOYMENT

As a result of operations on the European Continent during 1944 and 1945, the following lessons were learned and conclusions were drawn:

1. The towed tank destroyer gun was found to be unsuitable for any missions other than that of static defense. All towed tank destroyer battalions should be converted to self-propelled.

2. Small unit tank destroyer tactics, as conceived and taught in the United States have proved sound. At least two destroyers must work together to take full advantage of their mobility and high velocity fire power. The only satisfactory method of selecting destroyer positions was foot reconnaissance. Small unit training for future operations should be based on the principles which were taught for this operation.

3. In the employment of the tank destroyer battalion, tactics as taught in the United States were changed in this theater because our forces were usually not faced by large numbers of German armored vehicles in mass. The employment of tank destroyers by company or platoon was, with one exception, found to be entirely satisfactory. This one exception was that after months of combat against small elements of German armor, tank destroyer units were thoroughly scattered when the Ardennes breakthrough occurred and, as a result, no one battalion in Third US Army could be committed against the bulge as a massed unit. It should not be forgotten in future operations, if the enemy possesses the capability of massing his armor and if we continue to use divisional tank destroyers by company and platoon, that there should be more tank destroyer battalions available than the present allotment of one battalion per division.

4. As an accompanying gun in close support of infantry, cavalry, and armored forces, tank destroyers proved more efficient and were used to a greater extent than had ever been envisioned in the planning stages in the United States. Future training should lay more emphasis on the tank destroyer as a close support gun, so that tank destroyers will not be idle when there is no threat from enemy armor.

5. Frequently the small unit leaders of an infantry division, newly committed, did not understand armored employment. Most new infantry outfits insisted on directing every movement of the attached tank destroyer unit, rather than assigning the tank destroyer commander a mission and allowing him to make use of his special knowledge and experience. There should be an intensive program of combined training to acquaint small unit commanders with the capabilities and limitations of arms other than their own, in order to avoid the needless mistakes and losses of the past operation.

THE TANK DESTROYER

Lessons learned and conclusions drawn about the self-propelled tank destroyer were:

1. The 76mm Gun Motor Carriage, M - 18, suspension and power system and the mobility resulting therefrom made this vehicle the finest piece of tracked equipment in the US Army. The ideal tank destroyer should have a suspension and power system similar to that of the M - 18.

2. The three-inch gun with its present highest velocity ammunition is inadequate. A 90mm or larger (not to exceed 105mm) gun with a higher velocity ammunition (at least 3600 to 3700 feet/seconds) is needed.

3. Armor heavier than that now on tank destroyers is not necessary, but a cover for the turret is a definite requirement. Future destroyers should be modified to have a turret top which will give overhead protection, but, at the same time, permit horizontal vision in all directions.

4. Although the M - 18 was frequently the only combat tracked vehicle which could negotiate mud during the bad weather of the past winter, its tracks are still not wide enough. Rubber tracks were found ideal for long distance movements and ordinary weather; however, cleated tracks are a "must" for icy weather. Track width should be increased to give minimum ground pressure, but the track should not be made so wide that the destroyer's high maneuverability is materially reduced. All vehicles should come equipped with rubber tracks. For icy weather, complete replacement sets of cleated steel tracks or a better type of grouser should be provided.

5. Because tank destroyers were so frequently used in close support of infantry, the lack of a bow machine gun is the greatest single deficiency of any type tank destroyer at the present time. All tank destroyers should be equipped with a bow machine gun and, in addition, a mount for the anti-aircraft machine gun which will enable that gun to fire forward at ground targets.

EQUIPMENT

Lessons learned and conclusions drawn on the equipment other than the tank destroyer itself were:

1. The ammunition trucks and trailers provided by the present tank destroyer tables of equipment were intended for three-inch ammunition. There is not sufficient carrying capacity for 90mm ammunition. Battalions equipped with a 90mm or larger gun should be given additional trucks and trailers to provide the carrying capacity for this larger sized ammunition.

2. Tank destroyer gun companies and reconnaissance platoons, when attached to infantry and armored units, have frequently been separated from battalion headquarters by large distances, and have been without adequate means to communicate with tank destroyer battalion headquarters. A SCR 506 radio is needed for each tank destroyer gun company and each tank destroyer reconnaissance platoon.

3. Tank destroyers habitually work closely with infantry or armored units, but have no means of communicating with these other arms. In addition to the SCR 600 series radios now organic with each tank destroyer battalion, there should be three SCR 508 and twelve SCR 510 radios issued to each tank destroyer battalion operating with an armored division; and twelve SCR 300 series radios issued to each tank destroyer battalion with an infantry division.

4. Tank destroyer gun and reconnaissance platoons frequently were engaged in fire fights with enemy infantry and had no high angle of fire weapon to drive the enemy from emplaced positions. In addition, tank destroyers have no means of sending up illuminating flares to detect enemy patrols or enemy tanks at night. Each tank destroyer platoon, both gun and reconnaissance, needs one 60mm mortar as a support weapon against enemy infantry by day and as a means of illumination at night.

5. The Car, Armored, Light, M - 8, and the Car, Armored, Utility, M - 20, have proved entirely unsatisfactory for the purposes for which they were provided. A half-track or a light full-track vehicle is needed to replace the M - 8 and the M - 20.
